The Council states that an important focus of the 10-year draft budget is on reducing greenhouse gas emissions. Other actions include supporting Christchurch residents to take their own climate action, with advice and tools on sustainability, and supporting climate-focused community projects through the annual \$380,000 Sustainability fund.

We strongly support work to address climate harm and echo the voices of the young people who organised themselves to visit the Council and speak with the Mayor just last week about their views on climate change. We support their requests.

### **Thank you.**

We would like to be heard during the submission process.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Lucia **Last name:** Fenwick

**Your role in the organisation:** Player Belfast

Netball

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

- they flood when it rains
- they are slippery with ice on frosty mornings
- when most teams train in the evenings they are slippery and damp from night-time dew
- part of one court is permanently wet and covered in a slick film because it never dries out
- they have extensive cracking filled with vegetation
- they have holes for tennis net poles that are no longer used

The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

## Feedback

### 1.1 Have we got the game plan right?

I will be brief. You likely have thousands of these to read through. Many will be from community groups, the young, environmentalists and their organizations.

They will urge you to actually strongly implement Council's Climate Change Declaration. Many good suggestions for action will be presented. Much of it will be familiar having been suggested for years. More than politely listening Council needs to accept, develop and implement.

This LTP falls far short of what is required to prepare Christchurch for coming challenges. It instead allows a business as usual approach to direct activity. This will leave a city unprepared, financially strained. The young be left to suffer the consequences while paying for unfit for purpose infrastructure simultaneously with funding remediation. Many will logically chose to simply move elsewhere.

Where this plan fails is that the actions suggested are not suitable for the coming climate chaos and it offers infrastructure which will not meet the changed ways of living required to live within our means or zero emissions. It does not provide the infrastructure required for the future.

The Northern Arterial Extension and the fiasco down Cranford Street is an excellent example of what is not needed; more roading for motorized vehicles. We can't really afford it; it is never enough and will not be what the future requires. We have known for decades that you can't build your way out of congestion.

Transport emissions are a major contributor to greenhouse gasses. Transport spending is a major financial burden on the city. Let's deal with it, not pretend to deal with it. EV's will play a part, but simply moving people from cars with fossil fuels to electric will not relieve the financial burden or congestion. Public transport will need the support of great cycling and walking infrastructure for people to find it a real alternative to driving.

This LTP needs to clearly identify the challenges, what is required and the reality that business as usual is not an option. Not a politically attractive move.

It can be argued that people don't want to hear that they have to change, that this LTP is a palatable step in the right direction. Who is this palatable for? Is it palatable for politicians, for those unwilling to acknowledge the real challenges and make the hard choices? It will leave Christchurch with a far less palatable future.

Cancer patients don't want to hear that they must undergo painful chemo and radiation treatments. Yet the oncologist who does not insist on full treatment in an attempt to spare the patient's duress condemns the patient to death. This LTP will spare us for a decade, perhaps two, by condemning those who follow.

Fortunately focusing our efforts and economy on meeting current and future needs with suitable activities can create jobs and revitalize communities.

This LTP must set in motion education, promotion and community outreach to help residents understand why we have to change and the advantages to the present and future of doing so. As written it soft sells the seriousness of our challenges in hopes of not upsetting the status quo. It is the status quo which got us here.

Council needs to incorporate the best of what will be many excellent suggestions from the many individuals and groups who have been marginalized as "too radical" for too long. I support those submitters and encourage Council to be bold for the future of Christchurch.

### 1.2 Rates

Without wage increases, benefit increases many will struggle, some will fail. CCC needs to continue to lobby central government to let local bodies keep GST proceeds and to fund infrastructure. With retreat from the sea looming rates increases may become unaffordable.

1.3 Proposed changes to existing rates, and new targeted rates  
Meter and charge for excess water use. Do not implement other targeted rates as they tend to institutionalize some spending. It is easier to not give than to take away.

1.4 Investing in upgrading and protecting our city’s water networks  
go for it

1.5 Investing in our transport infrastructure  
No, too much on roads for cars and trucks.It is not sustainable, affordable or reduces emissions. Provide a completed cycle network now. Park and ride lots and bike lockers at transit hubs.

1.6 Rubbish, recycling and organics  
go for it

1.8 Our heritage, foreshore and parks  
Sea level rise makes this highly questionable. Reconsider.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
No  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments  
It is unfortunate, but needs to be done. But what of the many other facilities which need work? South branch of the library for one.

1.11 Potential disposal of surplus Council-owned properties  
Get a good price. If a buyer is able to flog it off shortly afterward for a profit fire those responsible.

1.12 Any other comments:

## 2021 LTP Submission

from Graham Robinson

Is the Game Plan right ?            No

The Council seems to have a strong focus on anything which purports to attract tourists and will therefore gain income from a source beyond the city's ratepayers. On the surface this might seem a good strategy , to increase the finance base for the city, but the earthquakes of 2010/11 and the Covid -19 virus have removed the supply of tourists in spite of the previous investments made to attract them. Even the Airport Company's investment in land at Tarras does not look to return any dividend in the near future.

The focus of the Council should be for the benefit of ratepayers of Christchurch. Roads and services for the public should be a priority and 'nice to have' projects delayed until we have surplus money to indulge in them.

We should use current rates for paying for current services like water supply, drainage, Council services and transport . Projects for the future should be paid for through borrowing ( especially if the interest rates are low ) and limited to what we can afford . If we cannot afford to do something, do not do it. Every householder has to limit their expenditure to match their income ( or borrow for the shortfall, which costs more to pay back )

It was reported this week that over 560,000 beneficiaries in NZ have in total borrowed in excess of \$2 million. from MSD. The proposed \$2.74 per week increase might be half the cost of a cup of coffee at a cafe for one person, but could be the cost of a meal for another. Over the ten year period that \$2.74 figure will increase to over \$30 per week. How many meals is that ?

The people of Christchurch do not have an unending supply of money to pay for ever increasing rates. There have been job losses and wage reductions through Covid-19 and businesses have advised they are going to have to pass on price increases.

There have been reductions in the Council budget and there needs to be more pruning.

## Rates

The proposed rates increases are inflationary.

The average increase over ten years of 4% resulting in a net increase over the ten years of 47.8% is far too high. The Reserve Bank web-site states that "the Consumer Price Index inflation rate has averaged 2.15% since 2000". The Reserve Bank's inflation target is currently between 1% and 3%. Why should the Council be charging more ? Another site, [www.rateinflation.co](http://www.rateinflation.co). Shows an average annual inflation even lower at 1.51 %.

The rates income expectations are incorrect.

I could not find mention of some allowance in the budget for property capital value increases. This week CoreLogic released that the March median sale price for properties in Canterbury was \$585,000 – a 17.8% increase on March 2020. With property sales increases in the near future still likely to exceed 10% per year, ( in spite of the Government's recent policy changes), because of the shortage of affordable housing, there will be rates income above the level allowed for in the proposed budget. The proposed % increases will end up much higher.

In addition to this, inner city suburbs like Addington are seeing a noticeable increase in housing density. It is common for a site of approx 1000m<sup>2</sup> with an old villa to be developed with 6-8 townhouses. This is partially through profit-seeking by developers and the shortage of housing, but also because of the Healthy Homes policies ( older homes require substantial investment to raise them to the required levels ) and reluctance by insurers to insure pre-1935 dwellings ( often requiring a reroof, new electrical wiring, plaster walls replaced by Gib board and sometimes repiling or replumbing ). Without insurance, borrowers cannot obtain a loan. Also, EQC insurance coverage is dependent on obtaining general house insurance.

The average value of properties will climb because the lower value properties will disappear. The \$2,500 rates from one dwelling is replaced by at least \$18,000 annual rates. Where do these increases show in the budget figures ?

There needs to be an upper limit on annual rates increases. In the UK, council rates are limited to an annual increase of 1.99%, unless the council supplies aged persons care, in which case 4.99% is the maximum limit. I suggest a 3% maximum annual limit and a 30% cumulative limit over ten years. If the rates increase by 30% from today's level of rates within eight years , no further increase can be levied until the ten year period has expired. This would give residents more security of future expenses on their properties.

Targeted, Uniform and rates per value:

Rates should be levied on the Capital Value of the property , rather than as a Uniform Charge , as in theory someone with a higher value property should be better able to pay a higher level of rates ( assuming Capital Value reflects the desirability and amenities of the area ) but makes no allowance for the level of resources used by that property, nor the number of people at the property. Having said that, there are elderly people who are " asset rich but money poor " because their property is in a desirable area. These same people do not have the financial resources to upgrade their properties and end up selling to developers.

The targeted rate for water sounds a good idea as it only charges those who use an excessive amount of water, but can penalise someone who does not know they have a leak under ground ( a lot of water can leak out between 3-month readings ) . There is also the concern that the allowable level per household will gradually be reduced from 700 litres per day, leaving most people paying for the supply of water twice ( a water connection rate per \$ Capital Value, plus a \$ rate per 1000 litres )

I can understand the Council wanting to pay for base isolation of the McDougall Art Gallery, so it can be used by the Museum, but do we have the spare money for it ?

Does the Council still own the Arts Centre? If not, why are the residents expected to pay for its repair ?

The level of rates remission should be looked at and adjusted to compensate the low income people . If the rates % increases, should the remission rate % not also increase ?

## Water

Our water networks need protecting and improving. Have there not been substantial replacements of the fresh water supply pipes and waste water pipes since the earthquakes ?

I am aware that the Council had to unexpectedly spend money on fresh water supply wells, because of what happened in the North Island with unsafe water, but the recent unsafe water at Banks Peninsula makes one wonder how proactive the Council has been about water safety.

The public are disappointed when they notify the Council of water leaks on the roads and footpaths and there seems to be no response to fix them.

## Roads and Footpaths

The desire to improve the state of Christchurch roads is admirable, because many need improvement. What proportion has been repaired since the earthquakes ?

The road surface does not seem to last long before it shows signs of deterioration and it needs replacing . Is this because of higher traffic levels or poorer grade of roading materials ? Residents also get frustrated at the

apparent lack of co-ordination between different groups who spend time and effort doing work and reinstating the roadway, before the same spot is dug up again by some other agency for some other reason. There are numerous footpaths which are difficult for disabled people to negotiate.

## Transport

Public transport will not lure people from their individual vehicles until the system is efficient, timely and reasonably priced. Why take a bus ( or buses ) for a journey of an hour ,when you can drive to the same place directly in less than 15 minutes.?

If you travel from an outer suburb into the city centre and home again in the evening, a bus will probably be OK. If you travel to work on the other side of the city after dropping children to school and collect them before doing some grocery shopping, the buses probably are not going to work for you.

There seems to be a trend of removing on street parking from primary traffic routes , to add an extra traffic lane, often a bus only lane . Please note that although the traffic might flow more freely, the difficulty experienced by drivers in getting to or out of their homes along the route becomes higher. These properties will probably become less desirable and their values will reduce..

## Climate change:

The Council will want to buy into the new electric vehicles, to show they are leading by example. I urge you to consider a few things before you rush in:

- that the chemicals for the batteries are sourced from an ethical source,
- that there is a suitable disposal method for the batteries at the end of their life,
- that there is a back-up transport system to cover for battery/vehicle failure.
- that reasonably priced vehicle are bought, as opposed to top of the line models

## Otakaro Avon River Corridor

Firstly, let me state that I have no Maori blood, nor any affiliations with Ngai Tahu.

I would like to suggest that this 602 hectares be offered to Ngai Tahu, as compensation for the 10% of land which was supposed to be given back as Maori Reserves , when land was first purchased for Christchurch. This would save the initial \$316 million intended to be spent on it ( Ngai Tahu would become responsible for its development and ongoing care ) and would reduce the ongoing costs associated with maintaining the land This would also rectify that Ngai Tahu were cheated by the Europeans who did not keep their promises. Maori seem to have a greater respect for ecology and the environment than Europeans ,and I think they could develop the land in a positive way.

## Community facilities:

Many of these” nice to haves” are again based on a desire to attract events and tourists, rather than actually to improve the lives of the Christchurch residents. Sports fans and followers of entertainers will pay promoters for expensive seats whilst the Council will be left with expensive venues to maintain at the ratepayers’ expense. The Council does not do “ basic “; they want all the bells and whistles, to make their venues a showplace. Would the Councillors spend as much if it was coming from their pockets ?

Residents are having to make up the shortfall that was left because the Council failed to adequately insure its infrastructure and buildings against earthquake damage.

## Heritage

The Council is very selective about which heritage it supports. Many older heritage buildings in places like Addington are going to be sacrificed in the name of urban redevelopment. New homes are up to the current building standard and are cheaper to build than repairing an older property. The higher density will allow for more homes and the increased revenue from rates and building permits is an added bonus.

## Parks and Foreshore

Please maintain what we have ( within reason ) and only expand and upgrade as money becomes available.

### Changes to Council Services

Please be aware that some of the services that you are considering removing are things which the most disadvantaged in our community rely on. People who work for low wages during the day and have no internet access nor computers at home rely on the libraries in the evenings . Those who cannot travel to libraries rely on the mobile bus service.

If service desks are closed, a compromise could be to have a person available for a week only leading up to rates payment time, or for only 1-2 days per week.

### Rubbish and Recycling

Council and Government need to find better solutions for waste disposal and minimisation.

Some of the problem is that people have waste forced upon them when they buy something ( excessive packaging to prevent damage to or theft of an item ). Most food comes pre-wrapped to prevent contamination.

A NZ firm is making fence posts from soft plastics and bags. Could this same technology be used for making coffins and urns ? Or other things like emergency shelters ?

Many older buildings on desirable land are uneconomic to relocate to other sites and require upgrading to modern building standards if you are lucky enough to find a place to shift them to.. Yet there are many resources within them which are wasted because there are no recognised alternative uses for the materials. I am sure there are community housing groups which could use the building materials and internal fittings, if they were offered them.

### Sharing Costs with the Governments

There is no such thing as a free lunch.

The Government offers subsidies or grants to do things, but that comes with a condition that the Council spend as much or more from ratepayer money on the same project. This in turn is money that ratepayers have to find now to avoid missing out on the Government money which is offered for a strictly limited time. Sounds a lot like the high pressure selling on morning television.

### Summary:

If we cannot afford to do something comfortably ( ie.without disadvantaging our residents with high rates bills) , then we should postpone some of the spending until a later time.

The earthquakes and Covid-19 have created a financial crisis for the Council, but has also caused our residents to be financially disadvantaged . The Council should not make it worse.

Missing out on sport or entertainment is not life-threatening. Going hungry is.

I support NZPTV [www.nzptv.org.nz](http://www.nzptv.org.nz)

SUBMISSION ON CHRISTCHURCH CITY COUNCIL DRAFT LONG TERM PLAN 2021–31

Full name Michael David Currie

#### Excess Water Use Targeted Rate for Households

I support the proposed charge for excess water use. I support this because I see the charge as not being for water but for the infrastructure needed to provide the water. The volume of water used is simply a measure of the use of that infrastructure, provided that money is used for the water infrastructure and not as a fundraiser to be siphoned to other infrastructural or other areas of expenditure. It's important to understand that water infrastructure is expensive and the more water we use the more likely it is we will need larger pipes to carry the water, additional water reservoirs, additional water pump station upgrades, additional land to dispose wastewater to and so on...

A charge for water use above 700l/day/household incentivises people to reduce water use (or put in alternative systems for irrigation), reducing the overall cost to the ratepayers. From my point of view, it's fair in that those who drive the need for additional infrastructure pay a greater contribution to the cost of that infrastructure.

However, alongside the excess water charge Council should be educating around the importance of conserving water, and best use in terms of rainwater/greywater collection.

With respect to rain water tanks, all new housing should include rain water tanks and subsidies be made available for existing housing to incorporate rain water tanks. Refer to supporting document "Regulating for supplementary water supply (rainwater tanks)" produced by the Canterbury Sustainable Homes Working Party. This will reduce the load on the Christchurch City drinking water supply and infrastructure.

Council has already approved in principle applying for a Conservation Order to the NZ Government to protect Christchurch's deep aquifers from exploitation by water bottling companies, intensive farming/horticulture, etc. This will enable more control of the load on the Christchurch City Council drinking water aquifers. The Long-Term Plan must allocate funding to allow the application process to proceed.

#### Drinking Water Supply Upgrade

I support Council "investing in upgrading the city's drinking water supply network, including upgrading well heads, drilling new and deeper wells, upgrading reservoirs, replacing older pipes, and installing new 'smart' monitoring systems and flow meters. The work we're doing is best practice and will future-proof the network for many years to come.

Safe drinking water, without residual chlorine, is a major priority for the Council, and for the people of Christchurch. We've resolved that, long term, we want to retain the city's untreated water supply system and will seek an exemption from the Government proposal in the Water Services Bill to require residual chlorine treatment."

The 'smart' monitoring systems should be installed not just for flow quantity but also for core water quality, meaning protection from and prompt detection and remediation of toxic substances such as E-Coli, nitrates, etc.

The Water Services Bill is about to go through its second reading. Between this Bill and the formation of Taumata Arawai (the enforcement agency) we are going to see the costs of Three Waters provision increase. In addition to that we have the Government proposing the creation of regional entities that will take over the management of Three Waters infrastructure unless councils decide to 'opt out'.

With the cost of running these systems set to increase but councils' debt limits remaining where they are, local councils are facing a dilemma. Unless they can find a way to fund the ongoing provision of Three Waters infrastructure to a standard that meets the requirements of the proposed Water Services Bill (and any additional requirements of Taumata Arawai), they will be unable to 'opt out' of the entity model.

I support Council opting out. This is because I believe that water services will be less expensive for users if they remain with Council. I also believe there's a reduced risk of privatisation if they remain with Council.

So, given all of the context above, my position is to support the charge for excess water because I believe it's the fairest way to fund infrastructure and the best way to ensure our Councillors can retain control over our Three Waters networks. Maintaining democratic governance of these networks at a local level means we'll all still get a say in chlorination and fluoridation of supplies, the cost of supplies and the way they are funded etc.

#### Transportation and Climate Change

In 2019 Council declared a Climate and Ecological Emergency "and set a target of net zero greenhouse emissions by 2045 (excluding methane), and to halve our emissions by 2030 from 2016–17 levels." I applaud Council's commitment to "meet this challenge through every means available."

Council should be discouraging the use of private vehicles in the city for the following reasons:

1. loss of valuable land committed to parking
2. making our roads safe and minimising traffic
3. eliminating the use of fossil fuels and the resulting pollution and to mitigate the climate crisis.

Instead Council should be encouraging the use of light transport. I recommend that Council work with Environment Canterbury to seriously consider the use of trackless trams to bring commuters, etc. into the city with park and ride facilities located north, west and south of the city. Please refer to supporting document "Why trackless trams are ready to replace light rail".

In addition to this, parking charges for the central city should be set at \$10 for the first 2 hours increasing to \$20 per hour thereafter to discourage commuters from parking in the city and also to provide further funding for the trackless tram trial.

I am not in favour of the Canterbury Multi Use Arena (\$253 million, as well as \$197.7 million from the Government over the next 10 years) and recommend that this funding be diverted to the

trackless tram trial, Three Waters infrastructure upgrades, rainwater tank subsidies and applying for a Water Conservation Order for Christchurch's deep aquifers (refer under Excess Water Use Targeted Rate for Households above).

I am in favour of the \$235 million budgeted over the next 10 years for cycling projects/programmes but note that more needs to be done in the east, both for cycleways and for pedestrian improvements (e.g. traffic islands on Hawke Street opposite the business centre parking area).

I do not support the proposal to close the Riccarton Road bus lounges. The bus lounges are an essential facility for public transport users, providing shelter from the elements and a well-lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch. The proposed closure of the bus lounge goes against Council's promises regarding climate change and its goal of getting more people using public and active transport, by closing down facilities that benefit public transport users.

#### Proposed Tarras Airport

I note that there is nothing included in the Long Term Plan regarding the Christchurch Airport and the proposal for Christchurch International Airport Ltd (CIAL) to build a new airport in Tarras. Council's target for net zero greenhouse gas emissions by 2045 in no way restricts emissions from Tarras airport, which would be out of district. Also, any attempt to restrict Tarras related emissions are virtually meaningless unless the emissions of the actual flights are taken into account.

Michael Apathy of Extinction Rebellion says: "Too much of the wrangling to get this project off the ground has taken place behind closed doors. It started when CIAL blindsided Tarras locals by announcing that land for an airport had been purchased, and it's continuing now when money that could go back to the council as dividends is going towards a project that ratepayers know very little about. This airport has massive implications for Aotearoa New Zealand's environment and carbon footprint, and the public needs real representation, not just lip service."

I do not support the building of this airport. CIAL is 75% owned by the council through its holding company, Christchurch City Holdings Limited (CCHL). Mayor Lianne Dalziel, deputy mayor James Gough, and councillors Sara Templeton and Andrew Turner sit on the CCHL board. I urge Council to put a stop to this proposal.

#### Christchurch City Council Structure

The Christchurch City Council has been restructured under new CEO Dawn Baxendale. Of concern is that Dawn Baxendale has 8 direct reports. That is way too many.

I am also concerned that as a result of the restructure and appointments there is neither a Registered Engineer, nor a Chartered Accountant, in the Executive team.

It is essential in a complex organisation like CCC that the person in charge of finance has professional qualifications in this area, and therefore subject to the ethical criteria of the Institute of Chartered Accountants. The GM Resources and CFO job was advertised as a combined position, which made a lot of sense. This supported the argument for a smaller Executive team by the CEO, as it would save money for CCC.

In the job ad it was stated that membership of Institute of Chartered Accountant of NZ was required. The interview panel selected Miles McConway, who is Director, Finance and Corporate Services at Environment Canterbury (Ecan), for the position of GM Resources and CFO. However, Miles McConway does not have Chartered Accounting qualifications, despite the job ad requiring them.

As noted above, the absence of engineering skills at Executive level is a major concern. Since I have been involved in Local Government from the early 1980's, there has always been a member of the Executive Team who was an engineer. As far as I can ascertain every Local Authority normally has an engineer in the Executive team. Two fundamental elements of Local Authorities are Planning and Engineering. We finally have a Planner in the Executive team which is great. However, CCC in its new corporate structure has no engineer at the top table.

Let us consider how much of the Council finances are driven by engineering services:

The CCC Long Term Plan (LTP) includes a total operating expenditure and capital expenditure for 3 Waters and Transport over the next 10 years of \$8.3 billion.

Engineers drive organisational costs. Let us consider just how far down in the organisational structure we have to delve before we find an engineer. Here is level 3 in the organisation:

- General Manager of Infrastructure, Planning and Regulatory Services: no engineering qualifications.
- Head of Three Waters: no engineering qualifications. (Formerly a policy analyst)
- Head of Transport: no engineering qualifications. (Formerly a Planner)
- Head of Asset Management: no engineering qualifications. (Formerly in IT)

So, therefore, at CCC it is four levels down before there is anyone who has engineering qualifications. A number of qualified engineers have left or have recently resigned.

This is a fundamental error in the restructure. It is essential that a core element in Local Government, engineering services, are managed by somebody with technical training on the Executive team.

Consider this scenario. When we had the earthquakes in 2010 and 2011 there were a number of Registered Engineers at senior level at CCC who saved this City by restoring the Three Waters. During our Civic Defence emergency at any time, we could have had a serious health disaster. The engineers on our staff prevented a breakdown of civil society. At SCIRT the organisation was loaded with qualified engineers.

Many thanks go to Garry Moore for his analysis and commentary on the new Council structure.

### **Ōtākaro Avon River Corridor**

I fully support the implementation of the Ōtākaro Avon River Corridor Regeneration Plan approved by Greater Christchurch Regeneration Minister Megan Woods in August 2019. It is imperative that this plan is adhered to and not contaminated by powerful lobby groups with their own agendas promoting such things as proposals to develop large areas for commercial and community use, flatwater recreational facilities, etc.

For the eastern reaches of the Ōtākaro Avon River Corridor, "the natural environment will be the defining feature, which will preserve and restore local and regional habitat for native wetland plants and birds. Already the location of significant salt marshes and wetlands, the opportunities in this Reach focus on a restored and enhanced natural environment. Ecologically restored areas would replace remnants of residential properties and local roads in the northern parts of the Eastern Reaches, and salt marshes in Bexley would be restored from their relatively recent urbanised state, to create habitat for migratory birds. "

The restored wetlands will also act as flood and tidal buffer zones and stormwater catchment areas which is a critical aspect of the Ōtākaro Avon River Corridor. This is in addition to its biodiversity advantages for both flora and fauna and it is imperative that the Regeneration Plan vision is not lost or watered down.

#### Asset Sales

There is no mention in the Long-Term Plan of selling off Council Assets such as the airport and port and this is a good thing, as it provides Council and its rate payers certainty for the future and enables Council to keep its rates lower than would be the case without the assets.

I implore Council to stick to its guns and not sell of any of our assets for short term gain, or any reason whatsoever.

#### Rates Proposals

The overall aim of the CCC Draft Long-Term Plan for 2021-2031 is to minimize rates rises for ratepayers, framed specifically as to reduce costs for low income communities, but these actions may not deliver the intended effects. Since rates payable are based on the capital cost of the property, lower percentage increases in rates benefit higher wealth individuals more. Meanwhile, cuts to public services via reduced operational spending (such as the closure of the Riccarton bus lounges) may disproportionately harm lower income individuals.

The council should also focus on the impending climate emergency and recognize that not investing now only means more investment and higher rate increases in the future for everyone due to Council "kicking the can down the road".

Greater investment in bus lanes and other public transport infrastructure is necessary to make public transport in Christchurch competitive with private cars and incentivise people to use public and active transport instead, helping reduce our emissions.

So, I implore Council to be bold and strike rates to such a level as to allow greater investment in water infrastructure, bus lanes and other public transport infrastructure and to focus on the impending climate emergency.

## Canterbury Sustainable Homes Working Party – Regulation

### Regulating for supplementary water supply (rainwater tanks) in new and rebuilt homes in greater Christchurch

#### Goal

The goal is to have greater resilience, reduced water demand in summer and mitigation of storm water runoff during rain events through the installation of rainwater tanks in all new homes and rebuilds following the earthquakes in greater Christchurch.

#### Method

The preferred method is through using s27<sup>1</sup> of the CER Act 2011 to instigate Plan Changes in the CCC, SDC and WDC District Plans.

Plan change 75 for the Kapiti Coast District Plan provides guidance for this process.<sup>2</sup>

#### Rationale

The Canterbury earthquakes disrupted the reticulated supply of water through damage to reservoirs, pumping stations and pipes. Some residents were without water for many weeks, and were reliant on bottled water, tanker supplies or neighbour's private wells

While more than eighty percent of the Christchurch water supply was restored within two weeks of the February earthquake, boil-water notices remained in place citywide until April 2011, due to the risk of cross-contamination from broken pipe works. Shortly after the 22 February earthquake, chlorine was introduced to the water supply to address potential contamination issues, and remained until December 2011.

Experience in Christchurch suggests that current UN-based recommendations of 3 litres of water per person per day, to meet water needs in a disaster situation, may fall well below the actual needs of an urban population. The CDEM Wellington Emergency Preparedness guide (December 2010) suggests 3 litres per person to meet daily drinking needs, and more for cooking, hygiene and pet care<sup>3</sup>.

In Christchurch City in summer 2011/12 level 3 restrictions were imposed because of the reduced storage in the water supply system.

If more homes had rainwater tanks they would have had access to an emergency supply, particularly for non-potable purposes such as clothes washing or garden watering, and there would have been reduced demand on the Councils' supplies.

Significant construction cost savings (up to 50%) can be realised by installing the rainwater tank and dual plumbing systems in new 'greenfield' developments (and new homes) compared to retrofitting existing 'brownfield' areas<sup>4</sup> (or retrofitting in existing homes).

Ministry of Health guidelines indicate that only about five litres per person per day (l/p/d) needs to be biologically and chemically safe. Average domestic water use is about 300-350 l/p/d – all of which is currently cleaned to a potable standard. Clothes and cars are washed, toilets flushed and gardens watered with high quality drinking water. Using rainwater for some of these activities would reduce the demand on potable water.

<sup>1</sup> S27 (1) The Minister may, by public notice, suspend, amend, or revoke the whole or any part of the following, so far as they relate to any area within greater Christchurch: (a) an RMA document

<sup>4</sup> Kettle, D. March 2010. Barriers to Water Demand Management: health, infrastructure and maintenance. Report WA7060/6 for Beacon Pathway Limited.

Putting in place legislation requiring rainwater tanks homes being built or rebuilt will incorporate resilience for the future.

- This is already signalled in the Christchurch City Council's Water Supply Strategy as Action 12, scheduled for 2014/15<sup>5</sup>.
- In the Waimakariri District Council Water Conservation Strategy<sup>6</sup> rainwater collection and reuse is recognised as a way to reduce peak water demand, but regulatory measures will be reviewed in the 2013 review of the strategy.
- Selwyn District Council has no specific reference to domestic rainwater collection in their five-water strategy.

### Definition

Rainwater harvesting involves the collection, storage and distribution of rainwater from the roof, for use inside and outside the home. Rainwater collected from the roof via gutters and pipes flows through screening devices to remove dirt and debris, and is then stored in tanks outside the house for use in the garden, toilet and laundry. The reticulated supply would still be used for drinking, cooking and other potable purposes.

Each rain tank can save a home about 50% in terms of their water usage when rainwater is re-used for the laundry use and toilet.<sup>7</sup>

### Benefits

- An invaluable alternative water supply when a disaster damages the reticulated system
- Reduces the demand for water from the main water supply
  - Reduces the extraction from groundwater
  - Reduces householders dependence on mains water
  - Offers more resilience when water restrictions are in place
- Reduces costs in the delivery of reticulated water supply, e.g. pipe size, reservoirs, energy costs
  - Avoids oversizing of water supply network and associated costs inefficiencies
  - Can delay capital works
  - Reduced energy costs in embodied energy of infrastructure, operational costs of treatment and pumping,
  - Lower households water bills (if water is charged for by volume)
- Reduced storm water runoff
  - Prevents the impact of storm water run-off on the local environment
  - Reduces peak flow in storm water system
- Education and awareness
  - On site systems give timely feedback to the householder on water consumption increasing awareness about the limits of water availability and cost of infrastructure/maintenance<sup>8</sup>
  - Householders have increased control over their water source
  - Rain tanks are part of a broader societal shift towards more eco-friendly behaviour and tanks facilitate a transition to more sustainable values and behaviours.

<sup>8</sup> Presentation - Sustainable water supply for Auckland – Craig Brown Consulting – 5 February 2010  
[www.thesustainabilitysociety.org.nz/docs/Forum-20-Brown.ppt](http://www.thesustainabilitysociety.org.nz/docs/Forum-20-Brown.ppt)

If the councils introduced a volumetric charge on domestic water supply the financial benefits would be higher.

### Costs

- Costs vary with the amount of rainwater to be stored and its intended uses.
- Tank prices plus the cost of installation and additional fittings

Rainwater tanks as a water efficiency mechanism are frequently cited as being high cost for the benefits compared with other technology – these calculations need to be checked that operational costs and life cycle benefits are included; benefits to storm water/wastewater systems are accounted for; and assumptions on treatment standards/equipment are realistic and practical.

### Barriers

Some health regulators believe that health risks are manageable for rainwater use as a non-potable water use. In New Zealand, at present, some health authorities believe that if water tanks are properly installed, labelled and maintained, they are safe to use for non-potable use - flushing toilets, laundry and garden use<sup>9</sup>.

### Regulatory Mechanisms

- The Resource Management Act 1991 (RMA)
  - Regional Policy Statement (RPS) - identify that District Plans of Territorial Authorities should make provision for the mandatory inclusion of rain tanks as a 'rule'. A Section 32 cost benefit analysis and public notification would be required with a public consultation process under the RMA.
  - Regional Plans – the Canterbury Land and Water Plan (replacing the NRRP)
  - District Plan - Plan Change to include policies and a rule around the requirement for rainwater tanks. This process would require a Section 32 cost-benefit analysis to be undertaken.
- The Local Government Act 2002
  - A territorial authority must, from time to time, assess the provision within its district of water services and other sanitary services. An assessment may be included in the territorial authority's long-term plan, but, if it is not, the territorial authority must adopt the assessment using the special consultative procedure
  - If this assessment signals the need for water conservation to avoid or push out further infrastructure development then such measures can be considered under the Long Term Plan (LTP) and considerably shorten the public consultation process required for inclusion in the District Plan.
  - A council can pass a bylaw requiring a supplementary water supply for new houses

The preferred method is through using s27<sup>10</sup> of the CER Act 2011 to instigate Plan Changes in the CCC, SDC and WDC District Plans.

## Appendix 1: Key regulatory processes to influence uptake of rain tanks<sup>11</sup>

| Process                                                       | Scale of Influence | Likely Timeline                                                                     | Priority | Likelihood of success                                                                         |
|---------------------------------------------------------------|--------------------|-------------------------------------------------------------------------------------|----------|-----------------------------------------------------------------------------------------------|
| <b>District Plan Changes</b>                                  | Local              | 2-3 years but would benefit from RPS or other policy work to set the scene          | High     | Success would require education and good consultation                                         |
| <b>Regional Policy Statement</b>                              | Canterbury Region  | Would take several years to be given effect to and filter through to implementation | Medium   | Medium to high, needs good collaboration with ECan                                            |
| <b>Regional Plans – NRRP and Land and Water Regional Plan</b> | Canterbury Region  | Planning process just beginning                                                     | Low      | Medium to high, needs good collaboration with ECan                                            |
| <b>Building Code</b>                                          | National           | 12+ months                                                                          | Low      | High but entirely dependent on involvement in code review and degree of interaction with DBH. |
| <b>Bylaw</b>                                                  | Local              | 6 month process                                                                     | Medium   | Medium – needs support from council to recognise a problem and begin bylaw-making process.    |

## Appendix 2: Rainwater tanks as part of integrated water management

The increasing cost and decreasing availability of water supply will require a more efficient and conservation-oriented supply and management approach if New Zealand is to achieve widespread household sustainability. Rainwater tanks need to be considered as part of a larger water management system:

- **Reduce** water use: demand management
  - Cheapest, but not sufficient in context of increasing population
  - Cost savings (energy and infrastructure)
  - Delays upgrading and renewing water supply and wastewater collection/treatment infrastructure
- **Reuse** water with minimal treatment, locally
  - Greywater recycling
    - Reduces base wastewater flow
    - Wastewater concentration increases
  - On-site wastewater irrigation
- **Rainwater:** a new source without knock-on infrastructure upgrades
  - Integrated Urban Water Management
- **Recycle:** collect and highly process water before using it again
  - Effectively it is another product

The benefits of an integrated water management system are:

- savings in operational (including electricity) and capital costs required for water supply and wastewater treatment
- increased awareness for consumers of water consumption
- increased provision of indirect use values through the reduction of water taken from ecosystems

<sup>11</sup> Adapted from Lawton M., Birchfield D. and Kettle, D. (2007) - Making policy and regulation rain tanks friendly. Report PR 205 for Beacon Pathway Limited.  
[http://www.beaconpathway.co.nz/images/uploads/Final\\_Report\\_PR205\\_Making\\_PolicyRegulations\\_Raintank\\_Friendly.pdf](http://www.beaconpathway.co.nz/images/uploads/Final_Report_PR205_Making_PolicyRegulations_Raintank_Friendly.pdf)

- reduced emissions of greenhouse gases.

### Appendix 3: Example - Kapiti Coast District Council

Kapiti Coast District Council (KCDC) has introduced the mandatory requirement for rain tanks for water conservation as a rule in their District Plan. They did this through their Long Term Council Community Plan (LTCCP), a Section 32 analysis, and a Plan Change notification and consultation process. The rule is triggered when there is an application for land use change or sub-division. In making their case for a plan change the council primarily considered resiliency of their system, especially in the light of climate shocks and water use efficiency, using non-potable water where appropriate. Current water supply can meet potable and hygiene requirements but cannot always supply outdoor needs.

### Appendix 4 : Rainfall and tank sizing

Figure 1: Christchurch Rainfall

Total rainfall per year (average) = 637mm

Rainfall varies across the city – wetter in the west, dryer in the east.

Volume available from a 200m<sup>2</sup> roof

$$= 200 \text{ m}^2 \times 0.637 \text{ m}$$

$$= 127.4 \text{ m}^3$$

$$= 127,400 \text{ litres}$$

$$\text{Less } 20\% \approx 100,000 \text{ litres}$$

In Christchurch the water abstraction rate for public supply averages between 430 and 450 l/p/d, with a median of 435 l/p/d. The daily peak in winter is mid-morning, whereas in summer it is in the evening because of garden watering.

Table 2: Tank sizing

|                                                                                                                                          |                                       |        |
|------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|--------|
| <b>1 Main Building area</b>                                                                                                              |                                       |        |
| Building width (metres)                                                                                                                  | 10                                    |        |
| Building depth (metres)                                                                                                                  | 8                                     |        |
| Rain Collection Area 1 (square metres)                                                                                                   |                                       | 80     |
| <b>2 Extension/conservatory/porch/garage/shed etc</b>                                                                                    |                                       |        |
| width (metres)                                                                                                                           |                                       |        |
| Depth (metres)                                                                                                                           |                                       |        |
| Rain Collection Area 2 (square metres)                                                                                                   |                                       | 0      |
| <b>3 Calculate the area of any remaining useful roofs as a figure in square metres and enter directly in the yellow box to the right</b> |                                       |        |
| <b>4 TOTAL of collectable roof areas (square metres)</b>                                                                                 |                                       | 80     |
| <b>5 Rainfall per year in your area (mm)</b>                                                                                             |                                       | 1251   |
| <b>6 Collectable rainwater per annum (in litres - discounted by 20% to account for water loss) (YIELD)</b>                               |                                       | 80,064 |
| <b>7 Use of water in the building</b>                                                                                                    |                                       |        |
| <i>Washing machine and toilet flushing are the main usage for rain water in domestic systems. Add an allowance for daily garden use</i>  |                                       |        |
| Number of people in the house                                                                                                            | 5                                     | people |
| Number of clothes washing cycles per day (50 litres each)                                                                                | 1.25                                  | 63     |
| Number of toilet flushes per day (4.42 flushes per person, average 3 litres each)                                                        | 22                                    | 66     |

# THE CONVERSATION

Academic rigour, journalistic flair

CRRC Zhuzhou Institute developed the rubber-tired autonomous rail transit (ART) system, or trackless tram, which has already been trialled in Zhuzhou, China. Wikimedia, CC BY-SA

## Why trackless trams are ready to replace light rail

September 26, 2018 5.58am AEST

I began my life as an activist academic in 1979 when the Western Australian government closed the Fremantle railway, saying buses would be better. Patronage immediately fell by 30% and I ran a four-year campaign to save the railway. We won. I have been writing books and running campaigns ever since on why trains and trams are better than buses. But I have changed my mind. The technology has changed, and I think it will end the need for new light rail.

“Trackless trams” are based on technology created in Europe and China by taking innovations from high-speed rail and putting them in a bus.

I went to China to check out the CRRC trackless tram (they call it autonomous rail transit, or ART). I came back convinced it’s a transformative transit technology.

Light rail is a connecting service. It joins up corridors or links heavy rail stations to surrounding areas and sometimes completes shorter corridors that lack rail lines. Buses were filling these functions in most cities but failing on two fronts:

- buses were not competing with cars so cities were filling with traffic
- buses did not enable denser development to be viable so cities were sprawling rather than redeveloping.

Light rail had many success stories of competing with cars and attracting denser development, so commentators like me did our best to make them policy-relevant (see, for example, [here](#), [here](#) and [here](#)).

The battery-powered trackless tram, or ART, in operation in Zhuzhou, showing the trackless autonomous guidance system. CRRC Zhuzhou Institute, Author provided

## So what can the new technology do?

Trackless trams are neither a tram nor a bus, though they have rubber wheels and run on streets. The high-speed rail innovations have transformed a bus into something with all the best features of light rail and none of its worst features.

It replaces the noise and emissions of buses with electric traction from batteries recharged at stations in 30 seconds or at the end of the line in 10 minutes. That could just be an electric bus, but the ART is much more than that. It has all the speed (70kph), capacity and ride quality of light rail with its autonomous optical guidance system, train-like bogies with double axles and special hydraulics and tyres.

World's first unmanned smart electric bus trials in C...

The first trackless tram rolled out for a road test in Zhuzhou, south China's Hunan Province, on October 23 2017.

It can slide into the station with millimetre accuracy and enable smooth disability access. It passed the ride quality test when I saw kids running up and down while it was going at 70kph – you never see this on a bus due to the sway.

A child runs along the trackless tram with the author looking on. Author provided

The autonomous features mean it is programmed, optically guided with GPS and LIDAR technologies, into moving very precisely along an invisible track. If an accident happens in the right of way a “driver” can override the steering and go around. It can also be driven to a normal bus depot for overnight storage and deep battery recharge.

The standard ART system is three carriages that can carry 300 people, but it can take five carriages and 500 people if needed. In three years of trials no impact on road surfaces has been found.

## The Trackless Tram: Fixed or Flexible? Reflections on a Visit to China.

from [Linda Blagg](#)

26:10 |

The author discusses his conclusions after visiting China to assess the operation of trackless trams.

### How do trackless trams improve on light rail?

Trackless trams can avoid the worst features of light rail – disruption and cost. It can take years to lay rail tracks, causing major disruption to local economies, as is happening in Sydney.

Similar disruption has happened in the Gold Coast, Canberra and elsewhere, but ultimately light rail systems have been highly successful in attracting patronage and land development. This will happen in Sydney too when the project is complete.

---

### ***Read more: Why Gold Coast light rail was worth it (it's about more than patronage)***

---

However, the cost has been far beyond original expectations. Sydney is costing over \$120 million per kilometre. The Gold Coast was similar. Canberra and Newcastle are over \$80 million per kilometre, as was the cancelled light rail in Perth.

The trackless tram costs around \$6-\$8 million per kilometre. And it can be put into a road system over a weekend.

The big test is whether the trackless tram can attract development around its stations as light rail can. That is the missing link in our cities. How can we unlock urban regeneration and prevent our cities sprawling ever outwards with poorer and poorer suburbs while the well-placed inner and middle suburbs become more and more expensive?

The divided city needs something that can unlock affordable medium- and high-density housing in new urban centres across the city. Following many discussions with the urban development industry, I think the trackless tram can do this. The cost can be afforded as a contribution to any new development and will bring the uplift in land value that unlocks investment.

## 'Trackless Trams' SBE

from [Linda Blagg](#)

09:57 |

Trackless trams could be transformative for a city.

We have developed a **model** that means governments do not need to find all or even any of the capital costs. This is how trams were first built as real estate projects.

But governments are needed to manage the process and create the land assembly and other urban regeneration processes as well as community engagement. This will help show where best to route such a system and how to manage it as a transit system operating for the public good. Governments can help with risk management on the financing, as in City Deals. We have produced a **guide and manual** for how to do this.

---

***Read more: Sidelining citizens when deciding on transport projects is asking for trouble***

---

### **Australian cities are lining up**

Cities across the world are lining up to trial these trackless tram systems. So far, Australian cities moving to use them are Townsville, Hobart, Melbourne (in Fishermans Bend and other sites), Sydney (in Liverpool and perhaps Parramatta Road where the first studies were done) and Perth – where five separate corridors are competing to run the first ART trial.

The table below summarises the main characteristics of buses, light rail and trackless trams, showing the improvements the new technology provides on key criteria.

## Characteristics of transit systems

The table summarises the key characteristics of Bus Rapid Transit (BRT), Light Rail Transit (LRT) and Autonomous Rail Transit (ART, or trackless tram) systems.

| Characteristic                                                  | BRT | LRT | ART |
|-----------------------------------------------------------------|-----|-----|-----|
| Speed and capacity                                              | ✓   | ✓✓  | ✓✓  |
| Ride quality                                                    | ✗   | ✓✓  | ✓✓  |
| Land development potential                                      | ✗   | ✓✓  | ✓✓  |
| Cost                                                            | ✓   | ✗   | ✓   |
| Disruption to services and local economy in construction period | ✓   | ✗   | ✓✓  |
| Implementation time                                             | ✓   | ✗   | ✓   |
| <b>Overall</b>                                                  | ✓   | ✓✓  | ✓✓✓ |

Source: Author provided

Others would rate some characteristics higher or lower, but for me the trackless tram looks a winner due to its ride quality, land development potential and cost.

Time will tell if the early demand for ART translates into a real transformative change – a disruptive innovation. It reminds me of the early days of solar and batteries, which are now completely disrupting coal power systems.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

To the Christchurch City Council

The Arts Centre has always been a big component to creativity in the city centre and it would be devastating if it cannot keep going.

Over the years in my own practice I have put on, organised and performed in many musical and theatrical performances at the Centre, both before and after the earthquakes. I have also been to many other powerful music and theatre performances of all kinds, including sculpture, dance and cinema. The history of creativity there is a lynch pin for Christchurch and should receive very careful consideration.

The continued funding and development of the centre should continue at all costs and I strongly advocate here for the subsidy to remain.

Chris Reddington

| LTP 2021-31 Akaroa Service Centre Submission |

Long Term Plan Submission  
 Christchurch City Council  
 PO Box 73016  
 Christchurch 8154

**Re: Closure of the Akaroa Service Desk as per the Draft Long-Term Plan 2021-31**

**Submitter:**

**Address for service:**

**Phone:**

**Email:**

**Introduction** - The Christchurch City Council policy statement about Banks Peninsula says:

**Our vision:** Banks Peninsula is home to many unique, thriving settlements as well as being a valued place for locals and visitors from the region, country and overseas to recreate, explore and unwind. Our focus is to enhance environmental, cultural, social and economic well-being so that the Peninsula is a vibrant and reviving place to live, work and visit.

Yet the 2021-2031 Draft Long-Term Plan page 58 indicates that the Akaroa Service Desk is to be closed. The reason given is due to minimal transactions.

Akaroa and the Bays collectively are a remote community, at least 75 km from the outskirts of Christchurch City and a 90-minute drive from the CBD. While the City offers a diverse range of activities and public services to the metropolitan residents, Akaroa and the Bays must be largely self-sufficient and self-reliant regarding employment, education, recreational activities, entertainment, shopping and health care.

The long-term sustainability, resilience and wellbeing of Akaroa's and the Bays communities, is important. If Akaroa and the Bays are to survive economically in coming years, then the local Council services must be maintained at an adequate level. In fact, this is a critical foundation stone for the resilience and wellbeing of the community, for both current and future generations.

A Council's ( Akaroa County Council, Banks Peninsula County Council and Christchurch City Council) presence in Akaroa has been located in the Historic Post Office Building for many many years. In 2015 while the Old Post office was closed due to earthquake issues the CCC Service Centre occupied a PortaCom. Without community consultation CCC attempted to move the Service Centre to the Akaroa Museum. This contravened the District Plan for listed historic buildings. Subsequent community consultation found 93% of respondents wanted the Service Centre to remain in the Old Post Office. After CCC spent \$984,407 to repair the Post Office Building it once again became the permanent location of the Service Centre.

In January 2021 the Service Centre was relocated in the School/Community Library. Moving the Akaroa Service Centre in January 2021 was contrary to public consultation outcome in 2015. This move has been stated as a 6-month trial (Jan – June 2021) where upon the use will be analysed, which runs counter to the decision in the LTP to close the centre.

While the relocation of the Akaroa Service Centre and/or the removal of the Service Centre Desk located at the Akaroa School/Community Library is contrary to the Banks Peninsula Community Board Plan 2020-2021 and Council policies. The Banks Peninsula Community Board was not consulted, this decision was neither open, transparent, or democratically accountable (as per the CCC Principles stated in the 2020 Strategic Framework). Again, CCC staff have made decisions without public consultation, discussion, or providing evidence or alternatives, all of which are required by the Local Government Act.

The only remaining avenue for ratepayers to comment on the closure of the Service Centre is by writing a Long-Term Plan submission.

### **Decision sought.**

The ratepayers of Akaroa and the Bays ask Christchurch City Council to reinstate the Akaroa Service Centre in the historic Post Office Building with adequate staff, well trained and locally based, to ensure ratepayers in the Akaroa area and the Bays can continue to be well informed, active citizens fully engaged with and participating in community and civic activities within the wider Christchurch district. The Information Centre and Postal services should be relocated into the facility as it was prior to the earthquakes in 2010.

### **The Reasons are as Follows:**

The Akaroa Service Centre, located in the historic 1914-15 Post Office building, provided an active Citizens Hub in a Council building that was specifically refurbished (\$984K +) to meet the requirements of the community and the post-quake building code. This historic, listed building was an effective central location for our community, that met the community needs (including a virtual meeting room), instilled resilience, and it was a source of pride.

Direct engagement with locally based Council staff is critical for the wellbeing of the community many of whom are retired and/or elderly. A community where internet service can be poor if at all, and a number of ratepayers do not have computers. The Service Centre allowed ratepayers to engage directly over complex issues with Council staff who had an in-depth local knowledge.

The decision to transfer the Service Centre from this central location of a dedicated building to the Library in January 2021 did not follow a formal consultation process. The Council is in breach of its statutory duty to undertake appropriate engagement and consultation, in accordance with Council policies and the Local Government Act.

### **Issues with the Service Centre at the School/Community Library**

- The Akaroa School/Community Library, is a small structure of approximately 180 square meters, adding the Service Centre restricts the ability of the Library to provide the same level of service to students, ratepayers, visitors and Library staff, due to the lack of available space. There is no room for the Council information to be displayed or stored eg District Plan, Have your Say fliers
- There is no private area in the Library where ratepayers can discuss problems with staff, nor is there space to construct a virtual meeting room. Should these services be added staff would lose their open plan office/tearoom and students would probably lose their small research and reading space.
- One Librarian has been trained – for the 6-month trial, offering split hours – 5 per day, 5 days a week.

It is taken that the last decade of earthquakes and now COVID-19 has impacted severely on CCC income. If the assessment of transactions and face to face interactions focused on the past 12 months for the stated closure of the Akaroa Service Centre in the LTP 2021–2031, it is unlikely to be accurate data. COVID-19 which closed borders, mandated lockdowns, social distancing, and limited travel has specifically impacted our remote community. COVID-19 may have provided the means to remove Customer Service from Akaroa as a cost saving exercise, if so, it is very short sighted. Post COVID, international visitors are likely to return in the next 2-5 years, Akaroa and the Bays need to be set up and ready to accommodate greater activity for the economic stability of the area to secure and support the resilience and wellbeing of the community.

CCC staff stated at public community board meeting in Akaroa (15/3/2021) that the Post Office building is a CCC asset and there is no intention of selling it. But they do not know how to use it and would like the community to assist with a use/s. We invite the Council to join the community in achieving a positive and on-going future for the refurbished historic, listed Post Office building at the centre of our community.

We suggest that this should include:

- Relocating the CCC Service Centre, the Information Centre, the Postal service, and Post Office boxes back to this building, which is in the centre of Akaroa and it was specifically designed for that purpose, including disabled access and parking.
- Locate an ATM machine to the side of the building once the BNZ closes in April 2021.

- Encourage greater community use of the building as an active Citizens Hub for Akaroa and the Bays.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.2 Rates

I think the proposed rates increases for Christchurch City are at an appropriate level.

### 1.3 Proposed changes to existing rates, and new targeted rates

I am supportive of the idea of targeted rates.

### 1.4 Investing in upgrading and protecting our city's water networks

I support making spending on water infrastructure a priority, and appreciate that rising sea levels in the future may affect drainage systems.

### 1.7 Our facilities

As someone who has utilised the Mobile Library service while having cancer treatment, I strongly object to the removal of this service from those who have permanently or temporarily limited mobility due to infirmity, disability or ill-health. Axing this service is not in keeping with the goal of 'All communities have equal access to Council services and resources...', which forms part of the Council's 'Valuing the voices of all cultures and ages (including children)' Community Outcome. I understand that continuing the Mobile Library service would cost around \$1 million over 10 years, which would require an increase of just 0.3% to the Access to Information operating budget (while also keeping numerous vehicle trips off the road from those who would otherwise have to deliver users to the library).

I am also opposed to the proposal to close the Riccarton Road Bus Lounges. In order to reach the central city (including services such as the Public Hospital) my parents and I need to transit through these lounges as our local bus route (140) does not go beyond Riccarton. The same applies to students at the College of Education (which is served by the Orbiter and 140 routes). I understand that there has been security issues with the lounges, but I do not believe that leaving passengers to congregate on the footpath (particularly at night time) would enhance their safety. The alternative for 140 route users would be to restore the route to the Bus Exchange, but that would require Ecan's co-operation.

### 1.8 Our heritage, foreshore and parks

I support having the targeted rate for civic heritage.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes

Comments

I support the targeted funding for the Arts Centre, especially given its small impact on the city budget.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes

Comments

I support base isolation for the Robert McDougall Art Gallery, provided that it is a prelude to its re-use.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

While i totally understand and agree with the need for cost savings, I feel that some of the propsed savings are short sighted and will have negative effects on the social well being of some our city's more vulnerable residents. Where these savings have the potential to decrease the ability of people to connect with each other it decreases the opportunities for active and connected communities to own their future - a Council Statagic Priority!

1.2 Rates

support this

1.3 Proposed changes to existing rates, and new targeted rates

I object to some of my rates going towards the restoration of the Christchurch Cathedral. While this is an iconic building, so were many others and those building owners have not had the benefit of such a considerable contribution by the Christchurch Ratepayer.

I do not support the introduction of the rates remission for community organisations as proposed. I do not feel that it takes into account the social contribution that some of these organisations provide to the city. Where community organisations provide an important connecting place as well as programmes that reduce poverty, these initiatives help the Council meet its statagic priorities. Therefore it does not make sense that these organisations will face increase costs through the removal of the rates remission. If Council are to go ahead with this, then there should also be some consideration for any social impact provided by that organisation.

1.4 Investing in upgrading and protecting our city's water networks  
Support this.

1.5 Investing in our transport infrastructure

I don't agree with the deferral of the Aldwins to Fitzgerald part of the Ferry Road masterplan transport infrastructure works. It is not fair to the community of Phillipstown, to have one part of the work done in the Woolston area, but not in Phillipstown. The condition of roads in the suburb is not good. Its already an area of high social deprivation and deferring improvements sends a message that this area is of less importance than others. When a neighbourhood looks as shabby and uncared for as Phillipstown does then it is nearly impossible to generate a sense of community identity and ownership.

1.6 Rubbish, recycling and organics

i would like to see some form waste infrastructure funding go towards targeted education/communication programme in areas where there is a high level of rubbish dumping on the streets. Lowering levels of dumped rubbish should lead to a saving in the costs needed to pick this type of rubbish up.

#### 1.7 Our facilities

i do not agree with the removal of the mobile library service that will hurt some of the more vulnerable embers of our society. While providing other ways of getting books to these communities, it does not factor in the valuable social connections that are enabled by this service. Often the visit of the library is the opportunity for bumping space interaction and invaluable community connections - again meeting Council's strategic priority.

I do not support the closure of the Riccarton Bus Lounges. Without these, the bus interchange for the busiest public transport routes will be forced onto the street where there is not the room for it. Closing the lounges will mean a certain level of infrastructure such as seating and signage will be placed on the footpath. It is already difficult at times to negotiate the footpath when there are people standing waiting for buses, business signboards and other people walking as well as skateboarding and scootering. Add a greater volume of people along with seating etc, and it will be even worse. For people with mobility issues and mothers with prams it will become a safety concern.

i feel that the charges for community facilities for groups that collect fees, attendance dues etc should be higher.

#### 1.8 Our heritage, foreshore and parks

I agree

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Where Council seek to provide financial assistance to organisations and their projects (ie Arts Centre, Cathedral, McDougall Gallery) i would like to see investigation into the feasibility of an opt in scheme in rates. Where a ratepayer supports a particular project they can opt in to have the set portion of their rates to go towards it. Alternatively it could be an opt out scheme where ratepayers have a window annually of one or two months to opt out of having a part of their rates go to any particular project. Having the set time would provide the organisations with some of awareness of the level of assistance.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

See above

#### 1.11 Potential disposal of surplus Council-owned properties

yes as long as there is some form of embargo on the new owners receiving Council financial assistance for any building alterations etc to the heritage ones.

#### 1.12 Any other comments:

There does not appear to be much reduction of levels of service and savings from the arts sector. I would rather see a reduction in spending in the arts sector rather than through proposals that will decrease support to the more vulnerable members of our communities.

i would like to see a review in the level of funding to major organisations that have the ability to self generate

funding. Businees and social enterprises such as the Christchurch Symphony Orchestra and Orana Park have the ability to generate money through trading and should need lower levels of support than organisations that don't.

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I support the LTP submission of the Avon-Otakaro Network.

I also wish to see an increase in momentum in the Otakaro-Avon river Corridor. \$366 million for the next 10 years is not enough and priority should be placed on moving forward with the Regeneration Plan for the sake of the eastern suburbs; as well as all of Christchurch.

I support the LTP submission of the Urban Star Watch Christchurch.

I also wish to see dark sky lighting specified in the planning objectives for the Otakaro-Avon River Corridor, and exemplar lighting infrastructure installed.

1.2 Rates  
Acceptable

1.3 Proposed changes to existing rates, and new targeted rates  
I support the targeted rates for The Arts Centre Te Matatiki Toi Ora and for specific heritage projects

1.4 Investing in upgrading and protecting our city's water networks  
I support the Community Waterways Partnership Charter and request that the Council continue to honour the recently signed Partnership Charter and ensure funding is adequate for this programme on an annual basis.

1.5 Investing in our transport infrastructure  
I support the cycle ways network, and particularly the City to Sea cycleway

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

1.12 Any other comments:

I support the LTP submission of the Avon-Otakaro Network in regards to Leadership for the Regeneration Plan and reiterate that the regeneration of the Otakaro-Avon River Corridor will require enormous investment but in order to unlock the true potential and value adding investment from third party sources the Council needs to demonstrate transformational leadership. The start of this is co-governance.

From:  
Sent: Sunday, 18 April 2021 9:36 am  
To: CCC Plan  
Subject: Submission on long term plan

Follow Up Flag: Follow up  
Flag Status: Flagged

I would like to make submissions on two aspects of the long term plan.

1. Disposal of council owned assets - land No 27 Hunters Road vacant land Title ref 12F/538

I would like to submit my view against the sale of this land for the following reasons:=-

- a) there are serious problems with the infrastructure in Diamond Harbour area - water leakage, sewerage, and poor roading. Development on this land would add to these problems.
- b) housing development on this land would change the aspect of Diamond Harbour that attracts the existing residents - rural, peaceful and community minded.
- c) there is the scope to use this land to benefit the community in the future if it is retained by Council.

2. Charging for water use.

I am retired and live on a largish piece of land with a big vegetable garden and flower garden. This is my solace and my main occupation. If the council decides to charge for water it would certainly take away this pleasure as I would be constantly concerned about my water usage. I'm sure that I speak for lots of older people who live on a limited income and enjoy gardening.

Thanks for the opportunity to make a submission

Cynthia Watkins

### Feedback

1.1 Have we got the game plan right?

On reading your proposal I am dismayed at your thinking, expecting people like myself who don't get any services from

storm water, flood management, sewer, foot paths etc. And by the way there is a separate rate for roading I think.

There is no buildings etc on my bear land to use your storm water system if there even was one, in fact your council pipes storm

water under the road into my property in six places. You keep harking back to central city problems and issues which

has nothing what so ever to do with the people of Little Akaloa. Maybe you should look at the councils poor

performance in many areas and sort our efficiency and performance first before you waste rate payers money again.

**First name:** Laura **Last name:** Beck

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

kiaora,

please remove requesting that the land as described as (27 Hunters Rd, Vacant Land, Pt Lot 1 DP14050++, 12F/538, 390,222 sq metres), be removed from the LTP and fast track disposal. The normal process for disposal of land that would require Community Board and public consultation, should be used instead.

1.7 Our facilities

requesting that the land as described as (27 Hunters Rd, Vacant Land, Pt Lot 1 DP14050++, 12F/538, 390,222 sq metres), be removed from the LTP and fast track disposal. The normal process for disposal of land that would require Community Board and public consultation, should be used instead.

1.11 Potential disposal of surplus Council-owned properties

kiaora,

please remove 27 Hunters Road, vacant land, plot Dp140550++ from the LTP and fast tracked disposal. Please ensure that it receives the normal process of disposing of land that includes community board and public consultation.

kind regards

Laura

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I'm happy with this.

1.2 Rates

I'm happy with this. However, if someone can afford a house worth 3 million, then they should be able to pay a weekly increase of more than \$16.22.

1.3 Proposed changes to existing rates, and new targeted rates

I'm happy with this.

1.4 Investing in upgrading and protecting our city's water networks

I'm happy with this.

1.5 Investing in our transport infrastructure

The new network of cycle lanes is a really good investment. I'm cycling to work every day. However, cycle lanes should be safe and preferably separated from the roads that cars are using. Some new cycle lanes follow this scheme. But still there are a lot of cycle lanes that just use a coloured marking on the road, which sometimes makes cycling dangerous. Christchurch is a perfect city for cyclists (and it always was in historical times). It's flat and the weather is ideal almost all year around. With the new cycle lane network some changes are visible already. Many more people cycle to work and you can now often see groups of pensioners enjoying cycling with e-bikes. In addition to this the bus network and frequency should be improved. It was sad to see the decision to paint all busses green. This in my opinion was a waste of money and made it much more difficult for many people to recognize their bus line. The money should have been spent in upgrading busses with electronic signature inside the bus indicating the next bus stop like it is the case in many other countries. This would also help tourists getting around the city on bus without difficulties. The free-fare bus trial should be implemented, if not for two years, then maybe for 6 months or one year as a pilot.

1.6 Rubbish, recycling and organics

A bottle deposit refund system should be introduced (but this might need to be done on a national level). In other countries there are automats in supermarkets where you can return glass and plastic bottles as well as beverage cans for recycling and you get a refund for each bottle/can.

1.7 Our facilities

Don't really understand why the Riccarton Road Bus Lounges need to be closed. Arguing that 'This kind of suburban facility is not provided anywhere else in Christchurch' and that 'there is no remaining need for these lounges or for any similar facilities in the city' is a strange explanation. If you want to upgrade the bus infrastructure, then make use of these facilities. Riccarton is a main business and shopping hub and a lot of people are using the bus stops in front of the mall. The bus lounges are a good place to stay dry and warm while waiting for the bus. In addition, there are business like the doughnut shop and the Metro Mart that are

dependent on the visitors of the bus lounges. I can understand that financing security guards is an issue, but it seemed to have worked in reducing crime and vandalism so far. Camera observation might be the cheaper alternative. It's not all about saving money. It's also about service for the community.

1.8 Our heritage, foreshore and parks

Investment in heritage, foreshore and parks will always pay-out at the end. It's important to start on the Red Zone regeneration projects including the Otakaro Avon River Corridor to transform this area into a natural habitat of which there are almost none left in the greater Christchurch area. Most other big NZ cities have eco sanctuaries except Christchurch. Riccarton Bush is a sad lonely survivor, but much too small to support a healthy birdlife. Intensive farming has destroyed too much of natural resources. The impact of the earthquakes on the residential red zone area is a chance for Christchurch to bring nature and native wildlife back to the doorsteps of the city. This should be a high-priority project as a legacy for future generations. In addition, maintenance of parks and the Botanic Gardens should continue. They are a big asset for Christchurch and many people enjoy this green space.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments  
I'm happy with this.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments  
I'm happy with this.

1.11 Potential disposal of surplus Council-owned properties

I have no opinion on this.

1.12 Any other comments:

Again, I want to emphasise that it is not all about saving money, but also about healthy communities. The decision of closing Wharenuī Swimming highlighted this issue. This is a popular community swimming pool with a long tradition that people from Riccarton can easily access by walking or cycling. The accounting error of \$5million should never have happened, but again it shows that it is all about money and not the community. Before building the new Metro Sports Facility has been decided, a possible closure of Wharenuī Swimming should have been announced. You can't build a big new facility in the distance and then if the building costs suddenly increase decide to close down similar facilities in other areas to finance the expenses. I sometimes wonder what the representative for Riccarton is doing in the council meetings. I don't see a good support of our community. And who decided on the ugly design of the new Metro Sports Facility? I thought that this kind of brutalism architecture was a thing of the past. A big black box in the middle of the city was not what I expected.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Brenda **Last name:** Nightingale

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.11 Potential disposal of surplus Council-owned properties

27 Hunters Road

I oppose the disposal of the above property, without further input from the community and other interested parties.

The block of land is large and borders existing housing. I would think a block this large would accommodate approximately 200 house sites. Although the block was purchased by the previous council for future housing needs, I do not think it was ever anticipated that the block would be disposed off wholesale without any controls/requirements, other than those imposed by the District Plan. A potential increase in this number of residents would have a major impact on the Diamond Harbour community and surrounding areas. The demand on services such as roading and infrastructure would place major immediate and future capital cost on the Council which would be well beyond the contribution a developer would have to pay to under the development. The fact is the area is rural and not well served in terms of roading (the route from Christchurch is hilly and a not an easy commute), public transport and other infrastructure. There is little prospect of major roading capital works and/or or public transport improvements in the foreseeable future meaning that a major increase in the number of residents will likely result in an increase in daily road users making their way to and from Christchurch. In the current environment this cannot be a desired outcome for a Council and community mindful of a more sustainable future.

Of course there is nothing stopping developer from developing other residential zoned land in the area, as happened at Black Point and Doris Faigan, in accordance with the district plan rules, but here we can do better with Council owned land.

I would like to see the land removed from the disposal schedule, with Council staff then required to consider options for the future use of this land and that those options be put to the community for its input.

Although allowing the land to be sold without considering and consulting on options may result in a short terms gain in Council's balance sheet, the, at this stage unconsidered, potential adverse effects and future capital costs to the community and Council may far outweigh any short term financial return.

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Timothy **Last name:** Hennessy

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

I am against any increase in rates unless they relate to an increase in level of service.

CCC wants to increase my rates without providing any additional services to my property and that is not fair.

#### 1.3 Proposed changes to existing rates, and new targeted rates

See above

#### 1.4 Investing in upgrading and protecting our city's water networks

See above

#### 1.5 Investing in our transport infrastructure

We have no transport infrastructure so why should I pay for it.

#### 1.6 Rubbish, recycling and organics

I would like to see a much more efficient recycling structure. Our current system is too limited and causes confusion.

Name: Hamish and Diane Kay. Steven and Tammy Shannon

Introduction,

This is our submission on Christchurch City Council's Long Term Plan consultation.

We farm at Duvauchelle and the Kay-Shannon Family 4<sup>th</sup> generation have farmed her since the 1940's. We farm 200 Dairy Cows and 500 Beef Stock.

Currently we pay \$11426.68 to Christchurch City Council as well as \$4370.50 to Environment Canterbury.

Our submission will focus on the proposed extension of the land drainage targeted rate to all properties, including those that are historically unserved by the Council's land drainage infrastructure.

We are shocked at this proposal which has come out of the blue with no prior consultation or engagement and only belated notice through a letter of 30 March 2021. We have worked out that we will pay \$427.04 in 2021/22 and this will increase to 1,281.12 in 2023/24. How anyone could describe this as a 'fairer' approach is beyond my comprehension.

This rate is for a service we do not receive or benefit from. The cost is oppressive for our farm and fails to recognise the work that we do as a landowner on our property to manage excess water. Mostly water from farms drains into wetlands, streams, rivers and the sea rather than to any council land drainage infrastructure. We are responsible for managing our water ways, drains and wetlands to standards set out by rules from fresh water management and rules that will be coming indigenous biodiversity. This includes considerable spending on fencing, riparian planting, sediment management, etc, all of which we are to meet at our own cost.

We as a family spray and maintain the drains and roadsides to allow the water to flow down the drain without causing erosion to the roading.

This proposal should not proceed. Please think again for the sake of the rural community.

Yours sincerely

The Kay-Shannon Farm.  
Hamish and Diane Kay.  
Steven and Tammy Shannon.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Gay **Last name:** Johns

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

Overall, I think the proposed spending is alright however, I am concerned with the costs associated with "Internal Services" in particular, Secretariat and Advice to elected members. I would like council to find ways of reducing costs in this area.

1.2 Rates

I think that this is reasonable.

1.3 Proposed changes to existing rates, and new targeted rates

I would definitely like to see people charged for water who exceed more than 700 litres per day.

I would like to see Water Bottling Plants banned. CCC banned fracking in 2011/2012, so why not water bottling? I think that it's imperative that all of the wasted water from broken, damaged, leaking pipes being fixed is a priority. It seems very short-sighted that we are experiencing water shortages in Summer yet both, Water Bottling and water is lost due to not attending to the wastage occurring due to broken or leakage from pipes.

1.4 Investing in upgrading and protecting our city's water networks

Absolutely - it's a must do. As mentioned earlier - wastewater entering our waterways should be avoided at all costs.

Our rivers need to be cleaned up and made healthy again. Identifying the issues of waste water invading our

rivers should not be ignored.

1.5 Investing in our transport infrastructure

I think you have identified some promising projects and I too, am conscious of the carbon emissions.

1.6 Rubbish, recycling and organics

Refuse & Recycling: I would like to see Landfills become a thing of the past and invest in zero waste alternatives such as Waste to Energy plant like Copenhagen, Denmark. It is not ok, in my opinion, that we still think that it is ok to use land to bury our waste under with our wide knowledge of how land and water resources are contaminated by such acts. Large amounts of money, land, transport, resources and infrastructure is spent and this will continue to increase. I think this needs to stop and I would like to see investment in more sustainable, responsible solutions investigated and instigated.

1.11 Potential disposal of surplus Council-owned properties  
I agree - sell them if they are of no use to the council.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Anthea **Last name:** Madill

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I believe the Council needs to integrate the Climate Change Strategy and Waste Minimisation plan better into the long term plan. We need to be recognising the fact that these things are all intertwined and I feel like the Council needs to make sure all the goals presented are in line with the overall strategy.

1.5 Investing in our transport infrastructure

I think the transport infrastructure should be viewed through the lens of the Climate Change Strategy and acknowledge the importance of public transport and cycle ways. While the support from council for Electric Vehicles in the city is great, the plan should not be to shift everyone from petrol cars to electric cars. Behaviour change and education is important for residents to understand the environmental impact of transport. There are already campaigns and resources on this available through things like EECA (Gen Less) etc.

1.6 Rubbish, recycling and organics

I support investment in recycling and organics facilities in order to divert more waste from landfill.

1.7 Our facilities

The city libraries are probably the most successful positive interface between the council and the community. By seeking to cost-cut by reducing hours and getting rid of mobile services feels like a detrimental decision on part of the council - the libraries are an important avenue for the Council to engage ratepayers and communicate important information.

Tūranga supported by the network of libraries and the services run in and from them are a defining positive feature of our city. Something to be proud of not something to quietly and progressively undercut and undermine.

1.11 Potential disposal of surplus Council-owned properties

If these properties must be disposed of, I submit that **they should** only **be sold to bona fide NOT FOR PROFIT ORGANISATIONS WITH CHARITABLE PURPOSES** and with a proven track record. Or gifted to such organisations, and a ground lease arrangement be entered into.

### Attached Documents

| File                      |
|---------------------------|
| S Clare LTPCCC submission |

Tēnā koe,

Thank you for reading my submission and for the opportunity to contribute. I will try to be brief!

**I support the following:**

- Expanding and funding cycle networks, Coastal pathway, cycleways and networks etc.
- Targeted rate for Arts Centre
- Heritage targeted rate
- Keep funding Life in Vacant Spaces, Gap Filler and Green Lab (not sure if this was proposed or not)
- Investment in stormwater infrastructure, drinking water, surface water and waterways quality. (We need to immediately reduce nitrates in our water coming from nearby farming, this is dangerous for public health and our environment.)
- I support the proposed water charge. This needs to be passed on to farmers also as they're currently using far too much water with high stock level farming which is depleting our waterways, polluting our rivers and water tables, and causing high emissions in our climate.
- The ecological and environmental investments, such as tree planting. Planting natives and food bearing plants too please.
- Rates for those who have vacant spaces in our central chch who are stalling on doing something with their land that contributes positively to the entertainment and wellbeing of people/the environment. Plus make it easier for those starting businesses by offering them support, plus not being near a vacant lot will help with foot-traffic.

