OK, but in my opinion no need to split or show targeted rates as long as spending is itemsied at council meetings and information is readily available to rate payers.

1.4 Investing in upgrading and protecting our city's water networks  
just get it done. The main priority of the council is roads and city infrastructure.

1.5 Investing in our transport infrastructure  
Cars are the transport of choice for Christchurch. Until Christchurch has over 600K people no need for more public transport just more parking. Car emissions are not a council concern this is a nz govt concern.

1.6 Rubbish, recycling and organics  
spend more finding innovative solutions for processing waste to recover energy and and bye products as road fill.

1.7 Our facilities  
more working from home that is well incentivised not more buildings.

1.8 Our heritage, foreshore and parks  
OK

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

- the Arts Center is the jewel in the crown of heretige building in Christchurch and must be supported

- lease-able space for small business' builds on the current weekend mecca the arts center ismand makes it more of a retail destination monday to friday.
- so much has been invested already but that needs to be written off until tje complex is complete.
- adds to the tourism offering between the Cathedral Square and the Canterbury Museum.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 14/04/2021

**First name:** Lindy **Last name:** harward

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I support excess water rate.

I think there needs to be ongoing education about not wasting water throughout the year.

Incidentally, I oppose allowing extraction of water for bottling unless there is a premium financial return.

On principle I oppose encouraging any use of bottled water on environmental grounds.

1.4 Investing in upgrading and protecting our city's water networks

Water provision and quality probably needs to be a priority and is of huge environmental importance. So if this is what it takes to get it on track I support the investment.

1.5 Investing in our transport infrastructure

I think cycleways are great but too much money on making them unnecessarily fancy, especially in areas of low traffic on periphery.

Having just attended an Age Concert Drive safety seminar I learn that CCC controls traffic within city area. In the interests of safety I think a priority should be to upgrade signalling at intersections. eg Brougham St/Ensors Rd. If turning right into Ensors Rd one takes ones life in ones hands because there is no arrow. Because of the volume of traffic & the need to ensure oncoming traffic is actually going to stop, one inevitably needs to turn R on orange & often on red. This is just one example.

1.6 Rubbish, recycling and organics

Yes. Anything which will usefully recycle more.

Get rid of horrid smell that pervades as far as Woolston!

Public education that just because one CAN recycle does not make it OK. There's no way round it we have to consume less & waste less.

1.7 Our facilities  
Maintaining libraries is my priority. They are a huge asset/incredibly important.

1.8 Our heritage, foreshore and parks  
Yes

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

**First name:** Kathryn **Last name:** Cane

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

Do not agree with the rate increase. It would be a struggle for many people to meet rate increases, when take home pay has not increased, and there is significant job uncertainty at the moment.

#### 1.3 Proposed changes to existing rates, and new targeted rates

targeted rates are good, as shows where money is being spent

#### 1.4 Investing in upgrading and protecting our city's water networks

great to invest in water infrastructure, but should this be financed from selling bottling rights to our water resources

#### 1.5 Investing in our transport infrastructure

great to see increase in bike lanes, but sometimes wonder if they have been over built.

#### 1.6 Rubbish, recycling and organics

Yes agree

#### 1.7 Our facilities

cutting of hours to libraries and art gallery fine. But disagree with cutting of Art Gallery services by 25%, art is an important service which is often over shadowed by funding in sporting facilities.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

**Comments**  
its is an important facility

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

**Comments**

#### 1.11 Potential disposal of surplus Council-owned properties

Yes, if not used for the purpose.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates  
I support target rates to be put towards the Arts Centre restoration.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes

Comments

It is essential the the Council support the Arts Centre with a grant of \$5.5 million. This is truly a heritage group of buildings and so much part of Christchurch's history. We must restore it for the benefit of future generations of Christchurch people as well as the large number of tourists it will bring to the City. This is our chance to save this historic centre. So lets do it.

### Feedback

1.1 Have we got the game plan right?

1.7 Our facilities

I would like to see the Library Van service continued.

The van was gifted to reach groups of people who may not have easy access to a library. Our nearest Library at Eastgate Mall is some distance from parking for people who are less able, which makes it difficult for some to carry books to and from transport.

The van provides employment for 2 half-time positions for Librarians.

People who rely on others for transport find the once-weekly service from the Library van meets their needs.

Thank you for the opportunity to make a submission.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

Specifically, I would like to know which buildings that the council would like to dispose of before making a decision.

1.12 Any other comments:

I would like The Robert McDougal Art Gallery to be used for the purpose in which it was gifted to the people of Christchurch. It is a beautiful building and it could go back to displaying many of the old paintings that used to be on display there. I know I missed the submission on the Canterbury Museum but The Robert McDougal is a stand alone building, it is not part of the museum.

### Feedback

1.7 Our facilities

To the changes proposed for Christchurch Art Gallery Te Puna o Waiwhetu - namely the cuts in public programmes:

You mention the drop in international visitors, however, the cuts you propose will affect locals as these programmes surely are used by the local population rather than tourists.

Covid has shown how art contributes to people's wellbeing. Cutting programmes that open art to people after working hours, enliven the city centre in the evening, provide opportunities for artists, food providers etc at these events as well as activities for the public and schools seems more important than ever in times of the pandemic. So on this plan, I don't think you "have got the balance right".

Thank you.

Reference No. 055007  
14 APR 2021

Christchurch City Council  
Acting head of Financial Management

We write to you regarding reproposal  
long term plan 2021 - 31  
LAND DRAINAGE TARGETED RATES

We are fully apposed to any of the suggested  
ways that we may incur additional charges  
regarding land drainage rate.

Our Reasons are as follows

The council do not supply or assist us  
with any of the following

- 1 - Stormwater disposal
- 2 - Sewerage Disposal.
- 3 - Water reticulations.
- 4 - Foot paths (do not exist).

In summing up, we have no issues with land  
drainage (ie flooding). The issues we do have  
is retaining any ground water as we have  
soak holes (ie gravel extraction pits and more  
proposed extraction gravel pits which in turn  
will suck our all ready over-rotted land  
even more drier.

### Feedback

1.1 Have we got the game plan right?

I write in support of the Christchurch Art Gallery and its exhibition and public education programmes. I understand reductions are planned in funding in these areas and I think that would be a mistake. CAG has been a beacon of hope throughout the post-earthquake years providing active programmes for all of our communities, with particular strengths in engaging with youth, Maori and Pasifika. In recent years the public engagement programmes have attracted many and diverse peoples into the central city and CAG, with obvious spinoff benefits to central businesses. The central city needs all the support it can get given the post-earthquake flight to housing developments in distant suburbs and in Selwyn and Waimakariri. I strongly advocate protecting the CAG budgets for the reasons outlined.

### Feedback

1.1 Have we got the game plan right?

I am very concerned at the proposed cuts to the Art Gallery, in particular the reduction in school visits that are so important to the development of well grounded children. These children are also the future of Art Gallery participation.

Bricks and mortar may be important aspects of a city but its soul depends on engagement with cultural activities such as art appreciation and music. To inhibit the public's opportunity to engage with and enjoy all that the Art Gallery has to offer by cutting the Council's financial contribution is a grave disservice to the city of Christchurch.

I urge the Council to reinstate the proposed cuts to the Art Gallery support over the next three years.

1.7 Our facilities

I am very concerned at the proposed cuts to the Christchurch Art Gallery. This is an integral part of the soul of the city and should not be adversely affected by spending on transport, roads and infrastructure, however necessary those may be. Declining numbers of visitors over the past year should not be considered as an indication of future numbers. These are and will continue to increase as life re-establishes itself.

I urge the City Council to reevaluate its proposed reduction of finances to the Art Gallery and appreciate the very real need to maintain the Art Gallery's reputation and relevance to the people of Christchurch and the many visitors to whom it gives such pleasure.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Arts Centre is an outstanding heritage centre that has already had a considerable amount of money spent to restore some of the buildings. It would be a tragedy if it was not possible to complete the restoration. The proposed Council fund would be invaluable for the continued work of the Centre.

### Feedback

1.7 Our facilities

I am writing about the proposed postponement of the restoration of the former Kukupa School site in Pigeon Bay.

I am a long term resident of Pigeon Bay, having been part of this community for over 20 years.

In this time I have witnessed the closing of the primary school and the growth, both in Pigeon Bay and right across the Peninsula, of the residents. Accessible public facilities are rare for this growing community.

I Understand the continuing postponement of the restoration of this building has long been an issue. Many local residents are frustrated at the lack of action by the Council. Locals value existing heritage and would be thrilled to see this building's potential realised. Local resident, prize winning artist Anna Dalzell has exciting plans for a public space. My understanding is that Anna is submitting these ideas in her submission. I fully support Anna's plans.

Another postponement would see the building further degraded. If only CCC would see the benefit of such potential being realised

Your faithfully,

Gerard Smyth

## Feedback

1.1 Have we got the game plan right?

It is good that the plan prioritises transport and water as these are basic essentials.

1.2 Rates

I believe this is realistic as we build a more resilient city.

1.4 Investing in upgrading and protecting our city's water networks

I support the changes

1.5 Investing in our transport infrastructure

All transport expenditure should be evaluated against it's contribution to reducing carbon emissions. The planned expenditure on cycleways is fantastic! We need to look for opportunities to create quieter linking streets to enable people to safely access the major cycleways, be these low traffic neighbourhoods or just lower speed limits on selected roads/areas.

Anything that can be done to promote public transport by increasing the frequency and reliability should be done. Bus lane priority and intersection changes to allow buses to move more easily are a great way to achieve this. The buses should be prioritised over cars.

1.7 Our facilities

I would like to see library hours kept the same as they are now, and not reduced.

## Feedback

1.1 Have we got the game plan right?

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

they flood when it rains

they are slippery with ice on frosty mornings

when most teams train in the evenings they are slippery and damp from night-time dew

part of one court is permanently wet and covered in a slick film because it never dries out

they have extensive cracking filled with vegetation

they have holes for tennis net poles that are no longer used

The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

**We Need Your Help To Get New Courts**

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow.

However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

The city is bigger than my area, so I am unsure about the game plan. At high level it seems fine, but I feel that there are issues that are important to my area that are not being addressed at all.

1.2 Rates

I am sure that you have good reasons for planning the increases you suggest. Unfortunately you ignore the economic reality that a lot of businesses and individuals face. If I look at what I can afford, the rates increases are insane. My income will go down not up in the next few years. Maybe I could afford 4 percent in 5 years time, but not now. And then you talk about new targeted rates (on top?) for services I do not receive?

1.3 Proposed changes to existing rates, and new targeted rates

I am willing to pay a land drainage tax, but then I expect to see actual land drainage in my area. Currently there are large flooded areas when we have rain - that will have to go away rural or not. I do not agree to pay for a service that you do not provide.

As for targeted rates for Arts Centre, etc. - I would prefer to eat rather than finance arts. Sorry but that is the reality. Give the rate payers a choice on how they want to allocate their "art" contribution. I would like to allocate mine to my land drainage.

1.4 Investing in upgrading and protecting our city's water networks

I do not use the city's water, but I think it is important to ensure that it functions properly.

1.5 Investing in our transport infrastructure

Transport is important. I have watched you redo Pound road leading up to Ryans road multiple times in the last year or so. Maybe doing it properly once may save you some money. (It actually looks like that is what is

happening there now thank heavens).

You should also do something about the quarries that give you the stone for the roads. They impact everyone who lives around them. Excuses just does not cut it anymore.

1.6 Rubbish, recycling and organics

I think it is important to do as much recycling as possible. At a high level at seems fine.

1.7 Our facilities

I do not really have an opinion on this.

1.8 Our heritage, foreshore and parks

I support this

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No  
Comments  
I very strongly do not support this.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments  
Simply money. I strongly do not support.

1.11 Potential disposal of surplus Council-owned properties

Sell them off. Then look at all the strange rules you have on properties around the airport and allow me to use my property in a fair way.

1.12 Any other comments:

If I look at the things that are important to me and seem to be important to the people living in my area, you do not seem to be listening to a lot of our issues

The quarries - no

Land drainage - no (unless of course you come and do the drainage in my area)

transport/roads - maybe (simple things like painting lines to indicate lanes/parking areas may prevent accidents, but not happening in my area)

The building/land use rules in the airport corridor - no

The amount of money you want to recover from people who can not really afford it - no not listening.

I could go on, but I am sure you understand my concerns

## Feedback

### 1.2 Rates

Okay, if the money is spent wisely

### 1.3 Proposed changes to existing rates, and new targeted rates

Yes, an excess water rate is sensible

### 1.4 Investing in upgrading and protecting our city's water networks

A rethink on the Akaroa Wastewater proposal, which would defer all work until pipework repairs are done in Akaroa. This would reduce the amount of stormwater leaking into the wastewater, and by the time it is done, The Water Services Bill may allow the reuse of treated wastewater, that is still mindful of Maori Cultural issues, but would also assist with solving Akaroa's critical water shortages. The treated wastewater should remain in Akaroa, where it is needed the most. This would be a far more sustainable and less expensive outcome.

### 1.7 Our facilities

The Service Centre should be returned to the old Post Office building. Akaroa is a remote community, with many elderly residents. Many residents prefer face to face interactions, as do many visitors to the township. The building has been refurbished recently, and the council should adhere to its stated heritage objectives. It should also adhere to its social and economic wellbeing objectives.

The Information Centre and the Postal Services should also be relocated back to the building, where they logically belong, and this would assist with the cost. This building is in the centre of Akaroa, and easily accessible to all. An ATM machine could also be installed, once the BNZ closes, which would also assist with the wellbeing of locals and visitors. It is such a valuable asset and should be encouraged to be the central citizens Hub for Akaroa and the Bays, to accommodate greater activity for the stability of the area, to secure and support the resilience and wellbeing of the community.

### 1.12 Any other comments:

PLEASE give Akaroa and the Bays, the consideration they deserve.

### Feedback

#### 1.1 Have we got the game plan right?

Kidshub are very interested in the bromley/linwood community and resources there within. We are particularly interested in the improvement of cypress reserve in Bromley to aid in our communities resilience & local opportunities for our tamariki. We are also wanting a community where nature is protected & respected & for our tamariki to feel this way too. Kidshub have undertaken surveys and questionnaires within our community & also to our tamariki to value the opinions and responses of all. We have come to the conclusion that this reserve is considerably lacking in use & amenities for our community and we would love to hear how we can help to improve it. The community have told us they want a place to connect, with lots of seating, a place to cook food, somewhere their children would enjoy playing & want to be. We want to be apart of the "21st century garden city we are proud to live in" rather than just be left behind as other suburbs improve themselves. The children have told us they would love nature play, somewhere to make mud pies & build a hit, play in a tree house, ride their bikes and scooters, play sports & learn new things! Our older tamariki would love a better skate park to learn new tricks than the one half-pipe that is just dropped in the middle of the reserve. Younger tamariki want somewhere to ride their bike and scooters safely. This would be an awesome opportunity to support the learning of our youth in road safety & to align with councils proposal of increasing alternative transport throughout our city & the introduction of the bike routes all around our suburbs & city. To be able to lay a road with signs etc in a safe place for them to start their journey in the safe way. Improving the skate park to a place the children will use will also have plenty of advantages to keeping our older tamariki entertained in a safe space. We would love nature play being a large part of the space there, it's such a beautiful spot & we would love to keep the play equipment relevant to nature, the children came up with ideas such as, a mud kitchen, messy play, wooden bridges, balancing stones, hut building, treehouse/playhouse, sliding through the flowers, bees, binoculars to look at the butterflies, fruit trees, chickens, strawberries, raspberry bushes. We love the idea of the food aspect to strengthen our communities & tamariki access to healthy free local produce. For them to understand processes & what they are foraging & be involved in the growth of this would be a great learning experience for them & whanau. We had some of our community asking for a dog safe space too which the Bromley Community Centre seemed very interested in hosting on the land on their side of the road in the form of a dog park. The final aspect the community were concerned about were the toilet facilities in the reserve. They are currently substandard, not close to any of the other facilities currently at the reserve & often not even open for use, which can be rather inconvenient especially with small children. Kidshub have been trying to utilise the reserve more in hosting free sports evenings and others meet to play and the toilets are quite important to ensure things like this run smoothly for our whanau.

**Thank you** for reading this far, we look forward to working with **you** in enabling our community to become more active & connected to each other & their future.

1.1 Have we got the game plan right?

I would just like to say the completion of full restoration of the Arts Centre is so important. It would be a terrible mistake to leave this incomplete for anymore years than a full completion effort will require.

To think of the funds wasted on that stupid screen in the lobby of the Turanga central library! These buildings are the most important historical buildings in Christchurch.

1.6 Rubbish, recycling and organics

Hello,

We need to have some resolution on the soft plastics which end up in the land fill.

Surely these could be burnt in a plant which could service the whole of New Zealand which would provide energy with clean emissions - following similar plants in Europe.

1.7 Our facilities

Hello,

I am a primary school teacher and have participated a few times now in the School Programmes that the Art Gallery provides.

I hope these are able to continue.

As school teachers we find our curriculum is so full of a high emphasis on the core subjects that we find it hard to fit quality art programmes into our day.

Thanks for the opportunity to tell you how much I value what you offer.

Regards,

Bridget Scoular

Subject: Long Term Plan

Follow Up Flag: Follow up  
Flag Status: Flagged

To whom it may concern,  
The renewal of the Belfast netball courts, driveways and carparks and the repair of the toilets needs to be a Council priority. 2027 is too late for our Club.

The Belfast Netball Club serves an important function within our community, providing organised physical activity and fostering a sense of community for our tamariki. My daughter has been playing for the club for four years. The courts themselves are in urgent need of repair. At least one court is almost unusable because of the uneven surface and weeds. The other courts are also very uneven.

I would also urge you to include repair of the toilet block in your plans. A significant number of netball teams practice at the courts over the week and toilet facilities should be available. Particularly as some of the students are coming straight from school and require a place to change.

If encouraging physical activity, sport and community is a priority for the council, then this repair work needs to be scheduled for much earlier than 2027. Give our children a facility that shows we value them and their sport, a place they can be proud of.

There is a provision in the draft Long Term Plan to renew the surfaces of the netball courts, the north and south driveways and carparks in the 2024-2027 Financial Years. The work would likely be complete in 2027. There is *no* provision to repair the toilet block.

The Belfast Netball Club is determined to make the renewal of the netball courts, driveways and carparks and the repair of the toilets a Council priority. 2027 is too late for our Club. The Council's draft Long Term Plan is currently open for feedback and we are encouraging Club and community members, and community organisations to make a submission in support of expediting the renewal of the netball courts, driveways, carparks and toilets.

The continuation of Netball in the Belfast community is vital and if these repairs are left until 2027, this will result in players leaving the club and either quitting the sport or seeking clubs with better facilities. This would serve to negatively affect the cohesion of the community.

Ngā mihi nui

1.1 Have we got the game plan right?

This fast track disposal be rejected and that proper community consultation should be undertaken. That would consider gully protection, boundaries, road access, school development, walking tracks, infrastructure and other local interests. If the land sells now, there will be no further consultation and subdivision can proceed without community input.

1.2 Rates

I think you are not factoring Covid 19 and changes of circumstances

We should be looking towards reducing costs to people not increasing

1.11 Potential disposal of surplus Council-owned properties

If you are expecting us to pay an increase in rates then i would expect these to be kept

1.12 Any other comments:

My comments are focused specifically on the proposal in the long-term plan to decommission Wharenui Pool.

For those of us bringing up our children in the 70's and 80's, the summer holidays were centred on the local primary school swimming pool. There was a whole network of these scattered throughout the Christchurch suburbs, of which Wharenui was one. For a small deposit, families would hire a key for the holiday period and spend many hours picnicking, socialising and swimming. Our children learnt to swim in school swimming lessons held throughout the school day in the warmer months, and became water-confident by taking part in the often boisterous water games.

Gradually school pools disappeared as new Health and Safety rules were introduced. Wharenui remained as our only local pool. Schools such as Ilam Primary ran efficient bussing enterprises taking pupils to and from Wharenui for swimming lessons and for swimming sports several times a year. Being grandparents at that stage, we helped with supervising the young ones and helping them dress and undress and also to keep track of wandering possessions, difficult enough in the confines of our small pool but a marathon task in a huge space like the Metro Facility.

We, the grandparents of the children of the 2000s, have enjoyed swimming at Wharenui Pool for many decades now. We see it not as just another "aquatic facility" but as our own community pool, answering to our needs and to the needs of this local community. It is easy to access, not needing a trip into the middle of Christchurch, with all the stress and hassle that involves. And over the years we have built up a network of friends and acquaintances who share our joy in swimming. This network has become even more important during as it means we always have people looking after our interests: making sure they make a space for us in one of the lanes and watching out for us in the changing sheds. All this is very precious to us and is

something a large Metro Facility certainly could not provide.

We need the large facilities, certainly, as they can cater to the many diverse needs and interests of the various groups of swimmers, but we also need small, local pools where older people and other locals can gather to swim and socialise.

## Feedback

1.1 Have we got the game plan right?

I believe the decision to not fund the Lyttelton Service Centre / Library, as presented in the plan, is entirely wrong. It is an invaluable service and hub for services for peoples of all ages in the community, from Pre-kindie ages kids (and their parents), school children and teenagers through to the elderly and vulnerable in our town. As a meeting place and tangible link where all of us come together, across all ages and backgrounds, the loss of this taonga would be a disaster far greater than a profit and loss ledger can ever show. I strongly oppose this move.

1.2 Rates

if its needed, do it

1.4 Investing in upgrading and protecting our city's water networks

its needed, do it

1.5 Investing in our transport infrastructure

EV infrastructure and encouragement to take up this type of vehicle would significantly reduce emissions, across both the bus fleet and private vehicle.

1.7 Our facilities

1.12 Any other comments:

I would like to make the following comments on the proposal to decommission Wharenui Pool.

I now suffer from \_\_\_\_\_ but my memories of Wharenui Pool are bright and clear.

I first went there in 1954 at the age of 12 when my younger brothers attended Wharenui School and the pool was open to the public outside of school hours. I have been a regular attender at various periods ever since, accompanying my children and grandchildren to swimming lessons and to fun sessions, and over the past 15 years swimming myself on a daily basis from 7.30 to 8 a.m.

This activity would simply not be possible for people like me at a big facility like the new Metro Facility. At Wharenui, other swimmers know to look out for me and make sure I'm coping with any difficulties. I know that if there were any sort of emergency like a fire or an EQ alarm, people would make sure I was O.K. If any such emergency happened at the Metro Facility, I know that health and safety measures would be in place, but people would not know about my particular circumstances and so I would be left feeling unhappy and confused.

Transport to and from this venue would also be a problem, requiring a trip into town with all the stress and traffic problems involved, whereas Wharenui, situated as it is in the suburb of Riccarton, is easy to get to.

Exercise is very important for older people, and swimming is one of the very best exercises for those with \_\_\_\_\_ and other problems.

Being able to get this exercise at a venue which is non-stressful for me is very important.

## Feedback

1.1 Have we got the game plan right?

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

- they flood when it rains
- they are slippery with ice on frosty mornings
- when most teams train in the evenings they are slippery and damp from night-time dew
- part of one court is permanently wet and covered in a slick film because it never dries out
- they have extensive cracking filled with vegetation
- they have holes for tennis net poles that are no longer used

The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

#### 1.8 Our heritage, foreshore and parks

I wholeheartedly support the funding of the The Arts Centre Te Matatiki Toi Ora. The Arts Centre is an undeniable icon of Christchurch, and is one that played an influential role in my childhood. I spent my school holidays there at memorable Kids Fest events and weekends trying new international dishes at the food truck market. There would be moments of gazing up at works of art by local artists, or nights watching independent cinema followed by mochas upstairs at Le Cafe with school friends. My best and most vivid childhood memories centre around The Arts Centre, and I only hope the same will be true for my children.

In my eyes, The Arts Centre is the genuine heart of our city. Nowhere else compares in terms of its history, culture, architecture and commitment to the arts and small business. I cannot begin to imagine life in Christchurch without The Arts Centre, so I fully support our rates contributing to ensure its safe future.

Please give The Arts Centre the funding and care it needs to thrive, so future generations can benefit from it the way I did.

### Feedback

#### 1.1 Have we got the game plan right?

I would like to see the rates stay the same, as the values of properties go up then the CCC gets more income anyway.

Just like any family budget or business budget you only spend what you have- not more. If we can't afford to pay for all these nice buildings. Then stop. Don't do it. Rate payers have lived with out them for several years, we can live another decade with out them. We actually don't want them. We really don't. I haven't spoken to anyone who is desperate for a convention centre, and yet here we are... late and over budget I'm hearing.

It is so easy to spend other people's money. If we can save 0.5percent here and 0.33 percent here then it should be done. It is outrageous that this is not seen as worthwhile in the plan I read. As a community we are all tightening our belts and our council needs to do the same thing.

We shouldn't be reading about the CCC bragging about the millions it is going to be spending. Tone-deaf.

No more rates increases. Accommodation is already so expensive, don't make it harder for Christchurch people to make ends meet. You are meant to be looking after the residents.

#### 1.2 Rates

NO NO NO.

A cumulative rates increase of 47.8% is outrageous. Absolutely outrageous. If those new buildings and even the Arts Centre was a good idea then private enterprise would be keen to buy them and build them. but they aren't. Because they aren't good ideas.

#### 1.3 Proposed changes to existing rates, and new targeted rates

Arts centre rates- this is absurd. And why not make it a flat rate for everyone. A more expensive property doesn't mean more disposable income for spending on taxes.

#### 1.4 Investing in upgrading and protecting our city's water networks

This sounds like a huge spend and I'm wondering how it can be reduced.

#### 1.5 Investing in our transport infrastructure

Stop with the cycle lanes for a few years. HOnestly I love to cycle , but stop with the spending for a few years.

Public transport should not be subsidised by the rate payers.

#### 1.7 Our facilities

What other council buildings can be sold? What other business interests do the rate payers own that can be sold? Let's pay down some of our debt.

Librarys can close at 6pm every night. And 5pm on weekends.

#### 1.8 Our heritage, foreshore and parks

Again, I think that we should push pause on spending where ever we can. SOme of these things would be really nice to have but we can't afford them.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

NO NO NO.

This should not happen. The Arts Centre needs to fund itself. The rate payers shouldn't be funding this.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

The Canterbury Museum is dreaming. This isn't even the final price. We need to say no for now and revisit in the next 10 years. OR if someone wants to fundraise for it- then go ahead.

#### 1.11 Potential disposal of surplus Council-owned properties

Sell them. Sell everything that isn't fit for purpose. And if it is borderline, sell it. We just can't afford to keep them.

## Feedback

### 1.2 Rates

This seems fair.

### 1.3 Proposed changes to existing rates, and new targeted rates

I support the new heritage rate allocation

### 1.5 Investing in our transport infrastructure

We must also prioritise efficient public transport and cycling incentives and discourage car use. The answer is not more roads and more cars. When improving road, areas with social and economic deprivation should be prioritised to make them safer. Those more in need tend complain less as they feel less entitled - please don't take complaints as a measure of need or lack thereof as a measure of satisfaction. Resident satisfaction is a terrible way to measure this -it should be much more objective.

### 1.6 Rubbish, recycling and organics

A focus of changing our 'throwaway' culture is desperately needed and I'd love to see CCC lead the country on this. We must do what we can to reduce waste to landfill - the emissions it produces are significant contributors towards climate change. Recycling should be processed on Aotearoa shores.

### 1.7 Our facilities

We should not be decreasing capital spend on community facilities.

I'm concerned by the proposal to reduce funding to education and public programming at Christchurch Art Gallery. This seems shortsighted when decreased visitor numbers are given as the reason for this. Education and public programmes are exactly the thing that bring locals in, and we haven't gone away. Obviously this couldn't happen during COVID-19 lockdown, but we would expect the figures to bounce back since then. Our children still need art experiences and we still need engagement with the arts. It's a matter of wellbeing.

Publications are very important for documenting our cultural history, we shouldn't lose them either - though digital formats should be encouraged to reduce costs.

The Akaroa Museum collection should still be developed and documented - let's not regret cutting funding to this in the future when we find taonga has been poorly treated.

Libraries are important community centres and I do not support any reduction of opening hours or services to

them.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

I support this crucial grant to secure this cultural taonga for future generations. Places like The Arts Centre are vital to the cultural health of our city and in turn the wellbeing of our citizens. to think we nearly lost it!

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.12 Any other comments:

It would be great if CCC would start referring to our city by it's original name, Ōtautahi, in the first instance. It would signify much.

## SUBMISSION TO CCC LONG TERM PLAN 2021

FROM: *LYNETTE & PHILLIP STEWING*  
*14 APRIL 2021*

We do not wish to be heard in support of this submission.

Tēnā koutou

**RE: RATES FOR CENTRAL CITY WASTE COLLECTION**

We support the submission from the Atlas Quarter Body Corporate in relation to rates for the collection of solid waste.

We support the Council's strategic goal of reducing solid waste but object to having pay \$300-\$400 per year in rates for the collection of the red, green and yellow bins when the Council does not provide this service to us. In the absence of Council providing this service, we pay privately through our Body Corp Levy for waste collection by EnviroWaste. We support waste minimisation and have all the same waste streams (green, yellow and red) as the Council provides.

We ask that the Council either:

- 1) reduce the general rate and waste minimisation levy for developments such as ours to reflect that no waste collection is provided, or;
- 2) amend your service contracts to provide the waste collection service.

*[add anything further you wish to say here]*

### Feedback

1.1 Have we got the game plan right?

Stop all the ridiculous spending!!! Our rates rise at a rate greater than inflation, and certainly MUCH higher than our salaries!!! How many swimming pools are needed in one city??? These cycle lanes are getting ridiculous and the resulting traffic is getting absurd. Have you been in Upper Riccarton lately??? The closure of the Middleton Road/Riccarton Road intersection combined with the cycle lane crazy has made getting from north to south anywhere near this area practically impossible.

A big fat NO to the water charges. The planned implementation of these charges shows just how disconnected from real life, family, situations and salaries this council is. The inequity in the charge is disgusting. How can you possibly think setting the limits the same for every household is equitable??? How do you come to the decision that a household of one person should be treated the same as a household of ten people?? This will disproportionately disadvantage lower socioeconomic peoples of our society, who have no alternative but to live in overcrowded situations just to make ends meet. I am disgusted at this decision and either the lack of thought on this matter or the lack of caring for the people you claim to serve. If you must charge, at least make it fair.

You are ruining my children's childhood. The days of kids under a sprinkler, water fights, water tables and paddling pools in the backyard in the middle of summer are gone, because of water restrictions EVERY YEAR. Just fix it already. You waste so much money on cyleways and swimming pools and other unnecessary things to "improve our city" and increase our rates for, but if we are dealing with capacity issues, INCREASE

CAPACITY, and stop harping on at us to stop using water when you clearly know THIS IS WHEN WE WANT TO USE IT! I would happily sacrifice most of the crappy delayed and superfluous anchor projects so my kids can play under a sprinkler in summer.

I think the priorities, planned implementations and continued overinflation of rates of this Council show how disconnected they are to the people they claim to serve, on our very own dollar. Your Merivale lifestyles, attitudes and plans for our city are a ludicrous dream for so many that are being made to suffer for its reality. Maybe you should set foot in some other suburbs for a reality check every once and a while.

1.2 Rates

I think increasing rates year on year to such a ridiculous extent, while salaries have stagnated, business are cutting back, house prices and rents and the price of food are sky rocketing, and people are financially hurting is irresponsible, disconnected and wrong. How about we realign our views on necessities vs luxuries and learn some frugality.

1.3 Proposed changes to existing rates, and new targeted rates

A big fat NO to the water charges. The planned implemention of these charges shows just how disconnected from real life, family, situations and salaries this council is. The inequity in the charge is disgusting. How can you possibly think setting the limits the same for every household is equitable??? How do you come to the decision that a household of one person should be treated the same as a household of ten people?? This will disproportionately disadvantage lower socioeconomic peoples of our society, who have no alternative but to live in overcrowded situations just to make ends meet. I am disgusted at this decision and either the lack of thought on this matter or the lack of caring for the people you claim to serve. If you must charge, at least make it fair.

1.4 Investing in upgrading and protecting our city’s water networks

Just make it sufficient, because clearly it isnt at the moment. You are ruining my children's childhood. The days of kids under a sprinkler, water fights, water tables and paddling pools in the backyard in the middle of summer are gone, because of water restrictions EVERY YEAR. Just fix it already. You waste so much money on cyleways and swimming pools and other unnecessary things to "improve our city" and increase our rates for, but if we are dealing with capacity issues, INCREASE CAPACITY, and stop harping on at us to stop using water when you clearly know THIS IS WHEN WE WANT TO USE IT! I would happily sacrifice most of the crappy delayed and superfluous anchor projects so my kids can play under a sprinkler in summer.

1.5 Investing in our transport infrastructure

For goodness sake stop reducing car access for the sake of non-existent cyclists.

### Feedback

1.5 Investing in our transport infrastructure

Why are we not given an option to approve the quarter of a billion dollars in cycleways ? I simply dont have much faith in the way they have been executed in our city , making intersections more dangerous and putting huge strain on crucial routs for services like the ambulances going to and from the hospital. I'm really worried someone is going to get killed one day because of the poor design.

1.7 Our facilities

I wish you would reconsider the closing of services at the Library in Lyttelton.

Reasons

Lyttelton is far from town and for the many older people it's an inconvenient and a long trip to pay rates make enquiries get dog licenses etc. Especially those that are no long able to drive.

A lot of people in lyttelton are ideologically interested in avoiding unnecessary car trips into town for ecological reasons .

The council benefits from having a local community based presence, The building and the office space is already in use anyway as a community library.

The Arts Centre is an absolute treasure for Christchurch. I remember attending music lessons there as a child and since then it has been a constant and unique (in New Zealand) feature of the city. Most recently, my partner and I started up a creative venture based at the Arts Centre, Franganzi Artisan Perfume Studio. Clearly, we have a vested interest in supporting the Arts Centre but beyond this, it is essential that this venue continues to thrive. It attracts visitors from outside the city and in particular is a focal point for tourists. It is simply not feasible to expect such a public facility, with its role in supporting our local arts and creative communities, to function effectively or cover operational costs through independent commercial revenue.

## Feedback

1.1 Have we got the game plan right?

**According to the 2018 previous version of the CCC Long Term Plan: the CCC will...**

**"Improve the perception that Christchurch is a cycling friendly city"**

**as well as supporting policies which would result in "More people are choosing to travel by bike"**

**I'd like to see this continuing for health, economic and environmental reasons.**

1.2 Rates

OK if it goes to things that make living here better.

1.3 Proposed changes to existing rates, and new targeted rates

Excessive water usage should be discouraged and taxed.

1.4 Investing in upgrading and protecting our city's water networks

Don't know about the balance but would love to have the non chlorinated water back that we used to have!

1.5 Investing in our transport infrastructure

- **More capital spending should be focused on encouraging biking, both on roads, and through parks.**
- **Designated cycling infrastructure should give people additional transportation, fitness, and recreational options, as well as benefitting the environment.**

*Investing in our transport infrastructure*

- **Expand & accelerate delivery of all the Major Cycle Routes and the Local Cycle Network**

Our Local cycle network: Lyttelton

- The network of bike tracks available to Lyttelton residents should be improved according to the CCC - Ururau Reserve Development Plan.

- Lyttelton should be connected into the existing network of trails above in the Port hills. I would love to see a cycle friendly track connect Lyttelton to the Summit Road in the Whakaraupo Recreation Reserve.

- **More spending on Cycleways gives people the freedom to chose alternative transport modes**
- **Include and fund cycle parking everywhere it is needed**
- **Make well designed cycling infrastructure a standard part of all transport projects as is currently done with footpaths**

1.6 Rubbish, recycling and organics  
I'd love to see more plastics able to be recycled.

1.8 Our heritage, foreshore and parks  
Urumau Reserve is a recreational reserve in Lyttelton, and a popular local destination for walking among natives and for mountain biking; The unique topology of the hillsides, shaded and protected by a mature pine plantation, provides an ideal setting for a local outing; The track network has room for significant improvement in accordance with the Urumau Reserve Development Plan. But this plan needs support from council to move forward in line with the Long Term Plan.

The reserve is currently limited to two formal access points only. The consultation plan shows extra access points to the reserve, utilizing existing reserve land:

- 18 Gilmour Terrace
- the end of Gilmour Terrace (across private drive)
- 12 Foster Terrace
- 24 Foster Terrace
- the Timeball Station

There needs to be a formal access point to and from the reserve onto Sumner Road.

Additionally, there is a strong desire to see a viable connection to the network of tracks available above in the Port hills. This was considered out of scope for the Urumau Reserve Development Plan, but should be supported from the point of view of a Long Term Plan.

As mentioned above, I'd love to see a cycle friendly route through Whakaraupo Recreation Reserve connecting Lyttelton to the Summit Road.

1.11 Potential disposal of surplus Council-owned properties  
Yes, good idea.

### Feedback

#### 1.1 Have we got the game plan right?

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

- they flood when it rains
- they are slippery with ice on frosty mornings
- when most teams train in the evenings they are slippery and damp from night-time dew
- part of one court is permanently wet and covered in a slick film because it never dries out
- they have extensive cracking filled with vegetation
- they have holes for tennis net poles that are no longer used

The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

As an active member of the community and a regular visitor to The Arts Centre for many decades, I would greatly appreciate the Arts Centre being included in the Council Long Term Plan. I believe the Arts Centre provides both local people and visitors from all over New Zealand, with a magnificent collection of buildings, which are of great historical value to both young and old.

This unique landmark also offers a variety of artistic displays which include: musical events, movie theatre, creative workshops, eating facilities and a large open space for people to just sit and relax or admire the architecture.

Although the Arts Centre suffered with the Canterbury earthquakes, a decent amount of restoration has been completed but it would be wonderful to have it fully restored, so it can continue as a much loved place of both liveliness and serenity.

We have lost so much of our history, with the destruction caused by the earthquakes and this is yet another reason of the importance of retaining the Arts Centre and to be included in the Long Term Plan. Thank you.

I think the Arts Centre, is one of the key resources in Christchurch. As a family we visit regularly. It is a treasure that I think as a city we need to ensure is preserved for future generations.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

Support targeted rates as a good policy mechanism as long as there is accountability for each "bucket" and the 'peter' bucket is not robbed to pay into the 'paul' bucket.

In other words, targeted rates have to be dynamic up or down. Kept under review. Not stay fixed.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Strongly support.

Arts Centre comprises lovely secular (non religious) buildings that contribute to the "heart" of Christchurch and have valuable commercial uses, which we also need in town. (not in suburbs). To me they are more important and accessible than the hopelessly broken and societally defunct Cathedral.

They are located near existing high quality transport infrastructure and parking, so build on metro economies of scale.

It is good to see the intent to scale it up and down but I note that these buildings are 'high maintenance' so change may be necessary over time.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

Strongly support.

The Council needs to shift its mindset on selling things. It does not have to own everything. It is about enabling a

good society in town (with wise asset management), not controlling via ownership. In this context businesses like Port, Airport, Citycare do not need to be 100% Council owned.

1.12 Any other comments:  
Well done for quitting the Red Bus business.

To: CCC Plan  
Subject: Belfast courts

1050

[REDACTED] [REDACTED]

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

- they flood when it rains
- they are slippery with ice on frosty mornings
- when most teams train in the evenings they are slippery and damp from night-time dew
- part of one court is permanently wet and covered in a slick film because it never dries out
- they have extensive cracking filled with vegetation
- they have holes for tennis net poles that are no longer used

The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

[REDACTED]

As such my submission is solely focused on the Library Van. We would like to see this service continue as it provides an essential service to not only the elderly, but the young who dont have material possessions. Least of which are books. Everytime the library van visits a school one child who may not ever pick up a book has the opportunity to do so. For furthering the education of our future generations this is worth it.

Lets call it art and spare some of the \$30mil allocated to art that half the city wont go and see.

Thank you.

1.4 Investing in upgrading and protecting our city's water networks

I would like to see the roll out in UV treatment to city wide. Remove chlorine completely. If it was good enough for the rich half of the city to have UV treatment then roll it out everywhere.

Kia Ora,  
I'm a player for the Belfast Netball Club. I always use the netball courts once a week for trainings. The renewal of the Belfast netball courts, driveways and carparks and the repair of the toilets needs to be a Council priority. 2027 is too late for Belfast club.

I've been playing for 6-7 years now and I've seen many people slip and fall over on the uneven ground. Also, one of the courts has a very large dip to the side and sand from the kindergarten always flows through and people slip over that.

One thing that is most definitely required is a new bathroom. A lot of netball teams practice at the courts over the week and toilet facilities should be available. Particularly as most of us are coming straight from school and have nowhere to change from our school uniform.

The continuation of Netball in the Belfast community is vital and if these repairs are left until 2027, this will result in players leaving the club and either quitting the sport or seeking clubs with better facilities. I've seen many players from my team quit for other sports.

If encouraging physical activity, sport and community is a priority for the council, then this repair work needs to be scheduled for much earlier than 2027. Give us a facility that shows we value sport and the community, a place that we can be proud of.

Thanks,  
Cate Donaldson-Scott

### Feedback

1.1 Have we got the game plan right?

One of the most important issues facing the population now and in the short term is obesity and how it will affect the populations health. I do not need to expand on this as it is well documented.

The city council should be putting more resources in to getting its rate payers off the couch and doing some sort of exercise and having a plan for the future to do this. Also some form of education to get people moving. Some of the greatest assets in the community are community run and could do with some financial assistance. Such as the mountain bike tracks, the walking tracks etc.

I think this will become a much bigger issue for local councils and rate payers than Climate change which, just because it is trendy the council seem to have put money into and have a separate plan for, even though at the end of the day what we do in Christchurch will have very little effect on the Christchurch rate payers and is probably more a national problem to deal with.

This is what I would like to see more of!

1.2 Rates

Obviously would like to see this lower and more in line with inflation.

1.3 Proposed changes to existing rates, and new targeted rates

This is really just another rate increase however you dress it up. But I do believe it should be user pays.

1.4 Investing in upgrading and protecting our city's water networks

It obviously needs to be spent? But is the spend due to lack of spend in the past or earthquake issues?

1.5 Investing in our transport infrastructure

No this should be a market lead policy. Maybe getting public transport is an option, but when and if carbon credits do their thing and carbon emitting transport becomes too expensive then people will go to other forms of transport. Let the market decide

The Arts Centre is a Christchurch Heritage Icon. Like so many locals and visitors alike I always loved to visit the Arts Centre; and was rapt to get my 1st Art studio there in 1997..where I stayed as a working artist tenant until the EQ of 22-02-2011 shocked us all. Thanks to the foresight of former Director Ken Franklin, much of the rebuilding work has been funded by this insurance.

Its fantastic to see the buildings reopen and people and businesses returning, bringing in a new chapter in the life of The Arts Centre. I feel a part of the rebuild by renting out pop up Galleries and spaces since Boys High Building reopened ? 4 years ago. I am in process of becoming a more permanent tenant again. Others will want to join....and eagerly await an opportunity to be a part of the beautiful and historic and much valued Arts Centre.

So funding for The Arts Centre is essential funding for our City's cultural life and future.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

### Feedback

#### 1.2 Rates

I think serious consideration needs to be given to accurately valuing properties. many properties in Fendalton are grossly undervalued and this puts an unfair burden on people whose rates are assessed at market value. As an example our neighbour who lives in a large two storied weatherboard house has a valuation of \$160k for improvements which is patently absurd. Surely if a house sells for \$x that is it's value and rates should be assessed accordingly

### Feedback

1.1 Have we got the game plan right?

i would like to see the wharenui pool to be kept even when the metro pool in the city opens.

Wharenui pool has a long history in Christchurch and is involved in many pillars. Their swim squad is strong and has had many swimmers go on to compete on an international stage and also many swimmer learn about setting and achieving goals, commitment and team work. Getting rid of the pool would loose all that history. not only that the squad currently has the entire pool to themselves from 3-7pm for all the different swimmers, if you close the pool they will have to move to metro. There is already a shortage of pool space and that would take away 4 hours every day of metros pool space that could be used for all the other sports that are struggling to get pool space for their training.

The other thing that would be lost is the learn to swim school program that I see running most mornings. The pool has wonderful swim teachers who divide the kids into their ability and teach them the basics so the teachers who often have a limited understanding of teaching swimming can just ensure the kids are happy and everything else runs smoothly. I feel this could be lost if it gets moved to metro. It would also take up pool space that may be needed for things like aqua jogging or pool swimming during the day.

The kayaking groups go to this pool also, the shallow smaller pool is useful for them to learn safely how to roll their kayaks.

Finally I just about always swim at wharenui as all other pools in my area in winter are over crowded for swimming. As an ex competitive swimmer, I often end up at the other pools with 4-5 people in my lane as a public swimmer, I over lap 1-2 people every lap which means I can not easily get into a rhythm and do a long distance swim set. I am constantly lifting my head to try and find a way passed the people that are much slower than me, but they and I have no where to go as most pools only have a couple of lanes available for public swimming as the rest of the lanes are booked.

Lastly, I see this problem of pool space shortage to only get worse as the population of Christchurch grows, in particular as the city center re builds.

In summary, there is a shortage of pool space in Christchurch and we need to protect the pools we have. This will enable all ages of people to enjoy the pool.

Additional requirements for hearing:

### Feedback

1.1 Have we got the game plan right?

Too much funding for roading and car parking and not enough for sustainable transport and environment.

1.8 Our heritage, foreshore and parks

Redcliffs is surrounded by the Port Hills, Barnett Park and areas of red zone land. Much of this is CCC owned or controlled and there is a major problem with weeds and pests due to lack of attention for many years. Barnett Park has a management plan which is over 30 years old and seriously out of date and it is time an effort was made to deal with the pests and weeds and restore an extensive area to native vegetation to improve amenity, reduce fire risk, enhance wildlife and promote sustainability.

Barnett Park has had minimal maintenance and no improvements over recent years, with dead trees not being replaced and little work done on invasive weeds. The situation is deteriorating.

Funding is needed to continue the pilot project for pest control in council parks as part of environmental restoration and Predator Free 2050.

It is also time to deal with the rockfall risk in Barnett Park post earthquakes in order to enable safe public access to resume to the historically important cave area. This could be a major local tourist attraction especially when the Coastal pathway is completed.

Finally, there needs to be work done on the estuary edge which is suffering from erosion in places such as Beachville Reserve and the Moncks Bay tram shelter and this could be managed for the benefit of local ecology also.

There is also a need to replace the public toilet at the entrance to the park that was removed due to earthquake damage.

We call on Council to set aside funding for the Barnett Park Management Plan review in particular and to increase funding for park and reserve maintenance and environmental improvement generally.

1.12 Any other comments:

#### Pigeon Bay Foreshore Erosion

We would like the council to consider allocating funding to put large rocks or concrete squares along a 250m stretch of coastline on Holmes Bay Rd to protect the bank from sea erosion. On this section of coastline the road is close to the shoreline. There is a narrow grassy strip between the road and the shoreline bank. Visitors and tourists often stop along this stretch to take photos and picnic. [REDACTED]

This stretch of coastline can receive pounding at high tide when there is a strong Nor-Easterly blowing. There had been gradual erosion over the years. This bank is now only a few metres from the road in places. This section of coastline is approximately 250m. Protection work now would be considerably cheaper than major repairs to the road in the future. Once the grassy edge is lost it will never be able to be replaced.

This section of road is part of the scenic route from Port Levy to the Summit Road on Banks Peninsula. With the Peninsula becoming a very important scenic attraction for both NZ and overseas visitors it is important to protect what scenic attractions we have and to protect the roading infrastructure. Protection work would have the support of all Pigeon Bay and Holmes Bay residents. Most residents of Pigeon Bay use this section of road regularly as it is the only access to the refuse depot at Pigeon Bay.

The main power supply to Holmes Bay is along this section of foreshore. Poles are on the narrow strip between the sea and the road. The road is the only access for Holmes Bay residents to Akaroa and Highway 75/Christchurch. Protection work will require placing large rocks or concrete blocks along the sea wall. The main cost would be transporting rocks or concrete block to the site and placing in position.

With the prediction of sea level rise (and the other issues outlines above) the sooner this work is put in place the lower the potential long term cost will be.

## Feedback

1.1 Have we got the game plan right?  
priority for public spaces

1.2 Rates  
Im happy to pay for increased rates if it goes to improvingband oteserving public spaces and the city for all people and making decisions that are environmentally sound thst benefit all cantabrians. Public soaces like the central library, the arts centre the art gallery the green spaces are the future of out city for the next generation

1.3 Proposed changes to existing rates, and new targeted rates  
yes we should pay for excess water use.  
Im not sure what the current rates arrangement wuth the arts centre is. But its a fabulous heritage building and its great to see it back in use.

1.4 Investing in upgrading and protecting our city's water networks  
  
is it sustainable? Is it environmentally minded and is it designed with the ling term environmental impact in mind i would be asking?

1.5 Investing in our transport infrastructure  
  
yes investment in that is essential. Chch is unique in that we can ride everywhere easily. Make it easy and safe for people.  
  
provide support and incentive for businesses to provide good bike storage. Its better that carparks. Like the cdhnb! Biggest emolyer in canterbury. Terrible car parking, employees that want tk bike to work but hopeless bike parking. Multiple submissions from staff (in their iwn time), and the DHB and council have been totally hopeless to be honest.

1.6 Rubbish, recycling and organics  
yes this is good investment.

1.7 Our facilities

I strongly oppose any reduction in service provision or funding to our community public spaces like library and art gallery. Its one if our cities most constant and wonderful spaces for all ages.

I see school groups and elderly groups in there frequently. Its fantastic and so accessible. You cant “measure” the impact the role of those places have on creativity, mental health, exposure to different cultures. Its not about numbers and throughput. That is very shortsighted.

for example: my father attends the “artszymers” sessions with dementia canterbury. The benefit if thise are so far reaching. They are so enjoyed by the group of maybe 8-10 people. But it also provides a morning help to all if those wives or husbands that care for them (another 8-10).

There are less and less services available for many groups of people like this. And just counting numbers doesnt reflect the benefit of these places prvide to the community.

1.8 Our heritage, foreshore and parks

cant comment as i dont know what the current spend is. Parks and foreshore yes.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Subject: Renewal of the Belfast Netball Courts and repair of the toilet block

Follow Up Flag: Follow up  
Flag Status: Flagged

Categories: Submission

I have heard that there is a plan in place for the renewal of the Belfast Netball Courts and repair of the Toilet Block- but not until 2027!

Seriously - come on Council that timeframe is a joke. These netball courts have been in terrible condition for a number of years now and should have been repaired many years ago already. They are dangerous for the kids to be playing netball or other activities on.

No way should there be any further delay. It's not just the netballers who use these courts - the school kids use them on a daily basis and it is a main route for many people dropping kids at school.

I don't personally have a child who uses these courts anymore as my child is now at Intermediate. However, we used these courts regularly since 2012 when my child was at Belfast School. The netball court area always flooded whenever it rained and both kids and parents got absolutely soaked while wading across the courts to get from the carpark. This is just not good enough.

My son still plays for Belfast Rugby and Belfast Touch and we use the adjoining fields and carpark weekly throughout the year. Both the carpark and the toilets need urgent repair. I've been bringing kids to rugby training on these fields since 2011 and there have been numerous times it would have been useful to have toilets ..... it is a serious oversight to not have useable toilet facilities in such a widely used location. It's a requirement of restaurants to have toilets so why should sports grounds be any different (especially for female netballers and Mums) I always thought it was being held up due to EQC repairs. To hear that they will be done by 2027 is just ludicrous!!

Please reconsider the timeframe - surely our wider Belfast Community are important enough to warrant decent facilities in an area which is widely and regularly used. Don't let us all down.

Kind regards  
Shame Brunton

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

No, I don't think you have...

Akaroa continues to suffer extreme drinking water shortages for the town itself and many of the surrounding Bays. Level 4 water restrictions have been in place all summer and still continue due to the drought conditions and resulting low stream levels.

The permanent population Akaroa is also a very popular recreational and holiday destination. Both residents and holiday home owners take great pride in their properties and consider their gardens an important investment. Many have made a large financial outlay to purchase plants to comply with landscaping and other requirements, while others plant substantial fruit and vegetable crops in an effort to take a more sustainable approach to food production. To be in a position of being unable to water these gardens due to the failing domestic water supply has been devastating to many.

No real plan has been put in place to address Akaroa's water shortages, which have been ongoing for two decades. Basic requests such as people applying for Building Consents to install tanks to store storm water and rain water have been ignored.

1.2 Rates

Acceptable but only if a workable solution is implemented!

1.3 Proposed changes to existing rates, and new targeted rates

Again fair enough if the right steps are taken...

1.4 Investing in upgrading and protecting our city's water networks

All good but...

Akaroa continues to suffer extreme drinking water shortages for the town itself and many of the surrounding Bays. Level 4 water restrictions have been in place all summer and still continue due to the drought conditions and resulting low stream levels.

Besides the permanent population Akaroa is also a very popular recreational and holiday destination. Both residents and holiday home owners take great pride in their properties and consider their gardens an important investment. Many have made a large financial outlay to purchase plants to comply with landscaping and other requirements, while others plant substantial fruit and vegetable crops in an effort to take a more sustainable approach to food production. To be in a position of being unable to water these gardens due to the failing domestic water supply has been devastating to many.

No real plan has been put in place to address Akaroa’s water shortages, which have been ongoing for two decades. Basic requests such as people applying for Building Consents to install tanks to store storm water and rain water have been ignored.

The Council needs to take a sustainable long term approach and **adequately provide a reliable drinking water service to the Akaroa community**. At this point the Council has done nothing to secure the water supply for Akaroa and the surrounding Bays given the knowledge of the increasing issues that climate change brings, and water shortages that have been ongoing now for over 20 years.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.12 Any other comments:

Akaroa Wastewater Process

We urge the Council to **delay funding a resource consent application** until the I&I pipe repairs are complete, an accurate volume is clarified for the scheme to then be designed around, and proper consideration is made for the reuse of wastewater in Akaroa.

The pre-text that treated wastewater can be used to irrigate native trees takes no account of specialist advice that the trees that the Council wish to plant such as Kanuka and Manuka will not thrive on wastewater irrigation and that both nitrogen and nutrient loading may cause serious long term issues. This highly experimental irrigation proposal is not by any means providing mitigation for climate change, as stated in the current CCC LTP document. The rain intercept canopy that the Council plan to create to dissipate natural rainfall to ground can not necessarily be achieved, leaving the scheme vulnerable to under sizing and failure.

The Council needs to take a long term view and develop an appropriate reuse system once national standards have been introduced to allow for this. With the Water Services Bill currently under review the Council needs work with Central Government **to ensure that national standards are introduced allowing for the reuse of treated wastewater** to supplement failing drinking water supplies.

Akaroa Service Centre

I fully support the community’s opposition to the closure of the Akaroa Service Centre. Akaroa is a service town, a tourist Any loss of local representation in Akaroa will be detrimental to the community and we fully support the opposition by the Akaroa Residents and others to its closure.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.8 Our heritage, foreshore and parks

Linwood Avenue Community Corner Trust along with Kidshub (under CMM), is very interested in the resources in the Bromley/Linwood community. We are particularly interested in the potential that Cypress Garden Reserve has and the necessary development it needs to have done to reach this potential. We would like to see this included in the Long Term Plan.

In 2020 we conducted a community survey where we received 16 responses. From these responses, a few key points arose. People like the amount of space that there is, but it could be better utilised. The lack of a playground and play options for local tamariki, lack of a nearby or accessible toilet, lack of seating, and lack of adequate maintenance are all significant issues.

For people with disabilities, or parents with young children in prams, this park isn't very accessible. One survey responder writes about the glass bottles in the park and how they can't safely go through this park on their mobility scooter because of it. Parents are having to push their prams across long stretches of grass and find that difficult. In our country and our city, parks and recreational spaces should be accessible for all individuals regardless of their level of physical ability. People with disabilities should not have to miss out because a space is not designed for them to be able to enjoy it.

I am one of the supervisors for the Kidshub holiday programme, and I can say with certainty that if this space had more available for children, we would be using it during our programmes. We believe that a playground and nearby and accessible toilet facilities should be the bare minimum. But there is an opportunity here to do something even greater than the bare minimum. A skate ramp for tamariki and their skateboards/scooters/bikes would be well used. Something like the Knights Stream bike track would be amazing. This community deserves to have the kinds of spaces that we are constantly seeing popping up all over Otago.

I also lead a group for girls named "Wonder Girls" for ages 6-13, and we would also love to use the park more if there was something there to go for. I feel confident in saying that other community organisations and groups for tamariki would also.

Cypress Garden Reserve is not currently meeting the needs of the community, and because of this people are more likely to go elsewhere. They shouldn't have to do this. We would love to see this addressed and see this space live up to its potential.