**Things I would like changed:**

- Do not go ahead with Tarra airport, we are in a climate emergency and this is a totally irresponsible move. Plus it doesn't benefit me as a Christchurch rate payer.
- Trialling participatory democracy and budgeting to help with community empowerment and engagement. Cities such as New York, Chicago, and Paris have all adopted participatory budgeting in some form, and all of them have seen significant engagement from people who would not normally care enough to become involved in local politics.
- Get going asap on the local connections cycle infrastructure. This is really important for our communities and reducing unnecessary car trips. So important (re: climate change and wellbeing). Plus fix up any danger/accident areas.
- I would love the Avon-Otakaro cycleway to get going, I ride my bike from Richmond (along River road) into town and although it's pretty riding beside the river, the roads haven't been repaired since the earthquakes so it's pretty rough going. I'd love river road to be turned into a smooth cycle way.
- I do not support uniform rates charges this is a regressive taxation that over burdens poorer people which is unfair and unjust. Let the rates progressive so that wealthier households, who won't notice it, pay more than poorer households. I support rates based on land value rather than on capital value.
- I would like the roads to be resurfaced faster and kept to a higher standard, if we keep on top of maintenance it's cheaper in the long run.

- Keep the Riccarton bus lounges. This will support use of public transport (re: climate emergency) and offer peace of mind for those who are more vulnerable in our communities by having a more secure, well-lit place to wait.
- Do not reduce hours at Tūranga, this is an amazing place and great resource to have.
- Keep the mobile book library, this is a cheap and important service for those with mobility challenges. For connection, wellbeing, learning, mental health etc.
- Stronger investment in making our city safer for walking, including more safe crossing points.
- Removal of the LGOIMA request fees as they act as a deterrent to engagement and transparency between council and citizens.
- Live streaming of all meetings including community board, committee, subcommittee, working groups, etc to help with civic engagement and accessibility. On this note, please improve your website as currently finding out about meetings is unduly complicated, you need to know what you're looking for to find anything. I'd love it to be easy to know what's happening in your community/city and what you can attend through an interactive guide/prompting tool.
- I would like a pedestrian/cycle crossing installed on Hills road by Edgeware road. I think the addition of a roundabout or traffic lights would be good to. As a cyclist I end up waiting on the side of the road to cross for up to 5mins. I then have to stand in the very vulnerable pedestrian island with my bike to cross completely, this feels unsafe. I also notice drivers get very impatient at these intersections and take risks here too.

## Overall

In summary, I want the council to emphasise funding projects that reduce the acceleration of climate change and biodiversity loss and help us to adapt to future climate change predictions (heavier rainfall, drought/water storage, flooding, etc).

Also creating a city that puts people, not cars first. Our mental health is one of the worst in Aotearoa. I support spaces that increase our ability to enjoy nature, have spontaneous interactions with our community, and move our bodies (in a safe environment).

Ngā mihi nui,

Selina.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.7 Our facilities

I strongly disagree to the proposed changes to the operation of Christchurch Art Gallery Te Puna o Waiwhetū. The Gallery remains a unique location in the Christchurch central area during their late night opening times, and is a drawcard into town for that reason. Their public programming too encourages engagement with art in a way that is unique for Christchurch, and supports the practice of emerging artists.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

In general we are happy to accept a 5% rates increase to allow maintenance/infrastructure to be kept up to date so that there is no delayed costs to burden our future generations.

#### 1.3 Proposed changes to existing rates, and new targeted rates

Rather than having user Water overuse Charges we request priorities fixing the Leaking pipes to reduce the current 20% loss and provide an education programme on value of economical water use and savings, including onsite capturing of rain water for storage

#### 1.7 Our facilities

SNN is against Library hours being reduced and are concerned that this will eventually lead to closures. Community Libraries such as our Spreydon Library are vital for the Elderly and as a resource for the Children in our area.

### Feedback

1.1 Have we got the game plan right?

I would be very saddened if the Wharenui Swimming Pool was decommissioned- I have swam at the pool at different times for over 30 years and regularly over the past 5 years. The reason I like Wharenui Pool is that has such a real community feel, there is a sense of being part of the swimming group, and everyone is warm and welcoming. It offers more than just an opportunity to swim to all age groups - from children and school groups to the older population swimming for health concerns. There is a very relaxed atmosphere to the pool, it feels like a safe place to go and exercise, and exudes a sense of belonging. I am a clinical psychologist and work mainly with women who have histories of sexual trauma and it is this pool I recommend they try as a place to exercise safely and with respect - this atmosphere is not available at the bigger pools that are impersonal and without that sense of caring for everyone.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.4 Investing in upgrading and protecting our city's water networks

its very disappointing that the water is still being treated when the original idea sold to us residents was that the treatment was only required for a few months! Now its just been swept out of the media and no more effort is being made to get ChCh water back to what it used to be. If a rates increase means more effort goes into protecting the waterways and our drinking water, then I am happy to pay it. But there needs to be visible effort made.

1.11 Potential disposal of surplus Council-owned properties

This submission to the draft Long Term Plan concerns the proposed fast track disposal of two parcels of land:

- 27 Hunters Rd (Record of Title CB12F/538, 38.96ha),
- 42 Whero Avenue (Record of Title CB452/50, 1.18ha)

The Council has notified in its draft Long-term Plan (LTP) that it intends to dispose of the land between the current Diamond Harbour housing and Bay View Road, without further consultation (other than LTP submissions). Many residents live adjacent to the land or use the land. As well as the current sheep grazing, it contains Morgan and Sams gullies where many locals have spent time restoring the vegetation. The gullies have not yet been protected by covenants (long-term they should become reserves).

**Requested changes to the draft Long-term Plan:**

1. The two pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan.
2. Thorough community consultation must be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.
3. Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not just be made by Council staff.
4. The following matters should be considered, as a minimum, if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process:

- a. Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to lead to conflicts with community usage and aspirations.
- b. The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea Road, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles.
  - c. Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.
  - d. If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.
  - e. If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner.
  - f. The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?
  - g. The subdivisions will add further pressure on road infrastructure and public transport requirements. What are the plans to align capital plans and public transport expansion with the expected increase in population. The roads are in bad repair and dangerous, who will pay for the required improvements and capacity upgrades?
  - h. Should all the land be sold (privatised) at one time? Would a staged housing development be better for the community?
  - i. Different use options for the land need to be considered not just a sale to a housing developer. Should some parts of the land be released for residential development and other parts held for other uses? Should the Council consider the needs of the community for special types of housing e.g. catering for older or younger people looking for smaller units?

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Jayson **Last name:** McRoberts

**Organisation name, if you are submitting on behalf of the organisation:**

Suburbs RFC

**Your role in the organisation:** Club President

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.11 Potential disposal of surplus Council-owned properties

I would like to submit my complete support of the possibility to have the Coronation Hall gifted to the Suburbs Rugby Football Club Inc. This would effectively be used as clubrooms but our intention is also to provide usable space to other community groups whenever required and possible. We believe in our strategic plan for the future and the gifting of the Coronation Hall would provide us with a solid platform from which to work off.

Many thanks, Jayson

### Feedback

#### 1.7 Our facilities

I believe investment in playing fields is a must, particularly in eastern side grounds which have deteriorated markedly over the past 10 years. It is very frustrating to see how good the fields are on the western side of the City, and the East continues to be neglected.

Is it fair that playing fields should be unusable over reasonable periods of the year, due to poor quality irrigation, and a desire for CCC to reduce water usage? If it is not possible to replace the fields, at least we should expect functioning irrigation and a reasonable level of water to make the fields usable and safe to play sport on.

It defies logic for the CCC to re-sew and core grounds in Spring, but then not water the grounds efficiently to give the seed a chance to germinate?

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

All the new projects should be put on hold to let people recover from the pandemic. New stadiums, recreation facilities etc. are not the priority at the moment. Concentrate on the maintaining essentials, but put on hold all the new high cost projects.

1.2 Rates

I think it's a huge increase for an average citizen. Proposed increase rate is too high. Average pay increase is 2-3% a year, so how do you expect people to be able to afford to pay 4-5% rates increase. Plus so many people have lost jobs or have their hours reduced with Covid-19. As we live in Christchurch that has been through so many terrible events that people are still recovering from, it would be nice to see compassion and humanity from the Council not just pure financial calculations.

1.3 Proposed changes to existing rates, and new targeted rates

Completely against water rates for households that use more than 700 liters a day. So let's target all the big families and Maori and Pacifica people that culturally live together. If you have family of 6 or more people of course you're going to use more water. How does it comply with health advise - wash your hands as often as possible, if now people going to be scared to exceed their water limit?

When do you start target water bottling companies that pay nothing for using New Zealand water to send it overseas? Or farmers that constantly water their fields? If they make profit, put a limit on them not ordinary people that just trying to stay healthy and safe.

1.4 Investing in upgrading and protecting our city's water networks

I would like to see Christchurch water without chlorine and fluoride added.

1.5 Investing in our transport infrastructure

Council spends ridiculous amount of money on bicycle lanes, not many people use them. Put money into fixing roads not cycle lanes.

1.6 Rubbish, recycling and organics

Happy with the proposed changes.

1.7 Our facilities

Not agree with reducing library hours and closing mobile library. Libraries are the only place where everyone can feel safe without discrimination. It's also the only service that Council provides without charge for people. While all other Councils (Selwyn and Auckland) are getting rid of overdue fees to grow the membership, CCC decides to make it very hard for people to visit libraries. Closing at 6pm will cut off a huge amount of working population from library services. Libraries are not for making money, shame on you Council for not realising it.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No  
Comments  
Supporting The Arts Centre is not a priority at the moment.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments  
Not important at the moment.

1.11 Potential disposal of surplus Council-owned properties

Yes, it's time to dispose of them.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.1 Have we got the game plan right?

Basically ok but the issue of selling off council land, particularly in Diamond Harbour needs further community consultation and absolutely should not be part of the LTP. Also the mobile library should not be sacrificed.

#### 1.2 Rates

While this may be a stretch for some poorer house owners and indeed push up rental costs which are of concern there doesn't seem to be many alternatives, perhaps again making rates on more expensive properties rise faster than those in lower socio-economic areas would be beneficial.

#### 1.3 Proposed changes to existing rates, and new targeted rates

I am not in favour of having targeted rates for heritage buildings if it creates more administrative costs. If there was the option to opt out of assisting with heritage funding (even if it was only for low income residents) then there would be a point. I agree with charging targeted rates for households using large amounts of water but only if it yields a net income once administrative and monitoring costs are taken into account.

#### 1.4 Investing in upgrading and protecting our city's water networks

That seems like a lot but we do want clean water and effective drainage.

#### 1.5 Investing in our transport infrastructure

Transport is important. The roads infrastructure for cars is still not good especially heading from Christchurch to Diamond Harbour. While I think cycleways are a positive they need careful community consultation. In my area the constant small roadworks plus the large Dyers Pass works has led to a lot of increase in commuting time but with very little perceived enhancement. The idea of increasing the population in our area with more traffic is frightening with the narrow winding roads, poor visibility on many corners and driveways and little real change to this part of our infrastructure. Cyclists on Dyers Pass continue to be a danger to everyone but mostly the cyclists are at risk. A separate area for cyclists whether inside the adventure park or elsewhere is needed to keep these cyclist off this narrow road - unless it can effectively widened with a designated cycle lane.

#### 1.6 Rubbish, recycling and organics

Balance is right

## 1.7 Our facilities

The mobile bus library should continue as this provides a service which is hard to return once lost and serves people with mobility issues in a city with frankly poor public transport. Money should be invested into arts and libraries.

I would love to see the sound management in the community hall in Diamond Harbour brought forward into a council annual plan sooner as I believe it would make the hall more useful for more groups and would therefore generate more income too.

## 1.8 Our heritage, foreshore and parks

I would rather investment in foreshore and parks than in spending large sums on a few heritage buildings. There is value in some buildings but the cost is prohibitive in maintaining so many buildings.

## 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

### Comments

I would hope there could be compromise between some public funds being supplied but then those using the facility or fundraising providing the balance as many residents rarely use this area.

## 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

### Comments

I simply can't seem to find enough information on what this really means and what the alternatives could be but I am committed to having a public art gallery which is able to be utilized by as much of the community as possible.

## 1.11 Potential disposal of surplus Council-owned properties

Once disposed of these properties will never be able to be regained. The properties in Christchurch seem to be small areas - 1-5 sections of land scattered across a large city. however in Diamond Harbour there is a proposal to sell a large section of land (in 2 areas) that potentially could radically change Diamond Harbour without any further consultation or community board input. This should not be in the Long Term Plan. I strongly disagree with disposal for this land in this way. Before any sale is even proposed the gullies should become reserves. The community has planted many native trees and developed a walkway to the school which is frequently used and enables both young and old to be out in nature as they move around the community and away from the narrow winding streets which have inadequate footpaths. The main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for. Sam's and Morgan's gullies have not yet been protected by covenants (long-term they should become reserves).

If this land is sold, there should be ongoing community consultation regarding its development and the required infrastructure. Already in this area the Black Point subdivision sale was completed without appropriate community consultation and has left the community without a beachside reserve nor easy access.

I want the land as described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) removed from the LTP and fast track disposal. The normal process for disposal of land that would require Community Board and public consultation, should be used instead. I believe that the current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation). Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not just be made by Council staff.

The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process.

These issues include the protection of the Gullies mentioned above and it should be recognised that even if

they are protected by covenants the long-term ownership by a land developer is likely to lead to lead to conflicts with community usage and aspirations. Other issues include that the boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea Road, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles. If there are houses built which seems the natural development for this area if sold without further consultation, the school roll is likely to increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.

If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner. The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. There will need to be coverage of costs for a significant upgrade the system to cope with the many houses that can be placed on the land and the community would not be best served by a single sale of this area and development but a staged development would allow the community to adapt. Again this would be much better done through community consultation rather than being part of the long term plan. This consultation could also address whether it would be better to have some parts of the land be used for residential development while other parts held for other uses, and the Council consider the needs of the community for special types of housing e.g. catering for older or younger people looking for smaller units, rather than simply leaving it to developers.

So in summary I strongly oppose the disposal of land in Diamond Harbour being part of the long term plan.

1.12 Any other comments:

Land disposal should not be part of the LTP as it does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation).

**Submission Date:** 18/04/2021

**First name:** Roger **Last name:** Welsh

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

1 Climate Change

---

I want to see a comprehensive plan (including investments) for how we will reduce our emissions to zero, transparency on how we plan to adapt to a changed climate, and what the tangible climate-risks anticipated by the council are.

Overall, the climate change sections of this report appear to focus more on climate adaptation rather than mitigation. We need more active transparency and divestment from carbon-polluting investments and projects. We need a plan for Christchurch to positively contribute to towards carbon-capture, carbon-sinks and mitigating climate change, as well as reducing our own emissions to zero. We also need systems in place that are able to rapidly respond to changing information around the climate, science around nitrates and deteriorating water-quality.

2 More Trees, cooler city

---

I propose we plan for integrating our city with nature, to promote biodiversity, and provide natural solutions that will enhance community climate resilience. [1]

Trees are an important climate mitigation strategy, because they can significantly cool neighbourhood streets in the summer, this would reduce air-conditioning costs and build resilience to adverse weather events. This would be particularly important in poorer neighbourhoods, where the air-conditioning would be cost-prohibitive and could induce heat-stress.

3 Biodiversity

---

I propose funding should not be reduced for community groups and projects which are known to offset carbon emissions, and enhance biodiversity.

It appears that funding to community groups, including Sustainability and Biodiversity initiatives will be cut by 5% across the board. We

are also not only in a climate crisis, but a biodiversity crisis. We cannot afford to cut funding on critical issues, such as biodiversity and sustainability initiatives.

4 Mobile Library 3.1.2.4 Proposed for Deletion

I propose that the mobile library be re-instated with reduced hours, rather than a cancellation of the service.

The mobile library is important for providing library access for members of the community that otherwise would be disadvantaged or unable to access regular library services. Even though there is declining service at regular service stops, that does not necessarily mean that use of the service itself should be reduced or stopped. Rather, it suggests to me that the service is not targeting or marketing to disadvantaged communities effectively. Particularly, after the COVID-19 pandemic, I think it is important to maintain services that facilitate community participation and reduce isolation.

5 Tarras Airport Construction

I propose we divest from Tarras Airport, or discourage Christchurch Airport from continuing with this project.

Christchurch Airport is 75 per cent owned by Christchurch City Holdings Limited – the commercial arm of Christchurch City Council. In 2019, the Council declared a climate emergency, yet Christchurch Airport (which Christchurch City Holdings Limited owns a 75% share in) has declared that they will build another airport in Central Otago. We cannot afford to invest in further growth of the aviation industry during this climate crisis. Commercial flights in Christchurch already account for 11.4% of greenhouse gas emissions[2]. Countless studies indicate that electric vehicles produce significantly more CO2 than combustion counterparts during the manufacturing phase. We need a reduction in aviation transport, and should not be investing in growth in this industry until the Climate Crisis has reached a resolution. We cannot afford to invest in green-washed job schemes any longer.

Footnotes

[1] I.e. The Christchurch City Council should plant more trees as a climate resilience strategy.

[2] 2018/2019 GHG report

1.7 Our facilities

### Feedback

1.1 Have we got the game plan right?

**Land disposal** diamond harbour both 27 Hunters road and 42 Whero avenue should be, if locally acceptable and reasonable, only following full community and community board consultation and input.

Put right the city council inspired 'fiasco' surrounding the removal of **Godley house**, the illegal rezoning of the site as a reserve and pay attention to community representations to replace the former hotel with something similar...not an unreasonable demand as nothing new but just what was there before!

Greater attention to **foreshore access**-(i) in particular from diamond harbour to camp bay and (ii) at least develop a means of kayak access to the foreshore from the public road leading into little pigeon bay (better still beach access for all but that's a significant step and likely to take many years.

Use **stormwater and reservoirs for recreational use such as fishing**.

1.4 Investing in upgrading and protecting our city's water networks

Whilst upgrading, which i agree is both urgent and necessary, we should have a **focus on recreational use of reservoirs including storm water area's for public use such as fishing**. The rest of the world utilises such area's for freshwater fishing and we should too. This would offset the current disappearance of local fisheries thru pollution / water extraction and provide a facility for city dwellers to use recreationally. It's not costly or difficult. We have currently a range of storm water area's, add reservoirs and simply stock with fish such as grass carp to control weeds, do not breed and provide anglers with sport particularly children and pensioners. When was the last time you saw a kid fishing in Christchurch? Happy to discuss further.

### 1.5 Investing in our transport infrastructure

Less emphasis on cycle ways in the city as not in keeping with the changing nature of christchurch where the suburbs and satellite towns are taking over and making the city less attractive to inner city living meaning less cycle traffic and in any case, based on current attempts by inexperienced planners, cycle ways at best unsafe / poorly planned.

Create (i) **more no traffic zones** - accepting that the square will not realistically be used for at least another 10- probably 15 years (ii) **Light rail** (airport to city) and **utilise current rail** (city to lyttelton / Rangiora). Cars will revert to zero emission electric vehicles and **electric vehicles still need area's to park/re-charge!**

### 1.6 Rubbish, recycling and organics

Make larger green waste skips available-small charge would be acceptable

### 1.7 Our facilities

Put right the city council inspired 'fiasco' surrounding the removal of **Godley house**, the illegal rezoning of the site as a reserve and pay attention to community representations to replace the former hotel with something similar...not an unreasonable demand as nothing new but just what was there before!

### 1.8 Our heritage, foreshore and parks

1. Put right the city council inspired 'fiasco' surrounding the removal of Godley house, the illegal rezoning of the site as a reserve and pay attention to community representations to replace the former hotel with something similar...not an unreasonable demand as nothing new but just what was there before!

2. Greater attention to foreshore access-(i) in particular from diamond harbour to camp bay and (ii) at least develop a means of kayak access to the foreshore from the public road leading into little pigeon bay (better still beach access for all but that's a significant step and likely to take many years.

### Feedback

#### 1.7 Our facilities

Kia ora. My name is Josiah Morgan. I run a theatre company and I am writing this submission on the Christchurch City Council's long term plan to express my strong support for the proposed time frame and expenditure on the Performing Arts Precinct anchor project.

While delivery of major anchor projects such as Te Pae convention centre and the Metro Sports Facility have taken priority during the rebuild of the central city, it is time to invest in facilities which will bring new creative vibrancy to the city. I support this project because I am a working artist in Christchurch, and I believe that this is beneficial for Christchurch. The area north of the square where the Performing Arts Precinct is proposed to be built is currently underdeveloped, and this will help to transform the area into an exciting cultural hub, sitting alongside Tūranga library.

The proposed expenditure of \$34,762,529 on the Precinct itself and \$1,500,000 on public space around it are a small price to pay for the benefits this will bring to the city. I also strongly support the proposed time frame of construction between 2022 and 2025.

Leaving construction any later will result in a continued loss of creative talent to other parts of New Zealand and overseas. I support the proposed rates changes and rise, as they are essential for paying for this important project.

Thank you very much for your time in reading this submission. Ngā mihi.

**Submission on CCC 10-year plan 2021 – 2031**

**PROPOSED RATE POLICY CHANGES to**

**LAND DRAINAGE TARGETED RATE**

**Name:** D G Foster, for D&P Foster Family Trust.

**Address:** .

**Location, description, ownership:** Our property is a 10-acre holding situated on the floor of Lansdowne Valley, stocking sheep. We have lived here 50 years and have close familiarity with historical issues relating to the principles and practices of drainage in the catchment serviced by the Halswell River.

**Concern with Proposal:** The proposed change to the Land Drainage Targeted Rate is based on a superficial rationale of convenience and lacks credibility or recognition of historical and legal precedent in relation to drainage obligations and responsibility. **We reject the concept and require CCC to administer rates in accordance with historical and legal precedent concerning stormwater drainage issues.**

**Background:** Council will be aware that the Halswell River has limited capacity to effectively drain first-flush stormwater run-off from developed land in its catchment. It is worth quoting the conclusion from a report dated 3/12/2008 by R J Vesey, the Regional Engineer for the Canterbury Regional Council in relation to a consent application CRC074090 by Freyberg Developments Limited to discharge water, since it effectively summarises the principles relating to discharge of water to the Halswell drainage system

*....the Halswell drainage system does not have capacity to accept increased volumes of water without adversely affecting its performance and adding to the already present flooding experienced by landowners in the catchment.*

*All consents granted for discharges onto the Halswell drainage system should as a minimum require the applicant to fully store and manage the discharge of water so that it does not increase the flow regime in any manner downstream from the discharge point.*

*Conditions should be set to ensure that the area of hard surfacing, including buildings, will not be extended in the future and that any future extensions would require a proportional increase in the detention storage capacity.*

*Unless that approach is followed decision makers are faced with determining which of the applications will be the straw that breaks the camel's back.*

*Any consents granted should have conditions to ensure that the discharge of water does not cause scour of the downstream waterway/drain inverts or erosion of the banks, and that the consent holder should be responsible for the costs of any remedial works at the sites of erosion and deposition.*

This conclusion summarises the common law equitable principles of obligation, and responsibility for bearing drainage cost of further development in the Halswell drainage system, or for that matter, any drainage system. Contrary to the claims made to support the proposed change in rating, it is not hard to apply. By way of example and sticking with the Halswell catchment since that is our area, if a developer wishes to create a new settlement that drains to the Halswell River, it will be required to engineer a system that retains first flush stormwater in accordance with certain engineered specifications that fully mitigate its impact on the Halswell drainage system. The associated costs are those they must bear in order that their project does not disadvantage other landowners in the catchment. If they judge the costs to establish and service these systems are too high, then their common sense response should be to develop or build in an area that can avoid those costs, for example, at Rolleston. The argument that everyone benefits from the development

is tenuous and unsustainable. For example, we rarely go into the city – we are more likely to go to Lincoln. Indeed, there is a case that can be made that the territorial boundary that runs down Early Valley Road between the city and Selwyn counties should run down Kennedy's Bush Road so that Lansdowne Valley is situated in the Selwyn district. Logically the rationale used to justify the proposed rating policy could be applied to any visitor from any other place to Christchurch who benefits from the city not been in a state of flood. The historical and common law principles that have applied to drainage must be retained and upheld.

**Drainage in Lansdowne Valley.** Lansdowne Valley has a large catchment area in excess of 1000 Ha. Jones Creek runs from the Eastern end down the length of the valley, and adjacent to Old Tai Tapu Road, Minson's Drain (maintained by ECan) drains the floor of the valley into Jones Creek which flows into the Halswell River. When the Halswell River is running at maximum capacity, its level can exceed the level of the valley floor and flooding can occur until the river drops. We on the valley floor understand that. It is not cost effective to expect a drainage system to overcome that problem, and we have never asked for it. What we on the valley floor insist on is that development of land since ECan's acknowledgement (above) that the Halswell drainage system was at full capacity must fully mitigate its stormwater effects and that cost must be met by those who require that development. If they are not prepared to meet those costs, then the sensible outcome is that the development will not proceed in that area. As noted above, the valley drainage is effected by ECan. The road drains on our section of road are not effective and have never to my knowledge been maintained by CCC. We understand CCC is involved in drainage schemes to deal with new development, related to the common law obligation for it not to worsen the position of existing landowners, and we expect no more, since no cost- effective scheme will avert periodic flooding in our valley, but we absolutely expect any development not to worsen our situation.

**Conclusion:** We understand the continual demand for land development, but cost should be one of the basic criteria that helps determine where that development should occur. If development is allowed in areas with prohibitive drainage costs, then those costs should be met by those who insist on developing there. Why should they be subsidised by other landowners? If the costs are unacceptable a more sensible location and outcome is likely. The proposed change in drainage rating policy is not equitable as claimed, nor sensible or justifiable. It has little merit other than as an expedient to spread a growing cost arising from inefficient development decisions. It should be rejected outright.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I think the priorities have been identified well.

The current road works to create a safer cycling network is a fantastic step forward despite the protests. With the ever increasing focus on the environment particularly from the youth, cycle ways are extremely important for the well being of the population & environment. Hand in hand with this development is the Avon green belt - city to sea. What a fantastic opportunity we have to future proof a green city.

1.2 Rates

I agree,

1.3 Proposed changes to existing rates, and new targeted rates

It seems very complicated but a system that charges for the amount used would be fair. Transparency is paramount.

1.4 Investing in upgrading and protecting our city's water networks

Yes

1.5 Investing in our transport infrastructure

See my opening comment on cycle ways.

This is a top priority.

1.6 Rubbish, recycling and organics

Yes

1.8 Our heritage, foreshore and parks

We have lost so much through hurried decisions by Government (Mr. Brownlee) so recognition of the importance of heritage & a long a term plan to preserve this is good foresight. 11% spend is good.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I would like to see more priority given to a pedestrian friendly city. More investment in active transport options such as walking and cycling. Making our streets safer by having better lighting. Making the cycle lanes safer by separating them from the cars. Repairing foot paths.

Less investment in projects that are costly and that their benefit is questionable, like the stadium. By cancelling this project the city can have a lot of money to provide many services to the entire community for a very long time.

1.3 Proposed changes to existing rates, and new targeted rates

The excess water targeted rate is problematic. How is the water allowance figure calculated? Is this an allowance by property size or by number of people living in the household? This can have a negative effect on larger families or multi occupants households.

A higher rate for vacant land is required. This will stop the practice of land banking and be an incentive to develop that land.

1.5 Investing in our transport infrastructure

More investment in safe active transport options and in public transport. Less investment in car parks.

1.7 Our facilities

If we want to see more people use public transport it makes no sense to CLOSE a bus lounge. Work with Ecan and INCREASE the level of bus services. It is the only way to have more people use the bus.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

## Feedback

1.1 Have we got the game plan right?

No, You need to take a step back and look at what you are throwing money at. You are not listening to the ratepayers.

Quit throwing cash at the 'nice to have' things and focus on the basics

1.2 Rates

Horrible. Very out of touch with life and think that us ratepayers have constant cashflow.

We cannot keep up with these constant increases..... especially when you go throw money on unnecessary rubbish

1.3 Proposed changes to existing rates, and new targeted rates

No. Household usage proposed is LOWER than the average family per person per day. For example - we have 5 in our household - Average of 200L per day each = 1000L per day. This is unfair targeting on bigger families.

1.4 Investing in upgrading and protecting our city's water networks

Yes. However if the water network had been maintained over the years it would not have come to this!

1.5 Investing in our transport infrastructure

Biking and busing are not always the best / easiest mode of transport for many. Less money on some cycle ways!

Speed calming measures!

1.7 Our facilities

Sad to see places that bring communities together not being a priority of the CCC

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

Not a "need". Money should be reserved for the things CHCH needs

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No

Comments  
Yet again not something we need. Focus on the "needs"

1.11 Potential disposal of surplus Council-owned properties  
Makes sense

1.12 Any other comments:

Speed calming measures need to be implemented in many many areas

Haswell is RAPIDLY growing so more \$ needs to be spent on that

Time CCC spent time to listening to the ratepayers.

Stop spending money the city doesn't have on things the city does not need

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I would see more community support in terms of cultural requirements, need cultural awareness in teh community. I see less resource available

1.2 Rates

DUe to covid 19 , lots of rate payers are struggling to keep up to the rate. I would like to see that rates are spread across next 10 years. Non profit organisation should be given some rate rebate. again each case needs too be examined the type of activity.

1.3 Proposed changes to existing rates, and new targeted rates

I would like to see more focus on communities get rebate (eg culturally )

1.4 Investing in upgrading and protecting our city's water networks

More upgarde is need after earthquake repairs and increase in popoluation pushing pressure on our current resources.

1.5 Investing in our transport infrastructure

Transport is the biggest sector we need to focus. More upgrade to better roading , public transport. Rail should be looked at option between city - Airport.

Parking will be a major issues in city when the new stadium gets started.

1.6 Rubbish, recycling and organics

More focus is needed in our waste , as population will grow in next 10 years.

1.7 Our facilities

I think its a good idea to dispose some of the council assets to be better utilised by the self managed community. We as a cultural community want to see bit of more relaxed to the current rules fo rteh use of community facility. (eg restricted hours, booking space, more towards cultural activities)

1.8 Our heritage, foreshore and parks  
I belive we should keep our heritage and focus more on parks and for community use.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
No  
Comments  
No need to further fund the Arts Centre, as its already had been maintained to the award standard.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No  
Comments  
Funds need to divert to better use for growing cultural activities

1.11 Potential disposal of surplus Council-owned properties  
I total agree that council should disposed some propoerties which can be utilized better for community purpose. Properties which have been seen sitting vacant from earthquake needs beter ulitised such us Community Hall. There are lots of orgnisation looking for halls and its good idea that council dispose this and this then can be runned by private orgainsation.

1.12 Any other comments:  
  
I believe council needs to put more effort in our growing cultural events and engage different ethnic groups and developpe a more multi cultural awareness.  
  
More focus on migration of different culture in a city that proudly being support by this council.

Subject: FW: Our discussion  
Attachments: TISI CHRISTCHURCH SANGAM.docx

Hi Paul and Gary,

Further to our discussion regarding the Hall as per council disposal list, please find our proposal attached.

We would like the two properties :

- 524 Pound Road, Yaldhurst Memorial Hall
- 2 sparks Rd, Centennial Hall.
- or any other properties that will fit our purpose (last option is a vacant land)

I am more than happy to have further discussion if it requires

Again thanks for the time on Friday and look forward to hearing from you.

Also I have submitted the proposal online.

Regards

Ashwin

\*\*\*\*\*

**TISI CHRISTCHURCH SANGAM (SI) INCORPORATED**

TO: CHRISTCHURCH CITY COUNCIL.

ATTENTION:

**RE: POTENTIALLY DISPOSED COUNCIL OWNED PROPERTIES: –YALDHURST MEMORIAL HALL – 524 POUNDS RD – SEC 6 SO 448090**

Further to our discussion, we TISI Christchurch a Fiji Indian organisation with over 500 members would like to submit the following:

- We would like to lease the land & building from council
- Repair the building to bring to required standard.
- Our members will use 70% and 30 % can be given to other community groups. We will book for all cultural programmes in advance and allocate any other time for other groups.
- We can work with the current Yaldhurst community group to reserve the heritage of the building.
- Hall will be used as a temple to promote our culture to our growing community
- Cultural events such as dancing, singing and other programmes will be held at the hall
- Hall will not permit any alcohol for any hire.
- Hall will later be used for day care for our ageing members to socialise, meetings etc.
- Hall will be available for anyone to use provided its within our guideline
- Hall for cultural weddings

We would be very grateful if council could assist our group with our proposal.

Look forward to hear

Regards

Ashwin Mani

## Feedback

### 1.3 Proposed changes to existing rates, and new targeted rates

#### Rates Remission Policy

This submission is made on behalf of Oxford Terrace Baptist Church, Breezes Road Baptist Church, Linwood Baptist Church, Canterbury Westland Baptist Association who all own properties under the Baptist Union of New Zealand and currently receive rates remissions. The purpose of this submission is to make comment on the Rates Remission Policy contained in the Christchurch City Council's proposed *Long Term Plan 2021-2031*.

The proposal to means test based on cash reserves discourages good financial management by NFPs and creates a disincentive for such organisations to maintain a healthy financial positions which will enable them to guarantee the ongoing performance of their community service activities in future years. It will also disproportionately target NFP's with lower value assets and higher operational costs as these NFP's are more likely to need to carry higher cash reserves.

We would also ask the question if any research has been done on how much extra rates will be generated through this proposal when compared with the cost of administration incurred by the council to track means testing.

We believe the eligibility for remissions should continue to be based "the organisation's activities provide significant public good".

|------------------------------|
| CCC Submission 18 April 2021 |

Christchurch City Council  
Submission  
Change to Rates Remission Policy  
18<sup>th</sup> April 2021

### **Rates Remission Policy – Not-for-profit community-based organisations**

Knox Church, as a beneficiary of property held by Presbyterian Church Property Trustees, makes this submission to Christchurch City Council on the proposed change to the Rates Remission Policy.  
Property Reference **73105433**

It is important to firstly state that the many charities, such as ours, which benefit from rates remissions provided by the Council (and effectively the ratepayers), are extremely grateful for this support. The rates remission helps us support the provision of critical social activities to our community, and is an important contributor to our financial sustainability. This support for not-for-profits and the recognition of the good they do in the community is appropriate.

#### **Executive Summary:**

The proposed change to the Rates Remission Policy is not supported due to (i) Insufficient Notice, (ii) Lack of Pre-Engagement, (iii) Lack of Information, (iv) Flawed Remission Assessment Criteria, (v) No Cost/Benefit Analysis, and (vi) the Existing Policy is Adequate. This submission provides supporting arguments and information for each of these concerns. Any of these concerns on their own provide justification for the withdrawal or, at the very least, reconsideration in the future in a more robust and fair manner. Collectively, they provide a compelling argument for Council to withdraw the proposal.

#### **Discussion:**

We submit supporting information below, under clear headings, in support of our position:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

#### ***1. Insufficient Notice***

This proposal affects a very large number of charities (including those that must file and disclose additional financial information to continue receiving a remission). Our organisation, like most charities, struggle with a lack of resources (people and funds) to enable ready and prompt access to

those who should be consulted about such an important matter. We therefore consider that insufficient notice has been provided to ensure that charities could appropriately engage in the

submission process. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

## *2. Lack of Pre-Engagement*

We would have expected that any proposal by Council to change the important policies affecting ratepayers, and the effect this would have on the community, would be well researched and that a level of pre-engagement with representatives of those affected would take place to help inform and validate the proposed change. The paper "Background Material on Proposed Changes to Rates for 2021/22" does not provide confirmation that either has taken place and, as outlined below, does not appear to have considered some serious shortcomings of the proposed change. We refer to our first point, and note that expecting charities such as ours to make ourselves informed of such changes without proper pre-engagement is unreasonable. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

## *3. Lack of Information*

The "Background Material on Proposed Changes to Rates for 2021/22", as it relates to this rates remission policy for charities and not-for-profits, is a very brief document and provides little objective information. It is inadequate for any meaningful consultation.

No substantive and objective information has been provided by Council of the supposed issue and how it could be best addressed. For example:

- What are the total remissions each year to charities?
- How many charities does Council consider are 'wealthy' and it views as not needing rates remission?
- How has Council determined that cash and investment balances define "wealth" for charities?
- How has a factor of 50 times the base services rates for which a remission could be received been determined as the appropriate cut-off of eligibility?
- Could some affected charities be forced to reduce the level of their charitable activities due to the loss of the rates remission?
- Has the Council assessed the worth to the community of the services provided by charities that is likely to be lost through this policy? If so, how have they done that?
- Has a cost/benefit analysis been performed that balances the estimate of a \$300k reduction in annual rates remissions to the cost of implementing the proposal?
- How many charities would be unfairly burdened by the additional filing requirements to Council to maintain their rates remissions, in order for Council to cease remissions to (a likely) very few charities?

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

## *4. Flawed Remission Assessment Criteria*

The proposed change to the rates remission eligibility assessment does not show an understanding of how charities are organised and funded. In particular, the use and definition of cash and investments as a proxy for determining whether a charity is 'wealthy' is fundamentally flawed and will cause more harm than intended. We note the following likely unintended consequences, and in doing so have

naturally assumed that the Council recognise that charities provide critical social services to vulnerable members of the community, otherwise they wouldn't be registered charities.

- Not considering the other aspects of a charity's financial position (than just cash and investments), such as liabilities, obligations and liquidity is not consistent with any measure of overall wealth, including those adopted by generally accepted accounting practice.
- Many charities receive funds grants, sponsors and the like in advance of performing key community services. They are therefore reflected as liabilities ("revenue in advance"), so is not discretionary funds held.
- Consistent with the above, many charities (such as ours) incur losses while still retaining cash/investments at a point in time. They live "hand to mouth" trying to preserve a capital base and earn enough income from that base to provide the services they do. This is increasingly more difficult in a low interest rate environment without putting their capital base at more risk.
- The proposal measures wealth via levels of cash and investments, which unfairly discriminates organisations with such assets from those with different income earning assets, such as investment property. i.e. a charity with investment property, earning the same or higher income from that asset as another charity earning income from cash and investment balances, would still be eligible for the rates remission. We consider this is patently inequitable.
- Significantly, many charities (such as ours) depend on bequests and donated funds that are tagged for certain purposes, and can only legally be spent on those purposes. In some cases these funds are received on the basis the capital must be maintained, and only the income from it used for restricted purposes. Having the funds in the bank does not therefore make such a charity "wealthy".

We consider therefore that crudely applying cash and investments as a proxy for whether a charity is wealthy and not deserving/requiring the support of a rates remission is fundamentally flawed. Further, the proposed eligibility criteria will have significantly detrimental consequences for some charities. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

##### *5. No Cost/Benefit Analysis*

The background material does not provide any analysis of the costs of implementation of the changes to this policy. It would be reasonable to expect the appointment of suitably qualified chartered accountants to be able to read and interpret the financial statements being submitted and have sufficient knowledge to make informed decisions about what cash and investments should or should not be included in any calculation. The level of maturity between charities to be able to interpret the rules would be quite variable.

It is also reasonable to expect that there will be increased engagement with charities, on an ongoing basis, over the filing of returns (financial statements) to Council and application of the rates remission eligibility criteria. There will also be additional ancillary costs and associated overheads for this and the financial statement review activity.

There is also the collective burden across all charities receiving rates remissions of filing information, including their financial statements, to Council. The time and cost of this to charities has not been considered in the proposal.

It is fair to reach the conclusion that the cost to Council and affected charities of this policy change would outweigh the estimated (but unsupported) benefit of \$300k plus GST in rates remissions per

annum. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

*6. Existing Policy is Adequate*

There is no discussion in the proposal as to whether the existing Rates Remission Policy is adequate and does not require change to enable Council to reduce or cease rates remissions to charities it reasonably concludes to be wealthy and not requiring such support. Further, the Council paper acknowledges that not making the change will "make it easier for some not-for-profit based organisations to provide more public benefits from their activities". Any change that will make it harder for not-for-profits to provide public benefits is counter to the principle of the remission.

The current policy provides for "Up to 50% remission (of the rates that would be payable if they were fully rateable) on targeted rates for standard water supply, sewerage, and land drainage" (emphasis added) and that the "extent of remission [if any] shall be determined at the absolute discretion of the Council" (emphasis added). The current Council policy already provides sufficient discretion to decline rates remissions to any charity where it deems that support is not warranted.

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

**Submission Date:** 18/04/2021

**First name:** Elizabeth **Last name:** Clarke

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

It sounds ok in principle - would like to know where the efficiencies are coming in.

1.2 Rates

Sounds ok

1.3 Proposed changes to existing rates, and new targeted rates

I do not know what the average amount of water a household currently uses and would like to know that figure before agreeing to the above.

1.4 Investing in upgrading and protecting our city's water networks

This is a lot of money you are asking I agree on with very little information provided. In principle I do agree to improving the city water networks but ask that you also put pressure on Ecan to improve rivers and the flow of water in them.

1.5 Investing in our transport infrastructure

This is a lot of money you are asking I agree on with very little information provided. In principle I do agree to improving the transport networks.

1.6 Rubbish, recycling and organics

It sounds ok.

1.7 Our facilities

I do not agree with any changes in the staffing levels and changing the hours at the libraries, service desks or Art Gallery. I also question the closing of the Riccarton Rd Bus Lounge. I consider that this would be short sighted.

I think the CCC should reduce the number of highly paid middle management in the Council before reducing the number of people who are paid less but doing an important job and supplying an important service on the ground.

1.8 Our heritage, foreshore and parks

Without seeing the full budget both capital and operating budget I cannot comment.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

I strongly support the giving of money from the CCC to the Arts Centre. The Arts Centre has already paid approximately \$200 million to have its' buildings restored so the money being asked of the CCC is a miniscule percentage of the total cost and what the citizens of Christchurch has received is a magnificent multi functional set of safe heritage buildings. It would be churlish not to give them the \$5.5 million.

By contrast - I never agreed to the restoration of the Cathedral - the money the Anglican Church had for its' restoration was never going to cover a large percentage of the cost of restoration but that decision was taken out of the hands of the Christchurch rate payers and citizens by the politician Hon Philip Burden and his cronies. A beautiful replacement Cathedral could have been build for the amount of insurance money the Anglican Church had in the bank for the destroyed building.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

Only if it is considered absolutely necessary to have base isolators installed as a part of the earthquake resilience and that a less expensive alternative is not sufficient.

1.11 Potential disposal of surplus Council-owned properties

I would want to know which buildings you are thinking of selling and what their market value is before commenting further. Why can you not include the buildings in your question?

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

No, you're wasting money on things. Certain things are costing far more than they ought - eg bike lanes.

1.2 Rates

It is almost impossible to budget accurately out more than two (2) years. Nobody has any idea what the inflation rates will be on costs after that time.

1.3 Proposed changes to existing rates, and new targeted rates

I believe the amount proposed to be spent on charging for excess water is a complete waste. It is based on an average that does not take into account whether people have gardens and are contributing to Christchurch City Councils claim of being the "Garden" city. The amount raised by the proposed fees is very petty compared with the overall council expenditure. I suspect that there may be a hidden agenda to sell off the water supply system.

1.4 Investing in upgrading and protecting our city's water networks

For such a large amount of money it needs to be clear that every part of these works is completely necessary. I am not qualified to comment on the engineering aspects.

1.5 Investing in our transport infrastructure

I do not believe that spending this sort of money will alter carbon emissions in any significant way. Technology outside of the control of the city council has taken care of vehicle emissions. Items such as cycle lanes should be provided for when roads are being built but not tacked on at vast expense to existing roadways.

1.6 Rubbish, recycling and organics

We have to admit that very little of so called recycling action ever occurs rather than allowing it to be used as a political lie. Replacing vehicles with electric or other technologies is once again a political gesture and should only be considered once cost effective. Technology not provided by the city council will no doubt provide this in due course. Electric vehicles suffer massive depreciation and will cost the ratepayers and council far more money in the long run.

1.7 Our facilities

Was the major construction of the Multi Use Arena considered as being a copy of an existing facility elsewhere?  
If not is there a policy in the council to do this wherever possible?

The bus library service which is nearly exclusively used by people who have difficulty getting to the main libraries is being considered for closure. This is a very inexpensive sum when put alongside the vast expenses on

dubious infrastructure and should be continued. As to the general libraries, I believe this is an integral link to the councils responsibilities - far more so than attempting to "Green the planet". These should be maintained at current hours for the education and wellbeing of rate payers and residents.

I object to the Art Gallery changes. This is part of the access to educational facilities at a minimum cost.

1.8 Our heritage, foreshore and parks

So much has been spent on heritage buildings in the past and in this budget, anything not currently accounted for will have to wait their turn in future budgets.

Cemeteries should be self funded through charges made of plots of land and of all crematorium services.

On the Kart Club, if the developers are keen to build upwards of 500 houses, I am sure they can find an efficient economic way to relocate the Kart Club without council intervention.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments  
So much has been spent on heritage buildings in the past and in this budget, anything not currently accounted for will have to wait their turn in future budgets.

1.11 Potential disposal of surplus Council-owned properties

I believe that generally speaking council owned properties should be used for council workers rather than building new ones at vast expense.

1.12 Any other comments:

Overall, it is fashionable for all politicians (including those at the local government level) to be seen to contribution to the reduction of emissions. The cost of this to the council far exceeds the benefit. The council has to be prepared to say they are and will wait for technology related to these costs to be upgraded rather than making tremendously expensive political gestures at the rate payers expense.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.7 Our facilities

I use the summer library (Matuku Takotako) regularly on Saturdays and Sundays. I would like to suggest to keep the library open on Sunday. If the budget doesn't allow current opening times, I suggest to shorten Sunday opening hours instead of closing completely.

Kind regards

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

##### Comments

As long as there is homelessness in Christchurch and other sever social problems, rates, in my opinion, should be spent on those rather than on the Art Center.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

##### Comments

As long as there is homelessness in Christchurch and other sever social problems, rates, in my opinion, should be spent on those rather than on the Art Gallery.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

At the moment i do not believe that we are able to know whether or not this plan has prioritised the right things considering the responses to the climate change plan have not yet been analysed/published.

1.2 Rates

if overall rates increase means only 4% increase over the whole 10 years (as opposed to 4% every year for 10 years) then i am of agreement. If it is increasing by 4% every year for 10 years then i strongly do not agree. This is a phenomenal rate increase at a time when home ownership is an issue for many people - let alone having to worry about an almost 50% increase in rates. This increase will just further price many people out of ownership.

1.4 Investing in upgrading and protecting our city's water networks

i agree with this as long as this investment means that the chlorination is finally removed from our water system as it has now been years since it was supposed to be.

1.5 Investing in our transport infrastructure

i would like to see free bus services or heavily discounted rates for students (we are one of the only cities where uni students pay full adult fares). A plan for a future rail network to the city would also be advantageous considering the increase in people moving into the 'satellite suburbs' like Rolleston.

1.7 Our facilities

i do not agree with the removal of the service centre from the Lyttelton library. As it is a suburb separated from the city by the hills/tunnel many people rely on the service centre being local. Removing this would cause people to travel longer distances and be less connected with council services.

1.8 Our heritage, foreshore and parks

i would like to see the Steadfast Development plan receive the funding it requires

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

1.11 Potential disposal of surplus Council-owned properties  
they should be rebuilt or formed into areas that can be used by the community but definitely not sold to housing developers.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Joan **Last name:** Blatchford

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I was really concerned to get to the end of the consultation document to realise that, although there was a section in the consultation document on what the Council is doing, there were no questions about Council's approach and priorities. Over the next 10 years this issue will continue to become more and more front of mind for us.

I would propose a highly visible coordinated approach with specific citizen engagement, education and involvement to complement Government policy and action.

1.2 Rates

I think that the focus on keeping rates down is short term thinking. The council should be emphasising the value ratepayers get for their money. Local bodies take only 6% of overall taxes in NZ. Surely there is a positive story there.

5% not a problem.

### 1.3 Proposed changes to existing rates, and new targeted rates

Dont agree to a targeted rate for heritage - should just be part of general rate as is across the city.

Yes to arts centre - time limited and important to the city.

Yes to Central City Business rate - specific group.

No to land drainage - many will not receive any value and the increase of over 11% is significant.

### 1.4 Investing in upgrading and protecting our city's water networks

Yes, important but focus still on reducing chlorine important.

### 1.5 Investing in our transport infrastructure

Any spare money should go to transport infrastructure.

A real issue needing transport planning in the next three years is to work out a solution to manage the increased congestion from Halswell around the bottom of the Port Hills to Huntsbury. To date there has been a piecemeal approach but this needs a strategy to ensure that all intersections are considered as part of the one plan. Doing work at the Hoon Hay Road intersection and the the Barrington St roundabout is just going to cause greater issues to other intersections.

### 1.6 Rubbish, recycling and organics

OK

### 1.7 Our facilities

Support initiatives to increase community housing in any way.

Still oppose the multi use arena - it should be delayed.

Levels of service.

Concern that library hours are to be cut in the evening when families without internet access may use it.

Do not understand why the Fingertip library would be cut in the weekend unless the service is not being used.

Real concern about the closing of the service desks in Lyttelton and Akaora. Rates transactions are a small part of the service - they are part of the fabric of the community as they provide invaluable information and provide Council with a profile. Surely there could be cross skilling in Lyttelton at least.

There must be creative ways to keep the services running with combining with other like services e.g. bankng in Akaroa. Moving the service to the library in Akaroa seemed short-sighted when Council is then left with an underused heritage building.

1.8 Our heritage, foreshore and parks  
A fundamental part of the city - continue to maintain and develop in this area.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments  
Part of the city's fabric - work to date has been amazing and it must be completed.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No  
Comments  
Happy to support the upgrading of the Robert McDougal, but this is a nice to have - there are greater priorities.

1.11 Potential disposal of surplus Council-owned properties  
I was concerend to hear that Council was proposing to dispose of a property in Diamond Harbour which has gullies where local volunteers have for many years and with Council support, been planting natives. This property needs specific community consultation and it may be that once these conservation areas are secured for the future, that parts of this block could be sold.

1.12 Any other comments:  
  
The Diamond Harbour residents have been seeking resolution of the Godley House site since it was demolished post eartquake.The community are quite clear about a practical solution.  
  
Council must work with them to resolve this as soon as possible.

### Feedback

1.7 Our facilities

I strongly oppose the decision to end funding to Wharenui Pool & Sports Centre, in favour of the Metro Sports Facility. I believe that these recreation centres should operate concurrently, as they serve different communities. Wharenui Pool & Sports Centre will remain as a valuable facility for the residents of Riccarton, long after the Metro Sports Facility is opened to the public of Christchurch.

### Feedback

#### 1.7 Our facilities

Community Engagement, a sense of community, safe and healthy communities are seen as Community Outcomes. The strategic priorities includes the statement - Enabling active and connected communities to own their future. These are seen as empty words by our members. Key community facilities are being removed with nothing to replace them. Namely the Mobile Library, the Wharenui Pool and the Bus Lounges on Riccarton Road. Our members feel their community is being attacked not supported by the Draft Long Term Plan.

**Mobile Library** - our members are not agreeable to the proposed cessation of the mobile library service. The loss of our Community Centre as a result of the earthquake meant the loss of our community library. The mobile library service has replaced the community library as no provisions were made for the community library to be part of Rarakau centre. The mobile library provides an excellent service, an individual service that is not replicated elsewhere. The librarian knows us and our reading habits and ensures a very personal service. Isolation of the elderly is becoming an increasing problem. D does not drive and uses a walker. The mobile library is accessible for her as since the death of her husband she does not have the confidence to catch a bus with her walker to get to a library. Also, as Turanga is too far to walk from the bus terminal, D would have to catch another bus. G suffers from severe asthma. She is fortunate to live not far from the Mobile library stop. Every Wednesday we are able to connect with members and check all is well. With Rarakau not a Community Centre (the Post Shop fills the foyer, there is no room freely available for people to sit and chat) the Mobile library creates a place for members to connect.

**The Wharenui Pool** - the Wharenui pool provides an easily accessible community facility for those new to the area, mothers with small children, and accessible for schools to use at little or no transport cost. The size of the pool means that it is able to be booked by the Muslim community so women may change and bathe in private. This is not possible at QE2, where there is not enclosed pool with changing facilities in close proximity, away from public eyes. Will the new Metro Sports Centre be able to cater for the Muslim women?

**The Bus Lounge** - Because this facility is not provided elsewhere, is not a sound reason for the lounge to be closed. Riccarton Road is a main bus route and supposedly the high frequency of buses negates the need for shelter. For many residents who use the lounge, it is a much appreciated facility, which allows for social

connections as well as shelter. The upgrade of Riccarton Road with the central tree planting, was promoted as Riccarton becoming a destination, which implied people would travel from across the city, rather than Riccarton Road being an arterial route feeding into the city. As a destination it is reasonable to assume there would be a place where one could wait in safety and shelter while awaiting the next bus.

## Feedback

1.1 Have we got the game plan right?

We are investing too much on sports and recreation.

1.2 Rates

We should cap rates to the rate of inflation. Each head of service should be accountable for their budget and ensuring it meets this target. In addition we should challenge our expenditure decisions e.g. we do not need an additional pool at Linwood and Hornby when we have new sports complex being built. We do not need to make Lancaster Park fit for public use when we have excellent outdoor facilities already, it should be sold for housing development. We should withdraw from Christchurch and park. We do not need to move a perfectly fit for purpose and loved go kart track from Halswell. The Eastern River corridor does not need to be developed let private individuals fund this. Where infrastructure expenditure is required for new build e.g. drainage, road improvement etc this should be fully funded but the developers. The cycle lane budget had exploded from \$68 to over \$300m. This should be cut back to the original specification. The new stadium will have major financial benefits to the NZRU, we need them to make a major contribution to its build, as sports clubs do in other countries.

1.3 Proposed changes to existing rates, and new targeted rates

Rates expenditure should not be targeted, as it over complicates the system. Although do after targeted collection to high users of services is acceptable.

1.4 Investing in upgrading and protecting our city's water networks

I agree with expenditure on infrastructure, but the service heads need to be set targets based on effective delivery of service i.e get the most from their budgets. I see a lot of waste in terms of staff standing around and jobs taking a long time therefore requiring higher costs in support.

1.5 Investing in our transport infrastructure

There are some really cost effective world class solutions being developed in Christchurch. We should be investing in this to save money and create local investment. See early comment on cycleways too.

1.6 Rubbish, recycling and organics

OMG, I am so disheartened with this our waste management is pathetic when I compare what we can recycle to Wellington and

Auckland. The team seems to be coming up with problems, which continually limit what can be recycled rather than coming up with solutions. Look at other councils to learn how to be better.

1.7 Our facilities  
All good as long as it is done cost effectively.

1.8 Our heritage, foreshore and parks  
Again challenge and ensure all expenditure use cost effective. Make service heads accountable and set inflation based targets. This applies throughout the council. Anyway can spend money a good leader can spend effectively and balance the books.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
No  
Comments  
We need a mindset of saving money? Every \$ adds up!

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No  
Comments  
see above. This would take us to a 0.12% increase, see how it all starts to add up!! Add \$4m moving the go cart track and it's 0.16%. then Linwood Pool, Hornby Pool and the Eastern river corridor and we are probably already well over 1% let's save this!!

1.11 Potential disposal of surplus Council-owned properties  
Yes sell them.

1.12 Any other comments:  
No save money and makes heads accountable for effective Operation of their services. Remind them it is not just about spending money. There are a lot of residents struggling after Covid and to pay for expensive houses due to inflation. Let's not add to their problems.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Mark **Last name:** Darvill

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Overall I support the LTP and the balance that is proposed.

I do not support the continued funding of Christchurch NZ, at least not to the extent that it is proposed. There is little justification for this entity to exist outside of the CCC and by doing so it creates its own management team and duplication of corporate services. Perhaps, only perhaps, the outcomes achieved by the organisation warrant its existence but the public perception of the organisation is that it is one of the last remnants of the unnecessary NGOs created by the fallout from the CES.

For similar reasons to Christchurch NZ, isn't it about time that Vbase was told to stand on its own two feet or be absorbed into CCC and remove the management and corporate services costs.

CCHL continues to rule the council-owned companies with a rod of limp celery. The weak universal proclamation of 'dividends down due to COVID-19' and the absence of stated KPI is farcical.

1.2 Rates

In order to make a comment with all the facts to hand it would have been useful to have seen what the rates rises would have been without the huge increase in residential properties over the last five years. With the number of properties still expected to complete and the East Frame still due to be completed within the LTP period the figure of 5 per cent for 2021/22 and 4 per cent of the next 10 years appears high.

1.3 Proposed changes to existing rates, and new targeted rates

I am happy with the proposed changes, especially the excess water targeted rate. The excess water targeted rate must be enforced though to cause a behavioural change in those who currently believe they are entitled to waste water on cleaning their driveway and being the only one in the street with a green lawn.

1.4 Investing in upgrading and protecting our city's water networks

I am unhappy with the current ratepayers bearing the brunt of the lack of investment in previous years. This is a damning indictment on the quality of staff employed by the Council and the comprehension of the Councillors about the Council's role in renewing infrastructure. That said, it is appropriate to spend the money now to correct the historic under-investment.

1.5 Investing in our transport infrastructure

I am happy to see the Council continue to press ahead with the cycleways despite the howls of protest from the local business

community and the city's motorists. I note that the city's roads will be still be receiving over \$250M of work of the LTP period doubt that will pacify those wedded to four wheels. I would ask that the existing on-road cycle lanes are not abandoned and allowed to fall into disrepair. Car drivers need to remain accustomed to bicycles sharing 'their' road and most cycle journeys that use the major cycleways will begin or end on on-road cycle lanes.

1.6 Rubbish, recycling and organics  
I am happy with the balance here.

1.7 Our facilities  
I am happy with the changes to service levels. The closure of the Riccarton Road Bus Lounges is yet more evidence of the mess that occurs when ECan and the CCC share responsibility for providing something. These things need to be stopped.

1.8 Our heritage, foreshore and parks  
I am happy to support the investment in the heritage, foreshore and parks. In particular I support the Ferrymead Park Development and the Ferrymead Towpath connection for providing areas of recreation and relaxation in under-utilised natural space in our city.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
No

Comments  
I do not support this. I believe there are other sources of grant to support the Arts and that support the Arts does not align with any strategic goal of the Council for the city.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No

Comments  
I do not support this. I would support the Council providing services to the Museum during the redevelopment at a zero rate (compared to normal charges) as a way of supporting the Museum but I believe that there are other sources of grant to support this type of work.

1.11 Potential disposal of surplus Council-owned properties  
Happy for the buildings to be disposed of.

1.12 Any other comments:

As ever, the Financial Overview makes no mention of the staff cost for the CCC. The cost of staff is buried in the project costs and the project costs determine the rates increases. Through this mechanism the expansion of the staff directly impacts on ratepayers. The Financial Overview should state what the staff costs are so that the CCC can be transparent about what it costs to deliver the various projects planned. Reducing the 'staff cost per project dollar' should be a stated strategic goal for the organisation and should be published.

It is noticeable that CCHL is once again looking to slip off the radar and avoid the hard questions about its management of the council-owned companies. The Key Performance Indicators are not stated for the entities with a cover-all statement trying to explain this away. It wouldn't have hurt to have had the 20/21 indicators for reference so ratepayers could see what the entities were supposed to achieve. Cynically, that would have allowed closer examination of their performance and it doesn't bear close examination. Nowhere is this further obvious than in their statement about dividends being lower due to COVID-19. Whilst this might have been their forecast there is plenty of evidence in the wider business community that business performance has held up well and even been boosted by COVID-19. COVID-19 might not have been the making of the management every crisis presents an opportunity, the weak response of each entity's management to the crisis should have prompted CCHL to demand better, not simply accept the excuse trotted out.

For full transparency, the entities CCC One Ltd, CCC Five Ltd and CCC Seven Ltd should have their purpose stated.

1.7 Our facilities

The education department at the Christchurch Art Gallery needs more funding and growth. I oppose any ideas to further cut education programmes at the gallery.

Late night opening once a month is ok. But do not make any cuts to education.

The services at Turanga should not be increased for residents. If you need to increase business usership, work on promoting it better rather than making the general public pay.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Louise **Last name:** Waghorn

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I'm really concerned about the decrease in hours that libraries are open, in particular the Sumner Library/Matuku Takotako Sumner Centre. The weekend hours allow people who work the traditional 9-5 to visit the library and make use of its services in a leisurely way, but it also provides vulnerable and disadvantaged members of our community access to resources that would otherwise be too expensive/or otherwise unavailable.

With fake news and online misinformation on the rise, the curated collections of knowledge in the libraries and the expertise of librarians in finding resources is more valuable than ever. Libraries also provide places for people to meet, work, and share.

1.2 Rates

No opinion.

1.3 Proposed changes to existing rates, and new targeted rates

Makes sense to me.

1.4 Investing in upgrading and protecting our city's water networks

Sounds good.

1.5 Investing in our transport infrastructure

I would like to see more incentives to reduce car use, particularly by single occupant car trips.

1.6 Rubbish, recycling and organics

Sounds fantastic.

1.7 Our facilities

I feel very strongly that reducing the hours of our libraries is a mistake. The Sumner community fought to increase library hours and have the library open weekends; to turn around and reduce hours at the weekend is counter productive.

1.8 Our heritage, foreshore and parks

I'd like to see this funding extended to projects like The Ngaio Marsh house in Cashmere, which is an amazing property, historically and culturally significant, but in danger of being lost because it is left to volunteers to fundraise for. The council needs to step up to ensure the future of this amazing legacy.

1.11 Potential disposal of surplus Council-owned properties

I think the Council should find long term tenants for these buildings instead of disposing of them, turning them into assets for the city.

1.12 Any other comments:  
I would like to see more investment in people and organisations. A city is not a collection of buildings and parks, it is the people that live in it.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.2 Rates

I think it is a ridiculous amount of rate increase. Almost 50% over 10 years is enormous. This will make house ownership even more unaffordable.

### 1.4 Investing in upgrading and protecting our city's water networks

we need to remove chlorination as this project has been going on for too long.

### 1.5 Investing in our transport infrastructure

we need free busses for students. I choose to drive rather than bus because it actually works out cheaper. If you want students to use the bus then you have to make it affordable.

### 1.7 Our facilities

We should not be removing the services centre from the Lyttelton public library. Lots of people use this (even for things like getting pool keys). If you want people in lyttelton to use public services then you cannot remove the way many people access them.

### 1.8 Our heritage, foreshore and parks

i want to see the Steadfast project in Cass Bay get the funding it needs.

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

### 1.11 Potential disposal of surplus Council-owned properties

we need more information about what buildings these are before we can decide if we want to keep them or not.

SUBMISSION from P.G.Morrison ( 1970 ) Ltd. ( PGM (1970 ) Ltd. ) 18/4/2021.

PGM (1970 ) Ltd. lease 4.7Ha of land under the Public Bodies Leases Act 1969

The current owners of the land are Environment Canterbury. The lease contains a perpetual right of renewal clause and PGM ( 1970 ) Ltd. developed the property and leased the property since 1973.

PGM ( 1970 ) Ltd have established their own drainage arrangements with large on site swales and soakage systems. It is to further extend this system by the installation of a large soakage basin under a granted resource consent RMA/2020/2834. This is expected to cost the company up to \$50,000 when all consulting and application costs are included.

PGM ( 1970 ) Ltd's Submission is that although noted under Alternative Option 1 the fact that " properties that have spent considerable sums of money establishing their own drainage arrangements " / the counter argument that the properties benefit from other lands throughout the city being drained etc. " is not fair or equitable to companies such as PGM ( 1970 ) Ltd. that have spent really large amounts of money establishing complete on site drainage systems and have the ongoing annual costs of maintaining such systems.

PGM (1970 ) Ltd's submission is that properties that can clearly show that they have established satisfactory on site drainage systems are either granted an exemption from the proposed Land Drainage Targeted Rate or a large rebate from the proposed rate.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

☒ Yes

☐ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

Additional requirements for hearing:

## Feedback

1.1 Have we got the game plan right?

Overall I think the proposed plan is good.

I support investment in:

- Investment in safe walkways and cycleways, Coastal Pathway, and local cycle infrastructure
- Investment in our water infrastructure.
- Investment in pest management and increasing diversity. I fully support the funding for the Rod Donald Trust and for greening the red zone. It is very disappointing to see that the funding for the Banks Peninsula Conservation Trust has been reduced and that Predator Free Banks Peninsula's funding has been cut altogether. I would like to see more funding for both of these groups.
- Excess water targeted rates (including supporting the exemptions available).
- Future rate for vacant sites in the CBD.

Changes I would like to see:

- I do not support the cuts to the Strengthening communities fund and would like to see funding reinstated.
- Along with excess water charges I would like to see the CCC provide information on how much water is needed to water gardens - I think there needs to be education around this as I think many are overwatering.
- I would like to see funding for more park rangers as this would enable more volunteer hours to be used.
- No fees more LGOIMA requests
- for transparency I would like to see all community board and all CCC committee, sub-committee and working group meeting live-streamed and recorded.
- CCC should stop the Tarras Airport from progressing. A new international airport will accommodate growing demand, if the council can not guarantee necessary safeguards (legislation and technology) to ensure that this airport will not enable more emissions from unsustainable aircraft then it MUST be stopped.
- Trial initiatives for participatory democracy (e.g citizen assemblies). I do not believe a council where every councillor is voted in by a white majority can ever achieve fair representation for marginalised and/or minority communities.

## 1.2 Rates

I am happy with the rates increase. I would rather we spend money today (to address degraded ecology and infrastructure, for climate mitigation and adaptation) than to compound the issues our children will be left with.

## 1.3 Proposed changes to existing rates, and new targeted rates

All rates should be based on the capital value of a property. I do not support uniform rates...UAGC rates should be zero.

## 1.4 Investing in upgrading and protecting our city's water networks

i support the proposal.

## 1.5 Investing in our transport infrastructure

- I strongly support the proposed spend on bus lanes and other bus infrastructure, and on cycleways and other cycling improvements.
- Please bring the Otakaro cycleway forward - 2025 is too late.
- I support the proposed increase in spending on resurfacing roads and footpaths. Disincentive parking in the city, increase the cost of parking.
- Incentivise cycling - make sure cycleways are well signposted and maps are easily available.
- Incentivise walking - make sure crossing points are convenient and safe.

I would like to see more investment in mass rapid transport.

## 1.6 Rubbish, recycling and organics

I support the proposal.

## 1.7 Our facilities

I support the proposed investments however I do not support the closing of Riccarton Rd bus lounges.

Need to focus on improving amenity and livability of low socio economic areas of the city such as Linwood, Philipstown, Waltham, Aranui, Northcote, Shirley etc.

I support downgrading Sumner Library hours but not those in eastern suburbs,

I support the proposed investments, however I oppose the changes in level of service.

In particular I oppose the reduction in library hours for Tūranga. As a whole there are too few inside public spaces in the central city, and Tūranga provides a quiet sanctuary from the hustle and bustle. I often go there to study, and now that I live close to the central city would love to have the option to spend more time in the evenings there, particularly during exam study. I know that I am not alone in this. It would be a tragedy to have our central library operating at less than full capacity. If anything, it should be open later.

I do not support the closure of the Riccarton Rd bus lounges. As someone who depends on public transport to travel around the city, these bus lounges are a massive perk when I have to transfer to a new bus at

Riccarton. As it is, footpaths around the bus stops are often cramped and lack the necessary seating to cater for large numbers of (in particular) older and differently-abled people. The bus lounges provide a warm area during winter, which otherwise would not exist. I completely oppose the proposed closure of the bus lounges.

## SUBMISSION TO CCC LONG TERM PLAN 2021

## FROM:

GILLIAN RUTH GRAY

18 April 2021

I do not wish to be heard in support of this submission.

**RE: RATES FOR CENTRAL CITY WASTE COLLECTION**

I support the submission from the Atlas Quarter Body Corporate in relation to rates for the collection of solid waste.

I support the Council's strategic goal of reducing solid waste but object to having pay \$300-\$400 per year in rates for the collection of the red, green and yellow bins when the Council does not provide this service to me. In the absence of Council providing this service, I pay privately through my Body Corp Levy for waste collection by EnviroWaste. I support waste minimisation and have all the same waste streams (green, yellow and red) as the Council provides.

**I ask that the Council either:**

- 1) reduce the general rate and waste minimisation levy for developments such as mine to reflect that no waste collection is provided, or;**
- 2) amend your service contracts to provide the waste collection service.**

Regards

Gill Gray

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

We are currently facing an environmental crisis in the broadest sense of the word. That is to say, this includes climate change, polluted rivers, loss of market gardening land for producing food for Christchurch City and greater Christchurch/the Peninsula, air pollution from cars, land/air and water pollution from plastics. This environmental crisis requires urgent (read, 'immediate') attention. I would like to see the emphasis and monies going into addressing these issues - pouring more and more money into roading, for example, will not only NOT address these issues but will only serve to help exacerbate them. Neither will fancy new facilities be helpful if we can't feed ourselves, don't have clean water, can't swim in our rivers and the sea, can't breath the air without the risk of illness.

1.4 Investing in upgrading and protecting our city's water networks

Yes, we need upgrading but we also need to ensure that our water/s is/are protected from pollution from the over-intensive farming (cattle/diary) that is happening on the Canterbury plains, and other pollutants, including the ever expanding housing on rich soils.

1.5 Investing in our transport infrastructure

Thought and investment needs to go into other forms of public transportation. What happened to the light rail idea - I would like to see that become a reality. People can't bike on crowded roads.

## Feedback

1.1 Have we got the game plan right?

no. I feel that cutting library hours is not in keeping with what the community would like. This serves no one. People who work during the day (or go to school) cant access the library at nights or on weekends with these cuts. It makes no sense.

1.2 Rates

i dont know.

1.3 Proposed changes to existing rates, and new targeted rates

i dont know

1.4 Investing in upgrading and protecting our city's water networks

thats a lot of money. Our water security and wuality is important but weve already spent a fortune on this. Im not sure the balance is right.

1.5 Investing in our transport infrastructure

transport is important but i dont want to waste anymore money on car infrastructure. Cycleways, improve buses, and pedestrian areas.

1.6 Rubbish, recycling and organics

this system is a mess and theres no penalties for people misusing the system. I dont know how much a rehaul will be but that feels expensive.

1.7 Our facilities

i dont know

1.8 Our heritage, foreshore and parks

i dont know

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments

1.12 Any other comments:  
i dont think its fair that the CCC expects the libraries to turn a profit. They are public services, not a business. A library should be open when the public would like to use it. Currently there are library activities in the evenings and weekends. Tūranga was recently built with the intension of having public maker spaces. If you close the libraries earlier then they WONT be used to the same extent. This is incredibly narrow minded.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I do not believe you have the plan right as the priorities of the Council are out of sink with what the Community needs are.

eg: The Harewood Road cycleway that the Council is going to spend \$19 million dollars of rate and tax payers money on is absolutely obscene and not what the community wants to see happen. All that was needed on Harewood Road was traffic lights at Gardeners Road intersection.

This is typical of the total disregard with which the Council spend hard earned money.

This matter was not publicly notified, again another thing the Council doesn't allow very often to happen (just like Quarry applications!) yet are happy in this case to spend \$19 million !!!

1.2 Rates

I think this rate rise is far too much and because of the reason outlined above.

Also the proposed cumulative rates increase over the next 10 years of 47.8% shows a Council out of control with it's spending.

How can you increase the rates by 5% when the current inflation rate is between 1 - 2% ?

1.3 Proposed changes to existing rates, and new targeted rates

The proposal that Rural rate payers should pay the Land Drainage Targeted rate is outrageous as they already have a lot of extra costs that residential rate payers don't. ( costs involved with sewage, water supplies etc )

1.4 Investing in upgrading and protecting our city's water networks

Again the Council has not had it's priorities in the correct order ( cycleways before infrastructure )

1.5 Investing in our transport infrastructure  
You do not have the balance right when you spend \$19 million dollars on a cycleway that will hardly be used when dangerous intersections like Pound / Ryans rds are way down the lists of jobs to be done ( I believe this one is about 200 on the list - REALLY !!)

1.6 Rubbish, recycling and organics  
Need to sort recycling better and disposal of used tyres.

Feedback

1.1 Have we got the game plan right?

I am astonished at the lack of vision outlined in this long-term plan in regard to Christchurch's transport infrastructure and networks. Throughout the last decade car traffic has been increasing exponentially, with worsening outcomes on our health and that of our environment. How is it that in the light of a climate crisis the city council's longterm funding priority remains roading, instead of investing in practical public transportation? The only potential for "public transport" is to be built on the back of a privately owned bus. What is the plan for growing public transport beyond the current bus company? How is the council going to ensure that the public transport system is not just a means of getting people from A to B, but is a means of improving the quality of life in the city?

From: Jun Bouterey-Ishido  
Sent: Monday, 19 April 2021 12:09 AM  
To: CCC Plan  
Subject: Re: LTP

Follow Up Flag: Follow up  
Flag Status: Flagged

Dear Christchurch City Council,

I am concerned that half of my submission to the long-term plan appears to have become garbled in the system when I copied it in.  
Could you please attach this to my submission (in the first box):

I am astonished at the lack of vision outlined in this longterm plan in regard to Christchurch's transport infrastructure and networks. Throughout the last decade car traffic has been increasing exponentially, with worsening outcomes on our health and on the health of the environment. How, in the light of a Climate Crisis, can the main longterm funding priority for the City Council remain roading, instead of investing in practical public transportation? The current allocation for "public transport" (i.e. solely the bus service) is pitifully small. Why is there no plan to expand our limited bus network, and to build other networks of rail and tram services to supplement the bus service, in order to offer the growing number of people that live in outlying suburban areas viable alternatives to commuting by car? There is no justification to limit spending to the bus network instead of building up a real system of "public transport" that includes at the very least networks of trams, in addition to buses, servicing the entire city. With the only mode of "public transportation" on offer being the bus, people in Christchurch are being let down.

Many thanks for your assistance,  
Jun (Bouterey-Ishido)

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.1 Have we got the game plan right?

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

#### 1.2 Rates

The proposed rates increases are far too high. The council needs more sustainable and selective with its spending, and not rely on increasing rates year after year.

1.3 Proposed changes to existing rates, and new targeted rates  
I don't oppose an excess water charge.m, but how is this going to be monitored and enforced if they cannot be remotely read. What cost is this going to have. There probably needs to be sone better education around efficient water usage, especially regarding garden watering.

1.4 Investing in upgrading and protecting our city's water networks  
That sounds like a lot of money.

1.6 Rubbish, recycling and organics  
Does this allow for recycling plastics locally and increasing the types of plastics that can be recycled?

1.7 Our facilities  
I think spending could be reduced.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
No  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No  
Comments  
Can't this be housed in the already base isolated Art Gallery.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I support prioritising infrastructure, including the operation of water networks. With regards to roads, Christchurch still has the opportunity to rebuild a more sustainable city, including focusing on investment in public transport and cycleways.

1.2 Rates

I support investing more in the operation of existing infrastructure like water networks, and allowing for more sustainable transport options of public transport and safe cycleways, rather than maintaining the status quo of widening roads to allow for more cars. This won't bring about a change in commuter behaviour.

1.3 Proposed changes to existing rates, and new targeted rates

I support a water use targeted rate for households that use significantly more water than the average household to change the behaviour of excessive water users.

1.4 Investing in upgrading and protecting our city's water networks

I support investing more in water networks. It would be great if we were in a position where we didn't have to chlorinate the water and there would be safer levels of nitrates.

1.5 Investing in our transport infrastructure

I support investment in public transport and cycleways. The bus interchange is excellent, and more frequent services would make buses more user friendly. Safer, separated cycleways would also encourage more people to stop using cars in rush hour, which would decrease travel times for everyone.

1.6 Rubbish, recycling and organics

With the recent local findings that microplastics have been found in the air we breathe, it would be great to see a focus on reducing plastic (even that which can be recycled). There's a lot of confusion about what can be recycled and possibly the simplest way to get around it is to do away with the need to deal with those single-use items.

### Feedback

1.1 Have we got the game plan right?

at least 80% of the Red Zone or OARC needs to be returned to forest or wetland. the Regen Chch plan must be adhered to or it will be taking a crap on all the effort hundreds of chch residents have put into submitting their wants and needs. The implementation of the Regen Plan's vision must be done by a robust co-governance model, putting river health and ecology first.

I am upset Council has no plans of financial commitment in the corridor till after another election/LTP cycle. Please bring spending of govt quake recovery money (eg CRAF) and the two mentions of the OARC on lines 119 and 120 of the LTP Distribution By Wards doc forward to the 2022/23 spend to make it definite.

instead of the Council giving money to contractors, please rearrange so that the money goes to support community-led restoration; there are plenty of community groups waiting for permission to get into the Red Zone. This will be cheaper for the Council and studies show if they are invested, communities are healthier and maintain your council land for you.

It seems like the Council is concentrating the ecological restoration purely along the green spine - this goes completely against the regen chch plan, which had a strong ecological restoration focus throughout the entire red zone, not just the green spine.

where's the transparency and consulting around where the stopbanks are going? we need a hui with community groups like greening the red zone.

'Dark Sky' lighting everywhere please!! blue/white wavelength lights give me migraines, produce more glare making it harder to see, and disrupt circadian rhythms of everyone, (and every living thing), that have to live under their glare. Just put in the warmer light colours, it's not hard to get the yellower LEDs - there's no excuse not to.

Monies for biodiversity and planting along the Ōtākaro Avon River Corridor should be budgeted for separately but that isn't clear. Stop-banking and eco-restoration overlap in the Green Spine - doing it right will take a lot more investment than we are seeing here.

The monies earmarked for the Red Zone must include provision for establishing

projects like the Waitākiri Eco-sanctuary and Eden. Once these boundaries are established the CCC can be relieved of its role (and cost) of maintaining those sections of the Red Zone.

The Regeneration Plan must be kept as per the end-result of years of consultation, work and expense. It is vital that no inappropriate encroachment be made into the Green Spine or critical areas of the wider red zone.

The pedestrian/cycle path is very positive and will help invigorate other parts of the Red Zone. I'm completely ok with it being flooded in some parts at some times, it doesn't need to be over-engineered.

Bexley Wetland is fantastic, full support from me there.

I support the targeted excess water rate (for those who use over 700 litres/day), so long as it does not disproportionately affect large, low-income families.

1.2 Rates  
increase it, do it!

1.4 Investing in upgrading and protecting our city’s water networks  
concentrate on reducing pollution of our rivers - wire cages to catch plastic on stormwater outlets, harsh fines for anyone pouring pollution down stormwater drains, and of course fix all the wastewater pipes - we don't want feces in our rivers!

1.5 Investing in our transport infrastructure  
I would like to see more busses on more bus routes. It is USELESS making busses free when (esp in poorer suburbs) it takes half an hour to walk to the closest bus stop, and then perhaps another half hour waiting for the bus.

1.6 Rubbish, recycling and organics  
less waste is great! also more education on what goes where, people are STILL confused.

1.7 Our facilities  
DO NOT decrease levels of service in libraries. opening hours should be longer, not shorter. the library bus is a necessary service, don't close it down. I am VERY angry about this. the very fact that this very 'have your say' is an online thing that people who are effected most will not be able to submit to is unethical.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties  
sure, but only if 'dispose' means you plant native trees where they were.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Gareth **Last name:** Simpson

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.1 Have we got the game plan right?

Stop spending money on cycleways. I use the cycleways and they're good but the cost can't be justified. Also the hospital desperately needs carparking. Not down the road somewhere, attached to it. Parking, getting to appointments etc is a nightmare and I'm able-bodied. I'd hate to think how hard it is for someone with ongoing needs who's also tight on cash.

I'm also submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block. The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because: <sup>35</sup>/<sub>17</sub> they flood when it rains <sup>35</sup>/<sub>17</sub> they are slippery with ice on frosty mornings <sup>35</sup>/<sub>17</sub> when most teams train in the evenings they are slippery and damp from night-time dew <sup>35</sup>/<sub>17</sub> part of one court is permanently wet and covered in a slick film because it never dries out <sup>35</sup>/<sub>17</sub> they have extensive cracking filled with vegetation <sup>35</sup>/<sub>17</sub> they have holes for tennis net poles that are no longer used The toilet block was damaged in the earthquakes and is frankly, in a disgusting state. The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden. Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027. Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

#### 1.2 Rates

Rates are already too high. There should not be any increases. Stop spending money on cycleways. I use the cycleways and they're good, but the cost can't be justified.

#### 1.4 Investing in upgrading and protecting our city's water networks

I know the council isn't involved in the water consent for bottled water but the council should be putting pressure on eCan to stop allowing wholesale giveaways of water

1.5 Investing in our transport infrastructure

There's too much emphasis on public transport. Stop wasting money on buses and cycleways that aren't getting used enough (and never will be) to justify the cost. For most people it's not practical. ChCh is too spread out for it to be effective.

1.7 Our facilities

Don't change the central library's or the art gallery's hours. Both are great assets, leave it as is.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments  
I would support it but don't feel the city has the money. It's a nice to have and we can't keep increasing rates

### Feedback

#### 1.5 Investing in our transport infrastructure

I am making this submission as a regular visitor to Christchurch for both work and leisure (I am a New Zealander currently resident in Australia). I make this submission conscious that I am not a local and not affected by any variation in rates. I am hopeful that a statement from my personal experience as a visitor and my professional expertise as a transport historian at the University of Wollongong might be useful to the council's consultation process. I have written in generalities below as I wish to speak to the bigger picture and encourage the council to make Christchurch a great city for public transport and active transport; I defer to local residents for specific, on-the-ground measures.

Transport provision in Christchurch has regressed significantly since the mid-20th century. It was once a city where people had considerable modal choice and transport options. It was known as a cycling city, but it is now dangerous to ride on many arterial roads. It was a great city to walk around, but now crossing roads is often tedious or risky for pedestrians. It had an extensive tramway network, torn up in the 1950s. It had electrified suburban rail to Lyttelton and daily commuter trains on the lines to Burnham and Rangiora, all gone by 1976.

Today, Christchurch is a city you drive around, and this is not sustainable. The harmful environmental effects are well known and many will not be ameliorated by electric vehicles; the negative social effects of car dependency are also significant, with streams of cars leaving streetscapes boring and noisy, unpleasant places to be. It is unsatisfactory that residents and visitors have few choices for transport. Walking can be dangerous for everyone and especially for people with impaired mobility. I have low vision, and on a recent visit for business, I had to cross at the Blenheim Road/Main South Road roundabout to get from my accommodation to work. I felt like I was taking my life in my hands. Taking the bus was little help, as in one direction I had to either make an unprotected crossing of Main South Road in Hornsby to access the stop or take a major time-consuming detour. Christchurch in many places feels actively hostile to pedestrians; it is a city for cars, not people.

This can be remedied. I commend the council for its proposals to invest in bus and cycling infrastructure and urge it to pursue an even larger and more ambitious programme on a quicker timetable. There is no time to lose in addressing the drivers of climate change. Dedicated bus lanes, safer and more accessible bus stops, and traffic light priority are essential. Traffic calming measures are important so that streets are more usable on foot or bike and so that bus passengers can reach their stops safely. The long-term gains will more than offset rate increases, especially as people leave cars at home and the bill for road maintenance declines. Christchurch needs to leverage the natural advantages of its generally flat landscape to foster more walking and cycling.

Investment should be made so that the busiest bus routes can be easily scaled up to light rail, which must be the long term goal: steel wheels on steel rails are the most energy efficient transport and in the coming decades Christchurch needs to develop a network of high-capacity rail spines (heavy and light rail) from which buses and active transport radiate. It would be a shame if investment in buses today only had to be torn up to implement light rail tomorrow, rather than providing some of the necessary foundations/facilities to make light rail cheaper and quicker to introduce.

I recognise that the council cannot do all of this alone and does not have responsibility for the full array of transport activity. The heavy rail corridors are an obvious example. But it can set the agenda by working proactively with neighbouring councils, the central government, KiwiRail, etc. It also must not fall victim to the fallacy that a central railway station would be too remote. The remoteness of the old Moorhouse Ave site is often exaggerated: Cathedral Square is a 15-minute walk, and many people in central Wellington walk further daily to use its commuter trains. There is no reason why Christchurch cannot also have a successful commuter rail network. A reliable service is what matters most, and the council can make meaningful contributions to a rail revival with effective bus connections and safe, pleasant pedestrian infrastructure. It is a cause for regret that Christchurch does not use the superb railway corridors through its suburbs for the transport of the very people who live along them.

At the end of the day, car dependency can only be broken by making active and public transport safe, effective, and desirable. Investment now in this infrastructure will have long-term savings in expenditure on local roads and give people the choice and mobility they deserve. I wrote above that I am a visitor, not a resident; if Christchurch can transform itself into a city that is easy and enjoyable to get around, I might consider it more seriously as a place to live.

### Feedback

1.12 Any other comments:

Hi, I'm not sure which one this fits under, but this is for the Wharenui pool.

I would like this pool to remain open - it is local to my work and is easy accessible via bike or walking and is very community focused.

There is a few of us who go during our lunch break and we don't have any desire to jump into a car and drive to the new metro center - we currently bike or walk. Its a good pool that is easily accessible.

Cheers

Tori

## Feedback

1.1 Have we got the game plan right?

Generally right balance. I would like to see more invested in public transport though, a very important part of Christchurch transport. Better public transport options means fewer cars on the road and less traffic and pollution. I have lived in a number of different cities in four different countries on three different continents, and what stands out to me the most about Christchurch transport is how pedestrian unfriendly the city is! Even compared to other car loving cities in Australia and North America. It takes so long to navigate some intersections as a pedestrian that it turns what should be a quick few minutes dash to the shops to a 10+ minute frustrating journey, waiting most of the time, which encourages short car trips - a disaster for the environment and for efficient movement of people around the city. High density housing should continue to be encouraged, as this helps with christchurch's transport woes.

1.2 Rates

I think the rates increases are reasonable.

1.3 Proposed changes to existing rates, and new targeted rates

I think charging for high usage of water is absolutely fair. I don't have an opinion on the other points/

1.4 Investing in upgrading and protecting our city's water networks

That seems like an awful lot, but I have not researched the problem, so I don't think I'm informed enough to make a strong comment.

1.5 Investing in our transport infrastructure

I think this is the absolutely minimum. Transport, especially pedestrian and public transport, is absolutely key to the lifestyle of the city. I think the bike infrastructure with recent improvements, is very good.

I have lived in a number of different cities in four different countries on three different continents, and what stands out to me the most about Christchurch transport is how pedestrian unfriendly the city is! Even compared to other car loving cities in Australia and North America. It takes so long to navigate some intersections as a pedestrian that it turns what should be a quick few minutes dash to the shops to a 10+ minute frustrating journey, waiting most of the time, which encourages short car trips - a disaster for the environment and for efficient movement of people around the city.

1.6 Rubbish, recycling and organics

It sounds reasonable - recycling is important.

#### 1.7 Our facilities

I think this is a good use of money, yes.

#### 1.8 Our heritage, foreshore and parks

All important topics. I think it is good to retain what few historic buildings we have. Parks and foreshore also important. I think a key consideration to parks should be what they're actually used for. Here in christchurch most parks seems to function as sports ovals - which means they're empty most of the time. That includes large parts of Hagley. Usually they have a small child playground as well. But parks should be much more than that - a place to picnic, play games with the family, walk the dogs, meet with friends. Look at the English Garden in Munich for example - a beautiful park, with lakes, rivers, trees as well as open fields. Everyone hangs out in these kinds of places on a sunny Sunday. Not just for sports.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

It's a small amount in the scheme of things!

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

##### Comments

Reasonable.

#### 1.11 Potential disposal of surplus Council-owned properties

No opinion on this.

#### 1.12 Any other comments:

Having lived in a lot of different cities in different countries, I absolutely love Christchurch - the beaches, the hills, the parks, the laidback Nature. The drawbacks are the car culture - everything is so spread out you have to drive everywhere. When every man, woman and child in Christchurch has their own personal car this means a huge footprint in the city for day parking for those cars, night parking, and congestion on the roads. Christchurch has to support alternative forms of transport to alleviate this, as well as encouraging higher density housing. Nice, functional, new well-built apartments in the city centre have to be attractive to young people and new immigrants. In other countries, a 'condo' is the preferred option over a house for a lot of people. Here it is considered to be a poor persons option. We have to shift attitudes to this. Some apartments in the city seem to be very expensive for what they are though, this will not help encouraging people to make the shift.

Some more pedestrian areas in the city will also help shift from the suburban+mall feel of the city, to having lively, walkable streetscapes.

### Feedback

#### 1.7 Our facilities

I understand you are planning to close the Wharenui Pool. This pool is a key part of the community and is needed by those who use it. There is a real sense of community at Wharenui Pool, I have been swimming there since just after the earthquakes in 2011 when we lost so many of our council pools. I wouldn't swim anywhere else now, every morning when I go into Wharenui I see my friends, my community. The squad I swim with are my community, the youngsters in the lanes next to us - some who have gone on to become Olympians, these are my community, the older generation who come in after 7am to use the pool, these people are my community. We all know one another, we see each other multiple times a week and there is a genuineness to the way people check in on each other and see how they are doing. It's more than just a hello, there is a real interest as we are all part of the same community. I've swum at other pools over the years, at those pools you are just a number, a transaction across the front desk as you enter the pool, they don't ask after you if you have been away a couple of weeks because they don't even notice, the reception desk at Wharenui notices and asks how you are or how your race went if you were away.

I know there are other pools opening, neither Hornby nor the new pool in town is suitable for me based on where I live and work, Wharenui is, it's near my home and on my way to work. Don't close our pool.

SUBMISSION TO  
CHRISTCHURCH CITY COUNCIL

DRAFT LONG TERM PLAN  
2021 - 2031

FROM TE WHARE ROIMATA TRUST

**Te Whare Roimata Trust**

## **I. Introduction**

This submission comes from Te Whare Roimata Trust, a longstanding Community Development organisation which works with the people of the Inner City East / Linwood West neighbourhoods. Both these neighbourhoods have a high rating on the NZ Social Deprivation Index, and were significantly damaged in the Canterbury earthquake sequence which aggravated this vulnerability. Census data consistently rates the ICE/Linwood West Community as amongst the most deprived in New Zealand.

Our submission has been prepared by Jenny Smith, Co-ordinator / Community Development Worker of Te Whare Roimata Trust.

## **II. The Right Game Plan?**

Te Whare Roimata recognises the significant socio-economic impact COVID.19 has had, and will continue to have over the next 10 years both locally and nationally, especially in terms of Council's spending.

We welcome the development of the Otautahi Christchurch Recovery Plan and its focus on fostering the socio-economic wellbeing of local communities. We support the Council's commitment to not wanting to adopt an austerity approach in the need to find savings and keep costs down for ratepayers while wanting to be forward looking to create a resilient, prosperous city and region.

We also acknowledge and commend the Council's willingness to confront the future challenges of climate change, technological advances, housing affordability, and ensuring the wellbeing for all people. Likewise we recognise that much of the capital expenditure is already committed giving little financial flexibility. While we are opposed to the Multi-Use stadium being built now, preferring that it was deferred until a later time, we recognise that commitments have been made which prevents such a deferral.

In view of the financial situation faced by Council, we support the efforts made to hold rate increases to the levels proposed but would urge the Council to strongly advocate to the government for greater financial assistance for infrastructure matters.

We also support the new targeted rates proposal and its focus on supporting heritage, as well as a target rate on business properties in the Central City. We welcome the need to help owners of vacant Central City land to either develop their land or at least improve the visual appearance in the short term.

### III. Te Whare Roimata Feedback

While we recognise that budgeting constraints are needed we strongly argue that the Council needs to draw on and firmly apply an “equity lens” across budget cuts to ensure these do not impact unfairly on geographically marginalised neighbourhoods such as the Inner City East / Linwood West communities or on communities of interest such as the elderly.

We particularly draw your attention to the continued struggle the ICE/Linwood West community faces post-quake and the complex, deep-seated systemic issues confronted. Resources need to be prioritised to this area to ensure the social, economic and cultural wellbeing of its people now and in the future. An “equity lens” will enable decision-making to reflect these principles, central to the Council’s strategic framework and co-design solutions are developed in active engagement with residents.

In the interest of geographical equity we urge the Council to prioritise spending some of the \$13.1 million set aside for planting across the city (under the proposed climate change actions) to support the “Greening the East” initiative, a partnership between the Waikura-Linwood-Central-Heathcote Community Board and the Inner City East Revitalisation Project. Local research highlights that many of the Inner City East streets are significantly lacking in trees, made worse by intensification and urban consolidation, and that the parks and green spaces in the neighbourhood are not well connected. Climate change will exacerbate these existing heat islands. Support for the “Greening the East” initiative will help address the issues faced.

In keeping with a push for geographical equity we would strongly urge the Council to ensure that the development contributions received from new developments in the ICE/Linwood area is in fact poured back into this area. At a time of rapid urban consolidation and change in the older central city suburbs additional resourcing is needed to ensure the infrastructure is developed so as to preserve and protect community wellbeing, and a liveable, healthy neighbourhood. Now, more than ever is the need to purchase land in the ICE area for extra green space.

On previous occasions Te Whare Roimata has submitted on the need for the strategic acquisition of land at the Linwood Village for the purpose of a community gathering space. This need grew from community conversations Te Whare Roimata undertook in 2017/2018. These conversations have subsequently been extended by the ICE Revitalisation Project. The success of the Tiny Shops Village Project has also influenced how such a space could be developed in a neighbourhood which has limited community facilities and is undergoing change as a result of urban

consolidation. Such a space could be instrumental in building a resilient, inclusive community.

We would see the use of development contribution funding as a way of financing a partial review of the Rapanui Cycleway from east of Fitzgerald Avenue to the Worcester/England Street corner where several design issues continue to dog the success of this cycleway.

While we appreciate the need to cut operational budgets we are strongly opposed to the loss of the weekly mobile library from July 2022. This important service reaches out to low income communities and to vulnerable adults and families who otherwise would struggle to access reading material. We have seen the value of this service to people in the ICE neighbourhood. In the interests of individual and community wellbeing we urge the Council to explore how this, or an alternate service can be developed to meet the important needs the mobile service provides.

We are also strongly opposed to the cutback to the Community and other grants programme, particularly given the financial impact COVID.19 has had on communities and on community organisations. Having been buoyed last year by the wage subsidy and the small increase in community funding by the Council this year will be a crunch year for some organisations still struggling from the loss of funds and without access to additional finance to aid their organisation's recovery.

## **Conclusion**

Te Whare Roimata acknowledges and wishes to express our appreciation for the valued support the Council offers our organisation, and for the financial support and staff resources received to support the ICE Revitalisation Project.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Organisation name, if you are submitting on behalf of the organisation:**

Addington Neighbourhood Association

**Your role in the organisation:** secretary

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

We **do not support** the proposed reduction in the Strengthening Communities Fund. This fund supports of the work of residents' groups such as ours.

1.2 Rates

We **oppose** a rates increase as a rates increase will have a disproportionate impact on our suburb.

Addington is not an affluent community. Our suburb contains a significant proportion (about half) of residents who rent their homes. This population tends to be younger, less well-off and more ethnically diverse than the city's average. They have few assets and if employed, their employment is more likely to have been adversely affected by Covid (either through redundancy, reduced hours or loss of small business income). Rates increases will inevitably lead to higher rents, and a small rent increase is a big deal here. Those who do own their properties in Addington tend to be older and frequently on fixed incomes. Their equity is in their homes, not savings in the bank. Rates increases inevitably therefore bite into an already limited discretionary spend.

We note that the proposed rate of rates increase is substantially in excess of the rate of inflation. Rates have undergone an average increase of 6.1 percent annually since 2006-2007, and now council is proposing a cumulative increase of 47.8 percent over the next decade. We also observe that rapidly increasing property values, residential intensification and suburban expansion will all increase council's rates take, and this does not appear to have been sufficiently accounted for in the council budget.

If it is however decided that rents must go up, in order that the increase has proportionately less impact on Addington, we:

- **Support** the proposed scaled rate of increase;

- **Support** the removal of flat rate Uniform Annual General Charges and the introduction of a fully progressive rating system;

- **suggest** that the rates remission scheme be restructured to provide relief to a wider sector of the population, and greater relief for those already eligible.

### 1.3 Proposed changes to existing rates, and new targeted rates

We **support** the heritage targeted rate in principle, but question why council feels the need to spotlight heritage in this fashion when there are many other areas of expenditure which could be similarly highlighted.

We **request** that the spending on the Canterbury Provincial Chambers be brought forward so that this key city heritage building does not languish for another decade.

### 1.5 Investing in our transport infrastructure

Transport is a central issue for Addington because of urban intensification, the many in our community who do not have ready access to a vehicle, and our location between Moorhouse Ave and Brougham St.

We **support** the encouragement of alternative modes of transport. Because of the many in our community who do not have ready access to a vehicle, we support a regular, efficient and cheap public transport system.

This said, we **do not support** residential intensification without sufficient parking as this reduces the amenity in our community as cars fill up every available place on the street.

We also **observe** that encouraging the take-up of electric vehicles may help solve the carbon issue, but will not necessarily solve the traffic issue.

### 1.7 Our facilities

We **do not support** reduced hours at libraries and service centres.

Reduced hours are more likely to impact on the less well-off. They are less likely to have computers and internet access at home, and often cannot visit libraries or service centres during normal working hours. This is becoming critical as more and more services (banks, insurance etc) are moving to on-line transactions only.

We **do not** support reduced hours at the Art Gallery. Cultural institutions such as this need to be more accessible to working people, not less.

### 1.8 Our heritage, foreshore and parks

We **do not support** the reduction of grants available to private owners of heritage and character buildings. As an older suburb, Addington contains a number of scheduled heritage buildings and many character dwellings. As a less-affluent suburb, grants are critical to the retention and retention in good repair of these buildings. We therefore **request** the reinstatement of the HIG fund to past levels.

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

#### Comments

We **support** the capital grant for the Arts Centre, but are concerned that it might be insufficient to allow the restoration of the complex to be completed.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

We **support** the base-isolation of the Robert McDougall if this is what is required to bring this key city heritage building back into full use as a display space. We question why this has been separated out from the general heritage targeted rate.

1.11 Potential disposal of surplus Council-owned properties

We would **support** a full consultative process outside the LTP before any council property is disposed of; particularly where heritage buildings and buildings with heritage values are involved.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Susan **Last name:** Wauchop

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I would prefer to see the budget broken down into these categories:

- maintaining infrastructure necessary to keep a major city functional ie water reticulation, sewerage and drainage; public transport; upkeep of the existing roading network
- building communities - providing facilities that make a neighbourhood worth living in - libraries, swimming pools, parks
- investing in the city's points of difference - our historic buildings (Arts Centre); our rivers and gardens; our cultural icons (Turanga; Isaac Theatre Royal, the Art Gallery)

All of these require equal investment. I wouldn't like to see infrastructure given priority over the other two areas. And sadly, we seem to have become committed to expensive projects that - no matter where in the world they are built - never repay the initial investment. (Convention centres; stadiums)

1.2 Rates

I'm happy with an increase in rates, provided the increased expenditure doesn't go on building new roads, but goes instead to adding value to the city's points of difference and to neighbourhood facilities.

1.3 Proposed changes to existing rates, and new targeted rates

I'm not certain what the implications of a targeted rate for the Arts Centre are. I absolutely support (increased) investment in our heritage buildings and institutions- (see above) but the way it is presented suggests you want to stir up negative sentiment for this investment. And while I strongly believe we should be putting a value on our water resource, I don't think this has been properly thought through. If we are going to charge for water, it surely

must start with industrial users, rather than with the average citizen. My understanding is that Christchurch is unlikely to “run out” of water. But we need to monitor its usage for industrial purposes and discourage its use for inappropriate purposes - such as irrigating naturally dry land, or selling it offshore.

#### 1.4 Investing in upgrading and protecting our city's water networks

Given that water is an extremely valuable resource, we should be ahead of the game in its management.

My question would be: are we taking advantage of the newest technologies and leading edge thinking about how water is retained, conserved and treated.

#### 1.5 Investing in our transport infrastructure

Our public transport system needs a radical rethink. At present, its a failing system. Buses are attracting fewer users than ever.

it might be worth trialling a period of free bus services to determine whether there is a market at all for the existing service.

Lets not build more roads.

It would be wonderful to have a light rail service crossing the city in four directions. That would excite interest - and attract patronage that will never be excited by bus travel.

#### 1.6 Rubbish, recycling and organics

I cant get excited about this. We really should be addressing the problem at the source.

I'd rather this expenditure go towards maintaining neighbourhood services.

#### 1.7 Our facilities

I absolutely oppose the reduction in expenditure on community services such local libraries and swimming pools. Local communities will increasingly become the focal point of peoples lives, as working from home increases, and people increasingly opt for a car-free lifestyle. Cutting back neighbourhood services seems to fly in the face of all of the emerging trends in peoples lifestyles.

#### 1.8 Our heritage, foreshore and parks

in line with my previous comments, I would like to see a significantly higher investment in our heritage, foreshore and parks. These are Christchurch's points of difference. If we want to rise above the mediocre, we need to make a significantly greater investment in these, our natural assets.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

\$5 million seems to me to be a tiny investment.

The Arts Centre is arguably Christchurch's most valuable built asset. Its restoration has been remarkable in its vision and craftsmanship. This is the jewel in our crown. Lets demonstrate our pride in it through a significant funding grant.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

**First name:** Wolfgang **Last name:** Rack

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

Overall right, but the current growth in area is not sustainable without increasing the density in population. Instead, the costs for infrastructure, public transport etc. is too rapidly increasing.

1.2 Rates

Not justified, as the increase in rates should not be higher than inflation.

Better strategy in building consents should enable higher density in population, keeping costs for infrastructure, public transport etc. much lower.

1.3 Proposed changes to existing rates, and new targeted rates

About right. I suggest a lower threshold for excess rates (350 liters per household up to 5 persons, and big 5+ should get 50 Liters extra per family member) and therefore a lower increase in residential rates.

I'd prefer a greener city with better public transport, lower speed limits (similar to CBD), and lanes for safer biking.

1.4 Investing in upgrading and protecting our city's water networks

About right.

1.5 Investing in our transport infrastructure

More investment is needed for public transport. Investment for cycle lanes is right, but walking and cycling can get safer by reducing the speed limits (similar to CBD) with minimal costs.

1.6 Rubbish, recycling and organics

About right, but recycling should happen increasingly via retailers, who should be required to take consumables back for disposal.

1.7 Our facilities  
Closing Bus lounges is only justified if saving is invested in public transport.

1.8 Our heritage, foreshore and parks  
OK.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties  
Buildings should be sold.

## Our Draft Long Term Plan 2021-2031 submission form

---

**Your details:**

Full name Gloria Jean Wallis (Mrs)

**I am completing this submission:**

☒ For myself ~~or~~ ☐ On behalf of a group or organisation (please tick one)

Organisation name \_\_\_\_\_

Your role in the organisation \_\_\_\_\_

Do you wish to present your submission at a hearing? ☐ No ☐ Yes (if yes, you must provide contact details below)

Daytime phone number \_\_\_\_\_

So we can understand what different groups of people are thinking, could you please tell us your gender and age group.

## Questions to think about when making your submission

### Have we got the game plan right?

Our overarching proposal is to focus on a deliverable capital programme that helps drive our city forward, with particular investment in roads and transport infrastructure and in protecting and upgrading our water networks. We're borrowing for new projects that have long-term value, and ensuring that the debt repayments are spread fairly across the generations of ratepayers who will benefit from them. We're maintaining enough financial flexibility to be able to handle unplanned events, and we're finding permanent efficiencies in our day-to-day spending. We've managed to do all of this while keeping rates increases as affordable as possible.

**Have we got the balance right? Have we prioritised the right things? If not, what changes would you like to see?**

I do not think you have prioritised right. Stop all this mess in Riccarton, regarding cycle-ways. What a waste of money and time. You have made narrow streets (already small), into really small. Two cars can barely get through on the streets. Have a look at my street "Lochee Rd" for example, also, Suva St!

Forget the "dream big" Convention Centre, and, swimming pools, chch cannot afford it. We have the Town Hall for concerts, and, our local pools, like Wharenui Pool, and Jelly Park Pool for example.

Lastly, I just want the ChCh Cathedral prioritised. Build it back to its original form. It is the heart of ChCh. It is disgusting that 10 years nothing has been done! Get it done!

### Rates

We've considered a range of options for how best to achieve what we need to achieve while also keeping the average rates increase as affordable as possible.

**What do you think of this plan for an average residential rates increase of 5 per cent for 2021/22 and an overall rates increase of 4 per cent over the next 10 years?**

I do not agree there should be a rates increase at all. Our rates are expensive now. Any increase at all will put our house in jeopardy. We are both on a pension, and do not want to sell our family home I have had for 40 years. Finance will be difficult, also, when I have to pay other bills, e.g. Power, Phone etc.

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

**What do you think of these changes to existing rates, and new targeted rates?**

**Have we got it right? If not, what changes would you like to see?**

Do not charge us water rates. My sister pays \$30, and, now they want \$60. This is in Leeston. It is an unnecessary charge for the little amount of water we use (my sister, and me). Charge big factories, farmers, and that Chinese Company for bottling, and, also stealing our water!

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

**We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

It is too late now. Have a look at Selwyn River, and, many other Rivers that are just now small puddles. Stop farmers irrigating their land, wasting water and depleting our water-ways, and, their run-off into their environment.

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

Silly idea painting all buses blue. Wheres the Orbiter? I think bring back trains to Rolleston, Rangiora and, Kaiapoi.

A tram also would be beneficial ~~to~~ (electric) in some areas. Maybe that could be possible in the future, re-pollution of other forms of transport.

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

**We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

Yes I agree with that. When is there going to be equipment supplied for no. 1 re-cycling? It <sup>is</sup> time it was done.

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

**What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?**

**Have we got the balance right? If not, what changes would you like to see?**

No you have not got it right! Leave our libraries and service desks, including the hours they are open. Don't close either the Mobile Library, or, the bus lounges. Every time I drive past the bus lounges are full, especially when School is out. Don't spend any more money on the Art Gallery, the one we have <sup>nicely</sup> does the job ~~more~~.

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

**We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.**

**Have we got the balance right? If not, what changes would you like to see?**

Yes I agree. Please make sure you empty Council Rubbish bins at the parks more regular, e.g. Wharenui Rubbish bin. Also, weeding is done around Bark areas of Traffic lights, especially Riccarton.

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☒ Yes ☐ No

Comments: The Arts Centre has already been up-graded. Why is so much ~~money~~ more money required?

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021-31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☒ No

Comments: That building is old, and, ~~cracked~~ cracked. It is not worth restoring. Unprofitable.

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future - what do you think of this proposal to dispose of surplus properties?**

Sell all surplus, unprofitable buildings. Keep the money for any emergency projects. eg, if there is another quake or flooding in Christchurch.

**Any other comments:**

Do not increase rates, and, spend money wisely.

Why do we need a new Stadium? Orange Theory should suffice.

**Thank you for your submission**

### Feedback

1.1 Have we got the game plan right?

As a resident of Diamond Harbour, I am submitting an outright rejection of the Christchurch City Council's stated intention in the Long Term Plan to effectively fast-track the disposal of a significant parcel of land in Diamond Harbour. The area comprises two properties described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha)

I propose as follows:

1a. The two pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan. It is completely inappropriate for the sale of such a complex parcel of land to be fast-tracked without meaningful community consultation, and this in itself contradicts the council's stated intent in this webpage discussion on planning.

1b The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation).

2. Instead, any proposal to engage in discussion about disposal of this land should go through a proper consultation process with residents directly and also via the local community association, which is knowledgeable in tracking historic and current local developments, and is engaged and highly responsive to the various needs within our community. A consultation process would include Council proposals as to how the land should be utilised, public meetings, and a submission process for residents to have meaningful input.

3. Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Banks Peninsula Community Board. Decisions on the sale should not be made solely or even predominantly by Council staff.

4. There are many significant and complex matters which need to be considered if disposal is to proceed through normal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process.

Some of these are:

- Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to conflicts with community usage and aspirations.
- The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. The proposed covenant boundaries intersect in a complex manner with the land titles.
- The need for adequate safe green spaces for existing residents (let alone a bigger population) should be thoroughly assessed and addressed.
  - For example, at the top end of Ngatea Road, there is current and historic 'commons' usage and vehicle access by residents on Marine Drive, which needs to be formally provided for. This green space is well utilised by residents in the vicinity, and has been maintained and used by locals for decades in various ways, with considerable harmony and enjoyment. It is well placed and contoured to continue to enrich the neighbourhood with a variety of potential uses such as safe dog exercise, safe children's play, neighbourhood gatherings and further community garden/ orchard development.
  - Diamond Harbour's existing infrastructure of narrow roads and footpaths, and narrow uneven cliff tracks, is not adequate or safe for a mix of users including vehicle traffic, dog walkers and recreational walkers/joggers of all ages. Provision should be made for safe and more evenly-contoured walking/playing/shared areas that all existing residents can access. There is a large proportion of retired residents, and many families with children, whose needs are not well catered for.
  - One example of local enthusiasm for development of community spaces, is the recent action by residents which has resulted in a redesignation of the small reserve on the corner of Waipapa Ave and Te Ra Cres.
- Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.
- If there are houses built, the school roll may well increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.
- If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Drivers already need to limit speeds to 25km/hour there. Whero Avenue has a dangerous low visibility corner.
- The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?
- Should all the land be sold (privatised) at one time? Would a staged housing development be better for the community?
- Different use options for the land need to be considered not just a sale to a housing developer. Should some parts of the land be released for residential development and other parts held for other uses? Should the Council consider the needs of the community for special types of housing e.g. catering for older or younger people looking for smaller units?

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** sarah **Last name:** Palmer

**Organisation name, if you are submitting on behalf of the organisation:**

Ferrymead Bays Football Club

**Your role in the organisation:** Club President

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.7 Our facilities

Ferrymead Bays Football was formed in 1972.

We are an NZF Licensed Club with 800 plus playing members ranging across all ages from First Kicks at age 4 through to master's Football. We participate within the Mainland Football Federation competitions using council owned facilities.

Ferrymead Bays Football seeks to safeguard and strengthen our club by raising the levels of professionalism in our structure's administration, technical and sporting development. We seek Council assistance with further development of Ferrymead and Barnett Parks to create better sporting facilities that can be utilised by the wider community.

By creating a first-class football and sporting hub, it has the possibility of establishing something special for the people of Linwood, Brighton, Ferrymead and Sumner. Something to be proud of on a local and national level.

#### Improvements at Ferrymead Park

- *Improved maintenance of the existing sand carpet field.* When Ferrymead Bays Football invested and installed the lighting at Ferrymead Park the club was advised the pitch would handle 20 hours per week of football use. We are lucky to get 8 hours per week use. Recent independent assessments of the pitch have eluded poor maintenance and timing of the works as a contributing factor in the pitch underperforming.
- *Lighting to rear sporting fields* allowing an illuminated facility for an array of sports. Cricket and Athletics also use this part of Ferrymead park and illumination may extend their seasons.
- *Multi code artificial sports turf* – the area has low housing density hence creating a sporting hub at this existing sporting facility will have little impact on the surrounding residential area. As noted above, creating a first-class multi code sports hub has the possibility of establishing something special for the people of Linwood, Brighton, Ferrymead and Sumner.
- *The removal of the Pampas bush* behind the goal at the end of the Eastern End of the #1 Football Pitch. Balls are regularly kicked into the Pampas when aiming at goal and retrieval is difficult with a Health and Safety Risk of the grass cutting you.
- *Adding storage facilities into the existing pavilion.* Ferrymead Bays Football met with the council in February 2020 and it was agreed that additional storage space could be easily included within the existing structure by enclosing the corner of the pavilion. This enclosure would assist current users Football and Athletics.
- *The removal of open drains* around the Ferrymead #1 football pitch with a replacement culvert drainage network would:
  - Provide better flow of water within a piped drainage network, being more efficient for storm water removal. The existing open drains have water sitting 12 months of the year
  - Reduce the existing Health and Safety risk of having open drains at a sporting facility. Participants and young ball boys currently recover balls from open drains during training sessions and matches.
  - Remove the breeding ground of mosquitoes.

#### Improvements at Barnett Park

- *Lighting*– a submission to upgrade lighting at Barnett Park is currently with the Council. The upgrade is based on the lighting plan prepared by Phillips lighting and will reduce the current wear of the ground in a central area.
- *Trimming existing trees and bush* – the gum tree at the end of the sports field has killed the grass beneath. Trimming this tree would enable more growth beneath. We appreciate the trimming of the bush away from the fields, but request this continues higher up the bank as its close proximity to the fields creates a Health and Safety hazard in the run of area beyond the pitch /behind the goal.

The above improvements would

- Provide better facilities in which we undertake community-based football solutions with First Kicks, Junior, Youth, Senior and Master's for both men and women. And enable the progression of football with sustainable pathways for community and talented players.
- Align with the NZF Whole of Football Plan in providing an opportunity to provide high quality experiences to attract and retain players, coaches and administrators in the game.
- Encompasses and reflects the Facilities Plan prepared by Christchurch City Council and Mainland Football for football facilities.
- Encompasses Mainland Footballs Strategy (2017-2021) "*more people playing and loving football, quality environments for everyone to meet their potential*".
- Encompasses Mainland Football Club Development Strategic Outcomes "*sufficient number of sustainable clubs delivering football to the community*".
- Enables effective planning and sharing of council owned facilities.
- It enables future proofing of the east side of Christchurch.

We appreciate your time in considering our proposals. And we welcome Council engagement and would appreciate an opportunity to meet to discuss further.

Regards

Ferrymead Bays FC

**First name:** Anu **Last name:** Pratap

**Your role in the organisation:** Volunteer guide,  
Christchurch Art Gallery

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.7 Our facilities

I am concerned about the proposed cuts to services currently offered by the Art Gallery.

-Reducing late opening hours on Wednesday evenings is not in the best interest of the public. People that visit the gallery then are often working during the day and avail of the chance to come to the gallery then.

- Reducing educational opportunities for school groups is also concerning. It is a program that is well subscribed and also a great opportunity for primary school children often from low decile schools that may otherwise not get the chance to visit the gallery and explore potential talent. We want to grow wholesome, well rounded kids and taking away these opportunities is not in their best interest.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

##### Comments

I think the arts center is a jewel in our city and needs more support from the council. The current proposed support doesn't go far enough and needs to be reconsidered. It would be more prudent to look after our heritage rather than let it go to ruin.. Better to do that than spend it on base isolation for Robert McDougall Art Gallery.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

##### Comments

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Francis **Last name:** Johnson

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

There should be a much greater emphasis on making large reductions to our greenhouse gas emissions, starting immediately.

The climate emergency is such a serious and urgent matter that it should be a central to all decisions made by the Council. As a developed country with high per-capita emissions, we must respond to the climate emergency by taking responsibility for the harm our emissions are causing to people overseas and will cause to people who are yet to be born.

### 1.2 Rates

I am in favour of the proposed increase, and would be in favour of an even greater increase if it were used to fund climate change mitigation measures.

I would be in favour of a more progressive rating system so that increases are borne by those who are most able to afford it.

### 1.3 Proposed changes to existing rates, and new targeted rates

Excess water rates: In favour.

Heritage, and Arts Centre: In favour, and agree with not to making these fixed-rate.

Vacant sites: It would be great if the city could support beautifying these sites while they are vacant.

Central City Business Association: It seems unfair that small businesses would pay the same as large ones.

Land drainage: I agree with the proposal to share this rate across all ratepayers. It should be progressive, not flat-rate.

Remote rural properties: In favour.

I agree with the proposed changes to remissions 1 and 7 (and am neutral about remission 5).

### 1.4 Investing in upgrading and protecting our city's water networks

I am in favour of a well-maintained water network, and safe unchlorinated water.

Two changes I would like to see are:

- The Council should support ECan to ensure that our water is not contaminated with nitrates. This could entail banning synthetic nitrate fertilisers, and supporting dairy farms to transition to land uses that are sustainable and restorative.

- The Council should support decentralised water harvesting to reduce the amount of water that needs to be supplied by the council.

### 1.5 Investing in our transport infrastructure

A much smaller fraction of the transport spend should be on roading, and much more should be spent on alternatives to private motor-vehicles, such as active transport and low-emissions public transport. The allocation to environmental improvements should be much greater than the proposed 23%.

We are in a climate emergency, and many of those most affected are in low-income countries where adaptation is not possible.

Christchurch's emissions are already contributing to death, disease and hunger overseas, and will continue to do so into the future.

To put it bluntly, our cars are killing people. We have a moral obligation not to harm people; this entails making a massive reduction in private vehicle use, and not just transitioning from petrol to electric vehicles (which are not zero-carbon because of their embedded emissions).

Given that the future must be one where our roads are used far less than they currently are (at least by motor vehicles), it would be

wasteful to spend large amounts of money on repairing them. Instead, we must greatly increase the number of cycleways and walkways that are safe (separated from traffic by physical barriers), well-connected (so that people are not put off by having to make part of their journey on busy roads), pleasant (away from busy roads, and with greenery visible), conducive to social cycling (so that people can ride two abreast and have a conversation), and well-signposted. There should also be safe places to leave bikes, with good locking systems for large numbers of cycles, and with anti-theft measures such as camera surveillance.

Major cycling corridors are only the start: there must also be networks of safe cycle routes sufficient to safely cycle the entire route between any two destinations in the city without needing to bike alongside traffic.

To encourage widespread use, public transport should be free in some cases (e.g. for children and elderly, or at off-peak times) and highly subsidised in other cases.

The Council must take a lead in educating the public to understand the urgency of the radical changes that must be made. One inexpensive way of doing this would be to award prizes for sustainable behaviour.

#### 1.6 Rubbish, recycling and organics

I am in favour of much greater emphasis on eliminating greenhouse gas emissions associated with waste.

I am in favour of greater emphasis on discouraging waste-producing behaviours, on more recycling, and on supporting organics facilities.

#### 1.7 Our facilities

I am in favour of a comprehensive analysis of the climate impact of the Council's facilities. Such analysis would include travel patterns of people using the facilities, as well as emissions from the facilities themselves. It would consider existing as well as possible facilities and means of transport. Information from this analysis – along with any existing information – should be a primary consideration in deciding what facilities to support.

Facilities can be seen as climate mitigation measures if they mean that people use local services or engage in local activities rather than travelling further afield. The Council should be actively looking for opportunities to make this happen, and should be supporting active transport or low-emissions public transport for travel to its facilities.

#### 1.8 Our heritage, foreshore and parks

I am in favour of:

- More support for community gardens.
- More shrubs and less short-cut lawn in parks.
- Cycleways and walkways through parks.
- Fruit trees in parks, provided the soil is uncontaminated.
- Not using herbicides and pesticides.

#### 1.12 Any other comments:

Feedback on this submission form: Great to have a submission form where all questions are visible on one page, and that supports rich text. The Yes/No radio buttons should have a "Don't Know" option.

Kia ora,

My name is Ali and I am a lecturer at University of Canterbury. Considering the opening for submission and suggestions, I first wanted to say thank you for all the improvements to our city in the past years. I wanted to add two suggestions which are both possibly on your agenda, more bike lanes and more libraries please.

Considering how flat our city which makes it perfect for bicycle transport more dedicated bike lanes will help it become the bicycle capital of New Zealand.

I understand that Covid has hit the budget of the council but please don't cut the budget of libraries and bike lanes. These are what will make our town different for future generations.

Thank you

Ali

### 1.11 Potential disposal of surplus Council-owned properties

Re proposed disposal of 42 Whero Avenue and 27 Hunters Road properties, Diamond Harbour.

My name is Philippa Joyce Drayton and I reside at Charteris Bay, Diamond Harbour. I have been a bach holder/ holiday maker since 1968 and for the last twenty years been a permanent resident on that site in Diamond Harbour.

I am completely opposed to the disposal of these properties without a full consultation process, that is, the LTP consultation is insufficient.

The issues below need exploration and community discussion. It is completely inappropriate for the CCC to sell/dispose of the properties without addressing these issues, examples of which are outlined below.

Furthermore there are significant infrastructure issues that would need to be addressed and current residents confident that the CCC would provide updated and functional infrastructure (in all its forms, e.g. Roading, domestic and heavy construction; sewage; water; power; sporting/recreational/library facilities; public transport, both within the area and size of ferry capacity; social housing; geriatric care; increased medical capability...) To take the last issue, medical capacity, the community funded the medical centre and although at times stretched it is functional. If there were to be a substantial development (of the order that the land disposal could permit) then the current facilities would be woefully inadequate and it should not fall on the community to upgrade the medical facilities just so the CCC can dispose of (and make a significant profit from) these lands.

In any event Morgan's Gully and Sam's Gully and the walkways and walking routes need to be fully protected and covenanted.

I support Morgan's Gully and Sam's Gully being given Reserve status.

I support part of the land in question (adjacent to the school) to be set aside for expansion of the school and pre-school facilities as these will be needed in any event in a growing community.

I support smaller unit and older persons facilities (including "rest home") and social housing (e.g. smaller land units so the community is not solely for those who can afford to purchase and maintain a large section.)

I support allocation of a portion of this land to the fire service should this be required. Note at present the Fire Service site is small and the community has just fundraised for a 4WD vehicle and the present site is unlikely to be adequate in even the short term.

It is imperative that there is full consultation and a planned approach to these land not just disposal.

For the above reasons I cannot support the disposal of 42 Whero Avenue and 27 Hunters Road properties.

The elements above (and likely others) need to be integrated into a planned package and discussed by the community.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

No, I feel you are prioritising nice to have services above essential services. 3 waters is an essential service while bike lanes are nice to have. I feel the Council has been cutting funding for too long to water, sewage and roading.

We had no say in the Council funding the Cathedral rebuild or purchasing the Christchurch Adventure Park. Again the Council should improve essential service before the nice to haves.

1.2 Rates

an increase of 5% is unsustainable for most residents in Christchurch and demonstrates a complete disconnection between the Council and the community.

Our personal situation is that we have just moved into our rebuilt house after the earthquakes. The house is the same size with the same number of resident but because it is new and higher value our rates have increase by about 50%. We are not using and do not receive 50% more service from the Council.

My husband has not had a pay rise for 4 years. How can the Council expect to increase rates higher than inflation? The Council needs to work more efficiently within the general inflation value.

1.3 Proposed changes to existing rates, and new targeted rates

I don't trust the Council. I feel the changes the Council are making is just another way to increase revenue without improving efficiency and productivity with the Council. First introduce the targeted rates then start increasing the value.

1.4 Investing in upgrading and protecting our city's water networks

Yes but it should lead to an increase of 5% in rates

1.5 Investing in our transport infrastructure

yes

1.6 Rubbish, recycling and organics  
yes

1.7 Our facilities  
yes

1.8 Our heritage, foreshore and parks  
Does the Council need to own as many heritage builds. I think the Council needs to look at the cost to support the builds vs the revenue raised by the buildings and reduce their ownership.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
No  
Comments  
The Art Centre should be self funded through rentals and hires

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties  
yes please sell and re invest the money into beneficial services and facilities

1.7 Our facilities

As a long-term, now ex-resident of Richmond Christchurch, I want to see the well-used and well-loved 10 Shirley Road Community Centre rebuilt. After over 10 years of broken promises, it is now time that the Christchurch City Council made good on its earlier promises and rebuilds this vital community facility.

### Feedback

1.12 Any other comments:

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Hunstbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

Best regards,

Sophie Smart

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I am submitting about the proposal to fast track the sale of the land as described as (27 Hunters Rd, Vacant Land, Pt Lot 1 DP14050++, 12F/538, 390,222 sq metres) and request that it be removed from the LTP and fast track disposal. The normal process for disposal of land that would require Community Board and public consultation, should be used instead.

The social, cultural and financial implications of the the sale and development of this land on the existing infrastructure of Diamond Harbour (water, power sewerage, safety, roading, medical and educational facilities) need to be fully considered under due process.

Additionally, there is significant community investment in the restoration of the natural flora and fauna in this area and the environmental impacts of any change to the current situation need to be given due process and consideration via the normal process for the disposal of land.

Fundamentally there are a multitude of social, environmental and sustainability issues to be considered in any potential development of this scale that can only be properly considered with full public consultation as per the usual process.

### Feedback

1.1 Have we got the game plan right?

The key priorities are climate change and, consequently, water. If these are not seriously addressed then nothing else will matter in the relatively near future.

Feel good projects should be shelved with funding going to reducing carbon emissions, increasing tree planting and maintaining the natural environment through improved bio-diversity, cleaning rivers and reducing water wastage. The proposal goes some way towards suggesting that but there is no margin of error. It is likely that there will be another pandemic (there have been eight zoonotic diseases this century alone) which will reduce the council's ability to carry out any proposals. What is included in the ten yearplan should be considered an absolute minimum, which, if we are lucky, may reduce the need for more major policies having to be enacted in the future.

Water should be metered and charged accordingly.

There is no provision to encourage people to use non-polluting, or very low polluting vehicles - a better sustainable transport policy that discourages unsustainable transport.

More support needs to be provided for community habitat improvement programmes.

If a sports stadium needs to be built it needs to be carbon neutral. These are being built in Europe. Te sports organisations that use it should pay for additional costs.

Support for improving the energy efficiency of the homes of the poor.

Fines for cutting down trees, This may not be considered applicable for the ten year plan but it will reduce the need to plant trees just to maintain the current level.

Education for low water use in gardens. Discourage lawns through support for other forms of planting and costs for irrigating lawns.

1.2 Rates

Rates should be increased by the cost of a cup of coffee a week.

1.4 Investing in upgrading and protecting our city’s water networks

More needs to be done on this. Water is going to be a major problem for the city in the next 30 years. The plan does not seem to appreciate the seriousness of the problem, particularly if the envisaged impact of climate change prove to be correct.

1.5 Investing in our transport infrastructure

More support for carbon neutral forms of transport are needed with that paid for by those who use climate change producing vehicles.

1.6 Rubbish, recycling and organics

This needs to be done in conjunction with educating people to reduce their levels of waste.

1.7 Our facilities

I would like more spent on libraries and community faciities but accept that we need to make sacrifices. These will be acceptable provided that the Council does not provide subsidies to organisations such as the New Zealand and Canterbury rugby unions. Cutting libraries so that 8000 people can watch a few rugby matches a year in a 30000 seat stadium is not acceptable.

Pehaps the organisations that use these facilities could be made to pay for all the seats and if they can't sell them all they will have to carry the cost.

**Subject:** David Lawry makes submission to ccc long term plan

My name is David LAWRY

I reside at

I am requesting that CCC undertake a re-evaluation of the Christchurch International Airport (CIA) air noise contours as required by Environment Court direction every ten years. This was due to be done in 2017. During the 2015 Judge led Christchurch City Council District Plan hearings CCC solicitor Scott and CIAL solicitor Appleyard submitted to the Judge Hassen that this re-evaluation would be carried out in 2016 or 2017. This has not occurred and I submit that the Judge was misled.

While the attached submission is headed ECAN long term plan it is the same submission I am making to CCC's long term plan .

I have already submitted to ECAN in their long-term planning process.

The point is also that the re-evaluation is sought to be carried out immediately given the already 14 years' time frame since the air noise contours were last re-evaluated.

Please acknowledge receipt of this submission

Kind regards David LAWRY

**ECAN Draft Long –Term Plan 2021-31 Submission**

My name is David Michael LAWRY I reside at

My email is

This submission has been designed to allow other submitters to adopt it should they desire in-order to become a party to these proceedings.

I indicate that I do desire to be heard at any subsequent hearings on this matter. Persons desiring to adopt this submission should indicate if they desire to be heard or not.

**Introduction**

This submission relates to the Requirement to re-evaluate the Air Noise Contours surrounding Christchurch International Airport (CIA) every ten years.

It was required to have been completed by 2017.

During the 2015 Judge Led Independent Christchurch District Planning hearings Christchurch City Council (CCC) and Christchurch International Airport Limited (CIAL) representatives stated that the re-evaluation would be carried out by them in 2016 or 2017. Both accepted the requirement for a reevaluation to be undertaken.

These assurances have proved misleading.

To my knowledge no firm timeline for carrying out this re-evaluation has been communicated to the land owners adversely impacted.

In order to understand the current situation and associated neighbouring land owners disgust at the competitive advantages CCC provide to their own company, a very brief background is provided.

These Air Noise contours significantly restrict land owners, living under these contours, land use development opportunities on their land. They are the most oppressive in the world.

There is however no noise development activity avoidance rules impacting on the land Christchurch International Airport develops. CIAL routinely progress development activities totally excluded to its neighbours, right where the noise is the loudest and most prevalent. They do this via outline planning processes that exclude public input and normal resource consenting scrutiny. These competitive advantages, and they are numerous, have reached a level where CIAL now earns more annually from its property management and development activities than from core airport roles.

The 50 dBA Ldn contour is a clear example of a development advantage. It has not been seen as justifiable anywhere else in the world as a noise level that is supportable for residential building avoidance rules. To the contrary there is a wide body of peer reviewed research carried out in 2004 by world leading acoustical expert Prof Sanford Fidell of Fidell Associates that totally negates any acoustical validity to a 50 dBA Air Noise Contour.”

The key finding was:

The information and analysis presented in the BEL report 2003-2004 accurately reflect current understandings of the effects of aircraft exposure on individuals and communities. They also support the

author's conclusions about the sufficiency of DNL value of 55dB as a conservative criterion for land use planning. The worldwide scientific literature on aircraft noise effects on residential populations provides little basis for favouring a yet more stringent criterion. **Thus a preference for a more stringent land use compatibility criterion represents a value judgment based on political, economic, personal or other non- acoustic reasoning.**

(Refer Review of BEL Report 2001-2004 "Study report on aspects of proposed variation 52 to the Christchurch proposed City Plan", 17 Feb 2004 Summary of Independent Review of Bel report Introduction and Summary Page 1)

There is no acoustical justification for the 50 dB Ldn Air Noise Contour It is the Christchurch City Councils competitive advantage gift to its owned company CIAL.

The New Zealand Standard NZS 6805:1992 states that a 55 Ldn as an Outer Control Boundary around all New Zealand Airports is sufficient. Only Christchurch City Council sought a lower noise activity avoidance threshold. It alleged that it was protecting the rural land use around the airport as part of variation 52 and successfully moved to implement a 50 dBA Ldn Air Noise activity avoidance rule. At that time CIAL operated large rural farming business which it has since ceased in favour of commercial land development and move completely opposite to protecting rural land use it espoused when seeking the 50 dBA Ldn Air noise contour.

The current plan requires the airport to operate with in a 65 Ldn/ 95 SEL Contour but CCC fails to monitor compliance.

It is not unusual in Christchurch Planning debates for World renowned expert evidence to be routinely rejected. I submit this is one major reason for the increasing lack of public engagement in the planning processes and growing suspicious of planning decision's steeped in conflict of interest.

**In order to try and bring some reality to this process noise at the 50 dBA level is akin to slightly elevated normal conversation.**

Professor J.P Clarke another world renowned airport related acoustical expert engaged by a submitter group I led at the Judge led hearings in 2015 has determined that the background noise levels existing on land under the 50 dBA Ldn Air noise contour already exceeds 50dBA. Again his evidence was ignored.

The RMA as one of its main tenants requires the effective and efficient use of land. It is obviously not effective or efficient to have land use exclusion rules impacting on land set at a noise level where the background noise already impacting on that land exceeds that set noise level.

Nevertheless this contour remains with it seems, no will by the powers to be, to actually objectively question it. The remedy sought is for the Regional Council to assess this contour in a manner that brings in on scope for independent assessment by the Environment Court.

### **Air Noise Contour Re-evaluation**

Putting the absurdity of this 50 dBA Ldn planning advantage CIAL enjoys aside I will now focus on the main purpose of this submission, which is to advocate for the required re-evaluation of the Air Noise Contours to be carried out this year. Regardless of absurdness of a 50 dBA Ldn

contour, the actual contours should accurately represent current reality. Continued reliance on the current contours is inefficient in terms of the RMA. It places restrictions on land use solely due to modeling error.

The contours have not been remodeled for 14 years yet they are still driving development decisions. This situation is totally avoidable and unacceptable.

As a signatory to the Experts Agreement, Regional Council has failed to resolve this matter nor plan for or budget to carry it out.

Further it cannot be asserted that there has been some mistake or lack of knowledge of the requirement. I personally appeared before ECAN Executives on this very topic in May 2018.

No outcome resulted.

### **Background to Re-evaluation Requirement**

In 2007 there were a number of appeals heard by the Environment Court against the proposed Selwyn District Plan which related to land zoning issues around Rolleston. Land owners who happened to be Selwyn District Council Councilors sought to have approximately 9 hectares of land they owned rezoned for residential development. The problem was that much of it was under the 50 dBA Ldn Air noise contour. The case proceeded very much on the basis of modeling arguments relating to the modeling of the 50 dBA, 55 dBA Ldn and 65 dBA Ldn contours around the Christchurch Airport.

The matter before the Environment Court was heard by Judge J. A. SMITH (presiding), and Environments Commissioners S J Watson and A

Sutherland. It was heard at Christchurch from 15-19 October 2007 inclusive and 23 October 2007. It related to various appeals against the proposed Selwyn District Plan under clause 14 of the First Schedule of the Act. The Appellant's were DJ and AP FOSTER and Nimbus Consultants Limited, Canterbury Regional Council and Christchurch International Airport The respondent was Selwyn District Council (SDC).

Prior to the actual appeals and that hearing and subsequent decision the following parties which included (CIAL), (SDC), Mr and Mrs Foster, Nimbus Consultants Ltd, Christchurch City Council (CCC) Canterbury Regional Council (CRC) and Waimakariri Council (WDC) entered into discussions in order to try to agree to settling matters.

The Parties with the exception of (WDC) actually entered into an agreement dated 17 July 2016 to a remodeling of the air noise contours which were previously modeled in 1994 and were then included within the SDC proposed Plan of 2000. The remodeling was completed with many matters/issues between the parties and their experts agreed but some were not.

This lack of agreement on all matters led to the Court Proceeding. In order to try and gain full agreement it was agreed that the parties experts would meet on the 23 and 24<sup>th</sup> of October 2007 and on the 25<sup>th</sup> if necessary for the purpose of agreeing an approach to modeling of contours to be included in the (SDC), (WDC) and (CCC) Plans proposed in Change No 1 to the Canterbury Regional Policy Statement.

In particular the experts were to agree on the parameters for such a contouring exercise. They were to agree on all of the inputs for a remodeling exercise (which were then outlined in detail).

Refer Exhibit One: Agreement Relating to Settlement of An Environment Courts Proceeding Drawn up by Anthony Harper Lawyers

(SDC) had engaged then Associate Professor J P CLARKE for the purpose of undertaking an independent peer review of the differing expert opinions expressed by (CIAL)/(CRC) experts and Nimbus/Foster experts. It was agreed that CLARKE would act as the Chairperson of the experts meeting and facilitate the negotiations discussions and dialogue between the experts.

In 2007 Environment Judge J A SMITH in his Oral Decision incorporated and accepted into the final decision of that Environment Court Hearing the recommendations of the memorandum of agreement which has become known as the Experts Panel Modeling Agreement of 25 October 2007.

On page 4 at [12] of that Oral Decision Smith states “Accordingly the appeals are determined in accordance with the memorandum of agreement signed and the directions made by the court. The changes to the plan are to be made without delay”

There is therefore no ambiguity the recommendations of the expert panel are binding. The re-evaluation of the contours is to be carried out every ten years.

This re-evaluation is now four years overdue. For clarity the contours were last re-evaluated 14 years ago.

Additionally the entire process of the re-evaluation is determined by the agreement. The Chair J. P Clarke has confirmed to me that cementing in the process was intended as it would enable the actual re-evaluation process to be transparent and easily replicated in an

ongoing manner. He has confirmed that all the parameters of the input data were agreed to be altered to greater reflect the realities existing at the time of any reevaluation. For example the total number of air movements, (currently agreed at 175,000) if at the time of each review is assessed as unrealistic or unachievable was subject to change in order to reflect reality.

It was envisaged that the actual noise profiles of the aircraft fleet flying at the time of the review should also be used. The objective he indicated was to produce contours that were based on realistic accurate data inputs, balancing airport needs and neighbours land use rights.

It is obvious that the current contours are exaggerated and inaccurate. One of the two major variables that make up the contour input data, the entire aircraft fleet and the associated aircraft noise profiles, is redundant. Every one of those planes no longer fly's into Christchurch International Airport. The noise profiles of the current aircraft fleet are of orders of magnitude quieter. Accurate data on this variable alone will significantly reduce contour size at all dBA levels.

It should be remembered that when the expert's panel carried out the last review the then contours shrank by 24%. This was due to (CIAL) input data exaggeration and a lack of (CCC) scrutiny of that data.

Hundreds of houses have now been built on the land at Rolleston that was previously prohibited under the 50 dBA Ldn contour. All on land, that by agreement was simply rezoned. All with zero adverse noise generated health effects to those residents and with nil adverse impacts on (CIAL) airport operations.

The sad fact is that CCC has lost thousands of residential rate payer opportunities all on the safest land in Canterbury while protecting its airport operations at a ridiculous 50 dBA Ldn noise activity avoidance level.

The reality is that mitigation of adverse noise effects at 50 dBA is very easily achieved. With background noise already way above 50 dBA what amenity adverse effects are alleged is very unclear.

The perverse effect has been that large tracks of potential residential land already largely serviced by major access road and very easily subdividable to the benefit of (CCC) are blocked out of development while Selwyn has become the largest residential growth area with many of its residence commuting into Christchurch daily.

Meanwhile (CIAL) has bought land for a proposed new airport at Tarras thereby conclusively indicating that they have lost confidence in air movement growth at Christchurch International Airport.

The 175,000 air movements at capacity data input that makes up the second major variable of the existing Air Noise contours was based on almost simultaneous take offs and landings using both runways, a process now negated by aviation authorities on safety grounds. An Independent assessment of the actual number of air movements at capacity of Christchurch International Airport is likely to result in a significantly reduced number. This is before asking why CIAL should be given protection at a total airport runway capacity level unlikely to ever be achieved to the detriment of all other land users' aspirations. Even prior to the adverse impact of the pandemic, actual air movements were below 60,000. Nearly 200% below, the contour capacity variable, currently being used, at some point a reality check is needed. Obviously

even a modest reduction of this variable to say 120,000 air movements would significantly reduce the current contours with zero real impact on CIAL core airport activities.

As indicated, CIAL now earns more from its property development and management activities than core aviation activities. Viewed from this perspective the property development advantages (CCC) have bestowed upon it in the total absence of any noise related rules requiring at source noise mitigation all while imposing the world's most sever noise activity avoidance rules upon all adjacent land owners living as neighbours is I submit conclusive evidence of planning policy driven by conflict of interest.

As one side as they are the actual contours driving the planning rules should be based on current data inputs. RMA demand this as do the adversely impacted land owners.

### **Remedies Sought**

That an immediate re-evaluation of the Airport Noise Contours be commenced.

That the Experts Agreement process for carrying out that re-evaluation be adopted. The methodology has been totally outlined including the software to be used and all data input variables. All parties accepted the methodology as suitable for the previous re-evaluation. (CCC) or (CIAL) attempts to now deviate from that agreed robust process, given previous input data exaggerations would simply be viewed as further conflict of interest maneuvering.

I have attached the actual agreement in order to assist. Refer Modelling Agreement dated 25 October 2007.

That a process be developed whereby the actual data variable numbers can be transparently and independently arrived at. A process that reflects CIAL business continuity concerns and neighbouring land owners land use rights and aspirations as a balancing challenge.

Such a process will require independent leadership. I put it to Regional Council that it engages J P CLARKE to act on behalf of Regional Council in carrying out this re-evaluation. This may go some way in growing engagement with ratepayers. It should not be the task of ratepayers to have to fund experts in order to have fair and reasonable land use contours developed. There is need to mend Trust perceptions this may prove a real way to address that issue if growing rate payer engagement is a real objective. Prof CLARKE is fully aware of the players and the need to balance fairly the issues, he is also totally aware of the processes involved having been the Chair of the Experts Agreement that developed the agreed methodology to be used in air noise re-evaluations. I submit there is no better independent expert to assist Regional Council in this endeavor

That the issue of the applicability of a 50 dBA Ldn air noise contour be raised in a manner that brings it on scope for Environment Court scrutiny.

That the dilemma raised by having an activity avoidance rule set at a 50 dBA Ldn Air noise contour level when the background noise experienced on that land under that contour already exceeds 50 dBA be investigated and resolved. It should be obvious that modern noise mitigation design methods can very easily resolve any alleged adverse noise impacts at 50dBA and for that matter at the 55 dBA level. If the assertion is that there needs to be amenity value/risk noise mitigation

for outdoor activities on land under the 50 dBA Ldn Air noise contour then could someone articulate what that risk is and how it can be mitigated when the background noise already exceeds 50 dBA.

It may be a great starting point to realize that Marshall Day (CIAL) and (CCC's) then preferred acoustical expert when outline consent processes were approved for the new Hotel at the airport indicated that 50 dBA was an acceptable noise level for the noise inside the bedrooms of that facility.

The only risk I submit is in the minds of CIAL executives terrified of a curfew on their 24 hour unimpeded airside operations. CCC, the statutory body charged with noise pollution enforcement has stood by for decades enabling the loudest and most sustained noise pollution at night and in the early hours of many mornings through aircraft on wing engine testing. Requiring zero at source noise mitigation. Given that fact I assess CCC's motivation to even investigate noise complaints relating to their airport company's activities let alone consider a curfew as zero.

Integrity, reasonableness, honesty builds engagement.

Kind Regards

D.M. LAWRY

Noise effects Decision re Robertson  
Exports Agreement

**CHRISTCHURCH INTERNATIONAL AIRPORT  
LIMITED (CIAL)**

**SELWYN DISTRICT COUNCIL (SDC)**

**MR AND MRS FOSTER (THE FOSTERS)**

**NIMBUS CONSULTANTS LIMITED (NIMBUS)**

**CHRISTCHURCH CITY COUNCIL (CCC)**

**CANTERBURY REGIONAL COUNCIL (CRC)**

**WAIMAKARIRI DISTRICT COUNCIL (WDC)**

Agreement dated the \_\_\_\_ day of October 2007

### Introduction

- 1 This Agreement records the basis of a settlement of an Environment Court (Court) proceeding between the Parties, which proceeding commenced in Christchurch before the Court on 15 October 2007.
- 2 The Parties Involved in the proceeding and the Parties to this agreement are:
  - 2.1 Christchurch International Airport Limited (*CIAL*);
  - 2.2 Selwyn District Council (*SDC*);
  - 2.3 Mr and Mrs Foster (*the Fosters*);
  - 2.4 Nimbus Consultants Limited (*Nimbus*);
  - 2.5 Christchurch City Council (*CCC*);
  - 2.6 Canterbury Regional Council (*CRC*);
  - 2.7 Waimakariri District Council (*WDC*).
- 3 The Parties, with the exception of WDC, are parties to an agreement dated 17 July 2006. The purpose of the 17 July 2006 agreement was to undertake a remodelling of air noise contours, which were previously modelled in 1994 and then included within the SDC proposed Plan of 2000. The remodelling was completed with many matters/issues agreed between the Parties and their experts but some were not.
- 4 This lack of agreement on all matters led to the Court proceeding referred to above taking place. Air noise contours are a key issue for the Parties in the proceeding referred to above and in respect of proposed Change No. 1 to the Canterbury Regional Policy Statement, which is open for submissions until 31 October 2007.
- 5 The Parties to the proceeding prepared their respective cases on alternative basis. Fosters and Nimbus were of the view that the results of the remodelling exercise completed under the 17 July 2006 agreement would provide the Court with sufficient information to enable the Court to resolve the issues between the Parties firstly on where the contours should lie within the SDC Proposed Plan. Secondly and/or alternatively, Fosters and Nimbus relied upon the remodelling for the purpose of receiving some guidance from the Court about how a contouring exercise should be undertaken, in particular, direction and/or guidance from the Court in relation to the modelling parameters and guidance relating to resource management considerations for such an exercise. CIAL/CRC took the position that there was no jurisdiction available to the Court to replace the noise contours in the Plan from 2000, but rather would provide evidence of the noise effects experienced at particular sites the subject

of appeals. CIAL/CRC accepted that the remodelled contours produced may result in a Variation to the Plan by SDC.