File

Cypress Garden Feedback

## **Cypress Garden Reserve Survey Feedback**

### **What is your first impression of the Cypress Garden Reserve?**

1. Thoroughfare for the school, plenty of potential, skate ramp not fit for purpose, old & outdated, beautiful trees and nature aspect
2. So much space so little things
3. Good open space
4. Lots of space with nothing happen
5. No playground
6. Great space, Where's the playground?
7. Needs work
8. Waste of space
9. Spacious but no playground.
10. Its tidy and I like the trees
11. Boring
12. Nice to have a green space in my area.
13. Lacks colour
14. I like that you can walk your well behaved dog here off leash.
15. Spacious
16. Boring

### **What do you like most about the Cypress Garden Reserve?**

1. Plenty of Trees & natural elements, butterflies
2. Not much really
3. The nice view of walking by the trees
4. The bush bit
5. lots of space
6. Open bright nice and quiet
7. School events and space for kids
8. Trees. big area to walk the dog
9. Nice big open space
10. I like that it make the school entrances safe
11. That its tidy no rubbish etc
12. Nice to have green space in my area.
13. open
14. That it's dog friendly.
15. Spacious
16. Open

### **What do you think could be improved?**

1. More for community & children in community, better skate park, suitable for all ages & levels, nature play, toilet facilities, Other facilities

2. A nice playground more seating nice flower area maybe sport area of some sort cricket/scooter/rugby posts
3. Nothing it is good... or maybe have the toilets cleaned more
4. Bike track, some gardens with flowers, places for kids to climb trees, build stuff
5. it needs a playground
6. Definitely a playground would be amazing
7. Gardens
8. Family friendly park, accessible toilets big area but not used very well.
9. Toilet facilities
10. The paths could be safer, the seeds that fall become a slipping hazard
11. Maybe having playground or picnic area
12. Access but I don't know how you will keep the motorbikes out that just go round and round and round for hours on end.
13. trees pruned, better vision
14. Put another path through the middle
15. Toilet facilities
16. Garden

### **What would have to change in order for you to have a good experience at Cypress Garden Reserve?**

1. More for children play wise, better toilets closer to the action, nature play, places to sit together
17. All of the above "A nice playground more seating nice flower area maybe sport area of some sort cricket/scooter/rugby posts"
2. Maybe drinking fountain on the other side.... or have the foot path go all the way round. Also maybe we could have a community garden
3. Things for kids to do
4. a playground
5. Playground I have some kids happy to kick ball round ect but others would enjoy a playground while they are playing ball
6. Clean it up
7. More family friendly activities.
8. Better toilet facilities
9. Have a place to sit and watch kids playing, safer paths
10. Couple of bench seats would be nice
11. For the mower people to have to pick up all the glass bottles that are just thrown anywhere by imbeciles. I can't just drive safely anywhere with my mobility scooter and the dog on the grass or paths due to the mower spreading the glass everywhere. It's blinking dangerous as I can't see it. Access is also hard for me as I have to drive to either corner because I can't get up onto the footpath on that side at any other place.
12. colour
13. Its fine as it is

14. A playground
15. Clean it up
16. Colour

**Do you think Cypress Garden Reserve meets the needs of the community?**

1. No, I feel it's only really used to walk dogs or as a thoroughfare for the school
2. So so
3. Yes
4. Some of the community not all
5. no
6. Nearly
7. Yes but needs to have more effort put into it
8. No
9. Yes
10. It doesn't meet any of my needs really
11. No
12. It's better than some I suppose. At least it's not tiny and leads to other areas you can go. It why I moved to this street.
13. mostly
14. Yes
15. So so
16. No

**If you could change or add or change anything in Cypress Garden Reserve, what would you do?**

1. Community facilities such as BBQs, seating, better toilets, nature play for children to keep with the natural aspects e.g. wooden bridge, stepping stones - trail through nature, emphasis on the butterflies - information? Relative play equipment? Better skate park suitable for all ages & levels - stop start signs with flatter surfaces & small bumps for younger & more, better ramps for older tamariki
2. More family friendly
3. Add a wee edible garden maybe wee playground that is available to everyone to get even in wheel chairs
4. More plants, more activities organised be community and whanau
5. add a playground
6. Bike track and playground just more things to do in the amazing space
7. Plant flowers
8. Playground, picnic area (bbq), water play ,skate park bike track.
9. Add a playground
10. It doesn't seem like a good place to relax, just for running around or exercising dogs. Picnic tables would be a great addition, and it would be an awesome place for a public paddling pool. Improving paths would be great too
11. Playground or picnic area

12. As my needs have changed now I would like footpath accessibility at least in the middle along Bromley Road. My mobility scooter can't get up gutters. Without the dog it's not such a big problem.
13. area for adults to do exercise
14. Please, please don't change it into a playground, there's almost nowhere dog friendly to walk as it is
15. Add a playground
16. Plant flowers

**How likely are you to visit Cypress Garden Reserve over other parks? 1-5**

1. 1
2. 1
3. 3
4. 1
5. 5
6. 3
7. 4
8. 2
9. 4
10. 1
11. 2
12. 4
13. 3
14. 4
15. 5
16. 2

1.1 Have we got the game plan right?

i am really disappointed that there is talk of withdrawing the mobile libraries. During the normal week, they provide books and social interaction for people who cannot access other libraries. Also, during the aftermath of the earthquakes they provided an essential service to many suburbs. It is surprising that the council will reduce this service whilst increasing rates!

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

they flood when it rains  
they are slippery with ice on frosty mornings when most teams train in the evenings they are slippery and damp from night-time dew part of one court is permanently wet and covered in a slick film  
because it never dries out they have extensive cracking filled with vegetation they have holes for tennis net poles that are no longer used  
The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

We Need Your Help To Get New Courts  
Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

Regards,  
Stacey Ryder

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.7 Our facilities

I oppose the closure of the Service desk at Lyttelton. This provides access to a range of people unable to access another easily due to transport considerations, mobility etc. I use the facility. There is more to 'service' than just financial transactions; which seems to be the current means of assessing its use.

#### 1.11 Potential disposal of surplus Council-owned properties

I oppose the disposal of the land in Diamond Harbour (Whero Ave./Hunters Road) as I do not believe the current infrastructure can cope with the increased number of houses that this would potentially mean.

It is also a much used recreational track.

[REDACTED]

1.5 Investing in our transport infrastructure

1.7 Our facilities

With the available monies, gathered from the cities rating base, y feeling is you've arrived at a resonably balanced plan going forward.

This is a different city from the one I grew up in. It has the promise of a vibrant cosmopolitan place to live, both for now, and into the future. My sigular problem is the notion that the city can go without the much appreciated MOBILE LIBRARY SERVICE.

Christchurch has developed a vigorous cultural life. Part of that is ease of access to the written word.

Art Gallery:

The Wednesday night hours at the gallery should not be changed. It provides a venue for Art talks and tours that are very popular.

The Education program at the Gallery should not be cut. It provides particularly low decile schools with more access to Art and children who otherwise would have no introduction to Art get a good grounding. This does not

happen so well with self guided tours. More children in the lower socioeconomic groups would miss out on Art education.

Libraries

Please do not cut the Sunday hours at the Sumner library.

1.8 Our heritage, foreshore and parks  
Heritage money put towards preserving the Baches of Taylors Mistake and Boulder Bay. Particularly help with remediating the hillside rock fall /cliff collapse (council land) behind heritage baches. These baches have huge potential and add interest and diversity to the city for visitors and locals.

## Feedback

### 1.2 Rates

I do not have strong opinions on the general rates increases.

### 1.3 Proposed changes to existing rates, and new targeted rates

I do not agree with the targeted rate for households using more than 700L of water a day.

This is a regressive tax which will punish people in shared living situations and with less efficient appliances.

The 700L per day recognizes the average use per person per day of approximately 200L, and justifies this for 4 person families as a family has shared water use - washing, cooking, dishes, gardening etc.

This policy actively discriminates against larger families, but even more so, people in shared living situations.

Young people and students in particular often live with multiple people in one household and without the shared water usage of a family.

People in shared living scenarios are one of your more vulnerable groups. When many people live in one house, it is not generally a sign of wealth.

[REDACTED] I do not have control over the water usage of my flatmates. I do not have control over the water efficiency of my house (water pressure, leaks, appliances [chattels] etc).

If you are trying to target people watering their lawns this is absolutely the wrong way to do it.

### 1.5 Investing in our transport infrastructure

Make the buses free!

## Feedback

### 1.2 Rates

5% now and 10% later is completely unaffordable for ratepayers. Rates are already at a premium with ratepayers on their knees after a tumultuous year of covid and living in a city which is still in recovery mode and not providing full, up to scratch services to its ratepayers. Council needs to look internally to save more money and spend less on unwanted and unneeded infrastructure like the Jeffreys Reserve water storage tank that has had vigorous public opposition and is not needed to enhance the water supply to the community as the current upgraded well heads work perfectly fine without it.

### 1.3 Proposed changes to existing rates, and new targeted rates

Excess water rate is totally wrong. Ratepayers should not be paying for our plentiful and pure artesian water.

### 1.4 Investing in upgrading and protecting our city's water networks

Council is spending money on water infrastructure that is not wanted by the community ie the Jeffreys Reserve water storage tank. The ungraded well heads were sufficient to make the water supply safe at this location This multi million dollar storage tank has been proven to be in excess of water supply requirements by a professor of water engineering at the community board hearing but he was disregarded by the board who only listen to their less qualified engineers. Council could save millions by not proceeding with this project that has languished and will no doubt have blown out in price from originally sanctioned budget. Wipe it off the agenda and spend the money on bringing the city to life with a new stadium, convention centre and restored cathedral and arts centre. These are projects the people of ChCh do want to see finished and unusable.

I do applaud the council for spending some money on the legal battle by AWA to stop the belfast water bottling plant. If only they could do more on an official level to make sure these historic consents are not automatically renewed when the operation is not the same. It is ridiculous that a small community group must wage war with this bottling plant with the council backing yet the council will do nothing themselves. I would like to see way more action and money from council on this problem.

### Feedback

1.1 Have we got the game plan right?

I think that, on the whole, the balance is adequate.

However, I would like to plead the case for maintaining opportunities to our population in Christchurch to access and learn about art.

The Christchurch Art Gallery runs excellent programmes for the general public and, more especially, for young people. In a country where sport is a key focus and art and literature take very much second place, it is important that our young people have access to and teaching about these things as a core part of their education. Unlike the more populous British, European and American cities, we do not have the plethora of galleries and art museums in New Zealand that give young people a broad education in art. When I have been travelling abroad, I have constantly been delighted to observe groups of children in major art galleries being given explanations about and being asked for their own interpretations of major artworks that they are viewing. Whilst we do not have this choice available to us, the Art Gallery offers a fine programme for young people. If we are to become "educated" adults we need an appreciation of the finer things of life.

Please do not cut the education funding for the gallery. It offers over 11,000 children in a year the opportunity to see artworks and carry out creative opportunities. This encourages them to think and to talk intelligently about art. It also stretches their minds as they create their own artworks and explore artworks in front of them.

I would also like to put in a word for not cutting funding for Wednesday evening late sessions at the gallery. Initially, I thought that not many people would visit in the evening and that it might not be a great loss. On asking, I find that in 1919, over 8,000 people attended these evening sessions. 2020 would probably be the same but for the intervention of COVID19. It is an evening where, personally, I have attended some very interesting talks and taken the opportunity to visit the galleries as well.

An art gallery should be an integral part of the community. An opportunity to reflect, expand our minds, enjoy and learn. We have a good art gallery with a leader and staff who offer imaginative exhibitions and access to some of our own New Zealand artists. It should be readily accessible to all members of the public and a training centre for young minds. Please allow it to maintain its good work. Unlike swimming pools, it is not as if there are other options in our city!

1.7 Our facilities

Please see response to "Have we got it right?"

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments  
Not at the cost of cutting funding to the Christchurch Art Gallery programmes. The museum can wait. Robert McDougall was our first art gallery, as I understand it. A shame it is not longer used for that purpose.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

As members of a small community, the most remote of all City Council communities, we hope that council will not lose sight of the need to continue to maintain its services and assets in Akaroa (including The Gaiety), and that its major investment in capital projects (such as the multi-use arena) is not at the expense of community facilities in the suburbs.

1.7 Our facilities

The Gaiety Trust is a registered trust and charity, with the express purpose of providing arts and cultural experiences in The Gaiety for the community, and a broader focus on promoting the use of this valued community facility. It is an entirely volunteer organisation, formed 20 years ago to refurbish what was then a neglected and disused heritage building.

The Gaiety Trust supports the proposed reductions in hire charges for The Gaiety in Akaroa, notified in Fees and Charges section of the draft LTP 2021-31, and hopes that the reduced charges for extended hires will help to reverse the trend of locals using alternative venues and encourage them back to The Gaiety. The reduced charges for extended hires will also certainly encourage out of town clients to consider using The Gaiety for weddings and other events.

The Gaiety Trust is currently formalising an MOU with council and is looking forward to having its own key to The Gaiety, access to the building for its regular meetings and to better communication with council staff.

Subject: Have we got the game plan right? Belfast Netball courts

1091

Categories: Submission

Tena Koutou,

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block. [REDACTED]

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

- they flood when it rains
- they are slippery with ice on frosty mornings!! Many skinned knees personally.
- when most teams train in the evenings they are slippery and damp from night-time dew
- part of one court is permanently wet and covered in a slick film because it never dries out
- they have extensive cracking filled with vegetation
- they have holes for tennis net poles that are no longer used

The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

### Feedback

1.8 Our heritage, foreshore and parks

Barnett Park in Redcliffs has a diverse history and I would love to see the loop track to the cave reopened. It has been closed since the earthquakes. It is a unique loop that was loved by Christchurch residents.

The park has so much to offer the community with adventure and exercise to a wonderful destination of the cave with beautiful views. It would be fantastic to see the biodiversity grow in this area too and could be a focal point for the council to see native bush and animal life regenerate.

The Coastal Pathway is at the bottom and this walk would a be a great off shoot from it.

The management plan for Barnett Park is nearly 30yrs old. Could this be a project that could move forwards?

Thank you for your time

## Feedback

1.1 Have we got the game plan right?

This seems like a balanced plan

1.2 Rates

That is reasonable

1.3 Proposed changes to existing rates, and new targeted rates

I support a targeted rate for the Arts Centre. I do not support excess water rates, but would be interested to know (on the rates account) how much water we use.

1.4 Investing in upgrading and protecting our city's water networks

This is a very necessary expenditure.

1.5 Investing in our transport infrastructure

That seems reasonable

1.6 Rubbish, recycling and organics

Looks good

1.7 Our facilities

I would not like to see any reduction in the operating hours of libraries, service desks or Christchurch Art Gallery

1.8 Our heritage, foreshore and parks

Good balance

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Such a unique Arts Centre, needs to be retained

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

#### 1.11 Potential disposal of surplus Council-owned properties

Not knowing what these properties are used for makes it a little difficult to accurately comment. Are they still being used, even if not for original purpose? Are they housing stock? Could they be renovated and used to bring in income? Really, only those who have accurate/detailed information would be able to make the decisions on this question.

#### 1.12 Any other comments:

Thank you for the opportunity to input.

### Feedback

1.7 Our facilities

i am against any changes to the funding of Christchurch Art Gallery.

The education programme at present is directly encouraging young children to enjoy art and to bring their parents and caregivers into the gallery.

I am also against any change to the wednesday night programme .

It fulfils a huge need for working people who cant get to the gallery at other times.

Anyone who works at the gallery will be abke to tell you that it is the biggest attending guiding slot of the week.

The movies and floor talks on a wednesday are so stimulating and interesting and must not be subject to council cutbacks.

Te Puna a Waiwhetu is a fabulous gallery and is a huge asset to Christchurch.

Please don't compromise it's funding.

With thanks

Veronica Anderson

## Feedback

1.5 Investing in our transport infrastructure

I support the current development of cycleways

1.11 Potential disposal of surplus Council-owned properties

I would like to submit that the land as described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) be removed from the LTP and fast track disposal.

This land contains 2 gullies that since 2014, local volunteers have spent thousands of hours of volunteer work in reforestation and building recreational walking tracks.

The CCC has invested and supported this process with plants, and track building materials.

There is also a very well used walking track (The School Track) that connects the gully tracks from Waipapa Ave to Diamond Harbour School. For school pupils living on Waipapa Ave, this track is just under 1km to walk to school. Walking along the road is 2km. Also, our footpaths are regularly blocked. On a Tuesday, the many wheelie bins on the footpath make it impossible to walk Marine Drive without walking on the road, often on blind corners. The school track takes dozens of people off these inadequate footpaths. I have attached a PDF showing photos of what our footpaths typically look like. I realise that the blockages are all illegal, but as there is no enforcement, they happen on a daily basis. Many parents believe that it's unsafe to allow their kids to walk to school along roads like this. The School Track is therefore a vital community asset.

There is a proposed covenant by CCC that would protect the gullies and the School Track. Unfortunately, even though this has been promised for years, it has been finalised at this time.

Therefore, the land disposal should be removed from this LTP and perhaps included in the next one once the covenant has been finalised.

## SUBMISSION 2021-31 LONG TERM PLAN

Steve McNeill

Unfortunately the proposed long term plan does not meet the needs of the public, and nor does it provide a true opportunity for public input.

There was an opportunity for a rates cut of at least 3% without impacting on the Christchurch community.

There was also much talk of openness and transparency as well as a zero-based approach to the development of the long-term plan. Unfortunately talk has failed to produce a fiscally responsible plan. There is insufficient detail to allow true public input.

1. There is at least \$200 million of capital budget in the next 3 year period sitting at programme level in the draft document. There is no openness and transparency when these sums are not defined for delivery as projects. Most will require a location and budget and some indication of the work planned in order to allow public input.
  - a. This may be in breach of the Local Government Act - section 93B(a)(ii) which states “can be readily understood by interested or affected people.”
2. The bulk of the Programmes without listed projects include huge budgets for Libraries, Pools, “Facilities”, and IT. Are these top priority for the community? How is the community to provide meaningful comment or weigh against other priorities when there is no detail provided?
3. Undefined spend also includes more than \$50 million for Transport in the first 3 years of the plan, and over \$80 million for the 3 Waters.
4. The draft plan is built on excess.
5. The plan is not measured or affordable, and has not been developed with a sustainable (continuity of spend and creation of consistent construction employment) approach.
6. There is a boom and bust cycle of expenditure in the draft plan. It is built around Councillor or individual ‘wants’ and not ‘need’.
7. The capital spend on the Avon River corridor is \$46.6 million (Vol1 page 140) – with \$16.5 million in the first 3 years of the plan. There will be a huge draw on ratepayers to operate and maintain these works. Every blade of grass to be cut and every tree trimmed is an additional (and new) cost to the ratepayers – above what has been paid in the past.
  - a. The flat-land red zones should be farmed, as any use that is not profit-making now will cost millions in the future. Farming will also be educational for urban dwellers and in many ways is merely a return to early (European) use. Farming could include commercial horticulture, greenhouses, fruit trees or animal farming.
  - b. Profit from use of these lands is the only sustainable way to ensure the rest of the zone is affordable into the future.
  - c. There is a need to avoid grandiose ‘wonderlands’ as these will cost the city and not support it.
8. There is an additional budget of \$122.7 million (project #61723 Vol1 page 141) for (again) undefined projects in the red zone in the next 10 years plus various allied stormwater and ‘regeneration’ projects in the same zone. The red zone ‘acquisition’ from central government under the guise of local control has placed massive costs on ratepayers – now

and into the future. The excesses of council plans and approach are evident in this regard and environmental and social gains are mismatched against financial sustainability.

9. The following examples provide evidence of the true cost of operating 'assets' and facilities to ratepayers.
  - a. The previously reported \$7 million annual operating costs for the central library requires all the rates from 2,000 'average' ratepayers to fund – each and every year. One library requires funding from about 4,000 residents.
  - b. ChristchurchNZ, with a \$13.6 million annual cost, will consume all the rates from 4,000 'average' ratepayers – nearly 8,000 residents to pay for one 'enterprise'.
10. Programmes contain unnamed projects, and there are obscure names for those that are named. The public is unable to ascertain exactly what is to be delivered from their rates monies and taxes used to provide 'Crown-funded' subsidies.
11. Overall operational costs increase by 27% across the 10 year period (Vol2, page 102 etc), revenue from sources other than rates drops, rates increase by over 50%, and debt payments increase by 119%. This funding mix is unaffordable and the rush to deliver new 'things' for the city is mismanagement and poor governance, as they could be delivered far more slowly and affordably.
12. Key points from the public perspective.
  - a. The overall programme is too large and unaffordable.
  - b. There is a lack of openness and transparency.
  - c. There has been no attempt at true zero-based budgeting.
  - d. This is not a 'back to basics' budget.
  - e. Minority public inputs currently gaining council support tend to favour wants and not needs.
  - f. There is a lack of clarity of exactly what is to be delivered because of poor and obscure project naming. This is common to all portfolios.
    - i. Examples are 'regeneration' projects – how are the public supposed to provide feedback at Long Term Plan funding level on an unknown scope, unknown specific budget, at an unknown location, and with an unknown outcome? There are many other examples - Library resources restricted assets; Cranford Street Intersection improvement; Specialised Recreation and Sports Centres (Vol1 page 132) – renewals (\$3.3 million within 3 years). What is being delivered for each of these?
  - g. Too much budget is being hidden in programmes.
  - h. The proposed rates rises in the proposed Long Term Plan are too high as they are underpinned by poor planning.

The current management and governance of council is out of touch with the public reality.

Instead of proposing a balanced budget that seeks a financially sustainable future for ratepayers there is an irresponsible approach of spending capital budgets now, and ignoring future operational costs and consequences.

This approach does not serve the city well.

### Feedback

#### 1.7 Our facilities

I am aware of suggestions that the Wharenui Swimming Pool may be closed by the Council. I strongly oppose this suggestion. It is well recognised that the Pool is a community facility and has been widely used for a very long time and for many purposes. I was a regular user of the original pool and its replacement during the period 1953-75 and continue as a user during visits to Christchurch.

It is clear to me that the community appreciates and needs the pool to remain open. The summary provided by the President of the Wharenui Swim Club - copied below - highlights this fact.

Even if only one facet of the Pool's operations serves to emphasise the need for it to stay open it is that it helps to save lives. 'Learn to swim' facilities are vital in all towns and cities throughout the country. Far from being an exception, the areas presently served by the Wharenui Pool will continue to need their trips to Elizabeth Street.

I implore Councillors to require the Wharenui Pool to be retained. The following summary from Chris Averill supports that request:

*Our mission statement refers to us as being recognised as the premier New Zealand swimming club, producing and nurturing high performance athletes, and outstanding young New Zealanders. In addition to high performance swimming, Wharenui caters for many different groups in the community who will all miss out if Wharenui closes – they love the family and community atmosphere that we have at the Club. Some of the Wharenui Club groups include:*

- *Swimming lessons given to 18 local schools*
- *Special Olympics*
- *Canterbury Waterpolo*
- *Masters Swimming*
- *Learn to Swim*
- *Parafed Canterbury*
- *Van Ash School for the Deaf*
- *Te Waka Pounamu (Learn to Swim in te reo Māori)*

- *Islamic Women sessions*
- *9 Kayak groups use the pool for rolling sessions*
- *13 schools use Wharenui for their swimming sports*
- *Activities for LGBTQI community including their Roller Derby*
- *Te Aho o Te Kura Pounamu use Wharenui as a base for their lessons on a Wednesday*

Thank you

Ian Gunthorp

*Former NZ water polo rep (and captain), Canterbury Swimmer of the Year (1966)*

## Feedback

1.1 Have we got the game plan right?

i wish to make a big objection to the Proposal to extend land drainage targeted rate.

we here and at the charitable trust operating on the land here are very opposed to being charged for drainage we do not in any way benefit from. therefor option 1 is best and the only acceptable one.

we are also opposed to any increase in rates as they are already very high.

sincelely,

r. brooks

1.2 Rates

these rates are already prohibitive and a rate increase over the rate of inflation is draconian to say the least. shame on you.

1.3 Proposed changes to existing rates, and new targeted rates

i wish to make a big objection to the Proposal to extend land drainage targeted rate.

we here and at the charitable trust operating on the land here are very opposed to being charged for drainage we do not in any way benefit from. therefor option 1 is best and the only acceptable one.

we are also opposed to any increase in rates as they are already very high.

we do not like arts, heritage or other things you fund and do not wish to see water paid for as you give millions of litres to the Chinese and others to take overseas free and for their profit not ours.

sincelely,

r. brooks

1.5 Investing in our transport infrastructure

i do not like the destruction of the roading by narrowing and making cycle paths which are not used. and curbs on them which are dangerous i recently blew out a tyre hitting one which was not continuous and at a 90 degree angle which can flip a car.

i also se it as absolutely ridiculous and polluting to see fleets of empty very large busses plying the streets and neighbourhoods with diesel fumes which we have to partly pay for . why not use smaller ones as they are NEVER full. and they have their exhaust pipes conveniently placed for us to breath at ground level. overseas they are routed up in the air at least .

1.6 Rubbish, recycling and organics  
this is much needed

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
No  
Comments  
we are not interested in paying for arts centre or the like.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No  
Comments  
ridiculous

1.11 Potential disposal of surplus Council-owned properties  
sell them

1.12 Any other comments:  
it is becoming very difficult for us to meet the rates as they have risen significantly in recent years. any increase will be inappropriate in our opinion. better to slash the fat salaries of the ones at the top and their cronies.

# CCC Draft Long Term Plan 2021-2031

## Te Mahere Rautaki Kaurere

April 2021

### 1 Introduction

As part of the University of Canterbury Te Whare Wānanga o Waitaha response to the Christchurch City Council's Te Mahere Rautaki Kaurera | Long-term Plan 2021-2031, this submission focuses on **Civic and International Relations**.

The long-term plan and even the guided individual submission response has a focus on the concrete side of the city ie rates, buildings, facilities. And the civil and international relations plan is quite high level and more ceremonial in focus. Social cohesion, diversity, inclusiveness and internationalisation are areas that are less explicit. Yet it is understood that through workshops throughout the city that one of the key challenges facing our city is lack of diversity and an aging population. International education (both high school and tertiary) helps solve two of the region's largest challenges – both increasing diversity and increasing the numbers of a younger demographic.

Universities focus on their international relations and connections for more than just revenue (although the flow on revenue impact for tourism, landlords and employers is significant). **International connections are important for research collaborations, recruiting academic talent and developing multi-cultural competencies in domestic graduates too.** International students help New Zealand students and New Zealand businesses by giving market **insights** into their own countries. International students who graduate and return home are more likely to recommend New Zealand to other students, to return as tourists, to trade with us, to **collaborate** with our universities in research, and to generally remain friends and supporters of this country.

*"International education contributes to the global good as it opens hearts and minds and encourages tolerance."* Caroline Bilkey, formerly New Zealand's Ambassador to Brazil, quoted in Beyond the Economic: How International Education Delivers Broad Value for New Zealand, May 2018

### 2 COVID Deficit

We will not have the "normal" benefit through international education due to the border closure, further exacerbating our aging population and lack of diversity. In 2019 the "normal" international numbers totalled 13,439 students in the region with 12% of the national market share (up 2% from 2018). Overall economic value \$530,000 excl VFR and supporting approximately 5800 jobs. With COVID and the border closure the numbers have dropped significantly, and given current government policies are unlikely to return soon without a concerted effort. UC's new international numbers in 2021 have dropped some 66%, and with the 2022 intake in jeopardy the pipeline of international students faces significant issues for many years to come. Given this impact, the CCC plan will require a more overt long term plan that is a joint effort between schools, tertiaries, CCC and other international experts such as Alistair Crozier (AsiaNZ).

### 3 Social Licence Education New Zealand (ENZ) Research 2020

As a first step there needs to be an acknowledgement of the value that international education can provide to the region, and the social licence to focus on this work. Education New Zealand conducted research in 2020 that provides important input to how to convey the benefits to the community.

When prompted to think about international students, more than three quarters of the NZ population agreed that they contribute to New Zealand in various ways. Such as supporting local businesses, supporting the New Zealand economy and economic growth, as well as bringing diverse perspectives to New Zealand classrooms, lecture theatres and wider society.

Also, when prompted to consider it, there is a sense of pride as to how the sector can contribute to New Zealand's reputation on the world stage. The benefits of international education may exist in the minds of these supportive individuals, however the benefits are not often seen or heard in day-to-day conversation. **This lack of socially observable support is a key limitation for social licence of the international education sector.** By increasing the prominence of international education in the CCC longer term plan both locally and New Zealand wide both diversity and discrimination issues can be countered.

As an approach, the \$5 Billion (2018) total size of the economic contribution of the sector was found in the research to capture people's attention, opening the door to a further narrative about societal benefits (such as adding cultural diversity, forming friendships and supporting local volunteering initiatives) as well as educational benefits (such as the opportunity for Kiwi students to learn about other cultures and languages as well as future opportunities to live and study overseas).

Trade and diplomatic collaboration and linkages are also enhanced through international education. Further, it is a sector that contributes to the reciprocal development of cultural competence – both for the international students choosing to study here and the Kiwis who interact with them in the nations' classrooms and lecture theatres, and across the wider community.

*See infographic 2017-2018 economic value of international education to NZ, Education New Zealand ->*

In summary, if it is acknowledged that international education is a key export of Canterbury then it needs greater prominence in the plan. And as noted above, if the diversity and population growth needs are clear too, then the solution that international education provides needs to be more explicitly planned for. The IRPF action plans are high level, and without acknowledgement more broadly (and publicly) there is unlikely to be the action taken that is required.

### Feedback

1.7 Our facilities

i would like to submit that the mobile library bus be kept as an important part of community service. [REDACTED]

[REDACTED] A mobile library van came once a month to change books that had been loaned to the library. The whole village turned out and with great excitement we scoured the shelves for new and exciting titles to supplement the meagre ( and extremely dated) books that we had in our library. You might think that those days are long gone but watching the Morning show with the residents of retirement villages i see that the excitement and the need for the mobile library is still very much a valued service. In my 70's i am very fortunate to live only a couple of minutes from the Shirley library. Not all are that fortunate.

### Feedback

#### 1.2 Rates

i think government charged too much rates from houses !!! and the houses in the east are ok with beautiful beach, but the prices are much cheaper than the houses in the other sides of christchurch, it is really unfair for the people living in the east, the houses in the east are very very low prices !!! i hope the houses in the east can up to the same rates like the house in the other side of christchurch !!!

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

##### Comments

Arts Centre has enough funding !! we need funding and build two more polytechnics in christchurch with different ethnic people as managers and tutors !!! because managers or tutors might ignore or bad to none english students, this is very very bad. !!one polytechnics is not enough for the christchurch students and south island students. UC do not has the same programmes(courses) as polytechnics !!! they are different !!!

DO hope government can think about this and build new polytechnics in chirstchurch.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

##### Comments

1.1 Have we got the game plan right?

To close down an institution that has served the community for as long as the Wharenui Pool has is nothing short of a disgrace and a failure to recognise what it and its members have done for the community for such a lengthy period of time. The pool serves the people and has though the actions of members been responsible for saving countless lives. Many of the members both past and present have gone on to serve as unpaid members of local Surf Life Saving Clubs.

1.8 Our heritage, foreshore and parks

I believe that the Wharenui Pool is part of our heritage and must be retained.

### Feedback

#### 1.3 Proposed changes to existing rates, and new targeted rates

This submission on the Rates Remission Policy contained in the Christchurch City Council's proposed *Long Term Plan 2021-2031* is made on behalf of the InterChurch Bureau (ICB). The ICB is an interdenominational group representing the majority of the Christian Churches in New Zealand.

The ICB appreciates that the Rates Remission Policy recognises, in its objective statement, that churches as places of worship are classified as non-rateable under Section 8 of the *Local Government (Rating) Act 2002*. Given that places of worship are non-rateable, the question of rates remission in many cases does not arise.

However, some church properties operating for the benefit of the community as, for example, opp shops, food banks or other support services, may be subject to rating by the Council. The ICB submits that, to support the benefit these not-for-profit activities provide to the wellbeing of the Christchurch community, rates relief should be provided to all such services.

The ICB notes that the proposed changes to the plan envisage introducing a form of means-testing to assess eligibility for remission of rates. Under this proposal, not-for-profit organisations (NFPs) with significant cash reserves would not be eligible for remission. The ICB submits that this criterion discourages good stewardship by NFPs by creating a disincentive for such organisations to maintain a healthy financial position which will enable them to guarantee the ongoing performance of their community service activities in future years.

We strongly submit that eligibility for remissions should continue to be based, as at present, on the ground that "the organisation's activities provide significant public good". The ICB requests the council reconsider the introduction of this criterion, recognising the desirability for the community of supporting good financial practice by NFPs, and promoting the ability of all such organisations to provide maximum public benefit through remission of rates.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I am happy with the overall balance subject to specific comments in following sections.

1.2 Rates

I am comfortable with the plan to increase average residential rates by 5%.

1.3 Proposed changes to existing rates, and new targeted rates

I support the adoption of new targeted rates for specific heritage projects and the excess water use targeted rate.

1.4 Investing in upgrading and protecting our city's water networks

I support the proposed spending on upgrading and protecting our water networks.

1.5 Investing in our transport infrastructure

I support the capital spend on transport infrastructure.

1.6 Rubbish, recycling and organics

I fully support the proposed measures to reduce waste sent to landfill and improve our organics and recycling infrastructure.

1.7 Our facilities

I would like to see the Council reconsider the proposed 25% cut to the programmes the gallery offers to the public and schools.

The school programme in particular is important for helping to ensure future users of the gallery. The cuts will have the most impact on children whose families do not or are unable to provide them with an opportunity to visit the gallery and it is important that these children have an opportunity to experience what the gallery can offer.

1.8 Our heritage, foreshore and parks

I support the proposed investment of 11 percent of capital spend on heritage, foreshore and parks, including the 57 million on heritage items and a proposed intangible heritage grant fund. However, I am disturbed to see that funding has been withdrawn for the Heritage Incentive Fund and I request that the Council restore this to the level of previous grants. The Council has widely consulted on its heritage strategy and the community expressed clearly its belief in the importance of adequate funding for heritage. Given that the recently adopted heritage strategy expands the definition of heritage to include moveable heritage and non-scheduled items of heritage value, it seems perverse and contrary to the Council's adopted policy, to cut the Heritage Incentive Funding Grant. The importance of this grant as a carrot to owners cannot be overemphasised.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Arts Centre is a major cultural and heritage asset for the city. The Arts Centre Trust as a Charitable organisation, has done a remarkable job of restoring the many heritage buildings on the site, but I believe it is appropriate that the Trust should receive support from the Council, especially given the impact of Covid. The Council has supported the Arts Centre on an annual basis in the past and it seems anomalous that this funding has been withdrawn in recent years. I am fully supportive of the proposed capital grant.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

The Robert McDougall is an important heritage building which has been closed to the public for too long. Base isolation will not only secure it and its contents against future earthquakes but will also allow its use for touring exhibitions and in association with the base isolation and redevelopment of the museum, will ensure that the museum can continue to provide its vital cultural, educational and scientific role in the community in a way which all citizens of Christchurch can be proud.

#### 1.11 Potential disposal of surplus Council-owned properties

I accept that the Council will from time to time have surplus property which it makes sense to dispose of but I would like to see this happen outside of the Long Term plan process. It is especially important that a building-specific community consultation occurs before Rolleston House, Coronation Hall and Yaldhurst Memorial Hall are disposed of. The first two of these are listed buildings. Rolleston House is an important building on a key site within a cultural precinct and it is not satisfactory that it should be disposed of without more robust public discussion. With the recent loss of the former University Book shop at the Montreal St corner of Worcester Boulevard, the fate of the early, largely unlisted buildings surrounding the Arts centre, which are an important part of its cultural and character context is a matter of considerable concern to those who value the heritage of the city. It is therefore disappointing to see that the Council proposes to sell a building it owns within this important precinct. At the very minimum I would want to be assured that if the proposed disposal of the building is upheld then the sale should be subject to a heritage covenants. This should also apply for Coronation Hall. The Yaldhurst Hall as a WWII memorial hall should not be disposed of before it has been assessed for heritage listing and if it is found to meet the necessary criteria, should also be sold with a covenant.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I would like to see funds go towards completing the Arts Centre. This is a vital part of the heart of Christchurch. A meeting and social place the is the best our heritage has to offer. A targeted rate for this would be a good solution.

1.4 Investing in upgrading and protecting our city's water networks

I hope you are considering the water available through Central Plains Water. Using Alpine water sources has got to be better than more bores and greater cost.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

This is a key part of Christchurch Heritage

### Feedback

1.1 Have we got the game plan right?

Dear Sir / Madam

Along with the swimming community I am aware of suggestions that the Wharenui Swimming Pool may be closed by the Council. As a past member who's family contributed a lot of money, time and material to the building of this community facility, I strongly oppose this proposal. It is well recognized around New Zealand and internationally that the Club and Pool is a community facility and has been widely used for a very long time and for many purposes.

My brothers and sisters were a regular user of the original pool and put in many hours and thousands of dollars for its replacement during the period 1953-71. These contributions were made during a post war period when it was a huge sacrifice, to financially contribute, but the community building effort was a worthwhile result of this sacrifice. I have continued that association through sponsorship of the Waterpolo team and use of the facility during numerous pre COVID business trips to Christchurch.

It appears to be clear to all that the community supports the need for the pool to remain open. The summary provided by the President of the Wharenui Swim Club - copied below - highlights this fact.

Even if only one facet of the Pool's operations serves to emphasize the need for it to stay open it is that **BUILDS A STRONGER COMMUNITY**. 'Learn to swim' facilities are a vital life saving and child health element in all towns and cities throughout the country. Far from being an exception, the areas presently served by the Wharenui Pool will continue to need their trips to Elizabeth Street.

I implore Councilors to require the Wharenui Pool to be retained. The following summary from Chris Averill supports that request:

*Our mission statement refers to us as being recognized as the premier New Zealand swimming club, producing and nurturing high performance athletes, and outstanding young New Zealanders. In addition to high performance swimming, Wharenui caters for many different groups in the community who will all miss out if Wharenui closes – they love the family and community atmosphere that we have at the Club. Some of the Wharenui Club groups include:*

- *Swimming lessons given to 18 local schools*
- *Special Olympics*
- *Canterbury Waterpolo*

- *Masters Swimming*
- *Learn to Swim*
- *Parafed Canterbury*
- *Van Ash School for the Deaf*
- *Te Waka Pounamu (Learn to Swim in te reo Māori)*
- *Islamic Women sessions*
- *9 Kayak groups use the pool for rolling sessions*
- *13 schools use Wharenui for their swimming sports*
- *Activities for LGBTQI community including their Roller Derby*
- *Te Aho o Te Kura Pounamu use Wharenui as a base for their lessons on a Wednesday*

Thank you

Terry Mulligan

*Former Wharenui Club Captain, Canterbury water polo rep*

Good morning CCC,

Please find attached a submission in support of the Atlas Quarter Body Corporate Submission regarding Rates for Solid Waste.

Regards,  
Charles Watson

[REDACTED]

## SUBMISSION TO CCC LONG TERM PLAN 2021

FROM: CHARLES WATSON

*15<sup>th</sup> April 2021*

I am unable to appear to be heard in support of this submission.

Tēnā koutou

### RE: RATES FOR CENTRAL CITY WASTE COLLECTION

We support the submission from the Atlas Quarter Body Corporate in relation to rates for the collection of solid waste.

We support the Council's strategic goal of reducing solid waste but object to having pay \$300-\$400 per year in rates for the collection of the red, green and yellow bins when the Council does not provide this service to us. In the absence of Council providing this service, we pay privately through our Body Corp Levy for waste collection by EnviroWaste. We support waste minimisation and have all the same waste streams (green, yellow and red) as the Council provides.

We ask that the Council either:

- 1) reduce the general rate and waste minimisation levy for developments such as ours to reflect that no waste collection is provided, or;
- 2) amend your service contracts to provide the waste collection service.

Waste collection is a primary function that councils provide to their ratepayers. It is unreasonable for Atlas Quarter to pay the CCC for a service that is not supplied, and then to have to pay for a private company to provide that service. We are effectively paying twice for a service.

Ngā mihi

Charles Watson

### Feedback

#### 1.7 Our facilities

We have read that your proposed budget contains a cut in 10% funding to the Akaroa museum. This would greatly affect our ability to be hosted by dedicated staff while we visit the Akaroa museum for our senior history trips. Students have access to resources, to ask valuable questions etc during our visit that is invaluable to their study of local histories. Especially at a time when the curriculum is being amended to include the compulsory teaching of NZ and local histories, we feel this cut to funding would do a disservice to our students, and does not fit with national education guidelines.

Ngā mihi

### Feedback

1.7 Our facilities

I work and attend church in the Riccarton Community and would not like to see the Wharenui Pool close. It is an asset in the community. Closing Wharenui will leave a big gap in the community.

1.12 Any other comments:

Riccarton is dominated by the mall and it is important that there are other foci for the community to use and connect with each other through. Wharenui Pool does this.

### Feedback

1.4 Investing in upgrading and protecting our city's water networks

As a property owner and long term community member of Robinsons Bay I urge the Council to relook at its funding for wastewater and water generally in Akaroa and its surrounds.

As per Councils own evidence I note that 61% of the water flowing into our wastewater system is ground and storm water, not wastewater.

I ask the Council to confirm there is adequate funding in the budget to fix the broken wastewater pipe network in Akaroa. When the repairs are fully completed to the 80% repair, as per Council Hearing Panel recommendation and resolution, then an accurate volume can be gauged, and a much smaller scheme designed based around the true capacity.

I do not agree with the Councils decision to design a wastewater system with its disposal in Robinsons Bay and Takamatua. This water could be repurposed in Akaroa and its surrounds. Level 4 water restrictions have been in place all summer and continue due to the drought conditions and resulting low stream levels.

The Council need to come up with a long term plan to address Akaroa's water shortages.

Yours sincerely,

Richard Smith

### Feedback

1.12 Any other comments:

We live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

[REDACTED] We have been told that there has been no reason provided as to why our area was not included in the roll-out.

We are zoned Residential Hills and so should receive the same level of service as other areas in the city zoned for residential. Otherwise we are effectively paying rates for a service we are not receiving.

We request the shortfall is budgeted for in the LTCCP; or, in the alternative, make it clear to Enable that it should cover or at least part cover (along with CCC) the costs of the fibre to our neighbourhood using its discretionary spending.

Your role in the organisation

Do you wish to present your submission at a hearing? ☐ No ☐ Yes (if yes, you must provide contact details below)

Daytime phone number

Our overarching proposal is to focus on a deliverable capital programme that helps drive our city forward, with particular investment in roads and transport infrastructure and in protecting and upgrading our water networks. We're borrowing for new projects that have long-term value, and ensuring that the debt repayments are spread fairly across the generations of ratepayers who will benefit from them. We're maintaining enough financial flexibility to be able to handle unplanned events, and we're finding permanent efficiencies in our day-to-day spending. We've managed to do all of this while keeping rates increases as affordable as possible.

**Have we got the balance right? Have we prioritised the right things? If not, what changes would you like to see?**

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

We've considered a range of options for how best to achieve what we need to achieve while also keeping the average rates increase as affordable as possible.

**What do you think of this plan for an average residential rates increase of 5 per cent for 2021/22 and an overall rates increase of 4 per cent over the next 10 years?**

---

---

---

---

---

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

**What do you think of these changes to existing rates, and new targeted rates?**

**Have we got it right? If not, what changes would you like to see?**

---

---

---

---

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

**We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

---

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

**We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

**What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?**

**Have we got the balance right? If not, what changes would you like to see?**

Wonderful facility, very important for us  
as my hubby isn't able to drive.

---

---

---

---

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

**We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 15/04/2021

**First name:** Murray **Last name:** Dickinson

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I support the excess water rates. I am an avid gardener and water my plants, however i object to people effectively washing the road for the sake of a 800mm wide grass strip (people using sprinklers with the majority of the water just entering storm water system). I am concerned on the potential effect of the lower social economic class, but potentially this could be targetted (i.e. properties with a ratable valuation over \$500k, etc)

1.4 Investing in upgrading and protecting our city's water networks

Essential, but I'd prefer you to accelerate this spend.

Christchurch residents should be more than willing to invest in it water networks. The Earthquakes have reinforced how crucial these are.

1.5 Investing in our transport infrastructure

Far too much spend. At least 50% of this spend should be rediverted to infrastructure. We require a world leading water network, to match the quality of our water. I

I support cycleways, just stop putting them on arterial routes. Enough of the stick, try the carrot.

The planners have pushed ahead with an extremely costly and largely inefficient transport network. If the Planners took into account all commuters and not just cyclist and Public transport users, there would be some balance. I support cycleways, but away from key arterial routes. You don't need to invest in more roads, but stop congesting the key roads you have with cycle ways. You have made it nearly impossible to get into the Central City (except on Bikes and buses), then seem surprised that the number of people who cycle and bus is woefully inadequate to support the CBD retail/hospitality districts.

there is an argument that by increasing trip times, there are more CO2 emissions. Hence

1.7 Our facilities

Libraries are an institution of the past. Stop trying to find new ways to attract people. If there is no community interest in the librarys (by book lending), close the libraries. They are expensive.

If people need community centres, make them community centres. Bu

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

I agree the support for the Arts Centre Te Makatiti Toi Ora.

The Arts Centre is vital for the cultural wellbeing of the City. It operates largely without support and will continue to draw an enormous number of visitors to Christchurch. It is the cornerstone of the heritage district and will only continue to flourish with the completion of the Christ Church Cathedral reinstatement in Cathedral Square. The Arts Centre is worthy of support.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

### Feedback

1.7 Our facilities

For once, this is about me. I am a rate payer. I pay my part to receive the services. If you take away the Lyttelton Service Desk, with a human being to help with questions, forms, good eyesight, good hearing and good knowledge of CCC admin - how do I manage? I am getting older - but I still pay my rates. You will be getting older - what's ahead for you?

You are creating a situation which I call abuse. Young Mums, need the Service Centres - they don't all have cars or time to catch buses to the city to spend an hour getting to CCC. Some folk in Lyttelton and Akaroa are so crippled, they can't get around, so are reliant on local help to take them to the LSD.

That's it - like I say, I pay my rates! Leave the Service Desks alone.

There are many folk in Akaroa who must feel the same - certainly, there are enough older folk there - who pay their rates.

I oppose the closure of the Akaroa and Lyttelton Service Desks.

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

Reduced all areas of spending across the board in the basics to enable the cuts to the Libraries & Art

Gallery to be lessened so that do not need such big cuts but keep out of overspending generally.

1.4 Investing in upgrading and protecting our city's water networks

No chlorine in the water asap please.

All waters - waste, storm, drinking & waterways do need ongoing maintenance to keep them up to structural & quality use standard. Yes to charging for excess residential water users. Please trim the costs & any spending to do the alterations within the sector.

1.5 Investing in our transport infrastructure

I do not feel public transport until its used by more people. Which is not helped by the recent changes as it is still easier & quicker to take a motorbike, car, bike & scooter etc.. across/around the city especially if you change buses/routes. Also please return of colour-coded routes so people can see easily which bus it is. Change the other colour of the buses for everybody to see as easily. Have all the destination & numbers clearly on all four sides not just seen at the bus stops. Do not do all free rides, not at present. Can you cut some of the

expenditure on the total area budget.

1.6 Rubbish, recycling and organics

Can we have more recycling of various paper, cardboard, plastics & other waste products, that may be reusable in that or another form, especially if these products do not have to be transferred to the North Island or/& could we produce more local/South Island options. Can we keep in budget by small savings in this whole not just recycling including the other areas here.

## 1.7 Our facilities

### Libraries

If the libraries evening hours are reduced, have they any rooms/spaces that can be hired, especially after hours e.g. from 6pm on how are groups/people supposed to access them because if the buildings are shut & no-one is there? And then afterwards be able to leave it secure. What about people/groups who need to use the library to work day & evening?

### Christchurch Art Gallery

Has a significant part of its adult education/activities because they are open when a number of people come in who may not be able to attend during the week days or the weekends. And they put on a variety of talks, films, activities etc on special holidays & other days. the CAG staff, friends, volunteers & other specialists provide teaching/information roles of various types. Mobile Library is still need for those who can not get a branch or who live in areas of CHCH without a branch they can go to easily.

### Canterbury Museum

What about before the major refurbishment/upgrading of whole structure etc.

No mention of opening hours cuts, staff redundancies or anything else. are there any other change planned in the meantime/soon.

### Robert McDougall Art Gallery

I disagree with the proposed base isolation of this.

## 1.8 Our heritage, foreshore and parks

PLEASE SAVE THE NG BUILDING, IT SHOULD BE REUSED, SHIFTED & KEPT.

Whats happening to the Provincial Chambers complex?

The heritage buildings mentioned should be & refurbished eg Cunningham house, old Municipal Chambers Our City O-Tautahi, & other heritage buildings.

Would like the funding reduced within whole portfolio.

### PARKS & FORESHORE

Alright with some slight changes to reduce costs to make-up for the alterations

in the Libraries & Art Gallery funding.

## 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

### Comments

#### ARTS CENTRE

If the budget can include this spending, we do not want to lose this after all repair work that has been completed & still to do to finish.

## 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

### Comments

see previous answer

1.11 Potential disposal of surplus Council-owned properties

Dispose of these particularly empty sections unless they may be required for Council-owned social housing. Heritage buildings could these be re-purposed/ or passed onto other community/private groups for them to reuse with conditions & penalties if not met.

1.12 Any other comments:

OTAKARO AVON RIVER CORRIDOR

The varied projects are excellent to have a multi-purpose space for a multitude of activities on the river & both sides of it. Eg That flood protection/climate change can provide a buffer zone for overflows of water from higher tides when there is too much water in the system. A small cut to the spending to assist in balancing the whole budget.

ROADS, FOOTPATHS & CYCLEWAYS

Do need regular maintenance & upgrades as necessary to infrastructure & other parts. If we can afford to do the footbridges & stay inside the budget good. Still need some minor adjustments to reduce the total costs to keep within the budget.

ANY OTHER COMMENTS

Why do we require a sports/multi-purpose stadium with a roof if during events sports & others the doors/gates are to be left open?! Do not see the point if only tepid or cool when inside! I do not think we can afford this.can we trim the costs.

### Feedback

1.12 Any other comments:

We wish to have the carpark at 18 March Place maintained and upkeep by the Council as well as ourselves. This carpark forms a vital link between March place and the Main North Road in Belfast. It is used by 100s of vehicles each day - rugby club, school parents, bowling club members, friendly club members, Rotary club members, general public.

It is in a very bad condition and needs several thousand dollars spent on it.

SUBMISSION FROM THE BELFAST SPORTS AND COMMUNITY CENTRE INC

**SUBMISSION FROM THE BELFAST SPORTS AND COMMUNITY CENTRE INC.**

**CCC LONG TERM PLAN**

We would like to submit the following regarding Sheldon Park, Belfast.

The irrigation only works at approx 60% and desperately needs maintained.

This park is used by thousands of people annually. Touch modules, Touch tournaments, cricket in the summer. Rugby (Junior and Senior) in the winter. It appears to get very little maintenance, the surfaces are deteriorating and are infested with broad leaf weeds.

There are a lot of trees around the park and these have very little, if any, maintenance. There are 2 silver birch trees which run along the eastern boundary which are dead and are due to fall. This is a massive health and safety issue.

This is a wonderful facility to have for the people of Belfast and the surrounding areas. It needs to be maintained properly so that people can enjoy it at all times of the year.

Submission from: The Belfast Sports and Community Centre Inc.

## Questions to think about when making your submission

### Have we got the game plan right?

Our overarching proposal is to focus on a deliverable capital programme that helps drive our city forward, with particular investment in roads and transport infrastructure and in protecting and upgrading our water networks. We're borrowing for new projects that have long-term value, and ensuring that the debt repayments are spread fairly across the generations of ratepayers who will benefit from them. We're maintaining enough financial flexibility to be able to handle unplanned events, and we're finding permanent efficiencies in our day-to-day spending. We've managed to do all of this while keeping rates increases as affordable as possible.

**Have we got the balance right? Have we prioritised the right things? If not, what changes would you like to see?**

No Cut expenditure other ways  
eg Do not consider cycle way  
on Horewood Rd. Suggested  
alternate seal whole foot paths  
and paint a line + ped + cycles.

Is the cost of library significant  
compared with cost of multiple  
fixed premises eg building cost,  
maintenance, lighting, heating  
cleaning insurance etc.  
"If it ain't broke don't fix it"

### Rates

We've considered a range of options for how best to achieve what we need to achieve while also keeping the average rates increase as affordable as possible.

**What do you think of this plan for an average residential rates increase of 5 per cent for 2021/22 and an overall rates increase of 4 per cent over the next 10 years?**

No comment (Now 90+92) as long  
as superannuation keeps pace with  
The consequent C.P.I. costs. Our  
income + expenditure coupled to C.P.I.

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

**What do you think of these changes to existing rates, and new targeted rates?**

**Have we got it right? If not, what changes would you like to see?**

Water costs. How about fixing the leaks??

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

**We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

See above. Is the above figure a consequence of long term neglect??

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

Agree with upgrading the rail link (Roketown + Rongiora) and get the station back to the city ie Moorhouse Ave.

(on library buses)  
Is saving significant of 400 million spent above

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

**We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

No. Too complicated and misunderstood.  
Have one collection instead of three  
and a upgraded recycling system.  
Don't rely on the public or penalise them

### Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

**What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?**

**Have we got the balance right? If not, what changes would you like to see?**

Question "Empire Building"

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

**We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.**

**Have we got the balance right? If not, what changes would you like to see?**

?? Sea level rise — Cost ?)

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☐ Yes ☒ No

Comments:

Peanuts. Do you want people in the city?

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021-31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☐ No

Comments:

No benefit to me compared with the cost saving of deleting library bus.

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future – what do you think of this proposal to dispose of surplus properties?**

Only keep what makes money

**Any other comments:**

The library bus is essential for lifestyle residents who like ourselves are partially disabled.

There are 45,000 residents in lifestyle villages at present, mainly in Christchurch City Councils area. You owe them a piece of your budget!

**Thank you for your submission**

Please put this submission form in an envelope and send it to:

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Jubilate Singers is a Christchurch based chamber choir of approximately 32 members, SATB. Founded in 1977, the choir has developed a reputation not only for quality singing but also for imaginative presentations. The Jubilate Singers is equally at home in performing a capella and sacred works, jazz arrangements and works with orchestral accompaniment.

The Great Hall of the Arts Centre is one of our favourite performing spaces. The architecture and acoustics are outstanding and uplifting for singers and audiences alike. We have also performed in other parts of the beautiful complex such as for community choirs in the quad, and as a special fund-raiser for the Arts Centre, an 'Echoes of Yesteryear' tour of historical locations throughout the complex with music chosen by our Musical Director, Philip Norman and monologues by Philip Aldrich. Such events attract many local and overseas visitors to enjoy the special facilities that the Arts Centre offers and they all enjoy admiring the progress being made to complete the renovations following the Christchurch earthquakes.

Given Christchurch has lost so many of its historical architecture it is essential that the City Council ensure the earthquake renovations are completed, and the complex receives the capital grant of \$5.5m to meet its financial needs for the next 10 years now that insurance and general maintenance costs have increased so radically in recent times.

Most of our choir members are rate players and we have no reservations in supporting a modest increase in our rates to ensure the financial security for the Arts Centre.

*ok.*

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

*By law on helmets required for scooter riders.*  
*More bus travel promotion*

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

**We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

*domestic  
Generally ok. weather proof stickers permanently on all rubbish bins so users are less likely to use the wrong ones.*

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

**What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?**

**Have we got the balance right? If not, what changes would you like to see?**

*Retention of mobile library bus. Cutting this would not save very much in the overall library services budget. See final page comments.*

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

**We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.**

**Have we got the balance right? If not, what changes would you like to see?**

*Basic things first. An insistence on garden foliage being cut back to the boundary so that two people can walk along pavements without having to avoid badly encroaching tree branches & shrubs. Protruding trees should be trimmed clear to head height above pavements.*

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☐ Yes ☒ No

 \_\_\_\_\_

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021–31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☒ No

Comments: \_\_\_\_\_

 \_\_\_\_\_

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future – what do you think of this proposal to dispose of surplus properties?**

*Quit them*  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

### Any other comments:

the library bus is an asset valued by those who use it. Patronage might fluctuate but it is a long established service for rest homes and social housing in Christchurch. With current emphasis and policies on mental health and wellbeing it is a necessary social service for those unable to access the suburban library centres. Being old or disabled should not be further handicapped by being forced to find transport to a library when a perfectly proven system of weekly drop by alternative has been possible since 1938.

Interaction with a knowledgeable librarian is - for the elderly - a better way of choosing and requesting books than the efficient and impersonal machines elsewhere. Check the travel and issue statistics. The library bus users are very unlikely to switch to going further afield. Most of those I have canvassed say they couldn't or wouldn't and it would be a significant loss.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.11 Potential disposal of surplus Council-owned properties

This proposal should be rejected, specifically relating to hunters rd and where ave.

There needs to be proper community consultation.

Gully protection, boundaries, road access, school development, walking tracks and general infrastructure need to be all properly addressed before the sale of land and subsequent closure of any further discussion on these matters.

### Questions to think about when making your submission

## Have we got the game plan right?

Our overarching proposal is to focus on a deliverable capital programme that helps drive our city forward, with particular investment in roads and transport infrastructure and in protecting and upgrading our water networks. We're borrowing for new projects that have long-term value, and ensuring that the debt repayments are spread fairly across the generations of ratepayers who will benefit from them. We're maintaining enough financial flexibility to be able to handle unplanned events, and we're finding permanent efficiencies in our day-to-day spending. We've managed to do all of this while keeping rates increases as affordable as possible.