- 6 As the Court proceeding between the Parties progressed it become apparent to the Parties that the Court was unlikely to provide an answer to the issues set out by Foster and Nimbus and the Parties mutually agreed to call a cessation to the proceeding and endeavour to resolve their difference by further expert based negotiation and mediation.
- 7 The Parties are all desirous of obtaining a resolution to the air noise contour issue. They all recognise the importance of the air noise contours, both in terms of the Council's District Plan and in terms of proposed Change No. 1 to the Canterbury Regional Policy Statement.
- 8 Accordingly, the Parties wish to undertake a process whereby the result of a modelling exercise can be seen as robust and reliable, and to provide a sustainable outcome in terms of the Resource Management Act in the view of all the Parties.

**Therefore the Parties agree:**

- 9 Foster and Nimbus will withdraw that part of their appeal that relates to the issue of where the contours should lie within the SCD Proposed Plan. Also, they will withdraw that part of their appeal that relates to what was described within the Court proceeding as the Foster "trapezoid block". The remainder of the appeals, the "Foster finger" of land as described within the Court proceeding will by consent be rezoned Living 2A and all policy issues in dispute between the Parties will be resolved by consent. A consent memorandum including all of the above matters will be signed by all Parties and lodged with the Court as soon as possible.
- 10 In return for the above, the Parties agree that they will endeavour to resolve the air noise contour issue by firstly having their experts meet to agree a resolution and failing that the Parties agree to mediate their differences in respect of the air noise contour issue. Details of the experts meeting and mediation process follow.

**Experts meeting**

- 11 The Parties experts will meet in Christchurch between 23 and 24 October 2007, and 25 October if necessary, and such other dates that they may mutually agree for the purpose of agreeing on an approach to modelling of contours to be included in the SDC and WDC Plans and CCC Plans and proposed Change No. 1 to the Canterbury Regional Policy Statement.
- 12 In particular, the experts are to agree on the parameters for such a contouring exercise. They are to agree on all of the inputs required for a remodelling exercise including:

- 12.1 the INM version to be utilised

- 12.2 fleet mix
- 12.3 flight tracks
- 12.4 runway utilisation (to be agreed in conjunction with CIAL)
- 12.5 aircraft movements and/or year for the projections
- 12.6 have regard to the recommendations of the New Zealand Standard 6805 Airport Noise Management and Land Use Planning both in the land use controls and Airport noise.

It is recognised that the experts between them have available to them considerable data, which has already been collected by CIAL and utilised for the previous exercises. These materials will be available to the experts for their consideration.

- 13 In addition to the above, the experts are to consider the points of difference that arose in the Court proceeding between them which can be identified as follows:
  - Modelling year 2025 or some other year/planning horizon.
  - What allowance, if any, for aircraft noise reduction should be made over time?
  - Reliability of predictions having regard to the term of the prediction.
  - Flight tracks – agreeing the basis upon which the flight tracks which are to be utilised.
- 14 The experts will meet, discuss and seek to resolve issues acting as experts.
- 15 Associate Professor J P Clarke has been engaged by SDC for the purpose of undertaking an independent peer review of the differing expert opinions expressed by CIAL/CRC experts and Nimbus/Foster experts. It is agreed that Associate Professor Clarke will act as a chairperson of the experts meeting and facilitate the negotiations, discussions and dialogue between the experts.
- 16 The outcome sought from the experts meeting is either:
  - 16.1 remodelled contours which are acceptable to the experts;
  - 16.2 an agreed process by which a remodelling exercise can be undertaken.
- 17 In the instance where the experts are not able to agree by Friday 2 November 2007, the experts will set out in a memorandum their points of difference providing supporting reasons to substantiate their difference as well as providing information that demonstrates the sensitivity of that difference in respect of the ultimate position of the contours.

### Mediation

- 18 In the instance that the experts fail to agree in terms of the outcome set out above, the Parties to this Agreement agree to facilitate mediation between them to resolve the points of difference as set out in the experts memoranda.
- 19 A mediator shall be appointed and the mediator will be Associate Professor Mr Peter Skelton or Mr Richard Budd or some other suitably qualified and mutually acceptable mediator. The mediator will need a background in resource management issues. If the Parties cannot agree as to the appointment of a mediator by 9 November 2007, then at the request of any one of the Parties to this Agreement a mediator shall be appointed by the President of the Resource Management Law Association (RMLA) or his nominee and the Parties agree that they will be bound by that recommendation.
- 20 Mediation will be convened for the purpose of endeavouring to resolve the issues and disagreement between the experts as referred to above. The mediation will be conducted upon the terms as set out within the LEADR New Zealand Inc. standard mediation agreement, a copy of which is **attached** and marked "A".

### Costs

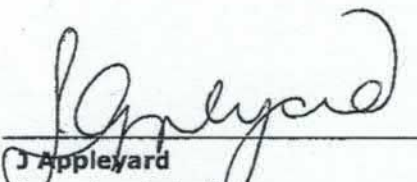

- 21 All Parties will bear their own costs in relation to matters referred to in this agreement. However, all Parties will pay an equal proportionate share of the cost of the mediator, if one is required to resolve differences between them.

### Timeframe

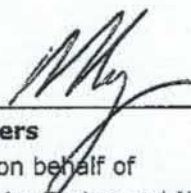

- 22 The Parties and the experts engaged on their behalf will work productively to obtain an outcome as soon as practicable and will avoid unreasonable delay.

### Good faith and all reasonable endeavours

- 23 The Parties will deal with each other in good faith and will use all reasonable endeavours to resolve the airport noise contour issue as soon as practicable. The Parties also agree to instruct their experts to act on their behalf in the same manner.

### Modelling Agreement on 25 October 2007

Experts representing SDC, CIAL, the Fosters and Nimbus have met between Tuesday 23 and Thursday 25 October 2007 pursuant to an agreement dated 23 October 2007, and have resolved and agreed the following in terms of a modelling exercise to be undertaken for CIAL to determine air noise contours.

- 1) 175,000 commercial movements per annum (runway extensions assumed) subject to Wake Turbulence and fleet mix factors, including the runway 29 seasonal factors to account for the Föhn wind (nor'wester) effect and the infrequent use of runway 29 as prime runway for all traffic;
- 2) 2025 fleet mix as modified in accordance with the table below

|      |                              |
|------|------------------------------|
| 2025 | Replace 747-400 with 777-300 |
|      | Replace A380 with 777-300    |

#### 3) J-P/KB flight tracks

- a) Arrivals: 10 nm for 8 nm / 8 nm for 6 nm with the following flight profile constraints:
  - i. aircraft deceleration;
  - ii. air traffic control considerations.
- b) Departures: ICAO B is to be used subject to airline confirmation;
- c) J-P/KB to calculate the percentage time for the left deviation turn to the north off runway 02 will be used.

#### 4) J-P CDA profiles

- a) Subject to 3(a) above, J-P will provide the final set of aircraft profile inputs;
- b) J-P to locate B737-700 data and review its appropriateness B787 substitution; and
- c) J-P to obtain Airbus flight profile data.

#### 5) Recognition of uncertainty

- a) The measuring system;
- b) The modelling;
- c) Input parameters;
- d) Chris Day to prepare best practice guidelines information based upon permanent monitoring at the 65 dBA contour and INM monitoring at the 55 dBA contour, noting the INM version used;

- Agreement to remodel every 10 years
- e) The compliance process should recognise the uncertainties identified in a), b) and c) above and the best practice guidelines in d) above;
  - f) Subject to further review the current view of the expert panel is that the total uncertainties are  $\pm 2$  dBA; and
  - g) For the period between remodelling exercises the previously utilised version INM is to be used.

#### 6) Runway use:

- JPC can  
HB can  
JPC can
- a) Preferred runway for night landings is runway 11 for all domestic jet subject to an extension of the runway;
  - b) Preferred runway for turbo prop departure will be runway 29 using applicable air traffic and meteorological conditions;
  - c) Preferred runway for turbo prop arrivals will be runway 11 using applicable air traffic and meteorological conditions; and
  - d) KB/J-P to modify the Airbiz runway usage allocations in light of preferred runway recommendations in a), b) and c) above;

#### 7) District Plan review

- #
- a) It is recommended by the panel of experts that the noise contours be remodelled every ten years and that all interested parties (e.g. Christchurch City and District Councils, Regional Council and CIAL) engage a team of experts to review the INM data using the latest version of the INM.
  - b) Between each of the remodelling exercises it is recommended that the City and District Plans contain the previously modelled contours.

#### 8) Interim compliance

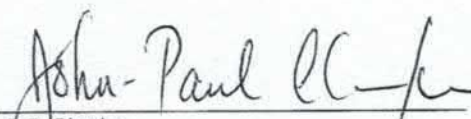

- a) MDA will model the current activity contours and investigate the growth and activity that would cause these contours to exceed the agreed future contours; and
- b) MDA to work with J-P to improve the modelling of current flight profiles.

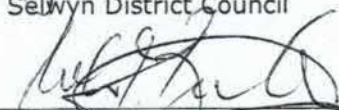

JPC can  
HB can  
JPC can

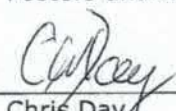

Items 1 through 7 will be completed prior to or on 30 November 2007, subject to mutually agreed changes in completion date.

Associate Professor J-P Clarke will prepare a report based upon the agreed modelling parameters explaining the rationale behind the modelling parameters that the experts have agreed. This rational to include an appropriate bibliography of applicable reference documents.

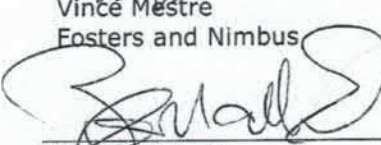

We, the undersigned, have hereby agreed to the following modelling parameters:

  
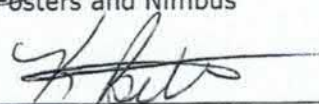

JP Clarke  
Selwyn District Council

  
Bill Bourke  
Fosters and Nimbus

  
Chris Day  
CIAL

  
Vince Mestre  
Fosters and Nimbus

  
Barrie Malloch  
Fosters and Nimbus

  
Kevin Bethwaite  
Airways NZ

### Feedback

1.12 Any other comments:

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

Many thanks,

Graeme.

## Feedback

1.1 Have we got the game plan right?

Hard to say but I can say - focus on the climate strategy as priority.

1.2 Rates

Fine except some of your priorities are 'nice to have' and not 'must have in terms of climate change.

1.3 Proposed changes to existing rates, and new targeted rates

Prioritise, incentivise and then penalize.

1.4 Investing in upgrading and protecting our city's water networks

yes to paying for water after a basic rate. This model for doing so is better than your last try.

1.5 Investing in our transport infrastructure

Prioritise better biking, walking, buses, rail, tram, etc. Building roads just causes people to use them.

1.6 Rubbish, recycling and organics

Start with the beginning not the end. Work out product packing and how to reduce the input to waste. This is not good enough.

1.7 Our facilities

Instead of closing service centres, get rid of some extra fat inside CCC . Projects dont seem to be planned well so the cones come and they go and then they come again - do people talk to each other?

1.8 Our heritage, foreshore and parks

Hard to say as some of them will be under water perhaps if we don't plan well enough.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

1.11 Potential disposal of surplus Council-owned properties  
Not if you are going to sell them to developers that are simply going to put poorly designed expensive buildings on them.

1.12 Any other comments:  
None of this seems other than business as usual. You have declared a 'climate emergency'. Where is that reflected really here?  
There are a few things but nothing that indicates you believe it is an emergency. Get out in front and LEAD!

## Feedback

### 1.2 Rates

Yaldhurst Rural Residents should have received a significant rate reduction. Rural residents have had to sacrifice Health, Life longevity, Crops, Livestock Health, Property Value and Amenity Values due to this councils incompetent planners and decision makers regarding quarry consents. Rural residents only receive a rubbish collection. On the odd occasion we might see city care mowing the grass verge. This is a complete waste of time as the rural residents have already mowed their grass verge to eliminate any fire hazards.

This council has an extreme amount of employees with equally extreme salaries. Employee numbers and outrageous salaries need addressing with the CCC.

This council has demonstrated no Duty of Care to Rural Residents West of the City

### 1.3 Proposed changes to existing rates, and new targeted rates

#### Land Drainage targeted rates

Rural residence have all ready invested \$1000's in drainage around their rural properties. We also have the on going maintenance of our storm water collection. We have no Footpaths to use in adverse weather conditions nor do we have gutters to collect the storm water. We have the on going maintenance of our driveways that are eroded from the water wash that flows from the road. This has been a cost for rural residents with no help from council or other rate payers. Rural rate payers shouldn't be expected to pay multiple times by subsidising someone else's drainage issues.

### 1.4 Investing in upgrading and protecting our city's water networks

Rural Residents have invested \$1000's into developing and maintaining their own Water Bores, Sewage systems with no help from this Council or other Rate payers we can not be expected to pay twice or subsidise the City.

### 1.5 Investing in our transport infrastructure

Rural resident have no option but to use their own transportation as public transport isn't available on Rural Roads.

## Feedback

1.2 Rates

Yes - got this right.

1.5 Investing in our transport infrastructure

NO MORE SPENDING ON NEW ROAD NETWORKS.

NEW ROADING SHOULD BE FUNDED BY THOSE WHO PROFIT FROM BUILDING IN SUBDIVISIONS.

1.6 Rubbish, recycling and organics

YES, THIS IS A GOOD THING!

1.7 Our facilities

DON'T CLOSE LIBRARIES.

KEEP THE CURRENT OPENING HOURS FOR THE ART GALLERY.

DO NOT LIMIT SERVICE DESKS HOURS.

1.8 Our heritage, foreshore and parks

YES, SLIGHTLY MORE INVESTMENT WOULD BE PREFERABLE. YOU COULD TAKE THIS FROM ANY NEW ROADS YOU WERE PLANNING TO BUILD.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No  
Comments

1.11 Potential disposal of surplus Council-owned properties  
Sell them to buyers who are going to preserve them.

### Feedback

1.7 Our facilities

I do not agree with the proposal to cease the Mobile Library service.

The Mobile Library is exactly that - a fully functioning library that is *mobile*. While it does deliver books and reading material to its customers, it is not a book delivery service just as a fixed location library is not a book storage facility. The Mobile provides all the same services a fixed location library does - qualified librarians, reader's advisory, reference services, a space for members of a community to come together, and for many of its customers a focus for their week.

The Mobile caters to those people in our communities who are unable to access a fixed location library for any number of reasons - that could range from no access to transport, to anxiety about being in a large public space, to not having a fixed location library in their neighbourhood.

One of the Council's Community Outcomes is Resilient Communities, encompassing a strong sense of community, active participation in civic life, and safe and healthy communities. The Mobile Library provides all of these to the people and communities it serves. Many of these communities are struggling and at risk, with people who are on the fringe. I honestly fail to understand removing the Mobile Library from these very communities meets the Council's own community outcomes.

The Mobile Library is a lifeline for many of those who access its services. Removing it is alarmingly short sighted, and appears to be based solely on numbers; dollars and cents; the bottom line. Libraries are not businesses. Libraries exist to provide equal and equitable access to information for all members of their communities. Ceasing the Mobile Library service discriminates against those members of our communities who aren't, for one reason or another, able to access a fixed location library.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.11 Potential disposal of surplus Council-owned properties

Re proposed disposal of 42 Whero Avenue and 27 Hunters Road properties, Diamond Harbour.

My name is James Dale Nieman and I reside at  
over 50 years.

I have been a permanent resident of Diamond Harbour for

I am completely opposed to the disposal of these properties without a full consultation process, that is, the LTP consultation is insufficient.

The issues below need exploration and community discussion. It is completely inappropriate for the CCC to sell/dispose of the properties without addressing these issues, examples of which are outlined below.

Furthermore there are significant infrastructure issues that would need to be addressed and current residents confident that the CCC would provide updated and functional infrastructure (in all its forms, e.g. Roothing, domestic and heavy construction; sewage; water; power; sporting/recreational/library facilities; public transport, both within the area and size of ferry capacity; social housing; geriatric care; increased medical capability...) To take the last issue, medical capacity, the community funded the medical centre and although at times stretched it is functional. If there were to be a substantial development (of the order that the land disposal could permit) then the current facilities would be woefully inadequate and it should not fall on the community to upgrade the medical facilities just so the CCC can dispose of (and make a significant profit from) these lands.

In any event Morgan's Gully and Sam's Gully and the walkways and walking routes need to be fully protected and covenanted.

I support Morgan's Gully and Sam's Gully being given Reserve status.

I support part of the land in question (adjacent to the school) to be set aside for expansion of the school and pre-school facilities as these will be needed in any event in a growing community.

I support smaller unit and older persons facilities (including "rest home") and social housing (e.g. smaller land units so the community is not solely for those who can afford to purchase and maintain a large section.)

I support allocation of a portion of this land to the fire service should this be required. Note at present the Fire Service site is small and the community has just fundraised for a 4WD vehicle and the present site is unlikely to be adequate in even the short term.

It is imperative that there is full consultation and a planned approach to these land not just disposal.

For the above reasons I cannot support the disposal of x and y properties.

The elements above (and likely others) need to be integrated into a planned package and discussed by the community.

## Feedback

1.1 Have we got the game plan right?

yes, in particular i agree that climate change mitigation should be a priority right from now, whatever early steps can be taken immediately, not left for future generations when it may be more difficult to afford

1.2 Rates

yes i agree this is a good compromise

1.3 Proposed changes to existing rates, and new targeted rates

yes, in particular i support the move to additional targetted rates

1.4 Investing in upgrading and protecting our city's water networks

yes i support water infrastructure as a priority

1.5 Investing in our transport infrastructure

i support the spending on cycleways and would like to see it as an ongoing priority. I would also like to see more spend on enhancements for pedestrians and more support for separation of different modes. In particular when cyclists are separated from cars there is not always sufficient separation maintained between pedestrians, fast cyclists (and e-scooters) and slow cyclists. This could easily have more money spent to enhance the situation for these quite separate groups of non-car road users. I would like to see less priority given to car oriented road maintenance and more revenue from parking and usage charges to pay for car oriented infrastructure.

1.6 Rubbish, recycling and organics

yes i support spending on improvements for recycling and composting

1.7 Our facilities

i oppose reductions in hours, particularly of libraries.

i oppose spending on the stadium.

1.8 Our heritage, foreshore and parks

i feel this is an area where additional savings could be made, i do not think it should be such a priority

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

1.11 Potential disposal of surplus Council-owned properties

yes i agree with disposal of surplus property so that it may be better utilised by others

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

No additional tax imposed ie no Land Drainage Targeted Rate.

Currently we do not have storm water services. We have no water coonection, all water is supplied by well at our expense. All clearing of drains to mitigate potential flood is at our expense including drain on our berm (council land) which has been dug out 4 times in 10 years at our expense. This drain fails due to the blocking of an outlet from the swale opposite this property which blocks with mud and has been acknowledged as requiring work. A job number was assigned for this 3 years ago but not completed. In addition maintenance of the Lansdowne Creek is performed by local landowners and is a major potential contributor to potential flooding. In addition this creek has recently seen eel and trout activity and should be noted thus.

All properties are to experience significant rates increases. I object to a Land Drainage Targeted Rate in addition as we already incur expenses in providing services and maintiaining drains for this property. Somewhat weak and arguable other reasons to justify this tax are based in other areas. Provision of kerb and footpath for example, not relevant to this property. General roading maintenance, I pay a road user charge for 3 vehicles.

1.3 Proposed changes to existing rates, and new targeted rates  
See above

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

Climate Change is at a critical point and so a major focus of CCC should be ensuring that we can transition to a net zero carbon lifestyle in a manner that is just, equitable, and transparent. We need to understand what the current carbon emissions are of the council and ensure that there is a well defined plan to reduce these emissions and to enable our citizens, especially those in the lower socio-economic brackets are provided with support to allow them to transition without being disadvantaged, and in fact we need to use these changes to reduce the gap between rich and poor. We need to ensure that cycling, walking and public transport become the predominant transport methods and that all our community sees these as safe, convenient options. We also need to ensure that we are not investing in carbon intensive industries and companies that may become liabilities in the future - such as the Tarras Airport.

### 1.2 Rates

I think just focussing on low rates is missing opportunities to invest properly in our people. We are at a cross-roads in many areas with climate change and now is a time when we need to focus on setting ourselves up for a carbon zero future. If this calls for a higher budget spend in the near future so be it. We need to use this investment to ensure that the transition is just and equitable and does not disadvantage those already at the bottom of the heap.

### 1.4 Investing in upgrading and protecting our city's water networks

Safe water is important and this seems to be a good investment in this area.

### 1.5 Investing in our transport infrastructure

We will only meet our carbon budget targets if we cause a behaviour change in people so that short trips by cars are not longer seen as the best option. While roads will still be necessary, only by focussing on making alternative such as walking, cycling, public transport, scooters etc more convenient options will we start to see these changes. By focussing on these alternative options we will make Christchurch a safer place to get around and have additional side benefits of having a healthier, more active population.

### 1.7 Our facilities

I think the earlier closing hours for the libraries is short sighted and a mistake. Libraries form a vital backstop for the young and the old by providing internet and access to many resources. I think the libraries should stay open at the current level.

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

### Feedback

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Comments

1.11 Potential disposal of surplus Council-owned properties

Ref.: proposed disposal of 27 Hunters RD and 42 Whero Avenue in Diamond Harbour. We need to request removal of the 2 properties from the Long-Term Plan and fast track disposal. The normal process for disposal of land that would require Community Board and public consultation, should be used. Rural feel close to the city, gullies as native reserves, walking tracks created and cared for by the local community, a sanctuary for native birds, all enjoyed by locals and wider community and tourists this all need to be protected so consultation with our local community is highly recommended. We have no idea how many houses will (can) be build on the land what will be disposed, density of the likes in Rolleston or Wigram or will we see lifestyle blocks and a retirement village / care facility? How does our climate change goals for Christchurch fit in this? We need to have some meaningful public consultation. With kind regards,

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I completely support both the Arts Centre rate, and the charge on excessive water usage. The water tax should be extended to businesses.

1.4 Investing in upgrading and protecting our city's water networks

This is a key tenant of Council provision. It must be well funded, and from historical difficulties over water quality, a substantial investment is required.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Arts Centre is now a beautiful, updated facility that highlights our heritage as a city, and a nation.

It is now truly run as an Arts centre. The unusual position in which it finds itself, with no direct funding, must be remedied and lead by the Council. I fully support the Capital grant from our rates.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I am primarily interested in the bettering of our bus system, which for the most part I believe are the best in the country.

And in keeping local libraries open until at least 7pm, this would be ideal, as many work or study late and then can be hindered from the library.

1.2 Rates

I don't care how high rates go as long as they are being used well for clear purpose, I think adding mission statements to various places where rates are concentrated is a good idea. Explaining to those who might not use the services why the service is needed.

1.3 Proposed changes to existing rates, and new targeted rates

This is good.

1.4 Investing in upgrading and protecting our city's water networks

Yes, this is absolutely important. We don't to have situations like in Wellington with burst pipes due to poor upkeep.

I hope that some of this spending will also allow for high density living in spaces that are being planned for in the central city.

1.5 Investing in our transport infrastructure

Yes, encouraging the public to bus and cycle is very good. Where possible, I would look to the Netherlands where they have wide cycleways, many not on roads.

I am mostly very happy with the bus system, we don't seem to have any buses get cancelled (which is amazing). Please make sure the drivers are being paid well, they deserve it.

1.6 Rubbish, recycling and organics  
Yes, no complaints from me.

1.7 Our facilities

If something is going to be a community space, it has be accessible and that means keeping it open into the late evening. I would like go see libraries staying open until at least 7pm, maybe 8pm.

Also, when you close the bus lounge, you are going to need to build more benches outside, so do it.

1.8 Our heritage, foreshore and parks  
I think so, not super informed on this. Do the right thing please.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments  
very cool

1.10 Funding for base isolation of the Robert McDougall Art Gallery

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I would like to see staff given the choice not to work on public holidays. I do not think it appropriate or necessary to open on these holidays or Easter Sunday. Opening on public holidays will also turn the library into an unsafe daycare.

Times are hard for many. Please consider keeping the current hours at libraries and redeploy rather than make redundant other staff.

Thank you

1.2 Rates

After the past decade I understand the challenge council has.

1.3 Proposed changes to existing rates, and new targeted rates

Keep on current staff but reduce salaries to a maximum of \$100,000. Over this amount is too much in the current climate and will go a long way towards reducing the rates increase.

Alternatively they could donate the other \$400,000 to council or perhaps the homeless.

1.4 Investing in upgrading and protecting our city's water networks

Recently I have had to replace my hot water cylinder due to the chlorine council has flushed through my water supply. It was so extreme I am required to filter my water and still do. Council nor my insurance were prepared to pay for this \$2400.

Therefore please stop the chlorine or at least reduce it.

1.5 Investing in our transport infrastructure

Sounds a lot. Light rail would be nice but expensive initially.

1.6 Rubbish, recycling and organics  
Spend less here and more on facilities.

1.7 Our facilities  
Spend more here, less on rubbish

1.8 Our heritage, foreshore and parks  
  
Please update signage and advertising asking owners to keep their dogs out of playground areas.  
  
Thank you for the upkeep of our beautiful Hagley Park

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

From:  
Sent: Sunday, 18 April 2021 8:50 pm  
To: CCC Plan  
Cc:  
Subject: feedback on CCC long term plan regarding facilities- Library hours

Follow Up Flag: Follow up  
Flag Status: Flagged

Good evening, I would strongly advocate that the library hours remain the same as are current. I frequently attend the Upper Riccarton Library taking advantage of the evening hours (up to the 8 PM closure) to use the facilities there. These include the cultural/ craft/ educational events run in the library in the evening. These activities have proved not only informative but contributed to my sense of wellbeing in being connected with others in the local community. If the library closes earlier these evening activities will cease. I work in the day time and due to work commitments I am unable to attend the library during the day time.

I do not advocate library hours extending to Public Holidays.

I would advocate for the continuation of the Mobile Library Service. This provides a vital link to the library service to those who are not able to readily access this service in other ways.

Thank you.

Carolyn Murray

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

The Council has stated in it's Long-term Plan that it intends to dispose of land at 27 Hunters Road and 42 Whero Avenue, Diamond Harbour. The likelihood is that it would be sold to a private developer for housing. The nature of the development with regard to existing infrastructure, roading access and Sam's and Morgan's Gully reserves and it's impact on the community would not be considered if this eventuates.

There are specific housing needs for some residents of the area wishing to move to smaller accommodation, which is scarce in Diamond Harbour but this would not be met by a private developer.

Volunteers have worked extremely hard and spent many hours on the replanting of Sam's and Morgan's Gullies and creating numerous footpaths to be enjoyed in the plot of 27 Hunters Rd. Although covenants are proposed, they are not yet secured and we do not want all this hard work lost. Also the track created across the plot at 27 Hunters Rd by a local resident for the children to be able walk to school instead of being driven or walking along a busy and dangerous road with no footpaths in some places is invaluable and needs to be protected. Ownership by a developer is likely to lead to conflicts with community usage and it's aspirations.

Infrastructure in Diamond Harbour would not cope with the increase in population if a large subdivision is created on the plots. Some roads in Diamond Harbour are already in a poor state of repair with constant water bursts and the increase in traffic would only accentuate this.

The sale of the land should be removed from the LTP and it should be put out for full public consultation as it is highly likely that there will be no consultation if the land is sold to a private developer.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates  
I support the new targeted water rate.

1.7 Our facilities

I do not support the reduction to library hours. These are vital social resources, and should be as available as possible.

My family and I frequently use the libraries after work at both South and Te Hapua. For working families, the evenings are often the best time to visit the libraries.

Te Hapua, in particular, is often busy in the evenings as people use it while attending other facilities in the complex, such as the meeting rooms and pool. There is a real community feel there, and it would be a huge shame to have the library close early. If restrictions must be made, then I suggest that those libraries, like Te Hapua, than anchor other facilities should be prioritised for remaining open longer.

Thank you for considering my submission.

### Feedback

#### 1.1 Have we got the game plan right?

A look through our recent history, we can see the world is rapidly changing around us. Even though we are geographically separated in Ōtautahi Christchurch we are not immune to significant events or connectivity to world events. What happens to us is important and what actions we take is equally important. I am not going to go into this in detail, but I do want to acknowledge there are people that have helped to build stronger communities in the face of adversity. By stronger communities I mean a place where we look out for one another, we help people and they in-turn help others, and a place where we recognise value in everyone.

I highlight this because this is the environment we have helped create in the past; this is the environment we must continue to improve on in the future. I acknowledge it is not perfect, but in many cases we have good triumph over bad. However, there are challenges ahead – caring for the environment, climate change, inequality, and people's wellbeing to name a few.

The heart of Ōtautahi Christchurch is people and environment, the correct long-term plan is one that recognises this. On balance, I believe this is the intent of the plan. Looking forward in a business-as-usual setting, I implore Council Staff and Council Members to reinforce this strong community focus with ideas, discussions, projects and voting that puts people and environment first.

With the respect to investment, I believe the balance is right. Yes, we need financial headroom in case the unexpected occurs, I also understand there is a maximum capacity capable of delivering capital programme. It is important though that we do not reduce this investment.

#### 1.2 Rates

We are facing challenges more significant than we have ever faced in the past. While these challenges have always been here, as a society we have ignored them. Further to that, it is not as though we have ignored them and they have gone away, the problem is we have ignored them and they have accumulated as environmental debt and people's wellbeing debt. These debts are things like polluted water and air, microplastics, greenhouse gas emissions (human created climate change), motorway noise affecting people's quality of life, a reduction in

enjoyable green space/parks/sports fields, etc.

A reduction in rates increase may seem like a saving in money (and that is often what media leads us to believe), but the reality is a reduction in rates is simply shifting the cost to the environment and people's wellbeing. This disproportionately affects people in the community, with often those more vulnerable being more adversely affected.

I support a rates increase of 5%. I do however see this as a minimum for the reasons mentioned above.

### 1.3 Proposed changes to existing rates, and new targeted rates

Agree with rate changes and targeted rates.

### 1.4 Investing in upgrading and protecting our city's water networks

Agree with spend on water infrastructure.

### 1.5 Investing in our transport infrastructure

Thank you for the acknowledgement that our transport networks need to be safe and the acknowledgement traffic on our roads generate 36% of greenhouse gas emissions.

On the issue of safety, the solution is the adoption of the Road to Zero (Vision Zero) strategy from Waka Kotahi. We need to recognise no one sets out to endanger anyone, but the reality is people make mistakes and vulnerable road users pay the price. In an instant, people's lives could be changed forever – imagine what that would be like for everyone involved.

At this point I could yet again share more concerning videos of what I see on the roads. However, we should have moved on from viewing evidence and now be solving the problem. Proven solutions include safe speeds, traffic calming, protected cycleways, intersections and crossings designed to support people biking and walking.

People recognise roads are unsafe; this has consequences. Take Harewood Road for example, the number of people biking on this road is a small because it is seen as dangerous (which is a correct appraisal). Similar concerns exist for pedestrians crossing this road. The result is people travel by private motor vehicle instead. There is nothing good about this current situation - people in this area have had the choice of active transport taken away from them.

Immediate action is required to undo the damage caused by human created climate change and damage to the environment. Projects like the Papanui ki Waiwhetū (Wheels to Wings) Major Cycleway are core to addressing the problem but will take time to implement. For this reason, we need additional initiatives to help support active transport. As an example, outside all schools need to be a safe road area. This would mean no parking immediately outside schools and the speed limit needs to be reduced to 30km/h. Manoeuvres like U-turns should also be considered illegal in locations like this. There also needs to be consequences for illegal parking, this needs a better method of enforcement (the current method of calling the Council to report illegal parking is not fit

for purpose).

Ultimately, we need to accept years of making it easy to drive a private motor vehicle has finally caught up with us. We need to understand addressing human created climate change means we must give people in our community viable transport alternatives. Walking, scootering, biking, and public transport need to be well supported – please listen to people that use sustainable transports, they know the challenges they face.

#### 1.6 Rubbish, recycling and organics

Agree with spend on organics infrastructure, transfer station infrastructure and recycling infrastructure.

I would however like to see more ideas to reduce the creation of waste in the first place – this could be in the form of consumer education, supporting schools/community groups helping in this space, positive acknowledgement of businesses that reduce waste in products they sell, and support for Central Government initiatives/regulations to reduce waste.

#### 1.7 Our facilities

Agree with the investment of Council-owned facilities and especially supportive of the growth in community housing. I am not familiar with the detail like library hours and Riccarton Road bus lounge, so I cannot comment on that. I will assume the best decision can be made on the available operation information; I ask however that any savings are retained within that area (i.e. still supporting libraries and public transport).

With respect to sports facilities, we need to make sure these produce benefits for grassroots sport in Christchurch. This needs to especially help out two groups:

1. Young children to get a start in sport.
2. Older children and young adults to continue playing sport through school years (currently many children a leaving sport early).

#### 1.8 Our heritage, foreshore and parks

Agree with spend on heritage, foreshore and parks.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Agree with funding \$5.5 million for the Arts Centre.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

Agree with funding base isolation of the Robert McDougall at a cost of \$11.8 million.

1.11 Potential disposal of surplus Council-owned properties

Agree with the disposal of surplus Council-owned properties mentioned.

## Feedback

### 1.1 Have we got the game plan right?

I would like to see spending in our suburb as it is falling behind and I'm worried it will loose a lot in value and be the next "eastside" before the earthquakes gave them all our rates. I would like picnic tables in the parks, I would like new playground equipment, I would like activities for youth, I would like a community centre to hold events rather the churches. I would like trees back on street berms, I would like less rate increases as this is higher than inflation. I would like chlorine out of our water and fluoride added.

### 1.2 Rates

Not good as our wages are not high enough to sustain this, lthis would leave home owners less money to maintain property and in my area I see very little spending, if any back in our area compared to amount we are being charged.

### 1.3 Proposed changes to existing rates, and new targeted rates

I don't like the idea of paying for water when we are giving it to overseas companies to sell and profit from.

I am happy to give to the art centre so long as they bring back the market as it was enjoyable and social.

### 1.4 Investing in upgrading and protecting our city's water networks

Its a shame the water network was forgotten for so long, I think of course we need to repair this to get the chlorine out of our water.

### 1.5 Investing in our transport infrastructure

I hate using public transport as its overpriced and takes 2 buses to get to where I need to and was hard work with a pram and also there are a lot of undesirable people at the shelters and on the buses. I don't feel safe riding a bike on busy roads and round the University the roads are narrow eg Maidstone Rd and I fear a car door being opened on me also the bike lanes are full of scrap material and lots of loose gravel and I don't like that on a road bike or the road gets resealed and the join is in the cycle lane and I have had a tyre get stuck and wobble like I was going to get thrown off before (out by Sumner).

### 1.6 Rubbish, recycling and organics

I hate the fact we only get a small green bin, I think it should be based on size of property as I can't even fit all my lawn clippings in it weekly.

I am all fr better recycling as its such a pain sorting plastics. I also feel manufactures should be levied on waste or excessive packaging to reduce the cost to rate payers

1.7 Our facilities

Keep the wherenui pool open. I'm happy to shut bus lounges as these are grotty places and encourage scummy people to congregate

1.8 Our heritage, foreshore and parks

Yip more maintenance to parks and picnic tables in everyone

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Comments

1.11 Potential disposal of surplus Council-owned properties

No. We need places available for community events, and hubs, it's this short sightedness that has left avonhead and Russley with nothing but churches, who charge the rate payer and pay no tax.

**First name:** Yvonne **Last name:** Palmer

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

That funding be provided for the Wharenuui Pool; to continue to operate as swimming is so important for all citizens to be able to do. Far too many drownings happen and if swimming is taught at the very early age and dangers of water then lives will be saved.

An error in the costings of this important facility and the work that they carry out needs to be put back into the budget. An error this big in the consultation document is disappointing.

1.2 Rates

For those that are on fixed budgets, ie pensions, sickness benefits and disability cannot afford for this increase as they have no increase in their incomes.

1.7 Our facilities

Do not support the removal of mobile libraries this is going to isolate the elderly and disability members of our community.

### Feedback

1.4 Investing in upgrading and protecting our city's water networks

We have been rate payers in the Banks Peninsula for over the past thirty years. We have also been rate payers in the Christchurch city for over 55 years.

We support the submissions made by the Friends of Banks Peninsula Inc. and the Robinsons Bay Residents Association all relating to the Akaroa Waste Water disposal plan.

We wish to make the following salient points relating to this issue.

It is very apparent that the waste water disposal system has not been maintained to provide an efficient and effective disposal system for many years. It is obvious it has now got to a point where it has been open to the discharge of storm water which has vastly increased the volume of discharge required. This has now impacted on the accuracy of the information necessary for the future capital planning to provide adequate safe discharge of waste water in the future.

With recent events it is also apparent that the water supply system is in a similar state due to lack of maintenance expenditure.

We are also aware the with increased development over recent years that the loading on the existing system has not been adequate and that investment has not been made to cope with increasing usage.

We can only speculate as to where the allocation of this funding has been directed.

However it is what it is !

We believe in the first instance that that the existing system must be up graded to prevent the ingress of storm water and any other maintenance issues required. It is only then that accurate information can be analysed in the design of a new sewage treatment system.

It is apparent with climate change that effective water management is becoming an even more important issue. The storage of storm water and treated waste water for effective usage being a utilised as a valuable asset.

The proposal to provide a sewage treatment facility at some distance from Akaroa in the upper harbour at

Takamatua and Robinson's Bay does not appear an effective use of capital resources and does not capture the effective value of the resource.

Surely what is required is a treatment plant that can treat the waste water to a level of purity that can be utilised effectively.

Why spend substantial capital on a system which is unlikely to satisfy the long term requirements of a growing population.

No doubt more capital will be required to construct a facility which provides the best solution but the long term investment is the better proposition. Obviously the rate payer will have to pay for the longer term solution but will be the beneficiary in the future.

We also make reference to the submission from Mr. Gary Moore which we also endorse. We also suffer the same issues with respect to water rationing.

Water is an essential resource and the safe and the re-cycling of water for human re-use must be given funding priority.

We are aware of the substantial funding given to what we believe are less essential services. All expenditure should be revisited and directed where most required. Put politics aside in the interests of making investments in the best interests of the majority of rate payers. The substantial funding of cycleways being a good example of a non essential service when funding is stretched to the extreme following the huge costs associated with earthquake recovery and now Covid 19

Our plea is make the hard calls now in the interest of the future benefits.

## Feedback

1.1 Have we got the game plan right?

1.7 Our facilities

I do not agree with the proposals to decrease the opening hours of our libraries as outlined in Christchurch City Councils' Long Term Plan and would like to see the library opening hours remain as they are, to ensure equitable access to library services.

The proposals to close libraries will mean that the Council is failing to meet its obligations to its own Council Vision where arts and cultural opportunities are available to all of our communities and that you commit to improving the cultural and social wellbeing for all.

I work full time and juggle child-care with my wife. This means that the times when I am able to use libraries is limited to the evenings. Closing libraries an hour earlier will deny working adults the opportunity to use library facilities after work for study or recreational purposes. Many libraries do not have quiet areas suitable for study during the day and become more appealing to students in the evening. The proposals will prevent those working from accessing resources in the creative studio at Turanga (open creative drop-in times run 6-7.30). A project often takes more than one session and staff are very busy with people attending sessions. It seems to be a very back-to-front way of providing services that rather than offering them at times when people can attend (at weekends and evenings) they are squeezed to fit in between lunchtimes and opening hours.

Similarly, because I work Monday to Friday, I'm only likely to ring the Fingertip Library in the evening or at weekends. Therefore, the proposals again discriminate against working people within the community.

The proposal to close Aranui library on a Sunday will mean that a low socio-economic and culturally diverse community will be unable to access one of the few cultural facilities within the local community. It is not realistic to suggest that existing users within the community could access another site outside of their community.

The proposal to close the mobile library in 2022 will mean that the most vulnerable in our communities will be unable to access library services independently. Currently libraries do not offer a comprehensive home library style service. The proposal will decrease the health and wellbeing of the most vulnerable in our community by them being unable to access these services. Rather than removing barriers to access, this proposal places a huge barrier to the older, less mobile members of our community in being able to access cultural services in their local area.

It is disappointing to see that lack of imagination in these proposals with the usual cuts to services being proposed. I would like to attend more classes and drop in sessions about the new technologies that are available however, classes are few and far between and are rarely in the evening - thus enabling all residents the opportunity to attend. According to you: "The Council's vision for the city is that Ōtautahi - Christchurch is a city of opportunity for all, open to new ideas, new people and new ways of doing things. We want to be an inclusive, connected city." The proposals here are really disappointing with no evidence of any new ideas or ways of doing things.

When I look at the UK, the demise of the public library system through cut after cut shows a society that is not concerned with the best interests of its people. I'm sure that we are better than that and can learn from their example. Library services need to be accessible to the local community both physically and digitally throughout the week and into the evenings. Once cut, services don't tend to be restored when times improve. These measures are short-sighted and irresponsible and will impact most severely on the weakest and most vulnerable in our community.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

No.

I don't think your idea of blanketing the rates is fair. User pays...Also if you have enough financial efficiencies there would be no need for the increase...

1.2 Rates

Unbelievable as you are are talking around a 50% raise in rates over the next decade .

1.3 Proposed changes to existing rates, and new targeted rates

Again it should be user pays, especially for households who choose to live in flood prone areas. Living in a rural area without certain amenities by choice or extra services required should be and is personal choice and should be charged according to services required not one for all...

1.4 Investing in upgrading and protecting our city's water networks

It should be concentrated around the town ship

1.5 Investing in our transport infrastructure

I suggest re introducing train services and not following the proposed closure of the many bus hubs around town as it discourages people using public transport

1.6 Rubbish, recycling and organics

More education of public and following up with introduced services like recycling of soft plastics, but also promoting ways for less waste in general

1.7 Our facilities

Why closing the bus lounges ? It will discourage users of public transport. Also why close libraries? They are not just libraries but also paces for communities to get together for all sorts of other community activities

1.8 Our heritage, foreshore and parks

Questionable in regards to climate change and support of private heritage should be only if public benefits

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
No  
Comments  
It should be user pays , just a small fee should be justified

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No  
Comments  
Combination of art gallery and museum could save staffing and other costs

1.11 Potential disposal of surplus Council-owned properties  
The sale could be used towards investment of valuable council owned properties

### Feedback

#### 1.11 Potential disposal of surplus Council-owned properties

We view with concern the current proposal to sell off the large block of land bounded

roughly by Marine Drive, Hunters Road and Bayview Road. Given that there may be

significant impacts on our reserve areas, the community and local infrastructure, such a sale

should be preceded by a comprehensive consideration of options and a detailed analysis of

costs and benefits. The current proposal contained in the LTP does not include such

consideration of these matters but delegates the authority to sell that land as staff see fit.

We also question whether the proposal contained in the LTP meets the decision-making

requirements of s76-79 Local Government Act 2002 for this property and could potentially

be liable to subsequent challenge. We therefore request that the proposal to sell this land

be removed from the Plan, and that if it is reconsidered in the future it should be subject to

a full consultation process including consideration of all infrastructure, community, and

environmental perspectives.

In association with the above, we note that the covenant proposed for Morgan's and

Sam's Gullies – which form part of the above residential block, has yet to be finalised. The

covenant would provide essential protection for the gullies which have been the focus of

substantial community reforestation efforts over the past 7 years. Not only is the proposed

covenant not yet complete, but the proposal to grant authority to sell without direct discussion with the residents regarding the impact on this community work, demonstrates a lack of respect for the work undertaken and the people involved.

## Feedback

1.2 Rates

Agree

1.3 Proposed changes to existing rates, and new targeted rates

I am happy for a targeted heritage rate.

1.6 Rubbish, recycling and organics

Agree.

1.7 Our facilities

Agree.

1.8 Our heritage, foreshore and parks

I agree with the investment in our Heritage, foreshore and parks. My only question is that is this enough?

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

I agree that it is important for the Council to support the Arts Centre with a capital grant of \$5.5million, as a minimum.

The Arts Centre is a heritage site worthy of saving and creating something unique for the city and NZ.

It is part of the most visited sites in Christchurch with tourists doing the Cathedral, Art gallery, Arts Centre and Botanic Gardens trek.

It is now over 10 years since the earthquake and this needs the support of the council to complete its renovation.

This investment in the Arts Centre will bring returns to the City for generations to come.

Tony Gray

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

The decision about the Robert McDougal Art Gallery needs to be discussed further.

I am not in favour of it being part of the Museum.

The council should rebuild its offices at the old site on Manchester Street, bringing the city more towards the East.

The current offices at Hereford Street (the old Post Office sorting building) should be turned into adjunct/annex for the Museum.

1.11 Potential disposal of surplus Council-owned properties

No, I would prefer that they were keep in the council's property portfolio.

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.11 Potential disposal of surplus Council-owned properties

I am requesting that the land as described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) be removed from the LTP and fast track disposal.

1. The two pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan.
2. The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation).
3. Thorough community consultation should be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.
4. Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not just be made by Council staff.
5. The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process.
  - Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to conflicts with community usage and aspirations.
  - The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea Road, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles.
  - Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.
  - If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.
  - If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner.
  - The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?

- Should all the land be sold (privatised) at one time? Would a staged housing development be better for the community?
- Different use options for the land need to be considered not just a sale to a housing developer. Should some parts of the land be released for residential development and other parts held for other uses? Should the Council consider the needs of the community for special types of housing e.g. catering for older or younger people looking for smaller units?

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

We are very disappointed we were not informed in time, to be able to attend any of the meetings regarding the Revenue and Financing Policy (c) stormwater Drainage and Flood Protection and Control Works discussion.

Apparently, there were several meetings held around Banks Peninsula to discuss matter. The CCC letter arrived on the 15th April 2021 in our mailbox - dated 30th March 2021, well after the meetings had been completed. Many others in Birdlings Flat had this happen to them as well, this is not consultation. Everyone knows that mail is very slow. Many have provided emails in relation to rates accounts, these could have been used, there is no privacy breach using the email addresses as this issue is directly to do with rates. If you do not have emails of ratepayers - request that we provide it to you for easier communication, admittedly some will not, but they will be the exception and need to be taken into account regarding timely mail delivery.

As residents and ratepayers of Birdlings Flat it is disappointing that there is a letter sent to homeowners basically saying that we will be paying for stormwater and drainage in our area when we do not have sewerage to require drainage and suspect these issues are highly unlikely to be addressed for many years to come anyway.

We do not have flooding issues in Birdlings Flat that we have noticed during our seven years living here. Some of this lack of flooding is probably attributable to the type of gravel we have here Greywake stone - any accumulated water is quickly absorbed into the ground.

The flooding we have observed seems to affect SH75 and some of this is due to a tidal flood plane and mostly around Lake Waihora and isn't this under the management of the Council and Waka Kotahi? Not sure why we at Birdlings Flat should be expected to subsidise this?

Frustratingly we feel that the decision has already been made to increase our rates despite any opposition and do not believe CCC will use this stream of income to address what it is meant for drainage and stormwater infrastructure for Birdlings Flat when the actual problem does not appear to exist or is certainly not urgent.

There are other problems that need a fix though, for example: we do not have footpaths or decent regular road maintenance.

Maintaining our roads would be more useful rather than relying on random filling of potholes here and there - sometimes some of them get filled in a day but not all of them - why? Some of the potholes are so large at times,

should a driver be unfortunate to drive into one, damage to wheels and tires could happen or dodging them may cause an accident.

Because there are no footpaths, people use the roads for walking and could easily get injured by falling into these large potholes as well.

In conclusion both my husband and I disagree with the current proposal regarding Revenue and Financing Policy (c) Stormwater Drainage and Flood Protection and Control Works rates increase due to:

1. There has not been enough or fair consultation with a community that is directly affected by the increase in rates but will not seemingly benefit.
2. Why are we paying for something that is unlikely to happen for many years, this is not a wealthy community and should not be used to subsidise other communities that are already paying for their infrastructure?
3. There are other more urgent matters that require attention: Road repairs; Rubbish collection; Footpaths; we do pay rates for these and receive very minimal services.

#### 1.6 Rubbish, recycling and organics

Providing the residents of Birdlings Flat and surrounding areas that do not have a rubbish collection should be a "given", is this part of the rubbish and recycling plan?

Currently there are set hours only on a Saturday morning to dump rubbish. For the non-drivers and the disabled who pay rates - or if they are renters - pay the landlords rates this makes their life once again more difficult.

Recycle bins and a rubbish collection please - I think we would be happy to trade the recycle bins for bags if it means a rubbish collection.

## Feedback

### 1.2 Rates

Yaldhurst Rural Residents should have a significant rate reduction. Rural residents have had to sacrifice HEALTH, LIFE longevity, contaminated crops, livestock health, Properties value and AmenityValues due to this councils incompetent planners and decision makers regarding QUARRY consents. Rural residents only receive a rubbish collection. On the odd occasion we might see city care mowing the grass verge. This is a complete waste of time as rural residents already mow their grass verge to eliminate any fire hazards.

This council has an extreme amount of employees with equally extreme salaries. Employee numbers and outrageous salaries need addressing with the CCC.

This council has demonstrated NO DUTY OF CARE to the Rural Residents West of the city or Abide by the HEALTH ACT which it MUST DO.

### 1.3 Proposed changes to existing rates, and new targeted rates

Rural residence have all ready invested thousands in drainage around their rural properties.

We also have the on going maintenance of our storm water collection.

We have no footpaths to use in adverse weather conditions.

### 1.4 Investing in upgrading and protecting our city's water networks

Nor do we have gutters to collect the storm water.

We have the on going maintenance of our driveways that are eroded from water wash that flows from the road.

This has been a cost for rural residents with no help from council or other rate payers.

Rural rate payers should not be expected to pay multiple times by subsidising someone else's drainage issues.

No the council has not got the balance right. STOP wasting our rates on the nice to have and concentrate on

fixing basic infrastructure.

1.5 Investing in our transport infrastructure  
NO more cycle ways. Waste of rate payer money. Fix the broken roads instead.

1.8 Our heritage, foreshore and parks

We in Yaldhurst have a Memorial hall the the council want to get rid of.

It is a Heritage Building, and a Memorial to our local soldiers who died overseas for us.

The council already neglected it since the earth quake

### Feedback

1.1 Have we got the game plan right?

Climate change mitigation should be the primary focus of the CCC. As the future condition of humanity and the wider environment is at stake, all decision large and small should consider this. Anything else pales in significance. Creating a clean green city will also create a healthy vibrant connected city.

Emissions are not yet reducing, so the CCC is negligent in this huge responsibility.

Please use any and all levers under your control to implement huge change, and exceed your own targets.

Stop the CIA from developing Tarras Airport. Or expanding itself. International tourism must now reduce in quantity, but perhaps focus on higher quality experiences, or longer duration stays. Investing in passenger travel by ocean would be in the direction the world must and will move.

1.2 Rates

Cheap if you meet emissinos reductions goals.

1.3 Proposed changes to existing rates, and new targeted rates

Excess water charge is great!

CCC should be lobbying ECAN strongly and publicly to protect Christchurch drinking water from contamination by industrial diary. Water use on the plains must reduce.

1.5 Investing in our transport infrastructure

Infrastructure investment for private vehicle use should be minimal to zero. Disincentives should be implemented

where possible. Reducing vehicle traffic should be a goal.

Cycle infrastructure should be a major priority. Recent progress has been good, and is reflected in cycle uptake. So don't stop. Continue to expand the cycle lane network, add cycleway protections, colouring, bike stands, bike lockups.

Public transport is also very important. Improve bus stops. Fund bus lounges. City shuttle.

1.6 Rubbish, recycling and organics

Why are ratepayers having to pay to deal with waste that is needlessly created by the food industry? Why not recover the costs from that industry by a compulsory charge depending on the type and weight of waste packaging? Recycling is ineffective for plastics as you will be aware, as much his currently going to landfill, or sometimes stockpiled. Then they would quickly find responsible packaging and avoid the fees.

improvement on organics infrastructure needs to accommodate the new composable packaging beginning to be used.

1.7 Our facilities

Closing bus lounges is a terrible idea, and flies in the face of your climate emergency declaration. If they are under utilised, then you need to improve usage not close facilities that encourage patronage.

1.8 Our heritage, foreshore and parks

All the ecological and environmental investment, tree planting programs etc should be fully funded.

Forests and wetlands should be priority restoration projects.

Red zone reforestation would be fantastic for mitigation and adaptation.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties  
Can some be used to enhance city vibrancy / public transport / community resilience?

## Feedback

1.1 Have we got the game plan right?

I do not think that you have got the balance right for residents at Birdlings Flat.

1.2 Rates

I believe that no change in charges needs to be provided for those that provide their own waste and storm water treatment and dispersal. This has already costs us tens of thousands of dollars to install and maintain. Also at Birdlings Flat we have no council drains or ditches for the roading. I believe the rates we already pay cover the costs of the services we receive here as there is also no water for fire fighting provided for the whole settlement and that is something we are also expected to provide for ourselves if we develop further living space. Erecting any structure that requires council approval requires at the minimum that we provide potable water storage of five thousand litres and storm water dispersal. So on top of these costs I am very opposed to receiving any further charges for services that I do not get any benefit from most of the time.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I am a resident in Southshore

I have been greatly encouraged to see some activity in our area restoring our services to pre-quake levels. After nearly 10years it is heartening and good for community mental wellbeing.

I support the proposed funding of the earthquake repairs to the Southshore and (South) South New Brighton estuary edge in the LTP, (Capital Spend Items: 56590,45166,61615, 62549). These projects once completed will restore our community to prequake levels of flood & erosion protection.

It is very good to see the new water pipe system that is currently being installed , for Rocking Horse Road due to be completed in 2021, which addresses long term earthquake damaged water pipes. I ask that funding is provided to ensure the road is properly resurfaced.

I ask for the following additions to LTP in Southshore/NewBrighton:

- Funding allocation for the reinstatement of the two-way section of New Brighton Road between Hawke Street and Rawson St to be done in conjunction with the Pages Road bridge.
- Evacuation route consideration for Coastal residents, especially vital if the South Brighton, New Brighton and Wainoni bridges are out .This could be completed in conjunction with the new Pages Road bridge.
- Increased operational budget for baseline maintenance and services (road cleaning, lighting, appropriate planting, mowing, weeding, rubbish and litter)

1.2 Rates

I support a rates increase as proposed, I accept that to enable projects to occur we need additional funding.

1.3 Proposed changes to existing rates, and new targeted rates

I am not in favour of the proposed water charge until homes have reliable water meters. Until then I don't think it fair and am unsure how you measure water usage.

1.5 Investing in our transport infrastructure

I agree with investment in cycleways however I request that a proper major cycle route (not a sightseeing route) be developed from Southshore/South New Brighton into central city. This could easily link up to the Linwood

Ave cycleway. When you look at the map of cycleways there is a significant gap in the Eastern suburbs. I wonder if you overlay a poverty/income map on top of cycleways whether you would see that cycleways are only in "perceived wealthy" suburbs. I would prefer to see some of the cycleway investment go to sensible commuter routes from Southshore/South New Brighton & New Brighton into Central city and linking to other routes.

1.6 Rubbish, recycling and organics  
I think the balance is ok

1.7 Our facilities

I would regret any reduction of library hours or services. While I do not see other libraries I do know New Brighton library is an essential part of our community in the East. The current opening hours are very good. They provide much more than books. I have a neurodiverse child - sports are not a realistic option for him. The clubs and activities at our local library have ensured he has a sense of belonging, a chance to extend friendships outside of school, an ability to belong to a group and he can excell in things that interest him and he is good at (minecraft, Lego, stem). The relationships formed by the librarians are invaluable. Libraries are so much more than books and they are not outdated.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I would like to see the anchor projects finished.

1.2 Rates

I think this is reasonable.

1.4 Investing in upgrading and protecting our city's water networks

Thats a lot of money! Hopefully you can keep chlorine out of our water.

1.5 Investing in our transport infrastructure

I want electric buses.

1.6 Rubbish, recycling and organics

I would like to see soft plastics able to be recycled in Christchurch.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

I think the CCC has done enough for the time being.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

Cant any important works go in the base isolated art gallery. \$11.8m is a lot of money to spend on this. How about looking into viscous dampers? This would likely be a cheaper alternative.

1.11 Potential disposal of surplus Council-owned properties

Agree to get rid of any surplus properties.

1.12 Any other comments:

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

Subject: Mobile Libfary Bus service

1911

It would be tragic if this wonderful service was stopped. How would many of us get access to books which we need for information stimulation and enjoyment? Some of us are in our eighties and nineties and are unable to drive or, in some cases board a bus. Many of us are isolated as it is without being deprived of the company provided by stimulating writers. Old age can be depressing enough without what pleasures are left being taken away.

PLEASE reconsider you plan.

### Feedback

1.1 Have we got the game plan right?

Recycling is a positive step.

1.2 Rates

I live in Birdlings Flat for which Christchurch Council provides no road drainage, footpaths or sewerage disposal, refuse collection and very sparse road lighting. Admittedly we pay lower rates than if we were in the City, but the difference is not in proportion to what we receive.

The roadway into the centre of Birdlings Flat is crumbling at the edges to the point that drivers now drive down the centre of the road to avoid the pot holes at the edges. I don't suppose this situation would exist in the City as the road repairs would be done promptly.

We have installed storm water drainage on our property as well as self contained sewerage system at a cost of thousands on Dollars to us.

It seems very unreasonable to expect ratepayers of Birdlings Flat to pay extra on our rates to cover the cost of storm water drainage and upkeep and upgrading of footpaths that we do not use in other parts of Christchurch when the Council do not provide it here.

1.6 Rubbish, recycling and organics

Green waste could be free to drop off with a charge made for the purchase of the resulting compost to cover costs.

## Feedback

### 1.11 Potential disposal of surplus Council-owned properties

I am requesting that the land as described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) be removed from the LTP and fast track disposal.

1. The two pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan.
2. The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation).
3. Thorough community consultation should be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.
4. Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not just be made by Council staff.
5. The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process.
  - Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to conflicts with community usage and aspirations.
  - The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea Road, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles.
  - Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.
  - If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.
  - If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner.
  - The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?

- Should all the land be sold (privatised) at one time? Would a staged housing development be better for the community?
- Different use options for the land need to be considered not just a sale to a housing developer. Should some parts of the land be released for residential development and other parts held for other uses? Should the Council consider the needs of the community for special types of housing e.g. catering for older or younger people looking for smaller units?

## Feedback

### 1.1 Have we got the game plan right?

We wish to make a submission to the council's draft Long Term Plan which contains an operational budget cut to the Akaroa Museum's staff budget.

We would not like to see any cut to the Museum's budget that would affect its ability to work with our students.

Our school makes an annual visit to Akaroa to research the local history for the students NCEA. and includes Akaroa Museum so students can carry out in-depth research using primary source material, under the guidance of Museum staff.

We value this because Akaroa has a such unique history and place in Aotearoa's history. I have been visiting Akaroa virtually every year since 2008 and my predecessor for at least 10 years before that. We have ALWAYS found the museum staff willing and able to help help guide and assist the students in their studies. Also has 2021 sees the introduction of the new NZ History curriculum being taught to ALL students in ALL schools from Y1-Y10 the need for local museums to teach akonga will be even more of a necessity. Akaroa museum and its staff have always been an important part of the students education in relation to our nations history. ANY reduction in services and or staffing will have am impact on students from my school and the numerous students who visit each year. at the exact time that schools in the local and wider rohe will be demanding more guidance and assistance that only experienced and professional staff at the museum can help provide.

Also another impact impact would be an economic. This year I am to bring 21 people to Akaroa for 2 nights and they will also dine out. While on the scale of economic stimulus this is minor many schools in the South Canterbury area undertake this same trip.

We would request that Council reconsiders its proposed cuts to the Museum's operational budget because the loss of this service to our school would significantly reduce the value of our visits to Akaroa. Also to look at the new opportunity that the NZ curriculum will present as all school and all students in Aotearoa up-to Y10 engage with History of their nation in away they never have. They will all being looking for assistance to do this. Assistance the Akaroa Museum has provided in the past and SHOULD be resources to do in well into the future.

### 1.7 Our facilities

### Feedback

1.1 Have we got the game plan right?

Our submission is in regard to the Land Drainage Targeted Rate,

The Te Oka Farm properties that are relevant to this "Drainage issue" are only affected when lakes Forsyth and Ellesmere are not "let out" in a timely manner, so unless this rate increase is going to address this problem, it will be of no benefit to our farming practices.

We don't see much benefit from the current high level of rates we already pay.

### Feedback

1.1 Have we got the game plan right?

No.

No.

Perhaps it is time to appoint Commissioners with fresh ideas & a fresh approach to fix all these large inherited problems. Once the recent large infusion of Govt money washes through the local economy & the Govt starts raising taxes to repay debt then many jobs & businesses in the productive sector that provide part of the rating base are likely to disappear. The Council has already proven itself incapable of adapting to an emergency - 10 years later the Mayor is still blaming the earthquakes, so we need a capable replacement.

1.2 Rates

Assuming for the sake of argument that the Council will hold rate rises to 5% this year & subsequently to 4%p.a. for the next 9 years (pretty unlikely) then rates are forecast to rise by 49% over the period & the council's rate's take will increase from ~\$550m to ~\$822m by the final year.

Given the expectation of near zero inflation then this is an additional cumulative transfer from its citizens to the Council over the next 10 years of \$1.434 billion dollars.

I cannot see, by any measure, that this transfer of wealth from ratepayers to the Council is justifiable. Sorry.

1.3 Proposed changes to existing rates, and new targeted rates

All around the city we see water seeping over footpaths & down the gutters, often for months at a time. We see reports of pipes bursting. We see the Council running sprinklers day & night in the parks & on sports fields.

Some estimates say the Council loses about 30% of all water through poor maintenance & poor management.

Before taking the lazy option of restricting households water use, why not start by fixing these pipes & mending fixtures first, then cut down the Council's own wasteful practices?

#### 1.4 Investing in upgrading and protecting our city's water networks

I would like to see this project first evaluated, costed & the budget compared to overseas work by a truly independent group of experts not some in-house or self-selected group.

For some reason all recent local Council projects seem to run over-budget, over time, under-deliver & cause enormous disruption.

These are the sort of big projects that should be taken out of Council hands by the Govt & contracted out to an overseas organisation with the proven expertise & track record of delivering. The French Govt gets much lower costs & better results by doing large local projects this way.

#### 1.5 Investing in our transport infrastructure

After the constrictions the Council keeps making to our central city roads "improvement" is not the first word to come to mind.

#### 1.6 Rubbish, recycling and organics

Recycling is failing. The Council is slowly but surely directing everything into the Red bins.

Given the Council pumps all the city's sewerage out to sea it is hard to take this proposal seriously - it is just Greenwashing.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No  
Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments

#### 1.11 Potential disposal of surplus Council-owned properties

Dispose of all excess Council property. The sooner the better.

#### 1.12 Any other comments:

CityCare should be liquidated. It cannot be sold. It returns next to nothing on its huge asset base. Any project given to it by the Council seems to take twice as long to complete because it appears to lack sense of urgency or any work ethic.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I wish to record my opposition to a wholesale increase in the rates associated with land drainage, based on the following points:

Our property drains through a non-pipe asset via an open stream.

Several years ago we had to carry out our own flood mitigation and control works, having approached the council for assistance and being turned down. The flow from our stream was increasingly threatening the safety of our home after episodes of heavy rain and so we were forced to approach a water engineering company and a plan was put in place. Remediation was carried out at a cost of over one hundred thousand dollars, including planting to protect the sides of the stream bed.

Contributing to this problem has been the installation of curb and channel in our valley, which culminates in a large pipe feeding on to our property and flowing directly into our stream. We were not helped financially in any way to drain our property or reduce its flood risk, despite asking for assistance.

The Port Hills fire also contributed to this problem by increasing surface run off from the fire damaged crater rim above us.

In summary, the drainage measures taken by the CCC in our immediate area have, to date, worked against us. We consider it unfair to make us contribute to the land drainage costs when we don't receive a service from them and have been left paying a substantial amount of money to rectify and manage the excess runoff onto our property. We consider the attitude of The Council and their lack of assistance to be extremely disappointing.

Jane Swinard (property owner)

### Feedback

#### 1.7 Our facilities

I write concerning: Reducing the programmes the Gallery offers to the public and school groups by 25 per cent a year.

I have been involved with The Christchurch Art Gallery/Robert McDougall Gallery for over 25 years as a Friend of the Gallery and also as an arts administrator/event organiser in the city. I have seen the impact the Public Programmes have on the community and their engagement with the rich collection of art that belongs to Ōtautahi Christchurch. I have seen people come hesitantly and grow in interest and excitement as their knowledge expands through the programmes run by the Gallery. This begins at an early age and many children would not have the opportunity to get to the Gallery if they didn't come as a school group and take part in the excellent education programme.

The arts make a difference to our lives and to have a central city Gallery offering free attendance and free schools and community programmes ensures every person in the city can have an opportunity to gain from the facilities offered.

I think a decrease in these services would be a retrograde step for everyone in the city.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

I support the grant to The Arts Centre as this is one of the key heritage buildings in the city. For 20 years before the earthquake I had either an office or a studio at The Arts Centre and was working there the day of the February earthquake. There was always an energy around the site from tenants and visitors and collaborations and events that happened during the year. The buildings that have been restored have brought some of this back, but the gaps and stops around the site need to be completed to return it to a working creative space that the community interacts with and feels safe to be around. This is one of the city treasures and the sooner it can be tenanted safely, the sooner the community will begin to use all the spaces and return the wonderful creative vibe it had.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

##### Comments

Yes, the Robert McDougall Art Gallery must be returned to public use. This wonderful facility is suitable for many uses and if the Museum can

be confident it can become part of their redevelopment, then the sooner the better.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I strongly object to the land drainage targeted rate being extended to rural areas in Banks Peninsula. In our area rural properties do not contribute to any drainage issues.

I am also concerned at the amount of targeted rates a property would have under this proposal. We already have a targeted River Rate and The Christchurch Cathedral. I don't think there should be any more than two targeted rates per property.( including Ecan targeted rates)

We rarely use city facilities, and object to paying city rates for a rural lifestyle.

I believe the Council has some responsibility to Historic Buildings however I would only suppose one targeted rate for Historic buildings(including the Christchurch Cathedral).

## Feedback

### 1.1 Have we got the game plan right?

See also below - responses to questions.

It is important to fix the roads but please remind the Councillors that what people might complain about in a survey is not necessarily what they care about or value most in their lives, or what they actually value most about what our local government provides to their community. For example, as Christchurch grows over the next ten years it will be increasingly important to make sure that public space is carefully considered, provided for and protected for everyone to use and enjoy.

Looking at the plans to help mitigate the effects of climate change: a number of the actions listed are already agree or underway as part of other work. I realise that the Long Term Plan is reviewed every three years, but should we also flag that we will need to have resources available as new solutions could be identified and put in place during this ten-year period?

### 1.2 Rates

It seems reasonably realistic, noting my general suggestions above and that there is a big question mark about the Council's role and financial commitment re: the Government's water reforms.

### 1.3 Proposed changes to existing rates, and new targeted rates

I understand the need to specifically value the water use component of our rates.

It's good to know there is expected to be targeted funding to make sure the Arts Centre and other key heritage buildings will be restored for future generations.

### 1.4 Investing in upgrading and protecting our city's water networks

It seems reasonably realistic noting my general suggestions above and that there is a big question mark about the Council's role and financial commitment re: the Government's water reforms.

### 1.5 Investing in our transport infrastructure

Public transport should be a much bigger priority as a tool to help mitigate climate change and reduce congestion, but I realise that in the current system, the Council has a limited part to play in influencing what happens. The Riccarton bus lounges are an example of money and resources spent by the Council to meet ECan's requirements for their network - now seen as not viable and a huge waste of money previously spent. I agree with the mayor that there needs to be a fully integrated public transport system that is not based on a competitive market model. This along with the bigger questions about access to aquifers and potential incursion are issues that need to

be managed collaboratively and with backbone given the legacy we may give to future generations if we don't address them now.

1.6 Rubbish, recycling and organics

This is an important aspect of meeting our targets for sustainability and protecting the environment.

1.7 Our facilities

As Christchurch grows over the next ten years it will be increasingly important to make sure that public space is carefully considered, provided for and protected. The Council needs to continue to play a key role in actively supporting this.

Larger libraries need at least one late night a week to cater for people who work during the day and want to go there on the way home or before the weekend.

If there is a demand for the mobile library it should be kept on as a service that shows the Council's commitment to being equitable and to supporting community wellbeing - including the elderly and those with mobility constraints.

The Christchurch Art Gallery hours and services should not have to rely for their resourcing on tourism to provide the full service for their local community. School and other programmes and later hours are for the locals. Like longer opening hours for libraries, the aim is to allow for and to help encourage use and appreciation by a wider range of users than those who are able to visit during the day. Libraries, the Art Gallery and the Canterbury Museum are key community hubs, learning and cultural centres, and these facilities should be prioritised and funded as such.

1.8 Our heritage, foreshore and parks

There needs to be true true consideration of the needs of a fast-growing population and any future use there might be in that light. There has been a huge loss of heritage buildings in Christchurch owing to the earthquakes, so selling any of these must be very carefully considered by the whole community. I support prioritising the maintenance of our parks and foreshore.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

It's great to know that the Arts Centre catered for. There are others in the pipeline so it's good to know there is expected to be targeted funding for them in the long term.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

It's great to know that the Robert McDougall Gallery is being resurrected. There are others in the pipeline so it's good to know there is expected to be targeted funding for them in the long term.

1.11 Potential disposal of surplus Council-owned properties

It may be OK to sell off surplus land and buildings as long as there is true consideration of the future needs of a fast-growing population and any future use there might be in that light. There has been a huge loss of heritage buildings in Christchurch owing to the earthquakes. Selling any of these or our community facilities must be very carefully considered by the whole community.

1.12 Any other comments:

### Feedback

#### 1.2 Rates

I can't really see how a 4% Rates increase for 9 of the 10 years can be sustainable for many families in the present economic climate. Few workers are currently receiving salary increases. Presumably by 2025 increases of 2% may be occurring? That still leaves a Shortfall in disposable income. 5 & 4% is too high. Please reconsider.

#### 1.4 Investing in upgrading and protecting our city's water networks

I don't mind spending in this essential area but please can you remove the Chlorine from our tap water. Depending on the sprinkling...some days it can be ghastly.

#### 1.5 Investing in our transport infrastructure

Transport is an ongoing concern but generally Council has it Right.

I would really like to see

1) The Colombo St bus lane instigated as soon as possible between Moorhouse Ave & Brougham St. This is of major concern to Bus passengers. I myself have spent many hours sitting in the bus as it crawls along this stretch of route. Certainly detracts from using Public Transport.

2) Salisbury Street Surface . This is in absolutely shocking condition for a main one way street. Can't some money be spent filling the many holes and rattles even if only temporary before it is dug up again to get an underground infrastructure.

3) Lichfield St Bus Exchange - Outside on Southside. Currently there is a drop off zone on the Northside outside Fresh Choice supermarket. However this does not serve traffic dropping off from the Eastside (eastern Suburbs) of Christchurch. We need a space on the Southside of Lichfield St outside the Bus Exchange.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

#### Comments

I think its a bit too much money. Could you target visitors to the city with an entrance charge. Why should rate payers pay for visitor to view and access the facilities.

## 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

## Comments

I think it would be really good to finally get the Robert McDougall up and running. A fantastic building and it will bring Tourists meaning more money circulating in the city.

## 1.11 Potential disposal of surplus Council-owned properties

I think far more Community discussion needs to occur regarding selling these properties. Many of the properties mean a lot to locals and hold family memories of great times in the past. It may only be a Section of Land to Council but it means so much more to the Community. Once they are gone....they can't be reinstated. Housing and the like can be placed on other areas

## Feedback

1.1 Have we got the game plan right?

1.3 Proposed changes to existing rates, and new targeted rates

Change to Land Drainage Targeted Rate.

I strongly object to the proposal you have put forward for the change to Land Drainage Target Rate and I suggested the fairest option is Alternative Option 1.

The reason for my feelings is that I live on an unserviced rural property have paid over \$7000 just to meet the requirement for CCC storm water management. I did not receive any funds or subsidies from the Christchurch rate payers. I am not impacting on the current services, yet I am expected now to contribute. I would suggest a fair approach is to allow me to skip payments until I have reach the \$7000 mark then I will start contributing.

I appreciate the beneficiary group is wider than the owners of properties on serviced/drained land. I visit Christchurch & benefit from storm water discharge/draining and I use roads that benefit from drainage. Someone has to pay and I am happy to contribute but at a rate that reflects my impact on the services. I am making the following suggestions.

1. All new serviced properties (e.g new builds/land sub-divisions) pay an increased rate for the first 5 years then drop back to the normal rate. This reflects the increased impact a new development puts on current services.

2. Take in account the distance of dwelling/land from serviced area and charge accordingly. I drive on 5 kms of road before I reach a road that has storm water drainage. I do visit Christchurch however I live 60km away & I visit once a week. I spend more time in Selwyn area yet Selwyn council do not charge me extra for using their serviced areas! If you are expecting any person that uses a serviced area to contribute you should bring back toll gates to people entering said serviced areas.

3. Flood control - A person who purchases a property or land should do their own due diligence and investigate if

it is flood prone. If it is found that it is flood prone, they should pay a contractor to install flood defences/flood mitigation, not expect to have sensible people that have done their research pay extra funds so they do not suffer from flooding. Do not issue build consent in flood prone area or do so but with the understanding that the owner pay a flood levy.

## Feedback

1.1 Have we got the game plan right?  
I don't support the closing of Wharenui Pool or the reduction in library opening hours.

1.7 Our facilities

I disagree with closing Wharenui Pool - this is an important community facility. I have used it regularly with the Whitewater Club for rolling practice (very important safety skill) & beginner training (when I was a beginner & later teaching beginners). I don't think Metro Sports will cater to this.

I do not support reducing library hours. The evenings are important for working people & for families to go together. Also having some quieter times is important for people who are sensitive to noise & lots of other people.

## Feedback

1.1 Have we got the game plan right?

The balance seems to impact cultural institutions unfairly

1.2 Rates

I think this is fair enough considering the revenue losses to the city

1.3 Proposed changes to existing rates, and new targeted rates

I think these are fair

1.4 Investing in upgrading and protecting our city's water networks

water is so important, if anything more spending on infrastructure is necessary

1.5 Investing in our transport infrastructure

this a good investment in our community, we need better travel systems to future proof our city

1.6 Rubbish, recycling and organics

I don't know how much should be spent on this, but it seems like a good investment

1.7 Our facilities

I personally believe taking funding away from the Art gallery's education and events will serve as a disservice to the city - they are two things that lift moral across the city, and provide for our community. I can't imagine these things would have been highly utilised by international tourists, so cutting these of all things seems like a bad idea.

1.8 Our heritage, foreshore and parks

this seems like a sound investment

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

although I believe that organisations such as the Art Gallery and library should receive investments instead, as the arts centre is a profitable organisation with a board of trustees so shouldn't be receiving such a big amount of government funding over the cultural institutions that aren't for profit.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

to some extent - but I don't know what the use would be if you cut the events and education budgets for the art Gallery, when our gallery could and should be expanding across the city.

1.11 Potential disposal of surplus Council-owned properties

i think there are other surplusses to be made, in terms of higher up individual employee incomes and other cuts before we start selling buildings

## Land drainage rate proposal

Hugh and Kathrine Fraser

This is my submission on the Christchurch city councils Long term plan consultation. We farm at Takamatua, my family have farmed here since 1970.

We farm 3500 stock units of sheep and beef.

Currently I pay 8100.00 dollars which includes 1814.96 dollars to Environment Canterbury.

My submission will focus on the proposed extension of the land drainage targeted rate to all properties, including those that are historically unserved by the councils land drainage infrastructure.

I'm shocked at this proposal which has come out of the blue with no prior consultation or engagement and only belated notice through a letter ( which we did not receive) of 30th March 2021. We were therefore only notified of this proposal on Wednesday 14th April by phone call and subsequent email by CCC.

I have worked out that I will pay \$8935 in 2021/22 and this will increase to 10671.12 in 2023/24. How anyone could describe this as a fairer approach is beyond my comprehension.

This rate is for a service I do not receive or benefit from. The cost is oppressive for my farm and fails to recognise the work that I do as a landowner on my property to manage excess water. Mostly water from farm drains into wetland, streams, rivers, and the sea

## Land drainage rate proposal

Canterbury.

My submission will focus on the proposed extension of the land drainage targeted rate to all properties, including those that are historically unserved by the councils land drainage infrastructure.

I'm shocked at the proposal which has come out of the blue with no prior consultation or engagement. I only belated notice through a letter ( which we did not receive) of 30th March 2021. We were therefore only notified of this proposal on Wednesday 14th April by phone call and subsequent email by CCC.

I have worked out that I will pay \$8935 in 2021/22 and this will increase to 10671.12 in 2023/24. How anyone could describe this as a fairer approach is beyond my comprehension.

This rate is for a service I do not receive or benefit from. The cost is oppressive for my farm and fails to recognise the work that I do as a landowner on my property to manage excess water. Mostly water from farm drains into wetland, streams, rivers, and the sea rather than to any council land drainage infrastructure. I am responsible for managing my waterways, drains and wetland to standards set out by rules for freshwater management and rules that will be coming on indigenous biodiversity. This includes considerable spending on fencing, riparian planting, sediment management, etc., all of which I am expected to meet at my own cost.

This proposal should not proceed. Please think again for the sake of the community.

Yours in disgust

Hugh and Kathrine Fraser

## Feedback

### 1.1 Have we got the game plan right?

I am not sure if we have prioritized the right things - this doesn't seem to take into account our most vulnerable people in the community e.g. the homeless, vulnerable families, students and the elderly who use the library and other public places and who need the services they offer. cutting these will be detrimental to our already vulnerable communities who have had a hard time - especially with covid. I think the increase of rates is alright, providing that wages and benefits etc match - so people can afford to buy a house/rent a house AND be able to live. There is already a housing crisis, we don't need to create worse scenarios and more struggling people.

### 1.2 Rates

again, i believe this is acceptable, providing the wages, benefits etc increase to match. We can't have people having to choose whether to have a roof over their head or to eat that week.

### 1.3 Proposed changes to existing rates, and new targeted rates see above.

### 1.5 Investing in our transport infrastructure

my concern is that i can confidently take the bus instead of the car - my main concern is that is it going to make the buses on time? cut transport costs? cut time it takes to arrive at places? At the moment i find the whole service appalling and more confusing than it needs to be, which isn't a great incentive for using the busses etc in the first place. I also find the bike lanes not a great help when im biking, i think they sometimes make biking more dangerous rather than helpful. I would also like to see more places for parking especially in the city that doesn't cost the earth, as i am finding that parking (either in a car or on a bike) there isn't enough and then people park dangerously or get road rage-which again isn't ok.

### 1.6 Rubbish, recycling and organics

i think the more recycling the better same for organics! I would like to see more incentives for people who aren't good at recycling - the stickers definitely help but i know many who don't seem to think its a big deal. i think placing more 'why its important' information will help - i mean if i enjoy recycling and organics sorting etc why can't they?

### 1.7 Our facilities

I think this is the worst idea! Keep good services or better yet, introduce new services, take money out of the bike lanes or the new stadium etc. Services shouldn't be compromised when basically everyone within the community uses these services in many ways. i see homeless, elderly, families, students, new citizens, migrants, refugees use these services everyday. Especially for people who are vulnerable to the community it would be a major mistrust to take these away. i want to know there is a safe space to study and research, i want to know where i can get free legal advice etc. especially when not many of us are lucky to earn enough to talk to specialist services etc. If people need help our council should offer it, especially if rates are being increased. I also think closing the Riccarton lounge is a bad idea, as when i do use the bus, its one of the few places i feel safe waiting for the bus that is on my consistent routes.

1.8 Our heritage, foreshore and parks  
i think this is about right, though i think we need to save our parks, forshore and heritage for our future.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Comments  
i guess so- 0.04 doesn't seem like a big amount especially if it gives art and heritage back to Christchurch.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes

Comments  
I would support it, providing that living expenses, wages etc doesn't make this a major burden for us the citizens. Also, we need to be able to see that it is going to pull in the people, and the money after its built (e.g. over seas exhibitions) to be viable.

1.11 Potential disposal of surplus Council-owned properties  
As long as it gets sold to people in NZ, and that better yet - first home buyers or people who will use it for a great purpose e.g. more housing, community focused businesses etc are offered it first.

### Feedback

1.11 Potential disposal of surplus Council-owned properties

i would like to see the Yaldhurst Memorial Hall saved. Children go to the Yaldhurst school and they could use the hall for their assemblies, school discos, plays and would make a lot of good use out of it. This hall also seems like a piece of history and would be a shame to see this go Please consider this.

## Feedback

1.1 Have we got the game plan right?

No - you should not be planning to close Wharenui pool as it is important to the swim club and local people in Riccarton as a place to swim

1.7 Our facilities

Wharenui Swimming Pool and sports centre needs to stay open. If you close it my Swimming Club will have no where to swim or will have to swim at a pool that isnt close to us and people in Riccarton will have to travel to swim and exercise

Lots of people and groups use the pool and they need it to stay

1.8 Our heritage, foreshore and parks

Wharenui Pool has a long history of teaching people to swim and of being one of the top swim clubs in new zealand. It should stay open to teach more people to swim

1.11 Potential disposal of surplus Council-owned properties

Please do not decommission Wharenui Pool

1.12 Any other comments:

Please do not decommission Wharenui Pool. it is really important to me that the pool stays so I can keep swimming. if we have to travel too far I wont be able to keep swimming. Wharenui is the best swimming club with great teachers and coaches. I started swimming there when I was 9 and am now in the competitive squads with friends I made in learn to swim. Everyone should be able to swim at their local pool and not have to travel.

I would like to go to the Olympics like lots of Wharenui swimmers before me and I dont want to travel to another pool to train.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.12 Any other comments:

I would like to recommend that the fast track proposal to open up the area below Bayview Rd Diamond Harbour for housing be rejected and proper community consultation undertaken. This should include the gully planting covenant all the walking tracks, road access and increased use of main roads and general infrastructure such as power and water and drainage which are already vulnerable in this area.

I would also like for the council to reconsider the reserve status of the Godley House site making it possible to build a café and meeting place on the original area. Is it not possible to 'float' a new building over the original house site thereby conserving the bricks which express the plan of the old house.

### Feedback

1.5 Investing in our transport infrastructure

I'd like to see a more integrated transport system where we can easily change modes dependent on best available option. Despite your great work, we still have a mindset where people are thinking 'i'm a vehicle person' or 'i'm a bike person'. This creates tribe mentality and division, and your communicating 'choice' (this or that) may contribute to this. Need to reconsider the communication to promote multi-modal transport options. An alternative scenario of vehicle into parking building on CBD rim, followed by free autonomous bus between main areas of town, or perhaps scooter for a block or two, would drastically reduce traffic, especially the 'looking for park' traffic. I hope the infrastructure model seen on St Asaph St where cycles, cars and parking all compete for space, trying to be all things for all people (and pleasing none) is a thing of the past.

Linwood Village Street Enhancements

\$1,481,380 • 2022-2023 • Project ID: 34094

Although anything would be better, I'd like to see enhancements that connect the Village visually to the river area above, and the city beside. It's in such a unique position, and the area will develop positively if integrated into the surrounding city instead of considering as separate. New development is dependent on diverting the flood of through-traffic, and slowing the vehicle movement, to ensure the area is more liveable, and businesses can attract customers. It should feel like a pleasurable respite

from the city, able to attract stadium users who want dinner before or a drink after, yet still providing the social space for community the area so desperately needs.

I can't find a specific project for the Greening The East initiative, but wanted to express my support for it. I see more families moving into the area, pushing prams, walking dogs, and although some streets and parks feel safe and pleasant, there are many stretches that don't. This project is a chance to fix that. Planting out and lessening the dominance of roads and vehicles on the visual landscape makes the area feel like a place where people feel comfortable, want to live in and make use of. The same high standards seen in the Avon River loop should wrap all the way around the beginning of the Red Zone, and down Stanmore Road to Linwood Village, marking a commitment to exceptional liveable residential areas, and positive change. When you do this you'll see more of the diverse community who live in the area, rather than just rough living that gravitates to an unused and unloved space.

Ōtākaro Avon Major Cycleway (Fitzgerald to Swanns Rd Bridge)

\$7,778,468 • 2022-2026 • Project ID: 26601

Even without the 'cycleway', this is such a great stretch to ride, so close to the city, and I see more groups of everyday cyclists using it. Providing a green corridor for getting into the city without using roads is the kind of thing that changes mass perception of what it means to ride or use alternatives to vehicles. As someone who's commuted for 30 years, including 10 in London, I understand the value of bikes and infrastructure, but I feel strongly that bikes don't need to inherit the 'highway' model developed by necessity for cars. I much prefer a 'softer' presentation of routes, particularly in areas like the river zone where there is separation from cars already. Don't revert to thinking highways for bikes (unless there's a specific need). Think most pleasurable ways to get from A to B using bikes, walking and assisted technologies. Put the emphasis on creating the best environment for meeting our needs. The solution may look very different.

Ōtākaro Avon Route Cycle Connections

\$1,132,327 • 2027-2028 • Project ID: 41852

I live in , and my 10yo son goes to in Opawa. Cycling to school has been limited by the lack of connection to the cycleway on Wilsons Road. The route is not rideable for a 10yo by themselves. The lack of connections between major routes is an issue I've pushed on the CAN (Cycle Action Network) for at least a couple of years. I can't wait to see it acted on. As said earlier, the infrastructure doesn't need to be overdone - often suitable traffic quietening, redirecting traffic down alternative routes, and routing bikes down quiet streets can be a very suitable solution. For example I use Chester St from Elm Grove to the Margaret Mahy park, and although a 'road', it's a pleasure to ride down (usually the middle of the road). Nursery Rd and/or England/Mathesons both have similar potential with re-prioritisation of mode.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

Fully support the funding. Would like to see an increasing focus on providing for residents rather than tourists. Although it's a tourist attraction (and should continue to be), an overemphasis on tourists means locals feel less connection, and the value is lost.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

I support the base isolation. Get it done. The Museum area lacks vibrancy, despite being the gateway to the incredible gardens. Having the Art Gallery functional should enable more events and breath fresh life into the area. The Lights Festival in the gardens a few years back showed how incredible this area can be when residents are given a reason to use it. Make this an exceptional place all the year around.

## SUBMISSION TO CCC LONG TERM PLAN 2021

ATLAS QUARTER BODY CORP INC

11 April 2021

C/o Richard Ball

We wish to be heard in support of this submission.

Tēnā koutou

### **RE: RATES FOR CENTRAL CITY WASTE COLLECTION**

#### **About us**

The Atlas Quarter is a Central City apartment complex with 113 residential units and three commercial units at 36 Welles Street, Central Christchurch. It was built by Fletcher Building as part of the Central City recovery on land formerly owned by the Council. The building design and landscaping had significant input from Council staff and has resulted in a high-quality urban environment. The development epitomises the Council's strategic goals for residential living in the Central City. All 116 units have been sold.

#### **Summary of the issue**

Atlas Quarter owners each pay an estimated \$300-\$400 per year in rates for solid waste collection (red, yellow and green bins). However, this service is not provided or available to us. Instead, we are required to pay EnviroWaste for waste collection through our Body Corporate fees. Paying both the Council and EnviroWaste is a significant and unfair financial burden when Council does not provide this service.

#### **Relief Sought**

We ask that the Council either:

- 1) reduce the General Rate and Waste Reduction levy for unit holders in developments such as ours to reflect the fact that no service is provided,
- or
- 2) amend Council service contracts to provide the solid waste collection service that we pay for.

#### **Explanation and Context**

We strongly support the Council's strategic objectives to reduce solid waste. The Body Corporate provides for all the same waste streams as the Council provides, as well as bins for corrugated cardboard. We have two designated waste storage rooms with large bins that are shared by all residents. We actively encourage waste reduction, waste sorting, re-use, recycling and organics.

The Council's usual three-bin residential system is impractical and undesirable in this style of higher density residential development. There is no-where to store the 339 bins that would be required for all 113 residential units (they would not fit in the waste storage rooms). Putting 226 bins (green waste plus either recycling or rubbish) onto the street each week for collection would be a nightmare for Council contractors, residents, pedestrians, vehicles and neighbouring businesses.

The Council has a goal of increasing residential occupancy and densities through developments like as ours, but your current policy and solid waste collection arrangements are woefully out of step with this goal. The current policy is designed for, and encourages, traditional low density residential living in the suburbs.

This is an issue that Council staff have known about for a long time. We have been told that developers have raised it in previous years and been rebuffed on the grounds that it requires a change in Council policy. As the LTP is the process through which rates are set, we wrote to the Council prior to Christmas asking that it be addressed in this current LTP, so that we could submit in support of the LTP. Sadly, this was not done.

We have recently been told that it will be looked at as part of a comprehensive review of waste policy and bylaws in the future. While we support a comprehensive review (and have offered to participate in that process), we do not wish to continue to pay in the interim. It is a significant amount of money for a service that we do not receive. If, having completed a comprehensive review, the Council is able to change its arrangements and collect our solid waste, we would be happy to pay for it. Until that happens, we can see no justification for continuing to charge for this non-service.

For the sake of clarity, we do not object to paying rates and greatly appreciate many of the services and assets that the Council provides. However, rubbish collection is not like roads, libraries or parks, which are public goods that residents can use if they wish to. Nor is like the three waters, where the network infrastructure needed prohibits alternatives. Waste collection is mostly a private benefit. We object to having to make our own arrangements for waste collection while continuing to pay Council for the service. If there is a portion of the waste reduction levy that is for public good purposes, such as managing old landfills or subsidising recycling or organics processing, we are happy to pay our share of that, but believe it to a fraction of what we are currently charged through both general rates and the waste reduction levy.

Ngā mihi

Richard Ball

On behalf of

Atlas Quarter Body Corporate Inc.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Elizabeth **Last name:** Bain

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.1 Have we got the game plan right?

It is interesting to see that the greatest area of the new rateable plan affects most of Bank Peninsula. Much of this area is deficient in the very services you now want to gather rates from. For example, timely capital works and maintenance of essential assets - reservoirs, provision of essential services without continual restrictions - water restrictions.

I live in an area where houses are connected to septic tanks, where we paid an initial part charge to have water supplied from the Duvauchelle scheme, and where storm water drainage does not connect to a council system. Why should I pay more rates!

#### 1.2 Rates

I am not happy to have an increase to the rates of my property where I get no benefit from being part of Christchurch City Council's rating district.

I am not opposed to paying a rating portion to the main highway - drainage and up keep. There are no foot paths on this road. The part of the lane that is a legal road has no footpath, curbing or drainage. There is a drain through part of this road that comes from a nearby property where the main road drains its excess water through. This has had no maintenance.

#### 1.3 Proposed changes to existing rates, and new targeted rates

Recognition that some properties do not fit into the models you have proposed. They are classified rural without any of the services that you plan to rate.

#### 1.4 Investing in upgrading and protecting our city's water networks

I live in a rural area where the Christchurch City Council has done little to maintain or invest in any thing to do with reservoirs, treatment plans, drinking water , manage collection, treatment and or disposal of waste water and storm water. (I do acknowledge the urgent action taking place to restore the safe water supply to Akaroa which is currently in progress. ) I have little confidence in the council regarding the Akaroa Waste Water plan where the council and it's consultation processes have met the council objectives, but have not resulted in the outcome wanted by the residents affected by scheme. Other than the desire to place a waste water scheme for Akaroa in Robinsons Bay - there is no mention of Robinsons Bay as an area of Christchurch. It seems to disappear somewhere between Duvauchelle and Takamatua.

#### 1.5 Investing in our transport infrastructure

There is no public transport where i live, Safe footpaths and roading is essential. There has been much work done to improve the condition of the road that leads over the hill from Cooptown to Barry's Bay. It is alarming in some places that there are no safety barriers on this road.

I live in a private lane that runs off a legal road. This legal road has no drainage, no footpaths, and no curbing. Part of it is currently being re sealed. This is the first maintenance in 20 plus years.

#### 1.6 Rubbish, recycling and organics

I support recycling, reducing waste, and collection of organics. However, I do not have a rubbish collection system, nor a recycling collection system or a green waste collection system. I use skips up Robinsons Valley Road, and have to take green waste to the dump in Barry's Bay.

#### 1.7 Our facilities

Our council service centre has been relocated into the community/school library. It's services have diminished considerably. I understand that they are to go completely. Please tell me where the investment is?

Small isolated rural communities need to have walk in available services associated with the city council that intends to gather rates from the property owners of that community.

#### 1.8 Our heritage, foreshore and parks

I support the development of the red zoned area of Christchurch, to become wetlands, green spaces, parks etc. From the estuary to the city.

I support a portion of my rates going to the predator free Banks Peninsula programme.

I do not support any of my rates going to the rebuild of the Christchurch Cathedral.

I cannot understand why all Christchurch City Ratepayers are not required to make a portion of their rates available for the Akaroa Health Hospital rebuild.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments  
So also fund the Akaroa Health Hospital rebuild.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments  
So also fund the Akaroa Health Hospital rebuild.

1.11 Potential disposal of surplus Council-owned properties

The historic Council Building in Akaroa is no longer being used as a council building. It was closed without consultation with the community. It is not regarded as a surplus building to the community. Rather, we would like it reinstated for the benefit of the community.

Surplus to council properties may have real value to the community they sit in. That community should be consulted and have a say in their future.

1.12 Any other comments:  
Rural areas of Bamks Peninsular are being asked to subsidise the ratepayers of Christchurch in order to spread potential rate rises, even where those rural areas may not benefit from any of those services.

## Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I am happy with the new targeted rate specifically created for The Arts Centre Te Matatiki Toi Ora.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Arts Centre Te Matatiki Toi Ora is a valuable collection of heritage buildings that need to be completed and preserved. They bring arts, culture, creativity and heritage to the region and strengthen the central city offering. It's rare for a city to have such a large collection of heritage buildings, and with many heritage buildings destroyed by the earthquakes, it's important that these buildings are around for future generations to enjoy. The whole block is home to 30 businesses that all provide income to staff and bring life to the Eastern side of the city centre. Many locals have fond memories at The Arts Centre, for some it was where they studied or graduated, others where they visited the market or enjoyed a concert, others still where they visited a gallery or watched a movie. For me, it's my workplace, but also where I enjoy all it offers. It's a true treasure and Christchurch is very lucky to have it. The Arts Centre of Christchurch Trust is doing an incredible job at progressing the rebuild through means of the insurance payout, fundraising, tenant income, venue hire and ticket sales. However, they are in a situation where they need support to keep moving forward and receiving this grant will enable them to do that. As a local ratepayer, I wholeheartedly support the Council funding \$5.5 million to The Arts Centre and I am happy for it to be included in a rates increase.

## Feedback

1.1 Have we got the game plan right?

Note:

I can be contacted by phone or email if further information is required.

1.2 Rates

Perhaps a graduated scale of increase would be more suitable given the difficulties people on low income are experiencing. That is income related rates increases.

1.3 Proposed changes to existing rates, and new targeted rates

Approve

1.4 Investing in upgrading and protecting our city's water networks

Approve

1.5 Investing in our transport infrastructure

Canterbury has a rail network that is ideal for commuter transport into and out of Christchurch. North to Amberley, West to Darfield, South to Dunsandel and East to Lyttelton. The line is 3 feet 6-inch gauge (colonial gage). Japan has the 7,000 km of non-electrified lines of the same gauge. The commuter trains for these lines are diesel powered. It could be possible to rent or buy some of these trains to run a trial on the Canterbury rail network. Perhaps retired trains suitable for refurbishment by the Kiwi Rail workshops could be sourced?

I imagine that, initially, train services would need to be subsidised, perhaps by raising central city all day parking fees to be a multiple of a single hour parking fee i.e., a discount would not apply for all day parking.

I worked for a short period each year from 2002 to 2016 at a research institute in Germany which was to the east of the Hartz Mountains and one hour from two cities, Halle to the south and Magdeburg to the north and .

Small railcar-like diesel powered trains ran frequently between the small villages, towns in the area and connected with the intercity rail network in the two cities.

There were two passenger compartments on each train and between them were an on-board ticket machine, toilet and bicycle storage. The stations in the villages were not staffed and apart from the platform, only provided parking spaces for cars and bicycles. Bus stops were usually located at the railway parking space for connections to destinations not served by rail.

Rationalise the requirements for the use of bicycles, electric scooters and hired electric bikes in bike lanes, shared paths and on footpaths. Issues include riding on the footpath, maximum speed allowed on footpaths and shared paths and mandatory use of helmets by all groups

My time cycling in Germany demonstrated that shared use of footpaths is possible and can work well. Each half of the footpath is coloured, generally a very pale red and a cream indicating where pedestrians should walk and riders can ride. Additionally, cyclists are required to have a bell and use it to warn pedestrians when they are approaching from behind.

Adapting these rules in Canterbury would give safe places for children and older people to ride at reduced speeds and provide the safety required by pedestrians. Riders of cycles, electric scooters and electric bicycles that wished to travel at higher speeds would still be able to use the road and the cycle tracks that were not part of the footpath system.

1.6 Rubbish, recycling and organics

Current levels of plastic recycling in Canterbury are low by NZ and international standards

I would like to see increased recycling as soon as possible.

Plastics that cannot currently be recycled should stored in separate landfills to make future recovery of these plastics easy, i.e., they would become plastic mines and provide valuable resources for future inhabitants.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

## Feedback

### 1.2 Rates

We have been hit hard by rates increases year after year for the past decade. The compounding increases have dramatically increased all of our rates, and we in Diamond Harbour feel as if none of that money is coming back to our community. Our roads are shambles. Our sewer is falling apart. Our water lines are falling apart. We have no money to put into the Godley grounds. You are taking our rates and putting them into communities where we don't see the benefit.

### 1.3 Proposed changes to existing rates, and new targeted rates

I support the targeted water rate. Too many people don't care about the water supply and treat it as an infinite resource.

### 1.4 Investing in upgrading and protecting our city's water networks

As long as some of that money comes to Diamond Harbour and the Bays, then yes.

### 1.5 Investing in our transport infrastructure

I think the ferry times need to improve. A long term move to a bigger boat, potentially electric. I would also like to see the cost to ride reduced. As it currently stands, it is cheaper for me to drive in my fuel efficient car than to take the ferry. If you want to get people on board, make it free for two years.

### 1.8 Our heritage, foreshore and parks

Purau Beach should have the dog ban over summer daytime hours lifted. There are no beaches we can take our dogs to to cool off (except one which is hard to access). Purau Beach is large and flat with plenty of space due to the shallow tide. Dogs should be allowed, and off lead, year round.

### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

### 1.11 Potential disposal of surplus Council-owned properties

I support the disposal of the land at Hunters Road in Diamond Harbour, on the condition that the gullies and school track are made into reserves and protected for public use and enjoyment. I only support this provided the land remain zoned residential, although I would like to see some of the land be required to have smaller section sizes than currently allowed in DH so that retirement/easy care properties can be constructed.

Community consultation must be sought in any development. A commitment by council to improving our roads

and three-waters network must be made prior to increasing the population of the area and over taxing an already struggling network.

1.12 Any other comments:

Building Regulation 1.5 Relevant Officer Charge Out Hourly Rates:

The hourly rates you charge out your staff at are unfair and out of touch for a non-profit organization. Theses hourly rates equate to unfair taxation to those carrying out building work. \$120 for an admin? \$294 for a senior engineer? These are SIGNIFICANTLY above the charge out rates for the private sector... WHERE THEY MAKE A PROFIT. Admins should be around \$80 max, and your seniors closer to \$200. Adjust the other rates accordingly.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

All the water that lands on our property stays on our property. If all our properties were the same as us then there would not be a need for this rate. We spend our own money ensuring this is the case. The council controls the area of roofs on our property so as not to create a discharge off our property. If we have to pay this rate the the roof area by law should be lifted immediately. We have our own well for water we have our own sewerage which we pay a consent fee on and maintain at our own expense. We have no footpaths or gutters on our street or any street with in a 5km radius. I do not go to town regularly and firmly believe that it should be user pays.

1.4 Investing in upgrading and protecting our city's water networks

Why are you wasting rate payers money on this when the government is going to take control of it and do what it likes with it. This is why most people think that the communist's are in control of our country.

1.5 Investing in our transport infrastructure

please explain to me how slowing down traffic and making it more congested in the city reduces our carbon foot print. I think you should leave the roads alone as you have made a big enough mess of it already.

1.6 Rubbish, recycling and organics

This is another rate that you should not inflict on people like us. All the organic matter on our property is composted on our property for the gardens and fruit trees.

### Feedback

1.5 Investing in our transport infrastructure

I am unsure why "Environment" Canterbury support CIAL who's commercial goal is to increase carbon emissions and noise pollution on the surrounding Christchurch residents. This also seems to be supported and encouraged by CCC.

Additionally I want immediate review of the operational noise contours that were promised years ago and were originally enforced on land owners based on incorrect modelling and assumptions! Likewise the 50 dba noise contour serves no purpose than to put onerous restrictions land owners in the surrounding airport area.

Thanks

Dianne Teear

## Feedback

### 1.11 Potential disposal of surplus Council-owned properties

With regards to the properties 27 Hunters Road and 42 Whero Ave Diamond Harbour I propose that the sale of the land mentioned is not fast-tracked and disposed of without consultation with the community that this development will effect. As outlined by our local Diamond Harbour Community Association we feel it is not in our interests for you to ignore the wishes and concerns of our residents.

1. The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process.
  - Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to conflicts with community usage and aspirations.
  - The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea Road, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles.
  - Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.
  - If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.
  - If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner.
  - The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?

I urge you to consider the outcome of this large development would have on our small rural community.

Mark Faulkner

## SUBMISSION TO CCC LONG TERM PLAN 2021

ATLAS QUARTER BODY CORP INC

11 April 2021

C/o Richard Ball

We wish to be heard in support of this submission.

Tēnā koutou

### **RE: RATES FOR CENTRAL CITY WASTE COLLECTION**

#### **About us**

The Atlas Quarter is a Central City apartment complex with 113 residential units and three commercial units at 36 Welles Street, Central Christchurch. It was built by Fletcher Building as part of the Central City recovery on land formerly owned by the Council. The building design and landscaping had significant input from Council staff and has resulted in a high-quality urban environment. The development epitomises the Council's strategic goals for residential living in the Central City. All 116 units have been sold.

#### **Summary of the issue**

Atlas Quarter owners each pay an estimated \$300-\$400 per year in rates for solid waste collection (red, yellow and green bins). However, this service is not provided or available to us. Instead, we are required to pay EnviroWaste for waste collection through our Body Corporate fees. Paying both the Council and EnviroWaste is a significant and unfair financial burden when Council does not provide this service.

#### **Relief Sought**

We ask that the Council either:

- 1) reduce the General Rate and Waste Reduction levy for unit holders in developments such as ours to reflect the fact that no service is provided,
- or
- 2) amend Council service contracts to provide the solid waste collection service that we pay for.

#### **Explanation and Context**

We strongly support the Council's strategic objectives to reduce solid waste. The Body Corporate provides for all the same waste streams as the Council provides, as well as bins for corrugated cardboard. We have two designated waste storage rooms with large bins that are shared by all residents. We actively encourage waste reduction, waste sorting, re-use, recycling and organics.

The Council's usual three-bin residential system is impractical and undesirable in this style of higher density residential development. There is no-where to store the 339 bins that would be required for all 113 residential units (they would not fit in the waste storage rooms). Putting 226 bins (green waste plus either recycling or rubbish) onto the street each week for collection would be a nightmare for Council contractors, residents, pedestrians, vehicles and neighbouring businesses.

The Council has a goal of increasing residential occupancy and densities through developments like as ours, but your current policy and solid waste collection arrangements are woefully out of step with this goal. The current policy is designed for, and encourages, traditional low density residential living in the suburbs.

This is an issue that Council staff have known about for a long time. We have been told that developers have raised it in previous years and been rebuffed on the grounds that it requires a change in Council policy. As the LTP is the process through which rates are set, we wrote to the Council prior to Christmas asking that it be addressed in this current LTP, so that we could submit in support of the LTP. Sadly, this was not done.

We have recently been told that it will be looked at as part of a comprehensive review of waste policy and bylaws in the future. While we support a comprehensive review (and have offered to participate in that process), we do not wish to continue to pay in the interim. It is a significant amount of money for a service that we do not receive. If, having completed a comprehensive review, the Council is able to change its arrangements and collect our solid waste, we would be happy to pay for it. Until that happens, we can see no justification for continuing to charge for this non-service.

For the sake of clarity, we do not object to paying rates and greatly appreciate many of the services and assets that the Council provides. However, rubbish collection is not like roads, libraries or parks, which are public goods that residents can use if they wish to. Nor is like the three waters, where the network infrastructure needed prohibits alternatives. Waste collection is mostly a private benefit. We object to having to make our own arrangements for waste collection while continuing to pay Council for the service. If there is a portion of the waste reduction levy that is for public good purposes, such as managing old landfills or subsidising recycling or organics processing, we are happy to pay our share of that, but believe it to a fraction of what we are currently charged through both general rates and the waste reduction levy.

Ngā mihi

Richard Ball

### Feedback

1.12 Any other comments:

With regards to the proposed diamond harbour land sales of 42 where ave and 27 hunters rd, I would like these land sales to be removed from the long term plan (LTP) and put through a public consultation process due to the many issues of concern to the community that would arise from the sale.

Dear Sir,

I am attaching a submission from East Christchurch Anglican Parish to the Christchurch City Council on the proposed changes to rates remission for non-profit bodies.  
I do not wish to speak to this submission at a hearing.

Yours sincerely,  
Pamela Barrett  
People's Warden, Anglican Parish of East Christchurch

## **Anglican Parish of East Christchurch**

**Hawke Street, New Brighton, Christchurch 8083**

### **Submission to Christchurch City Council on change to rates remission policy**

#### The principle

It seems to us that the new policy is inconsistent with the intention of the Local Government Act which provides for remission of rates on the grounds of the charitable purpose of the entity. The new policy focuses on the total of cash and investments held by the entity, not recognising that all the assets of a genuine charity are held for a charitable purpose.

#### The confusion

The Draft Long-Term Plan states that churches are classified as non-rateable under Section 8 of the Local Government (Rating) Act 2002, but adds that the land may be either fully or 50% “non-rateable”. Does this mean that, for a church, a 50% remission of the general rate is mandatory, and 100% remission discretionary? If this is so, why is there no mention of it in the letter which we received from the Council through Church Property Trustees?

#### The practicality

The letter we received from the Council states that “funds received from grants, fundraising or insurance proceeds committed to a specific capital project may be excluded from the calculation of the balance of cash”. This is a very loose definition and far from comprehensive. Are all grants and fundraising to be excluded or only those for a capital project? What about bequests for non-capital projects?

Insurance proceeds are to be excluded but what about funds received from the Government for a vicarage red-zoned in the earthquakes?

Given the vagueness of the definitions it is unreasonable to expect applications for remission to be made by 11<sup>th</sup> May and unreasonable to expect Council officers to process them by July 1<sup>st</sup>.

#### Our situation

The classification of our investments (summarised below and set out in detail on the attached spreadsheet) illustrates the complexity of the issues.

Currently the three church centres for which we receive rates remissions are assessed for rates of \$3763 a year. We receive a 100% remission on the general rate, which reduces what we pay to \$2427.

The new policy would make us liable for full rates if our investments exceeded \$188,150. At 31 December 2020 we had investments of \$1,205,825. The attached spreadsheet shows the breakdown as:

|                                                             |             |
|-------------------------------------------------------------|-------------|
| Special purpose bequests                                    | \$130,971   |
| Special purpose bequests (restoration of St Faith's Church) | 55,632      |
| Insurance settlements                                       | 266,969     |
| Sale of vicarage funds committed to building projects       | 726,518     |
| General purpose                                             | 25,735      |
| Total                                                       | \$1,205,825 |

As can be seen, our general purpose funds are minimal, but how special purpose funds are to be treated is not stated clearly in the Draft Long-Term Plan.

#### Submission

1. That the Council not proceed with the policy on the grounds that remission should be based on the charitable purpose of an entity, not on the balance of cash and investments it holds for a charitable purpose.
2. That, if the Council decides to proceed with the policy, the implementation be delayed till the 2022-23 financial year, to provide time to:
  - (i) enable the Council to provide clearer guidelines for entities affected
  - (ii) enable the entities to file applications
  - (iii) enable Council staff to process the applications.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Taryn **Last name:** Leathart

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

I have reviewed the long-term proposal and of particular note to me is the lack of funding for the OARC in the first three years. I would like it noted that I ask Council to bring that funding forward to begin in 2022-2023, to show commitment to the area.

Please find a list of bullet points outlining my comments on the Long Term Plan proposal:

- Most important is the thoughtful implementation of the Regeneration Plan's vision under a robust, co-governance model that puts the health of the awa and the ecology first and foremost.
- We need greater transparency re the realistic formation of a co-governance body, given that mana whenua have yet to come to the table in a meaningful way. We may be looking at 18 months to 2 years before that happens - a process that needs to be done right and cannot be rushed. People need to know this. In the interim, larger projects (Eden for example), need some certainty if they are to keep investors on the hook for that long. Smaller projects need to know so they can pace themselves and not burn out volunteers/facilitators who are trying to maintain energy levels. Some kind of governance structure is required.
- I note Council is making essentially no financial commitment until year 2024/25 Current spending is government quake recovery money (e.g. CRAF). There are just two mentions of the OARC on lines 119 and 120 of the LTP Distribution By Wards doc. This means another election/LTP cycle before any Council money is spent in the corridor. I strongly suggest these items be brought forward to the 2022/23 spend to make it definite.
- Community-led restoration with Council support is preferred over a top-down blitz approach because it's cheaper, it gives the community buy-in/'ownership', and also saves money with reduced vandalism/dumping etc
- The flood remediation is a form of restoration too, as they are essentially wetlands, but obviously they are technical and will be done by Council. Until we decide on planting plans etc, we won't know how much that's going to cost
- It's difficult to know if the corridor budget is sufficient, because the breakdowns aren't clear. There is \$7.7 million for pathways and connections, but does this include lighting? There is \$25.7 million for eco-restoration in the Green Spine, but is this largely the stormwater remediation works? Will it also support community planting projects? Is there anything for planting outside the Green Spine? An alternate breakdown says there is \$86 million to go on land drainage throughout the corridor, presumably including the estuary work? The numbers are big, but probably not big enough - we must spend that money wisely to get the most bang for our buck.
- The focus of spending for ecological regeneration appears to be focused on the Green spine. I urge the council to widen the terminology to include the entire OARC.
- How much stopbanking is in the budget and to what level is unclear. There is a potential danger of wanting to do the easy (cheap) stuff first, leaning into a piecemeal roll-out of stop-banking etc in the places where it is potentially the least needed. Or worse, has unintended consequences on critical projects, partly due to lack of transparency and consultancy until decisions have been made. There needs to be a collaborative and co-designing process for these infrastructural components.
- Monies for biodiversity and planting along the Ōtākaro Avon River Corridor should be budgeted for separately but that isn't clear. Stop-banking and eco-restoration overlap in the Green Spine - doing it right will take a lot more investment than we are seeing here.
- The monies earmarked for the Red Zone must include provision for establishing projects like the Waitākiri Eco-sanctuary

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>and Eden. Once these boundaries are established the CCC can be relieved of its role (and cost) of maintaining those sections of the Red Zone.</p> <ul style="list-style-type: none"> <li>• The Regeneration Plan must be kept as per the end-result of years of consultation, work and expense. It is vital that no inappropriate encroachment be made into the Green Spine or critical areas of the wider red zone.</li> <li>• The pedestrian/cycle path is very positive and will help invigorate other parts of the Red Zone.</li> <li>• Lighting should be a primary consideration and co-designed with experts and advocates, along with the foundation infrastructure such as stopbanks and pathways. Fit-for-purpose, nature-friendly LEDs should be amber-coloured, fully shielded and run on motion sensors. Throughout NZ areas of ecological importance are installing these best-practice lights. There are also creative options such as luminescent materials which can double as art.</li> <li>• Bexley Wetland development is a great outcome we fully support.</li> <li>• I support the targeted excess water rate (for those who use over 700 litres/day), so long as it does not disproportionately affect large, low-income families.</li> </ul> |
| <p>1.4 Investing in upgrading and protecting our city's water networks<br/>reduce pollution of our rivers</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p>1.5 Investing in our transport infrastructure</p> <p>I would like to see more busses on more bus routes. It is USELESS making busses free when (esp in poorer suburbs) it takes half an hour to walk to the closest bus stop, and then perhaps another half hour waiting for the bus.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <p>1.7 Our facilities</p> <p>DO NOT decrease levels of service in libraries. opening hours should NOT be shorter. the library bus is a necessary service, don't close it down.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p>1.9 Funding for the Arts Centre Te Matatiki Toi Ora</p> <p>Yes</p> <p>Comments</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

### 1.4 Investing in upgrading and protecting our city's water networks

Council should consider offering residents the option of rainwater harvesters/diversion tanks -this could be added to a rates bill and paid off over a period of time. With summers getting drier, watering gardens (especially fruit and vegetables), this is a logical and cost-effective way to save and protect our water and utilise rainwater instead.

### 1.5 Investing in our transport infrastructure

As a resident of Banks Peninsula, the transport options into Christchurch city are either limited, expensive or unreliable.

Improvements to the public transport options of the Diamond Harbour-Lyttelton ferry and the bus connections to town need to be improved greatly - i.e more frequent ferries and bus connections, express bus to/from town, later ferry connections and more options than just the current #28 bus service. Improving this service would see more Harbour residents utilise public transport and reduce cars on the road.

The roads across Banks Peninsula need immediate attention, the roads are of a very poor quality and any repair jobs only alleviate the problem for a few days, until it either rains or a large truck make the road rutted again. The ongoing costs to car users (e.g wheel alignment) is getting worse every year.

The current focus on cycle lanes in Christchurch discriminates against anyone elderly, or less mobile, any wheelchair users and young families - it is simply not practical for many residents to use a bike to get around the city. There needs to be a bigger focus on quality and long-lasting road repairs and good public transport options for the benefit of all residents of the city. With an aging population in Christchurch especially, careful consideration must be given to alternative transport options other than cycle lanes.

### 1.7 Our facilities

I disagree with the proposed closure of service desks in Lyttelton and Akaroa. These are small communities that are isolated and distanced from the city, particularly Akaroa. An alternative option might be to have them available for a number of times per month, if they can not remain open every day.

1.11 Potential disposal of surplus Council-owned properties

I strongly oppose the disposal of land described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) in Diamond Harbour.

- 1) The two pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan and the normal process for disposal of land requiring Community Board and public consultation must be used instead.
- 2) The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002
3. Thorough community consultation should be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.
4. Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not just be made by Council staff.
5. The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process.
- Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to lead to conflicts with community usage and aspirations.

• The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. The proposed covenant boundaries intersect in a complex manner with the land titles.

• Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.

• If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.

• The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?
- The tracks mentioned above are used extensively by this community, including the school along with children, families and residents of Whero Avenue, Kura Lane, Ngatea Rd, Hunters Rd, Marine Drive and surrounding roads. Utilising these tracks on a daily basis gives residents beneficial access to the outdoors, provides strong connections within the community, improves both physical and mental health and contributes to overall wellbeing. It would be detrimental to the entire community if the correct consultation process is not followed.

| Phillips Family Trust Submission |

**Submission to Christchurch City Council**  
**Re: Draft Long Term Plan 2021-31 proposed Land Drainage Targeted Rate**

Christchurch City Council has made the following statement:

*To make things fair, we want to move to all ratepayers meeting this cost over the next three years. The other option would be to leave the way we charge this rate unchanged, but we don't think this is fair to all ratepayers.*

On behalf The Phillips Family Trust, this is our submission in relation to our property at Banks Street, Templeton.

From our experience in Hydrology, land drainage is affected by two main parameters as follows:

- the ability for water to move(horizontally) on to or off the land,
- the ability of water to move(vertically) through the land.

### **Horizontal Water Transport**

This function is mainly dependent on the topology of the land and the presence of natural occurring and/or manmade drainage channels.

- Generally the land at Banks Street is lower than the surrounding properties which results in water flowing off those properties on to our property. For instance we had to construct bunding along part of the shared boundary with the council community centre to mitigate against flooding of the water race onto our property during high rainfall events – no bunding was needed on the higher community centre side.
- The property has stock water races on three sides which provides ducting of water on to or off the property. This function is anticipated in the water race system for which we pay significant rates. We are also required to maintain the water races at considerable expense to ourselves.
- The majority of the perimeter of the property does not have council-provided drainage systems. The little bit of channeling that is provided on Banks Street and Bicknor Street frontage is not very effective and can present pooling in high rainfall events.

### **Vertical Water Transport**

This function is mainly dependent on the water drainage properties of the land (soils, aggregates, etc) and the water being able to access the soils and natural and manmade drainage channels to underlying water courses and/or aquifers.

- The soils on our property are free draining and water generally gets away quickly.
- Manmade structures cover a relatively small percentage of the area (0.23%) of the property which means the vast majority of the 45 hectares functions as a natural hydrologic sink.
- The land is regularly cultivated for arable crops to avoid compaction and dense thatch of root masses.
- While the soils are probably similar on the neighbouring properties, those properties are largely covered by buildings, paths, driveways, etc. (typically more than 50-75% of the area of the property) which restrict water access to the natural drainage by this medium. Furthermore, the drainage characteristics of soils are generally not considered or maintained. These properties would also impose a load on the council drainage network through water exported into stormwater systems. By comparison, we are not connected to the council network and all drainage is managed on our property.

The proposal to move the cost to all ratepayers would not increase the fairness of the payment regime. Rather it would become unfair to ratepayers such as ourselves, firstly by imposing an 8.6% rate increase on us for no additional service – at \$12,053.43 total rates per year we feel that we already pay excessively for the services that we receive. With the proposed 5% rate increase this would take our total rates per year to \$12,556.69 (assuming that ECAN rates do not increase).

In Background Material on Proposed Changes to Rates for 2021/22.pdf the council states that “the proposal is a simpler approach to rating for land drainage facilitating greater consistency and fairness between ratepayers. In particular, there will no longer be a need to identify a “serviced area”, which is a difficult task given the range of assets that assist with land drainage and flood protection and control works”.

Similarly, the converse is cited as a disadvantage for alternatives due to “the complexity of determining and applying rules identifying which properties receive a land drainage service. These rules may not reflect the reality of how the property drains”.

These stated council arguments infer that council staff are preferencing their convenience over ratepayer expense.

Because of the topology of the land, our property acts as sink for water run-off from neighbouring properties. We get no credit for providing this land drainage function for these properties. The council currently collects land drainage targeted rates of over \$2,200 per annum from the 15 properties directly bordering our property along Bicknor Street. This equates to an average of \$150 per property collected by the council for a service largely provided by our property.

It should be noted that, under the proposal, the land drainage targeted rate for our property would be \$1033.21, which equates to approximately 47% of the total current land drainage targeted rates collected by the council from these 15 properties.

It should also be noted that our immediate neighbours include a school, a kindergarten, a church and a council community centre which are all exempt from paying rates (and will continue to be so going forward). Our property also acts as a sink for water drainage off these non-contributing properties and taking some of the burden off the council expenditure.

We are not happy with the sewerage targeted rate and water connected targeted rate. Our property has a small three bedroom single toilet dwelling occupied by **1 person** who is at work most of the day. Based on the capital value of \$2,600,000 the sewerage targeted rate equates to an annual cost of \$2,196.82. Other houses in the immediate area are charged much less, typically about \$340 per annum for this service from the council.

This is an example of how the council's preferred “fairer” targeted rate system works. It is not a fair system, and now the CCC wants to add further creep to our rates.

The total improvements value for our property is \$220,000 of which the value of the dwelling to which the sewerage is connected is estimated to be in the region of \$100,000. This would be a fairer valuation to use for the sewerage targeted rate. This could also be a possible system for calculating the land drainage target rate.

In our opinion, if the council really is genuine about wanting to make charges fair to all rate payers, the proposed system for the targeted land drainage rate needs to be based on factors related to land drainage rather than its capital value. Otherwise, it seems to us to be purely an envy tax.

## Summary

- We object to the council proposal to rate all rateable properties in the district for land drainage where the rate is calculated based on capital value.
- Our preference is the council's Alternative Option 2: No change to the existing land drainage rating policy. Our support for this option is based on the belief that we receive little if any land drainage service at our property. Furthermore, our property enhances the drainage of the local area and we receive no credit for this service. This also fits the council's demonstrated preference for a convenient system.
- If the council is intent on implementing a land drainage rate that is fairer to all ratepayers, we propose that the system should be based on factors related to land drainage and not a simplistic envy tax based on the Capital Value of a property. This is particularly so for larger land areas with limited developmen/improvements. Thus, we could support council's Alternative Option 1: Set the land drainage rate on properties receiving a land drainage service.

## Feedback

1.2 Rates

Happy for an increase

1.5 Investing in our transport infrastructure

more green public transport options - e-buses initially. More PR on encouraging bus use - changing negative perceptions around having to change bus to cross from one side of town to another by comparing to other cities where this is commonplace

1.6 Rubbish, recycling and organics

Great

1.8 Our heritage, foreshore and parks

Try and make it easier for private developers to restore heritage buildings and build independently of the group builders; and also to fund innovative contemporary projects and social enterprise housing/community initiatives. I see too much money going on consultancy fees just to get projects to start lines and many individuals give up along the way as it's too hard - while engineers, architects, lawyers, construction firms etc have plenty of lucrative work and so much demand that charges keep increasing and end costs keep inflating.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Very much in favour. The Arts Centre is a facility enjoyed by a wide cross section of residents (and an architectural and heritage treasure visitor drawcard, bringing economic benefits for the entire community). Why it loses out on public funding when sports venues and convention centres don't seems at odds to me.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

As long as they are not at risk of demolition am in favour

## Feedback

### 1.1 Have we got the game plan right?

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, we personally have lived here for 26years (1994) with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

### 1.4 Investing in upgrading and protecting our city's water networks

Yes sounds good to upgrade and hopefully the chlorination program can stop.

1.5 Investing in our transport infrastructure

trialing free bus fares is a good idea but why wait for 2 years and accure the costs of analysing for the next 2 years, whether its a good idea or not.

1.6 Rubbish, recycling and organics

Whatever it costs is good but there needs to be a lot of public education around what can and can't be recycled. Even now most people are not sure what can go in the bins.... information reminders need to be constant.

1.8 Our heritage, foreshore and parks

This is becoming more and more important ... to rebuild an identity.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties

Not knowing what or where they how can that question be answered.

---

**Question** hi there  
I tried to make a submission on the long term plan on my phone but it would not submit. I have arrived back from Dunedin and went to make a submission only to find submissions have closed - the website said they closed today but did not have a time.  
I would like to submit on the closure of the bus lounges. I would like then to stay open - many people who use them have no other transport options. The bus lounges enable them to be safe and out of the elements while they wait.  
kind regards

## Feedback

1.1 Have we got the game plan right?

### Christchurch City Council Long-Term Plan – Fast track disposal of land below Bay View Rd, Diamond Harbour:

The Council has notified in its draft Long-term Plan (LTP) that it intends to dispose of the land between the current Diamond Harbour housing and Bay View Road, without further consultation (other than LTP submissions). Many residents live adjacent to the land or use the land. As well as the current sheep grazing, it contains Morgan and Sam's Gullies where many locals have spent time restoring the vegetation. The Gullies however have not yet been protected by covenants (long-term they should become reserves).

The land is currently Council freehold with a Residential Banks Peninsula district plan zoning. There is a presumption that housing will go on it, as it was purchased by Banks Peninsula Council for future Diamond Harbour expansion.

There are many issues however that should be discussed with the Council and the Community Board before the land is sold e.g the uses of the land, the gullies, disposal sequencing and access.

The next stage after disposal, would entail subdivision, where decisions are made by the developer and Council in relation to roading access, public access, infrastructure, and reserves. However there is no requirement on the Council to consult widely about subdivision applications. In the past this has led to poor decisions in our community - Black Point is an example of this where no beachside reserve was created and easy access is lacking). There should be a consultation process prior to any disposal, as it is likely there will be no consultation afterwards.

I believe the Council Property section may be trying to fast track the land disposal and avoid meaningful public consultation by inserting the disposal into the LTP. This is a second attempt as about two years ago fast track disposal was tried, and this was rebuffed by the Community Board.

I therefore request that the land as described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) be removed from the LTP Potential Disposal of Council Land and hence fast track disposal. The normal process for disposal of land that would require Community Board and public consultation including public meetings and a submission process, should be undertaken instead including Council proposals as to how the land should be utilised. This should consider protection of the gullies, boundaries, road access, school development, walking tracks, infrastructure, and other local interests.

Furthermore I believe that the current process through the LTP does not adequately meet the requirements of Section 82 of the LGA 2002 in relation to Principles of Consultation. Decisions on whether to proceed with the sale of the land should be made by the Council on recommendation of the Community Board. Decisions on any sale should not just be made by Council Staff.

The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process.

- Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to conflicts with community usage and aspirations.

- The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea Road, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles.
- Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.
- If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.
- If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea Road is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner.
- The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?
- Should all the land be sold (privatised) at one time? Would a staged housing development be better for the community?
- Different use options for the land need to be considered not just a sale to a housing developer. Should some parts of the land be released for residential development and other parts held for other uses? Should the Council consider the needs of the community for special types of housing e.g. catering for older or younger people looking for smaller units?

Finally, given the current state of affairs in relation to the Godley House site here in Diamond Harbour and the appalling lack of progress in relation to the Community aspirations for this site over the past ten years, coupled with a lack of due diligence in the past I would respectfully suggest to the Council that a very real opportunity now exists going forward to engage with the Diamond Harbour / Church Bay Community and its representatives meaningfully, with integrity and in good faith on the above matter as something that has the potential to impact the community and its wellbeing significantly. As a resident I therefore look forward to a more considered approach in the future to engaging and consulting with the Community on the current proposal before us.

#### 1.11 Potential disposal of surplus Council-owned properties

##### **Christchurch City Council Long-Term Plan – Fast track disposal of land below Bay View Rd, Diamond Harbour:**

The Council has notified in its draft Long-term Plan (LTP) that it intends to dispose of the land between the current Diamond Harbour housing and Bay View Road, without further consultation (other than LTP submissions). Many residents live adjacent to the land or use the land. As well as currently being used for sheep grazing, the land contains Morgan and Sam's Gullies where many locals have spent time restoring the vegetation. The Gullies however have not yet been protected by covenants (long-term they should become reserves).

The land is currently Council freehold with a Residential Banks Peninsula district plan zoning. I understand there is a presumption that housing will go on it, as it was purchased by Banks Peninsula Council for future Diamond Harbour expansion.

There are many issues however that should be discussed with the Council and the Community Board before the land is sold e.g. the uses of the land, the gullies, disposal sequencing and access.

Otherwise the next stage after disposal, would entail subdivision, where decisions are made by the developer and Council in relation to roading access, public access, infrastructure, and reserves. However there is no requirement on the Council to consult widely about subdivision applications. In the past this has led to poor decisions in our Community - Black Point is an example of this where no beachside reserve was created and easy access is lacking). **Tracey McLellan**  
MP for Banks Peninsula

18 April 2021

Dear Mayor and Councillors,

Thank you for the opportunity to submit on the Christchurch City Council Long Term Plan 2021-31.

The Long Term Plan process is a vital part of Council decision-making and a mix of representative and participatory democracy. There will be a range of community views expressed and I urge you to listen carefully to their feedback.

It is clear that the Akaroa and Lyttelton service desk changes are not supported by the community ("First Point of Contact", level of service 2.6.1). These facilities should be reinstated, and a plan put in place to sustainably deliver these services going forward. In doing so, special attention should be paid to the needs of residents in remote and distant areas of the Peninsula who face particular practical challenges of isolation.

It is positive that, at last, the Council is taking action on the unacceptable breaches of resource consents by the Living Earth compost operation ("Organics Processing Plan Development" Project ID 60431). I welcome this recognition and am pleased to see that the Council is willing to put a substantial sum of money into this project.

However, I am aware of and share community concern that proposed mitigation measures may not be sufficient to eliminate odours. You must be confident that your proposed solution works, and if it does not, must be open to further capital expenditure to achieve compliance. This might mean exploring options including moving the plant.

The Bromley community has been incredibly patient to date with Council and rebuilding their trust will be paramount to the success of any upgrade.

Finally, I would like to take this opportunity to acknowledge the excellent work the Council does supporting a broad range of community organisations, both through the Strengthening Communities Fund and directly. For instance I am pleased to see ongoing funding for the Okains Bay Museum and would encourage the Council to continue to work on ways to provide predictable and reliable funding for this excellent institution that cares for a first-class collection and, as we all saw on Waitangi Day, is at the heart of a welcoming and vibrant community.

Warm regards

A handwritten signature in black ink, appearing to read "Tracey McLellan".

Tracey McLellan,

MP for Banks Peninsula

## Feedback

1.2 Rates

Fine

1.5 Investing in our transport infrastructure

Fingers crossed for fluoridated but not-chlorinated gorgeous aquifer water from our taps!

1.7 Our facilities

Please keep libraries and the art gallery open longer hours. Limiting opening hours is a bit like limiting bus services: if people can't go when they want, they switch off.

1.8 Our heritage, foreshore and parks

Having lived on Hereford St for 35 years, we are big supporters of the greening the east concept. As more intensive housing takes over, fewer and fewer gardens/trees survive. The effects of climate change on Canterbury's already dry and windy environment, along with increasingly hot summers and the impact of the urban heat island, let alone greater awareness of the toll of skin cancers, makes street planting a no-brainer. Public trees lining streets like Hereford are not just about aesthetics. They will provide birdlife with corridors that gardens no longer provide, provide corridors for humans on foot/bike/scooters etc, differentiate the road from the footpaths, shade the footpaths, break the wind, unify streetscapes, and, yes, give beauty that may not be provided in any other way as well as contribute to the overall city-wide response to climate change and ensure that the 'garden-city' concept is actually about the city as a whole, not limited to affluent areas.

We would also like to see planting in the red zone respect the beauty of what is already there. This is partly a heritage issue - the trees and shrubs that demarcate the past of now vanished but much-loved suburbs, and the work that citizens put into their plots and streets - as well as an environmental issue - we should not be killing perfectly good trees but complementing existing planting, and replacing trees as they come to the end of their lives. The Ōtākaro is a wonderful resource and an absolute joy. The concept of ecological restoration is very exciting but should be about life, able to take place without wholesale destruction of existing flora.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties

Subject: Sumner library proposed Sunday closure

1979

Hi there,

I am so gutted as I realised I have just missed the deadline to provide a submission to support Sumner library staying OPEN on a Sunday. It would be a crying shame to close it given it is very well used. I was there just yesterday and it is a valuable resource for our community.

I know so many people that use it, especially at the weekends and often on Sundays as many of us have kids that have to be at sport on a Saturday.

Please please please keep the library open on Sunday for our community.

Regards,  
Vanessa

## Submission to Christchurch City Council Long Term Plan 2021

### Submitter:

Sharon Torstonson  
Associate Director  
Flourish Kia Puawai Ltd

Christchurch

We do not wish to speak in support of our submission and ask that the following submission be fully considered.

### Introduction

“Today, at the global level, we face a rapidly accelerating climate emergency, daunting because we have procrastinated way too long. We now have one last chance to truly change our course. This is the decisive decade in the history of humankind. That may sound like an exaggeration, but it's not. If we continue on the current path, we condemn our children and their descendants to a world that is increasingly uninhabitable, with exponentially growing levels of disease, famine, and conflict, and irreversible ecosystem failures. “

*Christiana Figueres, architect of the historic 2015 Paris Agreement*

We are a team of three who have dedicated our lives and careers to community, environmental and social betterment. We started Flourish Kia Puāwai as a social enterprise to both continue our work and to focus our passion towards a regenerative future, one that not only addresses climate breakdown but supports co-creation of a better future for all. We have experienced and worked in the disaster recovery of the Christchurch Earthquakes, we have seen increased fires and impact of hotter summers. We have dedicated a programme of action towards doing our bit for improving lives and climate change at the grassroots. We are being courageous and the rest of Aotearoa and the world needs to be too. Let us not be conservative and narrow in our response but lead the way as Aotearoa has done with many other important issues in history.

Our focus while considering the draft 2021 LTP has been its ability to address climate change mitigation and adaptation in a socially just way.

### Climate change

We endorse the approach that Council has taken to put a climate change lens over the whole LTP.

Meeting the challenge requires a whole-of-community approach;

We recommend increasing the Sustainability Fund each year to assist with community responses.

We recommend that the Biodiversity Fund broaden its criteria so it's easier for a variety of projects and community organisations to increase biodiversity across the city.

We support Christchurch residents to take their own climate change action, with advice and tools on sustainability by resourcing local community organisations to support this, take a lead in certain areas.

Enable residents to collect rainwater and use greywater easily.

We will be submitting to the draft climate change separately.

## **Rates**

Strong and brave political action is essential to address the climate crisis and we endorse all efforts to address it. Lack of action on climate change will eventually impose costs on households and our city far beyond the proposed rates increases.

## **Drinking water**

We support the proposals and look forward to the day when the Christchurch drinking water supply will once again be chlorine-free. We also support the proposal to create an excess charge for those households using significantly more water than average.

## **Stormwater, floodplains**

In general we support the proposals outlined, so long as protecting and enhancing the environment and ecosystems are prioritised, especially when constructing stop-banks and developing the Ōtākaro Avon River Corridor.

There is a need for increased community education and awareness to reduce pollutants across the city, and we would support CCC working with appropriate groups to deliver that.

We thought the proposals outlined for wastewater were excellent and support the approach. We suggest that the native trees to be planted are also chosen for their low fire risk.

We also support the initiatives outlined to increase rainwater collection and greywater use.

## **Transport**

One of the strongest actions we can take to mitigate climate change is to reduce the use of private cars and encourage public transport and active transport. We therefore support all proposals to increase cycling and public transport use.

To support the ongoing recovery of eastern Christchurch, we ask that the Avon-Ōtākaro cycle route is prioritised to early 2025. There is a need for increased community education in the benefits of providing a cycling infrastructure for the good of peoples' health and for the health of the planet.

In order to future-proof our public transport system and help meet our climate targets in the Paris Agreement, we support any action towards investigating other public transport systems such as light rail and commuter rail.

### **Avon-Ōtākaro / Green spine**

We strongly support the proposed new co-governance model for development of the land. Such a model must be representative of the community and have strong community membership. It must follow Avon-Otakaro Network's vision led by the late Evan Smith.

All developments must put the environment first and take an inclusive-use approach.

The proposal to create a riverside landing at Dallington does not follow the Council's original response to the Regenerate Christchurch plan, when it decided to create the first landing in Avonside. We recommend a more robust decision making approach to look at need along the red zone and include consideration of Avonside and New Brighton communities' needs.

We strongly support the development of the Green Spine and ask that the Council ensures that it does not shrink. The original plan by Regenerate Christchurch is robust, having had strong community input and consultation. As envisaged by Urban Star Watch, lighting in the Green Spine must be appropriate.

### **Facilities:**

In general, we support the Facilities proposals. If the Canterbury Multi-Use Arena must go ahead, we recommend revising the architectural plan to have the 4 wall/street art canvas approach. This would reduce the cost and create an outdoor, year around art space. The current plans for this community facility don't take into account other possible community uses.

### **Heritage**

Built heritage plays a role in community wellbeing, with people identifying with heritage buildings and feeling linked to the past of their city. We have lost many buildings that Christchurch people loved. We ask that the Ng building be saved to help with our ongoing recovery and wellbeing.

### **Natural environment**

We support Council's approach to waste disposal, recycling and organics, and recommend adding a complementary feasibility study in creating a plastics recycling facility here in Christchurch.

### **Parks and foreshore.**

We support activities to develop, care for and enhance our recreational areas and assets. We urge careful consideration of the remaining projects in the Botanic Gardens Master Plan and what priority they have against other needs in the city, especially those still recovering from the earthquakes.

Urban reforestation and the planting of natives wherever possible will support the proposed Climate Change Strategy. There are many community and environmental organisations, such as ourselves, that council could have productive partnerships with to deliver this - providing they are properly resourced.

**Partnership approach**

A large number of proposals in the draft LTP talk of engaging with the community and working in partnership to build a city that is more resilient to climate change. As the Resilient Greater Christchurch Plan outlines (p.60),

With strong grassroots connections, community organisations can be leaders and natural partners with government agencies and councils in driving social, environmental, cultural and economic wellbeing. Whether as part of everyday support systems, or in times of crisis, community and voluntary organisations are a vital source of support, energy and knowledge. Supporting these community organisations as partners in maintaining the wellbeing of our communities is an investment in our future resilience.

We appreciate that the challenges facing the council call for some hard decisions and budget restraint, which has led to cutting budgets in many areas. However we are very concerned to see in this LTP budget that the essential role that community organisations take in the wellbeing of the city is severely undervalued. To see that cuts are planned for grants to the non-profit sector while on the same page economic grants are increased by 70% is astonishing to say the least and sends a deeply concerning message.

We urge the council to give deep thought to what that message says about its values and the worth of its words, and reconsider the proposed cuts to general grants and enormous increase to economic grants.

## Feedback

### 1.1 Have we got the game plan right?

My two children Meg and Mia have been swimming at Wharenui Swim Club for the last 5 years. The club have nurtured their growth as swimmers, encouraged them to set personal goals and supported them as they have competed at local, regional and national swim meets. The swim club is 75 years old making it the oldest swim club in Canterbury. The club is historically significant in the Canterbury Region and has made its mark on the National Stage with swimmers competing for New Zealand at Commonwealth and Olympic Games. The club means more to the swimming community than merely a local community pool. To shut the pool down along with the club would mean the end of a significant swimming club not only in Canterbury but in New Zealand. To survive the club needs both the facility and the learn to swim programme. There just isn't another facility that offers those two things for the Wharenui club. The common good of the community should be a priority in this case -we have lost so many things over the past decade -please keep this wonderful Swim Club open.

## Feedback

### 1.11 Potential disposal of surplus Council-owned properties

I would like to propose that the two pieces of land 42 Whero Ave and 27 Hunters Road, Diamond Harbour should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan. We as a community need to have full and open consultation with any repurposing of this land. It is our community and village lifestyle this will affect and add more heightened stress on our already crumbling infrastructure.

1. The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation).  
2. Thorough community consultation should be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.

3. Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not just be made by Council staff.

4. The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process.

- Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to conflicts with community usage and aspirations.
- The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea Road, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles.
- Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.
- If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.
- If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner.
- The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?

Yours R Meynell

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Megan **Last name:** Blakie

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Please prioritise food security; stop allowing arable and market garden land to be converted to housing etc.

1.4 Investing in upgrading and protecting our city's water networks

Bring in water charges. It will help stop wastage and make people conscious of this precious resource.

1.5 Investing in our transport infrastructure

I cycle frequently and live in East Christchurch. My primary route is the cycleway along QE2 drive/expressway. Part of this is maintained by NZTA/southernlink not CCC as its alongside SH74.

My recommendation is for the CCC to take over the maintenance of this and all cycleways within the greater metro area. This is because there are safety hazards and maintenance issues that still haven't been fixed weeks after lodging requests to southernlink. I also got a patronising response from southernlink.

The CCC longterm plan specifically states that cycle safety is a key objective. This standard is not being by the NZTA body and responsibility should be handed to the council.

There are multiple hazards such as loose sharp-edged mesh on foot/cycle bridges, huge tree roots etc etc Car drivers on the expressway would not have to put up with similar hazards and lack of maintenance in this very untimely and unsafe manner.

Further, the cycleway (if it can be described as much) from Anzac bridge to Ferrymead is absolutely appalling: earthquake damage at New Brighton Rd, obstacles along Dyers Rd section, flooding after heavy rain etc.

The east routes seem in a diabolical state compared to other cycleways in the city.

Also some standardisation of design would be helpful; perhaps signage should standardise that cars stop for pedestrians and cyclists, rather than making us dismount, and/or cross busy streets populated by cars eg by winters rd underpass.

Also, safety wise I invite councillors to come out for a bike ride with me to see where hazards and problems are, such as major roads where the cyclelanes just disappear (eg Innes rd; and St Bedes corner, where there's no designated way to get on to the new cycleway in an easterly direction. You have to cross the road and ride on

the footpath (on the opposite side of the road) and cross at the pedestrian crossing. Is it unfinished??

I love riding but feel safest when separated from vehicles. Otherwise every ride is taking my life into my hands in many of the cycle unfriendly routes I use regularly.

1.6 Rubbish, recycling and organics  
Lobby central government to put the onus of dealing with waste on the manufacturers and packaging designers rather than ratepayers. Why should we have to pay? We, the consumer and ratepayer, don't create plastic pollution and unnecessary packaging. REDUCE first, by tackling pollution and waste at the source.

1.7 Our facilities  
Don't close the mobile library service (if this is included in this section of plan)

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
  
Comments  
Unsure. How does this fit with the museum rebuild/upgrade. Defer until further decisions and museum fundraising plans are made.

1.12 Any other comments:  
Hot pools facility in New Brighton is a boon. The retail area should have been forcible redesigned under earthquake powers. Missed a perfect opportunity to enhance this coastal suburb. How can CCC get this moving at more than the current snail's pace?

## Feedback

1.5 Investing in our transport infrastructure

Christchurch is just a great city for cycling and it should be done so much more to make it safe for us adults, our kids and their kids to go to work/school/visiting friends a.s.o by bike and not having to be worried about dangerous traffic, speeding cars, careless drivers, etc..

We (our family) would like to see a much higher investment on safe bike lanes. My husband cycles every day to University. My daughter is cycling to school and I do our shopping and visiting friends by bike.

Ansley Terrace for example is so busy at times at school start and end and there are lots of kids using the road to get to/from Hansen Park to Grange Street, Bishopworth Street...It would be great to slow down the cars with plant boxes or other obstacles. Often cars go way too fast for such a road busy with kids going to/from school.

Some bike lanes in Christchurch are so close to parked cars and if they open the door without having a look accidents happen. Bike lanes should be safe and have the right to go before the cars.

It would be great to have fly over bridges only for bikes on busy crossroads.

There should be an investment on more pop up speed cameras to maybe get car drivers to go slower.

Benefits: More people will feel safe with their kids to ride their bikes.

ENVIROMENTLY FRIENDLY - BETTER AIR QUALITY - LESS NOISE - HEALTHIER

MUCH CHEEPER TO HAVE ONE CAR PER HOUSEHOLD AND ONE E-BIKE/BIKE THAN 2 CARS!

There are studies that 30 % of the car travel distance is less than 5 km which means that people when using their bike would be faster in some areas than with a car.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

1.11 Potential disposal of surplus Council-owned properties

More for the youth - like youth centers with a kind of disco, cheeper drinks, table football...

## Feedback

### 1.2 Rates

I am a bit of cautious because the increase will not stop after 10 years. Sometimes it is not really clear what we pay for because we do not see any improvement (bus services, etc.).

### 1.4 Investing in upgrading and protecting our city's water networks

The waterways are very important - the cultural perspective is important as well. With the challenges of climate, it will be more important to look after our water in many ways. Many species are already endangered and when we lose more diversity that will affect us deeply.

### 1.5 Investing in our transport infrastructure

It is important to work more on the public transport. I use public transport but it is time-consuming and not reliable. As soon as one goes further than the city centre, it is harder to get a good connection with the buses.

### 1.6 Rubbish, recycling and organics

I am almost an expert on recycling, but it is sometimes very confusing and frustrating to do the right thing. Make it simpler for the wider public.

### 1.8 Our heritage, foreshore and parks

Heritage has been treated badly after the earthquakes and when it almost too late, we were invited to give some ideas what to save and how. It was not always in the best interest of heritage how officials and investors or developer treated our heritage. It has to be done more and to consult the responsible and qualified people for it.

Heritage is not only parks, it is also about the buildings and places.

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

**Comments**

For this I accept an increase of rates.

### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties

Do not give up the heritage in your possession.

**Dear Sir/Madam**

**Long Term Plan 2021-2031**

**Submission – Land Drainage Charges**

I am concerned and somewhat taken aback by your proposal to charge all rateable properties in the district land drainage charges.

All properties in the District are unique and should be rated according to the location and the services provided by the Council, or not, in our case.

At Wharf Road, Port Levy our land drains directly into the bay, the Council who owns and maintains (or not) the road above our land drains the public road onto our land causing erosion and damage to our land that has to be maintained and repaired by ourselves at our own cost.

Approximately the last kilometre of Wharf Road and associated culverts from just North of Fields Road have not been maintained for a number of years, leaving ourselves to clear culverts and repair damage to our land caused by the Council.