Have we got the balance right? Have we prioritised the right things? If not, what changes would you like to see?

## Rates

We've considered a range of options for how best to achieve what we need to achieve while also keeping the average rates increase as affordable as possible.

What do you think of this plan for an average residential rates increase of 5 per cent for 2021/22 and an overall rates increase of 4 per cent over the next 10 years?

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

**What do you think of these changes to existing rates, and new targeted rates?**

**Have we got it right? If not, what changes would you like to see?**

---

---

---

---

---

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

**We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

---

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending

We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.

Have we got the balance right? If not, what changes would you like to see?

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?

Have we got the balance right? If not, what changes would you like to see?

No, I would really like the library van to keep coming up to the school. It has been invaluable to my boys for reading. The librarian has encouraged the whole family - I know my boys won't be reading like they do now w/o it. It definitely helps the boys but me and my partner read.

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.

From: P & C Thelning  
Sent: Tuesday, 13 April 2021 7:31 pm  
To: CCC Plan  
Subject: Long Term plan Submission, Land Drainage

As proposed affected landowners, my wife and I strongly oppose and object to the Councils proposal to levy us as farmers , for the land drainage and flood mitigation control as proposed in the Long Term District Plan.

We currently provide and pay for our own services with regard to land drainage , also water and our own private sewer schemes. There is no possible fair reason why a farmer on Banks Peninsula should be paying this charge as we derive no benefit from it whatsoever as do those in urban areas, who are directly serviced by these works.

The status quo should remain as it is now.

Yours faithfully,  
Peter Thelning

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 16/04/2021

**First name:** Elizabeth **Last name:** Eadon

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I support the submission from Greening the Red Zone

1.2 Rates

I do not oppose this. I feel this needs to be used to fund a sustainable greening and flood alleviation programme to help combat climate change

1.3 Proposed changes to existing rates, and new targeted rates

I am concerned that excess water usage rates may disproportionately impact large families living together (this might be for financial or cultural reasons) and may not be equitable.

1.4 Investing in upgrading and protecting our city's water networks

Because the other 59% is to be spent on actions that help reduce climate change (transport), health (sports facilities and parks) this futureproofing for the city seems a good balance

1.5 Investing in our transport infrastructure

I feel that transport focus should be on pedestrians, cyclists and public transport before cars.

1.6 Rubbish, recycling and organics

I would like to see encouragement for and support of home composting

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

What Maori and Pasifika heritage is being supported? I'm interested in equity, not rates cuts

1.11 Potential disposal of surplus Council-owned properties

I think that there should be a commitment to ensuring that the property and land be used to support projects / housing / facilities for the most vulnerable in our communities. It would be a terrible shame if it were simply sold off to property developers who build unaffordable luxury or expensive homes

Long Term Plan Submission, Christchurch City Council

**Re: Closure of the Akaroa Service Desk as per the Draft Long-Term Plan 2021-31 page 58**

Submitter: [Chris McGill](#)

In 2015 while the Akaroa Service Centre was temporarily located in a portacabin (due to earthquake damage to the Post Office). The CCC tried to move the Service Centre to the Akaroa Museum. This contravened the District Plan for listed buildings (Historic Post Office). Subsequent community consultation found 93% of respondents wanted the Service Centre to remain in the Old Post Office. After CCC spent \$984,407 to repair the Post Office Building it once again became the permanent location of the Service Centre.

However, in January 2021 the Akaroa CCC Service Centre was relocated in the School/Community Library. This move has been stated as a 6-month trial (Jan – June 2021) where upon the use will be analysed. This move was contrary to public consultation outcome in 2015.

While the 2021-2031 Draft Long-Term Plan page 58 indicates that the Akaroa Service Desk is to be closed. The reason given is due to minimal transactions. So, the trial was a farce when the decision to close had already been made in the minds of the CCC staff, and data collected will support the decision.

**The CCC Strategic Framework 2020** states:

- **Principle** - to be open, transparent and democratically accountable
- **Community Outcomes** – are for resilient communities, a strong sense of community, active participation in civic life, valuing voices
- **Strategic Priorities** – enabling active and connected communities to own their future

This relocation of the Akaroa Service Centre and/or the removal of the Akaroa Service Centre is contrary to the Banks Peninsula Community Board Plan 2020-2021 and Council policies. The Banks Peninsula Community Board was not consulted, this decision was neither open, transparent, or democratically accountable. Again, CCC staff have made decisions without public consultation, discussion, or providing evidence or alternatives, all of which are required by the Local Government Act.

The long-term sustainability, resilience and wellbeing of Akaroa's and the Bays communities, relies on the community having their voices valued by the larger urban component of the CCC territory. If Akaroa and the Bays are to survive economically in coming years, then the local Council services must be maintained at an adequate level. In fact, this is a critical foundation stone for the resilience and wellbeing of the community, for both current and future generations.

#### **Decision sought.**

That the Christchurch City Council reinstates the Akaroa Service Centre in the historic Post Office Building with adequate staff, well trained and locally based, to ensure ratepayers in the Akaroa area and the Bays can continue to be well informed, active citizens fully engaged with and participating in community and civic activities within the wider Christchurch district. The Information Centre and Postal services should be relocated into the facility as it was prior to the earthquakes in 2010.

#### **The Reasons are as Follows:**

The Akaroa Service Centre, located in the historic 1914-15 Post Office building, provided an active Citizens Hub in a Council building that was specifically refurbished (\$984K +) to meet the requirements of the community and the post-quake building code. This historic, listed building was an effective central location

for our community, that met the community needs (including a virtual meeting room), instilled resilience, and it was a source of pride.

Direct engagement with locally based Council staff is critical for the wellbeing of the community many of whom are retired and/or elderly. A community where internet service can be poor if at all, and a number of ratepayers do not have computers. The Akaroa Service Centre allowed ratepayers to engage directly over complex issues with Council staff who have real local knowledge.

The decision to transfer the Service Centre from this central location of a dedicated building to the Library in January 2021 did not follow a formal consultation process. The Council is in breach of its statutory duty to undertake appropriate engagement and consultation, in accordance with Council policies and the Local Government Act.

Another issue to impact on rural rate payers of Banks Peninsula is the proposed increase in rates to pay for land drainage and flood mitigation to make a fairer and more consistent way of recognising services to the whole district. This service enables easy access and a pleasant place to live.

Yet the CCC is removing the Akaroa Service Centre from a community that is 75km from the outskirts of the urban city and a 90-minute drive to the CBD. How could retaining the Service centre not be seen through the same lens? Retaining the Akaroa Service Centre is a critical foundation stone for the resilience and wellbeing of the community for both current and future generations.

It is understood that the last decade of earthquakes and now COVID-19 has impacted severely on CCC income. If the assessment of transactions and face to face interactions focused on the past 12 months for the stated closure of the Akaroa Service Centre in the LTP 2021–2031, it is unlikely to be accurate data. COVID-19 which closed borders, mandated lockdowns, social distancing, and limited travel has specifically impacted our remote community. COVID-19 may have provided the means to remove Customer Service from Akaroa as a cost saving exercise, if so, it is very short sighted. Post COVID, international visitors are likely to return in the next 2-5 years, Akaroa and the Bays need to be set up and ready to accommodate greater activity for the economic stability of the area to secure and support the resilience and wellbeing of the community.

From of analysis census data from 2013 & 2018 the growth rate percentage per annum over that 5-year period (post-quake) for Akaroa – urban is 3.4% compared to Banks Peninsula South at 1.2% and the Whole CCC population growth of 1.6%. Indicating the need to retain the CCC Service Centre, as the town of Akaroa grows and maintains its resilience, strong sense of community with valued voices actively participating in civic life. Removal of the service centre sets the isolated community apart from all other areas of the CCC.

CCC staff stated at public community board meeting in Akaroa (15/3/2021) that the Post Office building is a CCC asset and there is no intention of selling it. But they do not know how to use it and would like the community to assist with a use/s.

I invite the Council to join the community in achieving a positive and on-going future for the refurbished historic, listed Post Office building at the centre of our community.

That this should include:

- Relocating the CCC Service Centre, the Information Centre, the Postal service, and Post Office boxes back to this building, which is in the centre of Akaroa and it was specifically designed for that purpose, including disabled access and parking.
- Locate an ATM machine to the side of the building once the BNZ closes in April 2021.
- Encourage greater community use of the building as an active Citizens Hub for Akaroa and the Bays.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

Land Drainage Targeted Rate - Interesting CCC aims to increase rates rural Banks Peninsula properties in order to provide a 'fairer' and 'more consistent' way of recognising land drainage, flood mitigation and control works for the whole district. (As per letter 30/3/2021).

It is considered that the large rural areas by geographical area should pay their share of drainage and flood mitigation like they currently do for maintaining roads and footpaths.

As a resident of \_\_\_\_\_ where we have NO footpaths nor do we have curbside rubbish collection, but pay into the general fund like all other rate payers of the CCC then I think we currently pay our fair share.

Funny isn't it that it is equity across both rural and urban areas all sharing in the cost of land drainage and flood mitigation is the theory. Yet the bulk of flood mitigation and drainage will be for historical drainage and flood issues within the older urban areas.

The biggest conundrum is that the CCC has seen fit to provide a fairer and more consistent way of paying for this is to rate everyone within the CCC boundaries. Yet when it comes to the only service centre in the Akaroa and hinterland this is to be removed as it is a quick speedy way to save money. Instead of all rate payers across

the WHOLE CCC rates being used to ensure face to face presence of CCC at the Akaroa Service centre. The council will happily hang onto the historic post office - the location of the CCC service centre but have NO idea how to use this building, have invested virtually a million dollars to upgrade post earthquake.

Where is the fairness and consistent way of recognising services to the WHOLE district.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

For me, things of cultural and historical value, things that tell us who we are, and where we came from, are just as important as investment in roads and transport etc.

I would like as much investment as possible in protecting and sustaining our cultural heritage - we lost so much as a consequence of the earthquakes and more needs to be invested in saving what is left.

1.3 Proposed changes to existing rates, and new targeted rates

I fully support a targeted rate for the Arts Centre and would like it to be increased from that proposed. I'd also like to see more financial support for those organisations trying to save other parts of our architectural heritage, such as McLeans Mansion.

1.7 Our facilities

I am not in favour of closing the Riccarton Rd Bus Lounge as it seems counter to trying to increase bus usage. I am also not in favour of disbanding the mobile library.

I do not favour any move towards a user pays approach to facilities of cultural significance, including the library network and the Art Gallery.

1.8 Our heritage, foreshore and parks

This work is vital and if anything, I would like more funding for these projects.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

No question, this must be supported.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

## Comments

It is important that the Robert McDougall Art Gallery be returned to Council care to determine the best options for its future. I do not consider that the Museum has been proactive enough so far.

## 1.11 Potential disposal of surplus Council-owned properties

I am not in favour of disposing of these buildings, and in particular definitely not the one on Worcester Blvd.

## Have we got the game plan right?

**Have we got the balance right? Have we prioritised the right things? If not, what changes would you like to see?**

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

We've considered a range of options for how best to achieve what we need to achieve while also keeping the average rates increase as affordable as possible.

**What do you think of this plan for an average residential rates increase of 5 per cent for 2021/22 and an overall rates increase of 4 per cent over the next 10 years?**

---

---

---

---

## Proposed changes to existing rates, and new targeted rates

We're proposing a range of changes to existing rates, including the land drainage targeted rate and how we define remote rural properties. We're also proposing some new targeted rates, including a targeted rate specifically for the Arts Centre Te Matatiki Toi Ora, a heritage targeted rate to show the proportion of rates you already pay towards specific heritage projects, and an excess water targeted rate for households that use more than 700 litres a day.

**What do you think of these changes to existing rates, and new targeted rates?**

**Have we got it right? If not, what changes would you like to see?**

*I do not know enough in regard to Rates etc to comment to a sufficient level.*

## Investing in upgrading and protecting our city's water networks

We have a responsibility to provide and maintain the wells, pipes, reservoirs, treatment plans and pump stations for drinking water, and manage the collection, treatment and disposal of wastewater and stormwater.

**We are proposing to invest 41 per cent (\$2.329 billion) of our capital spend on water infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

*obviously a priority.*

## Investing in our transport infrastructure

We've heard from residents that transport is a top priority. It's also the city's biggest contributor to carbon emissions. We want to give people better options for getting around, whether by car, public transport, on foot, on a scooter or on a bike. We also want to ensure our networks are safe.

**We are proposing to invest 25 per cent (\$1.445 billion) of our proposed capital spend on transport infrastructure improvements.**

**Have we got the balance right? If not, what changes would you like to see?**

*As above*

## Rubbish, recycling and organics

In 2020 the Council adopted a new Waste Management and Minimisation Plan that focusses on changing our 'throw-away' culture and reducing the amount of waste we send to landfill. Implementing the actions in that plan are the key drivers of our operational and capital spending.

**We're proposing to spend \$25 million on organics infrastructure (which includes upgrades to the organics processing plant), \$18.5 million on transfer station infrastructure and \$18.4 million on recycling infrastructure.**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

## Our facilities

We're proposing to invest 19 per cent of our capital spend on community facilities. We're also proposing some changes to levels of service. This includes changes to libraries, service desks and the Christchurch Art Gallery Te Puna o Waiwhetū to reflect how and when residents use these facilities, and to acknowledge the impact that COVID-19 has had on visitor numbers. It also includes closing the Riccarton Road Bus Lounges.

**What do you think of our proposed investment in Council-owned facilities across Christchurch and Banks Peninsula, and in our changes to levels of service?**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

## Our heritage, foreshore and parks

Christchurch has a long and proud history of protecting and respecting our heritage. Over the past decade we've carried out a massive programme of repairs and restorations, but we still have some work left to do. In the next 10 years we will continue to restore our own buildings and support private development of heritage buildings. We will also be maintaining and improving our parks and foreshore.

**We're proposing to invest 11 per cent of our capital spend on our heritage, foreshore and parks.**

**Have we got the balance right? If not, what changes would you like to see?**

---

---

---

---

## Funding for the Arts Centre Te Matatiki Toi Ora

We are proposing to provide the Arts Centre with a capital grant of \$5.5 million. We would do this via a targeted rate that would recover the grant cost over 10 years, and would phase in over two years, so the targeted rate would be smaller in 2021/22 than in subsequent years. We're proposing that every ratepayer will pay this rate and it will be calculated as a number of cents per dollar of capital value.

**Do you support the Council funding \$5.5 million for the Arts Centre?**

**This proposal is currently accounted for in our proposed rates increase. If a decision is made not to proceed, rates would drop by 0.04 per cent.**

☐ Yes ☐ No

Comments: \_\_\_\_\_

## Funding for base isolation of the Robert McDougall Art Gallery

Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment. In July 2019, the Council agreed in principle to support the base isolation of Robert McDougall Art Gallery at a cost of \$11.8 million, subject to public consultation in the Long Term Plan 2021-31.

**Do you support the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million?**

**This proposal is not currently accounted for in our proposed rates increase. If a decision is made to fund base isolation, rates would increase by 0.07 per cent.**

☐ Yes ☐ No

Comments: \_\_\_\_\_

## Potential disposal of surplus Council-owned properties

We have a small number of properties, including two heritage buildings, that are no longer being used for the purpose they were originally acquired for. These surplus properties make up less than 1 per cent of Council's overall property portfolio.

**Help us decide their future - what do you think of this proposal to dispose of surplus properties?**

*I am not expert enough to comment except in the broadest sense. The more housing we have to disperse rents, Bad landlords and for single people who are largely ignored the better. And the balance of CCC flats with a small plot of ground seems good. But care of occupancy needed in dense housing.*

submissions in regard to the following.

Water .

Environmental Issues.

Public Transport.

Rubbish And recycling.

Public Library Facilities.

WATER:

My concerns around water supply are rather basic, I see little mentioned in regard to commercial exploitation of water resources and a great deal in regard to household water use.

Why is that? What is actively being implemented around commercial tabling of water use?

In regard to household use it is stated that 20% of Household water users in Christchurch use 50 % of the total water supply. How can that be and why?

Is it to do with gardens not necessarily based in food production, is it to do with excessive shower heads that use too much water?, is it to do with supposed eco dishwashing machines? , is it to do with Baths instead of showers?, is it home swimming pools , what is the cause?.

What I do know is that socially our cities population has seen a growth in Community gardens that hopefully encourage people to have productive plots thereby reducing and in turn forcing commercial food producers to at long last accept consumer power.

It has been working with Chicken welfare as free range eggs become more and more the norm and now it is long overdue that human welfare was addressed in regard to what we consume affected by a range of sprays etc.

I agree that this means that household water use increases but has this public recognition finally of the power being in their hands been recognised.

Has the City Council taken this into account or does it intend to cut the movement off as it is gaining traction ?

We have to accept for instance, fluoride being added to our drinking water based upon the knowledge that it is purely for infant and child health supposedly and that its worth over rides what limited ability to ask questions around it being curtailed.

Is this matter around water costs in the same sort of vein or is it commercial pressure.

## ENVIRONMENTAL ISSUES:

My submission re environmental issues is basic. I see our city altering hugely and rapidly and behind it all building wise and amenity wise is Sport. I saw that the building of the new Shirley Boys High and adjacent alterations around land use removed the School from Shirley and it should have had a name change in accordance with that.

I saw that two very long established trees that were central to Monarch Butterfly Migration and breeding were removed. These trees were largely not exactly secret but for the sake of them not being interfered with most of those aware of the two trees did not go about publicly saying a lot. It has been necessary that it be so as many dislike nature despite what is said and many like to harm.

But those trees were a symbol of an attitude that is over reaching in our city. We have alteration of planting etc but it is all very calculated to achieve only a certain outcome while despatching other natural inhabitants that are not native. There is a place for both native and exotic and insects and animals need both.

We have now huge growth of flaxes and grasses and waterways that rats and mice love. They in turn despatch eggs and hatchlings and so on. So, what is being achieved? And in due course are we going to be subjected to poisons in our Urban areas with untold consequences to add to the damage already done by sprays etc.

The only other comment I have is that creep must be prevented by sporting facilities. Hagley Park was left in perpetuity by our forefathers with the proviso that it remains a green space and not be ruined by building and additions of man.

Our large green space is precious and we have already lost so much history that cannot be replaced. The Botanic gardens are precious also and are adjacent to Hagley Park . I have no doubt that the two environments work hand in hand and altering one alters the other.

It is the simple art of nature without man that we will lose unless the City Council takes a firm stand in the matter and respects the wishes of those who created that space originally. It may be old fashioned to tell adults and children that enjoyment can be gained by simple exercise, walking and looking around at nature. It needs no embellishment when the eyes that view it truly see.

The Motorway Extension has removed the native Harrier and other wildlife so what has that achieved?

Generally for everything saved it seems as if two are lost .

That is all I have to say.

## PUBLIC TRANSPORT:

I have personally been a full- time public Transport users for thirty years. [REDACTED]  
[REDACTED]

[REDACTED]

I am aware that my personal experience is perhaps worse than the few other women who have had to do as I have due to my being a very personal target in this city and other places. But what I do know is that it was made clear to me right from the outset that Public Transport was the social indicator of public and private disapproval so I was not allowed to own a vehicle.

I watched as supposedly 'responsible' parties of the same age as myself or older regularly drank and drove, used drugs and drove and speed was a general rule of thumb. So, I ask you exactly who is to judge what is responsible and what is not. [REDACTED]  
[REDACTED]

[REDACTED]

From Plunket to Government all I heard was that a vehicle was regarded not as a want but a need and I was discriminated against to show disapproval of my choice.

I have seen the criminal fraternity never without a vehicle at their disposal and I understand that prison programmes always teach driving to inmates before they exit the system to improve their welfare. Yet I could not have such a chance.

So my forced independence was assured as well as actively discriminating against my household.

My experience with buses as the only means of transport has shown me that the Christchurch City Council has never fully committed to the Public Transport ideal.

They do bits of this ,bits of that and in doing so ensure that little truly alters.

New Zealand was and is fully wedded to motor vehicles .Cycling is engaged in by driving to point A then riding to point B and putting the cycle back on a vehicle.

And commercial resistance to anything else is largely unchanged as is shown by delivery costs, and so on.

I also note that Drivers are good bad and indifferent. Some state that they are not allowed to even get up out of their seat, others prefer to watch the infirmed struggle as they will not get out of a seat to put down the ramp and when asked to do so too many make it clear that it is a chore.

They have little to no investment in public relations and the job of driving buses is exactly that a job and nothing more. To lay a complaint as a bus patron is usually at your peril as I am told that the complainant is always identified to the driver and that says a lot when a complaint is genuine and on more than one instance I have definitely experienced retaliation for daring to complain.

I note that often the auto timetables on poles are not functional and take weeks or even more than a month to be repaired. I presume this is to pressure patrons to use the Metro App but that is simply

not possible for some. I note that Paper timetables are often out of date with service changes and that bus routes are altered consistently and without real explanation as is bus identification.

We are to have a step backwards it appears with a whole teal painted bus fleet and yet I have heard many patrons state that knowing their bus by colour was much easier than by number etc from a distance and the reason for the change I am unclear about.

The problem of vandalism of shelters is always ongoing and yet is largely ignored. The fact is however that such anti-social behaviour is misguided and has consequences. We now have to have black metal shelters with grill backs etc that let in much more rain than the glass ones did.

We have bus stops removed and never replaced, we have letters asking for improvements of shelter provision never replied to and we have density of shelters in some places and none in others. The Palms Bus stop which is sited by Kmart is one of the worst in the city and yet despite letters from myself and I assume other feedback nothing of a proper nature is done. There are more shelters added at Northlands, bus lounges at Riccarton [soon to be removed I am told and yet I have never seen them empty] and still nothing for the Kmart stop.

I am also told that drivers are afraid to take on anti-social bus patrons or anyone they consider might be stronger than them physically or that is what I was informed in regard to the picking and choosing of drivers around mask wearing recently. You cannot run a Public Transport network in such a way let alone a public Health exercise.

I ask if the problem is that driver's radios do not function, so they cannot request police or necessary Back up to enforce rules or do they consider that patrons should endure it while recorded and infrequently dealt with later.

You cannot run a public transport network that way or do police not attend anyway sitting over work and understaffing. Yawn, their eternal catch cry or is it in fact lack of driver investment in the public transport system.

The new much lauded Bus exchange in the central city has hard wooden seating that is not great for waiting for a bus and the arrival and departure boards are often out of sync with seating requiring standing up or walking to a new position to view them. Why? Should they not be clearly visible from as many vantage points as possible?

The last matter I would like to address is the small shuttles for off peak use. I have been told that they are no less costly to run than a full size bus, how can that be? I understand that a new vehicle with less pollutants and more modern and better design might initially cost more but surely over time it pays off socially and financially. It seems that it is always a must that social equality of transport and environment must always bow to private vehicles Why?.

In Christchurch we have the particular problem of the winter inversion layer that traps pollution as the Port Hills prevent ease of movement of pollution from vehicles, supposedly clean log burners, ah yeah right, and the dogged refusal of those who still want open fires and fossil fuels. All this means more winter illness and Asthma and related illness in our city alongside housing inadequacy.

My last comment is that I have seen a consistent increase in the use of private vehicles by Secondary school students so clearly the message s generally around environmental matters is not working. Or is it simply as always one cohort expect another to save the planet, save the very air we breathe and yet do nothing on their part that requires any personal inconvenience. It takes considerable effort to

survive without a vehicle in New Zealand and that social discrepancy is barely admitted to and kept reinforced..

At present the push is on regarding electric vehicles being the saviour of all issues but I also note that as soon as questions pertinent to how the pollution of old batteries began to be raised that public discussion ceased. That is no coincidence. Nor is it a coincidence that one of our trading partners has fleets of electric vehicles waiting in warehouses to flood the market once the public have been convinced enough that it will be 'the answer'. The truth is that there is more to the matter of electric vehicles than is being admitted just as with the scooters and bikes littering streets and berms. All these things are sold to the public who find it easier to not ask questions than to allow more detritus upon public spaces for pedestrians and others to suffer with.

They are like a red rag to drunks and others who so far have been able to escape prosecution for dangerous behaviour and incidents but that finally it appears will alter with the first conviction around harm to another party.

When is the Christchurch City Council going to cease using terms such as 'game plan', that is simply tow the line and don't endanger votes terminology and get with the true need to be proactive and forward thinking.

I know that our city has the reputation of being the most British and conservative in all the worst ways and I despair that it will ever alter.

#### RUBBISH AND RECYCLING:

In my opinion this is a work in progress and our population is trying, at least in some quarters and the message seems to be getting through to the commercial side of goods production.

We are having our recycle bins checked randomly I assume and across the whole city so consistent problematic areas can be addressed.

I understand that in the north Island there are certain days every few months when good recyclable household goods are put out to be taken free of charge for reuse. I believe we should follow suit and make it a consistent event so all are aware of it.

In regard to our household bins however I feel that the stickers we put on our bins to give information in regard to where items should be placed is still insufficient.

We need clearer plastic number Id on items and more around what to do with mixed medium items.

We need a more intensive social campaign around unacceptability of not recycling and snobbishness and social distancing due to recycling as it is very much still kept so by the shows etc on television that consistently downgrade recycling except for a limited number of shows.

We need upcycling workshops and courses and some geared specifically for women .

Apart from that we can only hope that those who approve materials and plans for buildings etc are taking the message on board rather than reinforcing the overuse of finite resources.

In conjunction with recycling I would also request that the City Council Become more Proactive , for instance a leaflet drop to all households requesting the following. For items to Thrift Stores and roadside< clearly mark that they are free to take. Please cover items

from the weather or bring them until it is fine again. Good genuinely recyclable goods are ruined by weather and no one should use any electrical item that has gotten wet.

Do not consider thrift stores a free dumping ground.

Begin prosecutions and patrols for thrift stores and video surveillance for recycle bins.

#### PUBLIC LIBRARY FACILITIES:

I would like to say firstly how much we appreciate having the Public Library System. Our Libraries are a goldmine of information , entertainment and education.

Books are a world that give relief from the world at times as do movies etc.

But oh the things we learn , it simply cannot be underestimated how much of an impact books can have.

Half hearted cooks become passionate, learn of new ingredients and secrets. Interior design becomes an exercise in learning though it can be fraught and it is the same with every subject under the sun.

Self- help and self- improvement sits quietly upon the shelves just waiting for us to read . Help in dark times and ways to celebrate good fortune, from politics to war to history to gardening it is all there upon the shelves.

So I say that every book and movie and educational purchase for our libraries is not a wasted investment.

We now have relatively comfortable surroundings and a good availability of hours.

The only critique if you could call it that is that more upcycling magazines and books are always welcome.

Just as many things run by the city council, our Library system is beyond price. And you are the people voted in by the public to protect those things. Do not let us down.

DSU

15 APR 2021

Housing Submission: Deborah Ann Minchington.

I apologise in advance to the City Council for my lack of dryness in my writing .But I am not an expert with facts and figures, rather my experience as a human being more my strength I feel.

So, I write accordingly to show that facts and figures have a human face.

Firstly, I would like to say that I know no more than most people about Rates. I know that Rates pay for our amenities and public roads and so on. Rates paid give us clean drinking water, hopefully good sewer systems and a little recreation to boot.

But I also know that the gap between renters and home owners is deceptive,, particularly in regard I feel to the refusal of direct rate payers recognising that renters pay rates within their rent. I know that it seems to be something of an exception with State Housing and in my opinion Government uses this trickery to keep housing poor of standard and to design policy both local and generally without concern for such people trapped in these areas.

If the Christchurch City Council is of the same mind set than it would be better to sell off Council Housing to those who are truly invested in the good of the population.

However, I do hope that is not so and that the City Council will continue to use their unique ability to work between departments within their offices to become part of the machine necessary to diminish property speculation and bad landlords preying upon the desperate.

I can write only of my visits to some of the City Council units which are admittedly basic but with a little forethought could be made exemplary.

But the message the units give is that anyone though not wealthy has a chance of living in prime real estate , and it is a gesture of egalitarianism. I have seen books written about these little blocks of four or five units with their handkerchief size grounds and they have fame. To remove them is like another loss to our city and in fact more of them being built for sole occupants would be a blessing.

Sole occupancy is a fraught exercise unless it is actually brought to the fore and that is rare due to the pre- occupation with couples and family dwellings. But even couples and other such households may find that life may have other plans and recognising that people may end up living alone is ignored to our peril.

State housing is exactly the same in general and tiny homes are an exercise in real estate not social housing generally.

So, I would ask that the City Council have more of a housing interest if they are willing to be mindful of tenants they put as neighbours as that means generally the success or failure of such housing and if those charged with the responsibility wish to sabotage the success then it will be so.

I am aware that it all depends upon money but every human being craves a roof over their head that they know they can afford in good and bad times .

It is exactly the same for renters. It is important that housing be seen not simply as an investment to profit from or discriminate through and for all voices to be valued.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

Generally yes (see some specific comments below)

1.2 Rates

As a rate payer I find this acceptable.

1.3 Proposed changes to existing rates, and new targeted rates

I support the proposed changes and the new targeted rates.

1.4 Investing in upgrading and protecting our city's water networks

I agree with the plans for water infrastructure including the drinking water plan and the changes to waste water discharges from Lyttelton & Akaroa Harbours.

1.5 Investing in our transport infrastructure

The goals are appropriate overall. The emphasis on active transport and public transport helps reduce carbon emissions and also has been shown to have significant health benefits for the population which, in time and looking on a broader level, helps reduce the overall costs of these measures to the community.

I am concerned that money is put aside to support new land development and subdivisions. While this development should not occur without infrastructure, in the long term we should be limiting development of subdivisions distant from the city in favour of increasing density in areas already well supplied with infrastructure.

To encourage more use of public transport, there has to be increased frequency on many routes including at weekends and in the evenings. Although I'm one of the few people using buses regularly outside peak times, I'm unlikely to take a bus home from the city at night as it means waiting for quite long periods at a bus stop or in the bus station (the bus frequency is only hourly).

I oppose the planned closure of the Riccarton bus lounge which seems at odds with the strategy to improve use of public transport. Having such a facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch seems important in attracting more patrons.

There is no specific mention of the previously published plans for further introduction of electric buses. This is essential.

1.6 Rubbish, recycling and organics  
I agree with these proposals.

1.7 Our facilities

See comments about bus lounge under transport above.

I strongly oppose the proposed changes to the Art Gallery programmes, both the public ones (which I am a keen user of) and the schools programme which helps develop an appreciation of art and aesthetics in children. Rather than fully removing the late Wednesday nights most nights of the month, the closing could perhaps be earlier eg 8pm which would allow the 6pm talks etc to continue.

The change to the library hours in terms of evening closing times may be acceptable but I strongly believe all libraries should be open at least from 10-4 on Saturdays and Sundays. I note the South library is a busy place on a Sunday and would see this as being likely to be the case in all the libraries if offered.

1.8 Our heritage, foreshore and parks  
I support the proposed plans for this spending.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments  
As a rate payer and keen user of the Arts Centre both now and pre-earthquake I strongly support this.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments  
This is a somewhat cautious 'yes', as I am not sure to what extent international exhibitions would come to the Robert MacDougall in addition to the Art Gallery. On the other hand, looking to the future, if this is the best way of ensuring safety of people using the building during an earthquake then it is worth doing. Overall, this is a building well worth preserving and using.

1.11 Potential disposal of surplus Council-owned properties  
I have no specific comments on this.

### Feedback

#### 1.2 Rates

I appreciate this is one of the biggest ways of raising the money needed to run the city but if like me, there have been few pay raises in the last couple of years. That's assuming that people still have jobs. Where are we supposed to find the extra money

#### 1.3 Proposed changes to existing rates, and new targeted rates

Definitely worth considering.

#### 1.4 Investing in upgrading and protecting our city's water networks

Always important to get this right. It sounds a lot of money but is forward thinking to ensure we have everything needed going forward as climate change brings more rain etc to keep the city running smoothly.

#### 1.5 Investing in our transport infrastructure

I would like to see more electric public transport and better incentives to encourage people to buy electric. We have a Prius.

#### 1.6 Rubbish, recycling and organics

This all sounds great.

#### 1.7 Our facilities

Hi, I'm against the closure of the bus lounges at Riccarton.

████████████████████ I also see how many people use them, there are those of us that are regulars.

It would be a great shame, especially for the elderly if the lounges close, particularly as winter is closing in. My mum is 83 and uses the lounges regularly through the week.

It also helps to keep youngsters off the street while they're waiting for their buses. They are more likely to mess around outside and get into trouble.

The lounges are doing a great service for the community in general, not including the people that work there.

Please don't close these key facilities to our community. They serve multiple ethnicities from all walks of life to.

Please keep us warm this winter and give us somewhere to sit while we wait.

The 10-15 minutes sitting and waiting in the lounge is the only time I get to myself all day. I bring a book and chill before I go home to the chaos that is life.

Thank you.

The other facilities in this group might benefit from shorter opening hours to suit the busy times. Maybe a survey by staff - or till receipts to see when it is quietest to close early or not open that day.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties  
If the heritage buildings can be sold to someone who will look after them and keep them in good shape. Then I'd be for it.

**First name:** Denis **Last name:** McMurtrie

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

It is difficult in this submission to look at various ball park figures and come up with specific spending on each. I have tried to look at each area in what I consider a more holistic and general way.

Balance yes about right. Most areas can argue their importance. When prioritizing how one area may effect another and how we can make some savings. eg Planting Trees - climate change. More and Improved roading-leads to more traffic - more parking- etc. At these interfaces is where savings could be made. eg improved focused education can lead to social interaction eg walking the talk and planting trees in drainage basins reduces down stream flooding - freeing up more land available for housing.

### 1.2 Rates

Our rates seem rather high compared with other cities especially as most of the city is flat and we have our water directly beneath us. Costs should arguably be lower. We must also take into account we are an aging population and more and more of us are on a fixed income. I suggest some more help from central Government in the area of reducing GST on rates. Even a small reduction could make a big difference. Has anybody done the figures. Have we done any lobbying?

### 1.3 Proposed changes to existing rates, and new targeted rates

I am happy with some targeted rates to keep the city vibrant and attract tourists to our heritage projects. I also think we should look at targeting projects which will entice tourists to visit. Tongue in cheek but what about a Tower? or increasing the trams out to Sumner and or Brighton. Imagine if we housed the Moana Lisa in the city - you get my point!

### 1.4 Investing in upgrading and protecting our city's water networks

Water is taken for granted but again it is the most important. It must be protected at all cost and when I travel to many other cities I always used to skite about our water with no taste. With the addition of chlorine I now cannot always do this. It can be terrible. We must keep it pure at all costs. No chlorine no matter what the cost.

Enhance piped water drainage creeks to improve water quality with plantings to bring back bird and fish life. Improve and look after drainage basins eg Bridgestone reserve once the Papanui Bush and now being developed by the community into the lungs of a commercial area.

#### 1.5 Investing in our transport infrastructure

Note as I suggested above I noted improvement in roads can mean more cars. We can and are fast following cities in the States that are vast motorways out to ever spreading suburbs cutting through over and destroying inner city housing like our just completed Northern Motorway.

The answer must come in the planning of all areas. When streets are improved all power (put underground ) and other infrastructure cycleway if desired should be improved or built at the same time a coordinated approach ie not a revisit for another dig up some months later.

#### 1.6 Rubbish, recycling and organics

I am not sure about the balance but again do not forget education in your budget. While I think young people are a lot more responsible than older persons the council must spend money on educating. This of course relates to what I earlier mentioned about walking the talk. The Community Parks Department for example has put out an excellent teaching resource. " Nurture Nature" "Manaaki Taiao" It relates to NZQA and parts can be used for Unit standards for Secondary students. This gives it a legitimate place in a schools' curriculum and specific NCEA qualifications.

#### 1.7 Our facilities

Any dealings I have had with the Papanui - Innes Community Board have been very good and members of the elected board and council employees have been most helpful. If the developing Papanui Bush is the lungs of the area the Library and Congdon swimming pool the heart and I would not like to see any reduction in facilities and their budgets to run them.

#### 1.8 Our heritage, foreshore and parks

I agree with the spend. How ever the devil lies in the proportion each may get? I would like to see a good proportion spent on parks and foreshore. As mentioned a coordinated approach, for example while improving parks with native plantings also carry out stream enhancement and look at waste collection sites etc.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

0.04% seems very little. Why not spend 0.08% to buy a 5.5m painting that would attract people to the city to view?

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

File
No records to display.

### Feedback

1.1 Have we got the game plan right?

The rates increases proposed are not affordable for the average ratepayer. .. a notion the council does not seem to get.

Live within your means as they must. You do them and us no favours treating us like a bottomless purse.

NZ current Inflation rate is .58% in 2021, bank interest rates are hovering around 1% at best and yet you talk like a rates increase of 4% a year and nearly 50% over 10 years is acceptable . It is not.

It should be no more than current inflation rate or the average or median wage increases .

1.2 Rates

I am appalled that you even consider this fair and reasonable.

The rates increases proposed are not affordable for the average ratepayer. .. a notion the council does not seem to get.

Live within your means as they must. You do them and us no favours treating us like a bottomless purse.

NZ's current Inflation rate is .58% in 2021, bank interest rates are hovering around 1% at best and yet you talk as if a rates increase of 4% a year and nearly 50% over 10 years is acceptable . It is not.

It should be no more than the current inflation rate or the average or median wage increases .

### 1.3 Proposed changes to existing rates, and new targeted rates

I absolutely oppose the proposed change to the land drainage targeted rate. It is unfair to expect ratepayers in a rural town ( Birdlings Flat) with no land drainages services, 50 kms from Christchurch to subsidise a city that they rarely visit.

Your proposal is not fair on people who pay for and maintain their own services and who rarely if at all visit Chch or enjoy or benefit from the many land drainage services Christchurch city ratepayers have .

**The reason rural ratepayers have not traditionally paid such land drainage rate costs is because they do not receive that service. That remains unchanged.** Your tenuous claims that they might benefit people living outside of CHCH (by making ChCh an accessible and pleasant place to live) is a flawed logic. Most Birdlings Flat residents enjoy living in a rural setting and rarely visit Chch. The nearby town of Lincoln in the Selwyn district provides for supermarket, doctors etc. A 90 km return trip to Christchurch is a costly exercise and a rare occurrence.

### 1.5 Investing in our transport infrastructure

No - you are wasting an inordinate amount of money on transport schemes few ratepayers use

### 1.8 Our heritage, foreshore and parks

Your red zone proposals should be delayed/ scaled down till such time as the city can afford it

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Comments

Good idea but not at this time. Rates are already too high.

### 1.11 Potential disposal of surplus Council-owned properties

I appreciate heritage building and we have few of them.

If they can be better preserved by others -- perhaps.

Nice if you can do that .... but again comes down to budget constraints.

### 1.12 Any other comments:

This quote appeals and is relevant.

**"Oh. I don't blame the government( or council). If I had \$600 billion (or the \$\$\$\$\$-present council income) at my disposal. I'd be irresponsible too."**

It seems to sum up government and councils think big , lets not count the cost schemes

and their let's instigate another tax or rate increase to fund it all.

Imagine a world (ours)with a finite often unchanging income source (- that's no rates increases to you) Could you set out and prioritise your plans within those limits as we have to. It would be great to see you try!

I hold out little hope that people on \$ 100 000 plus salaries can understand the impact on those who are not so comfortably off

or

that mine or the common peoples voice through these submissions will make any appreciable difference.

I would love you to budget as we have to... to go without as we have to... to save and delay projects till you can afford it

or even think of imaginative ways to get to where you would like to be without continually robbing the ratepayer .

Good luck .

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.2 Rates

Ok

1.3 Proposed changes to existing rates, and new targeted rates

Targeted rates are all ok, although I'm concerned about the spread of land drainage rate and hope when / if a coastal protection rate is required that this would be equally shared across the city

1.4 Investing in upgrading and protecting our city's water networks

Essential spend

1.5 Investing in our transport infrastructure

When I see the work being done, sometimes I wonder why, when the roads / junctions / pavements look okay. A lot of work has been done at our end of town and apart from the odd maintenance on some of our smaller suburban streets and junctions all has been positive

1.6 Rubbish, recycling and organics

I'm not convinced we'll ever get house to house recycling correct due to 'people' When Kate Valley was developed I submitted that we should be looking at incineration and use of gases for heating council / other government buildings. There was going to be the development of gas from the Bottle Lake landfill (pre-quake) and now talk is about from the sewage works. I still believe that the incineration option should be looked at, with 'recycling' being left to the hard to do e.g. batteries, paints etc

1.7 Our facilities

I'm disappointed that it is proposed to close Mātuku Takotako on a Sunday, but acknowledge that is poorly used on that day.

My main concern with this however, is the reduction in the number of toilet facilities in the village centre. Both Scarborough and the Surf Club have adequate numbers of toilets, but the village centre has none other than the library; the nearest being on the Esplanade by Marriner Street. These latter toilets are totally inappropriate / inadequate for the number of users, especially as they are also used as changing rooms

### 1.8 Our heritage, foreshore and parks

Having worked for Banks Peninsula District Council, I am aware of the community's love of Yew Cottage, but I do not believe it should have money spent on restoration unless it is re-located out of the increased sea level and has a location and community group committed to taking on the building as an on-going maintenance project - map from <https://coastal.climatecentral.org/> from <https://coastal.climatecentral.org/>

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

Yes, but only subject to its use as part of a museum redevelopment. There appear to be too many arguments about what the building can be used for. It's a small building, if I recall correctly, and not very welcoming. As the city is just having another "art" building being developed, I am not convinced about the justification of keeping this building let alone spending money on it.

### 1.11 Potential disposal of surplus Council-owned properties

I couldn't see any properties when I followed the links to find them

on <https://gis.ccc.govt.nz/portal/apps/webappviewer/index.html?id=63be645c6b8f4f4ab2a3e8f2627949f4>

However, I have no objections to the sale of the proposed two properties

### 1.12 Any other comments:

1. All masterplan funding to be delayed until 2031. This will affect the delivery of the **SUMNER VILLAGE GREEN** which needs to be delivered at the same time as the Bays Area Skate Park in 2022.
2. Please release, at least the major infrastructure funding so that the green can start to be delivered at the same time as the Bays Area Skate Park in 2022.
3. A cut of 5% to **COMMUNITY FUNDING** is scary, as most of our community groups rely on council funding for part of their services. These community groups help the vulnerable, build community, grow food resilience, do emergency

planning, protect and improve our environment and enable a better level of livability for us all.

### Feedback

#### 1.7 Our facilities

Imagine that your life consists of four walls. Your personal space is not much larger than a small bedroom and what is allowed in your personal is dictated by others and rules. Imagine that your meals are served at particular times and what you eat is also dictated by others. Now imagine if you wanted to leave this place, you have to wait for the weekly bus, the kindness of volunteers or the availability of family and friends. What about entertainment? Your travel is severely restricted, you are reliant on what ever the nursing home arranges, your hearing is disappearing and your vision isn't all that good. What if the only thing that you have control on is what you read? You enjoy reading. It is the only thing that takes you into a fantasy world, educates you, gives you a topic of conversation and allows you to socialise. What if the only way to get this reading material is through a mobile library that visits your nursing home / retirement village weekly? Wouldn't you be so joyful to see it coming around the bend, looking through the weeks offerings and picking something with excitement of the potential what you will find within in its pages?

Now what if I told you that this service which you rely on so much will be cancelled by your council, for a measly \$ 91,000 dollars a year? How will you feel?

I am writing this letter to the council to truly remind you and make you think about what you will be doing to all the people and your community if you cancel this service. You will be robbing severely isolated elderly of more services that they have already had to endure due to changing technology and infrastructure. You will be isolating them more creating increased depression, loneliness and thoughts of self harm and suicide. You will be creating people who have limited means to stimulate their brains and maintain their cognition. This will in turn lead to increased expenditure on your health budget as these people will need mental health and dementia services.

On the other spectrum, I am sure that not only the elderly utilise this service. What about all the younger years that rely on this mobile library to educate the younger generation. They are the future of this country and not everyone is as privileged as yourself to attend school and read and write. Some people really have it tough and a service like this might be the only physical means to access a book and learn. This learning could lead to schooling and university and a proper career. I implore you as a council to really think beyond the \$91,000 a year and more into the lives this library is changing weekly just for showing up.

Now you might be asking what qualifies me to say some of these things? I am a doctor. More importantly I am a

GP who has visited nursing homes and have worked in low social economic and isolated areas. Isolation is a dangerous thing. It can break the mind, body and spirit. It can make people loose hope. It can harm not only the person affected, but it can affect society as a whole.

Therefore, please reconsider the cancelling of the mobile library. Please let it be secured for another 10 years. No! 100 years.

### Feedback

1.4 Investing in upgrading and protecting our city's water networks

1. I would like the Council to allocate sufficient money to repair the broken waste water pipe network in Akaroa. I understand the waste water system is significantly infiltrated by ground water and storm water. A specific Akaroa Urban area rate, together with the money saved in designing an expensive over specked waste water system would cover the cost. My own property is outside of the urban area and I am required to make provision to collect, recycle and separate storm water, and contain waste water within the property. Akaroa Township could be a model for the same level of resourcefulness required by residents not connected to the town services.

2. Potable Water supply, as a holiday home owner serviced by the Duvauchelle Water supply I have been faced with water restrictions at the most popular holiday times, for many years. Despite having consumed no water for the majority of the year. This year we were forced to make provision for transported supply just to meet the normal household consumption of a large family. It is time to upgrade the storage facilities to adequately provide a reliable household water supply.

3. Akaroa Wastewater proposal. There does not appear to be any consideration for meeting best practice standards for the reuse of treated wastewater. I urge the Council to consider delaying funding for resource Consent of the proposed waste water scheme until Central Government has determined a framework of national standards for the reuse of treated wastewater. Simply moving wastewater from one district to another out of sight is colonial thinking, without full regard for the long term consequences on the environment and community health.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Less spending on new roading, and more on alternate forms of transport. there should be an immediate implementation of free round-the-inner-city bus service (like the previously successful Yellow Bus service). There should be an immediate focus on water: reducing pollution and fresh water wastage (from distribution pipes), restoring fluoride-free drinking water. The city also needs to focus on providing more Council housing, and replacing units that were lost in the earthquakes and never replaced (for example, the housing complex on Salisbury/Conference Sts.

1.2 Rates

Given what needs doing, I am happy with that. But if some just cannot afford that increase, there needs to be an abatement plan for them.

1.3 Proposed changes to existing rates, and new targeted rates

Generally, yes, I favour the targeted rates changes, in particular for water usage above a designated household usage level.

1.4 Investing in upgrading and protecting our city's water networks

Yes, I agree with this focus and the amount proposed.

1.6 Rubbish, recycling and organics

The Council needs to do more to encourage businesses to reduce unnecessary packaging and use of plastics. For example, the CCC would have far greater effect in pressuring The Press to stop wrapping daily paper in plastic. This is a gross and expensive waste and leaves the city liable for disposing of the unnecessary plastic wrappings. In fact, most retail outlets could cut back on packaging and waste--people adjusted quickly and successfully to supermarkets stopping the use of plastic bags for groceries. The same could happen with all kinds of retail goods, and an all out effort should be made to get them to cut down on packaging. Hardware mega-stores are prime offenders, and they in turn could pressure their suppliers. We need to make large and immediate changes.

1.7 Our facilities

Wherever it makes sense, service levels could be cut back slightly. However, saving \$95000 per annum to stop the Library Book Bus delivering books to retirement/assisted living complexes is outrageous. Often those people have no alternative ways of using the Library system, and the savings is so paltry it will make absolutely no difference to the Council budget. Be sensible.

1.8 Our heritage, foreshore and parks

Plans for parks are fine. However, the CCC needs to immediately stop consenting new buildings on low-lying land threatened by climate change/sea level increases. This is already a problem and it will only get worse, with the result that home/business owners on such land will inevitably seek compensation from the public purse. A strong message needs to be sent now, and continued building stopped.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

This magnificent complex must be saved and enhanced. Very little of old ChCh remains after the quakes and this structure is worth preserving and promoting, even if it takes time and considerable money to do so.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

With thought and careful consideration, yes, these buildings could be sold, as long as their continuation was assured.

1.12 Any other comments:

I do not want Wharenui Pool to close as it is the pool I used for my rehab after a bad cycle accident I had in February 2007. With my disability it has proved to be the best pool for my needs to assist my rehab. This pool I can get to on my own driving and have no parking problems or access. As part of my injury I have problems with distance judging and need to have a lane to myself. At this pool I can time it suit a quite period where I can do my swimming at my own pace and without fear of being hurt by trying to chain swim sharing a lane with others.

As the metro centre is in the city I will not be able to drive there as I avoid the CBD driving and where do I park when I get there. As I live in Halswell I can get to Wharenui pool without travelling on any busy roads.

### Feedback

#### 1.7 Our facilities

I do NOT support the proposed cuts to education services and evenings at the Christchurch Art Gallery Te Puna o Waiwhetū.

Wednesday night is such a very special time to visit the Gallery. Please do not proceed with the proposal to reduce it from weekly to monthly

- I am a volunteer guide at the art gallery. I frequently guide on Wednesday evenings as well as the daily tours. My experience is that the number of people on the evening tours is greater than I see on the tours during the day.
- It is easy for people to remember that every Wednesday night the Gallery is open. Reducing the openings to once a month will mean that the general public will miss out because of the reduced availability and the difficulty of keeping track of which evenings the Gallery is open. The art aficionados will keep track of the opening hours, but the general public - who are the ones we need to be encouraging to come into the gallery and enjoy the wonderful art on offer - are unlikely to keep a close eye and will miss out.
- The reduced evening hours will also affect the art classes run for adults in the evening. It will make running series of weekly evening classes impossible.
- The reduced evening hours will very negatively affect the excellent programme the gallery runs in the evenings with artist talks, film festivals and screenings, and it's larger events.

Reducing the education programme is an extraordinarily bad proposal.

- The education programme encourages young people to engage with art and makes them aware of where to find art. They are our future audience. What is the point of having an art gallery if it is not to foster art for everyone, not just the art "elite".
- The gallery's education programme is of such a high standard, hugely respected and valued by the community, and the envy of other galleries throughout NZ.

I support the status quo for the ChCh Art Gallery, with no reduction in education services or the evening opening hours.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

#### Comments

I strongly support the funding for the Arts Centre. They have done a remarkable job so far and it is imperative that Christchurch gets behind the Centre to enable them to complete the renovations. It is such a wonderful unique asset for the city.

1.7 Our facilities

A decrease in evening hours in libraries has been proposed. We are a user of a library meeting room on a Monday evening from 7 to 9pm and are concerned that if you reduce library hours we will no longer be able to use the room. Shorter library hours will affect a number of other groups that use the library meeting rooms in evenings, reducing the amount of room hire fees the council collects. We would like to see opening hours remaining unchanged.

## Feedback

### 1.7 Our facilities

It's wrong to open libraries only when most people are at work.

It abandons the principle of universality, which is a library's sole claim to the public purse — “a free library for every soul”, as Dewey put it.

Differential access privatises a public resource. The leisured classes will enjoy full free services, while those tied to a workplace will get a few weekend hours in a radically reduced collection, and must pay to read what is locked away.

In effect, the proposal runs two types of library together. The leisured get an open access circulating library, while the workers mostly get Victorian closed stacks.

But these were abandoned because they were not cost-effective. With open stacks, you select what you need, and leave the rest for the next user. With closed stacks, you must request a range of books to make this selection. If just 24 people request the books on elements, these will spend the next year in transit, unread by anybody.

And the catalogue, with its idiosyncratic language, inability to anticipate and correct spelling mistakes, and refusal to list variants, is not really up to the task.

Working people are not milch cows. Christchurch attracts a skilled workforce because its cultural benefits outweigh the low wages, offering their children a better chance. This proposal marginalises those who produce the wealth it wishes to consume. In a public service, funded by rates, how can public access become dispensable frippery?

We've almost completed a massive programme of library rebuilding and renovation. Now the bills are in, libraries are to be walled up half the day. How can this be? Jesus had harsh words for the servant who buried his master's treasure.

Fendalton, one of the largest collections, gets a double cut. It serves a large working-class area (it's closer to Bryndwr). It was to open on Sundays, but its immediate neighbours objected, so its weekday hours were extended instead. Now it loses both.

Seven-day service was introduced because a single income could no longer maintain a family. With both parents working, the collection was largely denied them (only the Central Library was open for reading only at weekends, 2-5 and 7-9). This proposal is an anachronism, harking back to a society which no longer exists.

Now families spend much less time together, the quiet evening hours in a library are precious: a chance to understand each other better, away from the hustle of home. At Fendalton, for example, which I visit at night, it's not uncommon to see a stressed child/young adult in tears over some homework problem, while the parent quietly addresses the causes of the stress, bonding them even more closely. These life-changing moments would not happen in the daytime after-school hurly-burly.

We value libraries for qualitative reasons, not quantitative. By ignoring the qualitative, and treating users as one homogeneous mass, regardless of their differing circumstances, this proposal risks making libraries seem irrelevant, at a time when the need for them is greatest.

### Feedback

#### 1.2 Rates

The rates are increasing too much. It is not easy for the people living with pension .

Food and living cost have been increasing higher and higher. It is hard to live. On the contrary people working for the Government are getting pay rise. It is not fair. They should have pay decreased.

#### 1.5 Investing in our transport infrastructure

People should use buses more. We have already have rails for the train and should use the rails for bus and tracks. People living outside the city can come on bus on rail. eg. From Rolleston they can come to Christchurch on buses using the rail .

#### 1.7 Our facilities

We are hiring Abberley Park Hall on Friday morning for 2 hours. It costs \$31.20 now. Now I heard we have to pay \$52 next year.

It is hard to believe!! You are only thinking about getting money, money all the time!!

We are all retired and live with pension. We charge people only \$5 per person and it is affordable. We are just managing paying for the venue now. We can't charge people more than \$5. We may not be able to hire the hall for dancing next year.

We may have to find a cheaper venue for next year.

If you increase the cost you may lose all the present customers.

### Feedback

1.12 Any other comments:

I believe there has been next to no transparency about the state of the bus lounges on Riccarton road since their opening, and especially with their closing. I do recall reports of issues with the larger lounge on the Westfield side after opening, but i do not recall other public statements on the lounges since. Additionally, it has not been mentioned if this has any relation with the closing, or if this plan is the final decision for their closure, nor the replacement if closed. Additionally, the long-term planning leading to the apparent "no longer needing" the lounges, has not been released in a suitable public manner.

As a result, this immediate decision to close the lounges, is both sudden, since it was released with no apparent consultation with either local residents, or with frequent users of the lounges, and also not well communicated. No visible news was posted by Metro (a non council entity, but the apparent operator of the lounges), or in the surrounding area such as the area around the lounges.

Currently, the lounges are well used, and appear to have a diverse range of ages of people using them, provide a significant increase in seating over a simple bus stop, are weather tight, and clean. Admittedly, the cleanness and nature of them being indoors does likely contribute to a cost increase, but that does not on it's own run counter to the goal of increasing bus patronage, unless the money is blocking improving other infrastructure that could also contribute to that goal. Additionally, the larger lounge on the Westfield side has a location for a commercial operator to operate, presumably helping recover some costs.

Prior to the lounge opening, a plan for a larger stop area and weather proof shelters was proposed for outside McDonalds and the mall carpark. While this was inferior to the lounges, it was similar to the other major bus stops (CHCH hospital, Manchester st, Northlands mall, etc). If the lounges are to be replaced, why has no breakdown about the costs of replacing them vs 10 years of further operation been provided, and will a similar facility be provided?

Additionally, currently Riccarton serves as a hub as part of the current "hub and spokes" network that was introduced following the earthquakes, which includes suburban routes that do not connect to the central city. Currently the 100, 120, 130, 140, and orbiter routes all stop at the Riccarton road stops, allowing for connection either to the city, or simply between suburban routes. If the lounges were removed at the Riccarton mall location, then it would also affect those routes.

### Feedback

1.1 Have we got the game plan right?

Please see my response under "Our facilities"

1.7 Our facilities

I am writing in reference to the intended closure of Wharenui pool as a community facility.

Everyone appreciates that Council facilities, by and large, do not make a profit. Hence the question to be decided is – are the benefits to the community worth the cost to the ratepayer? I appreciate the balancing act that the council must undertake when considering how it will best spend their scarce resources. I also appreciate that sometimes hard decisions around trade-offs must be made and that no community asset however much it is loved is immune from such scrutiny.

However, I believe that the decision to close Wharenui is being made prematurely and without sufficient information.

In the case of Wharenui pool it might be argued that the arrival of new facilities will cater to the needs of the community and that Wharenui is surplus to requirement. While there are new facilities arriving in the near future it is not clear that these will accommodate the capacity that is required. Although there is new capacity coming on stream in the form of the new Metro Centre and planned pools in Hornby and Linwood it must be remembered that the old QE2 and Centennial were lost following the earthquakes. The pools in Hornby and Linwood are not due to arrive for some time yet and delays beyond expected dates are all too common (in fact I would say are the norm). Further, Christchurch and the surrounding areas now support a greater population than it did 10 years ago. The demand for community facilities has increased over that time and it is premature in my view to decommission that capacity without fully understanding what the capacity needs are.

In addition the new capacity may not be as suitable for some uses currently catered for at Wharenui. Has it been established that existing Wharenui pool users can be accommodated if Wharenui is closed. Again this is better

determined when the planned capacity is all available.

I would also expect that it will not be the case that existing usage of pools simply spreads around the new pools. With new pools I would expect an increase in overall demand as some people will now find a pool that is more accessible to them (e.g. Hornby residents). Thus I would expect some people to start using pools who previously did not.

It might be argued that the new facilities are better and more up to date and that current users of Wharenui will be better off using those. However it is by no means clear that this is the case. Users value more than simply what is new. They also value location, convenience, and a sense of community and history. Wharenui pool as a long standing community asset has those things and decommissioning it removes that choice from the community.

I propose that the CCC retain the existing Wharenui facility until it becomes clear that it does represent surplus capacity or that users do genuinely prefer the new facility. If Wharenui really is surplus then that will be obvious via an analysis of usage data at the different facilities. If users do prefer the new facilities then that will also be obvious by examining usage data at Wharenui.

Retaining the facility in at least the short term will allow the Council and stakeholders in the pool to truly establish the long term costs and benefits of the pool with the advantage of actually knowing the impact that other facilities have. Only then can a fully informed decision be made.

The cost of waiting to see is relatively small compared to the cost of closure and regret (particularly with the revised downward cost). At the moment the decision to close Wharenui is being made in the absence of information of what the future looks like. It need not be that way.

16 April 2021

To Christchurch City Council

Re: Proposed Changes to Rates Remission Policy

It is proposed in the Long Term Plan 2021-31 that remission for Council rates on properties owned by not-for-profit community based organisations would only be granted when the organisation's annual financial statements have a closing balance of cash and investments of less than 50 times the total assessed Council rates.

The proposal would exclude income that was committed to a specific capital project provided evidence of the commitment was provided.

We are writing to oppose this proposal as we consider it is not equitable and would result in unintended consequences for the wider community.

We would submit that it is unfair to expect a non-for-profit organisation to use donations and income from fundraising to pay taxes rather than for the core activities of the organisation.

The proposed policy makes no account of the size of the organisation or the level of community support that is given by that organisation.

There might be justification for the proposal if the income has been derived from a commercial activity undertaken by the organisation but where money has been given by way of donation or bequest it is unreasonable for the Council to be paid a share of that income.

In many cases a bequest might be invested in an endowment fund so that the income earned by the fund can be used for many years in the future. To expect such income to be spent immediately is short sighted and makes no provision for unexpected future events where the community support could be made more appropriately.

There is no provision within the proposal to allow for the timing of the receipt income. For example, a bequest could be received just prior to balance date resulting in the

50 times ratio to be exceeded and the ratio might only be exceeded for a few days over balance date.

As the ratio is to be determined from the annual financial statements presumably once the ratio has been exceeded the organisation would have to wait until the following year before could reapply for the remission.

Therefore, a fairer method of administering such a proposal would be to ask an organisation with cash and investments that exceed the 50 times limit to provide details of how the monies had been received and the purposes to which they will be utilised. Where monies have be derived from commercial type activities and/or being accumulated with no specific purpose or timeline for their utilisation there might be justification to cancel the right for a rates remission.

However, where the organisation is working hard to raise income and is providing a positive service to the wider community it will make it that much harder if additional costs are imposed on the organisation solely on the grounds of the amounts of funds held in cash and investments.

Yours sincerely

David J White  
Treasurer

### Feedback

1.4 Investing in upgrading and protecting our city's water networks

Land Drainage Targeted Rate:

I support Alternative Option 2 – that there be no change to the existing land drainage rating policy. We have no services on our rural property and I routinely carry out regular maintenance on the nearby stream and roadside ditches myself.

Akaroa Wastewater Project:

I request that the Council increase the budget for the wastewater I&I repair work to ensure that the work can be accomplished completely, in line with the Council goal set for an 80% pipe repair.

I also ask that the Council delay the resource consent application until this repair work is fully completed. This will result in a reduction of the size of the scheme and there seems no point designing this project until the size is clarified.

1.7 Our facilities

Akaroa Service Centre:

This service provided by permanent staff in Akaroa is essential and I request that it not be removed from our town, but be maintained. I also ask that the Service Centre be returned to the old Post Office building, which was reopened by the Council after extensive earthquake repairs for this very purpose. It is in a central location in the township and could serve as a community hub, with other services operating out of the building as well.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

We strongly disagree with the proposed new targeted rate for land drainage.

We live on Banks Peninsula on 1.6 hectares, under Rural Residential classification. We believe we are paying more than we should due to our Rural Residential status while we are surrounded by larger landowners who are less targeted.

We currently pay high rates for no services to our property other than the road and roadside drainage. We maintain our own septic tank, collect our grey water on our property and have our own spring and therefore are not using water provided by the council. We need to travel approximately 5 km to dispose of our rubbish. We maintain our own driveway with no other road frontage.

We have given water retention a great deal of thought in our property management over the years being frequently in drought and value every drop of rain we get. In regards to drainage from our property this would be very minimal even though we have a hillside property. We utilise any rainfall by collecting rainwater from our roof and have dug some swales to retain water in our vegetable garden and orchard. We have planted flaxes along a natural drain line through our property soaking up the water as it moves through. We have extensively planted shelterbelts with natives around our property including 5 metre wide planting at the bottom of our property along a flat strip soaking up any potential run off.

We would like to see consideration given to our lack of use of council services and our proactive work to minimize any water being lost off our property.

We strongly disagree with any proposal that further targets our property for rates by introducing a new land drainage rate.

## Submission on the Christchurch City Council Long Term Plan 2021-31

**To:** Christchurch City Council  
cccplan@ccc.govt.nz

**Submitter:** Miles Premises Limited

### Introduction

- 1 Miles Premises Limited (**Miles**) owns approximately 18 hectares of land located on the corner of Russley Road and Memorial Avenue (the **Site**).
- 2 This submission is made in support of the proposed Capital Programme for the wastewater infrastructure works identified as the Riccarton Interceptor - Upper Riccarton and the Avonhead Road Wastewater Main Upgrade, proposed in the Council's draft Long Term Plan.

### Background - Christchurch District Plan: Sewer infrastructure

- 3 The Site is located within the Industrial Park (Memorial Avenue) Zone.
- 4 The Christchurch District Plan (**CDP**) sewer infrastructure rules for this Zone specify allowable discharge to the Council's wastewater network, dependent on the upgrade of sewer infrastructure described as: Riccarton Interceptor, Lower Riccarton Interceptor, Upper Riccarton Interceptor and Upper Avonhead Road sewer (rule 16.6.6.2.6, CDP).
- 5 The works on the Lower Riccarton Interceptor have been completed, which enables an initial discharge that would support development on a small area of the Site. The works identified as the Riccarton Interceptor – Upper Riccarton and the Avonhead Road Wastewater Main Upgrade are required to be completed before the Site can be fully developed.
- 6 Miles has recently purchased the Site and is currently undertaking detailed planning and design work to progress development. Miles' current aspirations are for on-site works to begin next year, with the first buildings constructed and businesses opened in 2023.

**Draft Long Term Plan**

- 7 Funding of capital works is proposed for 2021-2023 and 2024-2025 for the following wastewater infrastructure:
- (a) Wastewater Riccarton Interceptor- Upper Riccarton (CPMS ID 30172); and
  - (b) Avonhead Road: Wastewater Main Upgrade (CPMS ID 30173).
- 8 Miles supports the inclusion and timing of these proposed capital works in the draft Long Term Plan. The proposed timing of funding will align with the proposed timeline for development of the Site, and ensure there is limited delay to development as a result of infrastructure constraints. Development of the Site, as enabled by the wastewater network upgrades, will positively contribute to Christchurch through the provision of a high amenity development at this prominent location, and provision of business growth and employment opportunities.
- 9 Miles wishes to be heard in support of its submission.

**Submission by Miles Premises Limited on Draft Long Term Plan 2021-31 / 386**

- 1 Miles Premises Limited (**Miles**) has made a submission (**attached**) in support of the funding of capital works proposed for 2021-2023 and 2024-2025 for the following wastewater infrastructure:
  - (a) Wastewater Riccarton Interceptor- Upper Riccarton (CPMS ID 30172); and
  - (b) Avonhead Road: Wastewater Main Upgrade (CPMS ID 30173).
- 2 Miles no longer wishes to appear at the hearing, but instead asks that Council accept this letter as a supporting document.
- 3 Miles **supports** the inclusion and timing of the proposed wastewater infrastructure works in the draft Long Term Plan.
- 4 Miles owns approximately 18 hectares of land located on the corner of Russley Road and Memorial Avenue (the **Site**). In its earlier submission Miles indicated that it was undertaking detailed planning and design work, and anticipated on-site works beginning next year. Further to this, Miles now anticipates lodging a consent application for development of the Site within the next two months. It is critical to the proposed development of the Site that the wastewater upgrades proceed as scheduled, and accordingly that funding is made available as proposed in the draft LTP.
- 5 Miles reiterates that development of the Site, as enabled by the wastewater network upgrades, will positively contribute to Christchurch through the provision of a high amenity development at this prominent location, and provision of business growth and employment opportunities.

Yours faithfully

### Feedback

#### 1.3 Proposed changes to existing rates, and new targeted rates

I think rates should be staggered in their % (like income tax) so that if the rateable value of your property is over a certain value, then you pay a higher percentage of rates. This is a tiny step towards "closing the gap" that currently exists in NZ between rich and poor - the rich keep getting richer, the poor poorer (for example, the majority of people affected by the proposed closing of the Riccarton bus shelters will be the poorer (normally old and young who can't drive) part of our population).

#### 1.5 Investing in our transport infrastructure

You are not investing in our transport infrastructure if you close the Riccarton bus lounge.

I want to see MORE investment in public transport, safer paths for cyclists and scooters and pedestrians and LESS invested in cars. We need to have an eye on the future and cars are not it.

I remember all the fuss and fanfare about the amazing new bus lounge and now you want to shut it down again - less than 8 years after it was built and opened - that's a shocking return on our investment in this particular piece of the infrastructure. I know we live in a "throwaway" society, but that does not apply to Council investments and buildings in our city - very wasteful. And not what I expect to see in the Council running this city.

I would prefer more shelters and transport hubs - and a closer working relationship between ECAn running the buses and the Council running the infrastructure - which the Mayor said she would FOCUS on this time around. It's not good enough to blame each other - just sort it out.

#### 1.7 Our facilities

See above. I do not support closing the Bus lounges - this falls under transport and you have not got this right.

See above. \*

I know that Akaroa are upset that you're closing their service centre too. A de-centralised (localised) approach is the way forward and I think closing the Akaroa centre goes against this.

\*I remember all the fuss and fanfare about the amazing new bus lounge and now you want to shut it down again - less than 8 years after it was built and opened - that's a shocking return on our investment in this particular piece of the infrastructure. **Submission to:** Christchurch City Council  
**Subject:** Christchurch City Council Long-Term Plan 2021–2031 (the Plan)  
**From:** Creative New Zealand

1. Creative New Zealand welcomes the opportunity to make a submission on Christchurch City Council's ten-year plan. Arts, culture and creativity are an important part of developing strong and prosperous cities, and cohesive and healthy communities. We encourage Council to recognise the essential role arts and culture play in the wellbeing of its residents as it makes decisions for the future of the city.
2. We'd be happy to discuss this submission with you further. The key contact person for matters relating to this submission is:  
**Name:** David Pannett  
**Position:** Senior Manager, Strategy & Engagement

### Key Points

3. **The 2021–2031 Long-Term Plan marks a key moment for Ōtautahi.** A decade on from the earthquakes, it is an opportunity to rethink how Council can plan and invest most effectively, to enable Christchurch to develop into a 21st century garden city residents are proud to live in.
4. **We welcome investment in the Arts Centre through the capital grant for restoration.** The Arts Centre is a major part of Christchurch's unique cultural and historical identity, and is also a platform for residents and visitors to engage with a wide range of artforms and creative activities. The capital grant signals Council's recognition of the value arts and culture create for the city, and is essential for the Arts Centre to continue operating.
5. **We're disappointed to see a proposed cut to the Christchurch Art Gallery's operational hours and programming.** We encourage Council to reconsider this cut so that the gallery can

remain open consistently and confidently, and continue to deliver core services to Christchurch's diverse communities, including its high-demand education programmes.

6. **We encourage Council to consider reinstating the Public Art Fund through the Plan.** The partnership between Council and SCAPE Public Art, Matapopre and the private sector has attracted significant investment and supported a body of works that have become landmarks in the city. An ongoing commitment to this partnership is an opportunity for Council to continue its strong track record of making high quality artworks accessible to the city's residents and visitors, and to reach an international standard of central city public artwork.
7. **It's excellent to see an ongoing commitment to funding the Performing Arts Precinct in the central city.** In the lead up to the Precinct's opening, we encourage Council to continue to work with arts communities, business owners and tourism authorities to develop strategies to attract residents and visitors to the precinct, and to view its opening as an opportunity to make Ōtautahi an even more vibrant place to live and visit.
8. **We're proud to be continuing our support for the Toi Ō Tautahi Arts and Creativity Strategy as one of the Strategy's foundation partners,** and encourage Council to ensure the Plan shows tangible recognition of its own commitment to arts and culture, and aligns with the vision and directions of Toi Ō Tautahi.

#### **Draft Long-Term Plan 2021-2031**

##### *Strategic Priorities and Community Outcomes*

9. The Chief Executive's introduction states, 'at the heart of the Council's decision-making is the goal of promoting community wellbeing in its widest sense'. We welcome Council's commitment to supporting community wellbeing, and encourage it to recognise arts communities as well-placed partners to help Council deliver wellbeing outcomes to Christchurch's diverse communities.
10. The Plan outlines 18 community outcomes. It's fantastic to see specific mention made of arts and culture through the outcome 'Celebration of our identity through arts, culture, heritage, sport and recreation'.
11. We encourage Council to also recognise the strong contribution investment in arts and culture makes to other outcomes, in particular:
  - Strong sense of community – artistic and cultural activity increases social cohesion through connecting people and communities
  - Safe and healthy communities – participating in arts and cultural activities contributes to our wellbeing, and to physical and mental health
  - Valuing the voices of all cultures and ages (including children) – artistic expression is a powerful way to amplify and celebrate the voices of diverse communities
  - Vibrant and thriving city centre – artistic and cultural activity can play a major role in placemaking and rejuvenation to create great places to live and visit
  - 21st century garden city we are proud to live in – arts and culture cultivate creativity, innovation and resilience
  - Great place for people, business and investment – artistic and cultural activity equips people with the skills needed to create a more highly-skilled workforce

- Inclusive, equitable economy with broad-based prosperity – artistic and cultural activity have a strong ‘multiplier effect’ and attract economic activity to our cities
- Modern and robust city infrastructure and facilities – incorporating arts and cultural elements into infrastructure projects can create landmarks and contribute to a unique sense of cultural identity and increased sense of ownership.

### *Ōtākaro Avon River Corridor*

12. It's great to see Council committed to a co-governance model for land development, in partnership with mana whenua. As work continues on the development and revitalisation of the Ōtākaro Avon River Corridor, we encourage Council to build on its strong track record of incorporating arts and culture elements within infrastructure projects. There's great potential to continue working with mana whenua to incorporate toi Māori (Māori arts) elements throughout the Corridor, and to share stories of cultural and historical significance along the awa.

### *Our Facilities*

13. We tautoko the substantial investment being made to support a network of community facilities. Community centres and halls, libraries, Christchurch Art Gallery Te Puna o Waiwhetū, Christchurch Town Hall and Tūranga all provide spaces and services that contribute to the social and cultural wellbeing of their community and support the arts community.
14. We acknowledge, in particular, Council's continued commitment to investing in the Performing Arts Precinct. The precinct will act as a catalyst for the central city and build audiences, increase economic activity and make arts experiences more affordable and accessible.
15. As the Precinct's development continues, we encourage Council to consider where there are opportunities to activate existing performing arts spaces to attract people to the central city and provide vital space for arts communities (eg, is there a way to better utilise and increase access to the Town Hall?).
16. As the Performing Arts Precinct develops, we encourage Council to continue engaging with key stakeholders such as arts communities, business owners and tourism stakeholders, to consider how to promote upcoming events and shows. It will also be important to work with these groups to explore how to manage regulatory levers in a way that enables other sectors (eg, hospitality and events) to work alongside the Precinct, to drive economic, social and cultural growth.
17. There are a number of new facilities under development, including the Hornby Library, customer services and south-west leisure centre, Metro Sports Facility and Canterbury Multi-Use Arena. As Council continues to build and develop these facilities, we encourage you to consider:
  - whether any of the new spaces developed could support arts communities by providing spaces where they can make and show their work to audiences (eg, could an indoor multi-court space function as a multipurpose space used for rehearsals and performing arts events? Could sprung floor gyms also be accessible to dance groups?)

- how multipurpose facilities could provide more people with opportunities to engage with and participate in arts and culture, which has similar benefits for communities' physical and mental wellbeing as sport
  - whether any former spaces (ie, Horncastle Arena) and other spaces that Council may look to deploy following the development of new facilities could be repurposed to provide vital space for arts communities to make, share and present their work
  - how to work with local artists and arts practitioners to create a strong sense of cultural identity at each of these facilities.
18. While we understand the need for cost savings, we note that the proposal to reduce late opening hours at libraries and remove the Mobile Library service may also affect people's ability to access important library services, particularly older and vulnerable populations.
  19. It was disappointing to see a reduction to the Christchurch Art Gallery Te Puna o Waiwhetū opening hours and public and school programmes proposed. Reducing the number of late nights each month would negatively affect people's ability to engage with the exhibitions and activities on offer at the gallery. The late nights can have a multiplier effect, by attracting people to the central city area where they may go to see a show or purchase food or drink nearby.
  20. The 25 percent reduction to the programmes offered to public and school groups per year is concerning for several reasons. Firstly, Council has identified in the Christchurch Art Gallery Activity Plan that education resource is at capacity, and thousands of school students are not able to access the Gallery due to the constraint on the number of school visits which can be hosted. Therefore, a further reduction to programmes would only exacerbate this demand, and fewer children will have an opportunity to visit one of the city's most important education resources.
  21. In the Activities and Services Statement of Service Provision, one of the negative effects the Gallery's services may have on the wellbeing of the community Council identified was its difficulty reaching all communities due its central city location. The mitigation outlined was school programmes and outreach programmes, some of which receive external support to transport lower decile schools to participate in Gallery education programmes. A further reduction to programmes would also exacerbate this negative effect by further reducing the Gallery's accessibility.
  22. We urge Council to reconsider these cuts, and make provisions to maintain the Gallery's current hours and programmes.

#### *Capital Programme*

23. We support the capital grant of \$5.5 million for the Arts Centre. As New Zealand's largest collection of Category One heritage buildings, the Arts Centre is a significant asset and an important part of Christchurch's unique cultural and historical identity. Furthermore, the Arts Centre provides residents and visitors with access to a wide range of creative activities across museums, galleries, film, craft workshops, concerts, and as a venue for residencies, arts festivals and public artworks. Given the Arts Centre does not currently receive consistent government or council funding, Council's support is of great value.

24. We support Council's commitment to continue funding for public artworks and monuments, a unique part of Christchurch's landscape and identity. Public art can increase the use of public spaces, improve the aesthetics of a place, encourage a sense of ownership and community pride, and create landmarks and distinctive features in the urban landscape.<sup>1</sup> It also produces flow on benefits for education and community connectedness.
25. We encourage Council to reinstate the Public Art Fund through the Plan. The partnership between Council, SCAPE Public Art, Matapopore and the private sector has attracted significant investment, and for every \$1 of Council funding, the group have attracted \$4.15 in private funding to deliver to the first 10 years of the partnership. Therefore, Council funding of \$2.1 million over 10 years has been leveraged to raise an additional \$6.7 million and deliver assets of \$8.9 million to the city – an excellent return on investment. The Fund has supported works that have become iconic landmarks in the city, and is an opportunity for Council to continue its strong track record of making high quality artworks accessible to residents and visitors.
26. We support both the restoration work and the additional investment for base isolation of the Robert McDougall Art Gallery. Investing in base isolation would make the gallery a fit-for-purpose space that is able to host high quality exhibitions and protect its valuable collections for years to come.

#### *Fees and Charges*

27. We welcome the decrease in hourly hire fee for larger community spaces by community not-for-profit groups. Though a small reduction, this signals Council's commitment to ensuring these spaces are accessible for smaller, community-based organisations, including many arts groups.

#### *Grants*

28. We note there's a proposed reduction of 5 percent to community and grants programmes, including the Strengthening Communities Fund. As noted in the consultation document, this funding provides crucial support for volunteer and not-for-profit sectors, and delivers investment to a number of Christchurch's key arts organisations including the Christchurch Symphony Orchestra, SCAPE Public Art, the Court Theatre, the Physics Room, the Centre of Contemporary Art Toi Moroki and Ōtautahi Creative Spaces.
29. Funding for Strengthening Communities has been unchanged since 2010. While we understand further investment may not be viable for Council currently, we encourage it to reconsider the 5 percent reduction and maintain current levels of investment.

#### *Potential Disposal of Council Owned Properties*

30. We note 5 Worcester Street is a vacant heritage building included in Council's list of properties for potential disposal. The arts community have identified the site's potential, and we encourage Council to consider how the site could be repurposed to provide space for artists and creatives to make, share and present their work. The property's proximity to the Arts Centre and Christchurch Art Gallery Te Puna o Waiwhetū add to its potential.

---

<sup>1</sup> A review of the Henderson Youth Art Project (2016). Unitec.

### *Concluding Points*

31. We urge Council to continue supporting and developing ways for Christchurch residents to engage with and participate in the arts over the next 10 years. Arts and culture have an essential role to play in the wellbeing of Māori, Pasifika and Christchurch's diverse communities, as well as social cohesion between the many communities that call Christchurch home.

### **Creative New Zealand's interest in the arts in Christchurch**

32. Creative New Zealand is the arts development agency of Aotearoa, responsible for delivering government support for the arts. We're an autonomous Crown entity continued under the Arts Council of New Zealand Toi Aotearoa Act 2014. Our legislative purpose is to encourage, promote, and support the arts in New Zealand for the benefit of all New Zealanders.
33. We recognise the importance of Canterbury to the arts in New Zealand. For arts that are delivered in the Canterbury region, **\$6.35 million** of direct financial support was provided in 2019/20. Our overall support includes the funding of individual arts projects as well as arts and cultural organisations.
34. Our overall support includes the funding of individual arts projects as well as major Christchurch-based cultural organisations. These include galleries, theatres, public art, festivals and literature.
35. Under the Creative Communities Scheme, we also fund territorial authorities directly to support local arts activities. In 2019/20, funding provided to Christchurch City Council under the Scheme totalled **\$248,100**.
36. As noted earlier in this submission, we're also a partner in Toi Ō Tautahi Arts and Creativity Strategy, alongside Council, Rātā Foundation and ChristchurchNZ, working with others with a deep interest in arts and culture across the city. We're proud to be continuing our investment into bringing the Strategy to life in the coming years.
37. Thank you again for the opportunity to comment. Please feel free to contact me if you have any questions or if you wish to discuss this submission further (my contact details are at the start of the submission).

Ngā mihi rārau ki a koutou katoa, nā

### Feedback

1.1 Have we got the game plan right?

Don't close the Mobile Library.

I love going to Mobile Library every Tuesday after school, and choosing some books. Sarah, or[ Sally or Christina ] always put some great books on that they know I will like. I have read many books that I would not have chosen myself. It's great being able have them delivered right outside school, as often it can be hard getting to the library.

Please don't close it.

Hopefully you saw my picture on the front page of The Press this week, with my brother Callum.

Thanks Lochlan, aged 10, using mobile library for over 8 years!

1.2 Rates

Mum says lower rates.

1.7 Our facilities

Don't close the Mobile Library.

See above.

1.12 Any other comments:

Stop closing swimming pools, wharenuui and open the new one quickly.

Christchurch City Council  
53 Hereford Street  
Christchurch

15 April 2021

Dear Councilors

**Re: Letter of Support – Long Term Plan 2021 – 2031 – International Education**

We herewith would like to express our support of the city's proposed Draft Long Term Plan 2021 – 2031. As an industry body representing International Education providers in our region, we trust in our partnership with ChristchurchNZ to collaborate and promote Christchurch and Canterbury as the study destination of choice for international students.

International Education has been part of our city's fabric for decades and after the earthquakes our providers have learnt the true value of collaboration in a community that set best practice and appreciates the benefits of a unified approach towards the promotion of our city and providing our students with experiences that make them become lifelong friends of Ōtautahi Christchurch.

International students not only bring vibrancy and cultural diversity to our shores, they help our students grow and become global citizens.

In 2019 we were able to host 13,419 students in our region (nearing the 15,280 we had pre-quake) whose economic value to our region is no less than \$523,000,000.

Pre pandemic, our students provided employment for approximately 5,000 people in high-value jobs in Canterbury.

For many of our providers it has been a hard and long way to recovery post quakes and while borders remain closed now, we rely on the support of ChristchurchNZ to work with our stakeholders and offshore partners to continue to attract international students and welcome them with open arms, as soon as borders open.

Many thanks for your consideration.

Yours sincerely,

Roder Shew

Chairman  
Christchurch Educated

### Feedback

1.1 Have we got the game plan right?

very hard to answer this given the scale. Appreciate the amount of work that has gone into trying to communicate with the bubbles - they are quite helpful.

Overall main issue is with the spend on the arena. Further points below.

1.2 Rates

It's problematic that you rely on an increasing size/rate of development to fund your plans. Where is the conversation about a more circular economy?

It's problematic that in 10 years time the rates on a property will have increased in a way that income will not have kept pace with (most pay rises, if any, get linked to CPI rises of 1-2%).

I'd be happier to live with some things less 'fixed' post quake, for a slower curve on the rates rise.

Given the amount of debt in your financial strategy (much of it rotted in the EQ and now Covid), I'd expect a more transparent conversation with your ratepayers about reasons and methods to reduce that debt. How do we as a community decide what to spend less money on if you don't give us that autonomy of choice but simply inform us you've decided to borrow money to fund projects. It's particularly galling that a large chunk of the borrowing is for the arena, which is projected to cost more than it brings in economic benefits.

1.3 Proposed changes to existing rates, and new targeted rates

Targeted rates are great for transparency, especially for things where it can be used as an incentive eg to reduce excessive water use.

Support the grant to the Arts Centre.

1.4 Investing in upgrading and protecting our city's water networks

100% support the work to fix leaking pipes across the city.

Where is the programme to require all new builds to have a rainwater tank for the garden, or to encourage alternative water use and treatment facilities, for example pre-approved for building consent composting toilet systems for people who want to install them in the Christchurch residential area.

Where is the conversation about limiting the amount of hard landscaping and roof area in new subdivisions - the amount of available absorptive land will continue to put pressure on the stormwater system if development continues along those lines.

What about rates rebates for people who use less than a certain number of litres to incentivise low water use?

#### 1.6 Rubbish, recycling and organics

stop spending so much money and resource on educating the public and turn your focus to the industries producing the packaging and products which are un-recyclable and non-biodegradable. Direct your education programmes at them. Find ways to make it the producers responsibility to change their approach, and there will be a massive reduction in waste.

#### 1.7 Our facilities

In Lyttelton you are putting money into the Cemetery, Naval Point redevelopment, and the old stable building, to a total of \$27,220,164. The town can get by without the stables, the dearly departed aren't suffering from lack of spending, and Naval Point could have a budget haircut and you could spare a couple of million to go towards a new Museum, whcih would provide a much need free civic space of mana and interest for a town which is 90% cafes since the Earthquakes. Please refer to your own Master Plan post quake, which stated a Museum would very much be at the heart of a re-built Lyttelton, and there's no sign of it in your plan for the two decades post quake.

I do not support the closure of Wharenui Pool. An amazing community facility for people who simply want to swim - it's accessible, reasonably priced, ot overrun every school holidays, and is in the heart of a busy central urban district. I choose Wharenui because I can get to it at lunchtime but the Metro centre will be too far.

The Multi use arena at 454,000,000 is a disproportionate amount of money to spend in favour of one facility. Seeing it in roughly comparable with the water supply budget is shocking.

Support the changes to library hours with one exception - please keep a late night Friday at Turanga. Its important to have safe, family friendly reasons to be in town after work on a Friday.

#### 1.8 Our heritage, foreshore and parks

I'd rather see more money on this than on roading - the obsession with having bump free roads in Christchurch is crazy, the ground moves and services need digging for and within a short time the roads are all patched up again. Bumpier roads might put people off using their cars if the cycleways are smooth though, so keep up the great work on the cycleways. And make the transit lanes for EVs. Great you are spending money on EV off street parking.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.12 Any other comments:

There's a lot to take in.CCC has a great website and works hard to communicate widely on all topics.

In general despite the rhetoric about building a city for people, most of suburban Christchurch is dominated by cars, and commercial American style 'drive in malls' like Tower Junction, cafes with views of carpark. New housing makes a nod to green space with planted berms but there is poor urban design of suburban community hubs involving play spaces, schools, local food. The city will lose most of its larger suburban trees as infill increases unless there is change in strategy. What overseas cities do we aspire to be like and what's the roadmap to matching their success? Infill and terrace housing can be interesting, beautiful, well designed, a few in CHCH are, but much of what is going up all over Christchruch (mostly Williams and Wolfbrook) is banal, planned to maximise density rather than allow all dwellings to have some sun and privacy, and will not improve with age, only deteriorate and end up being pulled down in 30 years time.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

1.dog poo bags and dog poo drop station on public walks, parks and community trails.

2. More tree planted to replace trees that have been removed in older communities.

3. More trees planted in community parks /native/fruit/nut

4. Light restrictions on in ground pools, large fee came into place for no viable reason.

5. A stricter cleaning schedule on the public pools.

1.2 Rates

i dont agree, our rates keep getting hire but i am not seeing the benefit in my community from the rate increases.

1.3 Proposed changes to existing rates, and new targeted rates

n/a

1.4 Investing in upgrading and protecting our city's water networks

i agree this is where we should spend. No chlorine in the water please. Stop overselling our water.

1.5 Investing in our transport infrastructure

train (light rail) we need this in the city future plan.

1.6 Rubbish, recycling and organics

too much, this seems like an over spend.

1.7 Our facilities

the library services barely work, why not stop buying machines of low quality that are hard to use. Hire people (students at the living wage) to provide the same service. This would be good for the future of our community in my eyes.

1.8 Our heritage, foreshore and parks  
it seems expensive, a good idea, but it is what we will value long term.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes

Comments  
i agree this is a world class facility that brings people to our city.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
No

Comments

1.11 Potential disposal of surplus Council-owned properties

student housing / air bandb / hang on to it.

1.12 Any other comments:  
clean up that heritage building on Riccarton Road.

Antonio Hall - to keep with local communities, build a similar style building.

clean it up... it looks like CHCH can't manage the problems linked to it. Not a good look, that it has been left for so long, no matter who owns it. Just sort it

Submission  
Change to Rates Remission Policy  
18<sup>th</sup> April 2021

### **Rates Remission Policy – Not-for-profit community-based organisations**

Jennifer Ross, on behalf of Catholic Diocese of Christchurch, makes this submission to Christchurch City Council on the proposed change to the Rates Remission Policy.

It is important to firstly state that the many charities which benefit from rates remissions provided by the Council (and effectively the ratepayers), are extremely grateful for this support. For charities the rates remission helps support the provision of critical social activities to communities, and in many cases is an important contributor to their financial sustainability. This support for not-for-profits and the recognition of the good they do in the community is appropriate.

#### **Executive Summary:**

The proposed change to the Rates Remission Policy is not supported due to (i) Insufficient Notice, (ii) Lack of Pre-Engagement, (iii) Lack of Information, (iv) Flawed Remission Assessment Criteria, (v) No Cost/Benefit Analysis, and (vi) the Existing Policy is Adequate. This submission provides supporting arguments and information for each of these concerns. Any of these concerns on their own provide justification for the withdrawal or, at the very least, reconsideration in the future in a more robust and fair manner. Collectively, they provide a compelling argument for Council to withdraw the proposal.

#### **Discussion:**

This submission prefers to use the less corporate term of 'charities' as opposed to "not-for-profit community-based organisations".

Clear and supporting information is provided below, under clear headings, in support of the position taken in this submission:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

#### **1. *Insufficient Notice***

Given the very large number of charities that this proposal would affect (including those that must file and disclose additional financial information to continue receiving a remission) and that reality that most charities struggle with lack of resources (people and funds), it is considered that insufficient

notice has been provided to ensure that charities could appropriately engage in the submission process. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

## *2. Lack of Pre-Engagement*

It is reasonable to expect that any proposal by Council to change the important policies affecting ratepayers and the community would be well researched and that a level of pre-engagement with representatives of those affected had taken place to help inform and validate the proposed change. The paper “Background Material on Proposed Changes to Rates for 2021/22” does not provide confirmation that either has taken place and is reflected in serious shortcomings of the proposed change that are discussed later in this submission. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

## *3. Lack of Information*

The “Background Material on Proposed Changes to Rates for 2021/22” is a very brief document and thin on any objective information. It is inadequate for any meaningful consultation.

No substantive and objective information has been provided by Council of the supposed issue and how it could be best addressed. For example:

- What are the total remissions each year to charities?
- How many charities does Council consider are ‘wealthy’ and it views as not needing rates remission?
- What is the estimate of \$300k reduction in annual rates remissions based on?
- What would be the cost of implementing the proposal on an annual basis?
- What would the magnitude of loss of rates remission be for affected charities?
- What analysis was undertaken to support cash and investments at 50 times the base services rates for which a remission could be received as being the factor applied for cut-off of eligibility?
- Could some affected charities be forced to reduce the level of their charitable activities due to the loss of the rates remission?
- How many charities would be unfairly burdened by the additional filing requirements to Council to maintain their rates remissions, in order for Council to cease remissions to (a likely) very few charities?

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

## *4. Flawed Remission Assessment Criteria*

The proposed change to the rates remission eligibility assessment is blunt. Most particularly, inadequate consideration has been given to the use and definition of cash and investments as a proxy for determining whether a charity is ‘wealthy’. The current proposal is too much of a blunt instrument and will cause more harm than intended if not ‘nuanced’. Example of unintended consequences of the proposed policy change are provided below:

#### *Charity A*

This charity provides critical social services to vulnerable members of the community. It employs social workers, a manager, and is supported by many volunteers. It is recognised by the Council and government as providing vital social services. Its budget is extremely tight and all the staff are aware that they have limited job security due to the challenges of maintaining adequate levels of funding. At the end of the financial year the charity made a financial loss. It had eight months liquidity at year end – however almost all of this was grants in advance and recorded as liabilities in the financial statements. This pushed the charity over the 50X rates remission eligibility and it now faces having to reduce its services to offset this cost increase.

#### *Charity B*

This charity provides broad and valuable services to the community. It has just a few staff and many volunteers. It too is recognised by the Council and government as providing vital social services. It too has an extremely tight budget and consistently runs at breakeven or a loss. The charity relies significantly on bequests and endowments to fund its operations. Most of these bequests and endowments are held legally in trust and are restricted as to what they can be spent on, with the two largest endowments specifying that the funds capital must be maintained and only the income is available for specific activities. Despite having inadequate 'free cash' to fund its charitable activities, the value of the capital protected endowments pushes it over the 50X rates remission eligibility and it must now reduce its services to offset this cost increase.

#### *Charity C and Charity D*

There are two very similar charities - C and D. Both provide similar social services but in different locations. They operate on a breakeven basis, supported by grants, donations and income from modest (and separate) commercial premises they own. Charity C is forced to sell its commercial property under compulsory acquisition by the Crown. The income it receives from investing the sale proceeds is the same as the net return it received when it owned the property. The sale pushes Charity C over the 50X rates remission eligibility (it does not have a specific capital project to which it will put the sale proceeds) and it must now reduce its services to offset this cost increase, while Charity D which has the same level of assets continues to receive a remission.

The above examples show that crudely applying cash and investments as a proxy for whether a charity is wealthy and not deserving/requiring the support of a rates remission is flawed. Further, the proposed eligibility criteria will have significantly detrimental consequences for some charities. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### *5. No Cost/Benefit Analysis*

The background material does not provide any analysis of the costs of implementation of the changes to this policy. It would be reasonable to expect the appointment of suitably qualified chartered accountants to be able to read and interpret the financial statements being submitted and have sufficient knowledge to make informed decisions about what cash and investments should or should not be included in any calculation.

It is also reasonable to expect that there will be increased engagement with charities, on an ongoing basis, over the filing of returns (financial statements) to Council and application of the rates remission eligibility criteria. There will also be additional ancillary costs and associated overheads for this and the financial statement review activity.

There is also the collective burden across all charities receiving rates remissions of filing information, including their financial statements, to Council. The time and cost of this to charities has not been considered in the proposal.

It is fair to reach the conclusion that the cost to Council and affected charities of this policy change would outweigh the estimated (but unsupported) benefit of \$300k plus GST in rates remissions per annum. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### *6. Existing Policy is Adequate*

There is no discussion in the proposal as to whether the existing Rates Remission Policy is adequate and does not require change to enable Council to reduce or cease rates remissions to charities it reasonably concludes to be wealthy and not requiring such support. Further, the Council paper acknowledges that not making the change will “make it easier for some not-for-profit based organisations to provide more public benefits from their activities”. Any change that will make it harder for not-for-profits to provide public benefits is counter to the principle of the remission.

The current policy provides for “Up to 50% remission (of the rates that would be payable if they were fully rateable) on targeted rates for standard water supply, sewerage, and land drainage” (emphasis added) and that the “extent of remission [if any] shall be determined at the absolute discretion of the Council” (emphasis added). The current Council policy already provides sufficient discretion to decline rates remissions to any charity where it deems that support is not warranted.

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

**Organisation name, if you are submitting on behalf of the organisation:**

Catholic Diocese of Christchurch

**Your role in the organisation:** Management

Accountant

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.3 Proposed changes to existing rates, and new targeted rates

The Catholic Diocese of Christchurch is opposed to the proposed changes to rates remissions that seeks to determine eligibility based on cash and investments held.

While we may hold investments, these investments and the income that they generate are to be used for future building projects and other work of the diocese, they and their associated income do not form part of our operating cash flows. In some instances that is mandated through requirements of a bequest or endowment. Further, it would be poor stewardship of our resources if we were to fund our day-to-day operating costs, such as rates, from our capital, which we are obliged to protect in order to ensure the longevity of our organisation.

One of the areas of our Diocese which currently receives a rates remission is Catholic Social Services. Catholic Social Services already struggles to breakeven, and to lose their rates remission would mean the loss of counselling and other support services (such as food parcels) they offer to the community as the increased rates expense would require cuts in other areas.

Our further thoughts and comments are included in the attached document.

### Feedback

1.1 Have we got the game plan right?

I don't agree with the proposed closure of the Wharenui Pool and Sports Complex. I swim with the squad at this pool three times per week, and this is important for my fitness, health and overall wellbeing. It is not practical for me to travel to another pool instead of Wharenui, as the other pools are much further away. I see the Wharenui Pool as being an important asset for the Community, particularly in helping young people learn to swim.

1.7 Our facilities

I don't agree with the proposed closure of the Wharenui Pool - I think that money should be allocated to keep this open. I think that the benefits that this provides to the Community are more than worth the money that it would take to maintain this facility.

1.11 Potential disposal of surplus Council-owned properties

I don't agree with the proposed closure of the Wharenui Pool. I believe that this facility provides an important service to the Community, which is more than worth the cost of maintaining this. It is particularly important to have multiple pools open across the city for helping young people learn to swim, and for general health/wellbeing activities.

### Feedback

1.1 Have we got the game plan right?

Balance seems OK but council needs to work at improving efficiency and effectiveness as it appears there is a lot of waste in day to day operations.

1.2 Rates

As above, if more efficient and effective maybe able to achieve outcomes of 5% rate rise without increasing rates.

1.4 Investing in upgrading and protecting our city's water networks

More efficient and effective spending on infrastructure, ie getting better value for money through improved co-ordination rather than the current ad hoc often wasteful approach.

1.6 Rubbish, recycling and organics

increase the types of materials that are collected in recycling bins. Metals such as brass, lead etc are very recyclable yet have to go in the red bin.

1.7 Our facilities

Closing rural service centres has a greater impact on rural people or those in small towns such as Akaroa or Lyttelton than reducing services in central CHCH. Why not go back to combining service centre with other services such as NZ post like was the case in Akaroa or add driver licensing, visitor services to Lyttelton. Would moving staffing to the outer centres from town avoid having to spend huge capital amounts on central city offices.

As more services have been centralised the quality of service in Lyttelton has decreased would not want to see it fall even further.

Community facilities seems a shame that often the council appears to be running in competition with other community organisations such as YMCA rather than working cooperatively with community organisations to best meet community need.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes

Comments

This building should continue to be used for the display of art.

1.11 Potential disposal of surplus Council-owned properties  
YHA building....not sure all options for good use have been explored.

## Feedback

1.1 Have we got the game plan right?

Borrowing is dangerous, if we can't afford it now when will we be able to, and what will we be saving from spending in the future that will allow us to have surplus to pay back the debt.

Although the right things are prioritised, we need to stop being so grandiose about what is built, and more sensible about what we spend on, do we really need anti-terrorism bollards on the strip? do we really need the flashness of civic buildings.

I think there should be a back to basics approach, living within our means, and simple practical methods rather than more & more layers of bureaucracy

1.2 Rates

My Mum is on the pension, how can she afford the rates rise?

My salary has only risen approx 2% each of the last years and that is not unusual, how can I manage to cover cost increases of 5%.

How is the increase measured? Is it % increase on total take, or is % increase on capital value levys, which with the likely increase in RV next time round (10-20%?) will actually makes the rates I pay increase by 20% odd, and I'm still living in the same house getting the same service from Council

1.3 Proposed changes to existing rates, and new targeted rates

Is the shift of general rates to targeted factored into the 5%, or are you moving the value out to the targeted rate and then raising the value of the general rate 5%, which is effectively disguising the additional increase.

Targetting excess water consumption is great, it should be metered for all. I have invested in a rain water storage system, but why should I when I can get all the water I want for 'free' from the tap.

#### 1.4 Investing in upgrading and protecting our city's water networks

yep, but we need to ensure pragmatic and not grandiose spending to ensure we get the best value for money, consultant companies designing this stuff have no commercial acumen

#### 1.5 Investing in our transport infrastructure

yep, but we need to ensure pragmatic and not grandiose spending to ensure we get the best value for money, consultant companies designing this stuff have no commercial acumen

#### 1.6 Rubbish, recycling and organics

we need to ensure recycling is effective, if we can't be certain of the end use of the recycled product we may as well throw it in the rubbish on our back-yard.

we should never have sold off the rubbish system to the Chinese, we need to keep these things in-house to ensure any profits go back to the community, but we also need to ensure Council owned businesses are run properly, think City Care v CIAL

#### 1.7 Our facilities

get rid of some staff from the libraries, there's a mass of people in there doing bu66er all

need to get a commercial model into CCC employment. CCC staff have great benefits, a cruisy job and good pay, private sector work harder, get less benefits and now equal or less pay. It used to be that Civil Servants got cruisy jobs but then got paid less, now they have their cruisy jobs and get paid the same as the rest of us

#### 1.8 Our heritage, foreshore and parks

pretty good

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

need to make sure the right decisions are made though, why was Dux d Lux not allowed to restore the building themselves, we would have had this Chch icon back for no cost to the public

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

##### Comments

Pretty as it is it's always been in a cold corner and we have the new Art Gallery and also the Museum

#### 1.11 Potential disposal of surplus Council-owned properties

all good, but need to ensure we get a good deal for them

#### 1.12 Any other comments:

Council needs to live within it's means, we need more people from commercial/private sector in Council to get a reality check, but them we don't want them to sell everything (to their mates) then lease it back, Council's should own their own assets

### Feedback

#### 1.7 Our facilities

I would like to see the Council keep Wharenui Swim Pool open and operating.

The Council has already compromised the availability of swimming pools that facilitate teaching of swimming, swim training and competition by its provision of a less than adequate replacement of the damaged QEII pool.

Wharenui has, however, relentlessly persisted in providing quality aquasports teaching and training to its neighbouring community for decades gaining and maintaining a reputation second to none.

As a ratepayer I expect the Council to put my rates into supporting such a community facility.

### Feedback

1.1 Have we got the game plan right?

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

they flood when it rains

they are slippery with ice on frosty mornings

when most teams train in the evenings they are slippery and damp from night-time dew

part of one court is permanently wet and covered in a slick film because it never dries out

they have extensive cracking filled with vegetation

they have holes for tennis net poles that are no longer used

The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

**We Need Your Help To Get New Courts**

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

### Feedback

1.1 Have we got the game plan right?

i got a newsletter of CCC of plan changes today, 3 days before submissions closed. The amount of information is overwhelming and there is no way i can make an informed submission in 3 days.

i also saw in the stuff tonight the wharenui pool is proposed to close. I do not agree. This is a great facility i use regularly and i wont use the metro sports centre instead, central situ is not my community and i hte to think how much more it would cost me and how much more time it would tale to grt there by car because of parking issues, or bus.

i objectect to the massive increase in rates of 10 years and how it's promoted as a mere average 4% annually. Rates have increased so much over the uears its not funny. I understand a need but the council is doing notihng to fractionalise ownership, projects are built to budget that increase OPEX. I was walking in Armagh Street the other dsy with bin collection. The new no need to provide carparks for high density is obviosuly having a massive impact on cost of waste collection. I also see it in my neighbourhood near the university.

Why should we accept rates increases as fefault when operational budgets and construction budgets arent considered together.

as a resident I feel neighbourhoods are getting more disgusting and trashy because simple things like rubbish bins are being removed.

stop and think about place making and communities. We cant continue to rin with traditional models of finding and ownership.

1.2 Rates

Disagre totally as life cycle cost in infrastructure builds are being ignored. Post EQ we have seen huge increases.

1.3 Proposed changes to existing rates, and new targeted rates

No as your solution is to increase rates not to take a different veiw of investment and OPEX

1.4 Investing in upgrading and protecting our city's water networks

warer infrastructure is more importnat than a rugby stadium. Thos is an important investment and culturally respectful

1.5 Investing in our transport infrastructure

Most of the transport infrastructure got stuffed up post EQ. There have been some good aspects but there has been a huge waste of money as well. Getting annoyed by all the red arrows as it is desensitising motorist to looking for hazards. I feel vulnerable as a cyclist when im around red arrows

1.6 Rubbish, recycling and organics

Hige gap in education as to how peoplenuse thier bins. Im not sure the solution to waste is going to be expand

1.7 Our facilities

wont comment as i dont really use these as i will search for my needs online

1.8 Our heritage, foreshore and parks

great investment but with carbon charges happening in 2025 i think this is too low

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Comments

the arts centre is more important than the anglican chruch. 0.04% is a nothing number and so i dont know why we are beong asked about this. Its a great community asset that produces imcome and provide ecoic opportunity for small busonesse. Spend the money.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Comments

base isolation is a good thing bit dont use it as an excuse to extend and maintain the property post.

i was in the art gallery carpark recently and was hoffied how the water leaks are being left. Seems like the consiltants didnt understand the OPEX and asset management needs

1.11 Potential disposal of surplus Council-owned properties

if they arent being ised, dispose of them. Let others enjance them and take on the role of bringing life back to them.

1.12 Any other comments:

sorry about the spelling errors but there was no autocorrect and i was too lazy to proof what i was wrting on my phone.

### Feedback

1.4 Investing in upgrading and protecting our city's water networks

These are important and I'm happy for you to meet realistic costs to provide unchlorinated drinking water.

1.7 Our facilities

I am concerned by the proposal to reduce library hours, for both Tūranga and the suburban libraries. Basically these proposed changes mean that an evening visit is no longer on. That's not satisfactory - firstly for me, where I sometimes can go during the day but value the availability in the early evening. Secondly there are many others who, for work or family reasons will have just one more reason to sit at home and surf the web rather than do some serious reading. Following the earthquakes we lost the central 9pm closing, but i never thought the council would consider going even further in limiting learning opportunities in this city. Please do not go ahead with these changes.

## Feedback

### 1.1 Have we got the game plan right?

In terms of investment in roads, if the cycle lanes are included as this investment into roads then it need serious reconsidering. Half the cycleways that are made are used very little of the time and yet take up a large proportion of the road and is space otherwise useful for parking while in the CBD. Not everyone cycles and it all very well to promote that change but try cycling when you have a family, disability or the elderly. For a large number of the Chch population cycling is impractical and the cost spent on upgrading these and making ones would've better spent elsewhere such as actual roads or green turning arrows! Chch has got to be one of the worst places for no right green turning arrows, on intersections such as Selwyn from CBD turning onto Brogham you at time risk your life turning last minute on a yellow as otherwise you'd never move due to no green turning arrow. Multiple intersections are similar to this and it shouldn't take a fatal crash to change these...

The roads are also very cruddy in some places. Brogham street should be considered a motorway all the way through and the roads onto it should be on and off ramps. Traffic would be so much better handled and smoother running. It would also make sense to redo the road similar to the new quiet motorway tarcel cause traffic including trucks hammer this road and patch jobs are obviously patch jobs.

### 1.2 Rates

I think the 5% increase for 21/22 is a load of bull and feel the extra money will be wasted on non-thoughtful or beneficial projects - whararua pool budget for example. I think whoever is in charge of setting and guessing these rates had done a bulls up of the accounts and thought needs to be put into what's actually needed not just wanted... I'm in agreement with 4% over 10 but also don't think this will stay as planned.

### 1.3 Proposed changes to existing rates, and new targeted rates

I have little confidence in a definition being done for remote rural properties by urban councillors, it doesn't sit well and will likely be eye-roll worthy. New target rates don't change anything myself but I feel the households over 700L a day should also have this divided by people added into the equation and if there's a certain % of people then they're excluded. Cause it makes it even more stressful for big families likely hitting the already working class families.

### 1.4 Investing in upgrading and protecting our city's water networks

Relook into if \$2.329B is really actually required. Seems like a lot of money about to go down the drain and do what exactly? It's a very generic saying with no specific examples so no wonder it'll cost a tone. I'd like to see unchlorinated water.

### 1.5 Investing in our transport infrastructure

Divert the focus from cycles and instead invest for vehicles cause the roads are 80% stuffed and as answered in the initial question cycles and cycle lanes don't help.

Christchurch hospital needs a carpark building assessable to staff and public. Sick people and whanau shouldnt have to struggle with parking on top of what theyre already dealing with. Its a stress that easily eliminated.

Id also suggest all parking in the CDB free for two hrs, more people will visit and not be put off from the parking situation. With the crossing likey uping to \$4 to \$2 its a barrier towards visitingvthe CDHB cause why comebinto tiwn when you can go to a mall outside of town and park for free

1.6 Rubbish, recycling and organics  
n/a

1.7 Our facilities

I think the closure of the ricc bus lounge will have a big effect on the chch public and a poor decision overall. Its well used abd accessable. Recebt times although some more CDB activity has seen a shift out of the CDB so the services need to be outside of the CDB as well as acknoweging the bus exchange in town too...

I dont agree with the proposed changes to the chch libraries and feel most of their hours, unless otherwise proven theyre low on public viviting should remain the same and late nights are kept. It would also be hnady to have soem of the smaller ones, like spreymdon to open for a half day sunday. This would make it assesable for more, including shift workers snd likely used more on a sunday then monday or tuesday...

1.8 Our heritage, foreshore and parks  
what the actual is happening with the cathedral, get on with it already. Its been a lot of money going into something that was barely used and more just a monument than anything else. I thibk the % should be about 5 not 11%

# Canterbury

District Health Board

Te Poari Hauora o Waitaha

---

## Submission on Christchurch City Council draft Long Term Plan 2021-2031

---

**To:** Christchurch City Council

**Submitter:** Community & Public Health  
A division of the Canterbury District Health Board

Attn: Chantal Lauzon  
Community and Public Health  
C/- Canterbury District Health Board  
PO Box 1475  
Christchurch 8140

**Proposal:** Christchurch City Council is consulting on their long-term plan for spending for the next 10 years.

## SUBMISSION ON CHRISTCHURCH CITY COUNCIL DRAFT LONG TERM PLAN

### Details of submitter

1. Canterbury District Health Board (CDHB)
2. The CDHB is responsible for promoting the reduction of adverse environmental effects on the health of people and communities and to improve, promote and protect their health pursuant to the New Zealand Public Health and Disability Act 2000 and the Health Act 1956.
3. These statutory obligations are the responsibility of the Ministry of Health and, in the Canterbury District, are carried out under contract by Community and Public Health under Crown funding agreements on behalf of the Canterbury District Health Board.

### General comments

4. Health and wellbeing (overall quality of life) is influenced by a wide range of factors beyond the health sector. These influences can be described as the conditions in which people are born, grow, live, work and age, and are affected by environmental, social and behavioural factors. They are often referred to as the 'social determinants of health'<sup>1</sup>. Barton and Grant's Health Map<sup>2</sup> shows how various influences on health are complex and interlinked.
5. Local government is one of the most important and powerful influences on the health and wellbeing of communities and populations.<sup>3,4</sup> The decisions that local authorities make about land and transport use and the built and natural environment significantly affect health as do the myriad of other activities that many local authorities currently undertake to support the environmental, cultural and social wellbeing of their populations. The reinstatement of the four well-beings to the Local Government Act confirms the significant role to local government plays in lifting the quality of life of our people, and the health of our environment.

<sup>2</sup> Barton, H. and Grant, M. (2006) A health map for the local human habitat. The Journal for the Royal Society for the Promotion of Health, 126 (6). pp. 252-253. SSN 1466-4240 Available from: <http://eprints.uwe.ac.uk/7863>

<sup>3</sup> Public Health Association. 2013. *Getting into the Act. Local Government and Public Health in 2013 and Beyond.*

<sup>4</sup> Ministry of Health (2009) Public Health in New Zealand: Local Government's Contribution to Wellbeing. <https://www.health.govt.nz/system/files/documents/publications/public-health-local-government-oct09.pdf>

6. The COVID-19 pandemic has highlighted the essential role that local government and communities play in advancing health and wellbeing, both through providing infrastructure and especially by enabling and supporting community resilience.
7. The Long Term Plan (LTP) provides Christchurch City Council with an opportunity to influence the determinants of health for the people of Christchurch through prioritising funding for activities which support health and wellbeing.
8. The CDHB is pleased to see public health has been considered in relation to infrastructure, particularly water. However, the CDHB wishes to emphasise a number of other public health priorities for consideration in relation to equity issues and rates, flood protection, strengthening communities, libraries, accessibility of transport and community facilities, all of which have an impact on the health and wellbeing of Christchurch residents.
9. The CDHB supports the recognition of the impact of climate and the inclusion of a climate change lens across the LTP. Climate change is affecting the health and wellbeing of people in Ōtautahi Christchurch. Many factors that contribute to our health and wellbeing are affected by climate change, such as transport mobility and affordability, warm and dry housing, air quality, water quality, access to local job markets and financial and food security are all linked to climate change via environmental and health outcomes. Efforts to mitigate the effects of climate change will produce health co-benefits at a population level, such as reductions in heart disease, cancer, obesity, type 2 diabetes, respiratory disease, motor vehicle injuries and improvements in mental health<sup>5</sup>. For example, building fewer roads and reducing car dependence while increasing active transport reduces our impact on climate change and improves people's health outcomes. A failure to act will exacerbate existing threats to human health. The CDHB will submit on the Council's draft Ōtautahi Christchurch Climate Change Strategy separately but encourages investment in this area so that adaptation and mitigation initiatives are adequately funded to have sufficient impact.
10. The CDHB values the close working partnership we continue to have with Christchurch City Council, which prioritises collaborative action on common goals to improve the health and wellbeing of the residents of Christchurch.

## Specific comments

### *Rates*

11. The CDHB recognises the need for an increase in rates as proposed. The risk to public health from deteriorating assets, particularly wastewater infrastructure, which would in turn compromise drinking water and recreational water quality, outweighs the benefits of rates remaining unchanged.

### *Proposed changes to existing rates, and new targeted rate*

12. The CDHB supports the excess water use targeted rate for households. Raising revenue critical for the maintenance of the network should have the added benefit of reducing excess household water consumption given Christchurch's comparatively high water usage. The CDHB supports the proposed exemptions for those with medical conditions or very large families, to ensure that charging does not create or exacerbate inequity.
13. The CDHB additionally recognises that high localised demand situations such as summer peak water use and large firefighting events may create pipe water pressure drops significant enough to create a potential backflow situation with risk of contaminant ingress. The CDHB supports the introduction of water metering as a means of reducing consumer demand over critical periods.

### *Water network*

14. The CDHB supports the proposal to balance affordability with network needs but recommends that spending is prioritised to safeguard public health. There is a clear and strong relationship between water quality and availability and public health. The draft LTP highlights the very poor condition of the Council's drinking-water supply pipe network. In addition to asset management and sustainability considerations, leaking pipes also provide contaminants with a potential point of ingress into the network. This is particularly pertinent given the acknowledgement that wastewater and stormwater assets are in similarly poor condition, and that these assets are often in close proximity to the drinking-water infrastructure.
15. The CDHB agrees that upgrading drinking water infrastructure should be Council's main priority. A multiple-barrier risk-based approach covering drinking-water

supplies from source to tap provides the best public health protection against waterborne illness.