If you propose to levy a land drainage charge on our property, when you do not drain our land, then surely, I have the right to charge Christchurch City Council for draining the public road onto my property and for the resulting damage/erosion as a result of the Councils actions/inactions.

As such, we will be discussing with other land holders and seeking advice on these additional charges imposed on our property by the Council in relation to this drainage issue.

Yours sincerely

**Verity Rose Scarlett**  
**Martin Howard Jay**

## Feedback

1.7 Our facilities

My submission relates to the proposed closure of the CCC's mobile library service.

I read about this in *The Press* (Tuesday, 13 April 2021, p.4 "End of the road for book bus?") and found the article online at

<https://www.stuff.co.nz/the-press/news/124808376/proposed-closure-of-christchurch-mobile-library-another-loss-for-elderly>

I reside in the Selwyn District so I checked with CCC as to the eligibility requirements for making a submission on the CCC's Long Term Plan. I was informed that there was no requirement to be a CCC resident.

I have a keen interest in libraries and the many different services that they provide to a community, as I have a Masters in Information Management, the qualification required to be a professional Librarian in Australia.

The CCC can take a lot of pride from the fact that, *Tūranga fosters life-long learning and is the place for information, inspiration and entertainment ... and is the flagship for the Christchurch City Libraries network, supporting 19 community, digital, and mobile libraries* - <https://ccc.govt.nz/culture-and-community/central-city-christchurch/explore-amazing-things/central-library/>

A few days ago I posted the following request on LinkedIn, asking people to consider making a submission for the retention of the mobile libraries service:

<https://www.linkedin.com/feed/update/urn:li:activity:6788338406280716288> -

With 2021's World Book and Copyright Day approaching (23 April), it should be only an April Fools' Day joke that the Christchurch City Council is proposing closing its mobile library service. Please take a moment to make a submission, by this Sunday (18 April), against this part of the CCC's draft plan - <https://lnkd.in/d95DJX7> - either online or by email - <https://lnkd.in/dNsXjBD> Here's one of the many resources that discusses how mobile libraries support communities around the world - <https://lnkd.in/d5kxEpj>  
<https://lnkd.in/demc3DG>

I understand the CCC’s need to curtail costs and make savings wherever possible.

Accordingly, I am happy to follow up on my LinkedIn post by asking for suggestions on ways for keeping the mobile library services functioning without losing any of the many benefits that the service currently provides.

## Feedback

### 1.1 Have we got the game plan right?

Please do not decommission Wharenui pool. I am eleven years old and Wharenui pool is like a second home to me. I learnt to swim there, have had birthday parties there, spend time with friends there and my school swim sports are held there. I also train there during the week as I swim competitively for the Wharenui Swim Club. I love Wharenui pool. It is a fun, friendly place with great pools and I think it's pretty awesome that it has been around for 110 years. It is the most amazing home for my swim club and the best place to train. It is the closest swim club to where I live so if it was decommissioned, I don't know if I would be able to keep swimming competitively. I already spend many hours there, sometimes early in the morning and often late at night so I wouldn't have any time to travel the longer distances to any of the other swim clubs. Please please don't close Wharenui pool!

### Feedback

#### 1.1 Have we got the game plan right?

I am making a submission because I don't want the Council to decommission Wharenui pool. Wharenui pool has been and is an important part of my life. I have used Wharenui pool for recreation, swimming lessons and training for competitive swimming for the last five years. When I recently decided that I no longer wanted to swim competitively, I was able to join a fitness squad. I really enjoy swimming in this squad several times a week and would really suffer if it was no longer an option. I think it is very important that young people like me have access to safe, friendly facilities where we can participate in activities that keep us physically, mentally and emotionally well. I don't believe such a squad exists as close to my home as this one is, and I would not feel comfortable swimming anywhere else. Please don't take this fantastic community facility away from me and other young people like me.

## Feedback

1.7 Our facilities

Regarding the change to levels of service for the Christchurch City Libraries and Art Gallery

- The changes to levels of service seem to be justified on numbers, not need. For example, people who access the libraries at less busy times may have different needs. Certainly, it is much easier for us to come into Turanga in the evenings as my son has sensory sensitivities which make the library much more challenging when it's busy (and when he was younger, it would have been an impossibility). Has the council considered the needs of its diverse residents?
- The possibility of a library in an evening is so important to many people's wellbeing.
- A closing time of 6pm (other than Turanga) makes it very difficult to visit a library after traditional working hours.
- The Art Gallery is a vital hub for adults and young people for the visual arts; there are many public places for sports yet very little accessible places to enjoy art, including the making of art (in their foyer and at workshops).
- The school trips to the gallery and holiday activities for children are excellent. I also note that the holiday activities are very accessible for neurodiverse + anxious children.
- The gallery is one of the few places open late within the city during the week.

It seems strange that while the council is willing pay for debt for large capital works, they are limiting the access to important public spaces. The libraries and Art Gallery are safe, comforting, invigorating places

1.12 Any other comments:

I had to read page 56 of a long document to look at the changes I have discussed above. I am concerned that many residents will not be able to access this information?

9

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Arts Centre is one of the most significant assets of the central city, as a tourism asset. In addition to that it is a magnet for the arts and creative industries and plays a huge part in the cultural life of the city. Thirdly, the Arts Centre represents the largest collection of heritage buildings in the city, and is its custodian. For these reasons, the city has a responsibility to fund the Trust adequately, so that it can focus on its role and ensure the ongoing cultural and heritage wellbeing of the city. As a former Director, I am very aware of the challenges inherent in creating a balance between conservation and usage of the Arts Centre, and the costs which arise from those challenges. Security of funding would make a very great difference.

## Feedback

1.1 Have we got the game plan right?

Please consider investing less on roading infrastructure and more on services that benefit communities. We already have too many roads and cars.

1.4 Investing in upgrading and protecting our city's water networks

Please start to charge households for the water they use. The wastage of water in Christchurch and other parts of New Zealand is criminal and could be largely addressed by water charges.

1.5 Investing in our transport infrastructure

Your investment should promote public and active transport and discourage car usage.

1.6 Rubbish, recycling and organics

This spend feels too small compared to water and transport. The council should consider introducing a system similar to San Francisco, rewarding waste minimisation and incentivising organics and recycling.

1.7 Our facilities

You must not reduce the library opening hours. They're community facilities that should be available to everyone, which means keeping them open late for people and families that can't visit them during the day.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Art is an important part of our community and should be adequately funded. Like the library, the Art Centre opening hours should not be reduced so it is available for everyone in our community.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

No as no-one has any extra money. Over the last 13 years our rates have doubled. The council needs to reduce all staff salaries to 100,000.00 dollars or less as there is no reason why in this economic climate anyone should be taking advantage of others. We need social housing, free buses, and proper consultation on transport. We need better management of our parks ie fruit trees, trees that feed our birds and more toilets ie in every park. We need our libraries and mobile libraries. If your staff miscalculated 5 million on the Wharenuui pool that else has been miscalculated. We need younger people in management roles ie 40 years or younger.

1.2 Rates

No increase. Rates have doubled over 13 years. We have had no increase so as stated above you need to be prudent and lateral in your thinking.

1.3 Proposed changes to existing rates, and new targeted rates

Ridiculous in this economic climate. No increase.

1.4 Investing in upgrading and protecting our city's water networks

Get on with it and do it economically with no increase.

1.5 Investing in our transport infrastructure

You need to consult with the community and do what the community wants instead of justifying your jobs by dreaming up ways to spend our money. I have counted cyclists over the last 3 years and there has been no increase in their numbers! Consider safety figures ie refer to ACC and hospital admissions. What about the weather? What about the age of people young and old. I suggest registration of all cyclists with one dollar per week charge. Also all cycles should be registered. This should be taken to central government as user pays and responsible cycling should be encouraged.

1.6 Rubbish, recycling and organics

Household collection is ok. However more collection points for specific recycling eg plastic bags, glass small appliances, garden equipment eg pots, computer equipment. Supermarkets could be offered a rates discount to provide space. Organics could be streamlined better by providing compost to buy to the public. Also organic collection requirements better advertised at fruit and vege outlets and at garden centres etc. Please provide free extra green bins at least twice yearly to every street to encourage people to use your composting system. A greener city will be great.

1.7 Our facilities

You need to keep all services as is. Please consult with the communities and then do as community wishes. An educated community is an engaged, responsible and happy community.

1.8 Our heritage, foreshore and parks

Please consult with the community, schools and businesses etc Then with them work out how we all can help then more will be done, looked after and no monetary increase will be needed. Think laterally.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No  
Comments  
The Arts Centre needs to be creative and think laterally to meet the required funding.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments  
Once again the Ribert McDougall neds to be creative and think laterally to obtain the funding.

1.11 Potential disposal of surplus Council-owned properties

Yes dispose of them. We need to free up these properties for alternative uses and use the money to meet debt abd transport costs.

1.12 Any other comments:

Do not increase rates as all households have bern placed under pressure of increased expenses and can't meet any more costs. Think laterally and refer to my first comments.

February 2021

Background:

1: The Lyttelton Reserve Management Committee has both the governance and day to day management function for both Urumau and Whaka Raupō Reserves above Lyttelton. The committee was formed after the reserves were gazetted recreational in 2005.

2: Urumau is approximately 25 hectares. This reserve is used daily by the general public for recreation. There are a series of shared use, walking and Mountain Bike tracks. It is a popular place for dog walking and one of the few places in the Lyttelton area that dogs can be off-lead.

3. It is also where the community gets to learn a lot about the management of the reserve. At this site we give the community opportunities to learn about native plants. Some people grow seeds for our planting programme, others look after the nursery stocks whilst others plant, water and release to keep the plants thriving.

4. All plants on the reserve are sourced from local seed sources in the remnant bush from the south side of the Port Hills.

5. There are also multiple opportunities to get involved with track maintenance. This could be weed eating, or broom and gorse management in key areas. Our current focus is upgrading existing tracks to meet DoC standards. Currently the shared-use tracks are too narrow for both mountain bikers and walkers to share safely.

6. Our planting areas are the primary focus of our weed programme at Urumau. In Whaka Raupō it is minor weed infestations on the boundaries. At the moment we target Old Man's Beard, Sycamore, Ivy, Karo, Bone Seed, Spur valerian and Spindleberry.

7: Whaka Raupō is 85 hectares. Our philosophy for this reserve is minimum interference management. It is wild and rugged. Our philosophy is for regeneration of native species to occur naturally from remnant bush areas both within the reserve and on neighbouring rural properties. Apart from one authorised track where maintenance is required there is little work done in this reserve.

8. The aim of the Lyttelton Reserves Management Committee is to achieve best practice outcomes for the management of the Reserves. We model ourselves on Hinewai near Akaroa.

9. The second Urumau Development Plan was signed off in 2018. This replaced the Reserve 68 Development Plan from 2008.

10. Our reserves have never received LTP funding.

## WHY WE NEED FUNDING

11. Neither of our reserves have Management Plans. It is a requirement of the Reserves Act 1977 that reserves should have Management Plans within 5 years of the reserve being established. In many instances when reserves are deemed passive Management Plans are waived. In our instance both reserves are under pressure for additional mountain bike tracks. We do not have passive reserves, so the Committee needs detailed Management Plans to enable us to make effective decisions about the management of the land. The management plan should cover all aspects including; tracks, pests, weeds, fire, revegetation efforts and other users of the reserve. Approved Development Plans should align with the Management Plan (Reserves Act 1977). It should touch on ecological aspects and key risk areas and provide us with a suite of recommendations for managing the reserve in its entirety to achieve the outcomes of the community.

12. This triennium, our Committee working with our community, has the capacity for a larger work programme. The committee is very willing to achieve more. Track upgrades, weed work, and reforestation are on our work plans. We have the ability to provide all the labour from within our community. Remediation of existing tracks is a priority for us before further tracks are built. Currently in our 25 hectare reserve we have 12 mountain bike trails, total length of 5km. Just how many should we and can we maintain? We are under pressure to have more tracks built.

13. We are very outcomes focused. Last triennium there was an extensive community led planting programme. We planted over 1000 plants in Urumau Reserve of which half were actually grown from locally sourced remnant seed. We had a dedicated team of plant growers, nursery support, plant maintenance and waterers. This team was recognised in December 2020 with a Canterbury Aoraki Conservation Trust Board Award.

14. We have a weed team with monthly working bees and a maintenance team focused on walking, shared use and mountain bike trails.

15. This year we have introduced a Fire Risk Management Team, Cultural Team and a Communications Team.

16. The Reserve Management Committee seeks Community Board support for all our Long Term Plan requests.

17. LTP Requests:

July 2021 June 2022

- A Management Plan for Urumau Reserve to enable effective management of the reserve for the benefit of all users. We would be happy to support this process by also raising additional funds from our community.

- A Management Plan for Whaka Raupō Reserve to enable effective management of the reserve for the benefit of all users. As above we would be happy to support this process by also raising additional funds from our community.
- Interpretive Signage Panel Urumau – Information about the Reserve – Philosophy including dual language
- Feasibility study for proposed shared path from Timeball Station into Urumau Reserve to DoC standards to enable future cost to be factored into plans
- Proper scoping of diagonal track for suitable shared use
- Feasibility study for major upgrade of shared-use Urumau Loop Track to DoC standards
- Entrance track upgrade at Whaka Raupō Reserve through the whaharoa
- Interpretive Signage Panel Urumau – Information about the Reserve – Philosophy including dual language
- Water supply to be connected to Urumau Reserve for watering and fire risk management - pipework, fittings and tank required
- Pest Management Plan
- Fire Risk Management Plan
- Signage Plan

July 2022 June 2023

- Interpretive Signage Panel Whaka Raupō – Information about the Reserve – including dual language
- New Track - Diagonal
- Development of Māori Garden in Whaka Raupō Reserve.
- Feasibility Study New Track Whaka Raupō- linking Summit Road to Cass Bay
- Feasibility study MTB track Gilmour Terrace
- Forestry Management Plan

July 2023 - June 2024

- Interpretive Signage Panel Urumau – Cultural Information about the Reserve - including dual language
- New Track Whaka Raupō- linking Summit Road to Cass Bay

- New Track Timeball Shared Use

July 2024 - June 2025

- Interpretive Signage Panel Whaka Raupō – Cultural Information about the Reserve
- Gary Broker Seat within Urumau Reserve

July 2025 - June 2026

July 2026 - June 2027

July 2027 - June 2028

July 2028 - June 2029

July 2029 - June 2030

The Committee will also require some general maintenance expenditure each year.  
\$5000 per year should cover track upgrade/maintenance costs.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**First name:** Johan **Last name:** Verweij

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

## SUBMISSION TO CCC LONG TERM PLAN 2021

FROM:

SUSAN BROWN

*19th April 2021*

I do not wish to be heard in support of this submission.

Tēnā koutou

### **RE: RATES FOR CENTRAL CITY WASTE COLLECTION**

We support the submission from the Atlas Quarter Body Corporate in relation to rates for the collection of solid waste.

We support the Council's strategic goal of reducing solid waste but object to having pay \$300-\$400 per year in rates for the collection of the red, green and yellow bins when the Council does not provide this service to us. In the absence of Council providing this service, we pay privately through our Body Corp Levy for waste collection by EnviroWaste. We support waste minimisation and have all the same waste streams (green, yellow and red) as the Council provides.

**We ask that the Council either:**

- 1) reduce the general rate and waste minimisation levy for developments such as ours to reflect that no waste collection is provided, or;**
- 2) amend your service contracts to provide the waste collection service.**

**Ngā mihi**

Sue Brown

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Jane **Last name:** Hopkins

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Yes, I agree with prioritising repairs to roading infrastructure and water networks. Progress on fixing earthquake damaged infrastructure is painfully slow. After more than 10 years there is still so much to fix. With interest rates at a record low, I would like to see more borrowing to fast track the long awaited repairs in the east of Christchurch.

1.2 Rates

I support the rates increase as long as the council focuses spending it on "back to basics" as promised.

1.3 Proposed changes to existing rates, and new targeted rates

I support the excess water targeted rate.

I would like to see developers contribute more towards rates. In Philadelphia, developers must contribute 1% towards public art - is this something we could do in Christchurch?

I also don't like the rates model that tie the amount that businesses pay to the value of their premises. It means that businesses that don't have a large physical presence such as Lime scooters don't pay their fair share of rates. They should be contributing towards the roading, footpaths and cycle ways as their business relies on this infrastructure.

1.4 Investing in upgrading and protecting our city's water networks

I would like fluoride to be added to our water supply.

1.5 Investing in our transport infrastructure

Fix existing assets before investing in new assets. If you are unable to adequately maintain your existing assets then you should not be building new assets! The state of the roads, footpaths and drains in the east of Christchurch is woeful, please fix these before building new roads, cycleways, covered stadiums and pool complexes.

The streets in Richmond have finally started to be repaired but only about 1/3 of them have been done. There is a whole generation of children that have grown up thinking that broken cracked footpaths, pot-holed roads and

stagnant water in open drains that no longer drain are normal. Please don't let it be another 10 years before our roads and footpaths are fully repaired! We have been waiting long enough, watching other parts of the city get smoothed roads, new cycleways, pools and community centres - we'd like our suburb brought back to pre-earthquake standards now.

1.7 Our facilities

I'm surprised that there is no mention of the rebuild of the very popular and well used Shirley Community Centre in the LTP. Why is this? Other community centres all over Christchurch have been rebuilt since the earthquakes, why are we still waiting after 10 years for our Shirley community centre to be rebuilt? This needs to be prioritised and fast tracked.

The current Shirley Library is too small - we are unable to have workshops in there that other libraries are able to host such as New Brighton, South Library, Halswell. It would be great if the new Shirley Community Centre could also host a larger library with workshop and meeting room spaces for the community.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.2 Rates

If the city is to develop and infrastructure kept up to scratch then some rates increases are justified.

### 1.3 Proposed changes to existing rates, and new targeted rates

We pay GST on rates, and therefore by implication rates are to provide a service. If a particular service is not provided in a particular area then rates should not be charged for that service. Eg. rurally many of us provide our own water, at great expense and our own sewage disposal. A differential for such areas should always apply.

Should people on well-drained areas on the west of the city \*really\* contribute to draining low-lying areas in the city's east?

### 1.5 Investing in our transport infrastructure

A cycleway out west towards West Melton perhaps?

### 1.8 Our heritage, foreshore and parks

The old marina at Naval point is a dysfunctional eyesore and a waste of an important resource.

Can consideration be given to building some kind of breakwater to make this functional again and to tidy up the adjacent land area?

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

.07% is a small amount on our rates to bring such heritage buildings back into use

### 1.11 Potential disposal of surplus Council-owned properties

The Yaldhurst Hall should not be on your list for disposal.

This is devious.

Of course it is not currently providing its original purpose as it is locked out from use.

The EQ risk is controversial and has not been properly established, with some estimating it is 36% of building code.

There is a clear need for this hall to be re-established as there is nothing equivalent nearby, and the heart of Yaldhurst has been ripped out with the district now being treated like a giant contractors yard.

The economics of repair have not been established and so it should be removed from this list until properly resolved and Yaldhurst community given more consideration.

1.12 Any other comments:  
Consider making it easier through plans and rules to allow communal housing on some rural and within the city.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

Prioritise transition to carbon-neutral local economy so we don't leave huge climate change adaptation costs to future generations. LTP needs to ensure mitigation and adaptation work is well funded, especially the communications/engagement area to support behaviour change.

1.2 Rates

Include higher rate increases to support vulnerable communities and accelerate adaption for climate change - including creating a high wage/high tech green economy.

1.3 Proposed changes to existing rates, and new targeted rates

Yes - implement excess water charges.

1.4 Investing in upgrading and protecting our city's water networks

1.5 Investing in our transport infrastructure

Increase funding for cycleways so they can be completed earlier. Focus on the City to Sea one out to Brighton as 'the east' is really missing out with cycling.

Focus sooner on completing local cycleway connections to connect people on bikes to MCRs and other key destinations.

Include specific funding for pedestrian or cycling wayfinding or promotion that will make it easier and more attractive for residents

to cycle.

Focus on investment in transport infrastructure that will encourage residents to use cars less, and public transport, cycling and walking more.

1.6 Rubbish, recycling and organics  
Please all the levers you can to incentivise/motivate residents to create less waste.

1.7 Our facilities

Retain Riccarton Road bus lounges.

Continue to invest in libraries, especially those in lower socio-economic suburbs of the city.

Spend less money on the stadium, make it more community accessible at a lower cost - as per ideas from ARC.

1.8 Our heritage, foreshore and parks

Increase funding for Banks Peninsula Conservation Trust.

Increase funding for Predator Free Banks Peninsula.

Increase funding for 360 trail maintenance, extension and promotion.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

1.12 Any other comments:

Community funding

- Maintain current funding - especially the Sustainability and Biodiversity funds.
- Support volunteer groups across the city who run community gardens, park plantings etc, and make most of huge volunteer hours.
- Focus on improving amenity and livability of low socio economic areas of the city such as Linwood, Philipstown, Waltham, Aranui, Northcote, Shirley etc.

Representation

- Have a poll on moving to STV (single transferable voting) at the 2022 local body elections.
- Implement multi-member wards. The Local Government Commission is clear that multi-member wards provide greater choice for voters and following the election, provide greater choice for residents on who to approach on local issues and allow sharing and specialising in responsibilities between the councillors. This change will provide more choice and better, more engaged and available representation.

### Submitter Details

**Submission Date:** 17/04/2021

**First name:** Jess **Last name:** Smale

**Organisation name, if you are submitting on behalf of the organisation:**

Rad bikes

**Your role in the organisation:** General Coordinator

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.5 Investing in our transport infrastructure

RAD Bikes fully supports Council's current investment in cycling infrastructure and initiatives, but encourage Council to do more.

As a community bike workshop, we see the direct benefits & impacts cycling has on our community.

Cycling provides a healthy, equitable & environmentally friendly way to get around and good cycling infrastructure creates connected, liveable & sustainable cities.

With 55% of Christchurch's greenhouse gas emissions coming from transport, encouraging cycling as a sustainable alternative is critical to achieving the Council's Climate Change Objectives and Targets.

According to ViaStrada (local transport consultants):

Currently 6—7% of commuters in CHCH cycle to work, but ~50% of CHCH's population have cycled at some point in the past year, and would probably bike more given the right environment / support. This shows fantastic potential for transitioning to a low emission economy.

Council's investment in cycleways is already showing great uptake, particularly amongst women, which we are so grateful for. So please, get them coming!

We also encourage the Council to continue & increase their support community initiatives like ours to assist the Council in meeting the challenge of climate change, supporting people to cycle & recycle more, alongside many other fantastic cycle initiatives. Enabling the community sector is a powerful, strategic & efficient way to achieve great things!

#### 1.6 Rubbish, recycling and organics

Recycling is a core part of RADs kaupapa.

With Council's support, RAD Bikes has enabled the reuse of over 32,000 Bikes & Bike parts.

RAD fully supports the Council's investment in any recycling infrastructure and again, encourages Council to support community groups who are already working successfully in this space to achieve great things on minimal funds.

Sustainable recycling systems are a crucial part of making CHCH a truly sustainable city.

1.12 Any other comments:

RAD Bikes is proud of the work CHCH City Council is doing to meet the challenges of climate change.

We encourage Council to do more, be bold and utilise the expertise & capacity already present within our communities in so many forms. We need strong, innovative and passionate leadership, collaborating & empowering our community sector, for CHCH to become a truly sustainable city within the next 10 years. Setting the scene for generations to thrive.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.2 Rates

Given the impact of the Covid virus I agree with the rate increase so that the city can continue to move forward and look after its citizens.

### 1.3 Proposed changes to existing rates, and new targeted rates

I think that a targeted water rate would encourage people to be more thoughtful about their water use and encourage them to conserve water which is important with Climate Change resulting in drought in Canterbury. Some consideration should be given to larger households who may have higher demands because of the number of people using water in that house.

### 1.4 Investing in upgrading and protecting our city's water networks

Christchurch used to have the best drinking water in the country but I now have had to buy filters because it is so high in chlorine. Our older water infrastructure in certain parts of the city and particularly Banks Peninsula has failed causing pollution with our drinking water. A safe source of drinking water is essential for the well being of residents.

### 1.5 Investing in our transport infrastructure

I think too much money is being spent on cycle lanes at the expense of motorists, who pay towards the up keep of the roads. I find they create a traffic hazard and are definitely not being used as much as the roads that they compromise.

It is not practical or possible for me to cycle into town as I live on Lyttelton and as going over the Port Hills is not an option for me and cycling through the tunnel is not allowed I have no choice but to drive.

### 1.6 Rubbish, recycling and organics

The more we invest in machinery that can increase recycling of materials the better. We know we should be cutting back on waste going to the landfill so better education and technology will be important in achieving this.

### 1.7 Our facilities

I support the CCC investing money in a much needed updated playground for Cass Bay and that this is done in 2023. I am a strong believer in equitable access for everyone and have been saddened to see children with disabilities unable to participate in any form of play in our playground due to lack of suitable play equipment

1.8 Our heritage, foreshore and parks

I support the Steadfast Development plan which will allow public access to the Reserve and ask that funding to make this happen starts to be available in the next financial year. The community have been waiting for 15 to be allowed back into the area and many are keen to start working on tracks, planting and other projects.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties

If these assets are no longer of use to the community and a drain on financial resources, I support their disposal.

Attached Documents

**First name:** Sheralee **Last name:** MacDonald

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I can't tell from the LTP whether the investment and programmes proposed are likely to help us meet our targets of halving our 2016/2017 levels by 2030.

1.4 Investing in upgrading and protecting our city's water networks

I agree with charging for excess water usage

1.5 Investing in our transport infrastructure

I heard you are closing the riccarton bus exchange which seems counter-intuitive if you are trying to get more people to use public transport. I think CCC and ECAN and Waka Kotahi need to be working better together on investing in our transport future to ensure we meet our carbon emission reduction targets. I don't see anything in the LTP that gives confidence in that.

1.6 Rubbish, recycling and organics

How much investment is there in community education around reducing waste? Found it hard to tell.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Dave **Last name:** Evans

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

I believe a focus on climate change is vital. We must not pass on huge adaptation costs to future generations. We must make sure mitigation and adaptation work is well funded, especially in the communications/engagement area so people understand why they need to get behind it.

I fully support the Biodiversity Fund spending and note that the Biodiversity Strategy needs to be updated to recognise the increasing focus on climate change.

I oppose the 5% cut to community grants.

### 1.2 Rates

I believe the proposed rates increase is affordable for most property owners.

I support there being no UAGC, which places a proportionally higher burden on low value property owners.

### 1.3 Proposed changes to existing rates, and new targeted rates

I support the excess water targeted rate, provided it does not affect large, low-income families.

I support the heritage targeted rate as it is proportional to property value and not a flat rate.

### 1.4 Investing in upgrading and protecting our city's water networks

I support the proposed spending on water infrastructure.

I believe the council should support and incentivise rain water harvesting on commercial and domestic properties. With climate change we seem to be getting much less rainfall, leading to a higher demand on artesian water. Water harvesting also reduces the strain on our stormwater infrastructure.

### 1.5 Investing in our transport infrastructure

I support spending on bus priority lanes, we need to reduce carbon emissions by incentivising a move from private cars to public transport and/or cycles.

I strongly support all spending on Major Cycle Routes (MCRs) and Local Connections.

I oppose delaying any of the MCRs. Compared with what is, and has been, spent on roadways for cars these projects are cheap and very good value.

I would especially like to see the City to Sea MCR completed ASAP, as the east of the city is poorly served.

#### 1.6 Rubbish, recycling and organics

I strongly support spending on all waste minimisation projects.

The organics composting plant needs to be enclosed ASAP to prevent the appalling odour problems affecting nearby residents.

#### 1.7 Our facilities

I support closing the Sumner Library on Sunday but not the Aranui Library, as residents of that area have less ability to own their own computers.

I support the changes to Tūranga opening hours.

I oppose discontinuing the mobile library as it serves elderly people with limited mobility.

#### 1.8 Our heritage, foreshore and parks

I especially support the \$3 million going to the Rod Donald Trust for a strategic land purchase. Banks Peninsula is a fantastic treasure for Ōtautahi/Christchurch City.

I also strongly support the spending on the Avon/Ōtākaro River Corridor. Supporting the work of community groups is cost-effective for achieving restoration objectives and garners community support and care for the outcome.

Employing more park rangers would facilitate more community volunteer effort towards ecological restoration.

I also support the Waitākiri Eco-sanctuary, which will be a major tourist attraction for the city. Money spent on the Green Spine is very welcome and will have a wide-ranging good effect.

I support the planning for the tidal wetland in Bexley.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

I support the Arts Centre targeted rate. The Arts Centre is vital to the character of Christchurch.

#### 1.12 Any other comments:

I support large parts of the the council's draft climate change strategy and will make a separate submission on that. Implementation of the strategy is essential, so it's unfortunate that it won't be adopted until after the current LTP round is completed. There must be ways that action can be taken towards implementing large parts of the strategy long before the next LTP round, as there is no time to waste.

## Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I support a rating system calculated on the value of the land & property thus the higher value the higher the rates. I do not support flat rates as they create unfair burden on poorer citizens.

1.4 Investing in upgrading and protecting our city's water networks

This is fundamental infrastructure that we as a community must pay for or seek a financial commitment from central govt.

1.5 Investing in our transport infrastructure

Id like to see light rail including a train to Lyttelton & the airport.

1.7 Our facilities

I support keeping the Lyttelton service centre at the Library especially now there are few buses to Eastgate.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

We have to consult the Diamond harbour community before the land is sold as it overdevelopment could be an unintended consequence.

1.12 Any other comments:

Continue our commitment to pay the living wage to all staff (directly employed & contracted staff) and develop this plan on the principles of economic & social justice & fairness for all citizens ( i.e. commit to advancing needs of marginalised, poor, disabled etc) as move to a sustainable future focused on climate justice.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

St Martins Presbyterian Church is concerned that the possible changes of criteria for rates rebates for Churches and other non profit organisaations may jeopardise what we are able to provide for those in need in our community.

While we appreciate some non profit organisations with large sums of money could manage without the rebate, Churches who are genuinely providing the kind of community spaces and community activities and services with scarce resources and volunteer labour would struggle to continue to provide much needed services in their community.

We are concerned that it appears that Grants received such as for elder care programmes are not included in the list of deductions along with those for capital works grants.

## Feedback

1.1 Have we got the game plan right?

Basically feel that a focus on water then roads/footpaths is the right balance. Nothing survives without good water.

1.5 Investing in our transport infrastructure

As part of your existing planned budget I would like to suggest an improvement in local cycling connections. This would assist with climate change objectives to reduce carbon and other greenhouse gases. Plus enable more efficient active travel over generally safer, quieter routes. It may also meet the parameters of a "shovel ready" project for additional funding.

My idea is to print a transparent 'stick on' patch with a cycle symbol crossed by a green tick to be put onto existing No Exit signs whenever there is alleyway at the end of the street. At the same time, check that alleyways are easily accessible for everyone – twin pushchairs and wheelchair users, mobility scooters, as well as cyclists with cargo trailers or on tandems. I understand the Council currently does not have the power to enforce a speed limit as alleyways are not legal roads. Therefore a notice reminding users that this is a shared slow zone would suffice until the Council has the power (later this year?) to impose and enforce an actual speed limit (10-15 kmph?). This will assist in more active transport modes to help achieve some climate change objectives.

Another part of the job could be to update maps (OpenStreets?) to show these connections. Currently Google maps has some shown, but not all and printed maps not at all. For example the tunnel (needs white walls) at the end of Falsgrave Street under the railway lines which leads by quiet roads to a pedestrian safety zone when crossing Brougham Street and on to Waltham Park and the Heathcote River.

[Reply](#)

1.6 Rubbish, recycling and organics

Possibly consider introducing a charge, based on weight, for the collection of red bins. Yellow and green would still be included in rates. This would encourage people to buy items which are packed in minimal packaging, and think about what they are sending to landfill. At the same time promote web communities such as Freecycle so surplus items are given to someone wanting them not sent to landfill. Landfill sites are difficult to find and already Kate Valley is some considerable distance (greenhouse gases and excess wear on roads) from the source of the majority of rubbish currently dumped.

1.7 Our facilities

Really uncomfortable with closure of Council Service Centres on the Peninsula, particularly Akaroa. It is a long way for residents to access the Council and believe enough rates are collected from the Peninsula to keep some service operating for those who are not computer literate. Possibly look at running in conjunction with another service/function.

1.8 Our heritage, foreshore and parks

Parks are the lungs of the city, great stress relievers for all, and provide essential play areas now home sections are so small and seem to be getting smaller when redevelopment occurs. Eleven percent would seem to be about right to me.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

It is heritage that needs to be restored post earthquake, a major tourist attraction, and great foil to the museum and Hagley Park.

I assume a Grant would eventually repaid hopefully balancing out rate rises in the future.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

Essential heritage which needs to be protected against future earthquakes. We still have not had the "Big One" when the Alpine Fault ruptures. The McDougall was donated as an Art Gallery so hopefully it will still be used for a similar purpose getting art out of storage and on display, particularly art which does not fit in with the new gallery's collection.

## Feedback

### 1.11 Potential disposal of surplus Council-owned properties

Potential disposal of 27 Hunters Road, Bayview Road Diamond harbour

I am a Diamond Harbour resident and have lived there for many years.

Our community is semi rural and would be irrevocably changed if 40 hectares of land at Hunters road were sold and developed for residential use. The great number of extra residents would change the very essence of what makes Diamond Harbour a unique place to live.

It is also unlikely that the existing infrastructure could cope with this large increase in residents. The road intersections are hardly safe now. Sewage disposal will become a further issue. Public transport like the excellent ferry service would not cope.

I am opposed to the land being added to the disposal schedule, allowing Council staff and not elected members or the community the right to decide the future of the land.

I cannot understand how Council staff could have considered placing such a large parcel of land in proposed disposal schedule, considering the potential major impact of this disposal would have on the community, a good idea.

Is this decision heavily weighted toward financial gain rather than respect for the unique character of the Diamond Harbour community.

Please remove the land from the schedule, and plan any future development as small incremental steps rather than a large development like this which will damage the character of the community

To: CCC Plan  
Subject: Submission for Long Term Plan: Witte K.

Follow Up Flag: Follow up  
Flag Status: Flagged

Submission to CCC Long Term Plan 2021-2031  
18 April 2021  
Kay Witte  
[REDACTED]  
[REDACTED]  
[REDACTED]  
[REDACTED]

I was born in [REDACTED] and have lived within the [REDACTED] most of my [REDACTED] years.

[REDACTED] of 3.5 hectares, is our home and not a business. The property is settled between the [REDACTED] on the Northern boundary.

My current rates payment is \$2288.80 to the CCC and \$433.44 to Environment Canterbury.

We have lived in our home for the last 30 plus years. Here we raised our children and now, our grand children are climbing the same trees and exploring the same creeks and valleys.

This Submission is regarding -  
The payment for the land drainage rate to include rural properties that do not at present pay that rate and do not receive any service from the current drainage plan.  
At present I alone pay for the work done on my property with regard to drainage.  
There is increasing residential housing nearby influencing the waterways passing through my land.  
There is the beginning of legislation for Fresh water management of which will be a cost.

I understand the need to share costs within the city, and appreciate the increasing use and enjoyment and of the port hills by city residents.

I do not see in the long term plan any mention of extending the land drainage scheme to these rural properties you plan to charge. Is there provision for the Fresh water management, and a plan to incorporate these costs to all of Christchurch?

Will the housing already paying for drainage then have their rates increased to cover the extension of the drainage scheme to the rural area?

For I cannot see how I could be asked to pay excessive rates for no service and need to manage and pay for drainage from this property too.

The Second Reason for Submission is regarding the lack of time for reasonable consultation to submit to CCC.  
Within council documents regarding consultation I see it is policy to allow appropriate time, early in this process for timely consultation.  
In this case I do not feel that that was the case.

Regards

Kay Witte

## Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I support the new heritage targeted rate and excess water targeted rate. With the heritage targeted rate I assume this would also include or show the proportion of rates towards the rebuild of the Anglican Cathedral?

1.4 Investing in upgrading and protecting our city's water networks

This is critical work and I support the investment towards this.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

The property on Worcester Blvd over the road from The Arts Centre could be a fantastic building for artists. I know that there is a shortage of affordable studio spaces for artists wanting to work in the central city and I would assume there would be very little fit out involved if any - this would enliven the cultural precinct, support The Arts Centre, the art gallery, CoCA and performing arts organisations and arts venues wanting a central city place for visiting artists to stay - think CSO, ITR, Little Andromeda, Court Theatre. If part of the building was kept as accommodation, this could be an income stream for council.

1.12 Any other comments:

I oppose the reduction of 5% to the Strengthening Communities Fund - this fund has not appreciated for a number of years, and if the Council wish the city to be vibrant place to live, then reducing the amount available in this fund is shortsighted and is at odds with the wider intentions of Council. Associated with this is the Toi Otautahi Arts Strategy - in order to give life to this strategy, then again the reduction of this fund appears at odds with ensuring that this strategy's implementation is successful and meaningful.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

We do not agree with charging households with excess target rates. Why are water bottling companies free with no restrictions to use as much fresh water as a whole NZ city and then export it overseas...

New Zealand water should be free and not sent overseas.

1.5 Investing in our transport infrastructure

Christchurch city should have smaller electric buses or big vans. So they can frequently stop at bus stops more often and stop running over the Tuam Street centre line.

1.6 Rubbish, recycling and organics

Yes we agree on proposed Waste Management and Minimisation Plan for our landfills. We also believe the cost of purchasing organic compost is far too expensive. Organic Compost are free from the community and should be much cheaper to purchase.

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

The development of the Yaldhurst Area has changed and developed a lot over the last 10 years and after the major earthquakes. We have seen subdivisions and new houses being built, a new soccer stadium 'Christchurch Football Centre', McDonalds, NPD Fuel Station and Kiwi Pharmacy and Inspire Health Medical Practice plus much more development and expansion in Yaldhurst. Yaldhurst has also seen Norwood, Yaldhurst Hotel & Pub and many other commercial businesses exist and have come into the area. We have the Yaldhurst Domain which has a cricket pitch, 4 tennis courts and a playground, the St Lukes Church and a primary school 'Yaldhurst Model School'. But for 10 years since the big earthquakes, we have not had a community hall and for 145 years- 1876 Yaldhurst Model School has not had a school hall. Everything for Yaldhurst seems to be progressing, yet we still don't have a community and school hall available to use.

We strongly believe that Yaldhurst and Yaldhurst Model School, deserves to have a community hall. If you demolish the Yaldhurst Memorial Hall, that the council should replace it with a community hall closer to Yaldhurst Model School. As the traffic at the roundabout on Pound Road and Yaldhurst Road is far too busy for students to cross. Also not cost effective to get buses. Having a new community hall closer to the primary school, will allow the school an area to have assemblies where their parents and grandparents can come along because they aren't restricted to the limited space available. The whole school can have assemblies when it is wet, raining, windy and cold. The school can have performances and also do indoor sports especially in the winter when it's too wet and cold to use the netball courts or grass backfield. It would be great to also offer the YMS Kapa Haka Group a hall area to practice and perform in. All surrounding primary schools around Yaldhurst Model School have a School Hall. We don't understand why Yaldhurst Model School is so disadvantaged by the Christchurch City Council/Hornby Community Board and the Ministry of Education.

Being on the PTA for my 4th year, for my first 2 years we were fortunate enough to use Hornby Worker Men's Club for our school discos. Last year we had limited numbers at the Hornby Rugby Club, which limited our fundraising opportunities. This year has been a struggle and are yet to find a bigger hall to use for the school disco. This is my first year on the Board of Trustees. A decline in the numbers of remaining senior Year 7 and 8 students could be reversed, if the school had a school/community hall to offer more social, cultural, musical and sporting opportunities. Many parents have mentioned to me why don't we have a hall?

The heart of a community is to have a community hall available for our people and families to gather socially, perform and celebrate life's milestones. It helps to make us all feel connected to people and families both young and old. It creates wonderful memories and the happiness of belonging. Yaldhurst Community Needs a New Hall as the existing Yaldhurst Memorial Hall is structurally not strong and safe enough for people to be in if another earthquake occurs and the lighting too dim and heating is not sufficient. Please Give the Yaldhurst Community a New Hall for Everyone to Enjoy!

Kind Regards,  
Philippa Young-Yee and Jordan Yee

1.12 Any other comments:

We would like to ask the funds allocated for the Sumner Masterplan not be delayed until 2030/31. We hope to be able to deliver the Sumner Village Green to support the Bays Area Skate Park. This project would need funds from the Masterplan to be able to be delivered at the same time as the Skate park. The creation of a place for the community to gather would encourage walking, biking, scooting and skating to enjoy recreation and lessen the reliance on motor vehicles to access places of communal gathering and recreation.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I strongly disagree with extending the Land Drainage Targeted Rate to rural properties on Banks Peninsula and the city's north-west.

In most cases the rural properties in question do not contribute in any way to drainage issues. I would accept the council being able to extend the zones for properties being rated if it could be proven that those properties contributed to a drainage issues.

## Feedback

1.1 Have we got the game plan right?

Generally I am happy with the balance

1.2 Rates

Not that comfortable. 5% in means a double of the rates burden in real terms (i.e.- before inflation) on ratepayers every 14 years. 4% means doubling every 18 years.

Christchurch already has very high rates compared with most urban ares and the future affordability needs to be carefully balanced with need.

1.3 Proposed changes to existing rates, and new targeted rates

1. A land drainage rate on rural properties is surely a matter that ECan should be handing and not the CCC

2. A targeted rate for the Arts Centre is supported as its earthquake related renovations need to be completed. Unless it is satisfactorily completed it will not be able to attract sufficient rental paying tenants to both attract the public and pay its operating costs.

3. The separate water rate for a city that is meant to have a near unlimited water aquifer, needs to be handled carefully to not just be seen as a back-door rating increase. I agree that greater efficiency in water use is prudent, but the media suggests the largest inefficiency is associated with unrepaired infrastructure.

1.4 Investing in upgrading and protecting our city's water networks

See above. In addition make it more transparent what needs to be spent to cover arrears of repairs.

1.5 Investing in our transport infrastructure

I generally support transport infrastructure expenditure that gradually increases the priority for public transport and non-car use.

1.6 Rubbish, recycling and organics

There appears to be an insufficiency in understanding and promotion given to simple home composting systems for kitchen, lawn

clippings and mulched garden waste in Chch. Hopefully this will also be part of the recycling promotion.

## Feedback

### 1.5 Investing in our transport infrastructure

I support the investment in public transport but am concerned there's too much focus on the infrastructure rather than the quality of service. I used to live in Wellington and loved the Snapper system as it allowed you to top up your card using NFC. You could also top up your account for any amount. In Christchurch, top ups are minimum \$10. I think this deters people on lower incomes from using the service when they only want to take one or two trips.

Additionally, Wellington had a zoned pricing system. Christchurch is a spread out city but the fare to bus from Prebbleton to Kainga is the same amount as a short trip within the same suburb. I've also found that the buses in Christchurch are dirtier and more rundown (rattling, scratched glass).

The bus service must be made more attractive and accessible. Please consider investing in the buses and their service, not just the bus stops and lanes.

### 1.7 Our facilities

I am concerned that a reduction in evening hours across libraries will make the service difficult to access for people working until 5-6pm. Libraries and the art gallery have often run events in the evenings (post 5pm).

When the mobile bus retires, the library needs to ensure it can still reach communities with limited access to physical branches whether it is due to geographic isolation or reduced mobility from old age or disability. The Press article showed that the service is important to the community and it needs to continue in some way.

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Arts Centre is a beautiful building that is part of Christchurch's history. I want to see it restored.

However, I think some people might not understand the mission of the Arts Centre so I think the Council should factor in spending to help promote the Arts Centre, their work, and the value the investment will bring to the city.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

I am agreeing because I believe the Museum Redevelopment is important for the city and region. A modernised museum will help tell the story of Canterbury better, showcase its taonga, and will become a major tourist attraction.

Supporting the Arts Centre and the Museum to me means that we are investing in the culture and stories of Christchurch and its communities.

1.11 Potential disposal of surplus Council-owned properties

If selling property will save the Council costs, it sounds like a good idea. I agree that the Council should evaluate whether the properties could be retained first - if putting them to a different use will help the Council financially or with their business.

Regarding the heritage/cultural buildings, I think the Council should seek out a buyer which will preserve that heritage.

**Sent:** Saturday, 17 April 2021 11:59 am  
**To:** CCC Plan <CCCPlan@ccc.govt.nz>  
**Subject:** Fwd: Submission against Land Drainage rates

**Subject: Submission against Land Drainage rates**

To Whom it may concern

I would like to make a strong proposal against the submission to extend the Land Drainage Targeted Rate to our farm on [REDACTED].

I believe this rate is very unfair as the council does not provide us with any service to our land drainage infrastructure.

We have a large drain that runs along the road side for drainage that we maintain and manage at our own expense. We also maintain our own stormwater drainage at no expense to the council.

You will be charging for a service that is not offered or received to us.

Yours sincerely

Seumas and Elizabeth Douglas

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

A little more focus on forcing land bankers and owners of earthquake damaged properties to either fix or surrender their lands and buildings. 10 years is long enough.

1.2 Rates

As inflation in NZ is currently 0.6% and is not projected to increase above 2% in the next five years. A rates increase of 2% is more appropriate for the duration.

1.3 Proposed changes to existing rates, and new targeted rates

I believe that the Arts Centre grant is a good thing and support the full \$5M grant proposed.

1.4 Investing in upgrading and protecting our city's water networks

spend the cash, sort the network out and get rid of the chlorine.

1.5 Investing in our transport infrastructure

cycle paths are fine but the council and police need to enforce the red bike light at intersections.

1.6 Rubbish, recycling and organics

Separate glass recycling bins would help.

1.7 Our facilities

I use and will continue to use Wharenui Pool in Christchurch and do NOT support the decommissioning proposal.

1.8 Our heritage, foreshore and parks

We do need more park land to compensate for the dreadful high density housing concrete jungle being built near the city centre.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Arts centre is an important part of chch history and must be maintained.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

The museum and art centre are part of a heritage complex and should all be maintained

1.11 Potential disposal of surplus Council-owned properties

Council should keep these buildings and lease the spaces. disposing of heritage buildings run the risk of the owners defaulting resulting in the council picking up the bill which will likely cost more in the long run.

# Late submission for CCC Draft Long Term Plan 2021-31 “Te Mahere Rautaki Kaurera”

from New Zealand Spinal Trust, April 2021

## **Making the Burwood Rd & Mairehau Rd intersection safe for pedestrians**

The NZ Spinal Trust is based at Burwood Hospital and advocates on behalf of people with spinal cord impairment nationwide. In particular we support patients and their families whilst they are in the Burwood Spinal Unit.

The Burwood/Mairehau intersection is no ordinary intersection because of the pedestrian traffic from the Hospital campus over to the Dairy on the corner and also to the Burwood Shops (bike shop, bakery, fish & chips, hairdresser, laundromat, bottle store). Burwood is the main rehabilitation hospital for the Canterbury region and in addition to having the Spinal Unit there is the brain injury ward and a number of Older Persons Health wards.

Many of the people attempting to get over the roads at this intersection are using wheelchairs for the first time and with the very high volume of traffic entering the intersection from all 4 directions, this can be very dangerous. Last year one patient fell out of their wheelchair on a badly designed curb-cut and broke their leg. Also we believe it is only a matter of time before a car vs wheelchair incident occurs.

We are aware that the Burwood/Mairehau intersection safety works are in the Council's Long-Term Plan, however the NZ Spinal Trust respectfully requests that this work be brought forward so that it occurs within the next 12 months.

The Christchurch City Council has a stated intention to improve the city's accessibility and inclusivity and improving this intersection is entirely consistent with those aims. Therefore we request that completing some form of traffic calming or traffic control at the Burwood/Mairehau intersection that allows for safe usage by pedestrians, in particular wheelchair users, be completed as soon as possible.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I support the Long Term Plan in general and believe it does achieve a good balance overall.

1.2 Rates

In general i support a modest rates increase. I appreciate that the council has a number of challenges still outstanding from the past decade, and also has a number of new challenges to meet to ensure that this city is a great place to live in the future.

1.3 Proposed changes to existing rates, and new targeted rates

I oppose targeted rates for specific council expenses, but support the targeted water rate. Singling out and highlighting "wasteful" council spending is a common tactic by lobby groups who oppose taxation and government spending. I'm suspicious that this targeted rate is a first step towards privatization of these resources, which is something that should be strongly opposed at every opportunity. Arts and heritage are a core part of our city, and should be a part of our core council spend.

1.4 Investing in upgrading and protecting our city's water networks

I support this.

1.5 Investing in our transport infrastructure

Traffic is getting worse. We need better ways to get into the central city, and ways to get around the central city. I support more spend on public transport., and support efforts to make public transport more accessible, and carbon neutral.

1.6 Rubbish, recycling and organics

I support recycling and organic waste collection. I would like to see the Council work with other local governments, and with central government, to work towards a more unified approach to recycling around the country to make it easier for us to recycle.

1.7 Our facilities

I support these changes.

1.8 Our heritage, foreshore and parks

I would like to express my support for the Greening the East project which will see more trees and green spaces in the Linwood / Inner City East area. In particular i'd like to support the Green Corridor that has been proposed to link the Linwood Village to the Residential Red zone. The Red Zone is already a key green-space for residents in the east of the city, and I believe that as the Red Zone is developed it will be a crucial recreational area for the entire city. It is important that the council do all it can to ensure that this is accessible (via public transport and roading) to the the entire city, but especially to to the neighborhoods near to the Red Zone. This is why the Green Corridor project, and other links are important as the Red Zone is developed.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes

Comments  
I support supporting the arts.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes

Comments  
I support this.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.5 Investing in our transport infrastructure

I see motor vehicle traffic increasing daily on our roads and I am a 50 year old woman who cycles with my e-bike on most days from Heathcote valley to Papanui where I work and make use of 2 cycle ways, Linwood and Papanui. It takes me 10 minutes longer on a bike to travel the same distance and I get to work much more relaxed and energetic. I have found that many school children use the Papanui cycle way but it is now almost too narrow with the number of cyclists and being on an e-bike makes it hard to pass.

I fully support cycleways and wonderful that we have the opportunity to have a city that can provide for this.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Anne **Last name:** Scott

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Overall the plan is heading in the right direction but there are some issues.

I fully support the major cycleways. The government is likely to continue to support shovel ready options and cycleways fit into the climate change imperatives needed to stay within 1.5C. The current plan is not ambitious enough. It is time to start planning for future cycleways beyond the current 13 including more facilities in the east, converting Memorial Avenue into single lane with separated bike lanes, and appropriate ring routes.

Christchurch is becoming increasingly diverse. In order to prosper all of our children and adults need equitable access to education and life long learning. The city invests in equity and social cohesion through our Libraries. Please do not cut library services or hours. It is a false economy that assumes that everyone has devices, the internet and a safe welcoming space to study. The city benefits greatly from Tūranga and other libraries, and the range of great people who work there who reflect the diverse community. If Christchurch wants to be a vibrant, bicultural, and innovative city then investing in libraries is a great way to invest in an inclusive future for all participate.

Climate change must be addressed and quickly. All council initiatives should be passed through a climate lens. There are many solutions that are already cost effective and can produce many co-benefits. These include prioritising active transport; reducing speeds on all roads to 40Km/hr by default, with other speeds being the exception; prioritising electrification of buses, rubbish trucks and delivery vehicles; planting more native trees; banning gas connections; and looking at ways to reduce waste and conserve energy.

1.2 Rates

I agree with the rates increases as inevitable to pay for the resources that city needs. In fact this may be the time to invest strategically in the future a little more heavily than proposed. Our future is people not businesses.

Investigate becoming a supercity, including Waimakariri and Selwyn. The city will continue to move west as it expands and moves away from low lying areas. There should be savings in having a larger rate base.

1.3 Proposed changes to existing rates, and new targeted rates

The excess water rate is too generous and should be reduced to 600 litres a day. As Christchurch grows water will become increasingly precious. I support some heritage projects such as the Arts Centre and the Council Chambers, but I would rather that we had a targeted rate to continue progress on making the city visibly bicultural. Time to let go the majority of our often racist colonial past. Our best legacy will be the greening of the red zone and the port hills, and the return of native species.

1.4 Investing in upgrading and protecting our city’s water networks

I have to trust that council staff have got this right. It is a huge investment but as we saw in the earthquakes it is essential. Christchurch is blessed with great artisan water, but it has to be protected and conserved for future generations. I support fluoridation.

1.5 Investing in our transport infrastructure

The majority of the spend on transport should be focused on active transport, reduction in carbon and safety. One area that needs to be changed is policy and regulation. There is a transformational change coming and the current systems are not setup for them. We talk about cycle lanes, but actually they are used by scooters, hover boards, wheelchairs, trikes as well as bikes, and that is great. Many smaller low speed autonomous vehicles are coming, but where can they legally go? I would like to use a small electric vehicle to move material around the university, but cant get one across Ilam or Waimairi Road pedestrian crossings as they cant legally go on the road. We should not be prioritising upgrading infrastructure for cars. We should avoid any investment in hydrogen for transport as batteries are already cheaper and the technology is rapidly improving.

1.6 Rubbish, recycling and organics

Yes.

1.7 Our facilities

I strongly disagree with any changes to libraries, in either services or hours. I would not miss the Art Gallery if it were closed Monday and Tuesday, but please keep the 9pm Wed and weekend hours for those of us who work.

1.8 Our heritage, foreshore and parks

I support protecting and restoring our natural environment and some key heritage buildings, but not private development. I do not support funding the Christ Church Cathedral or its inevitable cost overruns.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments  
We can live without this for another three years are then revisit.

1.11 Potential disposal of surplus Council-owned properties

If there is a good business case to do so and, were it is significant to a community, it is open to public consultation then that is fine.

1.12 Any other comments:

Thank you for the opportunity to comment on the LTCP. I appreciate the many great things that the council has achieved over the last challenging decade. We have a better, more diverse, more resilient, more forward looking city as a result. The plan talks a lot about infrastructure but it is in investing in people, building relationships, improving equity and opportunity for all, and protecting our environment that will determine our future.

**From:** Wayne Phillips  
**Sent:** Sunday, 18 April 2021 5:52 pm  
**To:** CCC Plan  
**Subject:** Ltp submission

From Wayne Phillips,

You need to pump 10s of millions more into the cycle ways. The ones you have planned are good, but its embarrassing how long they are taking, and planning for the next lot of them linking them together needs to be well underway.

Further you must not reduce library opening hours at all.

Thanks,  
Wayne

**First name:** Hayley **Last name:** Guglietta

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I support the Plan and strategic framework from which this will be executed in particular the community outcomes. It would be good to see more action and genuine engagement. It is easy to see why there is a low voter turn out in local body elections and I suspect in this current process, the general population feel disillusioned and disengaged by the process. I was tempted to not bother as sometimes I cannot see the point and like many others feel "does it really make a difference"

1.2 Rates

We don't need any further out of inflationary rates increases, I would like to see better leadership around financial management, budgeting and finding creative solutions such as working with communities and outside organizations with proven track records in stretching the money to go further.

The incident over the Wharenui Pool highlights this lack of leadership and the work I do in my community (Richmond) has shown me first hand what can be achieve when communities, commercial organizations and the Council work collaboratively.

1.3 Proposed changes to existing rates, and new targeted rates

As long as they are equitable and do not impact the already disadvantaged in our community

1.4 Investing in upgrading and protecting our city's water networks

Support this wholeheartedly in fact do more

1.5 Investing in our transport infrastructure

This is chicken and egg we do not have a good housing model nor the population to support transport hubs currently, more work needs to be done with the greater chch group to lay the foundation for a transport infrastructure that will work and be supported. The people in this city are a long way off from ditching their cars and this insane drive to make them is not working.

1.6 Rubbish, recycling and organics

I do not support the investment in the processing plant this should move from it's current location and handed over to the private firm or promote more localized programs for dealing with our food and green waste.

I would like to see more support for local groups who can help reduce the waste before it hits the system

NO Lets not put in any more facilities untill we have improved and fully activated the ones we have and we understand where the gaps are so there is equity around the city. Lets not reduce critical services such as the libraries for the sack of saving a few bucks here and there, lets not punish the citizens for the poor financial management of city facilities.

## 1.8 Our heritage, foreshore and parks

Please retain this contribution we have lost so much in the way of Heritage we need to find ways to support what is left. I support the Avon Otakaro Network submission centered around the OARC and wish to request the allocated parks development funding to be shifted from 2024 (outside this long term plan) into 2021 so this newly developed team can actually do some long awaited planning.

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

## Comments

Undecided

### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

## Comments

Yes I support this as above re heritage

### 1.11 Potential disposal of surplus Council-owned properties

Do it if the asset is not ever going to give a return and is costing ratepayers to maintain! and also think about some of the wasted spaces, if we have a housing crisis why are we not developing these spaces I can think of a number just in my area

10 Shirley Road

## The old bowling club on Stanmore

The old bowling club attached to Petrie park

1.12 Any other comments:

\_\_\_\_\_ in doing this work one of my major frustrations is the siloed thinking of the Council Staff when it comes to understanding the big picture and community contribution particularly in the areas of Ecological restoration, enlivening spaces, Food Resilience and arts and culture. You might what does this have to do with the LTP? Well it does in the sense that if you have a more enabling culture rather than disabling more will get achieved by the community and commercial operators adding more value and flavor that cannot ever be achieved with a top down approach.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

yes

1.2 Rates

that's affordable

1.3 Proposed changes to existing rates, and new targeted rates

yes

1.4 Investing in upgrading and protecting our city's water networks

yes

1.5 Investing in our transport infrastructure

The diamond harbour ferry service is well used by commuters in diamond harbour and yet in the recent timetable changes a key rush hour run was removed (the 6.10pm run) and the run prior to this was brought forward by 5 minutes to 5.45, so now if you miss this run you have to wait until 6.30pm an additional 45 minutes added onto an already long commute is not acceptable. The population of diamond harbour has increased and yet we now have fewer ferry runs this just doesn't make sense

1.6 Rubbish, recycling and organics

yes

1.7 Our facilities

it would be nice to extend the opening of the lyttelton pool so it is open all year round, there are no easily accesible pools in the banks peninsula area

1.8 Our heritage, foreshore and parks

It would be nice to have some work done on the toilets and changing rooms at diamond harbour beach as it is well used by swimmers/kayakers etc, would also be good to have a pontoon for people to swim to after jumping off the wharf.

Diamond harbour and purau are full of dog owners and there are no dog friendly beaches in summer (day time hours). Purau beach (or a section of it) should be dog friendly year round, it's not well used by people beyond

the local area and is very popular with dog owners.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Although i support this, it is in the city center. It's a shame that heritage buildings outside of the city, such as godley house, were ignored and just left to fall by the wayside

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

again this is city center based, it would be nice to have some money put into a face lift of the diamond harbour village center - a popular tourist destination

1.11 Potential disposal of surplus Council-owned properties

one of these properties is the land in diamond harbour (27 hunters rd and 42 where ave). The fast track disposal should be rejected and a proper community consultation should be undertaken. This area has been looked after and replanted by locals and is well used for walking.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

I really would like to keep the walking tracks as they are. They are an asset to the area. This walking tracks are being planted by some of the member to the community and watered my a huge majority of the community. The area is filled with native bird life which is enhanced by the plantings. Up until recently land wasnt really selling

Yes with lockdown and with NZ success in combating covid as enhanced land and house sale but people want to move her as it rural. How will it stay rural if this area is to be developed as you intent. It might only be a few hours now but it will be a slippery slope. All the communities hard work in developing these areas will be lost. Our birdlife will be effected too.

Our water system is hardly coping with the communitirs demands and the roads are just appalling. The ferry service has been reduced at peak times. We only have one cafevat the moment due to the lease not being renewed on the temporary Godley head site. Maybe the council needs to invest in the area before it thinks about rezoning the land proposed for development.

I see you have mentioned about the rates dechlorinized the water plse.

### 1.2 Rates

personally this sucks, poor roads, chlorinated water, a water system just holding out, limited services, Godley head money stolen/ lost and nothing in its place.

### 1.3 Proposed changes to existing rates, and new targeted rates

i dont want this changes. Save rate payers money and leave it as it is. The heart of the community. The community focus. People lead as the community listens on what we want.

### 1.4 Investing in upgrading and protecting our city's water networks

get rid of the chlorine and reduce nitrates. Keep the beach free of sewage leakages and keep the rivers flowing. Update the water network that should be the focus.

### 1.5 Investing in our transport infrastructure

reduce the amount of roadworks/ diversion all at the same time. Traffic lights at night should be head light reactive as often traffic is heavy to the city in the morning. And heavy on the way back to the bays. The lights should reflect this. If the pass is shut maybe the maintenance on the tunnel could be a different night. Do you think it could be coordinated a bit better? Extend the ferry service later Friday, Saturday and Sunday night. Policed at a night time re boy racers and unsafe driving is a good thing. A speed camera up there too especially as cars and motorbikes use it as a racing track.

1.6 Rubbish, recycling and organics  
allow us to have a bigger green bin or a green waste dump this side of town. I see someone has dumped rubbish on dyers pass by Victoria park.

## Feedback

### 1.2 Rates

The scale of challenges we face as a city is immense (particularly the scale of effort required to actually restore the health of our waterways). We are responsible for the majority of environmental degradation here and owe it to our whenua to undo this damage.

I'm all for allocating far greater funding than present and will happily pay even greater rates increases than above to achieve this.

The average citizen bemoans rates increases, but loves to despise the Council for inaction at the same time. Personally I think we are in a period of time where action would help give people more faith in the Council again, and rates increases are one way to achieve this.

### 1.3 Proposed changes to existing rates, and new targeted rates

I'm happy with these proposed rates changes. I wonder if some exemptions to excess water charges could also be made for community services card holders?

### 1.4 Investing in upgrading and protecting our city's water networks

In short, we need to take far more aggressive action to undo the scale of human-induced environmental degradation which we as a city have primarily been responsible for. We owe it to restore the whenua.

It's encouraging to read "We're committed to maintaining the health of our waterways across our district, and to working with our communities to reduce the pollutants that can enter our urban streams and rivers." However, we need to prioritise restoring the health of our waterways, not maintaining current levels of degradation.

I hope we see much collaboration across all stakeholders to achieve this (e.g. via the Community Waterways Partnership). Rather than cherry picking localised solutions, let's investigate what it would take to achieve the catchment-wide levels of water health which our land needs and people demand, then have the conversation of how we get there.

We need to invest in stormwater treatment initiatives at a scale that is proportional enough to actually achieve environmental quality outcomes. Efforts to provide stormwater treatment are often localised and of minimal

effectiveness to actually make a significant enough difference. It's great to see CCC prioritising wetlands and basins in the last few years. It would be great to see more at-source diversion of pollutants, rather than the current ambulance at the bottom of the cliff strategies.

New developments have stormwater targets to meet, but there are almost no incentives to an existing homeowner to improve the negative impact they have on their surrounding watercourses. For years it feels like minimal advertising and awareness are the only steps that have been taken that are relevant to the average homeowner. Retrofitting existing properties to achieve reduced levels of environmental harm via stormwater is expensive which will almost always result in the beneficial options never being implemented (even if the homeowner is aware at all).

There's often very little incentive to do more than what consents and design standards set as bare-minimum requirements. Perhaps incentivising provision of higher levels of stormwater treatment than what current constraints require at new sites (i.e. via rates rebates) could be looked into. This could also apply for retrofitting existing properties with rain gardens, swales, proprietary stormwater treatment devices, rain tanks etc.

I'm very aware of the volume of rubbish which ends up in the Otakaro River in particular. Living in Burwood I regularly spend time on the Otakaro, and last year we drifted past a pied shag (Karuhihi) in the water that had slowly starved to death from getting trapped in a plastic milk bottle lid ring. We can do better!!! In terms of stormwater management infrastructure, the strategies, designs, products and maintenance regimes to divert this rubbish are known, but simply require resources to implement and maintain. Changing how we enforce littering in general would also be worth investigating.

---

#### 1.5 Investing in our transport infrastructure

Efforts to provide stormwater treatment are often localised and of minimal effectiveness to actually make a significant enough difference in waterway health. It's great to see CCC prioritising wetlands and basins in the last few years. It would be even better to see more at-source diversion of pollutants, rather than the current ambulance at the bottom of the cliff strategies.

Greater allocation of funding of stormwater treatment on transport projects would be good to see. Along paved road corridors from kerb to kerb, contaminant loadings are often concentrated at major intersections (increased brake pad wear, tyre wear during turning, heavy acceleration etc). These should be considered for the role each intersection could play in gradually restoring the health of our waterways.

---

#### 1.8 Our heritage, foreshore and parks

I would love to see us allocate more resourcing to prioritise ecological restoration of the red zone. We have the chance to allocate large scale urban naturalised areas of biodiversity on a scale most cities can only dream of. Plans like the Waitakiri Ecosanctuary have put in considerable effort to transforming these dreams to reality already

<https://www.canterbury.ac.nz/media/documents/oexp-science/geography/community-engagement/geog-309/2015/Waitakiri-ecosanctuary-feasibility-report.pdf>

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.12 Any other comments:

On the subject of paying rates in general, I believe it would make the "burden" of paying household rates less onerous if options to pay in more frequent installments than quarterly were available. E.g. monthly, fortnightly, weekly etc. For people living paycheck to paycheck the pressure to budget the amounts required for each installment is challenging.

### Feedback

#### 1.7 Our facilities

I have been working for several years teaching drawing to adults in classes based in the Christchurch Art Gallery Te Puna o Waiwhetu's education room on Wednesday nights. In addition to the wonderful program of open late nights, artist talks, events and film screenings I think it's important to note that the gallery on Wednesday night also quietly operates as a kind of sanctuary.

The later opening hours mean that visitors can enjoy the art and spend time in the spaces without the regular school groups and noise associated with a normal day. For many people this is the very best time to visit the gallery. In my role I have met many of these visitors. Some are there because of a deep love of art, some are curious and looking for new experiences, others are there because the visits support their mental health. I see many visitors who come to the gallery as they do the work of rebuilding their lives after major loss or challenge, those who have suffered a breakup, whose children have left home or who find themselves unfulfilled at work. They visit for new experiences, to reconnect parts of themselves and to explore other views. The work that the gallery does in these quieter off-times meets an important need in the community. I don't believe that this can be measured by visitor numbers as it is about quality and not quantity.

I also wish to add that the loss of public and education programs which make the gallery accessible to new visitors, would further undermine visitor numbers and have a long-lasting detrimental effect on the cultural health of the city. I strongly encourage the council to consider the ongoing effect of cutting these important connective resources.

1.11 Potential disposal of surplus Council-owned properties

I am not in support of the land disposal proposals at 27 Hunters Rd and 42 Whero Ave. This needs full community consultation as the community has a number of interests and ongoing activities on some of this land including extensive native plantings in gullies. It is my submission that these land disposals need to be removed from the LTP.

**Form Summary****Name**

Tak Cheung Woo

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.11 Potential disposal of surplus Council-owned properties

My submission is regarding the land at 27 Hunters Rd and 42 Whero Avenue, Diamond Harbour.

I submit that this fast track disposal be rejected.

A proper community consultation must occur.

Community energy has been invested into projects to care for and nurture this land.

The best interests of the community would need council to consider gully protection, boundaries, road access, school development, walking tracks, infrastructure and other local interests

The council must initiate a robust community consultation process before making any decisions about the disposal of this land.

1.12 Any other comments:

Please fix our roads at Diamond Harbour properly.

## Feedback

### 1.2 Rates

I am more concerned about how this money is spent. I think there has been an overinvestment in central city attractions, and that greater investment is needed in climate change adaptation, protection and enhancing of biodiversity within the Christchurch City area, water management, a greater focus on communities (so I support the concept of 15 minutes neighbourhoods), a greater focus on smaller neighbourhood parks.

I think there needs to be more money spent on community education and engagement, particularly with regards to the adaptation to and mitigation of climate change, neighbourhood development, community gardens, and biodiversity work. Change can be led by the council and other groups but it is at the individual and community level that most changes start, and can be used as examples to encourage others, and to have citizens develop their own responses to these issues.

### 1.3 Proposed changes to existing rates, and new targeted rates

I fully support an excess water charge as proposed in the consultation document. Our water resources are limited and we need to provide incentives for people to use them more carefully.

### 1.4 Investing in upgrading and protecting our city's water networks

The effects of climate change are becoming more obvious. I would like consideration given to making rainwater harvesting on new home and commercial builds made mandatory. This would ease some pressure on our water resources and water networks.

I would want these major infrastructure projects to take into account the effects of climate change in the future. It is wasted money if they do not.

### 1.5 Investing in our transport infrastructure

I would like to see electric buses, smaller buses that can service the 15 minute communities being discussed, and smaller ones that are more flexible in terms of where they go. The Timaru experiment will be interesting to watch and to adopt if it is successful.

I support the idea of an inner city electric shuttle.

I would like buses to use the bus priority lanes. Too often I have seen them in the normal traffic lanes during peak hours with the bus lanes empty. It adds to the general traffic and does not ensure a faster trip for bus users.

#### 1.6 Rubbish, recycling and organics

I would like to see bigger green bins as the standard option.

I'd like to see promotion of composting options for homeowners.

#### 1.7 Our facilities

I would like to see at least one library open in week evenings so that people who work are not left with trying to fit a visit to the library into an already busy weekend. Perhaps a different library each evening so that the whole of Christchurch has access one night a week. Please note that while the new central library is lovely it is not easily accessible for some people and the time taken to get there and back is a disincentive, so other community libraries, not just five nights a week at the central library.

This would also feed into the 15 minute community concept.

if the mobile bus service is to be discontinued perhaps the library could work with rest homes to ensure that rest home residents can visit the library, perhaps in rest home vans, on a regular basis. receiving books already chosen is no substitute for browsing through library shelves and coming across something new and different by chance. It is a way of keeping peoples' minds active and keeping people engaged with the larger community. Some libraries have cafes, so an outing might include morning or afternoon tea or lunch as well as choosing library items to borrow.

#### 1.8 Our heritage, foreshore and parks

I would like to see more funding for biodiversity projects, tree planting, and support for community groups involved in these projects

I would like to see support for school gardens and community gardens, for developers to be required to set aside land for community gardens in their developments in the same way land is set aside for parks.

I would like to see more trees planted on streets. As well as cooling city streets they also help absorb heavy rainfall. They add to the attraction of a neighbourhood and to the city overall as a tourist destination.

I would like to see neighbourhoods and individuals encouraged to plant trees on street berms, and for fruit trees

to be planted in some areas outside schools. and also in lower socio economic areas.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties  
We need to obtain a fair price for these properties and not just sell them off cheaply

1.12 Any other comments:

In whatever the Council does it must have climate change and the management of our water resources at the forefront of decision making.

I would like the Council to support and encourage Environment Canterbury to stop further water bottling and other change use consents that involve massive amounts of water being taken from our aquifers and waterways, even if it means legislative changes are required.

I would like less emphasis on big projects and more on community ones. for example, the Metro Swimming facility being built will be impressive, but will require people to travel to it one way or another. It is in an area that is already congested with sports fields and the hospital. I would rather have seen some money going to smaller community swimming pools such as the Wharenui Pool in Riccarton. I would like these neighbourhood facilities to be supported, not closed.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I object generally to the ever expanding Targeted Rate system that is being imposed on rural Banks Peninsula areas.

The Councils justification of Targeted Rates is not consistent and their position changes depending on the particular argument they wish to defend. If everybody benefits from everything (as the Council is suggesting) - why is there Targeted Rates at all?

Rural properties contribute to urban services throughout the district through the General Rate - but we do not always have those facilities supplied to us in the rural areas, such as: tar sealed roads, street lighting, sewer, water, footpaths, rubbish collection etc. etc. Perhaps all these costings should be itemised for Targeted Rates for the sake of transparency (and I would possibly get a rate reduction of about 80% as I don't get any of these things at my property).

However on top of the General Rate we are also asked to pay Targeted Rates for so called 'local issues' like a medical centre in Akaroa and pest control on Banks Peninsula (and the recent proposal for a wastewater system at Wainui). Apart from being basic services that should be supplied to a community, arguably the wider public will also benefit from those things.