16. The CDHB recommends that funds are set aside to implement any changes to water delivery made following enactment of the Water Services Bill and the accompanying Drinking Water Supply Operational Compliance Rules, which may include residual disinfection and improving bore infrastructure. The implementation of any changes should be prioritised to ensure public health risks are managed.

### ***Transport infrastructure***

17. The CDHB supports infrastructure improvements for roads in order to ensure safety for all road users.
18. The CDHB supports council's spending plan for maintaining and improving infrastructure that supports active transport, such as footpaths, cycleways and bus stops.
19. The CDHB supports joint planning with the Council to improve transport connectivity around our key health services sites. Access to health services is an important determinant of health and collaborative planning will ensure that patients, staff and visitors can easily access these sites using a variety of modes. An example of this relationship is current planning for road layout changes to enhance public transport facilities on Lincoln Road between Curletts Road and Wrights Road near the Hillmorton Hospital campus. We commend the Council for being responsive to requests for early engagement with the CDHB and look forward to working together closely to ensure that transport connectivity to Hillmorton Hospital is enhanced by the proposed changes.

### ***Rubbish, recycling and organics***

20. The CDHB supports spending on infrastructure to improve transfer station, recycling capacity and organics processing. For example, the CDHB is glad to see the proposed upgrade of the Barrys Bay Transfer Station to support waste services in Banks Peninsula included in the LTP. The CDHB recognises the efforts of Council to minimise waste and improve processing as a way to contribute to Council's zero emission target.

### *Facilities*

21. The CDHB supports continued investment in community facilities as identified in the draft LTP. Community facilities have the potential to improve the resilience of communities and support mental health and wellbeing by providing places for people to meet and participate.<sup>6</sup> This is particularly important for communities such as New Brighton, Woolston and Hornby where disadvantaged populations reside.
22. The CDHB opposes the proposed reduction in operating the hours of libraries, particularly in Aranui. Libraries are one of the highest if not the highest rated assets in Christchurch. They are sites of community development, support for children, families, and young people, and, provide a warm, dry, safe place for connection. The CDHB recommends maintaining or increasing the existing resource rather than reducing access. The CDHB supports consultation with current users of the Mobile Library to ensure access is maintained to library services.
23. The CDHB recommends that funding for accessibility audits of new and re-developed CCC-owned or operated facilities be accounted for in the budgets for such projects from the outset in order to provide universal accessibility. This would ensure that all users can safely and fully access facilities, and avoid costly retrofitting. This would also demonstrate commitment to the Te Arataki Taero Kore Accessibility Charter to which both Council and the CDHB are signatories.
24. The CDHB acknowledges the work the Ōtautahi Community Housing Trust has done in completing earthquake repairs and insulation to make community housing warmer and dryer. The CDHB commends the building of 90 new homes. The CDHB supports the Council leveraging land holdings to work with others to increase the amount of community housing in Christchurch. It is also notes that community housing needs to be available in rural areas – not just in the city.
25. The CDHB commends Council on recognising housing as a future challenge and as part of ensuring wellbeing. The community has raised concerns about the lack of affordable quality housing options in feedback to the Greater Christchurch 2050 work. Beyond community housing, the CDHB encourages Council to use policy or

<sup>6</sup> Thornley, L., Ball, J., Signal, L., Lawson-Te Aho, K. & Rawson, E. 2013. Building Community Resilience: Learning from the Canterbury Earthquakes. Retrieved from: <https://www.tandfonline.com/doi/abs/10.1080/1177083X.2014.934846>

other levers to enable a wide variety of good quality, health-promoting housing and neighbourhoods throughout the Christchurch and Banks Peninsula.

26. The CDHB supports the full maintenance, and rent-free use of the group of Council-owned buildings in which 'early learning services' are housed, particularly those of the Canterbury Community Early Childhood Association (CCECA). These 'early learning services' are uniquely placed in Christchurch to reach some of the city's most vulnerable families and effectively provide places of child and whānau wellbeing and connection. Navigating and linking vulnerable whānau to a whole range of children and whānau services takes up a huge amount of time for staff. One of the ways the centres support their children and whānau is through being flexible with fees, however, this further challenges their budgets.

#### ***Heritage, foreshore and parks***

27. The CDHB supports the proposed funding for the parks and foreshore, in particular the Residential Red Zone regeneration projects and Otakaro Avon River Corridor.
28. The CDHB encourages Council to welcome children in schools to be involved in the care and maintenance of parks, and of the Botanic Gardens in particular. Play and learning in nature helps children regulate their emotions, offering opportunities for failure, challenge, persistence, learning new skills, learning to take risks safely. Play and learning in nature also affords opportunities for children to learn about and respond to climate change. To help facilitate these benefits, the Botanic Gardens and Ōtākaro Avon River Corridor curators could involve children in the care and maintenance of these gardens and spaces. By doing so, they are preparing children for the role they will have in the future of our city and planet.

#### ***Other comments***

29. The CDHB recommends maintaining or expanding the existing Christchurch Art Gallery Te Puna o Waiwhetū programme. The LTP proposes reducing the number of people served by delivery of a 'diverse range of public and school-specific programmes to promote and educate the importance of the visual arts.' Arts are valuable in nurturing culture and wellbeing, and school outreach programmes break down barriers between people and the gallery.

30. The CDHB encourages Council to further develop and implement the Toi Ōtautahi Arts Strategy as a means to ensuring arts and creativity are valued equitably across the city.
31. The CDHB recommends maintaining the existing funding for the Strengthening Communities programme and inflation-adjusting the amount available on an annual basis. The LTP proposes reducing the existing pool of Strengthening Communities Funding from \$7.65M in 2021/22 to \$7.30M by 2028/29. This funding pool is often over-subscribed, and the outcomes of the funding use are well-rated. At a time when our communities are recovering and reorienting ourselves during/after a global pandemic, the Council is a valuable source of funding for community-led projects that support resilience and build social capital.
32. The CDHB supports using funding models for community projects similar to the Community Activation fund beyond the mosque shooting response. Having access to easy to apply for small grants for community groups to provide activation and community building projects helps build social cohesion and resilience at the ground level.
33. The CDHB recommends applications for Council community grants include criteria which allow applicants to provide evidence of how their projects/events support Council initiatives and aims such as being smoke free, providing healthy food options, being accessible and culturally competent.
34. The CDHB recommends that all units of Council use consistent categories to capture demographic data to allow for better understanding of the users/community.

## **Conclusion**

35. The CDHB does wish to be heard in support of this submission.
36. Thank you for the opportunity to submit on Christchurch City Council's draft Long-Term Plan 2021-2031.

**Person making the submission**A handwritten signature in blue ink, appearing to read 'C Brunton', with a long horizontal stroke extending to the right.

## Feedback

### 1.1 Have we got the game plan right?

- The CDHB is responsible for promoting the reduction of adverse environmental effects on the health of people and communities and to improve, promote and protect their health pursuant to the New Zealand Public Health and Disability Act 2000 and the Health Act 1956.
- These statutory obligations are the responsibility of the Ministry of Health and, in the Canterbury District, are carried out under contract by Community and Public Health under Crown funding agreements on behalf of the Canterbury District Health Board.
- General comments
- Health and wellbeing (overall quality of life) is influenced by a wide range of factors beyond the health sector. These influences can be described as the conditions in which people are born, grow, live, work and age, and are affected by environmental, social and behavioural factors. They are often referred to as the 'social determinants of health'. Barton and Grant's Health Map shows how various influences on health are complex and interlinked.
- Local government is one of the most important and powerful influences on the health and wellbeing of communities and populations. The decisions that local authorities make about land and transport use and the built and natural environment significantly affect health as do the myriad of other activities that many local authorities currently undertake to support the environmental, cultural and social wellbeing of their populations. The reinstatement of the four well-beings to the Local Government Act confirms the significant role to local government plays in lifting the quality of life of our people, and the health of our environment.
- The COVID-19 pandemic has highlighted the essential role that local government and communities play in advancing health and wellbeing, both through providing infrastructure and especially by enabling and supporting community resilience.
- The Long Term Plan (LTP) provides Christchurch City Council with an opportunity to influence the determinants of health for the people of Christchurch through prioritising funding for activities which support health and wellbeing.
- The CDHB is pleased to see public health has been considered in relation to infrastructure, particularly water. However, the CDHB wishes to emphasise a number of other public health priorities for consideration in relation to equity issues and rates, flood protection, strengthening communities, libraries, accessibility of transport and community facilities, all of which have an impact on the health and wellbeing of Christchurch residents.
- The CDHB supports the recognition of the impact of climate and the inclusion of a climate change lens across the LTP. Climate change is affecting the health and wellbeing of people in Ōtautahi Christchurch. Many factors that contribute to our health and wellbeing are affected by climate change, such as transport mobility and affordability, warm and dry housing, air quality, water quality, access to local job markets and financial and food security are all linked to climate change via

environmental and health outcomes. Efforts to mitigate the effects of climate change will produce health co-benefits at a population level, such as reductions in heart disease, cancer, obesity, type 2 diabetes, respiratory disease, motor vehicle injuries and improvements in mental health. For example, building fewer roads and reducing car dependence while increasing active transport reduces our impact on climate change and improves people's health outcomes. A failure to act will exacerbate existing threats to human health. The CDHB will submit on the Council's draft Ōtautahi Christchurch Climate Change Strategy separately but encourages investment in this area so that adaptation and mitigation initiatives are adequately funded to have sufficient impact.

- The CDHB values the close working partnership we continue to have with Christchurch City Council, which prioritises collaborative action on common goals to improve the health and wellbeing of the residents of Christchurch

## 1.2 Rates

The CDHB recognises the need for an increase in rates as proposed. The risk to public health from deteriorating assets, particularly wastewater infrastructure, which would in turn compromise drinking water and recreational water quality, outweighs the benefits of rates remaining unchanged.

## 1.3 Proposed changes to existing rates, and new targeted rates

The CDHB supports the excess water use targeted rate for households. Raising revenue critical for the maintenance of the network should have the added benefit of reducing excess household water consumption given Christchurch's comparatively high water usage. The CDHB supports the proposed exemptions for those with medical conditions or very large families, to ensure that charging does not create or exacerbate inequity.

The CDHB additionally recognises that high localised demand situations such as summer peak water use and large firefighting events may create pipe water pressure drops significant enough to create a potential backflow situation with risk of contaminant ingress. The CDHB supports the introduction of water metering as a means of reducing consumer demand over critical periods.

## 1.4 Investing in upgrading and protecting our city's water networks

- The CDHB supports the proposal to balance affordability with network needs but recommends that spending is prioritised to safeguard public health. There is a clear and strong relationship between water quality and availability and public health. The draft LTP highlights the very poor condition of the Council's drinking-water supply pipe network. In addition to asset management and sustainability considerations, leaking pipes also provide contaminants with a potential point of ingress into the network. This is particularly pertinent given the acknowledgement that wastewater and stormwater assets are in similarly poor condition, and that these assets are often in close proximity to the drinking-water infrastructure.
- The CDHB agrees that upgrading drinking water infrastructure should be Council's main priority. A multiple-barrier risk-based approach covering drinking-water Page 5 of 9 Issue Date: supplies from source to tap provides the best public health protection against waterborne illness.
- The CDHB recommends that funds are set aside to implement any changes to water delivery made following enactment of the Water Services Bill and the accompanying Drinking Water Supply Operational Compliance Rules, which may include residual disinfection and improving bore infrastructure. The implementation of any changes should be prioritised to ensure public health risks are managed.

## 1.5 Investing in our transport infrastructure

- The CDHB supports infrastructure improvements for roads in order to ensure safety for all road users.
- The CDHB supports council's spending plan for maintaining and improving infrastructure that supports active transport, such as footpaths, cycleways and bus stops.
- The CDHB supports joint planning with the Council to improve transport connectivity around our key health services sites. Access to health services is an important determinant of health and collaborative planning will ensure that patients, staff and visitors can easily access these sites using a variety of modes. An example of this relationship is current planning for road layout changes to enhance public transport facilities on Lincoln Road between Curletts Road and Wrights Road near the Hillmorton Hospital campus. We commend the Council for being responsive to requests for early engagement with the CDHB and look forward to working together closely to ensure that transport connectivity to Hillmorton Hospital is enhanced by the proposed changes.

## 1.6 Rubbish, recycling and organics

The CDHB supports spending on infrastructure to improve transfer station, recycling capacity and organics processing. For example, the CDHB is glad to see the proposed upgrade of the Barrys Bay Transfer Station to support waste services in Banks Peninsula included in the LTP. The CDHB recognises the efforts of Council to minimise waste and improve processing as a way to contribute to Council's zero emission target.

## 1.7 Our facilities

- The CDHB supports continued investment in community facilities as identified in the draft LTP. Community facilities have the potential to improve the resilience of communities and support mental health and wellbeing by providing places for people to meet and participate. This is particularly important for communities such as New Brighton, Woolston and Hornby where disadvantaged populations reside.
- The CDHB opposes the proposed reduction in operating the hours of libraries, particularly in Aranui. Libraries are one of the highest if not the highest rated assets in Christchurch. They are sites of community development, support for children, families, and young people, and, provide a warm, dry, safe place for connection. The CDHB recommends maintaining or increasing the existing resource rather than reducing access. The CDHB supports consultation with current users of the Mobile Library to ensure access is maintained to library services.
- The CDHB recommends that funding for accessibility audits of new and redeveloped CCC-owned or operated facilities be accounted for in the budgets for such projects from the outset in order to provide universal accessibility. This would ensure that all users can safely and fully access facilities, and avoid costly retrofitting. This would also demonstrate commitment to the Te Arataki Taero Kore Accessibility Charter to which both Council and the CDHB are signatories.
- The CDHB acknowledges the work the Ōtautahi Community Housing Trust has done in completing earthquake repairs and insulation to make community housing warmer and dryer. The CDHB commends the building of 90 new homes. The CDHB supports the Council leveraging land holdings to work with others to increase the amount of community housing in Christchurch. It is also notes that community housing needs to be available in rural areas – not just in the city.
- The CDHB commends Council on recognising housing as a future challenge and as part of ensuring wellbeing. The community has raised concerns about the lack of affordable quality housing options in feedback to the Greater Christchurch 2050 work. Beyond community housing, the CDHB encourages Council to use policy or other levers to enable a wide variety of good quality, health-promoting housing and neighbourhoods throughout the Christchurch and Banks Peninsula.
- The CDHB supports the full maintenance, and rent-free use of the group of Council-owned buildings in which 'early learning services' are housed, particularly those of the Canterbury Community Early Childhood Association (CCECA). These 'early learning services' are uniquely placed in Christchurch to reach some of the city's most vulnerable families and effectively provide places of child and whānau wellbeing and connection. Navigating and linking vulnerable whānau to a whole range of children and whānau services takes up a huge amount of time for staff. One of the ways the centres support their children and whānau is through being flexible with fees, however, this further challenges their budgets.

## 1.8 Our heritage, foreshore and parks

- The CDHB supports the proposed funding for the parks and foreshore, in particular the Residential Red Zone regeneration projects and Otakaro Avon River Corridor.
- The CDHB encourages Council to welcome children in schools to be involved in the care and maintenance of parks, and of the Botanic Gardens in particular. Play and learning in nature helps children regulate their emotions, offering opportunities for failure, challenge, persistence, learning new skills, learning to take risks safely. Play and learning in nature also affords opportunities for children to learn about and respond to climate change. To help facilitate these benefits, the Botanic Gardens and Ōtākaro Avon River Corridor curators could involve children in the care and maintenance of these gardens and spaces. By doing so, they are preparing children for the role they will have in the future of our city and planet.

## 1.12 Any other comments:

- The CDHB recommends maintaining or expanding the existing Christchurch Art Gallery Te Puna o Waiwhetū programme. The LTP proposes reducing the number of people served by delivery of a 'diverse range of public and school-specific programmes to promote and educate the importance of the visual arts.' Arts are valuable in nurturing culture and wellbeing, and school outreach programmes break down barriers between people and the gallery.
- The CDHB encourages Council to further develop and implement the Toi Ōtautahi Arts Strategy as a means to ensuring arts and creativity are valued equitably across the city.
- The CDHB recommends maintaining the existing funding for the Strengthening Communities programme and inflation-adjusting the amount available on an annual basis. The LTP proposes reducing the existing pool of Strengthening Communities Funding from \$7.65M in 2021/22 to \$7.30M by 2028/29. This funding pool is often over-subscribed, and the outcomes of the funding use are well-rated. At a time when our communities are recovering and reorienting ourselves during/after a global pandemic, the Council is a valuable source of funding for community-led projects that support resilience and build social capital.
- The CDHB supports using funding models for community projects similar to the Community Activation fund beyond the mosque shooting response. Having access to easy to apply for small grants for community groups to provide activation and community building projects helps build social cohesion and resilience at the ground level.

- The CDHB recommends applications for Council community grants include criteria which allow applicants to provide evidence of how their projects/events support Council initiatives and aims such as being smoke free, providing healthy food options, being accessible and culturally competent.
- The CDHB recommends that all units of Council use consistent categories to capture demographic data to allow for better understanding of the users/community
- Thank you for the opportunity to submit on Christchurch City Council's draft Long Term Plan 2021-2031.

## SUBMISSION TO CCC LONG TERM PLAN 2021

FROM:

INDIA CABLE

*14<sup>th</sup> April 2021*

I do not wish to be heard in support of this submission.

Tēnā koutou

### **RE: RATES FOR CENTRAL CITY WASTE COLLECTION**

We support the submission from the Atlas Quarter Body Corporate in relation to rates for the collection of solid waste.

We support the Council's strategic goal of reducing solid waste but object to having pay \$300-\$400 per year in rates for the collection of the red, green and yellow bins when the Council does not provide this service to us. In the absence of Council providing this service, we pay privately through our Body Corp Levy for waste collection by EnviroWaste. We support waste minimisation and have all the same waste streams (green, yellow and red) as the Council provides.

**We ask that the Council either:**

- 1) reduce the general rate and waste minimisation levy for developments such as ours to reflect that no waste collection is provided, or;**
- 2) amend your service contracts to provide the waste collection service.**

**Ngā mihi**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Friends of the Arts Centre has since 2014 provided support and fund raising for the restoration of the Arts Centre. The Council did financially support the Arts Centre over many years in recognition of the community interest and the nature of the facilities and events provided on the site. The capital grant through the special rate will allow further restoration work to be completed. This will build on exemplary work already completed by the Trust Board.

## Feedback

1.2 Rates  
ok

1.3 Proposed changes to existing rates, and new targeted rates  
I support the arts centre rate and am all for charging for high water use 700l is heaps

1.4 Investing in upgrading and protecting our city's water networks  
That's heaps but water is critical. Hope you have a plan to keep the nitrates out.

1.5 Investing in our transport infrastructure  
keep it up with the cycleways

1.7 Our facilities  
I think it would be better to make the bus lounges safer rather than closing them

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties  
I hope dispose means sell in which case fine

### Feedback

1.1 Have we got the game plan right?

Like more consideration regarding customer services particularly where elderly, disabled and the lack of computer skills or ability to access the internet is concerned.

1.7 Our facilities

There appears to be a misconception that the FingerTip Library is merely a contact centre. They are indeed a first point of contact for the entire CCL network, but they are also and especially a library. While they carry out some administration tasks and answer simple questions (just like a vast number of questions in a physical library are directional. eg "where's the toilet?") they are also among the most skilled staff particularly with regards to helping customers with questions about eResources and the library website. They are highly skilled in the use of technology, have very strong customer service skills and are champions of consistency throughout the network. In addition, just like library staff in physical libraries, they promote the use of library resources and deliver services such as reader's advisory.

As last year's lockdown FTL was the only the only option for library users giving access to eResources, solving account issues and giving re-assurance. This happens not only during emergencies. For a considerable number of people they are a key channel to help them overcome barriers to equity. In particular they are uniquely placed to assist people who may be grappling with:

- The Digital Divide. They perform most circulation activities and research for people who do not have access to the library eResources or the internet or who are unable to use them because of their lack of digital skills.
- The Accessibility Divide. Customers can contact them from the warmth and safety of their homes, or from elsewhere in New Zealand and overseas. People with disabilities can get assistance without needing to rely on others for support. Deaf people can use LiveOnline to contact them without having to talk on the phone or in person. Similarly people for whom English is an additional language can get support in writing, which they might find easier than having to deal with New Zealand accents and idioms. And of course, people confined to their homes are exclusively reliant on their service. They are the only library that provides service to people who cannot visit the library.

Removing FTL's services at the weekend would exacerbate inequalities rather than working towards a goal of promoting equity. Customers who are able to visit a physical library have access to the full range of services 7 days a week. Those who are not able to visit a physical library are restricted to a weekday service which may or may not be convenient to them.

Given our population is becoming increasingly older and diverse, it appears not only inequitable but also shortsighted to limit access to FTL's services to weekdays only.

### Feedback

1.12 Any other comments:

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

██████████ We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

## Feedback

### 1.7 Our facilities

I disagree with the proposal to reduce the programmes the Christchurch Art Gallery offers to the public and school groups for the following reasons:

The Gallery now only employs only one educator when prior to the earthquake closures there were two. A further 25% reduction would significantly impact the number of schools who would be able to access the programmes which are already often fully booked well in advance.

The Gallery education programme offers students first-hand experience with real works of art, encouraging curiosity and collaboration, facilitating discussion and exploring diverse perspectives whilst developing their creative and critical thinking skills. All extremely important in developing active and connected citizens and linking directly to the CCC's suggested community outcomes, particularly **resilient communities**.

Schools rely of the Gallery to provide specialist lessons and tours to enrich their curriculum and provide professional development as many teachers, particularly in the primary sector, lack support, confidence and training in this area. The programme makes links across the NZ curriculum as well as providing students with great opportunities to develop key competencies in a social context.

The draft plan states that, "The ongoing border closures as a result of COVID-19 mean Christchurch Art Gallery is currently welcoming fewer overseas visitors". Reducing what the Gallery offers to its local audience through public programmes and education will only further deplete visitor numbers.

"Taking an inter-generational approach to sustainable development, prioritising the social, economic and cultural wellbeing of people and communities and the quality of the environment, now and into the future." This reduction of resourcing is effectively reducing the ability of children and youth to fully participate in this. Art gallery learning provides an important means for children and younger people (as well as those of other ages) to engage in creative problem-solving around these issues.

In a [NZ Herald article](#) Jacinda Ardern states: "Two out of three young people say arts engagement helps to make them feel brilliant or really good, with increased confidence. Early involvement in arts and culture also fuels the success of our creative industries later, so we need to keep fostering that talent. Half the young people in the survey believe arts could help them get a job later in life and in a dynamic future where creativity will set us apart. I think they are right.

It's why I want to place more emphasis on integrating the arts and culture sector into all policy areas, into our regional economic development strategy for instance." The proposal will effectively reduce our ability to engage with and support these young people who are the future of our city and nation.

My concerns in reducing the Gallery's weekly Wednesday late night opening hours to one late Wednesday a month are as follows:

They provide a regular social hub and access for our local community

They support not only our creatives such as musicians, film makers, artists local craftspeople and performers but also food and beverage vendors, specialist lighting and sound technicians etc.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 16/04/2021

**First name:** Richard **Last name:** Wesley

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

I think that borrowing levels should not drop as fast as they do over the 30 year term, borrowing to fund infrastructure is required to spread the cost of the transition to a clean green low carbon economy.

Constantly saying we can't afford it when we still have borrowing headroom is a lost opportunity.

We do need more investment and spending on carbon reduction initiatives. The current generation should also be investing in climate change requirements. There does not seem to be any allowance for retreat from coastal areas in the plan, just an assumption that we can 'flood manage' our way out of the issues ahead.

### 1.2 Rates

While not happy with the level of rates rise due to the hardship it causes on low income earners, overall we need to pay for the requirements of the city and there is little other choice.

### 1.3 Proposed changes to existing rates, and new targeted rates

Strongly support the excess water charge. Christchurch has for too long undervalued it's water by making it free to all to waste. Good job bringing this long overdue rate into play.

### 1.4 Investing in upgrading and protecting our city's water networks

Sounds good, no way of knowing if it is actually the correct amount. With the changes ahead in three waters I guess it will soon not be a council asset.

### 1.5 Investing in our transport infrastructure

The balance of projects is not right. There is too much spent on simply improving and maintaining the network for single occupant cars. This capital spending needs to be slashed.

Capital projects for transport should be dominated by public transport improvements like bus lanes, and by cycleways. While there is money in for cycleways it is still not fast enough to complete a basic network.

There is still not enough prioritising of bike and pedestrians in our city, cars always come first for some reason. Cars are bad for the planet, bad for society (antisocial), and bad for people (inactivity is killing us).

### 1.6 Rubbish, recycling and organics

Still not enough focus on the problem. Rubbish should be paid for not through ratepayers but added to the cost of the item in question.

Strongly support investment in recycling.

1.7 Our facilities  
No view on these.

1.8 Our heritage, foreshore and parks  
Support investing in our heritage and it is a value for all.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments  
Strongly support the restoration of the Arts Centre and support through a targeted rate.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments  
Happy to support this work as this supports the museum. Not interested in having yet another art gallery, must become part of the museum.

1.11 Potential disposal of surplus Council-owned properties  
Very happy for these properties to be moved on to new owners and uses.

1.12 Any other comments:  
Think carbon reduction at every turn, not just for council but for all of Christchurch.

16<sup>th</sup> April 2021

Christchurch City Council

Submission  
Change to Rates Remission Policy  
18<sup>th</sup> April 2021

## **Rates Remission Policy – Not-for-profit community-based organisations**

**Fr Peter Head sm**, on behalf of **The Catholic Parish of Christchurch South**, makes this submission to Christchurch City Council on the proposed change to the Rates Remission Policy.

It is important to firstly state that the many charities which benefit from rates remissions provided by the Council (and effectively the ratepayers), are extremely grateful for this support. For charities the rates remission helps support the provision of critical social activities to communities, and in many cases is an important contributor to their financial sustainability. This support for not-for-profits and the recognition of the good they do in the community is appropriate.

### **Executive Summary:**

The proposed change to the Rates Remission Policy is not supported due to (i) Insufficient Notice, (ii) Lack of Pre-Engagement, (iii) Lack of Information, (iv) Flawed Remission Assessment Criteria, (v) No Cost/Benefit Analysis, and (vi) the Existing Policy is Adequate. This submission provides supporting arguments and information for each of these concerns. Any of these concerns on their own provide justification for the withdrawal or, at the very least, reconsideration in the future in a more robust and fair manner. Collectively, they provide a compelling argument for Council to withdraw the proposal.

### **Discussion:**

This submission prefers to use the less corporate term of ‘charities’ as opposed to “not-for-profit community-based organisations”.

Clear and supporting information is provided below, under clear headings, in support of the position taken in this submission:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis

## 6. Existing Policy is Adequate

### 1. *Insufficient Notice*

Given the very large number of charities that this proposal would affect (including those that must file and disclose additional financial information to continue receiving a remission) and that reality that most charities struggle with lack of resources (people and funds), it is considered that insufficient notice has been provided to ensure that charities could appropriately engage in the submission process. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### 2. *Lack of Pre-Engagement*

It is reasonable to expect that any proposal by Council to change the important policies affecting ratepayers and the community would be well researched and that a level of pre-engagement with representatives of those affected had taken place to help inform and validate the proposed change. The paper "Background Material on Proposed Changes to Rates for 2021/22" does not provide confirmation that either has taken place and is reflected in serious shortcomings of the proposed change that are discussed later in this submission. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### 3. *Lack of Information*

The "Background Material on Proposed Changes to Rates for 2021/22" is a very brief document and thin on any objective information. It is inadequate for any meaningful consultation.

No substantive and objective information has been provided by Council of the supposed issue and how it could be best addressed. For example:

- What are the total remissions each year to charities?
- How many charities does Council consider are 'wealthy' and it views as not needing rates remission?
- What is the estimate of \$300k reduction in annual rates remissions based on?
- What would be the cost of implementing the proposal on an annual basis?
- What would the magnitude of loss of rates remission be for affected charities?
- What analysis was undertaken to support cash and investments at 50 times the base services rates for which a remission could be received as being the factor applied for cut-off of eligibility?
- Could some affected charities be forced to reduce the level of their charitable activities due to the loss of the rates remission?
- How many charities would be unfairly burdened by the additional filing requirements to Council to maintain their rates remissions, in order for Council to cease remissions to (a likely) very few charities?

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### 4. *Flawed Remission Assessment Criteria*

The proposed change to the rates remission eligibility assessment is blunt. Most particularly, inadequate consideration has been given to the use and definition of cash and investments as a proxy for determining whether a charity is 'wealthy'. The current proposal is too much of a blunt instrument and will cause more harm than intended if not 'nuanced'. Example of unintended consequences of the proposed policy change are provided below:

*Charity A*

This charity provides critical social services to vulnerable members of the community. It employs social workers, a manager, and is supported by many volunteers. It is recognised by the Council and government as providing vital social services. Its budget is extremely tight and all the staff are aware that they have limited job security due to the challenges of maintaining adequate levels of funding. At the end of the financial year the charity made a financial loss. It had eight months liquidity at year end – however almost all of this was grants in advance and recorded as liabilities in the financial statements. This pushed the charity over the 50X rates remission eligibility and it now faces having to reduce its services to offset this cost increase.

*Charity B*

This charity provides broad and valuable services to the community. It has just a few staff and many volunteers. It too is recognised by the Council and government as providing vital social services. It too has an extremely tight budget and consistently runs at breakeven or a loss. The charity relies significantly on bequests and endowments to fund its operations. Most of these bequests and endowments are held legally in trust and are restricted as to what they can be spent on, with the two largest endowments specifying that the funds capital must be maintained and only the income is available for specific activities. Despite having inadequate 'free cash' to fund its charitable activities, the value of the capital protected endowments pushes it over the 50X rates remission eligibility and it must now reduce its services to offset this cost increase.

*Charity C and Charity D*

There are two very similar charities - C and D. Both provide similar social services but in different locations. They operate on a breakeven basis, supported by grants, donations and income from modest (and separate) commercial premises they own. Charity C is forced to sell its commercial property under compulsory acquisition by the Crown. The income it receives from investing the sale proceeds is the same as the net return it received when it owned the property. The sale pushes Charity C over the 50X rates remission eligibility (it does not have a specific capital project to which it will put the sale proceeds) and it must now reduce its services to offset this cost increase, while Charity D which has the same level of assets continues to receive a remission.

The above examples show that crudely applying cash and investments as a proxy for whether a charity is wealthy and not deserving/requiring the support of a rates remission is flawed. Further, the proposed eligibility criteria will have significantly detrimental consequences for some charities. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

*5. No Cost/Benefit Analysis*

The background material does not provide any analysis of the costs of implementation of the changes to this policy. It would be reasonable to expect the appointment of suitably qualified chartered accountants to be able to read and interpret the financial statements being submitted and have sufficient knowledge to make informed decisions about what cash and investments should or should not be included in any calculation.

It is also reasonable to expect that there will be increased engagement with charities, on an ongoing basis, over the filing of returns (financial statements) to Council and application of the rates remission

eligibility criteria. There will also be additional ancillary costs and associated overheads for this and the financial statement review activity.

There is also the collective burden across all charities receiving rates remissions of filing information, including their financial statements, to Council. The time and cost of this to charities has not been considered in the proposal.

It is fair to reach the conclusion that the cost to Council and affected charities of this policy change would outweigh the estimated (but unsupported) benefit of \$300k plus GST in rates remissions per annum. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### *6. Existing Policy is Adequate*

There is no discussion in the proposal as to whether the existing Rates Remission Policy is adequate and does not require change to enable Council to reduce or cease rates remissions to charities it reasonably concludes to be wealthy and not requiring such support. Further, the Council paper acknowledges that not making the change will “make it easier for some not-for-profit based organisations to provide more public benefits from their activities”. Any change that will make it harder for not-for-profits to provide public benefits is counter to the principle of the remission.

The current policy provides for “Up to 50% remission (of the rates that would be payable if they were fully rateable) on targeted rates for standard water supply, sewerage, and land drainage” (emphasis added) and that the “extent of remission [if any] shall be determined at the absolute discretion of the Council” (emphasis added). The current Council policy already provides sufficient discretion to decline rates remissions to any charity where it deems that support is not warranted.

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### Feedback

1.6 Rubbish, recycling and organics

We would like you to submit to the Council's Long Term Plan (LTP) in support of our Body Corporate submission on rates for solid waste collection. Currently we each pay the Council \$300-\$400 / year for waste collection rates but do not receive any service in return. Instead we pay Envirowaste to collect our red, yellow and green bins plus cardboard. We want that changed.

1.8 Our heritage, foreshore and parks

Re old Kukupa School Category 2 Heritage Protected building owned by the Christchurch City Council.

[REDACTED] I would like to see the preservation of this historic building commenced as soon as possible before it gets to the stage of complete demolition.

A proposal by residents to consider this building as a Gallery and Arts Education centre makes this a wonderful opportunity to bring life to this important piece of the history of Pigeon Bay.

I seek the Council to bring the total restoration of this building as a priority.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

Submission to Christchurch City Council re Proposed Targeted Land Drainage Rate

We wish to strongly oppose the targeted Land Drainage Rate proposed for rural Banks Peninsula Land.

The Government's National Fresh Water Policy and the upcoming National Policy statement are forcing farmers to be responsible for their own waterways, drains and wetlands and to comply with these policies.

Most farms are now, or plan to, drain excess water direct to wetlands, streams or sea rather than Council drainage infrastructure.

Through riparian planting and fencing we are placing this cost on our own farm to manage future drainage and water quality.

There is no indication as to the proposed rate charge for this proposal and we see no future plan for the Council to support us on our rural farm with this proposed rate.

We therefore reiterate that we are totally opposed to this rate and that the rate remains a charge on existing rateable properties.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

The council is over staffed and the wage bill needs significantly reducing.

1.2 Rates

This is far too high given the previous rates increases. Services are poor and current rates bills do not represent value for money.

1.5 Investing in our transport infrastructure

The current balance of bike/bus priorities are unacceptable. Yes we need to address emissions but to just hammer motorists at every opportunity is unsustainable.

Also, take a look at the effects of current infrastructure ...Cranford Street. We now have longer traffic queues than before it was built and dangerous rat runs through the suburbs.

1.7 Our facilities

Get the basics right before any nice to haves

1.12 Any other comments:

It really is time for a long and serious look at how effective the council is. The bloated wage bill, over employment and a lack of meaningful performance monitoring would not be acceptable at a private company

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

We need to draw a line on heritage - see comments below

1.4 Investing in upgrading and protecting our city's water networks

Yes, this is critical

1.6 Rubbish, recycling and organics

As much as possible towards cutting down on use, on reusing and recycling

1.7 Our facilities

I disagree with cutting the amounts to Christchurch Art Gallery. The schools programme is invaluable to the current and future culture and mental health of Christchurch people. The money could be targeted to lower decile schools if there is a concern.

1.8 Our heritage, foreshore and parks

The balance has swung too far towards restoring old buildings which are meaningful to only a small number of people. We can celebrate history better through parks and foreshore in ways that enhance the environment. We should prioritise looking to the future by supporting beautiful, resilient buildings and facilities that reflect what the younger generation want.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

I accept this grudgingly because the development of the Arts Centre is to be preferred than letting it stand incomplete for longer than necessary. The Council needs to draw a line in being a last resort funder in heritage projects that are inevitably going to cost more than expected.

Similarly for the Museum development. My support for both is conditional on synergies between the Museum and Arts Centre development being made - can the Museum use space in the Arts Centre and save on some of its redevelopment?

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.1 Have we got the game plan right?

I would like to see the council improve the way things work within the company to be efficient and not have old systems that don't work and cost us money. I would like to see work done for the council be held accountable for quality so, for example roads are not continually ending up with pot holes. I would like to see jobs done properly so that they last.

#### 1.2 Rates

-

#### 1.5 Investing in our transport infrastructure

I would like to see the free bus return to the city.

I would like to see further improvements to the bike path, there are several places where the bike path "disappears" for a short space, due to obstacle, like Colombo St heading south near to South City Mall there is a concrete curb structure that obstructs onto the road and the bike lane disappears. Also on Madras St the bike lane disappears around Latimer Square heading north, and again between Kilmore and Salisbury St again there are a few blocks heading south on Barbadoes St. In these examples there is plenty of space but no defined bike space, and the lanes could be more appropriate. The new bike lane on Ferry Road has a very rough surface. I hope not to see more jutter bars for cyclists as it should be the cars waiting for bikes it can be very rough if you are eating something or even children on bike seats or in trailers.

#### 1.6 Rubbish, recycling and organics

I would like to see more reuse encouraged and supported. Ultimately see drop off centres, perhaps at supermarkets, to collect bottles to be reused by locally produced products so they can be sent back and reuse the bottles rather than continuing the production of waste that has to be dealt with.

#### 1.7 Our facilities

The libraries should still be available in longer hours some people don't want to be there when it is busy, or if they work they may still need to come in to use the facilities. How the library operates still needs to reflect it being a place of gathering. It needs to remain affordable to all and accessible to all, keeping programs and activities and experiences for all. Tourists will return and we need to keep this in mind and not become a city that is all closed up. Even the whole church square has been minimised in activities waiting for the old post office building and church to be repaired. Our city is bigger than the riverside market and it would be nice to see support of encouraging people into more parts of the city.

#### 1.8 Our heritage, foreshore and parks

I would like to see more free bbq facilities in more parks including smaller parks where there is a community connection, particularly with more dense housing in the city area. I would like to see planting of low maintenance trees like walnuts and feijoas. Things need to be looked at at a community level if there is more people to be living in the city.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

It is of utmost importance to keep our children having access to the art gallery. All schools talk about the need to teach our children to be creative no matter what industry they work in when they leave school. One of the most important ways to do this is to expose children to Art in the flesh and the art gallery is the place to do that.

Also I would like to continue to see accessible programs that include families at the art gallery and keep this a place where people can gather. keep it relevant. the tourists will come back one day, and we should keep that in mind along side fostering an artistic culture in Christchurch.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

##### Comments

I do not know anything about this building having entered NZ in 2006. I do not know what the intention is of the building once it has been restored, how it will be used and what the benefits would be for the community.

**TE WHARAU**  
INVESTMENTS LIMITED

18 April 2021

SUBMISSION TO CHRISTCHURCH CITY COUNCIL  
2021 – 31 LONG – TERM PLAN CONSULTATION

Dear Sir

This is our submission on Christchurch City Council's Long Term Plan Consultation

We have a farm at Menzies Bay and have owned the farm since 2001.

Our submission focuses on the proposed extension of the land drainage targeted rate to all properties, including those that have historically not been serviced by the Council's land drainage infrastructure.

We are somewhat taken aback at this proposal which has come out of the blue with no prior consultation or engagement and only a belated notice through a letter we received, dated 30 March 2021.

We estimate that we will pay \$526.32 for this portion of rates for the 2021 -22 year which will increase to \$1578.96 for the 2023 -24 year based on the CCC figures.

In our view this simply does not equate to a fair and equitable approach.

This rate is for a service we simply do not receive and derive no benefit from.

It will have a significant effect on our farm cost structures, and clearly fails to recognise the work we, as landowners do on our property to manage waterflow.

Water from farms tends to drain into wetlands, streams, rivers and the sea rather than into any Council land drainage infrastructure.

We are responsible for managing our waterways, drains, wetlands, to standards set out by rules for freshwater management and rules that are proposed for Indigenous Diversity.

We have incurred significant expenditure on fencing, riparian planting, sediment management etc all of which assists with land drainage management with no assistance from the Council.

We oppose this Proposed Land Drainage Rate extension and request that it should not proceed.

Your sincerely

Paddy Cotter

# CCC Draft Long Term Plan 2021-2031

## Te Mahere Rautaki Kaurere

April 2021

### 1 Introduction

As part of the University of Canterbury Te Whare Wānanga o Waitaha response to the Christchurch City Council's Te Mahere Rautaki Kaurere | Long-term Plan 2021-2031, this submission focuses on Communities and Citizens, specifically the Arts Centre, and local and regional galleries and museums.

The Arts Centre, Christchurch Art Gallery, Canterbury Museum and Akaroa Museum contribute significantly to the Resilient Communities/Liveable City goals in the Plan (Vol. 1. pp.6-8), and especially the goal of celebrating identity through Arts and Culture (Vol.1 p.8).

### 2 Investment in the Cultural Precinct

The University of Canterbury strongly supports the proposed introduction of a rate to grant \$5.5 million to the continuing redevelopment of the Arts Centre. The University was a partner in the post-quake redevelopment of the Old Chemistry Building (3 Hereford Street), and in February 2017 the Teece Museum, the Classics Department and Music Performance moved their offices to that site. This has been a successful partnership that has attracted domestic and foreign tourists and school groups of all ages. In the past four years the Teece Museum has attracted over 10,000 visitors annually (slightly less during Covid) and will hit 50,000 during 2021. The School of Music hosts weekly events (New Music Central on Monday evenings and Friday lunchtime concerts), and offers numerous other performances during the year that have attracted over 10,000 visitors.

We also support the \$23.5 million proposed investment in redeveloping the Canterbury Museum which, along with the Arts Centre, forms the heart of the Cultural Precinct. A separate submission has been made in support of the Canterbury Museum redevelopment.

### 3 What is the College of Arts' (University of Canterbury) relationship with local museums and galleries?

#### 3.1 Christchurch Art Gallery

In the College of Arts three departments (primarily) make use of the Christchurch Art Gallery:

**Art History:** Most of the courses in Art History (undergraduate and postgraduate) make use of the Gallery in some way. Students are encouraged to visit the Gallery, but there are also field trips and assignments involving exhibitions and specific works in the Gallery.

**Classics, CLAS 322 Roman Architecture** has a short worksheet assignment where students look at the Art Gallery as a building. There are also a few works of ancient art in the Christchurch Art Gallery collection. These were on longterm loan prior to the 2010/2011 earthquakes, and as a result are published in J. R. Green, *The Logie Collection: A Catalogue of the James Logie Memorial Collection of Classical Antiquities at the University of Canterbury, Christchurch* (Christchurch: Canterbury University Press, 2009). These were returned to the Gallery after the quakes, but are occasionally loaned to the Teece Collection for exhibitions.

Fine Arts: There is a long, close association between the School of Fine Arts and the Christchurch Art Gallery. Most of the current staff have had their work exhibited in the Gallery in recent years and the Gallery's permanent collection contains numerous works spanning the full history of the School of Fine Arts. Students in Fine Arts visit the Gallery as part of organised field trips, but they are also encouraged to visit on their own as a part of course work and in relation to their own creative work.

Staff from Art History, Classics and Fine Arts also give occasional talks at the Art Gallery.

### **3.2 Canterbury Museum**

The departments most closely associated with the Museum are History, Classics, and Art History. Staff in these departments (especially, but not limited to Lyndon Fraser, Richard Bullen, Alison Griffith, and Terri Elder) have ongoing research relationships with the Museum. There is also a close connection between the Teece Museum and the Canterbury Museum, which involves frequent collaboration, loans from the Canterbury Museum to the Teece Museum, student interns, and former Canterbury students from History, Art History and Classics now working in the Canterbury Museum.

Courses in History, Classics and Art History regularly use the Canterbury Museum for class visits and tutorials.

Sarah Murray, Head of Collections and Research at the Canterbury Museum, is also an Adjunct Fellow in the History Department and contributes to courses as a guest lecturer.

### **3.3 Akaroa Museum**

The History and French departments make the most use of this Museum for field trips (French) and exhibitions relevant to local history (History). Again, I do not know whether Aotahi/Māori and Indigenous studies make use of this museum in their teaching.

## **4 The benefits of sustained investment in the Cultural Precinct**

On Vol.1 p.19 of the long-term plan the Council is rightly concerned with equity of access to local museums and other recreational/leisure facilities.

One way that the Canterbury and Akaroa Museums and the Gallery can extend their reach is by sending teams out into schools, in addition to hosting school groups on-site. The University contributes significantly towards extending the reach of the Christchurch Art Gallery, Canterbury Museum and Akaroa Museum by 1) contributing expert knowledge of academic staff; 2) incorporating exhibitions and works in the collections into lectures, tutorials and assessment; 3) working collaboratively with staff in local museums/galleries; 4) staff and students conducting and publishing research on objects and works in these collections; and 5) borrowing and exhibiting work from these collections.

- It's important that the University and the museums/Gallery continue to address Treaty of Waitangi obligations as part of their "extended reach" and mission. It's pleasing to see that all three institutions have taken this much more seriously in recent years. The City Council can help that mission through funding, and especially targeted funding.
- The University of Canterbury Knowledge Commons initiative is a way, or perhaps a motivation, for finding out how many lecturers and other staff at UC are involved with the Canterbury Museum, the Christchurch Art Gallery and the Akaroa Museum, and making a record of courses and research projects. This is already a major source of Town-Gown collaboration and will continue to be. See the bullet points above for further ways that we can contribute.

It is important for the City Council to commit to local artists (both living and deceased) because this is the only place in the world where one can learn about local art and culture. Therefore, it is very pleasing to see a plan for sustained long-term investment in the Christchurch Art Gallery and the Canterbury and Akaroa Museums,

and a commitment to helping to maintain the current level of exhibitions and to improving fixed assets and equipment (Vol. 1 pp.22-24 and p.126, p.131 and p.185). It is even more pleasing to see significant grants to the Canterbury Museum and the Arts Centre (Vol.2 p.117 and elsewhere in this volume).

- Currently entrance to the museums and the Gallery is by donation. This makes sense: ratepayers/taxpayers (locally and nationally) support local galleries and museums and so free entry is fair compensation. Tours and group visits cost money, and the price of these is increasing (Vol.1 p.186). This increase will affect school groups in some cases, and thus works against the desire to extend the reach (see above).
- In the “post Covid” world, the City Council might want to think about a \$2 charge for foreign tourists, or a fixed price card that allows entry into all the galleries and museums in the Cultural Precinct, including those that are not City-Council owned. It would be wonderful if the University could work with the City Council to create a Cultural Precinct card for foreign visitors. For example: \$8 allows entry into the Art Gallery, Canterbury Museum, Akaroa Museum, and the Teece Museum (and the Teece Museum gets \$1 of that for every visitor). The scheme could be extended to other institutions, such as Ravenscar House or the Okains Bay Museum.
- If the bullet point immediately above seems surprising, it’s important to consider that the University commits a significant amount of staff time and expertise in extending the mission of the Arts Centre, the Art Gallery, the Canterbury Museum and the Akaroa Museum as part of its educational mission. This kind of collaboration contributes significantly to the Resilient Communities/Liveable City goals. A blended rate-payer funded and user-pays system might help make the Cultural Precinct more financially sustainable.

In closing, I strongly support the level of funding proposed in the Long-term Plan, and appreciate the opportunity to make a submission.

Dr. Alison Griffith (Assoc Prof)

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Climate change preparedness, mitigation and reduction of dependence on fossil fuels does not feature highly enough.

1.2 Rates

I think households are already struggling and that these changes are too much for many.

1.3 Proposed changes to existing rates, and new targeted rates

I totally disagree with the proposal to charge community organisations full rates if they have more than 50 times the value of the rates in investments. I agree fully with the statements made by the CWEA in their submission. I would like to know a projected figure for what this will save? In my view the damage it will do will be far greater.

1.5 Investing in our transport infrastructure

Less investment for cars more for buses and bikes please.

1.6 Rubbish, recycling and organics

No, spend more on this and less on road for cars please.

1.7 Our facilities

I do not agree with closing the lyttelton service centre. There are many who do not have access to the internet particularly elderly residents who also do not have access to transport. This long term plan seems to discriminate heavily against older citizens. How can the mobile library be closed? I strongly disagree with this and urge the council to think about our kau matua and their needs.

If the council cares strongly about climate change we should be doing everything we can to encourage bus use not closing bus lounges.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

It depends entirely on what they are currently being used for. Where a community group or organisation is using them for the direct benefit of citizens it should not matter 'what their original purpose' was. If they are vacant or tenanted by a commercial concern then I think that there should be consultation with the local community to see whether they could be utilised before being sold.

### Feedback

1.7 Our facilities

I am passionately opposed to reducing the library's opening hours. The service IS the facility - not the buildings! It's the people. Late nights and weekends are the only times a lot of us can even get to use our beautiful libraries! Opening them on public holidays on the other hand is just odd and unnecessary. Getting rid of the Mobile library is sad when so many elderly people, and/or people who cannot get to a normal library love the mobile one.

It all feels so anti community, and a little like something written by people who do not understand the what community means to those of us with less.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

Three things:

first, I would like to see the in my view totally unnecessary refurbishment of Eastgate/Linwood library and service centre halted and the money saved pay for the next large number of years of life for the invaluable mobile bus. We do not need the children's section of the Eastgate library swapped with and resited to the adult fiction area. What we do need is a mobile library. I understood our rates benefit and cover all local citizens and is not dependent on the number of users. you only have to look at the three separate cycle lanes on Linwood Ave to see this is a joke.

Secondly I have been told that the humps on Tilford St are the highest and steepest in the city. Any chance of lowering them?

Thirdly -the entrance into Tilford St from Linwood Avenue is ridiculous. Poor visibility up the avenue from the middle of the trees, then you are forced into two tight turns to enter Tilford St where you are usually met by a car, legally parked, but scarily placed, necessitating another swerve. I am travelling under 15kph through all this. Please try this intersection for yourselves.

Comments

I fully support the targeted rate increase for The Arts Centre Te Matatiki Toi Ora. The centre is a taonga for Otautahi both for the beautiful heritage buildings steeped in history but the also for the activities offered inside these buildings. To see these lost would be such a shame for the people of Christchurch, Canterbury and those visiting from outside our region and from overseas.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

**Proposed change to the Rates remission Policy for not for profits community based organisations.**

**"No you have not got it right!"**

The proposed change would see us – a not for profit that supports people in the community who have mental health issues, lose thousands of dollars from our operating budget. This would directly mean a decrease in the services being able to be offered to the people who rely on Step Ahead Trust.

The financial advice that we have received over many years has emphasised the importance of operating with strict financial guidelines. In accordance with this advice we have aimed to keep a minimum of three months operating expenses in hand to cover contingencies such as any event that causes our services to be suspended with consequent loss of income. In addition we have been advised that we should aim for an operating profit in most financial years. Both these guidelines have been with the aim of being able to offer a sustainable service for many years to come.

**We feel like we are being punished for making good financial decisions over the years.**

Our main focus is on the wellbeing of our members, through the provision of excellent well run and safe programmes, as well as providing or directing other support. What would we cut?

At a time when more help is needed than ever and with no further funding available this proposal is morally and ethically wrong. Eroding this valuable resource cannot be in the best interest of the people of Christchurch or the Christchurch City Council.

Step Ahead is not a wealthy Trust by any means and sits just outside the allowance for remission. Please take this information into consideration when making your decision.

For the reasons explained above we respectfully register our opposition to the withdrawal of the rates remission scheme as outlined in the long term plan.

## Feedback

1.4 Investing in upgrading and protecting our city's water networks

Akaroa Wastewater Project:

I ask that the Council increase the budget for the repairs of the broken wastewater pipe network in Akaroa so that the work can be completed, in line with a recent Council resolution to work to repair 80% of the inflow and infiltration issue. I also ask that the project design work is delayed until these repairs are properly done. Until the capacity is clarified once the repairs are completed how can you know the quantity of wastewater that the scheme will need to be designed around? Reducing the I&I issue will mean that a smaller scheme can then be planned.

Land Drainage Targeted Rate:

I do not support a change in the rating system for land drainage. My rural property in Sawmill Road receives no drainage or flood protection services from the Council, and I carry out this sort of maintenance myself at my own expense, with no financial backing from the Council.

1.7 Our facilities

Akaroa Service Centre:

The service provided is very necessary to me as well as many others in our community, and I ask that a permanent staff member be maintained to act as a liaison between residents and the Council. As a senior citizen I do not have a computer, live in a Valley with limited cell phone reception and do not often travel to Christchurch. I use this service on a regular basis and would find it most difficult if it was removed. The help we have received during the past years has been exceptional.

I also ask that the Service Centre be returned to the centrally located old Post Office building, which was recently redesigned and refurbished at great expense to ratepayers for the very purpose of servicing our community's needs.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates  
I support the targeted rate for the Arts Centre

1.4 Investing in upgrading and protecting our city's water networks

All three forms of Water are critical to the future of our city. I am very comfortable with spending this high proportion of our rates on the water infrastructure. generations in the future will appreciate this investment.

Our drinking water is one of our greatest assets. Keep it pristine (no chlorination, fluoridation).

1.5 Investing in our transport infrastructure

Again, happy to spend funds on transport infrastructure. How you have allocated within that budget I do not support.

You are treating car drivers like second class citizens. There is not the density of population to support efficient public transport. we have cold winters. Several hundred cars go past my work every few minutes, the bikes are nowhere to be seen. This is folly if you think by building the bike infrastructure, "they will come". They will, but not to the extent of how you are allocating funds. Lets keep this in persperctive. In 10 years time when we are all driving EV's, you will be pulling up many of the cycleways.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

Re: Changes to land drainage rate changes

1. We already pay land drainage to ECAN of \$82 per year, due to increase significantly in the long term plan as well.
2. We currently receive no direct benefits for CCC land drainage activities. They do not maintain any of the ditches on the roadside or the stream running through our property. We spend very little time in Christchurch city and feel it is unfair for us to pay for the city's land drainage
3. The stream running through our property was dammed by very large trees that were washed down during the last significant flooding event in little river 5-6 years ago. We were not aware of the dam at the time we purchased the property. ECAN do not fund maintaining this stream and it is likely that even if we are charged for land drainage, the CCC will not fund it either. The cost of digging out a track to the dam, and the clearing of the dam falls on us, the land owner. This dam not only threatens our house, but council owned bridges further down the road. Part of the cause of the original flooding was brush and fallen trees from Orion contractors clearing HV powerlines which cross-cross our property.
4. If we have to pay land drainage fees to the CCC, we will be paying for this service to 2 different agencies, as well as incurring the costs associated with land drainage and flood protection on this specific property. We strongly object to the CCC implementing any option for land drainage and flood protection where we are charged for land drainage again, unless we are able to obtain financial assistance from CCC to carry out the flood protection and drainage issues on our property.

We are a single income family on a lifestyle block that we derive no income from.

1.6 Rubbish, recycling and organics

Given all the plastic waste that is supposedly recycled and either dumped in the landfill or shipped overseas, I'd like to see CCC take steps to investigate high temperature incinerators with air scrubbers to use as an energy source (or similar), as well as taking responsibility for the waste being generated rather. The next step would be to push central government to eliminate all single-use plastic unless there's an end-of-life solution provided by the suppliers.

## Feedback

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

I strongly support a capital grant of \$5.5 million to The Arts Centre Te Matatiki Toi Ora.

The Arts Centre of Christchurch is held in trust for the people of Christchurch. It is a critical heritage asset and is playing a key role in rebuilding the culture heart of our community following the devastation of the Canterbury Earthquakes. Contrary to public understanding, The Arts Centre of Christchurch is not owned by or funded by local government. But in many citizens' eyes, there is clear and undisputed moral ownership that brings with it responsibilities to do the right thing as a Council. The Trust has proven itself a worthy custodian of this internationally significant heritage site and has led the way in heritage restoration in our city. It must be supported to finish the job.

It is also important to be clear that, contrary to some opinions, the Trust was never "flush with cash". The insurance proceeds were always far below the overall projected cost of the restoration project. This required prudent management of finances from the outset. The Trust also made the conscious decision in the early days following the earthquakes not to seek external financial help until it had resolved the insurance position, modernised the governance arrangements, protected the site, and proved itself a worthy custodian by getting the project underway in a carefully staged way. That is now indisputable and The Arts Centre stands as an exemplar for heritage restoration and charitable trust governance. But the job is not complete. Fundraising efforts can only take the Trust so far. There are numerous competing demands on the philanthropic dollar. It is now at a critical juncture.

The charitable objects were enshrined in legislation in 2015 to ensure that this will always be "The Arts Centre". However, that will mean nothing if the financial position of the Trust is now imperilled by circumstances not of its own doing. It will be a stain on this city if The Arts Centre complex is placed at risk of being mothballed and closed from the public. The capital grant of \$5.5 million is critical to securing protection of this asset for the people of Christchurch, now and for future generations.

Nga mihi,

Jen Crawford

(Past Trustee and Board Chair 2010-2016)

## Feedback

1.1 Have we got the game plan right?

In my view no, get back to basics and stop coming up with grandiose plans to substantiate your own existence.

1.2 Rates

[REDACTED]

1.3 Proposed changes to existing rates, and new targeted rates

As previously stated we cannot afford any increase in rates and as for a excess water rate we take pride in our lawns and garden and would be concerned if we had to pay to water our lawns, what do you want "our community to look like a bomb site".

1.5 Investing in our transport infrastructure

My biggest complaint is the investment in and the design of cycle lanes, who ever came up with the current designs is over the top, to use Sparks Road and Domain Terrace as 2 examples the Cycle lanes are to wide which leaves the remainder of the road a danger to motorists, furthermore as a Motor Vehicle enthusiast over the years I have spent a considerable amount of money on Registration, various Road User Charges and Fuel Taxes, what does a Cyclist contribute? they do not pay Registration or any other form of road user fees and some are not even Ratepayers.

1.6 Rubbish, recycling and organics

One thing I would like to see is the implementation of a larger green bin, we have a small to average section and I mow our lawns weekly, at times our clippings our to much for our current bin so end up in the red bin which is not what you want.

1.7 Our facilities

I am sick of the way the Council is being bullied by the Rugby Union if they want a Stadium to themselves let them fund it the way they forced Cricket out of Jade Stadium/ Lancaster park was not right as a Park that was bequeathed to the Community as a hole it was for all use not just Rugby.

### Feedback

1.4 Investing in upgrading and protecting our city's water networks

I, William Abbott and Jayne Abbott support the submission from The Friends of Banks Peninsula Inc and the Robinson's Bay Rate payers and Residents to the Chch City Council re wastewater into Robinsons bay from Akaroa.

points of interest

1/ I urge the council to repair the Akaroa town's wastewater pipe network to prevent the I and I from stormwater. This will have the effect of

1/ designing a smaller wastewater system

2/ also to reduce the amount of wadtewater into Robinsons Bay and reduce the % of leaching nitrates into our beautiful bay.

3/ with predicted water shortage throughtout the world which includes Akaroa, a system that reuses water plus storm water should be high in the CCC's priorities.

The Akaroa wastewater system has to be updated in the near future, so please fix this and reduce the size of the proposed wastewater scheme, and it will be a win win for all those concerned.

Bill and Jayne Abbott

### Feedback

#### 1.1 Have we got the game plan right?

I do not want the Wharenui Pool to close I learnt to swim in this pool and I have returned since retirement. The pool offers good value for money, free parking, and the pool is not congested all day and allows for slower swimmers to swim with out being intimidated by the faster swimming and provides somewhat a feeling of privacy. I am concerned for the lack of school pools and the access schools have for teaching swimming to just need to look at the raise in summer drownings. I feel safe using the Wharenui pool the staff are friendly and the history of the pool should be preserved.

I am also concerned about the cycleways and the massive budget over runs and reported on Stuff last week. Does the council not audit and have a contracting department, it appears to me the CCC work on the premise that it does not create money IT JUST TAKES IT (from the rate payers). Where is the accountability on cost overruns who is the responsible person? It time the council becomes more productive, listened the the front line workers who know where cost savings can be made. Rate rises are totally out of step peoples incomes. We don't need to be incurring debt on non infrastructure projects. Lets complete the Earthquake repairs, and then create a plan for water, sewage, and essential services. I am concerned how the city has developed with bus and cycle ways should there be another EQ the city roads will be grid locked immediately and emergency vehicles will be useless.

It is not the time to add the nice to do things in Christchurch, you need to ask what value do this proposed project do for the city and what % of people benefit from the proposal, and final will the project be used daily - to - yearly. Its time to slow down and get value for the rates \$\$\$\$ spent.

#### 1.2 Rates

No rates increase for 5 years. Cut spending, become more productive, no borrowing. Complete current projects. Bring wages of the Management team back into line not the world scale if it means you loose good people then the new managers will step up, Find people who know what it means to be a leader - the person who asks the staff what to you need to do your job better or effiently.

Also the massive increase to property values will need to change as property inflation is not used in calculating

the CPI and wage increase %.

So no increase in rates. If the council need more money in the future you need to invest in the future and get a return, NO JUST TAKE IT (rates)

### 1.3 Proposed changes to existing rates, and new targeted rates

That is just bad thinking re read above. How can you charge household for excess water when no one owns the water? As for giving away water to the Chinese that needs to stop.

Stop all spending on all non infrastructure projects, If you need to provide a Rates holders card and provide a 50% discount to ratepayers and 100 % to use things like the Arts Center etc.

### 1.4 Investing in upgrading and protecting our city's water networks

Ok but upgrade water pipes when roads are resurfaced. Make sure we get clean water with no added chemicals ( chlorine, fluoride) etc.

1st clean the wells and replace as required, the delivery system needs to be planned I would hate to see the the CBD for example needs an upgrade after all the work that as been carried out in the city.

There must be main lines the run thru the CCC area and feeder lines taken of these lines, Create a city wide plan based on age, roading requirements etc.

### 1.5 Investing in our transport infrastructure

No you have wasted \$300,000,000 on over spend of cycle ways. Get the auditors in, get contractors and contracts that mean something and make people accountable,

### 1.6 Rubbish, recycling and organics

Sounds to cheap,

### 1.7 Our facilities

Stop the spending on facilities maintain the existing facilities

### 1.8 Our heritage, foreshore and parks

Pars just need to be maintained no additional improvement.

The council could how ever remove the silver birch trees that create sinus problems and replace with NZ natives

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

Needs a rethink

1.11 Potential disposal of surplus Council-owned properties

How can you dispose of a heritage building?

You are stuck with it

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.12 Any other comments:

27 Hunters Road Vacant Land. Pt Lot 1 DP14050++, 12F/538, and the adjacent land to the south of Whero Avenue, Diamond Harbour.

The Council are trying to fast track the disposal and so avoid a meaningful public consultation by inserting the disposal into LTP.

I wish to make a submission that the normal process of land disposal that requires Community Board and public consultation should be used.

I have the following primary concerns regarding this develop :-

- (1) That multi-storey dwellings will be developed
- (2) That there will be through traffic onto Bayview Rd
- (3) That there will be increased light pollution in a rural area.
- (4) Loss of established native areas.
- (5) Loss of the amenity of the established walkways.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Stop spending on cycleways, especially on main roads.

A priority should be removing the chlorine from our water, and NO we do not need fluoride added either. I refuse to pay for any excess water, unless the CCC pays for my medical bills, due to the chlorine.

The mobile library should be retained. Currently serves a number of retirement villages, rest homes etc. a number of these residents would be deprived as they have limited means of travel, mobility etc.

Increasing the cost of parking - another reason to keep me out of the CBD. I visited the new Library shortly after the opening (an amazing place), and have not been into the city since. Too dangerous with the "scooters" flying around, parking was hard to get, and an increase in costs!. The one way system is mad - 30kph. I travelled twice to the hospital via St Asaph Street, a nightmare with the cycle lane, concrete structures etc.

Is it necessary to have a swimming pool in every suburb? The costs to enter will be prohibitive.

1.2 Rates

Far too high. Delete plans for increasing cycleways & car parking fees and excess water charges.

Don't need a swimming pool in every suburb.

1.3 Proposed changes to existing rates, and new targeted rates

Delete excess water charges.

1.4 Investing in upgrading and protecting our city's water networks

Not sure, but get chlorine removed and do not add fluoride. Fluoride is added to most toothpaste, and is available in tablet form.

1.5 Investing in our transport infrastructure

Maybe

1.6 Rubbish, recycling and organics  
Doubtful

1.7 Our facilities

No. Yes close the Bus Lounges.

Keep the mobile Library service.

1.8 Our heritage, foreshore and parks  
?????

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

### Feedback

1.1 Have we got the game plan right?

No - there are a lot of community outcomes, strategies and clear CCC priorities not supported in this LTP. Appreciate the need to fix roads and pipes etc but that is only one small part of a 'livable city' or 'resilient community'

Changes I would like to see considered:

More support for placemaking - budgets for community experts has been reduced but CapEx budget for CCC increased, why?

Enliven Places Project Fund is reinstated in the LTP either through strengthening communities or vacant sites strategy perhaps. The quick turn around and specific support of vacant spaces has been invaluable in activating our city.

Support for Vacant Sites Strategy and targeted rate - would like to see some better consultation/collaboration with community experts about how this could work and be positively leveraged for CBD

The targeted rate on businesses in the CBD not be automatically and/or fully allocated to CCBA (why?) but perhaps be split between the many organisations working to activate and support the Central City

The Rates Incentive Programme is supported in the LTP - this is an invaluable tool to supporting land owners to make better use of the vacant land.

Funding is allocated in support of Toi Ōtautahi and the arts specifically - how can we expect our creative sector to flourish if there is no support? Part of the strategy also indicated CCC resourcing in the next 5 years - yet no line item in LTP.

The Strengthening Communities Fund is increased to better support current demand or at least maintained at it's previous levels.

More funding and advisory support established for community-led events and projects.

A number of CCC properties are retained and used to support the hundreds of community groups, creatives and start-ups struggling to find affordable space.

RedZone Regeneration timeframes are reconsidered - funding needs to be provided to these teams now (vs. the projected 2024/25) so work can begin. And/or some interim solutions are supported (especially around activation and co-governance) with some further funding allocated for short-term projects and activations (either through TTK or an other body)

Expressing support for Dark Sky Lighting in the RedZone.

Expressing support for funding for CAG's public programmes to continue

Expressing support for Arts Centre targeted rate

Do not want to see library hours reduced

1.2 Rates

I think it's a necessary evil but would suggest the 'curve' is flattened a little to soften such a large increase this year.

1.3 Proposed changes to existing rates, and new targeted rates

In support of targeted rates for:

- Vacant Sites Strategy
- Arts Centre
- Heritage
- CBD - NOT necessarily for CCBA

1.4 Investing in upgrading and protecting our city's water networks

I agree this is an important part of Council's role but I feel this is excessive considering the massive cuts elsewhere to make this happen.

1.5 Investing in our transport infrastructure

I agree this is an important part of Council's role but I feel this is excessive considering the massive cuts elsewhere to make this happen.

1.6 Rubbish, recycling and organics

Would support this but would like to see more engagement of community experts in order to consider innovative and experimental approaches.

1.7 Our facilities

Do not supporting reducing library hours or the potential reduction in public programmes at CAG.

Would support closing of Riccarton Bus Lounge as a bus lounge but would like to see space otherwise utilised for the community

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

### 1.11 Potential disposal of surplus Council-owned properties

I think this needs to be reconsidered in light of how many community groups, creatives and start-ups are seeking affordable space in Christchurch. A number of these properties could be used to support the community better.

- A better consultation/communication process needs to be established to make it clear what is available and how they can be used.
- CCC need to look at some of the barriers to folks using these spaces
- There is more need than ever for affordable community and creative space – why aren't these being used to support this – especially considering Toi Otautahi
- LiVS, an existing CCC partner, could help to support activation and use of some of these spaces

## Feedback

### 1.2 Rates

Rates Increase:

I do not support the 5% rates increase in the next financial year as I believe it is not justified. There is inefficiency of many areas of Council practice. Examples - huge budgets allocated for the new Christchurch Stadium, expensive cycle ways and the Akaroa Wastewater project etc etc. Flow on effects of increased rates result in rent increases for vulnerable tenants.

### 1.3 Proposed changes to existing rates, and new targeted rates

Land Drainage Targeted Rate:

I support Alternative Option 2 – that there be no change to the existing land drainage rating policy. My rural property receives no drainage or flood protection services from the Council, and we carry out this sort of maintenance ourselves at our own expense.

### 1.4 Investing in upgrading and protecting our city's water networks

Akaroa Wastewater Project:

I ask that the Council increase the budget for the wastewater pipe repairs in Akaroa so that the work can be fully completed. The money budgeted seems to be the same amount that was costed to carry out a 20% repair of the network, although Council wastewater staff have now been told they are to work to achieve an 80% repair without any budget increase.

I request that the project design work is delayed until these repairs are done as the wastewater volume remains unknown until this work is completed. Only then can the quantity of wastewater be calculated to design the scheme accurately.

### 1.7 Our facilities

Akaroa Service Centre:

This service is very necessary in our small, rural community and I ask that a permanent staff member be maintained to act as a liaison between residents and the Council. I also request that the service be returned to the old Post Office building, which was recently redesigned and refurbished at great expense to ratepayers for the very purpose of servicing our community's needs.

## Christchurch City Council

Submission  
Change to Rates Remission Policy  
16<sup>th</sup> April 2021

### **Rates Remission Policy – Not-for-profit community-based organisations**

Celia Quinnell, on behalf of the Anglican Diocese of Christchurch and Church Property Trustees, makes this submission to Christchurch City Council on the proposed change to the Rates Remission Policy.

It is important to firstly state that the many charities which benefit from rates remissions provided by the Council (and effectively the ratepayers), are extremely grateful for this support. For charities the rates remission helps support the provision of critical social activities to communities, and in many cases is an important contributor to their financial sustainability. This support for not-for-profits and the recognition of the good they do in the community is appropriate.

#### **Executive Summary:**

The proposed change to the Rates Remission Policy is not supported due to (i) Insufficient Notice, (ii) Lack of Pre-Engagement, (iii) Lack of Information, (iv) Flawed Remission Assessment Criteria, (v) No Cost/Benefit Analysis, and (vi) the Existing Policy is Adequate. This submission provides supporting arguments and information for each of these concerns. Any of these concerns on their own provide justification for the withdrawal or, at the very least, reconsideration in the future in a more robust and fair manner. Collectively, they provide a compelling argument for Council to withdraw the proposal.

#### **Discussion:**

This submission prefers to use the less corporate term of ‘charities’ as opposed to “not-for-profit community-based organisations”.

Clear and supporting information is provided below, under clear headings, in support of the position taken in this submission:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

#### ***1. Insufficient Notice***

Given the very large number of charities that this proposal would affect (including those that must file and disclose additional financial information to continue receiving a remission) and that reality that most charities struggle with lack of resources (people and funds), it is considered that insufficient notice has been provided to ensure that charities could appropriately engage in the submission process. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

## 2. Lack of Pre-Engagement

It is reasonable to expect that any proposal by Council to change the important policies affecting ratepayers and the community would be well researched and that a level of pre-engagement with representatives of those affected had taken place to help inform and validate the proposed change. The paper "Background Material on Proposed Changes to Rates for 2021/22" does not provide confirmation that either has taken place and is reflected in serious shortcomings of the proposed change that are discussed later in this submission. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

## 3. Lack of Information

The "Background Material on Proposed Changes to Rates for 2021/22" is a very brief document and thin on any objective information. It is inadequate for any meaningful consultation.

No substantive and objective information has been provided by Council of the supposed issue and how it could be best addressed. For example:

- What are the total remissions each year to charities?
- How many charities does Council consider are 'wealthy' and it views as not needing rates remission?
- What is the estimate of \$300k reduction in annual rates remissions based on?
- What would be the cost of implementing the proposal on an annual basis?
- What would the magnitude of loss of rates remission be for affected charities?
- What analysis was undertaken to support cash and investments at 50 times the base services rates for which a remission could be received as being the factor applied for cut-off of eligibility?
- Could some affected charities be forced to reduce the level of their charitable activities due to the loss of the rates remission?
- How many charities would be unfairly burdened by the additional filing requirements to Council to maintain their rates remissions, in order for Council to cease remissions to (a likely) very few charities?

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

## 4. Flawed Remission Assessment Criteria

The proposed change to the rates remission eligibility assessment is blunt. Most particularly, inadequate consideration has been given to the use and definition of cash and investments as a proxy for determining whether a charity is 'wealthy'. The current proposal is too much of a blunt instrument and will cause more harm than intended if not 'nuanced'. Example of unintended consequences of the proposed policy change are provided below:

### *Charity A*

This charity provides critical social services to vulnerable members of the community. It employs social workers, a manager, and is supported by many volunteers. It is recognised by the Council and government as providing vital social services. Its budget is extremely tight and all the staff are aware that they have limited job security due to the challenges of maintaining adequate levels of funding. At the end of the financial year the charity made a financial loss. It had eight months liquidity at year end – however almost all of this was grants in advance and recorded as liabilities in the financial statements. This pushed the charity over

the 50X rates remission eligibility and it now faces having to reduce its services to offset this cost increase.

#### *Charity B*

This charity provides broad and valuable services to the community. It has just a few staff and many volunteers. It too is recognised by the Council and government as providing vital social services. It too has an extremely tight budget and consistently runs at breakeven or a loss. The charity relies significantly on bequests and endowments to fund its operations. Most of these bequests and endowments are held legally in trust and are restricted as to what they can be spent on, with the two largest endowments specifying that the funds capital must be maintained and only the income is available for specific activities. Despite having inadequate 'free cash' to fund its charitable activities, the value of the capital protected endowments pushes it over the 50X rates remission eligibility and it must now reduce its services to offset this cost increase.

#### *Charity C and Charity D*

There are two very similar charities - C and D. Both provide similar social services but in different locations. They operate on a breakeven basis, supported by grants, donations and income from modest (and separate) commercial premises they own. Charity C is forced to sell its commercial property under compulsory acquisition by the Crown. The income it receives from investing the sale proceeds is the same as the net return it received when it owned the property. The sale pushes Charity C over the 50X rates remission eligibility (it does not have a specific capital project to which it will put the sale proceeds) and it must now reduce its services to offset this cost increase, while Charity D which has the same level of assets continues to receive a remission.

The above examples show that crudely applying cash and investments as a proxy for whether a charity is wealthy and not deserving/requiring the support of a rates remission is flawed. The eligibility criteria also fail to take into consideration (i) the need for charities to hold funds to provide a buffer against ups and downs in cash flows (the mere timing of financial year end dates will advantage some charities and disadvantage others) in order to provide continuity of services and security of employment for staff, and (ii) the reality that charity budgets are under pressure due to very low interest rates on funds held.

Further, the proposed eligibility criteria will have significantly detrimental consequences for some charities. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### *5. No Cost/Benefit Analysis*

The background material does not provide any analysis of the costs of implementation of the changes to this policy. It would be reasonable to expect the appointment of suitably qualified chartered accountants to be able to read and interpret the financial statements being submitted and have sufficient knowledge to make informed decisions about what cash and investments should or should not be included in any calculation.

It is also reasonable to expect that there will be increased engagement with charities, on an ongoing basis, over the filing of returns (financial statements) to Council and application of the rates remission eligibility criteria. There will also be additional ancillary costs and associated overheads for this and the financial statement review activity.

There is also the collective burden across all charities receiving rates remissions of filing information, including their financial statements, to Council. The time and cost of this to charities has not been considered in the proposal.

It is fair to reach the conclusion that the cost to Council and affected charities of this policy change would outweigh the estimated (but unsupported) benefit of \$300k plus GST in rates remissions per annum. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### *6. Existing Policy is Adequate*

There is no discussion in the proposal as to whether the existing Rates Remission Policy is adequate and does not require change to enable Council to reduce or cease rates remissions to charities it reasonably concludes to be wealthy and not requiring such support. Further, the Council paper acknowledges that not making the change will “make it easier for some not-for-profit based organisations to provide more public benefits from their activities”. Any change that will make it harder for not-for-profits to provide public benefits is counter to the principle of the remission.

The current policy provides for “Up to 50% remission (of the rates that would be payable if they were fully rateable) on targeted rates for standard water supply, sewerage, and land drainage” (emphasis added) and that the “extent of remission [if any] shall be determined at the absolute discretion of the Council” (emphasis added). The current Council policy already provides sufficient discretion to decline rates remissions to any charity where it deems that support is not warranted.

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

1.11 Potential disposal of surplus Council-owned properties

with regards to the disposal of land on Hunters Road Diamond Harbour:

provided there is reserves protected in the covenants and there is space put aside for future expansion of the Diamond Harbour School I support the selling of this land for future residential developement. Many clubs and groups over here could do with the increase of members to improve viability, and the flow on effect for local businesses and employment opportunities would be positive. Yes, i have a vested interest here but i truly believe in this last bit of final growth for this community size.

1.7 Our facilities

Hi there,

i would like to submit support for allowing the communtiy to continue to enjoy Art Classes at the Christchurch Art Centre on Wednesdays.

It has been instrumental in encouraging me, my family and friends to come into the city in the evenings abd enjoy the art classes. It also has meant a spin off of having dinner or going for a drink afterwards or before. Therefore, supporting local business in the area.

regards

### Feedback

#### 1.1 Have we got the game plan right?

Prioritising clean water, infrastructure to provide this, roading, transport, housing and other services all residents use is vital.

Spending rate payer money on luxuries such as cycle lanes, walkways etc should be considered as nice to have eventually and be costed across a long period of time. To spend as the council has on such things when we have huge infrastructure problems, especially in the east of the city is irresponsible.

To say the borrowing of money has been costed across generations is disingenuous, as the cost to future generations will be less and they will potentially not have the same problems we have had to deal with and pay for post quakes, pandemic etc.

I disagree rates are affordable, especially for single parent households or those living alone. Property value is one thing but if there is one person to pay the rates versus two or more, the cost is extremely high. Wages, benefits, allowances do not increase at close to the amounts you propose to increase rates.

#### 1.2 Rates

I think this is absolutely out of touch with the reality of most people. Our income does not increase this much making it more and more difficult to make ends meet. Again if you are a two person household for example this might not seem as much of a problem than if you are a single parent household, widowed or living alone. Unless you can foresee wages/benefits increasing 4-5% a year, this makes no sense and is not sustainable.

If you cannot afford to keep up with the basics then you need to trim non essentials, not push the costs onto people who cannot afford to pay.

#### 1.3 Proposed changes to existing rates, and new targeted rates

I think some of these seem sensible but again I don't understand how you can fairly apportion them. ie: a house with 6 kids and two adults is going to use more water in normal everyday activities than a single person home. These families earn less on average but could potentially end up paying more than a wealthy family pouring

water on their lawn. If you are going to charge land drainage rates, are you also going to compensate by reducing rural rates because those areas don't have the same access to other services? It sounds like take, take, take regardless of fairness or possibility.

Personally I agree with the money being spent on Te Matatiki Toi Ora which is pennies compares to what the council decided unilaterally to give to the Anglican cathedral. The fact the council sees fit to give money to a wealthy private businesses is verging on criminal. If we have a shortage of funds this should never have been contemplated.

#### 1.4 Investing in upgrading and protecting our city's water networks

Obviously this is a no brainer. We need clean water the fact that this has been neglected for generations and is now being pushed onto current residents is shameful but there is no choice now but to make this system workable. The balance should be spread as far as possible as future generations will benefit most from this.

The Council should hold ECAN to account for not doing it's part re: clean rivers, water take permits etc. An environment council which enacts consents which not only destroy the environment and water sources, but ignores all climate change is intolerable.

#### 1.5 Investing in our transport infrastructure

Too much money has gone into cycleways. It is a luxury that we did not need prioritised over public transport. They cater to a specific group of the population only.

Public transport needs reworking. There are gaps in the system and economic ways to address them, ie: smaller buses, fewer services to some areas, less frequent services where there are currently none. None of this is rocket science, and probably another ECAN problem, but it seems so obvious and easy to fix. I live at Diamond Harbour for example which has a great ferry service (although summer weekends are unusable for work commuting because of day trippers). Unfortunately there is no public transport to the ferry with the majority of housing a one hour walk away. This means the elderly, incapacitated and young are unable to access the service. This could be solved easily and cheaply with a van service 4 times a day.

#### 1.6 Rubbish, recycling and organics

I think we need to be thinking bigger on this issue and not band aiding. Can we burn trash for energy? We should be aiming to be a leader in this area.

#### 1.7 Our facilities

No, you have not got the balance right. Cutting services to ANY educational facility makes no sense at all. If you look at how much money is being spent on sports facilities for example compared to the arts the cuts are unfair and target a certain sector of society.

People seem to see the arts as frivolous but they are essential to any community and provide untold mental health benefits, income, education and joy. I think the way the impact of these facilities is measured is incorrect. There are few studies on the longterm benefits of arts exposure and it is not measured by how many people went to the gallery today. One person visiting may then have gone on to teach what they learnt 150 others for example. Covid is an excuse, and making longterm decisions based on short term problems is senseless. I would like to see the Robert McDougall Gallery returned to it's purpose. It was donated to the city as an art gallery and should be used as such.

#### 1.8 Our heritage, foreshore and parks

As long as it is affordable then our heritage should be restored for all of our benefit. Giving ratepayer money to private businesses like the Anglican Church is not okay. I'm assuming these buildings are now properly insured each for their full value?

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

This is a small amount given what was gifted to the privately owned anglican cathedral and is a heritage complex used by numerous groups, accessible to all.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

##### Comments

I support this but do not support the move to have the gallery encapsulated in the museum. It was gifted to the city for a purpose and this massive gift should not be used for any purpose other than which it was intended. The city has swathes of art that remains behind closed doors. This should be reinstated asap as the city's gallery.

#### 1.11 Potential disposal of surplus Council-owned properties

Yes, dispose of anything unnecessary but make sure everything is publicly notified and that residents views are listened to in these decisions. NO sneaky rezoning of land etc

#### Attached Documents

**Christchurch City Council LTP 2021-2031 Submission April 2021 – Transport.  
Age-Friendly Spreydon-Cashmere Committee.**

The Age-Friendly Spreydon Cashmere Committee thanks the Christchurch City Council for the opportunity to make this submission to their 10-year plan 2021-2031. The committee has researched local issues and works to a plan in partnership with the Spreydon-Cashmere Community Board for a safe, accessible, healthy and inclusive community that encourages active aging.

Our leading transportation objective is to ensure that all forms of transportation are accessible and affordable to older persons in our community.

Age-Friendly Spreydon Cashmere (AFSC) recently reviewed the status of public transport accessibility and the needs of older adults. As result we have both commendations and suggestions to offer.

The AFSC appreciates and endorses the following positive actions the Christchurch City Council has taken regarding the transportation needs of older adults. These include:

- Ongoing commitment to quality public transport infrastructure such as shelters, bus stops, seats, and priority bus lanes.
- Commitment to encouraging the use of public transportation.
- The city's commitment to the Greater Christchurch Public Transport Futures business case programme.

The AFSC Committee would like the Christchurch City Council to consider the following actions.

1. That consideration of the needs of older adults are included in transportation strategic planning.
2. To prioritise footpath upgrades near retirement villages, senior housing and neighbourhood amenities frequented by older adults.
3. To prioritise replacement of deep kerb gutter channels near retirement villages and senior housing to remove a tripping and falling hazard.
4. To extend the hours of the SuperGold free bus rides to 9am through to 4pm to complement the existing government subsidy. This change will benefit older adults and the city as a whole, and will:
  - Have little or no negative impact on rush hour bus usage,
  - Allow older adults to participate more fully in social, cultural and religious activities, with the added benefit of increasing socialisation and reducing isolation in older adults,
  - Increase the opportunities for active volunteering by older adults. Many older adults are involved in active volunteering and the extended free bus hours will enable more flexibility in volunteering and thus benefit the community as a whole, and
  - Have a significant positive impact on the rejuvenation of the city centre by making travel there more attractive.
5. To continue Council support for Age Concern travel and transport programmes.
6. Provide bells on bicycles and mobility scooters for older adults. This small action would make moving around the city safer for both the older adult and the population in general.
7. Ensure there is adequate rest seating for pedestrians at suitable locations along routes to bus stops and neighbourhood amenities.
8. Consider leaving seats where bus routes have been removed to make it easier for older people to walk further to bus stops and neighbourhood amenities. These can be marked as 'Not a Bus Stop'
9. Planting native trees (species which do not lose their leaves during the winter) to provide shade by seating locations near bus stops and rest seating, to encourage walking as a healthy transportation option for older adults.

**Recommendation:** That the Christchurch City Council take actions to ensure that public transportation and walking routes near retirement residences and neighbourhood amenities are safe and attractive for older adults which would improve their quality of life and benefit the city as a whole.

Thank you,

Simon Templeton – Chair Age-Friendly Spreydon-Cashmere

David Troughton – Committee member Age-Friendly Spreydon-Cashmere

Helene Mautner – Committee member Age-Friendly Spreydon-Cashmere

### Feedback

1.5 Investing in our transport infrastructure

The Charleston Neighbourhood Assn Inc does not see the need to 4 lane Ferry Rd from Fitzgerald Ave to Aldwins Rd, the traffic flows well for most of the day, building up in the late afternoon, but clears quite quickly. We would not like to see large amounts of land such as the frontage of Edmonds Factory Garden taken for roading, this is the last part of the original garden which is a heritage garden and would entail removal of established trees and contribute to a concrete jungle.

1.7 Our facilities

The Charleston Neighbourhood Assn would not like to see the removal of the Linwood - Central - Heathcote Community Board as it would disadvantage those who live in this part of the city.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

#### Submission on proposal to

**Extend the land drainage targeted rate** as detailed in

Background Material on Proposed Changes to Rates for 2021/22

#### Introduction

In this submission, I register my objection to Council extending the land drainage targeted rate to all rateable properties in the Christchurch City Council area, namely rural areas including Banks Peninsula where I own a rural property. My view is that Council is using an argument of 'fairness' in order to place an additional rating burden on rural landowners that is fundamentally **unfair**.

I now address and comment on several points made in the Background paper.

1. In section 2a *A service provided to land*, statistics are used to provide a misleading impression of 'unfairness' whereby a majority or ratepayers (96.3% of the district by value, and 97.5% by rating units) are paying the rate but they represent less than half of the geographic area. On the other hand, rural land owners who represent 3.7% of the district by value, and 2.5% of rating units but own more than half of the geographic area, are not paying the rate.

The unstated implication is that under the principle of 'fairness', shouldn't all ratepayers pay for the service, especially the minority who own the majority of the land? Rural land, by definition, is sparsely populated and covers a large area compared to urban areas which are more densely populated while occupying a smaller land area.

The fact that rural landowners, with few exceptions, do not receive the land drainage service is the relevant issue, not the land coverage. The primary beneficiaries of the land drainage service are people living in urban areas, not rural landowners.

2. In 2a) under **Amount recovered**, Council states that ‘The proposal for changing the land drainage targeted rate will not change the overall amount received – rather it affects the allocation of those costs between ratepayers.’

In reality, this means that the land drainage targeted rate will be extended to those ratepayers who benefit minimally (e.g. through occasional trips to Christchurch to shop or access services) from the drainage service.

3. Furthermore, in 2b) **Beneficiary group wider than owners of drained land**, we read the Council’s view is that ‘it is more fair and accurate to regard all Christchurch residents as benefiting from land drainage and flood protection and control works activities.’

The problem with this ‘fairness’ argument is that the benefit to rural landowners is out of all proportion to the cost imposed on them. Under the National Freshwater Policy, rural landowners are responsible for ensuring that runoff from their land is consistent with the policy, and they bear all of the costs involved. The ‘fairness’ principle could be utilised by rural landowners to argue that all ratepayers within the boundaries of Christchurch City Council should share in the cost of managing runoff and drainage from rural properties. But that would be unfair to urban ratepayers, and rural landowners are not asking for or expecting this.

Also, in 2a **How it works now**, Council’s proposal states that the land drainage targeted rate ‘is calculated based on capital value. High value properties therefore pay more than lower value properties.’ Rural land oftentimes has a high capital value. Thus, many rural property owners will end up paying amounts in the high hundreds or low thousands for a land drainage service that does not extend to their areas. Based on Council’s contention that rural property owners benefit indirectly from the land drainage targeted rate by being able to access facilities and services provided in urban areas, they will, in effect, be paying a capital value-based tax for this benefit.

#### 4. **Alternative Option 2: No change to the existing land drainage rating policy**

In the first paragraph, the assertion is made that ‘there are a substantial number of properties that seem to be covered by our existing policy but which are not rated for land drainage.’ The use of the word ‘substantial’ here is misleading in giving the impression of a significant number. However, the Council proposal earlier states that 97.5% of rating units are currently covered by the existing drainage rate. Thus, 2.5% of ratepayers are defined as a ‘substantial number’ when in fact they are a small minority of ratepayers – those rural landowners who do not receive or benefit from a drainage service in their local areas.

In the second part of Alternative Option 2, the proposal states that Council ‘would aim to change our practices to come more into line with the policy.’ This is, in effect, deceptively achieves Council’s goal of extending the land drainage targeted rate with the only exception being undeveloped properties. Thus, any property that contains ‘a roofed structure larger than a garden shed’ would be drainage rated. So a rural property with a hayshed, milking shed or woolshed on it would be drainage rated, as well as all rural properties with homes on them.

Council would also ‘move to consistently rate all properties that are close to Council-owned assets such as pipes, concrete kerb and channel, and swales, or that have their flooding risk reduced by Council activities.’

Here again we see Council extending its definition of serviced properties in a way that is likely to include virtually all properties. This would have the effect of achieving by stealth its stated aim of extending the drainage targeted area.

Conclusion

I submit that Council's proposal to extend the land drainage targeted rate to rural property owners is fundamentally unfair in its application to them. I propose that there be no change in how the land drainage targeted rate is applied.

## Feedback

1.8 Our heritage, foreshore and parks

For a city this size we have too many parks which require an excessive amount of cost to maintain. We should sell some of the small parks off as land for housing. Which is a win win. We get city land for housing and the Council gets the income from the sale, and then we have less annual cost on maintenance.

Foreshores are important and especially so as we face climate change and sea level rises, so we need to maintain our spending in this area.

Heritage has had a lot of money since the quake, it is time we reduced spending in this area, and let private developers decide on a building outcome. They will maintain it's Heritage provided it is financially worth while.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The arts Centre is a huge access to the City being on the tram route, and a amazing example of the architecture of the time. It has also been beautifully restored. Due to what it is, it is unlikely to be able to be self funding, so as a city we need to support it going forward to ensure it's survival.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

We have one big Art Gallery in the City do we really need to spend millions of dollars and rebuilding another.

Honestly how many Art Gallery's does a City this size need?

1.11 Potential disposal of surplus Council-owned properties

Absolutely dispose of surplus property. Why make the Rate Payer continue to fund something no longer needed, take the money and help the rates charges to Rate payers no matter how small.

## Feedback

1.1 Have we got the game plan right?

Less focus on expensive cycle ways that are not being widely used.

1.2 Rates

This amount becomes unaffordable to those choosing to live in their own home when their only income is superannuation.

1.3 Proposed changes to existing rates, and new targeted rates

Seems sensible, though need to periodically review this.

1.5 Investing in our transport infrastructure

Less focus on expensive cycleways which are not widely used. More maintenance on existing road and footpaths.

1.7 Our facilities

So wrong to close service desks at Akaroa and Lyttelton. People are being forced to chose to use phone or online services because you have made it difficult to actually make contact face to face.

Library services: The opening hours for libraries are user friendly. No libraries to be closed... Nor should you even consider stopping the mobile library service. A backward step for the city.

### Feedback

1.11 Potential disposal of surplus Council-owned properties

In regards to the proposed closing of Wharenuui pool:

Will the new pools provide the same ease of use to teachers (especially of primary aged students)?

The Wharenuui pools provide private group poolside changing and toileting facilities, a single entrance and well defined borders allowing teaching staff to easily supervise class+ sized groups, without creating confusion or mixing with the general populous. Larger shared facilities are also (generally) noisier hampering instructing large groups.

Currently the school my children attend only get 5 half hour lessons per year, this is a part of the New Zealand Curriculum, will the new site actually use its better efficiency to lower the cost to schools allowing greater access? or will more schools compete for access to the newer facility, limiting access overall?

Has the council discussed with current users whether the new facilities adequately address individual needs? The new facility's have not been tried and tested, once the pools are removed, they are removed permanently. perhaps when the new facility's prove Wharenuui pool redundant would be a better time for this discussion.

## Feedback

1.1 Have we got the game plan right?

I would like to see a relentless focus on value for money in all areas of council spending, operational and capital, focusing on doing core business well - this means focusing primarily on roads, the three waters, and solid waste.

1.2 Rates

Rates increases should be as close as possible to the rate of inflation, preferably the consumer price index (currently 1.5%) or at most the BERL Local Government Cost Index (around 2%).

1.3 Proposed changes to existing rates, and new targeted rates

It is most unfair to expect people who do not get serviced by a council activity to have to pay for it and especially unfair in the case of the Land Drainage Rate for people who do not get the service to pay huge amounts (hundreds and thousands) more than the people who get the full service. I therefore strongly oppose this unfair land drainage rate proposal.

The Heritage and Arts Centre rates should be targeted but they should be set on the basis of a uniform annual charge, just like the targeted rate for the Cathedral. I can't understand the reason why it would be set on capital value.

I strongly support the proposed excess water targeted rate but it doesn't go far enough - in fact, water supply should be funded through volumetric water charging, not property rates! Many other councils do this and it encourages conservation of a crucial resource!!!

I am okay with the other rates proposals.

1.4 Investing in upgrading and protecting our city's water networks

Agree, this is a crucial core activity for the council. The caveat is that this spending is on fit-for-purpose projects that deliver strong value for money and are done efficiently and effectively (i.e., not gold plated).

1.5 Investing in our transport infrastructure

Agree, this is a crucial core activity for the council. The caveat is that this spending is on fit-for-purpose projects that deliver strong value for money and are done efficiently and effectively (i.e., not gold plated).

1.6 Rubbish, recycling and organics

This spending should be on fit-for-purpose projects that deliver strong value for money and are done efficiently and effectively (i.e., not gold plated or in this case green plated).

1.7 Our facilities

This spending should be on fit-for-purpose projects that deliver strong value for money and are done efficiently and effectively (i.e., not gold plated. Core activities should be prioritised.

1.8 Our heritage, foreshore and parks

This spending should be on fit-for-purpose projects that deliver strong value for money and are done efficiently and effectively (i.e., not gold plated. Core activities should be prioritised.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments  
I am okay with this spending but the rate should be set on uniform annual charge, not capital value

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments  
I am okay with this spending but only if funded by a uniform annual charge, not capital value. If based on CV I would oppose it.

1.11 Potential disposal of surplus Council-owned properties

I agree with this proposal and suggest that the Council looks at asset disposals more broadly.

1.12 Any other comments:

A relentless focus on value for money spending please and move to a rating system which relies less on the very large capital value based general rate. More targeted rates and more use of uniform rates please!

### Feedback

1.1 Have we got the game plan right?

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

- 
- 
- 
- 
- 
- The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

### Feedback

1.1 Have we got the game plan right?

In general the allocation balance appears reasonable other than the significant underinvestment in sports parks and facilities.

There is a serious lack of investment in maintenance of existing parks and facilities that are currently under performing and affecting sports ability to engage its audience. The city and sports are relying on schools and private individuals to deliver community needs.

There is a serious lack of foresight in the future needs of parks and facilities where the long term plan has no acknowledgement of providing artificial surfaces as a change in playing surfaces. Mainstream sports are crying out for this and all other major cities have them.

If we are investing in the youth, welfare and well being of our people the investment in the LTP isnt enough to hold our place let along grow and prosper in Otautahi.

1.8 Our heritage, foreshore and parks

The balance of spending in sports parks needs to increase. Our sporting fields are in poor condition and this year 2020 there appears to have been a further reduction in investment looking at the quality of grounds around the city.

p.

In particular lines

43697 Recreational Surface renewals - this cannot be enough?

61785 Community Parks Sports Field development - given the cost to develop fields , this needs to double

61806 Sports Fields Irrigation Systems Development - the entire 10 years could be spent next year just to get to a half functioning level on our parks. It is a woefully inadequate number

61816 Community Parks planned Irrigation system renewals - as per above, this number cannot be right for the state of our current fields

61818 Community Parks planned Sports fields renewals - this number cannot be right for a 10 year spend and where is the sum to introduce artificial surfaces

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Climate Change ushering in a biodiversity and ecological crisis requires a doubling of expenditure in these areas - the balance is not right

This is not reflected in the way the plan is presented with expenditure lumped in with maintaining playing fields for sport

1.2 Rates

The rates rise does not reflect the urgency around improving housing, biodiversity outcomes and actions needed to provide a healthy, climate friendly environment for its residents to live in.

1.3 Proposed changes to existing rates, and new targeted rates

Borrow more while money is cheap to deliver now when it is needed.

1.4 Investing in upgrading and protecting our city's water networks  
Agree this is important to do

1.5 Investing in our transport infrastructure

Yes - improving walking and cycle ways and footpaths will encourage more children and seniors to cycle and walk, dedicated bus lanes will make the trips faster and therefore compete with the car, bus shelters, more electric buses, slowing traffic through busy centres (such as Sumner) create a place where people want to meet and gets us out of our cars

## 1.6 Rubbish, recycling and organics

Improvements to the organic recycling essential - consideration needs to be given to removing the plant from its current site - sea - level rise, easterly winds blowing the smells across Bromley

Agree on expenditure on recycling efforts to reduce landfill

## 1.7 Our facilities

Agree with proposed changes to community services - where these are not used such as Sumner library on Sunday.

However, Banks Peninsula is a special case, due to remoteness - thus no reduction in service should happen there

## 1.8 Our heritage, foreshore and parks

No CCC has not got the balance right in expenditure on biodiversity and Regional Parks. The fact that this budget is lumped in with heritage, foreshore and parks indicates the thinking of the planners. This budget must be doubled to \$400K to ensure the following organisations and community groups are able to continue their work for the environment and mitigate the impacts of climate change

1. The Avon Heathcote Estuary Trust - works with the community to inform, educate, advocate and research issues around the heath of the estuary - this biodiversity hotspot for the city - an International Flyway for migrating birds.
2. The Rod Donald Banks Peninsula Trust - likewise is delivering more efficiently and effectively on the CCC vision. Appreciate that money for strategic land purchases is in the budget - however, the price of land has increased so buying land to deliver biodiversity outcomes and public access is increasingly difficult to attain. Thus additional funding will be required over the 10 years of the plan
3. The Banks Peninsula Conservation Trust is also effectively and efficiently delivering on Climate Change and Biodiversity targets for the CCC with supporting farmers to protect what remains through advice and fencing. Their budget of \$50k must continue
4. The Pest Free Banks Peninsula is an outstanding example of multiple parties coming together to protect what remains and improve outcomes for biodiversity on the Peninsula. The \$60k funding for this must continue. Every day thousands of trees, birds, invertebrates, skinks and geckos are eaten by pests. Reducing pests is the quickest win for biodiversity and reducing the effects of climate change.
5. Support the funding for the Red Zone - Christchurch needs this biodiversity corridor from city to sea - linking across the plains - this is not only a great win for biodiversity but also creating a tourist and recreational gem in our city
6. Enviro-schools is one of the best ways to start growing the next generation of conservationists, educating kids about the wonderful wildlife in the city, leading to a future group of citizens who will play their part in keeping our streams clean, and protecting nature. This requires funding and support.
7. Barnett Park's 1992 out-of-date Management Plan needs updating and the tracks to the cave re-opened. This park is part of a corridor from ocean to the summits and has been badly neglected. Over-run with weeds and the playground facilities almost dangerous. This much used park needs attention and funding put into the LTP
8. Compliance - the CCC does not enforce its own plans to protect biodiversity - ensure that ecologists are included in consents to clear land or impact on biodiversity outcome and increase

and train well the number of compliance officers so we stop hearing of loss of rare plants and ecosystems such as that on Kaitorete Spit and ongoing clearance on the Banks Peninsula

9. CCC council grazed lands need attention. Currently much of CCC owned land is overgrazed for drought conditions and the small native tree remnants dying due to animal impact on their roots. Provide a budget to review all grazing leases and protect tree remnants to stop further loss.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

Dispose of Coronation Hall

The 5 Worcester Property - its inner city location would make this a prime location for community groups delivering on CCC vision for the city so worth keeping

1.12 Any other comments:

Opening and closing comments reflect the concern that given the CCC has declared a climate and ecological crisis but the budget for addressing is not reflected in the numbers.

This budget must be doubled to achieve any effective outcomes for the city

I agree that the council should provide this funding for the Arts Centre. It's an icon of our city, and it's continued restoration is important for our identity.

1.12 Any other comments:  
GirlGuiding New Zealand

Submission raising significant concerns to the Christchurch City Council (the council) long term plan surrounding rates remissions.

The Girl Guides Association New Zealand Incorporated (GGANZ) Registered Charity CC22069 is submitting the following concerns in response to the councils proposed rate remission changes for not-for-profit community-based organisations that provide significant community benefit.

GGANZ owns one property subject to rates payable to the council. The property has a per annum rates charge of \$8,377 and we gratefully receive a rebate of \$5,756 per annum. This rebate amount is critical in supporting our operations of this property and our ability to control costs to our venue hirers and our membership in general.

The cost of rates in our property has increased significantly since 2017 when our last communications on rates remission were had with Michelle McCormick from the council. At this time, the rates charge was \$6,968 for this property. There has been a sizeable increase of 20.2% over this period. Such increases, combined with the removal of rates remission is not sustainable for a non-profit organisation.

For GGANZ, the impacts of the councils proposed rates remission changes will be as follows:

- Increased venue hire to not-for-profit organisations utilising the venue to run community benefiting programmes due to the increased cost that would be imposed by the council
- Introduction of venue hire to government-based organisations currently using the venue FOC for training in the community benefiting areas of justice and crime due to the increased cost that would be imposed by the council
- Increased fee to our general membership across New Zealand due to the increased cost that would be imposed by the council

The intended exclusion criteria for the cancellation of rates remissions for not-for-profit community-based organisations is flawed. There is no correlation between cash balances and the size and scale of the not-for-profit organisation's operations. The annual rates charge, and the cash balances held by an organisation has no correlation whatsoever and this is a simple methodology that harms larger non-profit organisations who could have larger cash balances.

A nationwide organisation such as GGANZ may have cash balances in excess of 50 times its annual rates charge, however our operating costs are *significantly higher* than a regional based organisation also. We are disappointed that the criteria determining the status of granting and removing rates remissions is intended to be determined by an ill-defined decision model.

Therefore, we would ask the council to take a more pragmatic approach to this issue and consider the nature and scale of operations of a non-for-profit to ensure those organisations that need rates remissions continue to receive them. This will ensure that the roll-on effects to other organisations and the council are not disadvantaged through increased venue hire fees and negative feedback.

## Feedback

1.1 Have we got the game plan right?

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

<sup>35</sup><sub>17</sub> they flood when it rains

<sup>35</sup><sub>17</sub> they are slippery with ice on frosty mornings

<sup>35</sup><sub>17</sub> when most teams train in the evenings they are slippery and damp from night-time dew

<sup>35</sup><sub>17</sub> part of one court is permanently wet and covered in a slick film because it never dries out

<sup>35</sup><sub>17</sub> they have extensive cracking filled with vegetation

<sup>35</sup><sub>17</sub> they have holes for tennis net poles that are no longer used

The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

## **Draft Long Term Plan 2021-2031**

### **Submission on Proposal to Extend the Land Drainage Targeted Rate**

This submission is made on behalf of the undersigned property owners in Puari and Putiki Roads, Port Levy, Banks Peninsula.

We do not support the proposal that our properties at Port Levy are rated for land drainage at the same rate as the parts of the council area that receive drainage services. We have no public drainage infrastructure in our area, and therefore the properties must manage stormwater runoff. Even our sealed road has very a very limited drainage channel, mostly on one side of the road. Following rainfall, runoff from the road regularly ends up in private properties.

The proposed increase in rates would be significant for our community. As an example, a typical property with a capital valuation of \$465,000 would get an increase of approx. \$200 (from figures given in 'Newslines' on 9 April 2021). The current rates for the property are approx. \$1,500 so this is a 13% increase just for land drainage and we know that other increases are also proposed. This is unacceptable.

We accept that we do benefit from drainage infrastructure in other parts of the Council area, however many of the properties are holiday houses for people living in urban Christchurch who already pay land drainage rates, so to charge the full drainage rate for Port Levy properties would be getting them to pay twice for the same service, but not getting any service for their Port Levy property.

**Our submission is that our properties should not be expected to pay the same share of land drainage rates as those that have drainage infrastructure and services.**

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Arts Centre is now owning its name - it is truly a centre for the arts, marketing itself as such, and is therefore, integral to the well being of Christchurch citizens and the wider arts community. It is in a unique position in that it does not receive funding from any organisation, and as a key asset and draw card for residents and visitors to the city, must receive the capital grant.

New Zealand Opera has been welcomed with open arms to the Lumiere Cinema in the Arts Centre, with a great working partnership now established. The collaboration can further grow visitors to the cinema and centre facilities, drawing from our own opera whanau, and in addition, cinema fans can experience opera in a different way. Post earthquakes, Christchurch citizens have lead in collaboration, with more people benefitting. This is a real example of that in action.

On behalf of New Zealand Opera, as Chair, who lives in Ōtautahi, the capital grant appears a fair an equitable solution to support the business and buildings of the Arts Centre. We fully support this initiative. Kia kaha. Ngā manaakitanga, Annabel Holland

#### 1.7 Our facilities

Please do not scrap the Mobile Library. There is a need now as much as there has ever been for this vital service. It proved its worth post earthquakes when the majority of libraries were closed. It is important that the Mobile Library continue to visit rest homes as part of keeping the residents minds active and allowing the books to come to them when they find it difficult to reach a library through mobility issues and no longer being able to drive. It is also beneficial to those with young kids who do not drive and struggle to reach a library using public transport. The mobile library is vital in educating future generations and introducing kids to the joys of the world of books. For some elderly people the mobile librarian is another person they get to see and talk about their shared passion for books.

## Feedback

### 1.2 Rates

This is not clear. Does it mean 4% in total over 10 years or 4% each year for 10 years?

### 1.3 Proposed changes to existing rates, and new targeted rates

We have very limited land drainage catchment from our property. The stormwater drain below our property has not been maintained for at least 3 years and was only cleared then after repeated requests from us. Other stormwater drains in the area are maintained rarely and frequently cause problems by overflowing on roads and private property.

### 1.4 Investing in upgrading and protecting our city's water networks

Our water supply (the cost of which we contributed to when it was installed ) has been taken to Akaroa and severely restricted over summer ever since. I object to paying a water rate when I am unable to use water outside for months at a time, particularly as we had an undertaking from the council that our water supply would not be restricted when Akaroa was short of water.

### 1.5 Investing in our transport infrastructure

I would like to see a safe provision for cycling from Little River to Akaroa. There is currently not even a verge to ride safely.

### 1.6 Rubbish, recycling and organics

We don't have rubbish or recycling collection at our property and we don't have organics collection at all so should be paying less than city properties.

### 1.12 Any other comments:

We have far less services provided than in the city and would expect our rates to reflect this.

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

I question further investment in roads beyond thoroughly adequate maintenance. Actually footpaths and cycleways should take precedence over roading because we need fewer vehicles on our roads and calmer traffic to achieve a truly liveable, lively city. Do not make it easier to jump in your car and travel faster and faster. Make vehicles slow down and share space with pedestrians, cyclists, all comers by bus or scooter.

### 1.2 Rates

I am uneasy about a rate rise of about 47% over the next ten years for all who are on a fixed income. This may force particularly single people out of their homes.

### 1.3 Proposed changes to existing rates, and new targeted rates

Excess water rate is a very good idea. I would also like to see a new targeted vehicle rate for people who have a garage and a parking space on their property but don't use it. Instead they park their several vehicles including business vehicles on the street often blocking access to others' pathways and entrances and certainly inconveniencing postal deliveries and visitor access.

### 1.4 Investing in upgrading and protecting our city's water networks

Essential.

### 1.5 Investing in our transport infrastructure

Safety on our roads is largely a question of driver responsibility and attitude. If speed, inattention, misuse of alcohol/drugs and careless use of a vehicle are not legislated against AND ENFORCED safety measures are a waste of money. However, some changes are advantageous such as traffic lights at the junction at Riccarton Road/Deans Avenue replacing the roundabout. The trial separation of cyclepath on Ferry Road using planter boxes and "railings" works well but NOT the distracting rainbow colours. All bike paths in critical areas need to be green.

### 1.6 Rubbish, recycling and organics

I'd like to see companies and shops offering a pay-back for returned glass bottles, aluminium cans and possibly other containers. They would then think twice about how they package their products because they don't want the responsibility. This might drive innovation.

### 1.7 Our facilities

It is depressing that cultural amenities such as libraries and the Art Gallery face considerable reduction in services and hours. Transfer funds from roads, please. Besides, libraries are the one safe haven for poorer citizens. Would a charge of \$10 per year to belong to our library network make any difference?

## 1.8 Our heritage, foreshore and parks

I believe the Red Zone should be left for the next two generations to interpret. It is sufficient to establish flood protection and a wide probably shared footpath and cycleway either side where practicable. All other "development" or built infrastructure should not take place for about 20 years. Life and lifestyles will change remarkably in this period. The next two generations will have different and possibly unforeseen requirements and wishes. It is very likely that simple pure greenspace will become highly treasured. People will need open natural places for refreshment and well-being. Of course, this area will need to be looked after and plantings of trees and community gardens and even livestock should be possible. These are not necessarily permanent but a very useful community endeavour for the interim.

2. Develop a programme of Friends relating to various parks and reserves. Friends would enjoy Council support in gardening, weeding, sweeping, rubbish collection and painting projects (of children's play equipment, for example). There needs to be a big push towards Council and Residents in partnership. Local pride and civic responsibility needs to be fostered in this way. People value more what they contribute towards and have a sense of ownership of.

## 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

### Comments

The Arts Centre is the jewel of our built heritage and must over time come back to life for the greatest number of people.

## 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

### Comments

I don't see the need to redevelopment Canterbury Museum. It is attractive as it is. From the visitor's perspective it doesn't need to be bigger. There is then too much to take in in one visit. I appreciate their travelling exhibitions (Voices of the Arctic) was excellent and I would prefer the money spent on such.

The McDougall is a much treasured and beautiful building. Can it be made safe for public access without base isolation? If so, run a competition for possible community uses.

## 1.11 Potential disposal of surplus Council-owned properties

Council needs to enter into partnership with social housing agencies such as the Methodist Mission and local private development companies such as Mike Greer and Hardie and Thompson, Edgeware to develop as much social housing as possible. It is not a good idea to sell off land to the highest bidder in these times when there is a huge shortage of modest housing. Heritage buildings are complex. What about approaching philanthropists IF there is a suitable use for such buildings. Most can be made residential. Look at Canary Wharf in London.

The Sexton's Cottage on Cambridge Terrace would make a splendid bicycle hire centre with some accommodation for cyclists only. Christchurch will become the cycling capital of NZ and possibly for a time of the world. Prepare for it. This will be the new tourism.

## 1.12 Any other comments:

I have lived in a small cottage in central Christchurch for 30 years and seen the many changes in residential dwellings here. I urge the Council to show more rigour in legislating for mixed housing developments not just in regard to size but re accessibility. Apartments can be fine but build blocks with a large common lift/s so that each individual apartment is on one floor. Then a mix of age and family size can inhabit the one floor. The lift area becomes a "bump area" so a kind of community forms on each level of the building. Townhouses across two or three floors are often not conducive to family sharing or to people whose mobility is compromised: yet all would like to live in the inner city. Lifts may be relatively expensive when compared to stairs but in terms of general well-being, they pay off.

Please forward these reflections to the appropriate department if not relevant here.

Submission by Dr CORIN MURFITT

Change to Rates Remission Policy

18<sup>th</sup> April 2021

#### Rates Remission Policy – Not-for-profit community-based organisations

**PARISH OF UPPER RICCARTON - YALDHURST** is extremely grateful for the support we receive from the Council and ratepayers in the form of rates remissions.

It has always been a challenge operating a community-based charity, and it is even more so the case in these difficult times. For us the rates remission is critical in helping support the provision of many community initiatives we are involved in, including:

- Dance and choral classes use our Halls at a nominal rental
- English language classes in our Halls - free
- Exercise classes in our Halls -free
- 'Coffee & Chat' in the York Room - free
- Anglican Pre-school - - presently 52 enrolled and 13 nominations at 25 Yaldhurst Rd
- Petersgate Counselling Centre – offers affordable counselling to the community – rate remission allows the Centre to subsidise the costs to our clients by cheaper fees
- St Peter[s church with its Rieger organ is used for recitals & concerts

- Reduced rental in our other houses on our property – students & new migrants

The Parish clergy, Vestry and parishioners are concerned that the proposed policy change has not been adequately considered by Council. We do not support the proposed change to the Rates Remission Policy because of our concerns regarding:

- 1. Insufficient Notice
- 1. Lack of Pre-Engagement
- 1. Lack of Information
- 1. Flawed Remission Assessment Criteria
- 1. No Cost/Benefit Analysis
- 1. Existing Policy is Adequate

We understand that there are other submitters who have provided Council with information and arguments regarding the above concerns, so given our limited time and resources we haven’t expanded on these in our submission.

Dr Corin Murfitt, Vicar’s Warden does not wish to speak to Council in support of our submission

16 April 2021

Christchurch City Council  
 Christchurch

By Email:

**RE: Waka Kotahi NZ Transport Agency submission**

We would like to take this opportunity to comment on the proposed funding changes to the Public Transport network.

**Public Transport infrastructure funding**

Waka Kotahi NZ Transport Agency supports in principle, the proposed investment on bus infrastructure improvements and renewal.

We are an investment partner in the Greater Christchurch Public Transport Business Case programme with Christchurch City Council, Environment Canterbury as well as the Selwyn and Waimakariri District Councils. The public transport infrastructure investment proposed in the Long-Term Plan aligns with the recommendations of this programme.

**Proposed Riccarton Public Transport lounge closures**

Waka Kotahi NZ Transport Agency has concerns about the closure of the Riccarton bus passenger lounge as proposed and does not support this decision.

There was no prior engagement with Waka Kotahi on the proposed bus closure. As a public transport investment partner, we believe prior engagement with us would have been appropriate.