The promised benefit of getting rid of Banks Peninsula Council was that BP would get better services and facilities as they could be funded from a greater pool of contributors. So far this does not seem to be working out so well.

In relation to the Land Drainage proposal. It should either be Alternative Option 1 - where it is a truly Targeted Rate to those who benefit most, or Alternative Option 3 where everyone contributes. It is perfectly consistent to charge businesses and urban properties more than rural properties - as the non-pervious % area of their land to building ratio is usually far greater and this would make a more relevant criteria than using a 'garden shed roof' as the basis of who pays!

### Feedback

1.11 Potential disposal of surplus Council-owned properties

concerning 27 Hunters Rd, Vacant Land, Pt Lot 1 DP14050++, 12F/538, 390,222 sq metres - and 42 Whero Ave, Diamond Harbour.

I request that this land be removed from the LTP and fast track disposal to enable full community board and public consultation.

This land includes Morgan's and Sam's Gullies both of which have been planted in native trees and bush by locals plus walking tracks that are regularly used by many people and school children. The biggest concern is that these gullies and tracks are protected and secured for public access.

Also of concern is the fragile infrastructure of water supply (always leaks) and other services that need to be updated before further development occurs.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

The "Land Drainage Targeted Rate" should remain in developed regions which have altered the Natural flow of the land. We live on [REDACTED] Banks Peninsula. There is no benefit above, on, or below our land for council to spend any money on Drainage as it is already a natural process. which would be unchanged whether we were here or not.

Also some of the points raised about indirect benefits like CBD's etc are not valid. For example;

- our closest Service town is Lincoln, which is not within your boundaries,
- we use State Highway 75 which is controlled by NZTA
- and while I do work in Christchurch, my Employer and/or owner of Building pays rates which would include the Drainage component already. Not to mention those clients that are within your boundaries who also pay the Drainage Rate.

This is only a quick observation as explained in the General comment section below.

1.12 Any other comments:

We only received a letter on the 6th April 2021 (dated 30th March) explaining the Proposed changes to the "Land Drainage Targeted Rate" telling us well into the submission time frame of 12th March to 18th April.

This seems rather disappointing as it does not allow sufficient time to research the Existing and Proposed situations.

## Feedback

1.1 Have we got the game plan right?

### CCC LONG TERM PLAN - GTRZ SUBMISSION

#### Introduction

Thank you to the Christchurch City Council for enabling the community to submit on the Council's long-term plan. Our vision is for the Ōtākaro-Avon River Corridor (OARC) to be largely returned to native bush and wetland. We believe an urban forest and wetland park can support most of the objectives in the Long Term Plan.

We have reviewed the long-term proposal and of particular note to us is the lack of funding for the OARC in the first three years. We would like it noted that we ask Council to bring that funding forward to begin in 2022-2023, to show commitment to the area.

Please find a list of bullet points outlining our comments on the Long Term Plan proposal:

- Most important to us is the thoughtful implementation of the Regeneration Plan's vision under a robust, co-governance model that puts the health of the awa and the ecology first and foremost.
- We need greater transparency re the realistic formation of a co-governance body, given that mana whenua have yet to come to the table in a meaningful way. We may be looking at 18 months to 2 years before that happens - a process that needs to be done right and cannot be rushed. People need to know this. In the interim, larger projects (Eden for example), need some certainty if they are to keep investors on the hook for that long. Smaller projects need to know so they can pace themselves and not burn out volunteers/facilitators who are trying to maintain energy levels. Some kind of governance structure is required.
- We note Council is making essentially no financial commitment until year 2024/25 Current spending is government quake recovery money (e.g. CRAF). There are just two mentions of the OARC on lines 119 and 120 of the LTP Distribution By Wards doc. This means another election/LTP cycle before any Council money is spent in the corridor. We strongly suggest these items be brought forward to the 2022/23 spend to make it definite.
- Community-led restoration with Council support is preferred over a top-down blitz approach because it's cheaper, it gives the community buy-in/'ownership', and also saves money with reduced vandalism/dumping etc
- The flood remediation is a form of restoration too, as they are essentially wetlands, but obviously they are technical and will be done by Council. Until we decide on planting plans etc, we won't know how much that's going to cost
- It's difficult to know if the corridor budget is sufficient, because the breakdowns aren't clear. There is \$7.7 million for

pathways and connections, but does this include lighting? There is \$25.7 million for eco-restoration in the Green Spine, but is this largely the stormwater remediation works? Will it also support community planting projects? Is there anything for planting outside the Green Spine? An alternate breakdown says there is \$86 million to go on land drainage throughout the corridor, presumably including the estuary work? The numbers are big, but probably not big enough - we must spend that money wisely to get the most bang for our buck.

- The focus of spending for ecological regeneration appears to be focused on the Green spine. We urge the council to widen the terminology to include the entire OARC.
- How much stopbanking is in the budget and to what level is unclear. There is a potential danger of wanting to do the easy (cheap) stuff first, leaning into a piecemeal roll-out of stop-banking etc in the places where it is potentially the least needed. Or worse, has unintended consequences on critical projects, partly due to lack of transparency and consultancy until decisions have been made. There needs to be a collaborative and co-designing process for these infrastructural components.
- Monies for biodiversity and planting along the Ōtākaro Avon River Corridor should be budgeted for separately but that isn't clear. Stop-banking and eco-restoration overlap in the Green Spine - doing it right will take a lot more investment than we are seeing here.
- The monies earmarked for the Red Zone must include provision for establishing projects like the Waitākiri Eco-sanctuary and Eden. Once these boundaries are established the CCC can be relieved of its role (and cost) of maintaining those sections of the Red Zone.
- The Regeneration Plan must be kept as per the end-result of years of consultation, work and expense. It is vital that no inappropriate encroachment be made into the Green Spine or critical areas of the wider red zone.
- The pedestrian/cycle path is very positive and will help invigorate other parts of the Red Zone.
- Lighting should be a primary consideration and co-designed with experts and advocates, along with the foundation infrastructure such as stopbanks and pathways. Fit-for-purpose, nature-friendly LEDs should be amber-coloured, fully shielded and run on motion sensors. Throughout NZ areas of ecological importance are installing these best-practice lights. There are also creative options such as luminescent materials which can double as art.
- Bexley Wetland development is a great outcome we fully support.
- We support the targeted excess water rate (for those who use over 700 litres/day), so long as it does not disproportionately affect large, low-income families.

Ngā Mihi

Marc Duffy :)

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

This budgeting process is an unenviable task, with so many different demands of the Council's finances. However I believe that a slightly higher rate rise would be appropriate to keep some valued existing facilities, particularly the Riccarton Road bus lounges, the Mobile Library service, Wharenui pool, and the 8pm closing time at Turanga.

### 1.2 Rates

While none of us like rate increases, sometimes they are a necessary evil so that the best levels of service can continue to be provided to our community. I advocate that slightly higher rate rises are warranted if used to keep some valued existing facilities, particularly the Riccarton Road bus lounges, Mobile Library service, Wharenui Pool and the 8pm closing time at Turanga.

### 1.3 Proposed changes to existing rates, and new targeted rates

I agree with the proposed excess water charge. I have no problem with the proposed heritage and Arts Centre targeted rates as long as they are based on capital value and are not a fixed rate. I am in favour of the idea of a higher rate that targets owners of vacant sites to encourage development and disincentivise land banking. I have no particular view on the other rating suggestions.

### 1.4 Investing in upgrading and protecting our city's water networks

I support this proposed investment.

### 1.5 Investing in our transport infrastructure

I support the proposed spending on transport infrastructure. I am particularly supportive of the proposed spending on active and public transport modes, it is vital that these are enhanced as we continue the journey to reduce emissions as quickly as possible.

The proposed spending on public transport infrastructure is vital. However the continued delay to the Kilmore St two way conversion is particularly disappointing. This conversion is vital to allow the public transport network in the central city operate as intended, allowing the best access to workplaces, facilities such as the Town Hall, and residential areas.

The closure of the Riccarton Road bus lounges would be a highly retrograde step, and is completely at odds with the infrastructure spend to reduce transport emissions.

The consultation document suggests that the are not needed because future planning has not identified a need for these lounges or any similar facilities in the future. I have some familiarity with this planning work, and do not

believe that it was tasked with investigating the current facilities or making such a conclusion.

Riccarton is not just another suburban location - it is the busiest suburban location by far. It receives almost half as many boardings as the central Interchange and almost twice as many as any other suburban location.

It would be very difficult to accommodate the current level of usage at Riccarton solely using on street facilities, let alone accounting for future growth. Prior to the opening of the lounges the Riccarton bus stops were highly substandard. Expecting all Riccarton passengers to wait outside on street would likely raise significant safety issues (because of the volume of people waiting), which as far as I am aware have not been considered.

There are a number of other considerations the Council could make instead of closure, such as:

- Consideration of the opening hours and whether these could be reduced slightly
- Consideration of whether the level of security resourcing remains warranted, and whether this could be reduced at times to reduce costs
- Consideration of whether more space in the bigger lounge on the south side of the road could be subleased, reducing lease costs

Proceeding with the closure of these lounges would in my view send the wrong message about the Councils commitment to reducing emissions and climate change.

#### 1.6 Rubbish, recycling and organics

I support this proposed investment. A lasting solution to the Bromley odour issues is imperative, the residents of the east of Christchurch have suffered because of the deficiencies of the composting operation for far too long.

#### 1.7 Our facilities

I do not support the proposed closure of the Riccarton bus lounges, the closure of the mobile library service, or the closure of Wharenuī pool.

The closure of the Riccarton Road bus lounges would be a highly retrograde step, and is completely at odds with the infrastructure spend to reduce transport emissions.

The consultation document suggests that the are not needed because future planning has not identified a need for these lounges or any similar facilities in the future. I have some familiarity with this planning work, and do not believe that it was tasked with investigating the current facilities or making such a conclusion.

Riccarton is not just another suburban location - it is the busiest suburban location by far. It receives almost half as many boardings as the central Interchange and almost twice as many as any other suburban location.

It would be very difficult to accommodate the current level of usage at Riccarton solely using on street facilities, let alone accounting for future growth. Prior to the opening of the lounges the Riccarton bus stops were highly substandard. Expecting all Riccarton passengers to wait outside on street would likely raise significant safety issues (because of the volume of people waiting), which as far as I am aware have not been considered.

There are a number of other considerations the Council could make instead of closure, such as:

- Consideration of the opening hours and whether these could be reduced slightly
- Consideration of whether the level of security resourcing remains warranted, and whether this could be reduced at times to reduce costs

- Consideration of whether more space in the bigger lounge on the south side of the road could be subleased, reducing lease costs

Proceeding with the closure of these lounges would in my view send the wrong message about the Councils commitment to reducing emissions and climate change.

The Mobile Library service has long been an important part of the city. I remember with fondness going to the book bus after school as a child as there was no library in my neighbourhood. The current van is a shadow of the two large book buses that we used to have. However something is better than nothing, so removing it completely would be very disappointing.

There are surely some commercial opportunities that could support its continued operation. I note that the current van was donated, and presumably this could happen again. I've also seen media coverage where a rest home facility which the service calls at has expressed its disappointment. Facilities such as this could offer a financial contribution to the service to offset some (if not all) of the operational costs.

I am also disappointed to see that Wharenui Pool could be closed. I learnt to swim here and it is a great facility cherished by its community. I do not recall hearing anything at the time the Metro Sports Centre was in the planning stages about other facilities being affected. There is a need in our city for all of the current facilities and the ones under construction/planning, especially as many schools no longer have pool facilities.

#### 1.8 Our heritage, foreshore and parks

It is important that the remaining heritage buildings in Christchurch are restored and enhanced. The earthquakes removed so many, we must treasure what we have left. They bring balance to our cityscape.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

The Arts Centre is a very special part of our city. It is vital that this support is given to restore and enhance it.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

##### Comments

The Museum is currently too small. I fondly remember visiting the Robert McDougall Art Gallery before it closed. It is sad this space has seen so little use for 20 years. I support the funding of the base isolation for it.

#### 1.11 Potential disposal of surplus Council-owned properties

While I have no problem with the disposal of land that serves no further purpose for the CCC, I am concerned the 5 Worcester St is one of the buildings proposed to be disposed of. This building has been successfully run as accommodation for many years, and no doubt could be again in some form in the future. If the Council was to dispose of this building it should only be to a new owner who could enhance and preserve it in some way that continued Council ownership could not.

## Feedback

1.4 Investing in upgrading and protecting our city's water networks

Can we ever have our artesian water we grew up on back? Surely infrastructure and science can get this back? The chlorine whilst obviously helping to keep everyone safe at the moment is just the interim can't be the future of Christchurch water?

1.5 Investing in our transport infrastructure

Yes agreed public transport needs a rattle up. What's wrong with electric trams and trains? Lyttelton also needs a dedicated bike transporter just for either side of the tunnel, encourage people to be physical, we just need through the tunnel, please.

Not more roads more cars. Also ie lanes fantastic, but not with a physical barrier that's makes people trapped, including the cars can't turn into side streets. Rutland St is a nogth are. Just a bottleneck effect, drives everyone nuts and we go slower than the cyclists?! All the new speed limits, why? Do the bikes get checked as well?

E sxotters great if people are responsible and don't hit or cut people off, share the road. They shouldn't be on the footpath. Also they should be made to wear helmets.

1.6 Rubbish, recycling and organics

Less plastics in everyway, all organic, be part of the solution we have great green bins and recycling needs to be done locally in NZ.

1.8 Our heritage, foreshore and parks

Yes parks are amazing in chch keep up the good work, keep prioritising them and the foreshore make it public littering gets fined, it's unacceptable when did NZ become such a destructive culture. There needs to be co sequences for destroying collectively what we all need to preserve.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties

This needs to be not rushed through and quickly sold off. This is not OK, public consultation needs to go ahead first before any land is sold and subdivided. Whero Ave in Diamond Harbour and Hunters Reserve is important to the area and I bought a house here as I loved the rural outlook and space. If diamond harbour gets too populated it will loose the charm of why people want to live and visit here, let's not ruin another beautiful landscape like They have in Queenstown, yes extreme scale. It all starts small and scales up quickly. Democracy needs to be executed here.

Also the roads of more cars wlare to be on them for residents will not cope, the new speed limit is frustrating and the surface of the road is pitiful. A bigger ferry and locals get priorities, I love using public transport but I shouldn't have to queue for hours for a 10 min journey in summer. Or borrow a friends car and drive around cos the queue is ridiculous.

1.12 Any other comments:

The walking and public reserves should be supported and nurtured by the council. Let's spread the native tree corridors and pest control to support our native species.

**Form Summary****Name**

Ruth Baines

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

### Feedback

1.11 Potential disposal of surplus Council-owned properties

I submit that the fast track disposal of land in Diamond Harbour be removed from the Long Term Plan. The normal process for disposal of land that would require Community Board and public consultation should be used instead, to provide for informed consideration of any alternative uses and local community needs.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.2 Rates

I oppose this plan. Increasing rates at 47.8% over the next 10 years is a significant amount, especially starting at 5% next year. I would like to see an increase of only 4% to start, with lower gradual increases in the following years. I think further cuts could be made elsewhere instead (but not transportation or 3waters).

The heritage targeted rate could be decreased, especially in relation to the Christchurch Cathedral and Robert McDougall Art Gallery. I think individuals or organizations or who want to invest in these places can make their own donations, instead of charging all ratepayers who may never visit these places.

### 1.3 Proposed changes to existing rates, and new targeted rates

I agree with charging excess water rates, though I am not sure about the rate of 700 litres a day. I would be interested to see how this comes to play with large families who have a low income, and if it will be fair to those who can only afford a smaller property eg. a family of eight in a four bedroom house.

I agree with the proposed land drainage rate, as everyone benefits from this.

I think that the proposed target rate for the Old Municipal Chambers seems to be a smart plan, and pleased to see that a charitable trust will be maintaining the building.

### 1.5 Investing in our transport infrastructure

I would like to see more funds going into the area I live in, which is Halswell. Halswell is fast growing and now contains many subdivisions. I would like to see the roads maintained and safe.

### 1.6 Rubbish, recycling and organics

I am pleased to see we will be trying to do better as a city. I am keen to see upgrades to the organics processing plant, and would love to be able to put compostable bags and containers in my green bin. I would like to see the option for a swap of red and green bins to help with this at no charge (or almost none) in the regular rates eg. swap the 140L red and 80L green bin around in size if one wished to.

I feel the same about the funds going towards better recycling, and pleased that the Government with be funding the majority of this.

In regards to the proposed \$25 million, I cannot comprehend how much this would cost, so am unable to comment on that.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No  
Comments  
If the Council was only to put in a maximum of \$5 million for this, I would be happy to support this. This would be comparable to the amount being spent on the Arts Centre Te Matatiki Toi Ora. I think \$11.8 million is a lot of money to ask ratepayers for, and it should be up to individuals to pay the extra amount through donations.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

For the most part, yes, I support the proposed plan. I'd also like to mention two things before I get into my other suggestions:

1. I think the removal of LGOIMA request fees would be a step towards a more open and interactive relationship between the council and residents. The existence of these fees act as a disincentive to requesting official information. From personal experience, I can say that they impact on perceptions of council transparency.

2. The lack of streaming of meetings (community board meetings, and all committee, subcommittee and working group meetings that are not currently streamed) is a gap in the council's accessibility to the public that should be filled. I'd love to see these being streamed and genuinely believe they'd improve community engagement.

### 1.2 Rates

I support the proposed rates rise.

### 1.3 Proposed changes to existing rates, and new targeted rates

I support the proposed targeted rate for the Arts Centre and for heritage. Living in Ōtautahi means being painfully aware of the history we've lost as a result of the earthquakes; the Arts Centre is a rare survivor and I'm so grateful for its restoration. Our city needs to retain some of its heritage; I support a rate which will support this.

I strongly support the proposed changes to the land drainage targeted rate. Projected sea level and water table rise over the coming years mean reducing our flood risk is vital. I think this should be supported by everyone in Ōtautahi; the benefits of flood protection are for everyone, not just those who will be affected first (the residents of New Brighton, for example).

I strongly support the proposed water charge. A lack of a water charge results in water loss and wastage; water is a finite and vital resource. The proposed water charge is an excellent first step towards properly valuing water.

### 1.4 Investing in upgrading and protecting our city's water networks

I support the proposed spend. I would also like to see the removal of lead pipes.

### 1.5 Investing in our transport infrastructure

I support the proposed spend, but also support its acceleration! As someone who doesn't drive, Ōtautahi can feel quite isolating and difficult to navigate at times. I support, and am excited to see, transport infrastructure which provides space for cyclists to feel safe and for buses to move freely and efficiently. Young people, and people who don't drive, should feel able to move around the city in a way that feels safe and accessible.

In terms of cycling infrastructure, I would like to see the completion date for the sections of the Ōpawaho cycleway which are not dependent on bank stabilization bought forward to the first half of the 2020s. I would also like to see construction on the remaining Strickland to Tennyson St section of the Southern Lights cycleway bought forward from 2025 to 2023.

For the reasons listed above, I strongly support the proposed spend on bus lanes and other bus infrastructure, and on cycleways. I also support the proposed increase in spending on resurfacing roads and footpaths.

The last thing in this section I would like to ask for is a pedestrian crossing on Durham St south, potentially near the intersection of Durham and Wordsworth St. It's really difficult at any time of day to walk across Sydenham, and Durham St is especially bad. I often get off my bike because I'm so scared to cycle across it, and stand on the side of the road waiting for a gap in traffic for five minutes or more. A zebra crossing or similar would vastly improve walkability in Sydenham, an area which I really love but can feel pretty intimidating as a cyclist or pedestrian.

### 1.6 Rubbish, recycling and organics

I support the proposal as it stands.

### 1.7 Our facilities

I support the proposed investments, however I oppose the changes in level of service.

In particular I oppose the reduction in library hours for Tūranga. There are so few sheltered spaces to spend time in the central city, particularly for youth, or for people who would like to spend time somewhere without having to spend money to justify their being there. I am far from alone when I say Tūranga is a valuable space for students in particular, and it would be a real shame to have our central library operating with fewer hours and reducing its feeling of a welcoming community hub. I actually strongly support Tūranga remaining open later for several hours longer than it already does.

I do not support the closure of the Riccarton Rd bus lounges. The bus lounges provide a warm area during winter, which otherwise would not exist. Having sat for twenty minutes or more in pouring rain many a time, I'm always so grateful for such cozy sheltered areas. I completely oppose the proposed closure of the bus lounges, as I believe the proposed closure fails to take into account the young children, elderly people and disabled people who rely on public transport and would appreciate safe and comfortable spaces in which to wait.

I do however support the proposed 2022-2025 spend on the Performing Arts Precinct.

### 1.8 Our heritage, foreshore and parks

I support the proposed investment. In particular I support the proposed 2022 spend on the Port Hills Fire Recovery, the Otakaro Avon River Corridor investment, and the Mid-Heathcote Linear Park Masterplan Implementation.

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

If this base isolation helps to reopen the building, I completely support it. This gallery could be an absolutely fantastic space and breathe new life into the botanic gardens.

1.11 Potential disposal of surplus Council-owned properties

1.12 Any other comments:  
Thank you for your time!

### Feedback

#### 1.2 Rates

**UNSUSTAINABLE** on the average household

cut all spending thats not urgent trim back everything for now

stop giving money away for stupid projects we can't afford them

the whole council philosophy needs to change on spending . You seem to have forgotten that its not your money your wasting

#### 1.3 Proposed changes to existing rates, and new targeted rates

maybe targeting water bottling companies and charging per cubic meter of water the same as commercial customers pay instead of a yearly consent. How many companies do you know that get there materials for free?????

your already fleecing the average ratepayer with the unbelievable rate increases every year .

I'm not sure why the council thinks they can spent and give away our funds to whatever they see fit, I don't remember being asked to support a \$600,000.00 a year for 3 odd year business just because its a friend of one of the councillors.

You give away so much money to causes you think are important but its not your money

**STOP SPENDING !!!!!!!!!!!**

#### 1.4 Investing in upgrading and protecting our city's water networks

Can the treated waste water and storm water be used in the hydrant system to fight fires instead of flushing out to sea, thus saving good water for drinking???

1.5 Investing in our transport infrastructure

get rid of buses, they have no one in them 95% of the time, I see a lot of buses every day empty. Bike lanes are never busy another waste of funds at the moment. Why not fix the damaged roads we have now (still from earthquake 2011 unacceptable) and later on in a few years look at bike lanes and see if required then.

Sorry you councilors that bike but its not your decision **or your money**

1.6 Rubbish, recycling and organics

well if you go off what you can recycle you can't put a lot in the yellow bin maybe a real recycling plant needs to be constructed

1.7 Our facilities

I'd like to see signage in English at these facilities its a small percentage of our population that speaks or understands maori let alone any foriegn visitors . Yes close the bus exchange

## Feedback

1.1 Have we got the game plan right?

Yes, agree with transport and water focus.

1.3 Proposed changes to existing rates, and new targeted rates

I agree with the implementation of an excess water targeted rate over 700 litres a day.

1.5 Investing in our transport infrastructure

Yes - I would like to see more separated bike lanes to provide safe and sustainable transport corridors and connections for bikes, e-bikes, e-scooters, scooters. Vehicle congestion and dangerous drivers mean it is unsafe for these users to travel on the roads in Christchurch. East Christchurch in particular needs investment in this area.

### Feedback

#### 1.2 Rates

I disagree with the planned rate increase. I already find the rates exorbitant and will find the payment even more difficult when I retire shortly. There are other ways of gaining revenue as I have outlined below. Rate increase as percentages should not be more than the rate of inflation.

If the CCC let more of the land on the urban fringe be rezoned as residential there could be a lot more houses built and each one paying new rates to CCC. It seems that the CCC is happy for new housing to go on good farmland in Lincoln with their rates going to the Selwyn district council and also in Rangiora with their rates going to Waimakariri District Council.

We have land available on the north western side of Christchurch that is in small 4 hectares blocks that are now uneconomically to farm. If this was rezoned to residential houses would be paying rates to CCC and the main

#### 1.3 Proposed changes to existing rates, and new targeted rates

Re proposal to extend the Land drainage Targeted Rate

I strongly oppose this proposal to rate all rateable properties in the district for land drainage. This would mean a significant rate increase for people like myself who will not benefit from this and have already spent thousands of dollars on our own land drainage. You now expect us to fund others !

This is extremely unfair.

Alternative Options 1 or 2 would be OK but I also think that Option 3 is unfair for the businesses especially the small business owner.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.8 Our heritage, foreshore and parks

With the high growth in new housing stock in the Addington area would like to see some smaller sport facilities developed. In the Cornelius Oconnor Reserve(Harman Street) could a public tennis court be built, or a (and cheaper)smaller pickleball court(this is one of the fastest growing sports in the States).If none of these are goers could a petanque court be developed.

It would be great to see the Addington Park facilities redeveloped eg toilets and changing room. If the Addington Rugby League sides are not prepared to use the grounds(which is disappointing) then other options should be considered and more community input into the Park's redevelopment could be opened up. Could we have a tennis court there or a half court, would circuit training work there if the changing room was developed. There is inadequate facilitated areas in Addington for physical sporting activities and this needs to improve.

## Feedback

### 1.11 Potential disposal of surplus Council-owned properties

Potential disposal of 27 Hunters Road, Bayview Road Diamond harbour

I am a Diamond Harbour resident and have lived there for many years.

Our community is semi rural and would be irrevocably changed if 40 hectares of land at Hunters road were sold and developed for residential use. The great number of extra residents would change the very essence of what makes Diamond Harbour a unique place to live.

It is also unlikely that the existing infrastructure could cope with this large increase in residents. The road intersections are hardly safe now. Sewage disposal will become a further issue. Public transport like the excellent ferry service would not cope.

I am opposed to the land being added to the disposal schedule, allowing Council staff and not elected members or the community the right to decide the future of the land.

I cannot understand how Council staff could have considered placing such a large parcel of land in the proposed disposal schedule, considering the potential major impact of this disposal would have on the community, a good idea.

Is this decision heavily weighted toward financial gain rather than respect for the unique character of the Diamond Harbour community.

Please remove the land from the schedule, and plan any future development as small incremental steps rather than a large development like this which will damage the character of the community

### Feedback

1.1 Have we got the game plan right?

Council needs to deliver on the four wellbeings, not just provide roads, waste services and the 3 waters. Intergenerational well-being and providing services to those who face social and economic disadvantages is crucial. As is addressing climate change. We need more education and public engagement on climate action.

1.2 Rates

the rates increase is fine.

1.3 Proposed changes to existing rates, and new targeted rates

yes, happy with these.

1.5 Investing in our transport infrastructure

i support Council doing everything it can to create a low emissions transport system. Please consider equity issues - everyone, children, the elderly, those on lower incomes, should have access to low emissions transport. This means more cycleways, better bus infrastructure. Please don't close the Riccarton bus lounge. Please address the huge impact of the Northern Arterial extension on St Albans. All that heavy traffic is preventing people who live in this inner city neighbourhood from getting around on foot and bicycle. This is an inner city neighbourhood - it's in the perfect location for active transport - but the increase in vehicle traffic from the new motorway extension is making it more dangerous to use active transport.

1.6 Rubbish, recycling and organics

yes - let's reduce waste going to landfill. Has CCC considered the risks of sea level rise on landfills in the city?

1.7 Our facilities

I would rather see Council maintain its current level of service in the libraries and art gallery. Please don't reduce hours. I'm fine with reduction of service desks.

1.8 Our heritage, foreshore and parks

yes - support this. Our approach to our foreshore needs to sensibly and sensitively consider adaptation or retreat due to sea level rise.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

yes - definitely support this, it's one of the most important cultural assets in the city

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

## Feedback

### 1.1 Have we got the game plan right?

Transport: I appreciate the focus on continuing to make Christchurch more cycle- and pedestrian-friendly rather than prioritising travel in private vehicles. You've created some lovely cycleways over the past few years which is a definite incentive to cycle to work rather than drive. Absolutely crucial to have them as drivers are appallingly oblivious to cyclists and it's pretty unsafe to be cycling without a designated (and ideally separated) cycle lane.

Try to ignore all the giant lazy babies wailing about wanting to park their their cars all over the city - they'll be fine.

Liveable city: You mention community gardens in your strategic framework but don't seem to have any actions linked to them - I think this is an area where you should be actively working to create and support more community gardens across the city (ties into other areas like waste minimisation as well as positive community outcomes)

### 1.2 Rates

Seems legit, do what you need to do. If you need to make them higher to ensure we're climate resilient and protecting our waterways, environment and biodiversity sufficiently then do so - it's a false economy not to.

### 1.3 Proposed changes to existing rates, and new targeted rates

I support the targeted rate for the Arts Centre - I think it's a special part of Christchurch and worth preserving and restoring.

Yes to the water rate - frankly I think the cap should be lower than 700 litres a day, as that is an obscene amount of water. We need to become a more water-sensitive city and, sadly, paying for water is probably the only way to force people to have the barest modicum of awareness of how much water they're using

### 1.4 Investing in upgrading and protecting our city's water networks

Could have more focus on rainwater collection (in an ideal world you'd subsidise houses to install rainwater tanks but maybe that's an impossibly expensive dream). Could also look towards recycling greywater for certain uses as they do in Sydney.

#### 1.5 Investing in our transport infrastructure

Yes, pleased to see focus on prioritising active modes of travel as we must focus on reducing our emissions

#### 1.6 Rubbish, recycling and organics

Yes, a very important focus

#### 1.7 Our facilities

These changes are wildly misaligned with several points in your strategic framework and community outcomes e.g. sense of community, celebration of culture, vibrant and thriving city, and promoting public transport.

If anything the libraries aren't open enough as it is (esp. little ones like Spreydon and Lyttelton). It is an absolute nightmare when they aren't open on Sundays - surely that's a day when people who work during the week want to go to their local library? You should certainly not be further reducing hours. Turanga in particular is a joy and a light for the whole city and you mustn't do anything to dim that light. It's wonderful that it's open until 8pm at the moment, and it would truly be a blow to the city if this changed, particularly as Christchurch largely lacks any cafes or non-alcohol related venues where people could comfortably relax or work in the evenings. You could even extend the hours of the cafe if you want to entice people there a bit later?

Also, it is bizarre to say that you want to promote public transport use and improve equitable access to PT, as well as increasing people's perceptions of the comfort of bus stops etc, and then plan to remove the Riccarton bus lounges. Having a place to wait where you have live timetable updates, can be warm and sheltered, and - importantly - that is well-lit and therefore feels safe is absolutely crucial.

#### 1.8 Our heritage, foreshore and parks

Invest more on the parks and foreshore please. You have a fair amount of planting planned and I appreciate that but we must do even more work to enhance biodiversity. Get more volunteers involved if that saves you ca\$h

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

It's an important part of Christchurch's heritage and cultural life, as well as a lovely venue and tourist attraction. We've lost a lot after the earthquakes so it's important to preserve what's left

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

##### Comments

Not passionate about it either way... but if the Museum thinks it's crucial then I agree because I want the Museum to be happy

#### 1.11 Potential disposal of surplus Council-owned properties

Don't have any knowledge on this, so I say follow your heart CCC.

Maybe you could do more targeted consultation and see if the communities around these buildings feel there is something beneficial that could be done with them

#### 1.12 Any other comments:

It's mostly a lovely plan and I appreciate your focus on reducing emissions, planting, and waste minimisation. I also commend you on your excellent interactive bubble tools on the website.

Kia kaha in the face of people losing their minds about the rates increases and do what you need to do

### Feedback

1.1 Have we got the game plan right?

Tennyson Street also needs to consider for a safer means of crossing. Whether its a lighted crossing or a zebra crossing something needs to be done so children can cross it for school. Please look at the Beckenham school zone for reference. There are safety crossings but the speed is also a problem and children are taking unnecessary risks even just crossing one side of the road to the middle!! Please consider Tennyson Street as a priority as a serious accident is just waiting to happen.

|------------------------------------------|
| CCC Draft Long Term Plan 2021 submission |

Have we got the game plan right?

Have we got the balance right? Have we prioritised the right things? If not, what changes would you make?

We are pleased to see:

- the plan highlights the need to take action on climate change.
- 'Meeting the challenge of climate change through every means available' is a Strategic Priority.

We support:

- running the climate change lens across all policies and actions.
- focusing this budget on reducing greenhouse gas emissions – through making changes to the way we travel, the waste we create and the energy we use.
- investing in developing the understanding of the impacts of climate change so council can better prepare and respond to these together with communities.

We note that the Greater Christchurch 2050 project showed people want Greater Christchurch to be sustainable, green, safe and affordable – a place where it's easy to get around using public transport, walking or cycling, and where nature is protected and respected. We support this and what this strongly reflected in the plan.

Climate change and working with nature must be at the heart of our city's planning.

Great to see acknowledgement that "climate change is the biggest intergenerational challenge of our time. As a district, we need to reduce our carbon emissions and do what we can to mitigate the effects of climate change" is upfront as a heading.

Also, great to see that the focus of this budget is on reducing greenhouse gas emissions – through making changes to the way we travel, the waste we create and the energy we use.

What is missing in it is any sense of urgency over addressing climate changes issues in the Council's planned actions.

This long-term plan is at a crucial point in the really short time we have left to cut our global emissions. It needs to be truly transformational.

We have the science and we have the evidence.

The 2018 report by the Intergovernmental Panel on Climate Change (IPCC) confirmed that we must limit the world's temperature increase to 1.5 degrees if we are to avoid the impacts of catastrophic climate change, and that the agreed global threshold of 2 degrees is not enough.

We have been warned, yet New Zealand is still increasing its greenhouse gas emissions and Christchurch is a contributor to this increase.

Much work has been done in New Zealand to work out effective ways to transition away from fossil fuels. Professor Susan Krumdieck, civil engineer until recently based at Canterbury University Engineering School, is a global leader in the field of transition engineering and Co-Leader Global Association for Transition Engineering and Director Advanced Energy and Material Systems Lab. Transitioning to the kind of Christchurch we need to become needs to be guided by what people working on this issue have learnt.

#### Action sought:

We want to see the Mayor and the Chief Executive lead from the top by stressing the urgent need to take strong action to address climate change and for the plan to truly reflect this need.

We would like to see Christchurch more than meet the Government's requirements.

We note this must be done at speed.

- We want to see 'Meeting the challenge of climate change through every means available' move from being one of five Strategic Priorities to sitting above the other four.

We support the actions:

- Working with Ngāi Tahu and Papatipu Rūnanga, businesses, organisations and the community to develop and implement actions in our draft Ōtautahi Christchurch Climate Change Strategy.
- Adaptation planning with communities that will be impacted by sea level rise through coastal erosion, coastal inundation and rising groundwater.
- Engaging with all communities across Christchurch and Banks Peninsula to understand and develop responses to sea level rise impacts.
- Supporting Christchurch residents to take their own climate change action, with advice and tools on sustainability.

We note it is a high priority to engage with all communities across Christchurch and Banks Peninsula to understand the climate crisis we are in.

A part of this must be moving people towards the required behaviour changes. This includes informing people what we face, in terms of horrendous financial costs and costs to our way of life and well being, if we don't reduce our emissions quickly and deeply.

The science on climate change is getting regularly updated. The information passed on to the community must be based on ongoing, updated climate change science.

#### Action sought:

We want to see it stated in the plan that Council will take into account, in its decisions and actions, ongoing, updated climate change science advice on climate change.

Ensure climate change mitigation and adaptation work is well funded. As a part of this, ensure there is good funding for encouraging the behaviour change required across the community.

We ask for funding to be provided in the plan to put relevant council staff through the Canterbury University Transition Engineering course set up by Professor Susan Krumdieck,<sup>1</sup> as a priority.

#### Rates

What do you think of this plan for an average residential rates increase of 5 per cent for 2021/22 and an overall rates increase of 4 per cent over the next 10 years?

#### Proposed changes to existing rates, and new targeted rates

What do you think of these changes to existing rates, and new targeted rates? Have we got it right? If not, what changes would you like to see?

We support the increase as long as spending this revenue takes into account the need to focus on addressing our climate and biodiversity crisis, i.e. puts into practice running the climate lens across all activities.

---

<sup>1</sup> <https://www.canterbury.ac.nz/epecentre/research-and-innovation/professional-development/>

We do not support continued population growth being used as a way to keep up to get rates lower for ratepayers. This continued growth makes dealing with our climate and environmental crisis much harder.

We support charging an excess-water-use targeted rate for households that use significantly more water than the average household, for the reasons stated in the plan, as long as means are found to avoid penalising larger, lower income families and households.

Our water needs to be much better protected and used more carefully and efficiently.

We suggest what is needed is much more encouragement to people and households to collect rainwater, use grey water, install water-free toilets, effectively water gardens. Many Australian states have been doing this for years and made Australians much more water conscious than we are. An education and encouragement plan should be in place.

We support a heritage targeted rate calculated as a number of cents per dollar of capital value of a ratepayer's house for the projects proposed in the plan. This is much fairer than a flat one.

Investing in upgrading and protecting our city's water networks

We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure. Have we got the balance right? If not, what changes would you like to see?

We support the proposals.

We are very pleased to see waste water diverted from Lyttelton Harbour.

We appreciate that the earthquake caused prolific leaks in the water-delivery infrastructure and that these can be hard to track down as many are unseen.

How about a campaign to encourage people to check their water use levels to see if there is an undetected leak on their property?

We ask for an education and encouragement campaign on water harvesting and saving, efficient water use and tracking down water pipe leaks.

Investing in our transport infrastructure

We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements. Have we got the balance right? If not, what changes would you like to see?

It is urgent to make deep, strong cuts in our greenhouse gas emissions to avoid climate change catastrophe for humans.

Getting private cars off the road and encouraging and supporting cycling in a largely flat city like Christchurch is a no brainer.

The plan does not stress the need to reduce use of private vehicles. It is not possible to transition from all our fossil fuel powered vehicles to all electric powered, which some see as the answer to the problem. Professor Susan Krumdieck has spelt this out in a November 2020 interview:

<https://www.stuff.co.nz/environment/climate-news/122689734/sustainability-is-wishful-thinking-get-ready-for-the-energy-downshift>

We are big fans for 15 min villages (FMV) In a FMV, where people can get everything they need within 15 minutes, travel requires space only for citizens to make their own way: a leisurely cycle, a casual wander.

We personally do most of our city travel by cycle, sometimes bus, and fully support the cycleways programme.

We would like to see:

- More money for way finding for cycleways to make it easier for new cyclists to find their way around.
- More funds spent on public transport infrastructure:
  - more regular buses and intuitive routes to avoid the long circuitous trips sometimes required to get across the city
  - Trialling of a free-fare zone in inner city
  - A plan to gradually reduce private cars in the inner city. Copenhagen, another flat city, has been doing closing a street in the city to private cars each year. This would work well in combination with inner city free public transport and public transport from the outlying population areas readily available to the edge of the inner-city free transport zone.
- An e-bike subsidy/incentive for lower income people.
- The plan highlight the need to transition away from high use of private vehicles.
- In the plan a start made to working towards 15-minute villages (FMV).

## Rubbish, recycling and organics

We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure. Have we got the balance right? If not, what changes would you like to see?

We support the statement that waste minimisation is fundamental to helping achieve our climate change goals.

We note that many people do not know what they can and cannot recycle, even in affluent suburbs, and understand that poorly sorted recyclables may just be dumped. This suggests regular publicity, to reach across the suburbs, on how to recycle and what can and cannot be recycled is required. We request this.

We ask the Council to work towards a circular economy as the real and long-term answer to waste minimisation, as opposed to our widespread 'throw away' approach.

## Our facilities

What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service? Have we got the balance right? If not, what changes would you like to see?

We strongly support the investment in community housing.

We ask Council to plan to increase the amount of community housing across the city over the life of the plan, not just “hope to”, as an increase in community housing is a pressing need.

We are big fans of libraries and see them well used and appreciated across the community.

We question whether it is truly necessary to cut hours.

We ask the Council not to make cuts to library hours in lower socioeconomic areas such as Aranui, Waltham, and Linwood, as the libraries are important hubs for these areas.

### Our heritage, foreshore and parks

We’re proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks. Have we got the balance right? If not, what changes would you like to see?

We support a heritage targeted rate calculated as a number of cents per dollar of capital value of a ratepayer’s house for the projects proposed in the plan. This is much fairer rate than a flat one.

We support regenerating the 602-hectare Ōtākaro Avon River Corridor.

The tree crops planted across Christchurch are very popular with the community, including the many in the red zone. It is an ideal site for further Increasing tree crops.

We ask Council to consider this.

We ask that Council does not ‘overbuild’ the City to Sea pathway, but keep it simple and just tidy up the current riverside track.

We support the Rod Donald Trust strategic land purchase (\$3 million) expenditure.

We note the Botanic Gardens Master Plan projects and renewals is tagged to get \$27 million. This is a significant amount.

We hope the master plan does not aim to turn the gardens into infotainment. This would destroy the quiet, visually peaceful atmosphere that is a panacea for so many.

Few citizens would support the gardens changing too much. We appreciate it as it is.

### Funding for the Arts Centre Te Matatiki Toi Ora

Do you support the Council funding \$5.5 million for the Arts Centre? This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.

☒ Yes ☐ No

### Funding for base isolation of the Robert McDougall Art Gallery

Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million? This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.

☒ Yes ☐ No

### Potential disposal of surplus Council-owned properties

Help us decide their future – what do you think of this proposal to dispose of surplus properties?

No comment.

Any other comments:

#### Community grants

We do not support the 5% cut to community grants. Many of these go to community groups doing worthwhile environmental work such as the Banks Peninsula Conservation Trust and Predator Free Banks Peninsula.

We ask for these 5% cuts to be reinstated.

#### Expansion onto to good productive land

We are very concerned about the city expansion onto to good productive land. We regard it as an intergenerational crime to have already built so much over this land, e.g. in the Marshland and Halswell areas, where good market gardening land has disappeared.

This trend must be halted.

We ask the Council through the plan to move to prevent any further good productive land from building development as part of the city's resilience policy, to preserve and provide food security for the city.

We ask for increased planting of tree crops across the city.

#### Growth

We note the many references to continued growth in the plan.

We note this is incompatible with the need to urgently address our climate and biodiversity crisis.

The statement "...we can assume that over the medium to longer term, growth will resume at the rate predicted" is debatable.

We need a powering down, not continuous economic growth if we are to survive as a species. We need to be prepared for possible rapid environmental change.

We do not support encouraging continual growth of Christchurch. In the face of the climate and environmental crisis we have to make a downshift in the system and rebalance how our communities will work and grow.

#### Christchurch NZ funding

We note a great deal of ongoing funding to Christchurch NZ. Their purpose is stated as "to stimulate sustainable economic growth". They further state, "We bring together partnerships to deliver multi-generational community benefit" ... and "We have set ambitious 10-year-goals that go beyond the blunt measure of gross domestic product, embracing and exploring a holistic approach to prosperity". These are vague somewhat meaningless statements. And concerning.

We have but 10 years to reduce emissions. How does Christchurch NZ help prepare the city for the increasing climate crisis?

Ratepayers' money going to Christchurch NZ should be oriented to lowering emissions and preparing for climate disruption, as with any body the council is affiliated with.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

**First name:** Stephanie **Last name:** Oberg

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

While repairing, maintaining and upgrading the city infrastructure is essential, its also essential that rate payers have a good life here- by this I mean they have access to affordable transport and funded public programs, through the library, art gallery and museums.

1.3 Proposed changes to existing rates, and new targeted rates

I find it ironic that we will be charged for water use when foreign bottling companies pay a pittance and their daily rate of use far exceeds the average household level.

1.7 Our facilities

I think its essential our libraries, art galleries and museums maintain a high level of service through the strong delivery of public programs. These programs have far reaching benefits to the city, in particular they serve to educate and enrich ratepayers and future rate payers experience. They encourage a sense of municipal good will, well being, a sense of equality and belonging. They facilitate cultural opportunities/ participation and engagement that serves families, social and community groups.

Its essential we continue to encourage ratepayers and visitors to engage with these cultural centres.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

While I/we love the Arts Centre as a heritage building at the heart of the City, it doesn't serve the city as the iconic place of activity that it once did. The loss of the Dux Delux and the market have robbed the Arts centre of much needed vitality. The amount required is relatively modest but Id rather see the council pay wages for a professional fundraiser to help generate these funds from benefactors and philanthropists, than task ratepayers.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

Its expensive but seems appropriate for the preservation of the McDougall. Its an iconic building

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

do not fast track the sale of council owned land in Diamond Harbour. See further comment in the property disposal section.

1.7 Our facilities

An appropriate replacement for Godley House should be provided for the Diamond Harbour community. This should as a minimum enable the construction of a licensed cafe/restaurant and community space by re zoning the area where Godley house stood. The old foundations which are an eyesore and of no value should be removed or built over

1.11 Potential disposal of surplus Council-owned properties

, requesting that the land as described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) be removed from the LTP and fast track disposal. The normal process for disposal of land that would require Community Board and public consultation, should be used instead.

The two pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan. This is the most important point to make if you wish to see meaningful consultation.

The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation).

Thorough community consultation should be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.

Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not just be made by Council staff.

The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process.

Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to conflicts with community usage and aspirations.

The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea Road, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles.

Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.

If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.

If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner.

The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land? Should all the land be sold (privatised) at one time? Would a staged housing development be better for the community?

Different use options for the land need to be considered not just a sale to a housing developer. Should some parts of the land be released for residential development and other parts held for other uses? Should the Council consider the needs of the community for special types of housing e.g. catering for older or younger people looking for smaller units?

## Feedback

1.1 Have we got the game plan right?

Meet climate change obligations by reforming transport network and promoting active transport. Promote the development of the economy with locally produced products and their waste streams.

1.2 Rates

no objections to rates rises. Christchurch badly needs to pay for infrastructure for the 21st century.

1.3 Proposed changes to existing rates, and new targeted rates

yes please support the arts centre. High to enter use should absolutely be charged additional cost.

.

1.5 Investing in our transport infrastructure

Support transport options for an equitable society. More public transport. Less infrastructure for private cars. Support transport planning that serves 8 and 80 year olds.

1.6 Rubbish, recycling and organics

Increase landfill per tonne dumping charges. Regulate and collect data on private landfills in Canterbury.

1.7 Our facilities

Retain and support all current library services.

1.8 Our heritage, foreshore and parks

.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.12 Any other comments:

Please more funding Strengthening communities.

### Feedback

#### 1.1 Have we got the game plan right?

I feel very strongly that the Christchurch Art Gallery retain its opening hours on Wednesday nights and also that the public programmes and offerings to school groups NOT be reduced by 25% as proposed on page 58 of the Draft Long Term Plan Consultation Document 2021-2031.

I find the proposed reduction in the opening hours and programming problematic, as I already feel that the cultural offerings in Christchurch are sparse compared to other cities like Auckland and Wellington. As a major South Island city with a rich history, I believe that Ōtautahi should aspire to maintain its opening hours and programming schedule at the very least, during the recovery from the pandemic.

Reducing the offering to school groups would have a negative impact on accessibility as many children visit the Art Gallery through their school trips and familiarise themselves with the facility and exhibitions. I would hate to think that some children would miss out on what is an introductory to a superb public facility which gives opportunity for its visitors to explore various forms of human expression and ways of thinking from a young age. Christchurch Art Gallery does this very well as a lesson is developed around an exhibition which is quite different from the one before. It is empowering for young people to be encouraged to engage with a public institution where different forms of expression are genuinely celebrated and explored. This is something Christchurch should be investing more into for its future rather than taking away from.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

I absolutely support the Council funding \$5.5 million for the Arts Centre, especially when it only effects rates by 0.04 percent. So many historic buildings have disappeared since the earthquakes so it makes sense to restore what we have left, especially when it is such a great example of Gothic Revival architecture. The Arts Centre is an important part of Christchurch's history and plays an integral part in the network of buildings that are around the precinct such as with the Canterbury Museum and those in the Botanic Gardens. I cannot wait for its restoration to be complete

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

##### Comments

As with the Christchurch Arts Centre, I support the funding for the base isolation for the Robert McDougall Art Gallery.

### Feedback

#### 1.2 Rates

Rates increase is too high.

More trimming of costs is needed

All CCC works plans and contracts need to be independently checked to ensure cost effectiveness/efficiency.

#### 1.4 Investing in upgrading and protecting our city's water networks

This is a massive spend. Rigorous QC of the water infrastructure program is needed to ensure cost efficiency and cost effectiveness.

#### 1.5 Investing in our transport infrastructure

CCC should aim to reduce traffic loadings...and reduce need for traffic infrastructure spend....essential part of GHG reduction/climate action

#### 1.8 Our heritage, foreshore and parks

Heritage recovery should be priority. Provincial Govt Buildings restoration should be No 1.

CHCH has lost so much of its heritage buildings, and what remains is correspondingly more important, and deserving of financial support to ensure its recovery and maintenance.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Arts Centre is critical for our city's identity and history, and as a tourism destination. It must be supported by CCC.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

I am not convinced the expense of base isolation is needed. The building came through the quakes intact. Its been tested, and survived well.

Re function of the gallery... it should house CHCH's historic art works...which very much tell the story of the CHCH and the city's art culture. As such it would be a special extension of the Museum.

1.11 Potential disposal of surplus Council-owned properties

Council has missed many opportunities to purchase and secure land for the benefit of the community. CCC needs to be proactive in identifying prospective land acquisitions.

Surplus properties should be assesed on a case by case basis, and sold if of no value to Council.

18 April 2021

Addressing the consultation on the Christchurch City Council's 2021 – 31 Long Term Plan draft

### **Submission by the Canterbury Aoraki Conservation Board on the proposed 2021 – 2031 Long Term Plan**

Thank you for this opportunity to make a submission on the proposed 2021 – 2031 and for the Board to outline how the Council can support improving conservation outcomes as part of the Long Term Plan (LTP) process.

#### **Submission Points**

Canterbury Aoraki Conservation Board Te Runanga Papa Atawhai o Waitaha me Aoraki (the Board) wishes to convey that the Council should in this LTP set aside sufficient funding:

- To support active conservation initiatives in the district, *with protecting remnant ecosystems and species prioritized.*
- Working collectively towards implementing Te Mana o te Taiao, the Aotearoa New Zealand Biodiversity Strategy 2020.
- For pest management in the district, specifically in their reserves,
- Work with staff and contractors to improve their skills in identifying indigenous species, so as to minimise loss.
- For protection and ecological restoration of the waters and the natural environments within the district in the Council's control; and
- To have capacity to support collaboration opportunities should they arise to partner with the Department of Conservation, Environment Canterbury, and/or local Runanga initiatives.

The Board would also like to specifically comment/recommend:

- Funding for the Styx regeneration, Funding for the Ōtākaro Avon River Corridor regeneration, Improvements for Ihutai Avon Heathcote Estuary, regeneration of Ōpāwaho – Heathcote River catchment, funding to support improvements to Whakaraupō/Lyttelton Harbour and implementation of Whaka-Ora Healthy Harbour, improvements to the Akaroa harbour and implementation of new wastewater treatment solutions, and funding to support a partnership to improve Te Waihora/Lake Ellesmere.
- Ongoing support for Riccarton Bush, Summit Road society, and Rod Donald Banks Peninsula Trust so their important work can continue.

## **The Role of the Board**

Canterbury Aoraki Conservation Board is an independent body established by the Conservation Act 1987. Made up of twelve appointed members, including four iwi appointees, the Board represents the community of interest not only in the work of the Department of Conservation (the Department) but also in conservation in general throughout Canterbury.

The Board's main statutory responsibility is to work with the Department to develop a conservation management strategy (CMS) for our area and to oversee its implementation. The CMS is developed in partnership with Ngāi Tahu and follows a statutory process involving consultation with the whole community. It sets out objectives and policies for the work of the Department of Conservation in Canterbury over its ten-year life. The CMS became operative on 1 September 2016.

## **Concluding Comments**

Effective protection for conservation values is needed by all stakeholders in society and in particular by local government if we are to progress conservation outcomes for future generations, we invite you as you are confirming your Long Term Plan to consider this.

Paula Smith

Chair

Canterbury Aoraki Conservation Board

## Form Summary

**Name**

Robbie Peacocke

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Overall I think the proposed plan is good.

I support investment in:

- Investment in safe walkways and cycleways, Coastal Pathway, and local cycle infrastructure.
- Investment in our water infrastructure.
- Investment in pest management and increasing biodiversity. I fully support the funding for the Rod Donald Trust and for greening the red zone. It is very disappointing to see that the funding for the Banks Peninsula Conservation Trust has been reduced and that Predator Free Banks Peninsula's funding has been cut altogether. I would like to see more funding for both of these groups.
- Excess water targeted rates (including supporting the exemptions available).
- Future rate for vacant sites in the CBD.

Changes I would like to see:

- I do not support the cuts to the Strengthening communities fund and would like to see funding reinstated.
- Along with excess water charges I would like to see the CCC provide information on how much water is needed to water gardens - I think there needs to be education around this as I think many are overwatering.
- I would like to see funding for more park rangers as this would enable more volunteer hours to be used.
- No fees for LGOIMA requests.
- For transparency I would like to see all community board and all CCC committee, sub-committee and working group meeting live-streamed and recorded.
- CCC should stop the Tarras Airport from progressing. A new international airport will accommodate growing demand, if the council can not guarantee necessary safeguards (legislation and technology) to ensure that this airport will not enable more emissions from unsustainable aircraft then it MUST be stopped. We also need to be prioritising land use to support increasing biodiversity and carbon sequestration not for new roads and airport runways.
- Trial initiatives for participatory democracy (e.g citizen assemblies). I do not believe a council where every councillor is voted in by a white majority can ever achieve fair representation for marginalised and/or minority communities.

1.2 Rates

I am happy with the rates increase. I would rather we spend money today (to address degraded ecology and infrastructure, for climate mitigation and adaptation) than to compound the issues our children will be left with.

1.3 Proposed changes to existing rates, and new targeted rates

All rates should be based on the capital value of a property. I do not support uniform rates...UAGC rates should be zero.

1.4 Investing in upgrading and protecting our city's water networks

I support this proposal.

1.5 Investing in our transport infrastructure

- I strongly support the proposed spend on bus lanes and other bus infrastructure, and on cycleways and other cycling improvements.
- Please bring the Otakaro cycleway forward - 2025 is too late.
- I support the proposed increase in spending on resurfacing roads and footpaths.
- Disincentivise parking in the central city, increase the cost of parking.
- Incentivise cycling - make sure cycleways are well signposted and maps are easily available.
- Incentivise walking - make sure crossing points are convenient and safe.
- I would like to see more investment in mass rapid transport.

1.6 Rubbish, recycling and organics

i support the proposal.

1.7 Our facilities

I support the proposed investments however I do not support the closing of Riccarton Rd bus lounges.

- Need to focus on improving amenity and livability of low socio economic areas of the city such as Linwood, Philipstown, Waltham, Aranui, Northcote, Shirley etc.
- I support downgrading Sumner Library hours but not those in eastern suburbs.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Jane **Last name:** Batchelor

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I support Heritage targeted rates, including a targeted rate specifically for the Arts Centre.

1.4 Investing in upgrading and protecting our city's water networks

I support the proposed upgrade of water infrastructure. Vital for community health and wellbeing.

1.5 Investing in our transport infrastructure

I strongly support investment in cycle infrastructure and safe cycle lanes for all ages. Important for climate change, exercise and community health, making cycling a safe option for children going to school, commuters and reducing vehicles on our roads.

1.6 Rubbish, recycling and organics

I support waste minimisation, am appalled at what I see being thrown into the rubbish pit at refuse centre that is potentially recyclable and would like to see more publicity on what is acceptable in our recycling bins.

1.7 Our facilities

I am against closing the Riccarton Bus Lounge, it makes no sense when trying to encourage people to use public transport.

1.8 Our heritage, foreshore and parks

I would like to see the funding of the Heritage Incentive Grant reinstated to its past levels. It is a significant incentive for heritage building owners and key to retaining the remaining heritage in Chch.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Strongly support the targeted rate, the Arts Centre is crucial to the character of Chch.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

It is a beautiful building and I would like to see it retained as an art gallery according to the terms of its gift to the people of Chch. I am not keen to see it taken over by the museum.

1.11 Potential disposal of surplus Council-owned properties

The community needs to be consulted about the use of these buildings as there are likely to be community organisations that could make excellent use of them.

If the outcome of this consultation is that they are to be sold by the council then a meaningful effort to protect them should be made by consideration of a heritage covenant being placed on them, A heritage covenant is the only way a building can be protected as it is registered on the title and legally binds subsequent owners to retain the building and may have other specific conditions. Mere registration on the council heritage schedule or that of Heritage NZ is not enough to give protection, when an owner is determined to demolish.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I would like to comment on the land drainage targeted rate. I do not support the proposed option to rate all rateable properties in the district. I think the targeted rate should only be levied on properties receiving a land drainage service. This would require Council to be more transparent about the drainage work it undertakes within a catchment like Purau and which properties receive drainage services. This would allow rate payers to assess if they get value for their targeted rates. The drainage work required depends to a degree on Councils (district) planning and consenting practices. In Purau there are also drainage problems due to SLR. If the targeted rate is set for properties receiving land drainage services the service level Council will provide will hopefully become clearer.

Dear Christchurch City Council,

**RE: Long Term Plan Submission: Lyttelton Port Company Feedback**

- 1 Lyttelton Port Company Limited (*LPC*) wishes to take the opportunity to provide feedback on the draft Long Term Plan 2021-31 (*LTP*) released for consultation by Christchurch City Council (*CCC*)

**ABOUT LYTTTELTON PORT COMPANY**

- 2 LPC own and operate Lyttelton Port, which is the most significant port in the South Island in terms of total tonnages of cargo, number of containers handled, the value of exports and the value of imports. By volume, the Port accounts for 34.3% of South Island seaports' overseas exports and 37.4% of overseas imports. By value, the Port handles 41.4% of the South Island's seaports' exports and 67.9% of the South Island's seaports' imports<sup>1</sup>.
- 3 The agriculture, forestry and fishing industries and the manufacturing industry together generate an estimated 105,000 jobs<sup>2</sup> or 34.4% of total employment in the Canterbury region and underpin much of the economic activity of Greater Christchurch<sup>3</sup> and the wider Canterbury region. These two industry groups are highly dependent upon Lyttelton Port exporting their finished products and importing goods required as inputs to their production activities.
- 4 Lyttelton Port is recognised as a 'lifeline utility' at a national level<sup>4</sup>, and as "strategic infrastructure", forming part of "strategic transport networks" at a Canterbury regional level<sup>5</sup>. LPC's Midland Port is identified as "important infrastructure" in the proposed Selwyn District Plan.
- 5 LPC operates two other key sites within the Greater Christchurch area – CityDepot in Woolston, and Midland Port in Rolleston. CityDepot provides an inland container storage and repair facility

---

<sup>1</sup> For the year ending 30 June 2020. Source: Statistics New Zealand Infoshare, Overseas Cargo Statistics ([www.archive.stats.govt.nz/infoshare](http://www.archive.stats.govt.nz/infoshare))

<sup>2</sup> Source: Statistics New Zealand NZ Stat. Business demography tables, February 2019 data. Assumes a regional employment multiplier of 2.0.

<sup>3</sup> As defined in the Canterbury Regional Policy Statement (inclusive of areas within the Christchurch City, Selwyn, and Waimakariri Districts)

<sup>4</sup> See Schedule 1 of Civil Defence Emergency Management Act 2002.

<sup>5</sup> See Canterbury Regional Policy Statement.

in close proximity to Lyttelton Port and is the South Island's largest empty container hub. Midland Port provides for the receipt, storage, packing, devanning and cross docking of full and empty containers and includes direct rail connection to the nine container shipping lines and eight container shipping services that access the Port.

- 6 LPC's inland port Midland Port at Rolleston has been developed to enable containerised cargo for export to be aggregated before transport by rail or road to Lyttelton Port. It also allows for containerised imported freight to be disaggregated and redistributed at a central point relatively close to the main South Island domestic market of Christchurch. This not only reduces transport costs but also reduces road transport externality costs such as vehicle emissions, road accidents and road congestion.
- 7 Trade through Lyttelton Port has grown considerably across both containerised and general cargo. In the year ending 30 June 2020 the Port handled 446,101 containers, an increase of 2.0% on 2019 (despite the impacts of Covid-19 in the second half of the year ending 30 June 2020) and an increase of 188.5% since 2010<sup>6</sup>. This is equivalent to an average annual growth rate of 11.2%. LPC expects this growth to continue into the foreseeable future, as a result of:
  - a. Growth in Canterbury and South Island export and imports; and
  - b. Greater use of Lyttelton Port instead of other South Island ports as shipping companies continue the trend of using larger container ships and reducing services to some ports.

## FEEDBACK ON THE LTP

- 8 Lyttelton Port Company is a partner in the Whaka-Ora Healthy Harbour programme along with Te Hapū o Ngāti Wheke, Te Rūnanga o Ngāi Tahu, CCC, and Environment Canterbury. The partners provide leadership and support for Whaka-Ora Healthy Harbour Catchment Management Plan and are undertaking projects to help achieve the vision set out.
- 9 As a partner in the Whaka Ora – Healthy Harbour, LPC and **supports** CCC's projects which will align to achieve the vision; particular projects we identify within the LTP include:
  - a. 60336: Port Hills & Lyttelton Harbour Erosion and Sediment: Sedimentation and erosion to waterways and the harbour is identified as a key focus area in the Whaka-Ora and LPC is supportive of the funding provisions made by CCC. If opportunities exist to bring this project forward, LPC encourages this also.
  - b. 42008: Lyttelton Stormwater Improvements: Whilst we appreciate some of this will be conveyance and structurally focused, we encourage CCC to identify opportunities to add treatment within the network to provide improved water quality outcomes for the harbour as is envisaged in the Whaka-Ora Plan.
- 10 LPC considers that it is important that CCC, as a partner of the Whaka Ora Healthy Harbour, makes specific reference to this within the LTP to provide clarity of funding and programme for particular projects to be completed. We consider this should be presented by showing this programme commitment as a particular line item with respect to forecast funding and specific projects listed which fulfil commitments to the Whaka Ora Healthy Harbour. In providing this information, we believe this will provide the community, stakeholders and partners with an understanding of commitments to be fulfilled and timeframes for when these are expected from CCC.
- 11 LPC is aware that security of water in Lyttelton is important for both the community and LPC's needs. Therefore we support projects that are proposed to increase water supply security and

<sup>6</sup> Source: LPC Annual 2020 Report page 17 and for 2010 data: [www.championfreight.co.nz/largest-nz-ports](http://www.championfreight.co.nz/largest-nz-ports)

resilience through the upgrading and renewals of the water supply system; projects 60007 and 888 are critical to this. LPC wishes to encourage CCC to consider bringing project 60007 forward as undertaking this work in 2027. We are presently aware of times when supply is reduced or at risk during the 2020/21 summer period and suggest this work should be brought forward where possible to provide a secure and safe supply.

- 12 As part of the Lyttelton Port Recovery Plan, LPC has developed areas of the inner harbour for public access and recreation. This included the redevelopment of Te Ana/Dampier Bay completed in 2018 and connectivity to Naval Point through pedestrian path upgrades. LPC supports two key projects within the LTP which help to complete this vision as follows:
  - a. 357: Naval Point Development: LPC has been in consultation with this project with CCC and is supportive of the project moving forward. We are aware this was pushed back following COVID19 and revision of the Annual Plan; however, wish to emphasise that this project should not be delayed further. Not only would the development provide financial stimulus in the economy, the subsequent benefits of completing this project are highly important. For example, securing the sailing GP and potential other events requires facilities of a particular standard and Naval Point would help to meet this criteria.
  - b. 52119: Lyttelton Pedestrian Linkages: This project is important in enhancing the ability of the community to access Te Ana and Naval Point. LPC is supportive of the timeframes for this project to be completed within the timeframes proposed.
- 13 As the operator of major freight nodes at the Port, CityDepot and Midland Port, LPC requires efficient, safe and sustainable roading networks between its sites and to the wider region. LPC is therefore supportive of projects such as 245 (Inner Harbour Road – Lyttelton to Diamond Harbour) which provide improved levels of service to freight. This project; whilst is not now a key route for LPC with Sumner Road re-opening, does provide an alternative option and resilience for freight from the Port. We consider it important the level of service is continued should the route be required due to hazard events.
- 14 LPC does not wish to be heard in support of its feedback.
- 15 Finally, LPC welcomes Christchurch City Council to contact us for any further discussion on matters raised in this letter.

Yours sincerely,

**KIM KELLEHER**

Head of Environment & Sustainability

## **Rates**

I am concerned that pensioner rate payers are not going to be able to afford the future rates increases. I am already paying \$230 per month for a 2 bedroom, 100sqm over 60s unit.

## **Proposed changes to existing rates, and new targeted rates**

I am also concerned that on top of the rates increase there could also be an additional water rate excess charge.

## **Investing in upgrading and protecting our city's water networks**

I question why you haven't fixed the water pipes before now – can't keep blaming the earthquakes. When you are building more properties you should organise this first when building on that land.

## **Investing in our transport infrastructure**

Roads – turning lights should be double.

Bike Lanes – are a waste of time and I have concerns that emergency facilities have trouble passing by or pulling over when needed. I think cyclists should pay for road use like road user miles. Cyclists also need to indicate more.

Escooters – are too dangerous and too fast.

New road lane markers – these should be marked further back so people know where they are going in advance.

Parking lines – sometimes parking obstructs views.

## **Rubbish, recycling and organics**

Yellow bin – with the change of rules it hasn't been clear what I can recycle.

## **Our heritage, foreshore and parks**

Heritage - You should keep heritage buildings up to date with the money you have.

**Funding for the Arts Centre Te Matatiki Toi Ora**

☐ Yes ☒ No

They should have received enough from the earthquakes.

**Funding for base isolation of the Robert McDougall Art Gallery**

☐ Yes ☒ No

**Potential disposal of surplus Council-owned properties**

Yes – good if they are not going to be used.

**Any other comments:**

I have a concern that neighbours are allowed to park 2 cars on the road 24/7 – they should have enough space on their property to park cars or buy a bigger property.

 Subject: Re: A cost effective community litter initiative

Dear

Thank you for your response to my correspondence re the litter initiative and for your offer of submitting my idea to the powers that be though the thought of such I find highly intimidating and my ignorance of procedure quite a hurdle, so I think I would like to take you up on the offer of forwarding my idea through your good self though this idea is one that I have a rather more detailed overview of the idea laying out such things as award structure so as to maximize results whilst minimizing costs along with the logistics of the operation that I would love to take the time to explain to you so as the actual effectiveness of the concept is relayed concisely. May I be transparent on the point that I'm not an educated man though a natural thinker thus I consider such ideas of which I have numerous are the product of my love for our region or city and our people

thank you for your time  
 regards  
 Mark Leighs

Dear Mark,

Thank you for your email and your idea.

It so happens that submissions on the Council's Long Term Plan is now open seeking feedback from the Council see <https://www.ccc.govt.nz/the-council/plans-strategies-policies-and-bylaws/plans/long-term-plan-and-annual-plans/long/>

Perhaps you would like to submit on this or I can forward your email to the LTP Team to add to the submissions.

 Subject: Re: A cost effective community litter initiative

Dear Lianne

Hello Lianne, I write to you today as stated with what I believe a cost-effective

community inspired council-sponsored idea that I am certain will like all good plans achieve its goal of clean streets but also have a positive flow-on effect

for our city and most importantly our people for I am sure you would agree our city in the recent past have. had shall we call them "challenging" times

As a proud Cantabrian, I have for a while now challenged myself to pick up just 2 pieces of discarded litter to place them in the next council litter bin each time I leave my house. and though like the boy on the beach rescuing starfish I know that my efforts are on my own a losing battle ..... So, in short, my idea is perhaps if the council began a fund of say \$20,000 to be distributed through the existing structure of council workers perhaps parking wardens ( would help their public image ) so they may award any citizen seen picking up rubbish that obviously wasn't theirs ... I believe coupled with an advertising campaign through local radio and posters, etc and the glorification of those first years recipients of the financial reward that this would create a mindset of cooperation and mindfulness amongst the populace of Christchurch

I envision the success of this project in Christchurch would soon make positive noise throughout our nation thus inspiring other councils to once again be inspired by the forward-thinking inclusive leadership of Christchurch perhaps even at a national level.

I look forward to your thought on this idea and if you have an interest in discussing it further please feel free to email me

thank you for your time and please excuse my typing skills ....but I'm just a guy

many thanks

Mark Leighs

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Form Summary****Name**

APRIL 2021

# SUBMISSION – PROPOSED CLOSURE OF METRO BUS PASSENGER BUS LOUNGES – RICcarton ROAD

I am writing this submission to express my concern/disappointment – around Christchurch City Council. Possibly looking to permanently close the Metro Bus passenger waiting lounges on Riccarton Road.

As a disabled person - wheelchair user. That at times uses the Riccarton Road Metro bus lounges on a reasonably regular basis myself. I probably like many others really value having a safe, Warm and dry place to wait for the bus in Riccarton. As from the perspective of a disabled person myself. That know's all too well. What vulnerability feels like – including being around/near those that may be engaging in anti-social behaviour. That unfortunately occurs in some parts of Christchurch. I fully am in support of these Metro Bus lounges remaining open, and NOT being closed permanently – by the Christchurch City Council. As one of the proposed ways to save on council expenditure. As I think it would be a great shame, to see facility's like these close. As they definitely serve a purpose for the wider community using these. Even by having somewhere warm and dry to wait. When the weather maybe rainy and cold. I also believe that Christchurch City council should be proud to say. That we have high functioning bus passenger waiting facility's, that are clean, safe and user-friendly As there are probably some parts of the country - where there are No public transport bus passenger waiting lounges – for those to wait in when catching buses.

As previously mentioned above. Asides from these passenger waiting lounges providing a safe, warm and dry place for all to wait for buses. It's also very convenient having the Metro bus passenger waiting lounges to wait in for the bus. If people do not wish to wait outside on footpath areas during peak times of the day eg: Early morning/afterwork, Before/after school. That can sometimes become congested – at various times of the day. Sometimes preventing other pedestrians from easily being able to use footpath space near bus stops. Such as the Bus stop near Church Corner (outside Countdown Supermarket). That can sometimes have lots of school kids standing around on footpath area near bus stop So this is definitely an advantage with having Metro bus passenger waiting lounges. The current Metro bus passenger waiting lounges also have other advantages such as:

- Warm place to wait for the bus – when the weather is cold and rainy
- Metro passenger lounges – provide adequate levels of seating/floor space, while waiting for the bus
- The Metro passenger bus lounges provide a safe space to wait – where there is lounge security people there. During the hours of Metro passenger lounge operations. So that people don't have to wait out of footpath/street areas. Where there maybe Undesirable types of people. That may frequent these areas eg: street beggars/others that may display anti-social behaviour. That may make some feel unsafe while waiting for buses eg: People with impairments etc
- The current Metro passenger waiting lounges – have usefull features/facilities in them such as: Toilet facilities, RTI Bus information Display Screens, Bus Timetables, Route Maps etc, Lounge Security people there – during the day/evening when the Metro passenger waiting Lounges are open. That adds another layer to people being able to feel a bit safer when waiting for buses in these Metro bus passenger waiting lounges.
- CAFÉ – Within Metro passenger lounge

In terms of the negative impact on various groupings of the community. It would definitely have. If these Metro passenger waiting lounges were to close. This would mean that there would be NO safe waiting lounges. For those that may experience various types of impairments eg: Physical, Intellectual, Sensory, Visually impaired/Blind people, Deaf/Hearing Impaired. As well as those that may experience Mental Health struggles eg: Anxiety & Depression. That may have the need to use these Metro passenger waiting lounges. So I believe this reasoning in itself. Should be important factors for all those making the relevant decisions. To consider when deciding to keep these Metro passenger lounges open or not.

Finally in closing If Christchurch City council is looking at the possibility of discontinuing their involvement. In the running of these Metro passenger waiting lounges. There should defiantly and needs to be other options and alternatives looked at. For example: Identifying other potential partners. Eg: Corporate businesses – Riccarton area OR located elsewhere. That may wish to take over the running of these Metro passenger waiting lounges. Otherwise alternatively entering into or looking at ways. Where there could be cost sharing arrangement/agreement eg: Christchurch City Council/AND OR other parties. So that these Metro Passenger waiting lounge facilities. Can remain open for sectors of the community. To utilize them when using public transport in Riccarton. As well as a transfer point to get to other parts/destinations within the city. Along long with their still being, a safe, warm and dry environment – for all those to be able to wait for buses that need to for whatever reasons. As a closing comment/feedback. I realize that COVID has brought many financial challenges. For many council's across the country – in terms of all of their services and facilities which councils/associated partners operate, and whether they can all stay financially viable & survivable. However it also needs to be remembered. That the community in which we live should have important community facilities like these – that can be of benefit to all who use them.