The Riccarton Bus Interchange is the second busiest public transport location in Christchurch after the central city Interchange based on data on passenger boardings. In March 2018, there were 85,233 passenger boardings at the Riccarton Interchange. Also, in the same month, there were 186,113 boardings at the central interchange and 47,166 at the Northlands Interchange, the next busiest location. Riccarton gets 45% of the passenger boardings at the central Interchange and almost double the numbers at the next suburban location.

Riccarton therefore, is an important location in the Christchurch public transport network. Reducing the level of service by closing the bus lounge, is contrary to what we are working to achieve as Canterbury public transport partners.

We believe this lounge closure proposal needs further discussions with all public transport partners before the City Council makes its final decision.

**Kilmore Street and Salisbury Street project**

We note that this project has been moved further back and substantive spend on this project is from 2028/29. This delay will mean that the intended central city bus network cannot be fully implemented.

While we have concerns on the timing of this project, we would welcome further discussion with Council on the decision to move delivery of this project to later years than as originally indicated in the Accessible City Plan.

Waka Kotahi does not want to be heard in relation to these points.

Ngā Mihi

## **Submission to the Christchurch City Council LTP from the Canterbury Artificial Surfaces Trust - April 2021**

### **Background**

As Trustees of the Canterbury Artificial Surfaces Trust (CAST), our main objective is to provide the facilities (essentially artificial hockey playing surfaces), that enable the Canterbury Hockey Association (CHA) to satisfactorily run the game of hockey in Canterbury. In doing so, we work closely with CHA to ascertain their needs.

The September 2010 earthquake destroyed our previous major hockey facility at Porritt Park (2 artificial surfaces plus social/changing facilities) and CAST managed to rapidly construct 2 more artificial surfaces at Nunweek Park. This added to the single surface that we already had at Nunweek Park and the single turf at St Bedes College. CHA managed to run their competitions for many years on these 4 surfaces. The CCC's Nga Puna Wai (NPW) development of 2 turfs plus social/changing facilities, was an essential addition to the hockey playing facilities of Christchurch.

The artificial turf industry is developing rapidly and there are currently a number of options to select from when selecting a surface to play hockey on. To simplify things, these options can be broken into two broad areas:

*water-based surface* which requires water to be applied before playing,

*hybrid surface* which contains sand and doesn't require watering.

The latter are generally cheaper to install and operate (in part as they don't require water reticulation) but they are really only acceptable for lower level hockey (below Premier local hockey). Higher level games, such as internationals, interprovincial and including all national tournaments, require a water-based surface.

### **Current situation.**

Currently there are 7 full size artificial hockey surfaces in the greater Christchurch area.

Rangiora (1),

St Bedes College (1),

Nunweek Park (3)

Nga Puna Wai (2).

CAST owns and is responsible for the 3 surfaces and changing facilities at Nunweek Park.

The 3 turfs at Nunweek Park are all hybrids whereas the other 4 turfs listed above are all water-based turfs. The NPW facilities are of international quality but of course its major use is for community hockey.

At present, Canterbury has over 7000 registered hockey players which represents around 1000 players per turf. Hockey NZ has a guideline of 800 registered players per turf to enable adequate training and playing time per player, so our current Canterbury turf facilities do not reach this recommended level.

Given this situation and the objectives of our Trust, the CAST Trustees are advocating for more artificial surfaces to meet the current needs of the hockey playing community. In addition, given the current growth trends of the game, without further additions to the current number of artificial surfaces, Canterbury will fall further behind these guidelines.

It is also worth noting that because it is played on artificial surfaces, the game of hockey has a relatively small footprint in Christchurch parks. When artificial surfaces were first introduced to Christchurch, it was estimated that one surface would replace more than 12 grass fields in CCC parks. In addition, artificial surfaces do not require CCC attention for maintenance as this is carried out by the hockey community and paid for by them. Hockey is essentially a “pay for play” sport and this maintenance is part of the cost of playing the sport.

However, the capital cost of the artificial surfaces is quite high. Depending upon the geo tech nature of the land, a new artificial surface facility costs of the order of \$1.5-2.0M, not including the cost of the land. An artificial turf surface should last around 12 years and then a replacement surface will cost around \$350-400K. While the hockey community generally pays for the replacement of old surfaces, it requires financial assistance with any new installations.

### **LTP Submission**

The Canterbury hockey community is extremely grateful for the financial support it has received from the CCC over many years. There was excellent support for the effort to build two new turfs at Nunweek Park very rapidly after the loss of Porritt Park from the earthquake. Then again, the CCC made a tremendous financial commitment to construct NPW and thus provide the hockey community with a top class venue.

Given the above, CAST wishes to make a submission to the CCC for continued investment into NPW to allow for a 3<sup>rd</sup> artificial hockey surface to be constructed within the next 3 years. In the stage 1 construction, provision has been made for a 3<sup>rd</sup> hockey turf to be added and the CAST view is that the demands of the sport require that this be constructed within the next 3 years.

Further, the community use of NPW has been such that further CCC investment by way of advancing Stage 2 is now required. In Stage 2, we believe that there needs to be consideration of some sport administration facilities and increased social facilities.

Also, given the problems created by the wind on the site, more planting to help offset the adverse effects created by the wind, needs to be considered.

**Situation at a glance.**

**Hybrid turf;** a lower quality surface containing sand which can be used for domestic grade hockey but not for most national or international play. Cheaper than water based turf and doesn't require watering.

**Water based turf;** a higher quality surface required for international, national league and all national tournaments. Required to be kept wet for play.

**Current situation;** 4 water based turfs and 3 hybrid surfaces in greater Christchurch.

**Registered players per turf ratio;** Hockey NZ recommended ratio is 800 players per turf, Canterbury's ratio is about 1000 players per turf.

**CAST Trustees.** Selwyn Maister (Chair), Peter Cox, Ian Riach, Nick Harris.

Attachments: SUBMISSION TO CHRISTCHURCH CITY COUNCIL.docx

1307

Hi, submission attached.

**SUBMISSION TO CHRISTCHURCH CITY COUNCIL**  
**2021-31 LONG-TERM PLAN CONSULTATION**  
**18 April 2021**

Introduction

This is my submission on Christchurch City Council's Long Term Plan consultation.

 and our family have farmed here since 1850. I farm 5000 stock units of sheep and cattle

Currently I pay \$13,283.17 in rates to Christchurch City Council and Environment Canterbury.

My submission will focus on the proposed extension of the land drainage targeted rate to all properties, including those that are historically unserved by the Council's land drainage infrastructure.

I am shocked at this proposal which has come out of the blue with no prior consultation or engagement and only belated notice through a letter of 30 March 2021. I have worked out that I will pay \$510.54 in 2021/22 and this will increase to \$1531.62 in 2023/24. How anyone could describe this as a 'fairer' approach is beyond my comprehension.

This rate is for a service I do not receive or benefit from. The cost is oppressive for my farm and fails to recognise the work that I do as a landowner on my property to manage excess water. Mostly water from farms drains into wetlands, streams, rivers, and the sea rather than to any council land drainage infrastructure. I am responsible for managing my waterways, drains, and wetlands to standards set out by rules for freshwater management and rules that will be coming on indigenous biodiversity. This includes considerable spending on fencing, riparian planting, sediment management, etc., all of which I am expected to meet at my own cost.

This proposal should not proceed. Please think again for the sake of the rural community.

Yours sincerely

Will and Hanna Johns

Subject: SUBMISSION In support of Wharenui Swimming Pool remaining open

1308

We wish to put this submission forward in SUPPORT of the Wharenui Swimming Pool Complex REMAINING OPEN.

Our reasons for keeping the Wharenui Swimming Pool open are as follows:

#### 1. LOCATION AND PROXIMITY

- We personally chose the Wharenui Swimming Pool Complex because it was within walking distance from our home [REDACTED]. Our six children started in the Learn-to-Swim classes and all progressed through to the Squads (training up to five times per week.) Our family has supported the Wharenui Swim Club financially for 25 years plus we now have another generation (the grandchildren) swimming at the pool.
- The Wharenui Swimming Pool is located to three nearby bus routes – the 140 Russley/Mt Pleasant bus which stops right outside on Matipo Street, as well as the 120 Burnside/Spreydon bus and The Orbiter which both travel on Clarence Street (these stops are within 10 minutes' walking distance!) There are also numerous buses travelling down the busy Riccarton Road route – all only 10-15 minutes' walking distance from Westfield Mall to the Wharenui Swimming Pool.
- The Christchurch City Council's newest cycleway, the South Express Major Cycle Route, travels right down Elizabeth Street, Riccarton – right across the road from the Wharenui Swimming Pool.

So, not only can people walk and bus to the Wharenui Swimming Pool – they can also cycle to the complex!

The Christchurch City Council's Draft Long Term Plan (Consultation Document 2021-2031) states under the heading "Things to consider" (page 14) – "We need action on climate change" and one of the key points suggests "Supporting Christchurch residents to take their own climate change action, with advice and tools on sustainability." (Our emphasis.)

On page 15, under the same heading, there is also the statement saying, "We all need to make changes to the way we travel ..."

Climate change is an urgent issue facing us ... surely the city of Christchurch wants fewer people travelling on the roads. We also need to shorten the distance and time people need to travel to get to a swimming pool. With these visions in mind, keeping the Wharenui Swimming Pool Complex open would assist and encourage more people living in Riccarton and surrounding suburbs to use the facility due to quick and easy access.

#### 2. COMMUNITY CONNECTION (Keeping the Riccarton Community Connected with Each Other and to Other Communities in Christchurch)

- Adults, retirees, teenagers, children and toddlers come together for swimming exercise, Learn-to-Swim and Squad swimming from many different parts of Christchurch including local Riccarton swimmers.
- The Wharenui Swimming Pool has special times set aside for various community/sports groups to use their facilities eg children's birthday parties, private swimming for Muslim women's groups, kayak training, life-guard training. The Wharenui Swimming Club also holds in-house swimming competitions for their swim club members as well as encouraging children from the Learn-to-Swim classes to partake - this is a great social event allowing parents of the swimmers to get to know one another.
- Many local business people use the pool during their lunch break during the week.
- There are numerous local primary, intermediate schools and high schools who use the Wharenui Pool for swimming lessons/competitions for zones (Wharenui School, St Teresa's Catholic School, Medbury School and Villa Maria College.)

#### 3. EASE OF ACCESS AND USE OF FACILITIES FOR THE WHARENUI SWIM CLUB

- Present arrangements at the Wharenui Swimming Complex allow Wharenui competitive/squad swimmers reasonable access to the pool for training – can the Christchurch City Council guarantee the same access/availability once the Metro Sports Centre opens?

#### 4. SWIMMING IS AN ESSENTIAL LIFE-SKILL & PROMOTES HEALTHY EXERCISE

- Learning to swim is an essential life-skill which should be fully encouraged for all CCC residents regardless of age or where they live.
- Swimming is a healthy activity which anyone of any age can partake in.

On page 20 of CCC's "Our Draft Long Term Plan – Consultation Document 2021-2031" under the heading "Greater Christchurch 2050" a new strategic direction is planned and reads: "We need to look ahead and make sure we have the right plans, tools and resources to support the health and wellbeing of the people who live here and the environment we live in." (Our emphasis.)

As local residents and regular users of the Wharenui Swimming Pool in Riccarton our SUBMISSION IS AGAINST THE DECOMMISSIONING OF WHARENUI SWIMMING POOL as stated in the City Council's Long Term Plan 2021-2031.

Neil and Jane McLaughlin

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I am writing in support of keeping library hours as they are. I use the Upper Riccarton Library very frequently at all hours of the day (sometimes arriving at opening, other times late in the evening and there are always others using it as well. I am really grateful for this facility, I love being able to go there to read, browse, work, and study and I know there are many regulars who use it at all hours too. I also visit other libraries across the city more than once a year. Libraries are important not just for me but for people with reduced opportunities who may not have access to the internet or resources at home (or have no permanent home). It is a safe place you don't have to pay to be and where you can educate and entertain yourself for free. Help keep people safe and with increased opportunities for escaping poverty and other risks by keeping libraries open.

I would be incredibly disappointed if the hours, staff, or services were reduced. Things I would rather have than reduced library hours:

increased rates

extended delivery times on central city anchor projects

bins collected less frequently

reduced ours at other council facilities

worse roads and footpaths

longer debt repayments

I would consider most sacrifices worth it.

There are many other things about Christchurch that I love and would love to see improved but this is one area I am truly concerned about.

Thank you council members for the opportunity to be consulted and for making decisions on behalf of our communities. PLEASE don't lock people out of our libraries!

## 1.7 Our facilities

I am writing in support of keeping library hours as they are. I use the Upper Riccarton Library very frequently at all hours of the day (sometimes arriving at opening, other times late in the evening and there are always others using it as well. I am really grateful for this facility, I love being able to go there to read, browse, work, and study and I know there are many regulars who use it at all hours too. I also visit other libraries across the city more than once a year. Libraries are important not just for me but for people with reduced opportunities who may not have access to the internet or resources at home (or have no permanent home). It is a safe place you don't have to pay to be and where you can educate and entertain yourself for free. Help keep people safe and with increased opportunities for escaping poverty and other risks by keeping libraries open.

I would be incredibly disappointed if the hours, staff, or services were reduced. Things I would rather have than reduced library hours:

increased rates

extended delivery times on central city anchor projects

bins collected less frequently

reduced ours at other council facilities

worse roads and footpaths

longer debt repayments

I would consider most sacrifices worth it.

There are many other things about Christchurch that I love and would love to see improved but this is one area I am truly concerned about.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

Change the rating to unimproved land value. Land left unused should be rated at the same level as developed land, to discourage 'land banking' and encourage development. This is especially relevant in the CBD where vacant sections used for Wilson's parking are an eyesore.

1.5 Investing in our transport infrastructure

I support the council's support for cycling and walking.

I would like to see a more flexible regime for charging for parking. We need to discourage longterm free parking around the CBD, university, airport etc. but we also need to make allowances for local residents in these places. The possibility of easy parking in Christchurch stops people from using public transport.

1.6 Rubbish, recycling and organics

I support the council's waste management programme.

1.8 Our heritage, foreshore and parks

I strongly support this.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Postcode \_\_\_\_\_

**I am completing this submission:**☒ For myself or ☐ On behalf of a group or organisation (please tick one)Organisation name N/AYour role in the organisation N/ADo you wish to present your submission at a hearing? ☒ No ☐ Yes (if yes, you must provide contact details below)

Daytime phone number \_\_\_\_\_

So we can understand what different groups of people are thinking, could you please tell us your gender and age group.

Questions to think about when making your submission

Have we got the game plan right?

Our overarching proposal is to focus on a deliverable capital programme that helps drive our city forward, with particular investment in roads and transport infrastructure and in protecting and upgrading our water networks. We're borrowing for new projects that have long-term value, and ensuring that the debt repayments are spread fairly across the generations of ratepayers who will benefit from them. We're maintaining enough financial flexibility to be able to handle unplanned events, and we're finding permanent efficiencies in our day-to-day spending. We've managed to do all of this while keeping rates increases as affordable as possible.

Have we got the balance right? Have we prioritised the right things? If not, what changes would you like to see?

DO NOT AGREE WITH DEFUNDING  
OF WHARENUI POOL COMPLEX

SUGGEST CCC THINK OUTSIDE  
THE SQUARE WITH THIS SUGGESTION

2023/24	FUNDING	REDUCE TO	80%
2024/25	✓	✓	✓ 60%
2025/26	✓	✓	✓ 40%
2026/27	✓	✓	✓ 20%
2027/28	✓	✓	✓ NIL

Rates

We've considered a range of options for how best to achieve what we need to achieve while also keeping the average rates increase as affordable as possible.

What do you think of this plan for an average residential rates increase of 5 per cent for 2021/22 and an overall rates increase of 4 per cent over the next 10 years?

Any other comments:

VERY IMPORTANT TO  
KEEP WHARENUI ROLL  
COMPLEX AVAILABLE TO  
THE COMMUNITY  
CLOSING IT WOULD BE  
A DISASTER.

Subject: Rates for Land Drainage works

1317

## **Rates proposal for drainage works.**

To whom this may concern,

I have lived rurally for the last 32 years and have payed rates as I have owned and occupied these properties. I have never received town water, sewer nor have had curb and guttering, and mostly no garbage collection. I have asked in the past, "What do I pay rates for then?" The answer has always been "Sir, you pay for our administration costs, services such as the library and curb and guttering in the towns".

So, I feel that I already contribute towards the land drainage assets which have a significant focus on draining the central business district.

It would, in fact, be unfair, to further slug those on remote rural properties for work not done in their immediate district. Transparency must also exist around all works performed by council in any of the areas within its jurisdiction, so that we as rate payers can see where our money goes.

I do not need to travel to the CBD in times of flood, and as a rural dweller, recognise that at these times it is better and safer to stay on the property.

Rates are already expensive compared to other countries like Australia, for the services we get. I also have always felt that rates should be calculated on unimproved land values, not improved.

Therefore, I think Alternate Option 1 is the best, to rate only those properties with a specified distance of Certain Council Land Drainage Assets, as long as the "specified distance" is not unreasonable, and that the rates are proportional to the identified Council Land Drainage Assets within that distance.

yours sincerely,

Phillip Dodd

FROM: MIKE PEERS [REDACTED]

We do not wish to be heard in support of this submission.

RE: RATES FOR CENTRAL CITY WASTE COLLECTION

We support the Council's strategic goal of reducing solid waste but object to having pay \$300-\$400 per year in rates for the collection of the red, green and yellow bins when the Council does not provide this service to us. In the absence of Council providing this service, we pay privately through our Body Corp Levy for waste collection by EnviroWaste. We support waste minimisation and have all the same waste streams (green, yellow and red) as the Council provides.

- 1) reduce the general rate and waste minimisation levy for developments such as ours to reflect that no waste collection is provided, or;
- 2) amend your service contracts to provide the waste collection service.

[add anything further you wish to say here]

MIKE PEERS

### Feedback

#### 1.2 Rates

Yes, rates increases enable the continued improvement of the liveability of cities. All rates increases are good.

#### 1.3 Proposed changes to existing rates, and new targeted rates

I agree with overall increases in rates as these can enable the city to spend further on creating a more liveable city. Through rates increases, further increases in public transport and active transport can occur. I agree with an excess water rate, bringing Christchurch inline with other cities in New Zealand where water is metered and charged accordingly.

#### 1.4 Investing in upgrading and protecting our city's water networks

Yes

#### 1.5 Investing in our transport infrastructure

There is not enough spending on active transport and public transport. While, I recognise that some of the roads, footpaths and safety budget (Street upgrades - \$46.4 million, Footpath renewal - \$59.5 million, Kerb and channel renewals - \$68.2 million) will help to increase public transport and active transport (walk and bike) uptake, there is still too little given in the public transport (\$96.7 million) and active transport (cycling - \$235 million) specific budgets. Active transport has a range of benefits to sustainability/climate change, public health, the transport system, children's development and the economic benefits. Separated cycleways will make active modes of transport more attractive, disincentivise car dependency, and reduce transport emissions.

For climate change adaption and climate change mitigation to occur in our transport system we need far more emphasis on active (walk, bike, other wheels) and public transport. There is far too much dependency on cars.

If we transition our vehicle fleet to electric, this is only one step in the equation as we still have to solve congestion problems. The only way to solve congestion is through moving people to other forms of transport. For this we need separated cycleways that cater to all users (8 to 80 year olds) and disabled people, we need footpaths that are a pleasant place to be and we need robust, resilient and effective public transport systems. There are other factors at play here, including a need for greater density in our cities to enable mass transit routes to be really effective and mixed use - developments. Mixed use developments/communities are good

because they offer safety and vibrancy for people. By having businesses and residential properties in the same building there will always be people using the street. We must legislatively enable this to happen for better towns and cities. We MUST stop urban sprawl as soon as possible as it makes our cities less economically prosperous and locks in decades of emissions, as well as creating a host of problems for the transport system.

1.6 Rubbish, recycling and organics  
Yes

1.7 Our facilities  
Yes, community facilities are essential for the creation of a place of being for communities. Libraries play a key role in connecting people of all ages/abilities/ethnicities/genders. Through this 'bumping' of people different to one-self, we can enable a greater awareness of the problems that other people face - increasing overall social capital and social contract.

1.8 Our heritage, foreshore and parks  
Yes

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties  
Yes this is okay.

From: CCC Plan  
Subject: LTP submission - Riccarton Bus Lounge

### Form Summary

**Name**

Nick Reid

**Are you against the closure of the Riccarton Bus Lounges?**

Yes, I am AGAINST the closure of the Riccarton Bus Lounge. The bus lounge is an essential facility for public transport users, providing shelter from the elements and a well lit safe environment for shoppers, commuters, the youth and the elderly on the busiest public transport corridor in Christchurch.

**Do you think under the proposed Long Term Plan, the council should increase funding for bus stop improvements (shelters, seating, etc.) and for bus lanes (reduces traffic and reduces travel time for buses)?**

Yes, I SUPPORT increasing funding for bus stop improvements and bus lanes,

**Comments?**

Bus lanes must be a priority, if we are to meet our climate targets

### Feedback

1.1 Have we got the game plan right?

It looks ok overall but I'm concerned about the closure of the Riccarton bus lounges, these are important for the safety of people taking the bus (especially women and minorities, who face harrassment on public transport frequently). Safety should be central to decisions made around the public transport system.

Also, the reduction of hours for Christchurch Art Gallery and Turanga seems completely arbitrary.

1.2 Rates

Fine but will anything be done to stop landlords increasing rent?

1.7 Our facilities

Closing the Riccarton bus lounge will make it less safe to take the bus. As a woman who has faced harrassment many times on the bus in Christchurch, the bus lounges feel a lot safer (especially when it is dark). Please do not close them, this will discourage people from taking public transport in the area. I am aware no other suburb has bus lounges, but Riccarton has a high percentage of university students and young people, so it makes sense that it is there. Safety should be a key consideration in developing a better public transport system.

Reducing hours of Turanga and the Art Gallery also seem arbitrary, and to not address the needs of the community.

1.12 Any other comments:

Please take safety more into consideration especially around public transport

1.3 Proposed changes to existing rates, and new targeted rates

We live and farm sheep and crops on a 20 hectare property and have done since 1989. We already receive a land drainage service via a large central drain across our land which is owned and adequately maintained by Environment Canterbury for which we pay an annual rate. It would be grossly unfair to apply a drainage rate to our property on top of that which we already pay to ECan, for no additional service to us.

Land drainage rates should be imposed on the developments of properties that will substantially benefit from drainage solutions, in other words the user or anyone who directly benefits from drainage works should pay for a land drainage service.

We object strongly to a Christchurch City Council rate imposed on our land for no additional service or benefit to us.

**We support Alternative Option 1 : Set the land drainage rate on properties receiving a land drainage service.**

### Feedback

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

For me, a theatre director, the Arts Centre is at the very heart of arts in Christchurch, and always has been. I learnt many performing arts skills here as a child and teenager, worked for years at the old Court Theatre in the middle of the Arts Centre, and now use two of the Arts Centre's rehearsal rooms for our upcoming production of "The Secret Garden" which we will perform in July at the most beautiful venue in town, the Great Hall. I could have chosen other rehearsal spaces and venues for the performances, but the Arts Centre has the most incredible feel about it- you get this great sense of history and being included in something really special working there, which other newer spaces just don't have. I'm sure a lot of people who have grown up here, as I have, would tell you the same thing. Please, please do all you can to allow future generations to enjoy this unparalleled environment.

## Feedback

1.1 Have we got the game plan right?

Please leave the libraries alone.

1.5 Investing in our transport infrastructure

Please keep building the cycleways.

1.7 Our facilities

Please leave the library opening hours as they are.

Council spends untold trying to develop community. Libraries form and support communities organically. Closing early will basically shut down the opportunities that so many different groups have to get together., and for individuals to be among other people and to feel connected while be unconnected.. you don't need this spelling out. You know it. But for the sake of this exercise:

- Youth who can have their own space in the early evening
- Special interest groups who can have a bright, welcoming space to meet after work/after children have been fed whatever (personally for me, this includes my Toastmasters club committee)
- Friends who can meet and don't want to go to a bar
- Students needing a warm place to study
- People who just want to feel connected to community
- Organisations wanting to put on an event in the one of the event spaces

And many more. But to me, the above are reasons enough. Thanks.

# Long Term Plan

## PSA submission to Christchurch City Council

16 April 2021

### Background

The New Zealand Public Service Association Te Pūkenga Here Tikanga Mahi (the PSA) is the largest trade union in New Zealand with over 77,000 members. We are a democratic organisation representing members in the public service, the wider state sector (the district health boards, crown research institutes, and other crown entities), state-owned enterprises, local government, tertiary education institutions, and non-governmental organisations working in the health, social services, and community sectors.

We are an organisation that is committed to the principles of the Treaty of Waitangi.

The PSA has been advocating for strong, innovative, and effective public and community services since our establishment in 1913. People join the PSA to negotiate their terms of employment collectively, to have a voice within their workplace and to have an independent public voice on the quality of public and community services and how they're delivered.

### The PSA in Christchurch

The PSA represents approximately 8,263 members who live and work in Christchurch, 900 of whom work for the Christchurch City Council.

All of our members have a strong interest, as residents of Christchurch, in the long-term plan and its aspirations and intentions. Those members employed by the Christchurch City Council have an additional interest in how the long term plan will affect their jobs and working conditions.

This submission has been prepared by local PSA members who work for the Christchurch City Council. We wish to speak to this submission, and the contact person is

Shane Lean– PSA Organiser [shane.lean@psa.org.nz](mailto:shane.lean@psa.org.nz)

## PSA vision for Local Government

Local democracy is a cornerstone value for the PSA as vibrant communities are underpinned by strong democratic institutions that aim to support and maximise citizen participation in local decisions. We support public ownership and control of services and facilities.

The PSA believes that the constitutional independence of local government must be supported and strengthened.

## Key recommendations on the draft long term plan

### *Key issue 1: Proposed investment Package - Councils financial response*

Our recommendations on the proposed investment package – Councils financial response include the following:

#### Living Wage

- ***We seek a commitment that Council become an accredited Living Wage Employer and extend the payment of a living wage to all contracted staff including those contracted to Council Controlled Organisations.***
  - *We support the work that the Christchurch City Council has undertaken recently to pay all directly employed council staff a living wage.*

#### Pay equity

- **We strongly urge Christchurch City Council to set aside budget for pay equity settlements**
  - PSA has lodged an equal pay claim with the Christchurch City council relating to Library assistants. This will need to be funded once resolved,
  - Increasing salaries across professions affected by pay equity claims to avoid wage compression

#### Rating proposal and debt limits

- **PSA support the proposed 5% rating increase**
- **PSA support increased debt to fund infrastructure and services.**

#### Climate change

- **PSA support the council's proposed climate change initiatives**

- **PSA strongly urge the Council to work closely with central government so that efforts to address climate change can be coordinated and a shared funding model agreed to.**

#### Provision of Council services

- **PSA consider services and assets should, in principle, be retained in-house rather than be outsourced.**
- **PSA is against the privatisation of public services.**
- **Asset sales: PSA strongly supports the retention of publicly owned assets in public ownership and control.**
  - We oppose the sale of assets that are large-scale, strategically important to the economic, environmental, cultural and social well-being of the community, and the sale of which will disadvantage future generations.
- **PSA strongly oppose any cuts to Council services, particularly where these will impact on the services available to residents.**

## Further information in support of our key recommendations:

### Living Wage

PSA acknowledge and thank Council for the work done thus far to pay the living wage to directly employed staff. We seek a commitment that Council become an accredited Living Wage Employer and extend the payment of a living wage to all contracted staff including those contracted to Council Controlled Organisations.

PSA urge Council to make it a requirement of all procurement for services by Council and CCO's making it a requirement of the contract that wages be pegged (as a minimum) to the living wage set each year by Living Wage Aotearoa.

PSA urge the Council to become a leader in the community and become accredited living wage employers, as is the case for local government in Wellington and Dunedin.

The Living Wage emerged as a response to growing poverty and inequality that continues to hold back so many Kiwi workers, their families, and our economy. The Living Wage concept is very simple, yet such a powerful alternative – it's the hourly wage a worker needs to pay for the necessities of life and participate as an active citizen in the community. It reflects the basic expenses of workers and their families such as food, transportation, housing and childcare, and is calculated independently each year by the New Zealand Family Centre Social Policy Unit.

The Living Wage is 73 percent of median disposable household income in New Zealand and 61 percent of the mean disposable income for households with two adults and two children respectively.

The Living Wage rate is voluntary and as of the 01 April 2021 it was announced that it will be \$22.75 per hour, however accredited Living Wage Employers must implement it by September 1, 2021. If the Christchurch City Council were to follow the lead of other large Councils and become an accredited employer, then this would be the mechanism to make the adjustments annually. It should also be noted that the current adult minimum wage is now \$20.00 per hour.

## Pay Equity

In 2019, PSA raised a pay equity claim under the Equal Pay Act 1972 on behalf of Library Assistants (or similar work) with 6 Councils - Auckland, Tauranga, Hamilton, Wellington, Christchurch and Dunedin. The Councils have accepted that the claim is arguable, and we have commenced a joint assessment process of the library assistant (or similar) work to establish the level of undervaluation.

This quantum will not be known until that work is completed, which is scheduled to take a further year with a view to reaching a settlement in 2021.

Whilst the PSA initially raised this claim on behalf of their members, the amendments to the Equal Pay Act in 2020, now means that this claim will cover all staff in these positions, approximately 1000 people across the 6 councils.

The gender pay gap for the overall NZ economy is 10% as at November 2020.

Central government agencies have made progress on reducing the gender pay gap as follows:

- Progress in decreasing our gender pay gap in the last year, from 14.4% (June 2019) to 8.7% (June 2020).
- the gender balanced leadership in tiers 2 and 3 in Senior Leadership roles as at June 2020 is 67% women

One of the potential features of pay equity settlements is that they are designed to disrupt relativities in existing pay systems, and this can lead to the need to consider whether or not other occupations are similarly currently or historically undervalued because they are female dominated occupations. Further claims and remedial action may need to be planned and budgeted for.

## **Rating proposal and debt limits**

PSA are pleased to see the proposed short-term increase in Council borrowing.

PSA believe that any financial decisions should be taken in the context of the Council's overall financial situation and its strategic objectives, rather than just responding to an immediate and short-term loss of revenue.

The cost of borrowing has never been cheaper and borrowing to invest is prudent.

## **Climate change**

PSA support the proposed climate change initiatives and it is great to see this in the long term plan.

Further to this PSA have made these recommendations to other councils, of which some of these are already cover by your plan.

- aligns itself to the carbon neutral timeframes in line with central government.
- adhere to the CEMARS measuring tools
- advances the electrification of transport
- infrastructure for recharging vehicles
- partnering with central government for subsidies for electric vehicles
- seeks adequate funding from central government for climate change initiatives, e.g.: funding for infrastructure.
- advocates for resource recovery of the electric battery recycling.
- requiring public transport provision in new development
- seeks more central government funding that allows for subsidising public transport to encourage uptake so that there is no impact back on staff.

## **Provision of Council services**

The PSA's view is that services (and assets) should, in principle, be retained in-house rather than be outsourced or removed to a CCO. A key issue for PSA members is ensuring that CCOs and other contracted service providers remain fully accountable to the Council and to the service users. Additionally, we want assurance that Council will require that contractors follow 'responsible contractor' policies, including best practice employment requirements,

health and safety best practice, a commitment to workforce and career development and job security.

The council are proposing to make the follow changes

### **Citizen and Customer Services**

Most people now choose to use our online and phone services to make Council payments. With that number growing, the Council has reviewed the demand across the city for face-to-face financial transactions at our service desks. Although we still have high demand at 10 of our 12 locations, in particular our sites with NZ Post, the service desks at Akaroa and Lyttelton have minimal transactions.

The Council is therefore proposing to close these service desks. All other existing services at these locations, such as the library services at Lyttelton, will remain unchanged.

### **Libraries and Information Unit**

The Council has considered when our libraries are at their busiest and when it can reduce opening hours without too much impact on how, and when, the community likes to use their local library.

These changes would also mean that library opening hours are more consistent across the city.

The Council's proposals include:

Tūranga closing at 7pm, rather than 8pm, on weekdays, but opening for some public holidays.

Aranui and Matuku Takotako: Sumner Centre Library closes on Sundays to align with our other small libraries.

All larger libraries will be open until 6pm on weekdays. South Library, Te Hāpua: Halswell Centre are currently open until 7pm. Linwood Library is open until 7pm one day a week, and Fendalton and Upper Riccarton Libraries currently shut at 8pm.

Reducing the Fingertip Library to a five-day (Monday to Friday) service from the current seven-day operation.

Discontinuing the weekly Mobile Library from July 2022, to coincide with the retirement of the mobile van. Consultation with current users of this service is to be undertaken in the year prior to explore alternative service options to meet users' needs.

### **Christchurch Art Gallery Te Puna o Waiwhetū**

The ongoing border closures as a result of COVID-19 have meant Christchurch Art Gallery is currently welcoming fewer overseas visitors. Combined with the pandemic's impact on the Council's finances overall, this has meant the Council has had to take a close look at how affordable the Gallery's services are.

The Council proposes to:

Reduce the Gallery's weekly Wednesday late night programme to one late Wednesday a month.

Reduce the Gallery's public programme and education offering

We are opposed to reductions in service levels because these adversely impact upon the more vulnerable sections of our community and do not correlate with the policies objectives and desired outcomes associated with pursuing the four well-beings: promoting the social, economic, environmental, and cultural well-being of their communities, taking a sustainable development approach.

Over and above these identified issues, we believe that the reputational damage to both The Christchurch City Council and Christchurch itself would be considerable should services be reduced, or services outsourced.

### **Staff retention**

PSA strongly advocate that the loyalty of the workforce to continue deliver service to the citizens of Christchurch.

Reduction or capping staffing levels will increase workload and stress and will prevent staff from delivering services to the high level that the citizens of Christchurch expect, and place The Christchurch Council at risk in terms of its obligations under the Health and Safety at Work Act 2015.

To: Moher, Bruce  
Subject: Attention Bruce Moher

[REDACTED] letter dated 30/03/21 from you.

Dear Bruce Moher,  
The history of land drainage at

Along the south and east boundary was a stream bed that eventually flowed into Nottingham Stream. Wigram Road and [REDACTED] Wigram Road drained into the stream. Downstream, the stream was filled in, therefore the drainage from Wigram Road and [REDACTED] Wigram Road had nowhere to go.

At my cost, I pump the stormwater from [REDACTED] Wigram Road and also the water that drains from [REDACTED] Wigram Road and properties at [REDACTED] Rempstone Drive, onto my property.

I am happy to pay the extra in land drainage rates as the Council see it as a fairer approach, as long as the council takes over the cost and responsibility of pumping the stormwater from [REDACTED] Wigram Road, as this would be a fairer approach.

Waiting for your reply by 3rd May 2021.

Yours sincerely  
John Partridge

### Feedback

#### 1.2 Rates

The continual rates increases (when there are no wage/salary increases) severely reduce discretionary spending money within many families, this affects sports clubs, small businesses etc

#### 1.3 Proposed changes to existing rates, and new targeted rates

It is unfair to charge all properties for drainage when the properties do not benefit in any way from the drainage and are on land that is naturally extremely well drained. To say that land owners benefit from the city being drained is true, but to be fair then most residents of Selwyn who benefit from the CBD being drained should also contribute!

Excess water rates unfairly target larger families who often pay more rates via being on a larger property, but use less transport infrastructure (having a lesser number of vehicles per household)

#### 1.6 Rubbish, recycling and organics

Charging more for rubbish disposal results in more dumping especially on country roads, in water ways which then have to be individually picked up

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Rates Remissions Submission - 210416

## Christchurch City Council

---

Submission by Anglican Parish of Heathcote Mt Pleasant  
Change to Rates Remission Policy  
18<sup>th</sup> April 2021

**Rates Remission Policy – Not-for-profit community-based organisations**

The Anglican Parish of Heathcote - Mt Pleasant is extremely grateful for the support we receive from the Council and ratepayers in the form of rates remissions.

It has always been a challenge operating a community-based charity, and it is even more so the case in these difficult times. For us the rates remission is critical in helping support the provision of many community initiatives we are involved in, including:

- Providing regular Sunday worship services and at special times such as Christmas and Easter.
- Providing study groups to promote spiritual growth and understanding.
- Providing pastoral support for the infirm and the elderly.
- Engaging with the local community in the provision of services for weddings and funerals.
- Fostering a “Twinkle Tots” group for pre-school children and their parents.
- Supporting fellowship and service groups such as Association of Anglican Women and hosting local community groups such as Guides, Spinners and Aikido.
- Promoting community lunches and preparing and distributing Christmas hampers.
- Undertaking an initiative to use surplus land to provide affordable environmentally sensitive housing for people over 60.
- Maintaining an historic church at Heathcote.

The Anglican Parish of Heathcote - Mt Pleasant is concerned that the proposed policy change has not been adequately considered by Council. We do not support the proposed change to the Rates Remission Policy because of our concerns regarding:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

We understand that there are other submitters who have provided Council with information and arguments regarding the above concerns, so given our limited time and resources we haven't expanded on these in our submission.

The Anglican Parish of Heathcote - Mt Pleasant does not wish to speak to Council in support of our submission.

1.1 Have we got the game plan right?

Please consider the repercussions of Climate Change more!!

1.2 Rates

fine

1.3 Proposed changes to existing rates, and new targeted rates

fine

1.5 Investing in our transport infrastructure

more support for cyclists

make public transport free!!

1.6 Rubbish, recycling and organics

The more money for organics and recycling the better!!

1.7 Our facilities

I believe the Riccarton Rd Bus Lounge should stay open!!!

1.8 Our heritage, foreshore and parks

at least 11%

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

It s definitely worth while, it will become such a focus for our visitor industry!!

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

#### 1.11 Potential disposal of surplus Council-owned properties

I request the land described as 27 Hunters Rd and 42 Te Whero Ave be removed from the LTP and the fast track disposal. The normal process for disposal ie Community Board and public consultation should be used instead!

The current process does NOT adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of Consultation)

Thorough community consultation should be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a consultation process.

Decisions on whether to proceed with the sale of the land should be made by the council on the recommendations of the Community Board. Decisions on the sale should not just be made by Council staff only.

Disposal of the land requires all sorts of consideration regarding use of the gullies, development of required infrastructure for new housing etc.

How can all this be kept out of the public eye???????

### Feedback

1.11 Potential disposal of surplus Council-owned properties

27 Hunters Road and 42 Whero Avenue, Diamond Harbour: I am writing to request that the Council please engage in full community consultation with Community Board input before disposing of these Council-owned properties. Diamond Harbour is a small rural community with one main access road into the village from Teddington. If these two large properties were sold for residential housing, for example, the quiet rural nature of the village would be negatively affected. Roding would be compromised by increased traffic, and some potential access points - Ngatea Road and Hunters Road, would be dangerous and unsuitable for increased traffic. Hunters Road is the main entrance to Diamond Harbour School and Early Learning Centre. Increased traffic on this road would compromise safety for children and families of the school. Ngatea Road is currently a safe and quiet street which is used as part of a safe walkway to the school and early learning centre for children and their families, thereby avoiding having to walk along the busy main road (Marine Drive). Ngatea Road also has a sharp bend which makes it really only suitable for one-way traffic. This street, its occupants and the school walkway users would all be detrimentally affected if there was increased traffic. Homes on the higher side of Ngatea Road currently back onto farmland. Housing development would negatively impact all the residents in this quiet street, turning it into a suburban neighbourhood rather than a quiet rural area. Council land on these two sites also includes a number of gullies which have been planted and tended by dedicated volunteers, eager to encourage native bush regeneration and to enhance the extensive walkways that have been developed. It would be critical that these gullies are protected.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

There needs to be more money invested in businesses that can support our climate change goals.

1.2 Rates

Rates increase is appropriate for the plan.

1.4 Investing in upgrading and protecting our city's water networks

Clearly this in great need but it is a considerable outlay of council funds.

1.5 Investing in our transport infrastructure

Give electric / hybrid cars use of bus /T2 lanes, this will encourage people to make a better choice of vehicle.

Walking around the city is easy but not pleasant, there is a lot of pollution from vehicles and I worry about damage caused by air pollution. Joining more cycleways to footpaths away from cars would be fantastic. I see this is already being done with the Papanui parallel.

Buses should all be electric, this is not new technology, instead of painting them, you need to consider their environmental impact.

1.6 Rubbish, recycling and organics

More money must be spent on waste reduction and recovery. Recycling is done poorly as a whole, incentivising people to recycle correctly is essential. For example, don't have just one bin for all recyclables, separate plastic, glass and paper/card at the source, this will lead to less confusion as to what goes in each bin.

Give households a monthly target, if they reach it they get a reward for example cash back/gift voucher or rate

reduction.

The same goes for water usage, instead of charging more for excess use, reward a reduction in use. These things can be monitored simply from an app.

1.7 Our facilities

It is reasonable to reduce the opening hours of these facilities in order to save money.

1.8 Our heritage, foreshore and parks

Yes.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

## SUBMISSION TO CHRISTCHURCH CITY COUNCIL

### 2021-31 LONG-TERM PLAN CONSULTATION

18 April 2021

Name: Goughs Bay Farms Ltd

#### Introduction

This is my submission on Christchurch City Council's Long Term Plan consultation.

We farm at [REDACTED], or family has farmed on Banks Peninsula for 152 years. We farm 3500 sheep and 250 cows and dry stock.

Currently I pay \$24778.68 to Christchurch City Council as well as *a unknown amount* to Environment Canterbury.

My submission will focus on the proposed extension of the land drainage targeted rate to all properties, including those that are historically unserved by the Council's land drainage infrastructure.

I am shocked at this proposal which has come out of the blue with no prior consultation or engagement and only belated notice through a letter of 30 March 2021. I have worked out that an increase of \$2973.45 2021/22 and this will increase to \$3330.26 in 2023/24. How anyone could describe this as a 'fairer' approach is beyond my comprehension.

This rate is for a service I do not receive or benefit from. The cost is oppressive for my farm and fails to recognise the work that I do as a landowner on my property to manage excess water. Mostly water from farms drains into wetlands, streams, rivers, and the sea rather than to any council land drainage infrastructure. I am responsible for managing my waterways, drains, and wetlands to standards set out by rules for freshwater management and rules that will be coming on indigenous biodiversity. This includes considerable spending on fencing, riparian planting, sediment management, etc., all of which I am expected to meet at my own cost.

This proposal should not proceed. Please think again for the sake of the rural community.

Yours sincerely

Goughs Bay farms Ltd

John, Carol, George & Emma Masfield

# GREENING THE EAST VISION:

Adults and children have multiple opportunities to connect to, and be enriched by, the green, biodiverse and healthy neighbourhood of Inner City East/Linwood, while discovering the natural and cultural heritage of the area and its unique character.

I support the *Greening the East* vision and its guiding outcomes of *Connect, Enrich, Discover*.

I ask the Council to set aside funding in its Long Term Plan to make the *Greening the East* Plan a reality.

The reasons I support this are:

I would like to corroborate by suggesting scooter free pavements, enforced, if not also cycle free. Someway to facilitate an (easy walk home) safe from the cultural classes etc

### Feedback

#### 1.2 Rates

I am happy with the total rates planned, but I think there is a serious question to be considered regarding the nature of apportionment - its balance - particularly within the CBD.

It's a question of what makes up the CV - the capital valuation. As I understand it (and the Draft Plan does not seem to refer to it), the CV has two components: land value and improvements.

There's a serious problem in the CBD with distressingly large areas with no buildings on them - areas of desert or carparking or both. Presumably it suits the owners not to proceed with development and simply to hold the land and allow it to appreciate in value.

This is very bad for Christchurch, and makes much of the city singularly unattractive to residents, businesses and visitors.

I assume that a major reason for the situation is that the rates bill for undeveloped land is low, and there is no incentive for development.

Therefore I strongly urge that consideration be given to changing the relative proportions of CV between land value and improvements. A significantly greater proportion of the CV should be applied to land value and less to improvements. In this way, a normal commercial building will have no change in rates, but the rates payable for bare sections will have a substantial increase.

I would see this as a cost-neutral solution (from the CCC point of view) to a serious current problem, and urge that it be given serious consideration.

#### 1.5 Investing in our transport infrastructure

Two things. firstly, I would hope that "transport infrastructure" would include parking provisions, as they are a significant contributor to transport - and emissions - management within the city.

Secondly, I would like the city to move ahead with a rail-based public transport system. I have read many objections, but they miss two important points.

The first is that light rail seems to produce an increased sense of excitement and interest in the city centre. I've seen this in Portland, Sydney, Buffalo and Bilbao. It gives a lift to the community.

The second is that rail gives a sense of security, of dependability to developers wanting to build in the outskirts. Bus lanes will not do this.

It's clear that the shape of Christchurch has been changing from an amorphous circle to a string of beads as it spreads out from Rolleston to Rangiora and Kaiapoi. I've lived in places where a park and ride system has worked very well.

1.8 Our heritage, foreshore and parks

I'd like to see us take on board the exciting idea of Christchurch becoming a National Park City. It's an idea I've heard from Colin Meurk, who no doubt will be making a submission on this. It seems to me it would really be a goer. It would be good from the environmental and wildlife point of view, which I strongly support. It would also increase the attractiveness of the city as a tourist and visitor destination. How, indeed, could you not see this as something to push for, strongly?

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Arts Centre is a wonderful community facility, and with care and adequate support it could become even better. It is part of an essential and attractive hub whose other components are the Museum, the Art Gallery, the Botanic Gardens and, eventually, the Robert McDougall Gallery.

Good system theory here: look at things as a whole and not as individual parts, because letting one component fail could lead to collapse of the whole, as, for example, Beeching's disastrous reform of the British rail system in the 1950s.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

Make sure the base isolation system - and excellent idea - includes provision for strong vertical ground motion.

## Feedback

1.1 Have we got the game plan right?

I do not agree with the closure of Wharenuui Pool; it is a much loved and much utilised local facility at the heart of the community.

1.2 Rates

I am not against above inflation rate rises, if there is clear improvements in the city and the community. To be fair, I think Christchurch is a very dynamic city in this respect and there are many new initiatives, which I agree with; such as the new cycle lanes.

1.3 Proposed changes to existing rates, and new targeted rates

I am all for user pays when it comes to water charges. Long overdue.

1.4 Investing in upgrading and protecting our city's water networks

I am totally against water chlorination. If the upgrades results in keeping our world class water chlorine free, then I am all for it.

1.5 Investing in our transport infrastructure

I would like to see a tram line from the University to the central city, as proposed by Bob Parker a number of years ago. A missed opportunity, as trams are very successful when re-introduced overseas.

1.6 Rubbish, recycling and organics

I would like to see a bookable 'free' tipping service for mattresses and large pieces of furniture/ware, like in other countries; as people are just fly tipping them on the pavements themselves; making Christchurch look 3rd world and 2nd rate. A constant problem and eyesore for the local communities.

1.7 Our facilities

Wharanui pool is the jewel in the crown of our local suburb. Closing it will tear the heart out of many peoples lives. The new metro centre is not convenient and will be a nightmare for accessing by car.

1.8 Our heritage, foreshore and parks

I am all for investing in a genuinely clean, green city and country.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
No

Comments  
To my mind, the Arts Centre has been a disappointment and doesn't deserve lots of extra funding.

1.11 Potential disposal of surplus Council-owned properties  
Yes, dispose of surplus properties.

### Feedback

#### 1.2 Rates

This is a huge increase over 10 years. Some serious fiscal accountability needs to be in place.

Currently the burden of rates falls unevenly on property owners as opposed to facility users. A move to 'user pays' could possibly help the current housing crisis by lessening the burden on property owners which is currently passed on to tenants via increasingly necessary rent hikes.

#### 1.3 Proposed changes to existing rates, and new targeted rates

Broadly in favour of water rates but with the proviso that commercial users (profit driven bottlers for example as well as rural irrigators) should be paying the highest rates.

We still want to maintain Christchurch's identity as the garden city and would want the level of usage not to discourage gardeners and home veg growers.

#### 1.4 Investing in upgrading and protecting our city's water networks

As above I agree with improvements to infrastructure as deemed necessary so long as these improvements are not taken advantage of by overseas, profit driven entities at the expense of local ratepayers....user pays.

#### 1.5 Investing in our transport infrastructure

As a user of public transport I am happy with the current situation. Sadly our small population and the spread out nature of our surrounding areas does not warrant increases in the public transport network in the style of European cities. There will always be a major reliance on cars.

The buzzword 'carbon emissions' can be misleading when all the components of the making of electric battery cars are taken into account.

#### 1.6 Rubbish, recycling and organics

Very happy with current practices.

## 1.7 Our facilities

Definitely in favour of bus lounges being closed.

As a frequent library user I would be sad to see hours cut and the library van disbanded but pragmatically I would prefer quality over quantity.

## 1.8 Our heritage, foreshore and parks

If 11 per cent can keep parks to their current standard I am happy. I look forward to the new red Zone facilities.

## 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

## Comments

As a frequent visitor to the Arts Centre I would like to express my support for the Special Heritage(Arts Centre) rate that is proposed in the Longterm Plan.

Christchurch has lost so much of its character and history in the rebuild that maintaining the Arts Centre is a vital component in defining Christchurch in the future.

## 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

## Comments

The city has managed without the Gallery for some time and whilst I am in favour of heritage protection the location and size of the gallery does not in my opinion warrant rescue.

## 1.11 Potential disposal of surplus Council-owned properties

Heritage again! If these can be onsold to an entity prepared to restore and manage I would be happy for them to leave council hands. Demolition would be another discussion.

## Christchurch City Council

Submission  
Change to Rates Remission Policy  
18<sup>th</sup> April 2021

### **Rates Remission Policy – Not-for-profit community-based organisations**

I Martin Sivertsen, on behalf of the Christchurch West Catholic Parish makes this submission to Christchurch City Council on the proposed change to the Rates Remission Policy.

It is important to firstly state that the many charities which benefit from rates remissions provided by the Council (and effectively the ratepayers), are extremely grateful for this support. For charities the rates remission helps support the provision of critical social activities to communities, and in many cases is an important contributor to their financial sustainability. This support for not-for-profits and the recognition of the good they do in the community is appropriate.

#### **Executive Summary:**

The proposed change to the Rates Remission Policy is not supported due to (i) Insufficient Notice, (ii) Lack of Pre-Engagement, (iii) Lack of Information, (iv) Flawed Remission Assessment Criteria, (v) No Cost/Benefit Analysis, and (vi) the Existing Policy is Adequate. This submission provides supporting arguments and information for each of these concerns. Any of these concerns on their own provide justification for the withdrawal or, at the very least, reconsideration in the future in a more robust and fair manner. Collectively, they provide a compelling argument for Council to withdraw the proposal.

#### **Discussion:**

This submission prefers to use the less corporate term of 'charities' as opposed to "not-for-profit community-based organisations".

Clear and supporting information is provided below, under clear headings, in support of the position taken in this submission:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

#### *1. Insufficient Notice*

Given the very large number of charities that this proposal would affect (including those that must file and disclose additional financial information to continue receiving a remission) and that reality that most charities struggle with lack of resources (people and funds), it is considered that insufficient notice has been provided to ensure that charities could appropriately engage in the submission process. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### *2. Lack of Pre-Engagement*

It is reasonable to expect that any proposal by Council to change the important policies affecting ratepayers and the community would be well researched and that a level of pre-engagement with representatives of those affected had taken place to help inform and validate the proposed change. The paper "Background Material on Proposed Changes to Rates for 2021/22" does not provide confirmation that either has taken place and is reflected in serious shortcomings of the proposed change that are discussed later in this submission. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### *3. Lack of Information*

The "Background Material on Proposed Changes to Rates for 2021/22" is a very brief document and thin on any objective information. It is inadequate for any meaningful consultation.

No substantive and objective information has been provided by Council of the supposed issue and how it could be best addressed. For example:

- What are the total remissions each year to charities?
- How many charities does Council consider are 'wealthy' and it views as not needing rates remission?
- What is the estimate of \$300k reduction in annual rates remissions based on?
- What would be the cost of implementing the proposal on an annual basis?
- What would the magnitude of loss of rates remission be for affected charities?
- What analysis was undertaken to support cash and investments at 50 times the base services rates for which a remission could be received as being the factor applied for cut-off of eligibility?
- Could some affected charities be forced to reduce the level of their charitable activities due to the loss of the rates remission?
- How many charities would be unfairly burdened by the additional filing requirements to Council to maintain their rates remissions, in order for Council to cease remissions to (a likely) very few charities?

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### *4. Flawed Remission Assessment Criteria*

The proposed change to the rates remission eligibility assessment is blunt. Most particularly, inadequate consideration has been given to the use and definition of cash and investments as a proxy for determining whether a charity is 'wealthy'. The current proposal is too much of a blunt instrument and will cause more harm than intended if not 'nuanced'. Example of unintended consequences of the proposed policy change are provided below:

#### *Charity A*

This charity provides critical social services to vulnerable members of the community. It employs social workers, a manager, and is supported by many volunteers. It is recognised by the Council and government as providing vital social services. Its budget is extremely tight and all the staff are aware that they have limited job security due to the challenges of maintaining adequate levels of funding. At the end of the financial year the charity made a financial loss. It had eight months liquidity at year end – however almost all of this was grants in advance and recorded as liabilities in the financial statements. This pushed the charity over the 50X rates remission eligibility and it now faces having to reduce its services to offset this cost increase.

#### *Charity B*

This charity provides broad and valuable services to the community. It has just a few staff and many volunteers. It too is recognised by the Council and government as providing vital social services. It too has an extremely tight budget and consistently runs at breakeven or a loss. The charity relies significantly on bequests and endowments to fund its operations. Most of these bequests and endowments are held legally in trust and are restricted as to what they can be spent on, with the two largest endowments specifying that the funds capital must be maintained and only the income is available for specific activities. Despite having inadequate 'free cash' to fund its charitable activities, the value of the capital protected endowments pushes it over the 50X rates remission eligibility and it must now reduce its services to offset this cost increase.

#### *Charity C and Charity D*

There are two very similar charities - C and D. Both provide similar social services but in different locations. They operate on a breakeven basis, supported by grants, donations and income from modest (and separate) commercial premises they own. Charity C is forced to sell its commercial property under compulsory acquisition by the Crown. The income it receives from investing the sale proceeds is the same as the net return it received when it owned the property. The sale pushes Charity C over the 50X rates remission eligibility (it does not have a specific capital project to which it will put the sale proceeds) and it must now reduce its services to offset this cost increase, while Charity D which has the same level of assets continues to receive a remission.

The above examples show that crudely applying cash and investments as a proxy for whether a charity is wealthy and not deserving/requiring the support of a rates remission is flawed. Further, the proposed eligibility criteria will have significantly detrimental consequences for some charities. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### *5. No Cost/Benefit Analysis*

The background material does not provide any analysis of the costs of implementation of the changes to this policy. It would be reasonable to expect the appointment of suitably qualified chartered accountants to be able to read and interpret the financial statements being submitted and have sufficient knowledge to make informed decisions about what cash and investments should or should not be included in any calculation.

It is also reasonable to expect that there will be increased engagement with charities, on an ongoing basis, over the filing of returns (financial statements) to Council and application of the rates remission eligibility criteria. There will also be additional ancillary costs and associated overheads for this and the financial statement review activity.

There is also the collective burden across all charities receiving rates remissions of filing information, including their financial statements, to Council. The time and cost of this to charities has not been considered in the proposal.

It is fair to reach the conclusion that the cost to Council and affected charities of this policy change would outweigh the estimated (but unsupported) benefit of \$300k plus GST in rates remissions per annum. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### 6. Existing Policy is Adequate

There is no discussion in the proposal as to whether the existing Rates Remission Policy is adequate and does not require change to enable Council to reduce or cease rates remissions to charities it reasonably concludes to be wealthy and not requiring such support. Further, the Council paper acknowledges that not making the change will "make it easier for some not-for-profit based organisations to provide more public benefits from their activities". Any change that will make it harder for not-for-profits to provide public benefits is counter to the principle of the remission.

The current policy provides for "Up to 50% remission (of the rates that would be payable if they were fully rateable) on targeted rates for standard water supply, sewerage, and land drainage" (emphasis added) and that the "extent of remission [if any] shall be determined at the absolute discretion of the Council" (emphasis added). The current Council policy already provides sufficient discretion to decline rates remissions to any charity where it deems that support is not warranted.

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

Kind Regards

Martin Sivertsen  
Chairman of Mission Support Council

### Feedback

1.1 Have we got the game plan right?

Submission re Mobile Library below.

1.7 Our facilities

Proposed closure of Mobile Library: the CCC asks the question, "Have we got it right? "

The answer, in relation to the mobile library, is No.

The rationale given by CCC is that usage has been declining. As a resident in a Lifestyle Village (Alpine View), I believe there are several points to be made.

1) There seems to be no information **on paper** delivered specifically to retirement, rest home and lifestyle villages about the services that the mobile library provides. A large number of elderly people do not use the internet. Detailed information (in large enough print) specifically designed to inform the elderly of all the relevant services provided by the mobile library, including dates and times at each location, would help those who cannot access that online. In a large retirement complex the bus is not visible to most residents; even driving briefly

around a village ringing a bell (or similar), like the ice-cream trucks of old, would be a wonderful reminder to residents to visit the library in its designated spot. It would surprise me greatly if usage did not then increase significantly.