Daytime phone number

So we can understand what different groups of people are thinking, could you please tell us your gender and age group.

## Draft Long Term Plan – Christchurch City Council

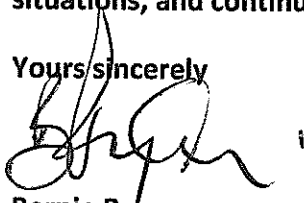

In the Consultation Document (page 58) there is a proposal to discontinue the weekly Mobile Library from July 2022.

On behalf of the Nazareth Retirement Village (Brougham Street) residents I would like you to reconsider this action. We have quite a number of residents who do not have ready access to transport, and because of age and health reasons, find this service of great benefit to them. We also have a Care Facility (80 beds) with residents who are quite unwell and unable to access library books by any other means. The withdrawal of this service would be a major inconvenience and hardship to many people. Most are, or have been, long-term residents and rate-payers of the Christchurch city, and unquestionably the most affected by the withdrawal of this service.

While a reasonable percentage of the village residents still access their library requirements directly from a local library, rather than the van, all are concerned that this service will not be available to them if, and when, they may require this in the future. Unfortunately many of current and future users of the van do not have the means or ability to access library books via the electronic media.

We would urge the Council to consider our residents, and the many others in similar situations, and continue this valuable and appreciated service into the future.

Yours sincerely

Bernie Ryan

Hi Janet,

Thanks for putting that in to Mum's letterbox.

She had a good read and would like to add her name to the submission.

I have also put a submission in via the council's website on behalf of my brother and I in support of the mobile library bus. I did not know that it went to so many retirement complex's!!!

Which is all the more reason to keep it running. Keep up the good battle.

Paul Teeuwen  
on behalf of Riki.

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

**What do you think of these changes to existing rates, and new targeted rates?**

**Have we got it right? If not, what changes would you like to see?** *Regarding excess water charges:*

*I understand the need to charge for excess water use but have a huge problem with understanding the fact that apparently there are Water Bottling Companies using huge amounts of water for a very little cost & making a huge profit from selling & exporting our water. - If this is so I feel it is very unfair to charge rate payers for excess water use.*

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

**We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

**We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

**What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?**

**Have we got the balance right? If not, what changes would you like to see?**

*I am concerned about Reducing Library Opening Hours. I am concerned that the Mobile Library Service is being considered to cancel. - I am fortunate to live near a library but many others especially the elderly rely heavily on using The Mobile Library. Should I have to move I would hate to be unable to access a library. - I frequently see people in libraries using the free wifi internet connections for long periods of time. Maybe if there were charges for these services it would help towards reducing the library's costs.*

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

**We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.**

**Have we got the balance right? If not, what changes would you like to see?**

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Form Summary****Name**

Martina Cepeda

**Are you against the closure of the Riccarton Bus Lounges?**

# How to have your say

## Ways to make a submission

### Te Mahere Rautaki Kaurera Our Draft Long Term Plan 2021–2031

We'd like your feedback on the draft Long Term Plan 2021–31. There are a number of ways you can give feedback:

#### Written feedback

Written submissions can be made from **Friday 12 March** until **Sunday 18 April 2021**.

- ✎ Fill out our online submission form at **[ccc.govt.nz/longtermplan](http://ccc.govt.nz/longtermplan)** (*preferred*)
- 📄 Fill out a submission form (available from libraries and service centres).
- ✉ Email your feedback to **[cccplan@ccc.govt.nz](mailto:cccplan@ccc.govt.nz)**
- ✉ Post a letter to:  
Freepost 178 (no stamp required)  
Long Term Plan submissions  
Christchurch City Council  
PO Box 73017  
Christchurch 8154
- 📍 Or deliver to the Civic Offices at 53 Hereford Street.  
(To ensure we receive last-minute submissions on time, please hand deliver them to the Civic Offices).

You need to include your **full name, postal address, postcode and email address** on your submission. If you wish to speak to your submission at the public hearings, please also provide a daytime phone number.

If you are completing your submission on behalf of a group or organisation, you need to include your organisation's name and your role in the organisation.

#### Social media

Informal feedback, which is not counted as a submission, can be made in the following ways:

Go to our Facebook page **[facebook.com/christchurchcitycouncil](https://facebook.com/christchurchcitycouncil)** and include **#cccplan** in your post.

Tweet us your feedback using **#cccplan**

## Want to talk to us in person?

Come along to one of our drop-in sessions at TSB Space, Level 1, Tūranga in Cathedral Square.

**Tuesday 23 March, anytime between 11.30am–1.30pm**

**Wednesday 31 March, anytime between 4.30pm–6.30pm**

Or come along to one of the Have your say Community Board events (see calendar at [ccc.govt.nz/longtermplan](http://ccc.govt.nz/longtermplan)).

## Can't make these drop ins?

Please let us know if you'd like us to attend your community meeting. Or call us directly if you have any questions:

Katy McRae, Engagement Manager

Phone: 03 941 8037

[katy.mcrae@ccc.govt.nz](mailto:katy.mcrae@ccc.govt.nz)

## Hearings

**Public hearings will be held in May 2021.**

## Submissions are public information

Subject to the provisions of the Local Government Official Information and Meetings Act 1987, we will make all submissions publicly available, including all contact details you provide on your submission. If you consider there are reasons why your contact details and/or submission should be kept confidential, please contact us by phoning (03) 941 8999 or 0800 800 169.

# Te Mahere Rautaki Kaurera

Your role in the organisation Founder

Do you wish to present your submission at a hearing? ☒ No ☐ Yes (if yes, you must provide contact details below)

Daytime phone number \_\_\_\_\_

So we can understand what different groups of people are thinking, could you please tell us your gender and age group.

[Redacted area for gender and age group information]

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

**We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

**What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?**

**Have we got the balance right? If not, what changes would you like to see?**

*We do not support the proposal to reduce the Gallery's Wednesday night hours, nor the decision to reduce the programmes offered. We believe this would have a significant & detrimental impact on Christchurch. A thriving art gallery is an essential part of any thriving city!*

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

**We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☒ Yes ☐ No

Comments: We wholeheartedly support this proposal. Not only is the Arts Centre a treasured heritage building, but also an iconic hub of arts & culture in Ōtautahi Christchurch. We have already lost so much of our history in Christchurch, & we feel confident Christchurchians would be behind this grant.

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021–31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☐ No

Comments:

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future – what do you think of this proposal to dispose of surplus properties?**

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

**Please put this submission form in an envelope and send it to:**

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

C.C.C. long Term Plan.  
Christchurch City Council  
Hereford ST

9 April 2021

C.C.C. long Term Plan.  
Reasons for retaining bus lounges  
at Riccarton.

Please find following reasons for retaining  
lounges.

1. Large number of senior shoppers use  
both lounges for weekly shopping, often  
have trolleys and large loads. This  
includes disabled but mobile seniors.  
They use multiple bus routes i.e. City or  
Aurumhead or Hornby etc.

2. Many overseas visitors go to one mall -  
and it is Riccarton mall. People from the  
West Coast, North Island, and Australia  
use the bus service and the lounges.

3. On a winter morning it can be -3 fcs.  
it is not healthy to have older people

2.

Waiting on the pavement is -3 Fros and  
it is a very uncomfortable wait and does not  
encourage bus travel.

Thank you.

yours sincerely,

Diane Blackwell.

**Form Summary****Name**

Olivia Cannon

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

Yes (if yes, you must provide contact details below)

Daytime phone number

So we can understand what different groups of people are thinking, could you please tell us your gender and age group.

Gender: ☐ Male ☒ Female ☐ Gender diverseAge: ☐ Under 18 years ☐ 18-24 years ☐ 25-49 years ☐ 50-64 years ☒ 65 years and over

## Questions to think about when making your submission

### Have we got the game plan right?

Our overarching proposal is to focus on a deliverable capital programme that helps drive our city forward, with particular investment in roads and transport infrastructure and in protecting and upgrading our water networks. We're borrowing for new projects that have long-term value, and ensuring that the debt repayments are spread fairly across the generations of ratepayers who will benefit from them. We're maintaining enough financial flexibility to be able to handle unplanned events, and we're finding permanent efficiencies in our day-to-day spending. We've managed to do all of this while keeping rates increases as affordable as possible.

**Have we got the balance right? Have we prioritised the right things? If not, what changes would you like to see?**

Priority

No1 Re roads + transport — road maintenance and public transport

No2 Ensure parking in new residential housing development is adequate and/or upgrade/widen streets surrounding.

Put both above more cycleway construction.

### Rates

We've considered a range of options for how best to achieve what we need to achieve while also keeping the average rates increase as affordable as possible.

**What do you think of this plan for an average residential rates increase of 5 per cent for 2021/22 and an overall rates increase of 4 per cent over the next 10 years?**

5% is acceptable, but 4% better

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

**What do you think of these changes to existing rates, and new targeted rates?**

**Have we got it right? If not, what changes would you like to see?**

*I don't understand the question / statement.  
What is a "targeted rate?"*

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

**We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

*I don't know the extent of the work required so am unable to comment. However, I agree that water quality is our top priority, over transport*

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

*I don't know the work required. I suggest a focus <sup>(spend)</sup> on park and ride (designated areas) & less emphasis on cycling.*

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

**We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

More education (school level) re re-use, recycle etc is needed. Can funds be allocated to that?

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

**What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?**

**Have we got the balance right? If not, what changes would you like to see?**

What "changes" to libraries / levels of services?

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

**We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.**

**Have we got the balance right? If not, what changes would you like to see?**

Our heritage is more important now than ever before. Please spend some money on a think-tank to discuss preservation of older suburbs.

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☐ Yes ☐ No

Comments:

*No knowledge*

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021-31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☐ No

Comments:

*What does "base isolation" mean?*

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future – what do you think of this proposal to dispose of surplus properties?**

*Only if they can be covenanted as a condition of sale / purchase*

**Any other comments:**

I would like to see adequate funding for discussion groups / think tanks to discuss the serious issue of inappropriate infill housing in our older suburbs. New suburbs have covenants necessitating all buildings to conform to certain standards. Currently, outgized, featureless towers of investor-driven "medium & high density" apartments are ruining the character & amenity of older suburbs. I would like to see some legislation to control such — a panel of experts & lay people, with costs covered. Fairness for all suburbs, old & new is a priority.

**Thank you for your submission**

The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

Te Mahere Rautaki Kaurera

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☒ Yes ☐ No

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021–31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☒ No

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future – what do you think of this proposal to dispose of surplus properties?**

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

**Any other comments:**

Your proposal to drop the mobil library next year would be a very evil thing to do.

It would have an enormous effect on thousands of older Christchurch citizens

If they have no means transport how are they going to get to a library.

How many millions of dollars are you spending on bicycles lanes for the younger people, but won't spend \$93,000 on the older generation who can't ride a bike, drive a car, or walk to a library.

Please keep the mobil library operating.

**Thank you for your submission**

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**First name:** Carolyn **Last name:** Meynell

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.11 Potential disposal of surplus Council-owned properties

The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process. I propose full consultation be undertaken with our community with regards to the following issues as outlined by our local Diamond Harbour Association. Please do not disregard your responsibilities to the people and community that voted you in your position to look after our interests.

- Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to conflicts with community usage and aspirations.
- The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea Road, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles.
- Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.
- If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.
- If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea

is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner.

- The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?
- Should all the land be sold (privatised) at one time? Would a staged housing development be better for the community?
- Different use options for the land need to be considered not just a sale to a housing developer. Should some parts of the land be released for residential development and other parts held for other uses? Should the Council consider the needs of the community for special types of housing e.g. catering for older or younger people looking for smaller units?

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

**What do you think of these changes to existing rates, and new targeted rates?**

**Have we got it right? If not, what changes would you like to see?**

Targeted rates look like lots of calculations required. Hope these will turn out fairly. The excess water rate seems fair if multi-units are assessed openly; eg. how do we know if we have more than one meter for our 3 properties at same address. P44 of the Consultation document is vague.

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

**We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

Street flooding after heavy rains as sew manholes and drains are unable to cope needs to be addressed urgently.

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

I believe that Urban Rail should be implemented — to reduce traffic and emissions on roads to West Melton, Rollerton, Rangiora + Lyttelton. Changing the bus fleet to electric needs to be started. Cycle lanes involve huge construction expense and start-up traffic for relatively little use. The Riccarton Bus lounges should not be closed — just because other areas do not have them. They are vital for many elderly bus users and there is no other reason.

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☒ Yes ☐ No

Comments: *So much has been spent already it needs to be completed and to continue and increase its learning capability.*

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021–31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☒ No

Comments: *I don't know what the R.M. Art gallery is used for - if anything? This project could be delayed.*

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future – what do you think of this proposal to dispose of surplus properties?**

*Good idea. To reduce maintenance, supervision and make financial gain.*

## SUBMISSION ON DRAFT LONG TERM PLAN.

I AM AGED 69 & RETIRED. I HAVE LIVED & WORKED IN CHRISTCHURCH MOST OF MY LIFE. I LOVE OUR CITY. I HAVE HAD A PROFESSIONAL OCCUPATION & I WOULD LIKE TO THINK THAT I HAVE CONTRIBUTED SOMETHING TOWARDS THE CITY & ITS PEOPLE OVER THAT TIME. I CERTAINLY HAVE FINANCIALLY IN TERMS OF THE AMOUNT OF RATES I HAVE PAID.

NOW I DREAD MY 3 MONTH CYCLE WHEN I HAVE TO FIND MONEY TO PAY MY RIDICULOUSLY EXPENSIVE RATES. I LURCH FINANCIALLY FROM ONE RATE INSTALLMENT TO THE NEXT, THIS IS A REAL

CONCERN TO ME & MOST OF MY FRIENDS WHO ARE IN A SIMILAR POSITION.

ANY INCREASE IN OUR RATES SHOULD BE LIMITED TO THE INFLATION RATE. PERHAPS THE COUNCIL COULD SAVE SOME MONEY BY:

- REDUCING STAFF LEVELS & THE WAGE BILL
- BECOMING MORE EFFICIENT
- NO TARRAU AIRPORT (NO DOUBT THIS WILL AFFECT US)

- NOT INCREASING STAFF PAY. AFTER ALL MOST COUNCIL EMPLOYEES HAVE A JOB FOR LIFE - NO STRESS & LITTLE RESPONSIBILITY.
  - REDUCING SIGNAGE ON CCC VEHICLES - THE COUNCIL DOES NOT NEED TO PROMOTE ITS BUSINESS.
  - NO ELECTRIC VEHICLES - THEY COST TOO MUCH & HAVE A LIMITED LIFE SPAN - THEN WHAT DO YOU DO WITH THE VEHICLE'S BATTERY - WHEN IT IS SPENT! NOT VERY GREEN.
  - NO MORE BIKE LANES WHICH THE CITY'S INHABITANTS DON'T USE.
  - NO WORK JUNKETS PAID FOR BY THE RATEPAYER.
  - FORGET CLIMATE CHANGE - WHATEVER N.Z DOES IN THIS REGARD WILL HAVE NO IMPACT ON THE WORLD. WE ARE A SMALL WINDY ISLAND GROUP DISTANT FROM ANY OTHER COUNTRIES.
- THE COUNCIL IS ONE OF THE FEW ORGANIZATIONS THAT CAN DECIDE ON A BUDGET & THEN BILL THE RATEPAYERS THE APPROPRIATE AMOUNT TO BALANCE THE BOOKS.

WOULDN'T LIFE BE GREAT IF WE COULD ALL DO  
THAT.

IN THE FUTURE IT MAY WELL BE THAT FIRST  
HOME BUYERS WILL BE ABLE TO PURCHASE A HOUSE.  
BUT IF OUR RATES KEEP ON INCREASING, THEY  
WON'T BE ABLE TO AFFORD THEM. THEIR RATE  
PAYMENT IS LIKELY TO EXCEED THE INTEREST  
ON THEIR MORTGAGE.

I WILL SOON HAVE TO SELL MY FAMILY HOME  
WHICH I HAVE OWNED SINCE 1982 BECAUSE  
YOUR RATE "TAKE" IS SO EXCESSIVE.

PLEASE DON'T INCREASE OUR RATES ANYMORE.

WHEN THE NEXT VALUATIONS COME OUT REFLECTING  
THE INCREASED PROPERTY VALUES OUR RATES WILL  
GO UP ANYWAY. WHY NOT JUST ALIVE WITH THAT  
INCREASE.

THANK YOU.

18/4/21

J. A. FRENCH

Mary Grant

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

Free Buses in within the 4 Avenues

## Form Summary

**Name**

Helene O'Neill

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

A lot of vulnerable people rely on these spaces to feel safe. From the elderly to women at night. Waiting on the street is far riskier than waiting in one of these lounges. I understand they're closing due to youth intimidation and gangs. However closing public spaces that provide safety to many is not the way to solve this issue.

## Form Summary

**Name**

Marie Leala

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

Although I do not use the bus stop that often, at one point in time my mum who finished late would wait in the lounge to shelter from the cold after a long day at work. It would be disappointing to see such a useful public space taken away, especially when it serves to encourage people to take public transport by ensuring they have a safe place to wait for the next buss.

## Our Draft Long Term Plan 2021-2031

### submission form

---

#### Your details:

Full name **Judith Marie Dennis**

Postal address

Postcode

Email (preferred)

#### I am completing this submission:

☒ For myself or ☐ On behalf of a group or organisation (please tick one)

Organisation name

Your role in the organisation

Do you wish to present your submission at a hearing? ☒ No ☐ Yes (if yes, you must provide contact details below)

Daytime phone number

So we can understand what different groups of people are thinking, could you please tell us your gender and age group.

Gender: ☐ Male ☒ Female ☐ Gender diverse

Age: ☐ Under 18 years ☐ 18-24 years ☐ 25-49 years ☐ 50-64 years ☒ 65 years and over

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.

Have we got the balance right? If not, what changes would you like to see?

Yes.

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?

Have we got the balance right? If not, what changes would you like to see?

An adults playground with seating conducive to conversations eg  $\Delta$  so single elderly can go and have a ride or just meet with others & converse. Like the have overseas (playgrounds) This may be the only opportunity for conversations with like minded people !!

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.

Have we got the balance right? If not, what changes would you like to see?

Yes.

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

What do you think of these changes to existing rates, and new targeted rates?

Have we got it right? If not, what changes would you like to see?

---

---

---

---

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.

Have we got the balance right? If not, what changes would you like to see?

---

---

---

---

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.

Have we got the balance right? If not, what changes would you like to see?

As my grandson was injured when the bus stopped suddenly and was seated in centre of the back row - he was catapulted down the aisle & received an injury to his arm/wrist and couldn't compete in rowing competitions.  
A seat belt in this seat would be worthwhile!!

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☒ Yes ☐ No

Comments: \_\_\_\_\_

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021-31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☒ Yes ☐ No

Comments: \_\_\_\_\_

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future – what do you think of this proposal to dispose of surplus properties?**

No – the Heritage buildings should be retained and repaired at a later date. (when funds available.)

Any other comments:

This image shows a single sheet of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There is no handwriting or printed text on the paper. A small, faint smudge or mark is visible near the center of the page.

**Form Summary****Name**

Rose Bayldon

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

As a frequent active transport user these kinds of lounges are super essential!

## Form Summary

**Name**

Samantha Watson

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

As a frequent bus user the bus lounge on Riccarton road is a god send especially on cold/rainy/windy days. I visit Westfield mall often and I have never witnessed any violent or antisocial behaviour. While it may not seem like a big loss to someone from the council who is fortunate enough to be able to afford to drive a car but for those of us on a low income having somewhere to rest and relax while waiting for the bus is everything.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

As someone who both lives, works and commutes near/at/from Westfield, and have seen firsthand how useful these areas are for the general public, including being a much safer space than out on riccarton road during the darker months of the year. Where else is there for commuters to wait? There are no viable seating areas on Riccarton road outward bound, removing the lounges would be a terrible idea.

## Form Summary

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

As someone who goes to Riccarton by bus at least 3-4times a week and has mobility issues this would mean extra hassle for my trips especially in the winter time. I've used this space since it opened and likely will for many years to come and to penalise bus users because the council has mishandled funds in other places is unacceptable.

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

CCC is showing itself to be remarkably ignorant and shortsighted with respect to its proposals for public transportation. Public transport in Chch should be FREE and improvements---especially bus shelters and frequency of service---need to be EXPANDED, not cut, in order to increase ridership. The idea that Riccarton bus lounge is slated for closure is a massive red flag that CCC is woefully detached from, and ignorant of, the everyday experience of working people who rely public transportation. Perhaps their cars should be taken away so they can get a clue.

## Ways to make a submission

Te Mahere Rautaki Kaurera

### Our Draft Long Term Plan 2021–2031

We'd like your feedback on the draft Long Term Plan 2021–31. There are a number of ways you can give feedback:

#### Written feedback

Written submissions can be made from **Friday 12 March until Sunday 18 April 2021**.

- Fill out our online submission form at **[ccc.govt.nz/longtermplan](http://ccc.govt.nz/longtermplan)** (preferred)
- 📄 Fill out a submission form (available from libraries and service centres).
- @ Email your feedback to **[cccplan@ccc.govt.nz](mailto:cccplan@ccc.govt.nz)**
- ✉ Post a letter to:  
 Freepost 178 (no stamp required)  
 Long Term Plan submissions  
 Christchurch City Council  
 PO Box 73017  
 Christchurch 8154
- 📍 Or deliver to the Civic Offices at 53 Hereford Street.  
 (To ensure we receive last-minute submissions on time, please hand deliver them to the Civic Offices).

You need to include your **full name, postal address, postcode and email address** on your submission. If you wish to speak to your submission at the public hearings, please also provide a daytime phone number.

If you are completing your submission on behalf of a group or organisation, you need to include your organisation's name and your role in the organisation.

#### Social media

Informal feedback, which is not counted as a submission, can be made in the following ways:

Go to our Facebook page **[facebook.com/christchurchcitycouncil](https://facebook.com/christchurchcitycouncil)** and include **#cccplan** in your post.

Tweet us your feedback using **#cccplan**

## Want to talk to us in person?

Come along to one of our drop-in sessions at TSB Space, Level 1, Tūrangā in Cathedral Square.

**Tuesday 23 March, anytime between 11.30am–1.30pm**

**Wednesday 31 March, anytime between 4.30pm–6.30pm**

Or come along to one of the Have your say Community Board events (see calendar at [ccc.govt.nz/longtermplan](http://ccc.govt.nz/longtermplan)).

## Can't make these drop ins?

Please let us know if you'd like us to attend your community meeting. Or call us directly if you have any questions:

Katy McRae, Engagement Manager

Phone: 03 941 8037

[katy.mcrae@ccc.govt.nz](mailto:katy.mcrae@ccc.govt.nz)

## Hearings

**Public hearings will be held in May 2021.**

## Submissions are public information

Subject to the provisions of the Local Government Official Information and Meetings Act 1987, we will make all submissions publicly available, including all contact details you provide on your submission. If you consider there are reasons why your contact details and/or submission should be kept confidential, please contact us by phoning (03) 941 8999 or 0800 800 169.

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

### What do you think of these changes to existing rates, and new targeted rates?

Have we got it right? If not, what changes would you like to see?

In theory, sounds acceptable BUT with 47% overall increase over 10 yrs in TOTAL 10yr Plan is NOT acceptable (65,000 pop ~ over 65/m pension) - More cost savings needed or defer some items still. Airport unlikely to bring investing in upgrading and protecting our city's water networks up dividend for 5 yrs

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.

Have we got the balance right? If not, what changes would you like to see?

"Dog Squad" TV. progr. showed dogs used to "smell" water pipe leaks. Maybe try this too! Patch up rather than dig up so much.

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.

Have we got the balance right? If not, what changes would you like to see?

Intersecting bus routes would help reduce car use as only in/out of Centre means cars still get us places more efficiently. Lots of buses pass my home (4 per 20 mins) with few/no passengers (9.30 - 3.30). Times close/peaks/lows. Ridiculous building cycleways all over Chch WITHOUT doing surveys to see if routes ARE already accommodating a good number of cyclists. Question schools/parents re likelihood of using them - when at least bikes for all their families??

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

**We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

**What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?**

**Have we got the balance right? If not, what changes would you like to see?**

One Mobile Libr. bus needs to be retained - even if use/times/placements are varied. The Earthquakes 2010-11 proved their use too. With 65,000 over 65s in Chch and bus routes that do not go by libraries or intersect to change buses to do this, we need this support.

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

**We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.**

**Have we got the balance right? If not, what changes would you like to see?**

Re assess whether use of these places will be effective post-repair or "white elephants" - if so, defer "repair" further.

The foreshore will go under; so local residents need to accept measures will be SHORT-term & -maybe relocation of properties to council-leased land.

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☒ Yes ☐ No

Comments: Having spent over \$100 million on reinstatement there, to avoid it being "white elephant" like support is logical.

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021-31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☐ No

Comments: Unsure. Dividing the Museum's collection & function with a NEW purpose-built ancillary museum elsewhere in CCH could be a better option & more locals might then access museum collections, and not revive R.M.D. art g.

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two <sup>which?</sup> heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future – what do you think of this proposal to dispose of surplus properties?**

In general, yes.

**Any other comments:**

With the goal waking up at last to loss of fertile, food-producing land, reassessment by you of where future housebuilding can/should go is needed. Pressure on owners of unused land within the city to "use it or lose it" - ie. forced "sale" if they can't afford to develop it (legality?)  
 Revisit building height/density requirements/constraints

Nothing here about helping "social housing" needs.

**Thank you for your submission**

Please put this submission form in an envelope and send it to:

## Form Summary

**Name**

Ted Leros

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

Close it down! It's a waste of retail space. People can wait in the mall.

## Form Summary

**Name**

Jessie Robb

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

Closing the bus lounges would be a disservice to so many people. Waiting in a bus lounge when it's dark makes me feel so much safer as a woman than waiting outside.

Emailed & returned on The 17<sup>th</sup> April

2313

I wish to make a submission to the 10 yr Plan,  
Concerning the mobile library

I live at Streamside Court and appreciate the Service that has been offered with the mobile library. It appears this service is under threat of being withdrawn.

I understand that the mobility bus was purchased with public donations to help those with mobility issues, to be able to enjoy the services the library offers. It is relatively new and in good shape to continue its task of giving the elderly the opportunity to use their library membership.

In my area there are a large number of elderly residents who need such a service. They are no longer able to drive and can struggle walking long distances if using public transport. Being able to get books easily has been a real life line for many of us. We would hate to see this Service stop. It would impact on our well being and health. Reading is often the only pleasure many of us are able to have and it is a strong link with the past.

Losing this service is a real threat to our independence. We have been able to loan a wide range of books over the years and it would be difficult to have to get other people to have to take us to the library or

have to purchase books instead. Not an option.

~~For~~ For our age group, books are an integral part of our lives, rather than devices, which many young people now use. Most residents in my Village do not have computers or Kindles.

Please would you reconsider your decision in light of the elderly needs in our community. We are all rate payers and have paid substantial amounts over our life times. Please hear our voices in this matter.

Thankfull yours,  
Sue Sara.

P.s. 3 attempts were made to e-mail this submission to the give electronic address without success on the 17<sup>th</sup> April in the afternoon.

## Form Summary

**Name**

Serena Dempster

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

Don't get rid of the lounge! This provides a safe spot to wait for the bus from the environment and from potential assault as a lot of students study late at the university and use it to wait safely for transport. The elderly also need a place to safely rest and wait for their transport. The preposition of encouraging public transport and then getting rid of an essential public tool which can help this goal is incomparable!

## Form Summary

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

I already pay more in bus fares than I would spend on petrol owning a car. If the CCC expects me to continue making sacrifices because I care about the planet, they need to at the very least not actively make changes that make my use of public transport more dangerous for me as a woman. I already do not feel safe using the Christchurch bus system at night. If you close the shelters that help me and other women feel safer in a well lit off-street area you will force more of us to use environmentally irresponsible forms of transport. I'm horrified that this is even an option you are actively considering.

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

I also support increasing funding for infrastructure supporting cycling and walking. It is essential that we reduce car travel in Christchurch to reduce carbon emissions and improve population health and wellbeing.

**Form Summary****Name**

Janine Hazeldine

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Comments?**

I am a student at the university of Canterbury and use the riccarton bus lounges regularly late at night. Taking these away would make me feel unsafe bussing alone. I already walk with my keys between my fingers once I get off the bus and walk to my appartment. Bussing is my only form of transportation I have, I don't even own a bike. As a young women with a small build, I am in constant fear walking home, but the riccarton bus lounges provide alittle but of safety In my journey.

Question I have tried to have input on your 'Have your say' pages and found them impossible. What I wanted to say is that I think the opening hours for the Upper Riccarton Library should stay the same. Many community groups use this facility in the early evenings, including the quilting group I belong to. I would hate to see the hours reduced. Please reconsider. Many thanks. Chris

Amélie Harris

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

I have been a frequent user of public transport in Christchurch over the past 7 years attending High School in Christchurch. Without the Riccarton Bus lounge I would have had to wait outside in the dark to catch a bus home. Without the lounge I will not use the buses as frequently as I would feel extremely unsafe at nighttime and cold in the winter. The Riccarton stop is very busy and therefore I see a lot of people using the lounge, including elderly and disabled people who often need a place to sit down and rest while waiting for their bus. The removal of the lounge would be an absolute travesty.

## Form Summary

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

I have been busing in Christchurch since the start of 2011 and use the systems daily. The loss of the lounges is only asking for further bullying, danger to wāhine or others by not having a security guard or a place to wait safely is a huge loss to the area. I have seen assaults and people bullied there after school hours and it is asking for trouble by not having a safe place to wai.

## Form Summary

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

Public transport will never be a viable alternative to private vehicles without continuing to invest in making them a compelling choice, and not simply option of last resort! We absolutely need more investment in PT, not less, and the return far outweighs the cost.

## Form Summary

**Name**

Jen Middendorf

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

I use the Riccarton Bus Lounge regularly, especially on dark winter evenings when it feels a lot safer (and warmer!) waiting inside than out on the street. Because I don't live on a main bus route, almost all my bus journeys involve a change of buses at Riccarton, so removing the bus lounge would mean taking the bus would become a lot more unpleasant, making me less likely to choose to take the bus.

Subject: Feedback on Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31 / 386

Good Morning

I have received in the mail a letter from the CCC re changes to the Land Drainage Targeted Rate in our area.

Due to this you are implying a significant rate increase.

Living in                      we do not receive from the CCC any of the following - water, sewage or rubbish collection.

As property owners we provide our own services, including sewerage, drainage (taking care of waterways and culverts) and taking our rubbish to the Barrys Bay Refuse Station. All of these services are maintained at our own cost.

We would like to see significant improvement of our services before an increase to rates should apply.

Helen and Tom Keeley

Kilmeny Kelly

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

My family uses buses very single day. My children need buses to go to school. Bus use should be encouraged. In Addington there is a serious problem with busy road and a serious lack of car parking. The bus shelter at Riccarton is a safe place, it encourages bus use and a sense of community.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

The Christchurch city council needs to prioritise its spending on public transport as part of its obligation to mitigate climate change. Increased funding for public transport is also equitable towards the poorer residents of Otautahi. The consequence of removing this bus shelter is a decline in participation with the bus services and an increase in costs to the bus companies.

## Form Summary

Julia Stowell

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

the bus stops provide a safer space for women travelling at night and protects public transport users from the elements! Very important to support public transport in NZ - we are building all these cycle lanes, why can't we also improve bus infrastructure?

Riccarton

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

The closure of the Riccarton Bus Lounge is a contradiction of the Council's actions to solve Climate Change (creating more cycleways). The bus lounge is a necessary facility to make public transport and active transport more attractive compared to driving because it provides a place for people to stay if it is cold or rainy outside. Once more people start using public transport (by the improvement of the bus services), then there will be a lack of loitering because it will become a mode most people will be using.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

NZ and CHCH especially needs to improve with public transport and cycling accessibility. We need to help our community in regards to physical and mental wellbeing. Public and active modes of transport are proven to improve people well being. Taking away this shelter will significantly decrease the number of people wanting to catch the bus which is a huge step backwards for CHCH

To: CCC Plan <CCCPlan@ccc.govt.nz>  
Cc: Margaret Hean  
Subject: Long term plan 2021-31

Good morning

I would like to put in a submission regarding the Land Drainage Targeted Rate.

We live on a rural property with no drainage provided by the council.

We have no stormwater pipes, no kerbing or channels, no swales and no drainage ditches either on our property or within a number of kilometers of our property.

We have had to pay ourselves for all our drainage requirements including the digging of soak pits filling these with gravel and maintaining these for our property.

We consider the proposed option to charge us for services that are not provided to us to be grossly unfair.

Should the council undertake to provide us with the above amenities we would be happy to pay for them but until that time only those who are provided with them should pay for them in the same way as they pay for their water and sewage services.

We therefore wish our submission to be:-

Option 1: Set the land drainage rate on properties receiving a land drainage service.

Thank you

Margaret and David Hean

Phone  
Email

Ps. Due to the current postal service, notification of this did not arrive in our letterbox until last week when we were away on holiday. It was only found on our return!

Please confirm receipt

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

When I was younger, I frequently used the bus to travel to school, to visit family and friends and to attend after school programs. Often I would be waiting on the side of the road waiting for my bus between 7-9pm waiting for a bus home as a young teenager alone. I feel if I had a place like the bus lounge back then I would have felt a lot safer and also it would have been somewhere outside of the cold that I could have spent my time. There needs to be places like this for young people to feel safe and keep out of the weather when they are travelling on the buses.

This lounge provides a warm shelter for commuters as well as restrooms. I frequented this lounge for several years to get to work and uni every morning, and I was always so appreciative of a warm place to sit when waiting to transfer to another line, especially in the early mornings during winter when the mall was not yet open.

**Christchurch**  
City Council 

**AVONDALE RESIDENTS ASSOCIATION****Submission to the Long Term Plan**

We do not wish to be heard.

**Safety of our Community**

Like other Eastern communities Avondale has been impacted severely due to the 2010-2012 earthquakes. We in this community have lost our shops, tavern, primary school and 40% of our homes. The bus service was cut severely which has been hard on our elderly and not-so able residents. The land slump will exacerbate flooding due to forecast sea level rise. As a result of all of these factors the suburb has become very unsettled.

During the last term the Coastal Burwood Community Board advocated to the Annual Plan for a community facility to service a wider area that a Community Survey and a Feasibility Study identified as a need. Wellbeing concerns and safety issues were also brought to the attention of the council in their submission. These have also been brought to the attention of the Policing Team over the last 3 years. Little has been done to address our safety concerns. Time moves on but the issues haven't. In fact the safety concerns have increased.

Our petition to the 12 April 2021 Community Board meeting raised the community's concerns about unsafe driving practices residents of Briarmont Street are being subjected to. Adjoining streets (example Waratah Street) are also impacted. Residents do not feel safe because the roads we speak of are the older style design, being long without traffic calming implemented. Orrick Crescent intersects with Briarmont Street and also Cowes Street and is excessively wide. This Crescent is a nightly playground for reckless drivers burning up and drifting. The evidence is clear to see that it is indeed a nightly playground for reckless drivers burning up and drifting. Waratah/Niven Street bend is also experiencing driver behaviour that is unsafe. Here is the copy of our submission:

**PETITION FOR ACTION:****TOPIC:****SAFETY OF OUR COMMUNITY**

We the undersigned, residents of Briarmont Street, Avondale would like to express our concern regarding the constant and ongoing speeding drivers through our residential street and adjoining streets in Avondale.

We ask that in conjunction with the Police, the Coastal Burwood Community Board find solutions to reduce vehicle speeds that are effective and permanent.

This petition will be presented to Kelly Barber, Community Board chair by the Avondale Residents Association'.

Signed by 37 residents:

Residents feel the police could do more however we have been informed that there isn't the resources to monitor the area.

Although the board members were sympathetic to deputation's concerns and recognised that we were advised outside of that meeting that there is no funding to make our streets safe. This is simply not acceptable. We should not be inflicted to constant speeding cars shortcutting through our streets or boy racer behaviour that will kill more than our pets.

Please give our request funding consideration as traffic calming and streamlining measures have become an urgent matter that needs addressing.

Thank you for your consideration.

**Avondale Residents Association.**

**Kathy Simmons**  
Coordinator

## Form Summary

**Name**

Courtney Dyson

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

We cannot expect people to reduce their emissions by using public transport if we cut off the facilities and infrastructure that make these changes possible.

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

This should be a no brainer? All busstops should also have some form of shelter.

## Form Summary

**Name**

Isa Siemers

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

To me, a good future for Christchurch includes a robust, accessible, reliable and well-funded public transport system. The reasons for this include environmentalism, traffic, quality of life for people whose access to private transport is restricted, and more. Closing the Riccarton Bus Lounge will disincentivise public transport for those who have alternatives, and hurt those who solely rely on it.

## Form Summary

**Name** Jessica Frost

Hi Paul,

One of our associated cultural group (Shir Rama Krishnna Group) , a group of 70 members would like to put interest on the property 740 Avonside Drive.

Due to short notice with a cultural programme for 9 days the President could not put a online application.

I am acting on their behalf and would like to put interest on that property.

They promoted cultural awareness and would like a small property for their programmes. they would like a lease on land % building and may be a right of purchase after 10 years.

I am happy to introduce their representative.

Look forward to hearing from you.

Regards  
Ashwin

## Questions to think about when making your submission

### Have we got the game plan right?

Our overarching proposal is to focus on a deliverable capital programme that helps drive our city forward, with particular investment in roads and transport infrastructure and in protecting and upgrading our water networks. We're borrowing for new projects that have long-term value, and ensuring that the debt repayments are spread fairly across the generations of ratepayers who will benefit from them. We're maintaining enough financial flexibility to be able to handle unplanned events, and we're finding permanent efficiencies in our day-to-day spending. We've managed to do all of this while keeping rates increases as affordable as possible.

**Have we got the balance right? Have we prioritised the right things? If not, what changes would you like to see?**

Yes, it's about right, although it sometimes feels like roading/motorways gets more attention than any other issue!

### Rates

We've considered a range of options for how best to achieve what we need to achieve while also keeping the average rates increase as affordable as possible.

**What do you think of this plan for an average residential rates increase of 5 per cent for 2021/22 and an overall rates increase of 4 per cent over the next 10 years?**

Acceptable, so long as this is the absolute upper limit. <sup>(and fixed)</sup>  
Residents with limited income will need continuing assistance in line with this increase.

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

**What do you think of these changes to existing rates, and new targeted rates?**

**Have we got it right? If not, what changes would you like to see?**

Don't have enough information to comment on this; except for excess water use which sounds reasonable, but needs to be fairly applied

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

**We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

Vitally important work. Should have top priority.

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

Keep on top of this one ~ continue to try educating people of the need for change (this always scares a lot of people!) and keep offering options.

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.

Have we got the balance right? If not, what changes would you like to see?

Keep up the good work on this one, too!

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?

Have we got the balance right? If not, what changes would you like to see?

No less than 20% would be ideal.  
The proposed changes should reflect current use but don't lose sight of the effects on changing preferences that may arise in the future.

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.

Have we got the balance right? If not, what changes would you like to see?

Yes ✓ although 15% would be preferable.  
(and number)  
Choice of projects, however, will depend on what people see as important to them.  
I don't support restoration of the cob cottage at Ferrymead Bridge on its present site.

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☒ Yes ☐ No

Comments:

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021–31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☒ No

Comments:

*Far too much for this one aspect of the city's cultural budget.*

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future – what do you think of this proposal to dispose of surplus properties?**

*Good idea.*

**To:** McRae, Katy <[Katy.McRae@ccc.govt.nz](mailto:Katy.McRae@ccc.govt.nz)>  
**Cc:** Rayya Ali [REDACTED]; Ina Savelio [REDACTED]  
**Subject:** NZMCA - submission on the Christchurch City Council Long Term Plan 2021-23

Dear Katy,

We respectfully request the Christchurch City Council accepts this late submission from the New Zealand Motor Caravan Association Inc. (NZMCA).

The NZMCA currently represents 105,000 New Zealanders, many of whom enjoy exploring our country (including Christchurch) at leisure in their certified self-contained motorhomes and caravans. Approximately 9,000 individual members live in and around Christchurch and enjoy camping in their own backyard. The Council's freedom camping bylaw also provides for responsible camping in public areas where there are no available facilities.

There is a severe lack of council-owned public dump stations (with access to potable water) across the City. The existing public dump stations in Christchurch are privately run on commercial land and their continued operation is always uncertain, particularly when the land ownership changes hands or other commercial priorities result in the unexpected closure of those facilities on site.

It is essential that Council provides well-functioning public dump stations in and around Christchurch. The Local Government Act 2002 and section 23 of the Health Act 1956 require local authorities to improve, promote, and protect public health. Local authorities must assess the need for sanitary services to protect public health from indiscriminate waste disposal. Most local authorities, during their assessments under Part 7 of the Local Government Act, determine the need to provide for public toilets, which serve both residents and visitors alike.

Local Government New Zealand's guidance on assessing sanitary services notes:

***For some territorial authorities, the need for and supply of effluent disposal facilities (i.e. facilities for the disposal of wastewater and sewage from trucks and campervans etc.) may be relevant in the assessment of public toilets*** (Ref: Local Government New Zealand (2000). The knowhow guide to assessing water and sanitary services under the Local Government Act 2002, p. 29.)

**The main benefits of a well-functioning public dump station include:**

- Providing a safe and convenient facility for local ratepayers to use when they return home from their motorhome and caravan holidays.
- Support the local visitor industry which benefits financially from domestic and international motorhome tourism.
- Helping to protect communities and the environment by providing facilities that encourage visitors and ratepayers to safely dispose of their wastewater.

In 2017 the NZMCA tried to work with the Banks Peninsula Community Board to install a new dump station to service that area, however we're not sure where that projected landed (see attached email exchange).

## **RECOMMENDATION**

THAT, in partnership with the New Zealand Motor Caravan Association Inc., the Council establishes a budget in the Long Term Plan 2021-31 to prioritise the installation of at least three new public dump stations in Christchurch (x2) and on the Banks Peninsula (x1).

The NZMCA would be open to providing the pre-cast units, signage and financial contribution towards installing these new facilities. The value of the NZMCA's additional financial contribution per project would be subject to further information on the new facilities, including their location, design plans, and estimated development costs. As a general guide, we generally provide other local authorities with between \$5,000 and \$25,000 additional financial support per dump station project.

Ngā mihi | Kind regards

**Subject:** RE: DS query website

Hi Fi,  
 Thank you for your email.  
 Please see attached "Dump Station Assistance Request Form" which is part of our Dump Station Guide (also attached).  
 Please take the time to view the guide as it outlines installation requirements, and the need to follow these NZ Standards guidelines.  
 We will need this form completed for funding approval to be obtained, therefore we require a breakdown of costs/ letter outlining what you require. Funding is therefore determined on a case by case scenario. If you require further information please contact me.

Kind regards

**Ina Savelio** | Property & Projects Co-ordinator

Good Afternoon

I'm following up on a Banks Peninsula Community Board meeting from November 2017, which stated the New Zealand Motor Caravan Association had reportedly offered to install dump stations around Banks Peninsula. A staff member was assigned the action for progressing this, but does not seem to have progressed it any further. Does your organisation contribute towards the installation of these dump stations?

Many thanks for any help you can provide.

Kind regards

**Fi Smith**

# DUMP STATION GUIDE

New Zealand Motor Caravan  
Association 

August 2015

## DUMP STATION FUNDING

Dump stations are small facilities that help protect public health and the environment by ensuring the

proper disposal of black and grey waste water from motor caravans and caravans.

The NZMCA provides assistance for the installation of public dump stations by way of a:

- (1) pre-cast unit (and fittings) built to **NZS 5465:2001 – NZ Standard for Self Containment of Motor Caravans and Caravans** – that requires minimal work to assemble and install, along with the appropriate signage to assist the public in locating the site;
- (2) if necessary, additional financial assistance (assessed on a case by case basis).

In return, we require the dump station to meet the following conditions for its economic life:

- Accessible to the general public 24 hrs a day
- Accessible for large vehicles (*e.g. 12m buses*)
- Built to a design that meets the approval of NZMCA and relevant Council requirements
- Able to be used for no charge (*We are not opposed to a donation so long as the donation is not 'required'*)
- In a location where NZMCA members have verified a need for a dump station (*The NZMCA will investigate this part once we have your request for funding*)

*The NZMCA has a limited budget, so meeting the above conditions **does not guarantee** that funding can be approved in that financial year.*

You may purchase units and signs. Please visit [www.nzmca.org.nz](http://www.nzmca.org.nz) for an order form.

We publish the location of dump stations in our members' Travel Directory, bi-monthly Motor Caravanner magazine, and website.

If the dump station is well-designed and fully accessible, then no one has any excuse for not using the facility and this will help protect public health and the environment from indiscriminate waste disposal.

**To apply for funding, submit the application form at the end of this guide and include any necessary supporting documentation.**

NZMCA representatives are willing to volunteer their expertise and assist local authorities, organisations and contractors to find suitable locations for dump stations, and provide technical advice for installation.

## DUMP STATION INSTALLATION

Dump stations need to be positioned with appropriate access, e.g. drive through, or a large turning area, for longer length vehicles as motor caravans can be up to 12m long and can have their tank release valves on any side of the vehicle.

### Constructed dump stations:

Appendix B of NZS 5465:2001 (below) outlines the minimum requirements for dump station installations.

Below is a photo of a practical dump station installed in Omokoroa, giving an idea of the size and look of the facility, and a schedule of materials and plans for the 'ideal' dump station.

We recommend you use a gully trap in the dump station with a removable grate for people to empty port-potties, or use non-standard sized hoses without spillage or blockage.

If you have no grate over the open hole of the gully, the station will need a lid to keep out litter and leaves.

Two x 1m posts either side of the dump station is recommended to prevent vehicles driving over the top and damaging the unit.

## NZS 5465:2001

### Appendix B – Dump station installations

#### B 1

Dump stations for the disposal of waste water from the waste tanks of motor caravans and caravans having self containment certificates in accordance with this Standard shall comply with the following minimum requirements.

**Note: waste outlets can be on either side of the vehicle.**

#### B 2

The station shall be on an un-floodable level site with a good vehicular access and egress, and should be clearly marked with this complying sign. **Ideally, large vehicles should be able to “drive by” from either direction.**

#### B 3

The station shall consist of:

- a) A self cleansing unit of at least 600 x 500 mm with an upstand surround of not less than 100 mm, above the adjacent carriageway or on sealed surfaces 25 mm with a gradient to the outlet of at least 1 in 60.

**The following is to clarify the above instructions:**

(i) A self-cleansing unit of at least 600 x 500mm with an internal upstand of not less than 100mm with an internal gradient to the outlet of at least 1 in 60;

(ii) The external upstand of the Dump Station not more than 100mm and not less than 25mm above the carriageway serving the facility.

For current drainage regulations refer to Acceptable Solution G13/AS2.

- b) The following shall be mounted in the base:

- i. A 75mm diameter bayonet coupling;
- ii. A 75 mm diameter cap to seal the bayonet coupling;
- iii. A 100 mm N.B. floor waste outlet with protective grate; or
- iv. A 100 mm N.B. sewer pipe with a water seal.

- c) Mounted over the base shall be:

- i. A water standpipe with the tap, and backflow prevention device as approved by the local authority consent not less than 450 mm above the base;
- ii. A flexible hose of not more than 300 mm length attached to the tap.

#### B 4

The installation shall be connected to a waste water treatment system and shall comply with all appropriate regulatory and bylaw requirements.

## PRE-CAST DUMP STATIONS

In an effort to standardise the construction of dump stations around New Zealand, we have developed a pre-cast lightweight version to comply with NZS 5465:2001.

|              |                                                               |
|--------------|---------------------------------------------------------------|
| Top of unit  | 540 x 575mm                                                   |
| Base of unit | 590 x 630mm                                                   |
| Lid          | 600 x 600mm with hinge straps embedded into concrete surround |
| Total weight | approx. 80kg                                                  |
| Gully trap   | adjustable supplied if required                               |
| Grating dish | inside gully dish                                             |

## SCHEDULE OF MATERIALS: DUAL BAY DUMP POINT (see figure 2)

Note: A building consent application will have to be gained for approval to construct the foul sewer drainage portion of this work.

### Island

- 'Dump point' island [typical size 9000 x 800mm] with rounded ends. Constructed with concrete kerb to perimeter with 100mm thick concrete slab 2850mm long in centre and grassed surfaces each end. Include all reinstatement of surrounding surfaces. **Note: Lip of dump station unit should be flush with surface of concrete slab to remain no more than 100mm from the carriageway.**

### Water

- Water supply pipe from existing reticulation run to one outlet in the island including all necessary excavation, imported fill, backfill, surface reinstatement, pipe work, fittings, connection to existing system as required.
- 1 No. vertical water supply pipe finishing 1100mm above island with bend and extension for tap, fixed with saddle clamp to timber post.
- 1 No. backflow prevention device.
- 1 No. Self closing bib tap (for non-potable water tap)
- 1 No. Self closing bib tap with screwed ruff (>15sec timer) or standard brass hose tap (for potable water). Contact us for further information on bib taps.
- 1 No. 500mm long flexible hose pipe and coupling for attachment to tap.
- No.100 x 100 x 18000 long H5 Tanalised Pine posts set in ground and bedded in concrete.
- 1 No. Non-potable water sign mounted on post.
- 1 No. Drinking water sign mounted on post where fresh water supply is located.

### Foul Sewer Drainage

- 1 No. Building consent approval.
- 1 No. 100mm diameter sewer branch pipe work from existing foul sewer system to new vehicle dump point including all necessary excavation, imported fill, backfill, surface reinstatement, pipe work, fittings, connection to existing system as required in accordance with Local Authority requirements.
- 1 No. 700 x 550 precast concrete surround set in concrete slab.
- 1 No. 100mm diameter sewer P-trap, connected to new pipe work.
  - 1 No. 100 x 100 x 75 dia. sewer pipe junction.
  - 1 No. 300 x 210 Marley gully 1575-100 without grate, bed in concrete.

- 1 No. 75 dia. sewer pipe in vertical extension with bend as detailed connected to branch, terminating with 75 bayonet coupling set in concrete.
- 1 No. 75 dia. airtight cap to coupling with chain stay fixed to concrete.
- 1 No. Cement plastered grading of concrete base of sump trap to falls.

### Metal lid/cover (supplied with approved funding)

- 2 No. Purpose made hinges each comprising two lengths 50 x 6 MS flat, one end fish tailed for casting into concrete, both drilled for and complete with M12 bolt and locking nut, other end welded to checker plate lid.
- 1 No. 700 x 550 x 6mm checker plate cover with lifting ring.
- 1 No. Hot dip galvanise plate and hinges
- 2 No. Cast hinges into concrete base.

## DUMP STATION SIGNS

When a new public dump station is to be installed we may provide the following signs:

|               |                                      |
|---------------|--------------------------------------|
| <b>Small</b>  | 300 x 300mm, single sided            |
| <b>Medium</b> | 300 x 580mm, double sided            |
| <b>Large</b>  | 470 x 900mm, double sided            |
| <b>Water</b>  | 150 x 210mm, potable and non-potable |

Medium and large signs come with brackets and straps.

Small, medium and large signs in situ

**Figure 1 – ILLUSTRATIONS OF TYPICAL DUMP STATION SET UP**

**Figure 2 - DUAL VEHICLE DUMP POINT IN ACCORDANCE WITH NZS 5465:2001**

If fresh water tap/s are to be included in the installation, it is recommended that they be installed as far away from the D/S carriageway as the site will allow. With the increasing numbers using the facilities congestion can occur frequently.

Cc: 'Ben Alexander'; Poppy Alexander  
Subject: Drainage Rate  
Attachments: FW: Property Team - Watercourse - Bugg Drain

Hello

The Council owns a drain that runs right through our property owned by Blackwood Estate Limited and BK and VJ Alexander Family Trust at [REDACTED]

I have contacted the Council as per the attached email correspondence a number of times to sort the total lack of drainage in what I understand is Bugg Drain which runs through our place.

I have had no joy at all in getting you to clear the drain and get it flowing again. It does not flow at all.

In 2014 City Care estimated the job to be \$60,000 plus GST

If you were to maintain the drain, it would seem fair to charge a rate. If you did not clear the drain, I don't see how you could fairly charge a rate to Blackwood Estate Ltd or BK and VJ Alexander Family Trust.

We run a horticultural operation and the plants near the end of the rows in the areas against the creeks do not survive as the water does not drain away and has got to the stage that this is the first year that the drains have held water all summer (second driest year in 10 years) so the problem is deteriorating.

If someone from the Council would like to view the issue onsite, please let me know as it would be great to go over it with them.

Alternatively I would purchase the land and deal with the drainage myself.

Thanks  
Ben Alexander

David Laughlin

20 April 2021

**Submission re stormwater drainage proposal**

Broadly, this comes down to the principle of “user pays” verses “everybody pays, regardless of usage”. Naturally it would depend on how each of our properties, are affected by stormwater issues, as to which side of that principle is the one, we would pursue.

We own one of the ten or so properties, in Charteris Bay opposite Orton Bradley Park, in the past classified as rural residential, in other words, no footpath, curbing, street lighting etc, that would be the norm in the city. Implicit in that is also the absence of any council provided stormwater infrastructure. This is not a problem, in that the land naturally drains towards the sea foreshore, beyond the northern boundary of the properties.

The only time in recent years, when stormwater was an issue, was in the winter of 2014, when during heavy rain, the stream through Orton Bradley Park became dammed at the road bridge due to plant material dislodged further upstream. Four properties became inundated, but as the cause of the problem was self-evident, a volunteer working bee at the time, and occasionally since have kept the stream clear of debris, so no repeat since of the 2014 flooding event.

Due to the nature of the land structure and slope, none of the properties in this section of the bay need any council provided stormwater infrastructure, so understandably we are not keen to assist in the funding of such for those who chose to buy property or build on land which clearly needs such provision. With a number of land and housing development projects going on at present within the harbour, many on hillside sloping land, one would assume that it would be requirement as part of council’s approval of the development, that stormwater provision is an integral part of the project, as there is a clear real need to have such.

I accept that due to the profile of much of the land in the greater Christchurch area, whether almost flat or hillside, does require proper management of stormwater. In most cases the required infrastructure is already in place, even if in need of upgrade or improvement. However in respect of my own and adjacent properties, we do not have any council provided stormwater drainage infrastructure, nor will we ever need it.

On the basis of the discussion above, our preference is for **Option 1**, which is effectively following the “user pays” principle.

Regards

David Laughlin

## **Rates Remission Policy – Not-for-profit community-based organisations**

Elizabeth Forbes, on behalf of Holy Trinity Avonside, makes this submission to Christchurch City Council on the proposed change to the Rates Remission Policy.

It is important to firstly state that the many charities which benefit from rates remissions provided by the Council (and effectively the ratepayers), are extremely grateful for this support. For charities the rates remission helps support the provision of critical social activities to communities, and in many cases is an important contributor to their financial sustainability. This support for not-for-profits and the recognition of the good they do in the community is appropriate.

### **Executive Summary:**

The proposed change to the Rates Remission Policy is not supported due to (i) Insufficient Notice, (ii) Lack of Pre-Engagement, (iii) Lack of Information, (iv) Flawed Remission Assessment Criteria, (v) No Cost/Benefit Analysis, and (vi) the Existing Policy is Adequate. This submission provides supporting arguments and information for each of these concerns. Any of these concerns on their own provide justification for the withdrawal or, at the very least, reconsideration in the future in a more robust and fair manner. Collectively, they provide a compelling argument for Council to withdraw the proposal.

### **Discussion:**

This submission prefers to use the less corporate term of ‘charities’ as opposed to “not-for-profit community-based organisations”.

Clear and supporting information is provided below, under clear headings, in support of the position taken in this submission:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

#### **1. *Insufficient Notice***

Given the very large number of charities that this proposal would affect (including those that must file and disclose additional financial information to continue receiving a remission) and the reality that most charities struggle with lack of resources (people and funds), it is considered that insufficient notice has been provided to ensure that charities could appropriately engage in the submission process. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### **2. *Lack of Pre-Engagement***

It is reasonable to expect that any proposal by Council to change the important policies affecting ratepayers and the community would be well researched and that a level of pre-engagement with representatives of those affected had taken place to help inform and validate the proposed change. The paper “Background Material on Proposed Changes to Rates for 2021/22” does not provide confirmation that either has taken place and is reflected in serious shortcomings of the proposed change that are discussed later in this submission. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### 3. *Lack of Information*

The “Background Material on Proposed Changes to Rates for 2021/22” is a very brief document and thin on any objective information. It is inadequate for any meaningful consultation.

No substantive and objective information has been provided by Council of the supposed issue and how it could be best addressed. For example:

- What are the total remissions each year to charities?
- How many charities does Council consider are ‘wealthy’ and it views as not needing rates remission?
- What is the estimate of \$300k reduction in annual rates remissions based on?
- What would be the cost of implementing the proposal on an annual basis?
- What would the magnitude of loss of rates remission be for affected charities?
- What analysis was undertaken to support cash and investments at 50 times the base services rates for which a remission could be received as being the factor applied for cut-off of eligibility?
- Could some affected charities be forced to reduce the level of their charitable activities due to the loss of the rates remission?
- How many charities would be unfairly burdened by the additional filing requirements to Council to maintain their rates remissions, in order for Council to cease remissions to (a likely) very few charities?

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### 4. *Flawed Remission Assessment Criteria*

The proposed change to the rates remission eligibility assessment is blunt. Most particularly, inadequate consideration has been given to the use and definition of cash and investments as a proxy for determining whether a charity is ‘wealthy’. The current proposal is too much of a blunt instrument and will cause more harm than intended if not ‘nuanced’. Examples of unintended consequences of the proposed policy change are provided below:

#### *Charity A*

This charity provides critical social services to vulnerable members of the community. It employs social workers, a manager, and is supported by many volunteers. It is recognised by the Council and government as providing vital social services. Its budget is extremely tight and all the staff are aware that they have limited job security due to the challenges of maintaining adequate levels of funding. At the end of the financial year the charity made a financial loss. It had eight months liquidity at year end – however almost all of this was grants in advance and recorded as liabilities in the financial statements. This pushed the charity over the 50X rates remission eligibility and it now faces having to reduce its services to offset this cost increase.

#### *Charity B*

This charity provides broad and valuable services to the community. It has just a few staff and many volunteers. It too is recognised by the Council and government as providing vital social services. It too has an extremely tight budget and consistently runs at breakeven or a loss. The charity relies significantly on bequests and endowments to fund its operations. Most of these bequests and endowments are held legally in trust and are restricted as to what they can be spent on, with the two largest endowments specifying that

the funds capital must be maintained and only the income is available for specific activities. Despite having inadequate 'free cash' to fund its charitable activities, the value of the capital protected endowments pushes it over the 50X rates remission eligibility and it must now reduce its services to offset this cost increase.

#### *Charity C and Charity D*

There are two very similar charities - C and D. Both provide similar social services but in different locations. They operate on a breakeven basis, supported by grants, donations and income from modest (and separate) commercial premises they own. Charity C is forced to sell its commercial property under compulsory acquisition by the Crown. The income it receives from investing the sale proceeds is the same as the net return it received when it owned the property. The sale pushes Charity C over the 50X rates remission eligibility (it does not have a specific capital project to which it will put the sale proceeds) and it must now reduce its services to offset this cost increase, while Charity D which has the same level of assets continues to receive a remission.

The above examples show that crudely applying cash and investments as a proxy for whether a charity is wealthy and not deserving/requiring the support of a rates remission is flawed. Further, the proposed eligibility criteria will have significantly detrimental consequences for some charities. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### *5. No Cost/Benefit Analysis*

The background material does not provide any analysis of the costs of implementation of the changes to this policy. It would be reasonable to expect the appointment of suitably qualified chartered accountants to be able to read and interpret the financial statements being submitted and have sufficient knowledge to make informed decisions about what cash and investments should or should not be included in any calculation.

It is also reasonable to expect that there will be increased engagement with charities, on an ongoing basis, over the filing of returns (financial statements) to Council and application of the rates remission eligibility criteria. There will also be additional ancillary costs and associated overheads for this and the financial statement review activity.

There is also the collective burden across all charities receiving rates remissions of filing information, including their financial statements, to Council. The time and cost of this to charities has not been considered in the proposal.

It is fair to reach the conclusion that the cost to Council and affected charities of this policy change would outweigh the estimated (but unsupported) benefit of \$300k plus GST in rates remissions per annum. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### *6. Existing Policy is Adequate*

There is no discussion in the proposal as to whether the existing Rates Remission Policy is adequate and does not require change to enable Council to reduce or cease rates remissions to charities it reasonably concludes to be wealthy and not requiring such support. Further, the Council paper acknowledges that not making the change will "make it easier for some not-for-profit based organisations to provide more public benefits from their activities". Any change that will make it harder for not-for-profits to provide public benefits is counter to the principle of the remission.

The current policy provides for “Up to 50% remission (of the rates that would be payable if they were fully rateable) on targeted rates for standard water supply, sewerage, and land drainage” (emphasis added) and that the “extent of remission [if any] shall be determined at the absolute discretion of the Council” (emphasis added). The current Council policy already provides sufficient discretion to decline rates remissions to any charity where it deems that support is not warranted.

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

## Christchurch City Council

Submission by Holy Trinity Avonside Anglican Church  
 Change to Rates Remission Policy  
 18<sup>th</sup> April 2021

### **Rates Remission Policy – Not-for-profit community-based organisations**

The vestry of Holy Trinity Avonside Anglican Church are extremely grateful for the support we receive from the Council and ratepayers in the form of rates remissions.

It has always been a challenge operating a community-based charity, and it is even more so the case in these difficult times. For us the rates remission is critical in helping support the provision of many community initiatives we are involved in, including:

- WednesdayCafé,footclinic,community garden, historical grave yard and protected trees.\_\_\_\_\_
- Concert,
- Community Christmas lunch.
- communityChristmas carols.\_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_

Holy Trinity Avonside is concerned that the proposed policy change has not been adequately considered by Council. We do not support the proposed change to the Rates Remission Policy because of our concerns regarding:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

We understand that there are other submitters who have provided Council with information and arguments regarding the above concerns, so given our limited time and resources we haven't expanded on these in our submission.

Holy Trinity Avonside Anglican Church does not wish to speak to Council in support of our submission.

**To:**

**Subject:** Land Drainage Rates

Dear

I wish to make a submission about the land drainage targeted rate. I received a letter in early April. The submission closed less than three weeks after I received it. This is not enough time to engage in the necessary information and submit a response among already very busy lives. My husband and I both work to keep our property. If you want to keep NZ land owned by New Zealanders we need not keep adding unnecessary expenses to an already inflated market for services they won't require. We live over the Waimak River in Yaldhurst. There is so much drainage here we struggle to grow grass! We needed to provide our own sewerage system, find and maintain water as well as provide many others services.

I wish to have the chance to also put in our say. This very limited timeframe is not acceptable to a scheme that will mean significant costs to many rural areas who have already had to set up and maintain much of their own services.

Nāku noa (kind regards)

Ann and John Wilson

**Subject:** Proposed closure of Wharenui Pool

Submission against the proposed closure of Wharenui Pool.

Reasons as follows :

- Wharenui School have a close association with the pool and use it for both recreational swimming , sports , lessons and also use the recreation centre in the winter months for games and PE . This loss would disadvantage our low decile school by not having this facility so close .
  - The pool and rec centre are part of the Riccarton Community , is affordable and accessible to everyone
- 
- It was built with the help of community fundraising and huge community input to establish the pool in 1911 and in the years since.
  - Many local schools use the facility for swimming sports and lessons for students .
  - I personally have taken my now grown-up children to swimming lessons , use the pool for surgery recovery and attended aqua fit classes over the 40 years we have lived in the area . It's accessibility( walking /cycling ) and locality to our house makes it easy to use .

Cheers,  
Karen McNaught

Your role in the organisation .....

Do you wish to present your submission at a hearing? ☒ No ☐ Yes (if yes, you must provide contact details below)

## Questions to think about when making your submission

### Have we got the game plan right?

Our overarching proposal is to focus on a deliverable capital programme that helps drive our city forward, with particular investment in roads and transport infrastructure and in protecting and upgrading our water networks. We're borrowing for new projects that have long-term value, and ensuring that the debt repayments are spread fairly across the generations of ratepayers who will benefit from them. We're maintaining enough financial flexibility to be able to handle unplanned events, and we're finding permanent efficiencies in our day-to-day spending. We've managed to do all of this while keeping rates increases as affordable as possible.

Have we got the balance right? Have we prioritised the right things? If not, what changes would you like to see?

No!

YOU PEOPLE SEEM TO FORGET  
THAT NOT ONLY HAVE WE NOT  
RECOVERED FROM THE EARTHQUAKES  
AND NOW COVING.

A LOT OF WASTE GOES ON AS  
WE CAN READ ABOUT. (MONEY)

### Rates

We've considered a range of options for how best to achieve what we need to achieve while also keeping the average rates increase as affordable as possible.

What do you think of this plan for an average residential rates increase of 5 per cent for 2021/22 and an overall rates increase of 4 per cent over the next 10 years?

WHY OH WHY. MUST RATES INCREASE  
EVERY YEAR. IT IS NOT  
AFFORDABLE FOR A LOT OF PEOPLE  
INCLUDING MYSELF.

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

**What do you think of these changes to existing rates, and new targeted rates?**

**Have we got it right? If not, what changes would you like to see?**

HA HA HA!  
COUNCIL AT THE TIME PUTTING IN  
METERS AND NOT FOLLOWING UP TO  
CHARGE, WASTED OPPORTUNITY.  
NO TO ARTS CENTER

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

**We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

YOU HAVE ONLY TAKEN RESPONSIBILITY  
SINCE THE EARTHQUAKES AND PEOPLE  
REPORTING LEAKS. OUR PURE WATER  
BEING CONTAMINATED NOW BY CHLORINE  
AND IN THE FUTURE BY FLUORIDE  
NO NO NO

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

WHAT RESIDENTS YOU SPEAK TO  
AND I HAVE YET TO FIND ONE, DON'T  
WANT THESE BIG BUSES RUNNING ROUND  
EMPTY. SMALLER PREFERRED. EMISSIONS??  
WHO IS USING COAL STILL?

FERRY ROAD FROM FITZGERALD AVE TO  
HIGH ST IS RIDICULOUS AND UNSAFE

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

**We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

O. K.

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

**What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?**

**Have we got the balance right? If not, what changes would you like to see?**

MAYBE A GOLD COIN CHARGE TO ENTER THESE PLACES. WHERE ARE PEOPLE SUPPOSED TO WAIT FOR BUS?? AND WHY CAN'T WE HAVE QUIET IN THE LIBRARIES ???

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

**We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.**

**Have we got the balance right? If not, what changes would you like to see?**

PRIVATE DEVELOPMENT?? FORGET IT!

SOUTHSHORE STILL WAITING FOR THEIR BARRIERS ROUND WALKWAYS. ALSO PARKING AT HOSPITAL - WHAT RIGHT HAVE CRICKET TO CLOSE CAR PARKS TO US.

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☐ Yes ☒ No

Comments:

THERE ARE <sup>MORE</sup> IMPORTANT THINGS  
THAT NEED DOING FIRST  
AND NO MORE MONEY FROM US  
FOR YOUR GREAT IDEAS.

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021-31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☒ No

Comments:

WAIT TIL CHRISTCHURCH  
RECOVERS FIRST FROM  
EVERYTHING  
WE ARE MORE IMPORTANT THAN  
BUILDINGS

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future - what do you think of this proposal to dispose of surplus properties?**

SURELY - WITH GROUPS CRYING OUT  
FOR PLACES FOR PEOPLE TO MEET  
HEAL AND BE DOING SOMETHING  
GOOD. AND LIVE  
GIVE THEM THE OPPORTUNITY TO HAVE  
THEM (AT NO COST)

## Any other comments:

TO MY MIND, SUBMISSIONS  
ARE A WASTE OF OUR TIME AND  
THOUGHTS. YOU PEOPLE HAVE IT ALL  
WORKED OUT IN WHAT YOU WANT.

YOU SEEM TO THINK RATEPAYERS  
HAVE UNLIMITED MONEY.

WHERE ARE PEOPLE LIVING? A LOT  
IN CARS GARAGES ON THE STREETS.

EMPTY HOUSES IN MY AREA WAITING  
FOR REPAIRS OR DEMOLITION (3yrs) NOW.  
2 COUNCILLORS GETTING FINED AND COMMUNITY  
WORK FOR DOING A GOOD DEED FOR WALKERS  
(AND) HOUSEHOLDS AND YOU SPENDING  
THOUSANDS OF OUR MONEY

Thank you for your submission

**From:** Brown, Gill

**Sent:** Friday, 30 April 2021 11:35 am

**To:** CCC Plan

**Subject:** Dr 2021-31 Draft Long Term Plan - feedback from Gill Brown and Vanessa Johns - owners of

We would like to provide feedback on the above proposal.

We purchased the above property in February 2019.

Whilst we expected that living on a lifestyle block would mean Council-provided services would be limited, we have been surprised and disappointed at how little benefit we see from our rates payments. This appears to be limited to weekly rubbish collection. Numerous calls to the CCC to cut overhanging branches which impede traffic signs outside our property have gone unanswered, as have requests to remove the gorse on the Council maintained dog park next door to our house, which has now encroached onto our property.

We have no regular bus service, no drainage, no water supply, guttering, footpaths or street lighting.

We pay for our own drainage and effluent.

We have extensive quarrying in our area, which has impacted the resale value of our properties, as well as our air quality.

We feel it is inequitable that we are now being faced with the prospect of increased rates payments due to the above plan. Your plan appears to be asking ratepayers in our area to further subsidise other ratepayers with their drainage systems when we receive no support ourselves from CCC.

Therefore, we would like to be on record as strongly opposing the above plan. It is neither fair or equitable.

Regards,

Gill Brown and Vanessa Johns

Hi Katy

I note that consultation period has closed for the Councils Long Term plan 2021 – 2031

I am the Chair of the Southern Centre Charitable Trust

We work closely with the Council in relation to the Southern Centre Multi-sensory facility at The Pioneer Recreation and Sports Centre.

We have raised funds to purchase a number of equipment used in this space.

We are also currently raising funds to purchase bespoke equipment for the aquatic multi-sensory space that will be included in the new Metro Sports facility.

Below is the submission the Trust intended to submit.

Unfortunately the cut of date was missed and it was not sent in.

Is there an option to have this included as a late submission or could this be included as part of the public hearings that are coming up.

Warm regards

**Craig Scott**  
**Chair**  
**The Southern Centre Charitable Trust**

**Southern Centre Charitable Trust –**

**Submission on Christchurch City Council Long Term Plan 2021- 2031**

**Noting the proposed fees for the Southern Centre Multi-Sensory Facility, the Southern Centre Charitable Trust fully supports maintaining the current levels for non-birthday party fees.**

**Any fee increases may have increased the barriers to disabled people accessing this important facility, especially for people who otherwise have limited recreation options.**

**The modest birthday party hire increase is reasonable and the Trust has no concerns about this.**

**The Trust endorses the Christchurch City Council's ongoing support of The Southern Centre, which is located at the Pioneer Recreation and Sports Centre.**

**This facility plays an important part in multisensory experience opportunities, which will soon be complemented by the planned aquatic multi-sensory experience at the new Metro Sports Facility.**

**Craig Scott**

**Chair**

**Southern Centre Charitable Trust**

To all at the CCC

This submission is to state that the expenditure of the Christchurch City Council (CCC) when it comes to the long term plan is totally unexpected.

To contemplate what appears to large increases in rates over the next 10 years shows little restraint or consideration for Rate Payers particularly those on fixed incomes or on Pensions.

The Councils inability to bring in projects on budget in most cases and the apparent lack of ability to even try to save expenditure by better management of its over all activities is of grave concern.

Most Businesses need to manage expenditure by looking at ever increasing efficiencies that does not appear to be the case with the CCC

Bob Thayer