2) Many of us who have led very active, busy lives, did not necessarily do a lot of reading during our careers. On retirement, many people comment that they are enjoying reading much more than they used to. Most of us have had to drastically downsize our own home libraries, so rely on the provision of library services.

3) Reduced mobility for many residents makes those people almost entirely dependant on the mobile library for their books, magazines, DVDs. Personally I am reasonably fit and do not use a walker. However I cannot contemplate taking a bus into town and then walking to Turanga. Nor can I consider driving and trying to park a car in the middle of the city. Parklands Library requires car transport.

4) At \_\_\_\_\_ we are fortunate to have the venerable \_\_\_\_\_ run a Book Club for residents. This further stimulates the desire to try new reading material that has been reviewed at our meetings. I don't believe the Book Club would survive without our access to the Mobile Library.

5) If the mobile library van needs to be replaced, due to age, is it not possible to purchase a second-hand bus in good condition and furnish it with the existing internal shelving, etc? Although recognising the need to cut costs, I would like to suggest that there are other means that are at the City Library's disposal that do not so harshly reduce the wellbeing of the elderly.

Thank-you for considering this submission.

Naku noa nō

Kath Bennett

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

##### Comments

Proposed closure of Mobile Library: the CCC asks the question, "Have we got it right? "

The answer, in relation to mobile library, is No.

The rationale is that usage has been declining. As a resident in a Lifestyle Village (Alpine View), I believe there are several points to be made.

1) There seems to be no information **on paper** delivered specifically to retirement, rest home and lifestyle villages about the services that the mobile library provides. A large number of elderly people do not use the internet. Detailed information (in large enough print) specifically designed to inform the elderly of all the relevant services provided by the mobile library, including dates and times at each location, would help those who cannot access that online. In a large complex the bus is not visible to most residents;

2) Many of us who have led very active, busy lives, did not necessarily do a lot of reading during our careers. On retirement, many people comment that they are enjoying reading much more than they used to. Most of us have had to drastically downsize our own home libraries, so rely on the provision of library services.

3) Reduced mobility for many residents makes those people almost entirely dependant on the mobile library for their books, magazines, DVDs. Personally I am reasonably fit and do not use a walker. However I cannot contemplate taking a bus into town and then walking to Turanga, nor can I consider driving and trying to park a car in the middle of the city.

4) At \_\_\_\_\_ we are fortunate to have the venerable \_\_\_\_\_ run a Book Club for residents. This further

stimulates the desire to try new reading material that has been reviewed at our meetings. I don't believe the Book Club would survive without our access to the Mobile Library.

**Disabled Persons Assembly NZ**

April 2021

To Christchurch City Council on the 10 Year Plan 2021-2031

## **Disabled Persons Assembly NZ**

Contact:

**Prudence Walker**

**Chief Executive**

**Email:**

**Ingrid Robertson**

**Kaituitui – Christchurch**

**Email:**

## Introducing Disabled Persons Assembly NZ

---

The Disabled Persons Assembly NZ (DPA) is a pan-impairment disabled person's organisation that works to realise an equitable society, where all disabled people (of all impairment types and including women, Māori, Pasifika, young people) are able to direct their own lives. DPA works to improve social indicators for disabled people and for disabled people to be recognised as valued members of society. DPA and its members work with the wider disability community, other DPOs, government agencies, service providers, international disability organisations, and the public by:

telling our stories and identifying systemic barriers

developing and advocating for solutions

celebrating innovation and good practice

## The submission

---

DPA New Zealand welcomes this opportunity to submit on the Christchurch City Council's 10 Year Plan 2021-31.

DPA welcomes the focus on new developments such as the Canterbury Multi-Use Arena, Metro Sports Facility and the Otakaro Avon River Corridor programme. In this submission, we will be asking that these and other infrastructural developments and upgrades planned by Council be made accessible according to Universal Design principles.

DPA also notes the plans to improve transport infrastructure and plans to maintain and improve roads, footpaths and cycleways. In this submission, we will also be asking that these be made accessible according to Universal Design standards.

DPA is pleased to see that the Christchurch City Council recognises the urgency of climate change which will impact on everyone and will have particularly adverse ramifications for disabled people if it is not reversed in the long-term. In this submission, we will be calling for the Council to take full heed of the Climate Change Commission's final recommendations to Government.

DPA is pleased to see acknowledgement of the impacts of Covid-19 on the economic, social and cultural fabric of the city. The pandemic, coming as it did in the wake of our major earthquakes in 2010-11, the March 15 terrorist attack and other natural events which have impacted the city, saw the community come together again to deal this time with a health-based threat. Yet, the Covid crisis also saw

disabled people experience some adverse outcomes in terms of facing difficulties in accessing adequate income, food, transport, healthcare and other essential services, especially during the lockdown period. We strongly believe that this 10 Year Plan must continue to address the impacts of the various crises of the last decade by ensuring that disabled people and our representative disabled persons organisations are at the table when it comes to making the decisions which will drive Christchurch's future.

DPA, however, has concerns about a number of proposals that have been mooted as part of this plan. We will be commenting upon these with particular reference to the need to either not proceed with or reconsider these proposals due to the impact they will have on the disability community in Otautahi-Christchurch.

### **The United Nations Convention on the Rights of Persons with Disabilities (UNCRPD)**

The UNCRPD Articles most relevant to our submission are:

- Article 4.3: Involving disabled people and our organisations in decisions that affect us
- Article 5: Equality and non-discrimination
- Article 9: Accessibility
- Article 19: Living independently and being included in the community
- Article 20: Personal mobility

## **DPA's recommendations**

---

DPA strongly recommends that the Otakaro Avon River Corridor be fully inclusive and accessible with footpaths and walkways designed according to Universal Design principles. Also, any cycle ways should be constructed in such a way that they are parallel to any pedestrian walkways or footpaths to ensure that safety is ensured for both pedestrians and cyclists, ensure that space is preserved for mobility parking and that disabled people be involved alongside others in the co-design of this infrastructure.

DPA strongly recommends that the Draft Development Contributions Policy include a clause specifying that Council will remit a certain percentage of development fees in return for developers building housing or other residential developments to Universal Design standards. This will ensure that private and community sector housing

developments are made accessible for all users across the course of a building's lifetime.

DPA strongly recommends that the proposed developments to be funded and/or built by Council, namely, the Canterbury Multi-Use Arena, Metro Sports Facility, Performing Arts Precinct, Hornby Library, Te Pou Toetoe: Linwood Pool be fully accessible, built to Universal Design standards and that disabled people be fully involved alongside other stakeholders in the co-design of these facilities.

DPA strongly recommends that when it comes to building a more integrated transport network including improved footpaths, cycleways and roading, and when designing systems that make our transport system safer and more environmentally friendly that disabled people should be fully involved alongside other stakeholders in the co-design process. Any cycling, footpath and roading changes should include consideration of adequate space for mobility parking as well.

DPA strongly recommends that, when it comes to the issue of whether Council should invest more or less in terms of both capital and operational spending, recommends it invests more so that cuts don't have to be made to such things as community grants or to building programmes. Indeed, Covid-19 has presented challenges for nearly all non-government organisations and communities. While spending more in both capital and operational terms will entail rates increases, we would ask that Council mitigates these through promoting the greater availability of rates relief grants and utilise every other mechanism possible to ensure that the burden of any increase falls less on low-income households, as many disabled people who own their own homes are in this category.

DPA strongly recommends that the proposed closure of the mobile library service not proceed in the absence of a suitable alternative service. This service is used by a high number of disabled and older people who find it hard to access physical libraries in our communities. In the absence of a suitable alternative, the closure of this service should not be considered and should continue and even be expanded, made more accessible and aim to connect with currently under-serviced communities through the use of electric-powered library buses.

DPA strongly recommends that the proposed closure of the Riccarton Road Bus Lounges not proceed in the absence of a suitable alternative. The bus lounges enable disabled and older people to have a warm, dry place to sit in while waiting for buses and also gives people a chance to embark and disembark on journeys from a readily accessible building. Safety concerns should be given weight in any decision making too around the proposal given that there are concerns from some of our members, and other members of the public, around safety issues at the Eastgate bus shelters, particularly at night. Therefore, if the Orbiter service was re-arranged in such a way that it started and finished at the Riccarton Bus Lounge, then this would be an acceptable solution for us. For all the above reasons, we would prefer that the

lounges remain open, be upgraded and further integrated into both existing and new public transport networks.

DPA strongly recommends that the Council implements environmentally friendly policies that will contribute to both the national and global fight against climate change and base these around (and even go beyond) the Climate Change Commission's forthcoming recommendations. Climate change poses as much of a threat, if not more, to disabled people as it will, for example, potentially require more internal migration away from lower lying communities where many disabled people (especially those with mobility or age-related impairments) live. We would like to avoid that outcome as much as possible. Also, disabled people should be involved in the planning, design and implementation of environmental and climate change mitigation policies, especially those which involve the Christchurch City Council.

DPA welcomes this plan as providing a blueprint for the future of Christchurch City going forward. We approve of the general direction of the plan, but we also wish for the concerns we have raised in this submission to be fully addressed.

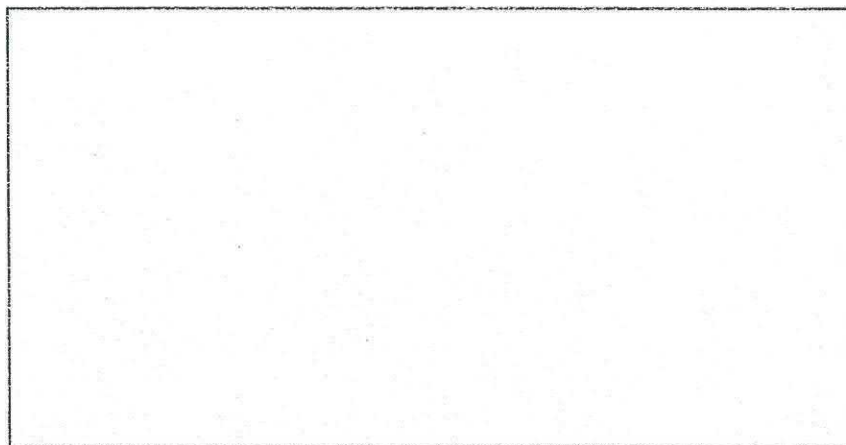

**GREENING THE EAST VISION:**

Adults and children have multiple opportunities to connect to, and be enriched by, the green, biodiverse and healthy neighbourhood of Inner City East/Linwood, while discovering the natural and cultural heritage of the area and its unique character.

I support the *Greening the East* vision and its guiding outcomes of *Connect, Enrich, Discover*.

I ask the Council to set aside funding in its Long Term Plan to make the *Greening the East* Plan a reality.

The reasons I support this are:

### Feedback

#### 1.7 Our facilities

As long term partners, The Chartwell Trust advocates to retain the full education and public programme budget and the open late nights programme. The Trust, as a high profile nationally significant charity for the visual arts, does not support the reduction in services with regards to Christchurch Art Gallery Te Puna o Waiwhetū. We do not support the reduction of the programmes the Gallery offers to the public and school groups by 25% per annum. We do not support the cuts to access to the cultural toanga within the Gallery's collections that will be impacted by the reduction of the Gallery's weekly Wednesday late night opening hours to one late Wednesday a month.

Re: The importance of Art Gallery educational and public programmes for children and members of the public.

The Chartwell Trust has financially supported a number of educational and public programmes at the Christchurch Art Gallery because we are committed to the creative future of Aotearoa, New Zealand. We have read the research which shows that the public, including school aged children, benefit from these programmes in a number of ways. Now more than ever, with Covid causing levels of unprecedented uncertainty and fear, as well as anxiety in the community, we need access to the arts for many reasons including the ability to imagine a different future through development of creative minds.

Many school students often don't have the chance to be creative, so experiencing art galleries may open them up to communities they didn't know existed or weren't aware they could be a part of. Often children are denied the opportunity to be creative at home. Some parents don't see any worth in letting children explore this side of themselves when jobs in creative fields are often disregarded as less financially rewarding.

Taking students to art galleries will help them engage with people in the arts community, and let them see the value of creative work.

It will also give them an opportunity to get involved and explore their own creativity, which is something that many don't get the chance to do.

Young children bring a wide range of experiences with them when they encounter programmes at art museums. They use their minds, senses, and bodies to respond to and interpret artworks. When given opportunities for self-expression, choice, and control during an art museum visit, children are empowered in this environment. When welcomed and empowered in this environment, young children 'actively connect' with the art museum and its contents, providing imaginative insights and new perspectives about the artworks (Jeffers, 1999, p. 50). Unlike inexperienced adult visitors, young children do not feel they have to be experts to respond to artworks. They are open-minded and spontaneous in their responses and interpretations. This ability to feel confident in their creative minds benefits them in all aspects of their life, from school to family to friendships and relationships.

Museum educators believe that encouraging open-ended dialogue, inquiry, exploration of ideas, and spontaneous responses is more important than providing viewers of art with fixed meanings or interpretations (Durant, 1996; Macgregor, 2001; Piscitelli et al, 2003). Art Gallery public and education programmes are important as they allow dialogue and engagement that values what each person – adult and child – has to say. The richness and variety of perceptions within any group programme benefits each individual, ‘as they all learn to see through different lenses, to understand and appreciate different ways of seeing and being’ (Durant, 1996, p. 20).

This ability to access new way of thinking and a diversity of life experiences as expressed in engagement with art, means that art boosts the emotional intelligence of people who experience it, giving them experiences of empathy and exposing them to new worldviews and ideas. These are some of the key skills people use to function in society. Even if a child doesn’t aspire to be an artist or work in the art world, visiting art galleries can be hugely beneficial for their personal development.

Not only will it help them develop personally, but it will also give them a greater sense of the historical identity they hold, as well as the identities of others. Seeing art made by your own culture, and the cultures of others, can really help contextualise your place in the world, what ideologies were held in the past, and how the human experience has changed.

There’s no shortage of research indicating the benefits of museum visits for children, and for educational and public programmes that are shaped to engage with them. They can provide memorable, immersive learning experiences, provoke imagination, introduce unknown worlds and subject matter, and offer unique environments for quality time with family.

"Art gives us an experience like nothing else can, a chance to connect, understand, and explore perceptions, feelings, and innovative thoughts. Museums provide a space for reflection, experimentation, inspiration, creativity, enjoyment and allow for authentic learning experiences and play. Bringing children to the museum reveals children and adults as being equally active in learning, putting them on equal standing as they create a shared understanding. It’s a democratic process." —Jamee Yung, Education Coordinator, Weisman Art Museum

We make the submission that cuts of 25% per annum to the Christchurch Art Gallery’s education and public programmes budget will deny children and members of the public these benefits and their right to learn. The young generation are the future of our country and as citizens in a democracy, we all want them to succeed, be empathetic, and curious, knowledge seeking creative leaders for the future. Cuts to these programmes is restricting these opportunities for a wide range of people.

As a charitable trust, we support public galleries around New Zealand and we therefore ask you to address these proposed cuts and see them as damaging to our creative future. These cuts jeopardize the creative future for approximately 5,500 people. That is a lot of creative potential that is lost for the city of Christchurch.

Yours sincerely

Sue Gardiner

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

The balance is largely right. The top priority is responding to climate change. That includes sustainability. I agree with the over-arching goals.

Road expenditure should only be to improve roads that are used by public transport. I encourage you to resist expenditure on roading to please private car use only. And limit road expenditure largely to areas of the city close to amenities. The city growth design is currently encouraging sprawl - and this should change, as it is contrary to the needs of addressing climate change. Keep the city growth close to amenities and public transport. Instead put that "roading" money otherwise in sprawling areas into cycle ways such as the northern motorway one to encourage e-cyclists (and normal cyclists too!). Especially as 150K more residents are anticipated. As an aside, if water is being addressed, ensure that road resurfacing is aligned with under-road infrastructure - too much wasteful double re-surfacing of roads occurred during earthquake repairs. So I disagree with your prioritising roads ahead of cycleways.

Cycling work expenditure - a high priority, I agree. These cycleways are more important than roads per se.

Redzone expenditure - yes, agree

No mention of the Arts Centre. The Great Hall is a taonga for the city. I strongly recommend the city financially ensuring the Arts Centre precinct can thrive - it is currently at great risk.

Ongoing Rates increase to achieve budget balancing. I agree. I would go further and say that the rates increases follow the needs of the plan. The plan should not be reduced in future in order to limit rate increases. I presume the city council will be making a substantial submission to the forthcoming review of local councils - that should be done with due care so needs to be budgeted for.

1.2 Rates

I agree with rates increases to balance the budget. As above, rates increases may need to be adjusted upwards in future to meet

the Plan - the Plan should not be compromised to limit rates increases to those suggested in the Plan

1.3 Proposed changes to existing rates, and new targeted rates

Strong yes to targeted rates for the Arts Centre - provided is seen as an absolute requirement, and does not get watered down!

Yes, to excess water charge.

1.4 Investing in upgrading and protecting our city’s water networks

Water is criticalto life in the city. No compromises.

1.5 Investing in our transport infrastructure

The detail of Transport infrastructure expenditure should all be assessed through the climate change lens. Is the proposed activity assisting or harming or neutral to climate change needs? All transport proposals should be prioritised according to their climate change affects, virtually without exception

1.6 Rubbish, recycling and organics

Agree

1.7 Our facilities

If you are intending to apply changes based on current level of use, then I disagree. The expenditure should be based on long term worth to the community over the length of the Plan - it is short sighted to base it on current use only as that will bed in inconsistencies and hinder achieving the long term goal of the Plan..

1.8 Our heritage, foreshore and parks

Yes.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

I doubt that that level of funding is sufficient. The finding should be to ensure the Arts Centre remains a viable entity for the lifetime of the Plan.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

Probably yes. But a better explanation of why it is needed would be nice. To make it earthquake secure, and usebal in civil emergencies -is that the reason?

1.11 Potential disposal of surplus Council-owned properties

Not a biggy - doubt it needs such widespread consultation - unless some pressure groups are blocking a sensible decision.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Do not close Wharenui Pool, it would be a tragedy for myself and the community. I was horrified to learn that it was even a prospect to close due to the building of the bloated and inconvenient metro centre.

1.2 Rates

i am very supportive of many of the initiatives and accept above inflation rate rises may be the cost to bring these to fruition.

1.3 Proposed changes to existing rates, and new targeted rates

Targeting through user pays only seems fair.

1.4 Investing in upgrading and protecting our city's water networks

Keep our water pure and free from chlorine and flourine. It is the envy of the World. Get parents to take responsibility for their children's teeth instead.

1.5 Investing in our transport infrastructure

Develop the tram network to be practical and convenient, like in Melbourne. Rather than just an idiotic tourist loop. They are a tremendous asset when re-introduced across the world.

1.6 Rubbish, recycling and organics

Protecting the environment for future generations and promoting recycling initiatives are very important.

1.7 Our facilities

Wharenui pool is at the heart of our community. If you tear it out, then it will be very costly in non-monetary terms.

1.8 Our heritage, foreshore and parks

Foreshore, parks and open spaces are vital for mental well being and quality of life. I'm all for the spend.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

The Arts Centre does not offer much interest.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No
Comments
Arts in the city are a disappointment.
1.11 Potential disposal of surplus Council-owned properties
Yes, if not used, but can be protected if heritage, why not?

SUBMISSION TO CHRISTCHURCH CITY COUNCIL  
2021-31 LONG-TERM PLAN CONSULTATION  
18 April 2021

Paul de Latour

#### Introduction

This is my submission on Christchurch City Council's Long Term Plan consultation.

I farm at Okains Bay and I have farmed here since 1996, I farm 220 fattening steers

Currently I pay \$3330.93 to Christchurch City Council as well as \$888.39 to Environment Canterbury.

My submission will focus on the proposed extension of the land drainage targeted rate to all properties, including those that are historically unserved by the Council's land drainage infrastructure.

I am shocked at this proposal which has come out of the blue with no prior consultation or engagement and only belated notice through a letter of 30 March 2021. I have worked out that I will pay \$178.16 in 2021/2022 and this will increase to \$534.48 in 2023/24. How anyone could describe this as a 'fairer' approach is beyond my comprehension.

This rate is for a service I do not receive or benefit from. The cost is oppressive for my farm and fails to recognise the work that I do as a landowner on my property to manage excess water. Mostly water from farms drains into wetlands, streams, rivers, and the sea rather than to any council land drainage infrastructure. I am responsible for managing my waterways, drains, and wetlands to standards set out by rules for freshwater management and rules that will be coming on indigenous biodiversity. This includes considerable spending on fencing, riparian planting, sediment management, etc., all of which I am expected to meet at my own cost.

This proposal should not proceed. Please think again for the sake of the rural community.

Yours faithfully

Paul de Latour

**GREENING THE EAST VISION:**

Adults and children have multiple opportunities to connect to, and be enriched by, the green, biodiverse and healthy neighbourhood of Inner City East/Linwood, while discovering the natural and cultural heritage of the area and its unique character.

I support the *Greening the East* vision and its guiding outcomes of *Connect, Enrich, Discover*.

I ask the Council to set aside funding in its Long Term Plan to make the *Greening the East* Plan a reality.

## SUBMISSION TO CCC LONG TERM PLAN 2021

**FROM:** MATTHEW HEMENS,

17/4/2021

We do not wish to be heard in support of this submission.

Tēnā koutou

### **RE: RATES FOR CENTRAL CITY WASTE COLLECTION**

We support the submission from the Atlas Quarter Body Corporate in relation to rates for the collection of solid waste.

We support the Council's strategic goal of reducing solid waste but object to having pay \$300-\$400 per year in rates for the collection of the red, green and yellow bins when the Council does not provide this service to us. In the absence of Council providing this service, we pay privately through our Body Corp Levy for waste collection by EnviroWaste. We support waste minimisation and have all the same waste streams (green, yellow and red) as the Council provides.

**We ask that the Council either:**

- 1) reduce the general rate and waste minimisation levy for developments such as ours to reflect that no waste collection is provided, or;**
- 2) amend your service contracts to provide the waste collection service.**

**Ngā mihi**

*Matt Hemens*

**GREENING THE EAST VISION:**

### Feedback

1.1 Have we got the game plan right?

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

<sup>35</sup><sub>17</sub> they flood when it rains

<sup>35</sup><sub>17</sub> they are slippery with ice on frosty mornings

<sup>35</sup><sub>17</sub> when most teams train in the evenings they are slippery and damp from night-time dew

<sup>35</sup><sub>17</sub> part of one court is permanently wet and covered in a slick film because it never dries out

<sup>35</sup><sub>17</sub> they have extensive cracking filled with vegetation

<sup>35</sup><sub>17</sub> they have holes for tennis net poles that are no longer used

The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow. However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

### Submission Change to Rates Remission Policy 18th April 2021

The Social Service Council of the Diocese of Christchurch is the legal name of Anglican Care which encompasses several community facing operations, one of which is the Christchurch City Mission.

The City Mission has received a remission on its rates for several years now, for which we are very grateful.

In any given year the City Mission is required to raise more than \$8 million to undertake its services. Within this approx. \$2 million are received from a variety of central government agencies, and the remainder of the support coming in a variety of ways from the community of Ōtautahi; we are truly here for the people and undertake all we do at the privilege of our people.

The CCC's current remission support is significant in its assistance in enabling the City Mission to provide on-going services to those who are most vulnerable within our community.

The Christchurch City Mission is a social service agency promoting justice and equal opportunity for all in our community. Within this, more specifically the City Mission seeks to support, care and advocate for those who are marginalised through social and economic factors and are at risk through unemployment, inadequate housing, family breakdown, addiction, financial difficulties, abuse or other difficulties.

Work is undertaken in both crisis and preventative ways to improve the quality of people's lives and support is provided to encourage meaningful, societal change.

In short, we care for the most vulnerable amongst the community of which we served in excess of 62,000 members of our Christchurch community throughout the past year.

The need for each of the City Mission's services is great and our reach to support, serve and hold hope for the people of Ōtautahi is significant.

The remissions we receive include the Local Government (Rating) Act Schedule 1 non-ratable land categories for the following:

- 272 Hereford St, City Mission Chapel – clause 9 religious' worship
- 276 Hereford St, City Mission main building including the Men's Night Shelter and Foodbank – clause 21 free maintenance or relief of persons in need
- 228 Worcester St, Women's Night Shelter - clause 21 free maintenance or relief of persons in need

In addition to the remissions listed above, the Christchurch City Council has provided further remissions at its own discretion under the Council's Rates Remission Policy #1 significant community benefit to the properties listed below:

- 272 Hereford St, City Mission Chapel – 50% of the remaining sewerage and water rates
- 276 Hereford St, City Mission main building including the Men's Night Shelter and Foodbank – 50% of the remaining sewerage and water rates
- 228 Worcester St, Women's Night Shelter – 50% of the remaining sewerage and water rates
- 275 Hereford St, City Mission old building including Short Term Supported Accommodation project supported by the Council in 2015 and opportunity

We do not receive remissions on other properties used by the Mission at 269 & 271 Hereford St.

We acknowledge that being a large not-for-profit organization we hold cash and investment funds more than the suggested 50 times the assessed Council rates.

However, these funds:

- are used to support the social services of the
  - Christchurch City Mission in Christchurch
  - our Mid-Canterbury Advocacy social services team based in Ashburton
  - our South Canterbury social services team based in Timaru
  - other community projects within our Diocese including our door to door energy poverty project in high deprivation areas of Christchurch.
- are used to support the long-term viability and sustainability of the organisation so that services we currently provide can continue
- include the capital building fund, circa \$10 million, for our new building at the City Mission campus
- include legal trusts where funds have been bequeathed to us to be used for specific projects/areas or where only the interest on those funds may be used

We accept that any remissions we receive either must be recovered from other ratepayers or reduce the Council's overall revenue and that Council must maintain financial prudence and resilience.

We respectfully ask that in the new long-term plan, the Council continue to honour the significant community benefit remissions that we currently receive which would assist the Mission to provide its on-going services to our whanau in need.

### Feedback

1.1 Have we got the game plan right?

My comments specifically relate to the Land Drainage Targeted rate proposal.

1.2 Rates

It is well in excess of predicted inflation.

1.3 Proposed changes to existing rates, and new targeted rates

I consider that the proposed land drainage targeted rate focusses unfairly on Banks Peninsula rural properties. As your document says the CCC land drainage assets have a significant focus on draining the CBD of Christchurch and expensive flood protection assets primarily to protect the low lying areas of Christchurch. The rural areas of Banks Peninsula basically are self draining and not flood prone and do not get any benefit from these CBD and flood protection assets. If rural properties are to pay an additional fee based on capital value then that targeted rate should reflect this and be much lower than for properties that benefit such as urban properties in Christchurch. For our property for example: it drains to ground and natural waterways and yet under this proposal we would have to pay \$576 per year additional rates based on this years Rates Details. This seems unreasonable. Other larger farms on Banks Peninsula will have higher Capital values and get no identifiable benefit from CCC land drainage assets. Effectively this proposed rate is requiring the country to pay for the city's assets.

I would agree with Alternative Option 1 except it is a binary option. If a CCC officer determines even a minor land drainage service then the land owner would have to pay the full land drainage rate. The cost would not be in reasonable relative to the benefit.

1.4 Investing in upgrading and protecting our city's water networks

The CCC certainly need to invest in Akaroa water infrastructure. The current situation shows a complete lack of infrastructure maintenance. It needs serious attention and investment.

1.5 Investing in our transport infrastructure

No comment.

1.6 Rubbish, recycling and organics

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.4 Investing in upgrading and protecting our city's water networks

I strongly support any plans to remove chlorine from the water. The additional of chlorine is incredibly disappointing and has been in place for significantly longer than originally proposed. Please continue to prioritise this. I also strongly support the continual upgrade and improvement of water quality across Canterbury and the ageing infrastructure.

I am very disappointed in the decision to allow water to be bottled and sent offshore by a commercial enterprise and strongly oppose the planned introduction of the excess water charge while this practice is allowed. If the permit for bottling and selling water is removed I would be more amenable to a water tax, but this should be considered in more details. For example, I do not believe it is appropriate to compare an inner city property with our property in Banks Peninsula. We have a large section, adjacent to the CCC queens chain coastal land and are working hard to restore it to native bush, remove pests and invasive plants. This takes significantly more water than a garden-less inner city property but has huge benefit to the environment and aligns to other CCC long term goals.

#### 1.5 Investing in our transport infrastructure

I support the roll out of e-bikes, scooters etc

I would like to see consideration given to a light rail option for improved public transport. While I appreciate that this is a costly project, its only going to get more expensive as time goes on and would significantly improve options for leaving the car at home - helping to meet our climate change goals. Some great places for this would be between the University and the city, the airport and the city, Lyttleton and the city (improved - faster - public transport options would encourage Diamond Harbour residents to use public transport rather than increase pressure on the already sub-standard roads) and Summer and the City.

#### 1.6 Rubbish, recycling and organics

I would like to see increased emphasis on recycling including more being managed locally in NZ rather than sent offshore. I am disappointment about the amount of items that could be recycled that currently are not and would like to see investment in the

technologies that would allow more items to be recycled.

#### 1.8 Our heritage, foreshore and parks

I support the continued redevelopment of our heritage buildings.

I support the Coastal plans.

I would like to see a walking / cycling track all of the way around Lyttelton Harbour.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

I support the continued redevelopment of the Arts Centre.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

##### Comments

I would like to see the Robert McDougall Art Gallery refurbished and brought to the standard required for displaying art collections - either those of the Museum (which would make since given its location) or those from the Central Art Gallery.

#### 1.12 Any other comments:

I would like to make some comments regarding the sale and development of land in Diamond Harbour and the improvement of community facilities.

I understand that the council is considering the sale of land on Hunters Road behind the School. While I am not against the further development of land per se, I would like to make a number of observations that I believe are important considerations before any decision is made.

1. Land should be protected for the expansion of Diamond Harbour School. The school is currently quite small, but with the continual growth in local housing the needs of the school are likely to change.

2. Strong consideration should be given to the local infrastructure and if it can support the amount of additional proposed housing. My understanding is that the current water and power infrastructure is likely to be challenged. In addition, the roads will not support a large increase in traffic (and changing the speed limit will make no difference to this).

3. The local community lost one of only two local restaurant and bar facilities some time ago. Nothing has been done to replace it and the remaining cafe in the DH Village is not capable of managing with visitors in the summer. In addition, visitors to Diamond Harbour (which is clearly promoted as a destination by CCC) are often found confused and wondering where all the facilities they expected are to be found. The community has

already provided strong feedback via consultation that a replacement for the Dark Star and Godley House is needed. In addition, something for visitors such as a large adventure playground would be beneficial.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I oppose an extension of the land drainage rate. My property is on the lower side of Hamiltons Rd and 3 culverts run water in my property. In heavy rain my slip prone land gets swamped with water. Basically the Council runs water in my property and I should pay for that and for the cleanup after heavy rain. Your proposal is absolutely unfair and I oppose to it.

### Attached Documents

File
------

No records to display.

To, Christchurch City Council  
 Attn Bruce Mohr.

As a landowner who received your letter regarding 'Land Drainage' Rating alternatives, I would like to submit my thoughts on this matter.

I thoroughly support user pays system.

1. To suggest that we also use the benefits of the amenities within the town border, and therefore contribute to the work done there, this logic can apply to many things, so where and with what does it stop.

2. The rate should be proportional to the services received.

The service I receive is getting the road and channel adjacent graded perhaps twice a year. The drainage to get to this point, we as landowners do it ourselves, as you state in your letter, at considerable cost. There is no service the council can provide on private land, therefore we are at risk of being rated and no further services provided. The geographical nature of our property makes us responsible for the catchment drainage before it gets to the road, therefore we are happy being left to our own devices in order to protect our properties. Culverts, swales, streams, ditches, we maintain ourselves.

3. Already on our rates are facilities outside our immediate area. These eg. Cathedral, Health Hub I am comfortable with, but some people prefer to live with amenities right on the doorstep, for me to pay for that privilege is not acceptable to me.

Personally I am already rated higher as 'residential', apparently the reason given is 'because I do not take a living off my land'. Do I get more services than my neighbor ~~that~~ who does? Do. So where does all this grab at money stop?

4. Option 2 may rate higher properties near to Council owned assets. This doesn't mean we are on them or indeed want to go on them, eg. Water. Option 3 is not transparent and some of the ideas put forward may result in people demanding services, costly to the council, unnecessary for many, just because we are rated for them, forced to comply.

Yours faithfully  
 Martin ... 1, 2 million

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

I dont think that the Rates have to rise at all as some low income people or people who just have the benefit to rely on for income find it difficult enough as is to pay the rates.

#### 1.3 Proposed changes to existing rates, and new targeted rates

the proposed targeted rates are not realistic you should be more concerned about the roads & footpaths at the moment as some of the roads & footpaths are all cracked,

#### 1.4 Investing in upgrading and protecting our city's water networks

I would like to know how long it takes for the water pipes to be fixed as you should be making that your priority,

#### 1.6 Rubbish, recycling and organics

I would like to see more hard & soft plastics being recycled as far to much is just being dumped as the landfills are getting bigger & surly that is not helping

#### 1.7 Our facilities

I think you closing the Riccarton Road Bus Lounges is a terrible idea as a lot of people use them & especially when it is cold & wet at least they have somewhere warm & dry to go & sit the amount that has been spent on the new sports center in town is outrageous,as for the Wharenui pool a lot of people use it especially in the Riccarton area as it is more convenient then having to go into town, the motto i go by is 'IF ITS NOT BROKE WHY FIX IT'

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

#### 1.11 Potential disposal of surplus Council-owned properties

Why dont you make the buildings into flats for the people that are still waiting for homes & just charge them a very small fee or even have a rent to buy

## Feedback

1.1 Have we got the game plan right?  
mobile library submission below.

1.7 Our facilities

I have been a user of the vital services of the City Libraries for well over seventy years. They have always been greatly appreciated. For the past three years these have included - almost exclusively - the mobile library. For a sizeable part of our population, mainly elderly, but not exclusively so, the mobile library is the only means of access to these wonderful resources. Age, mobility, resources, location - there can be many reasons for reliance on the mobile, but its loss would represent significant loss of quality of life for so many.

The mobile also brings a quality not often known or talked of, but nevertheless significant: it provides personalised service to its users through its knowledgeable (and long-memoried) librarians.

Rather than a costly add-on, I think the mobile library is the most efficient, C21st, means to provide service to a wide demographic. I invite the Library and Council to think so too.

## Personal submission on the Christchurch City Council Long-Term Plan 2021-31

*Ashley Campbell*

Thank you for the opportunity to submit on the Christchurch City Council's Long-Term Plan for 2021-31. I wish to submit on three areas: Cycleways; OARC; Water Charges.

### 1. Cycleways

- 1.1 I am not a cyclist. However, I strongly support the Council's programme of building separated cycleways to protect cyclists from vehicle traffic and increase the number of people choosing to cycle. I believe the Major Cycle Routes programme is essential for meeting our responsibilities to decrease greenhouse gasses, has significant health and welfare benefits, and also makes roads safer and more efficient for motorists. Council recently declared a climate emergency – unless it follows through with programmes that will make a real difference, such as this, I can only conclude that the declaration was greenwashing. Please do not give in to the naysayers.
- 1.2 Indeed, I strongly urge the council to revise its MCR programme to INCREASE and SPEED UP the building of separated cycleways throughout the city. I note the current almost total lack of separated cycleways in the east and northeast – this must be fixed. People in the east are being discouraged from cycling because of the lack of safe, separated routes.
- 1.3 The northeast in particular is a high-growth area. Planning for a separated cycleway should be an integral part of any further development in Prestons/Marshlands/Burwood. Build it in from the start so that residents have the option of cycling right from the start. It will be cheaper and more effective than retrofitting in 10 or 20 years.
- 1.4 Two of the existing shared paths in the east/northeast (Anzac Dr, QEII Dr) are in poor condition and need improved maintenance. Money should be allocated for this no later than 2023.
- 1.5 The Te Ara Otakaro River Trail cannot be considered a commuter cycleway, and should not be treated as such. I also question whether it will be a cycleway and separate footpath, as the current shared path is heavily used by walkers/dog walkers, and peak dog-walking time corresponds with peak cycling time. Even at current use levels it can be tricky for walkers and cyclists alike. Whatever is done here must separate walkers and cyclists.
- 1.6 I would like to see funding of the Te Ara Otakaro River Trail brought forward, so that planning happens no later than 2023, and construction begins in 2024.
- 1.7 I also strongly urge the council to include an additional commuter cycleway (not lane) in east Christchurch. I would suggest the current Wainoni Rd or Pages Rd cycle lanes would be candidates for upgrades into proper cycle ways. Again, I would like to see planning for this begin by 2023.

- 1.8 In terms of funding, I would suggest that if the people of the northwest are so upset about getting safe cycling facilities virtue of the Wheels to Wings cycleway, then divert the money away from them, and send it to the east where it will be gratefully accepted and appreciated. The \$500,000 allocated to line item 26611 in 2021 could be transferred to begin the Te Ara Otakaro River Trail, or even to start planning a commuter route.

## 2. Avon-Otakaro Corridor

- 2.1 I note from line item 61723 that council funding for Red Zone regeneration does not start until 2024/25. Almost 10 years after the red zone was first announced this simply is not acceptable. This area holds so much promise for revitalisation of the east, and could be another positive step the Council takes towards proving its sustainability credentials. I urge Council to bring this forward to 2022/23.
- 2.2 One of the major obstacles to beginning the necessary regeneration work in the OARC is the lack of a formal governance structure. As a member of Te Tira Kahikuhiku, I am acutely aware of the need for a permanent governance structure to be formed, and to begin work, as soon as possible. I urge Council to do everything in its power to speed up establishment of the governance structure so that real regeneration can begin.
- 2.3 I also urge Council to plan for effective Dark Sky lighting within and immediately surrounding the OARC, and to work towards creating an Urban Dark Sky Park in the OARC. This is a unique opportunity to establish a unique amenity in Christchurch that will only add to its desirability as a place to live and a place to visit. I fully support the LTP submission made by Urban Star Watch Christchurch.

## 3. Water charges

- 3.1 I fully support introducing water charges, as proposed. This is another fundamental step towards environmental sustainability. It is simply not acceptable for the ratepayers of Christchurch to be forced to fund the swimming pools, lush green lawns, and inappropriate gardens of those who choose such lifestyles. Almost every other city in New Zealand has some form of water charging, and given Christchurch's climate, it is inexcusable that we do not. This must change.

**SUBMISSION TO CHRISTCHURCH CITY COUNCIL  
2021-31 LONG-TERM PLAN CONSULTATION  
18 April 2021**

Name: Tim Coop

Address:

Phone number:

Email:

Introduction

This is my submission on Christchurch City Council's Long Term Plan consultation.

I farm at **Port Levy**, the Coop family have farmed here since 1916. I farm **6000 sheep & 500 cattle**.

Currently I pay \$25196.08 to Christchurch City Council as well as **\$8182.24** to Environment Canterbury.

My submission will focus on the proposed extension of the land drainage targeted rate to all properties, including those that are historically unserved by the Council's land drainage infrastructure.

I am shocked at this proposal which has come out of the blue with no prior consultation or engagement and only belated notice through a letter of 30 March 2021. I have worked out that I will pay **\$1522.37** in 2021/22 and this will increase to **\$4567.13** in 2023/24. How anyone could describe this as a 'fairer' approach is beyond my comprehension.

This rate is for a service I do not receive or benefit from. The cost is oppressive for my farm and fails to recognise the work that I do as a landowner on my property to manage excess water. Mostly water from farms drains into wetlands, streams, rivers, and the sea rather than to any council land drainage infrastructure. I am responsible for managing my waterways, drains, and wetlands to standards set out by rules for freshwater management and rules that will be coming on indigenous biodiversity. This includes considerable spending on fencing, riparian planting, sediment management, etc., all of which I am expected to meet at my own cost.

This proposal should not proceed. Please think again for the sake of the rural community.

Yours sincerely

Tim Coop

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

Submission against the removal of Rates Remission for Cashmere Presbyterian Church

CCC Reference 73123811.

Cashmere Presbyterian has a long-established role in the local area, being a hub for various Community groups and providing care and hospitality for a wide range of ages. Our ability to offer these would be adversely impacted if the rates remission currently generously afforded by the Council were to be discontinued.

The services and facilities we offer meet both practical and spiritual needs, and provide a place of support, and where people can form their own support networks.

Some examples of the activities taking place here are:

- Weekly Pre-School Music group: providing a lively and fun activity for children, and enabling parents/caregivers as well as the children to build friendships. Between 8 & 15 families each time.
- Weekly Craft Group meeting: mainly older ladies socialising whilst crafting. 10 to 18 people each week.
- Foot Clinic: suitably qualified volunteers provide foot massage and toe-nail cutting for older people, as well as a cuppa and chat. 26+ regular attendees, plus a waiting list.
- Community sing-a-long afternoons
- Discussion groups.
- Community Conferences on public issues e.g. Exploring Sustainability; Promoting Youth well-being.
- CREST Community Support group are based here, including holding equipment to assist the community in case of a civil defence emergency.

As well, we host Parents Centre classes, Karate classes, Social skills and anxiety management groups for children, and provide a low-cost venue for community groups and meetings.

We urge the Council to preserve the rates remission that assists us in the delivery of services as outlined above. We are a place of safety and refuge where folk can receive the support they need and thereby strengthens the fragile fabric of our community.

### Feedback

1.1 Have we got the game plan right?

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Hunstbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer

funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

~~~~~

As a teacher I need good access to the internet to run education programmes and be ready to teach when we may at the drop of a hat be required to do on line teaching. During the last lock down it was absolutely hopeless trying to run zoom meetings while other members of the household were continuing with essential services business.

i would like to be ready next time.

regards

Catherine Dalley

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

RE: RATES FOR CENTRAL CITY WASTE COLLECTION

We support the submission from the Atlas Quarter Body Corporate in relation to rates for the collection of solid waste.

We support the Council's strategic goal of reducing solid waste but object to having pay \$300-\$400 per year in rates for the collection of the red, green and yellow bins when the Council does not provide this service to us. In the absence of Council providing this service, we pay privately through our Body Corp Levy for waste collection by EnviroWaste. We support waste minimisation and have all the same waste streams (green, yellow and red) as the Council provides.

**We ask that the Council either:**

1. **reduce the general rate and waste minimisation levy for developments such as ours to reflect that no waste collection is provided, or;**
2. **amend your service contracts to provide the waste collection service.**

## SUBMISSION TO CCC LONG TERM PLAN 2021

ATLAS QUARTER BODY CORP INC

11 April 2021

C/o Richard Ball

We wish to be heard in support of this submission.

Tēnā koutou

### **RE: RATES FOR CENTRAL CITY WASTE COLLECTION**

#### **About us**

The Atlas Quarter is a Central City apartment complex with 113 residential units and three commercial units at 36 Welles Street, Central Christchurch. It was built by Fletcher Building as part of the Central City recovery on land formerly owned by the Council. The building design and landscaping had significant input from Council staff and has resulted in a high-quality urban environment. The development epitomises the Council's strategic goals for residential living in the Central City. All 116 units have been sold.

#### **Summary of the issue**

Atlas Quarter owners each pay an estimated \$300-\$400 per year in rates for solid waste collection (red, yellow and green bins). However, this service is not provided or available to us. Instead, we are required to pay EnviroWaste for waste collection through our Body Corporate fees. Paying both the Council and EnviroWaste is a significant and unfair financial burden when Council does not provide this service.

#### **Relief Sought**

We ask that the Council either:

- 1) reduce the General Rate and Waste Reduction levy for unit holders in developments such as ours to reflect the fact that no service is provided,
- or
- 2) amend Council service contracts to provide the solid waste collection service that we pay for.

#### **Explanation and Context**

We strongly support the Council's strategic objectives to reduce solid waste. The Body Corporate provides for all the same waste streams as the Council provides, as well as bins for corrugated cardboard. We have two designated waste storage rooms with large bins that are shared by all residents. We actively encourage waste reduction, waste sorting, re-use, recycling and organics.

The Council's usual three-bin residential system is impractical and undesirable in this style of higher density residential development. There is no-where to store the 339 bins that would be required for all 113 residential units (they would not fit in the waste storage rooms). Putting 226 bins (green waste plus either recycling or rubbish) onto the street each week for collection would be a nightmare for Council contractors, residents, pedestrians, vehicles and neighbouring businesses.

The Council has a goal of increasing residential occupancy and densities through developments like as ours, but your current policy and solid waste collection arrangements are woefully out of step with this goal. The current policy is designed for, and encourages, traditional low density residential living in the suburbs.

This is an issue that Council staff have known about for a long time. We have been told that developers have raised it in previous years and been rebuffed on the grounds that it requires a change in Council policy. As the LTP is the process through which rates are set, we wrote to the Council prior to Christmas asking that it be addressed in this current LTP, so that we could submit in support of the LTP. Sadly, this was not done.

We have recently been told that it will be looked at as part of a comprehensive review of waste policy and bylaws in the future. While we support a comprehensive review (and have offered to participate in that process), we do not wish to continue to pay in the interim. It is a significant amount of money for a service that we do not receive. If, having completed a comprehensive review, the Council is able to change its arrangements and collect our solid waste, we would be happy to pay for it. Until that happens, we can see no justification for continuing to charge for this non-service.

For the sake of clarity, we do not object to paying rates and greatly appreciate many of the services and assets that the Council provides. However, rubbish collection is not like roads, libraries or parks, which are public goods that residents can use if they wish to. Nor is like the three waters, where the network infrastructure needed prohibits alternatives. Waste collection is mostly a private benefit. We object to having to make our own arrangements for waste collection while continuing to pay Council for the service. If there is a portion of the waste reduction levy that is for public good purposes, such as managing old landfills or subsidising recycling or organics processing, we are happy to pay our share of that, but believe it to a fraction of what we are currently charged through both general rates and the waste reduction levy.

Ngā mihi

Richard Ball

On behalf of

Atlas Quarter Body Corporate Inc.

### 1.11 Potential disposal of surplus Council-owned properties

I would like to request that the land as described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) be **removed** from the LTP and fast track disposal. The normal process for disposal of land that would require Community Board and public consultation, should be used instead.

The two pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan.

The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation).

Thorough community consultation should be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.

Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not just be made by Council staff.

The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process:

- Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to conflicts with community usage and aspirations.
- The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles and do not follow the fence-lines. This means that extensive areas of native planting are not in the draft covenants.
- Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for. The Mt Herbert Walkway also has no easement at present (as it is on Council land).
- If there are houses built, the school roll may increase, and the school may wish to expand on to the land considered for disposal. There is an easement to the western side of the school but no designation for further expansion in the district plan.
- The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?
- Should all the land be sold (privatised) at one time? Would a staged housing development be better for the community?

- Different use options for the land need to be considered not just a sale to a housing developer. Should some parts of the land be released for residential development and other parts held for other uses? Should the Council consider the needs of the community for special types of housing e.g catering for older or younger people looking for smaller units?

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Need more focus on sustainability, public transport, safe cycling.

Urgent need to stop cutting funding to arts / cultural institution. Eg Christchurch Art Gallery, which is the cultural heart of the city.

1.2 Rates

A necessary evil.

1.3 Proposed changes to existing rates, and new targeted rates

I am afraid the targeted water rate may unfairly disadvantage larger families in less affluent areas, and that landlords will pass this cost to tenants.

Heritage targeted rate may result in lack of support for protecting heritage.

1.5 Investing in our transport infrastructure

stronger focus on public transport needed. Also on improving dangerous roads (eg from cashmere over hill to governors bay)

1.6 Rubbish, recycling and organics

Need facilities to recycle more types of plastic.

1.7 Our facilities

Reducing funding and access to the Art Gallery, libraries and service desks will have a negative effect on christchurch's reputation as a supporter of the Arts and make them less accessible to diverse communities (eg those who work during the day and can only visit after hours). The GLAM sector has been hard hit by COVID and funding cuts will make life harder for those working in the cultural sector, as well as the communities who use galleries and libraries. Closing service desks will make it harder for vulnerable community members to access services.

1.8 Our heritage, foreshore and parks

A greater focus and more spending needed here.  
Need to remove possibility of destroying built heritage that survived the quakes (eg the Ng building).

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Thr arts centre drawers tourists to the cbd and is an important venue for local businesses and artisens.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

In strong support of this. The building is an important part of the city's heritage and could be put to great use and draw visitors if used by the museum

1.11 Potential disposal of surplus Council-owned properties

Heritage buildings should be kept, restored and used. The city has already lost too many.

### Feedback

1.1 Have we got the game plan right?

I do not agree with the decommissioning of Wharenuui Pool.

My entire family learnt to swim there.

I still swim each week in a safe supportive environment.

Christchurch lost so many of its heritage buildings in the earthquakes.

I consider Wharenuui Pool to be an important part of the city's heritage and should survive and be protected

1.11 Potential disposal of surplus Council-owned properties

Please remove 27 Hunters Road, Diamond Harbour and 42 Whero Avenue, Diamond Harbour. The Diamond Harbour community needs to be fully involved through normal land disposal processes including full community consultation and Board community input. The high number of houses that could be built on this land negatively impacts on this local community along with a wide range of associated issues. Request that these two properties are removed from the LTP and put through the public consultation process.

## Council Submission

The following pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan:

- 27 Hunters Road, Diamond Harbour (Title Ref: CB12F/538)
- 42 Whero Avenue, Diamond Harbour (Title Ref: CB452/50)

Reasons why:

1. The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation). Local residents must be properly consulted given the massive impact this sale could have on them.
2. A thorough community consultation must be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.
3. The following matters should be considered if disposal is to proceed through a normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process:
  1. Gully protection. Extensive replanting has been undertaken in Morgan's and Sam's Gully This work has been done by community members, including myself, with the support of the City Council, Environment Canterbury and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for these gullies, but it has not been finalised. The gully by the school is also unsuitable for housing, and should be protected. These covenants must be completed. Furthermore, it is my view that these areas should have reserve status before any sale is considered. This would protect the replanting and ensure continued community usage.
  2. The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, at the top end of Ngatea Road there is current usage and access by local residents on Marine Drive.
  3. Walking tracks have been built within the proposed covenant areas. Access to these tracks must be protected. The main school access walking track from Waipapa Avenue does not have an easement and needs to be provided for.
  4. Residents must be consulted with regards to road access to the site. For example, Ngatea Road is narrow with a sharp bend. There is no way it could safely support even a moderate increase in traffic, let alone construction traffic over an extended period.
  5. Diamond Harbour's wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay to upgrade the system to cope with the large number of houses that can be built on the land?
  6. The road in and out of Diamond Harbour can be dangerous at the best of times. A significant increase in traffic during peak hours would make the situation worse.
  7. Should all the land be sold at once? Would a staged housing development be better for the community? Should some parts of the land be released for residential development and other parts held for other uses, e.g. a new Fire Station?

I sincerely hope the Council will take into account all of the above mentioned points and remove these areas from the list of Council owned properties that could potentially be disposed of in the Long-term Plan.

### Feedback

#### 1.7 Our facilities

I strongly oppose the Council plan to cease the Mobile Library Bus. Has any thought gone into how the elderly, those living a considerable distance from a suburban library, and those without transport (to name only a few) are going to access reading material?

The actual monetary saving of this proposal is insignificant especially when compared to the amounts spent on the "nice to haves" which many in the community would gladly do without if the bus could be retained.

It is totally unreasonable to expect family to collect books from a library for a family member as has been suggested. This is a basic service that cannot under any circumstances be removed.

### Feedback

1.12 Any other comments:

live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

### Feedback

1.1 Have we got the game plan right?

This is a very balanced plan, and lots of thoughts have been put into it. The right things have been prioritised.

1.2 Rates

I agree with the overall rate increased proposed.

1.3 Proposed changes to existing rates, and new targeted rates

I agree to the change in the split of rates, as well as the new charges (for excess water use especially).

1.4 Investing in upgrading and protecting our city's water networks

I support the proposition for our water treatment and disposal.

In addition, I am not sure how this is split at the moment, but I would like the new developments to pay for their roads and three water infrastructure. Buying a property on a new development far from the city center increases carbon footprint as people will have to travel more. At the same time, it is attractive, as it is everyone who pays for the new development infrastructure, lowering the cost of buying new property outside of the current developed areas. This is something I would like to be considered. I understand we need to offer affordable

1.5 Investing in our transport infrastructure

I strongly support cycling and safer roads for all. This is especially true around schools. Beyond the major cycle corridors, we also need to secure the last few hundred meters. Near school, cars should be forbidden. It is today safer to bring kids to school by car than on a bike or a scooter. It is not good for the environment and their health. By increasing the cycle access to schools, or even forbidding cars at certain times, we make it safer for our kids. As they grow up, they will then be used to travel by foot, bike, scooter, and continue reducing the carbon footprint. I would also like to have cyclist involved in the design. A few of the current cycleways have sharp curves (switching side of road) which are increase the effort required for the cyclist. I would like to see a little more of transport put into the active transports (foot, cycle, scooter) than the motorised one. The more road we build, and the easier it is, the more car we'll have, increasing congestion and pollution.

1.6 Rubbish, recycling and organics

I support the spend on organics infrastructure, as well as recycling and transfer station infrastructure. I would like to make easier for people to access recycling not taken in the bin, such as batteries. Driving to an Eco-drop to dispose batteries, is really not helping the environment. Could we create collections points in more locations, such as libraries, for batteries for example?

1.7 Our facilities

I support the proposed investment in Council-owned facilities across Christchurch and Banks Peninsula. I strongly support the change in your levels of service. This is something that should be done on a regular basis, to ensure you keep your costs aligned with our needs, which change over time.

1.8 Our heritage, foreshore and parks

This ooks right to me too.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

I support the sale of properties, that are no longer being used for the purpose they were originally acquired for. This should be done on a on-going basis, to ensure you keep your asset portfolio up to date, and have some money to invest in new or more relevant projects.

1.12 Any other comments:

Thanks you for your hard work on the plan.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 16/04/2021

**First name:** Korimako **Last name:** Te tomo

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.5 Investing in our transport infrastructure

Electric busses would have lower impact on the environment. Busses are also an accessible form of transportation for the elderly and disabled. This form of transportation could be more accessible for everyone if there were to be a price drop on fares and/or on metro cards.

bus drivers should also have more support.

1.7 Our facilities

I think that it is wrong to cut down on and limit facilities that offer arts and creative modes of learning to the public. Places like libraries and Christchurch art gallery are currently accessible places of learning and socializing that EVERYONE has access to, no matter their economic situation or background. This is something the people of Christchurch deserve.

The bus lounges on Riccarton road offer a safe, warm and comfortable space for those most vulnerable such as the elderly and disabled people. These spaces are facilities that offer a comfortable place for everyone. And I believe it would be wrong to take away these spaces especially for those who need them most.

1.8 Our heritage, foreshore and parks

I would like to see the council include and give involvement to the indigenous people of Otautahi.

Ideally I would also love to see all of the sculptures of racist colonizers removed.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

## Comments

The Christchurch Museum should focus on making plans to make their representation of ethnic groups less racist instead.

1.11 Potential disposal of surplus Council-owned properties  
Safe and affordable night shelters for homeless people.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

I don't think this is a fair system. Rates will become unaffordable for a large amount of people if they rise to approx 47% over the next 10 years. People's income are not increasing 4% a year.

Rates should not be funding The Arts, sculptures, festivals, etc they should be only funding the core necessities ie water, sewage, roading, rubbish, maintenance of public parks & roadsides. Other costs should be paid for by the user or other organisations that wish to have these services.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

#### 1.12 Any other comments:

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been

developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

As a member of the screen industry here in Christchurch, I think it is crucial for City Council to do as much as possible to attract film and television productions to our region. There are many individuals and families that depend on work increasing in the screen industry in Canterbury. Regional incentives in the form of grants and tax credits are essential to industry growth. Thank you.

### Feedback

1.5 Investing in our transport infrastructure

I started cycling to the University of Canterbury from Cashmere for my studies in 2019. From that initial experience I fell in love with cycling and saw the huge opportunity Christchurch has to become a full on cycle friendly city.

The flatness and dry climate of the city provide ideal conditions for cycling everyday for commuting purposes.

But it seems like the city isn't fully prepared to go down that path. The whole painted cycle lane still feels super unsafe. I don't know how you guys should do it but I really want this city to fully embrace cycling.

I'm submitting this because I need the council to know that I think cycling infrastructure in the city should be much better.

The opportunity is there. Please commit more.

P.S I never cycle for sport. I use the bicycle as a tool for commuting.

### Feedback

#### 1.11 Potential disposal of surplus Council-owned properties

The following pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan:

- 27 Hunters Road, Diamond Harbour (Title Ref: CB12F/538)
- 42 Whero Avenue, Diamond Harbour (Title Ref: CB452/50)

Reasons why:

1. The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation). Local residents must be properly consulted given the massive impact this sale could have on them.
2. A thorough community consultation must be undertaken to determine the future of the land. This would include Council proposals as to how the land should be utilised, public meetings and a submission process.
3. The following matters must be considered if disposal is to proceed through a normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process:
  1. Gully protection. Extensive replanting has been undertaken in Morgans and Sams Gully This work has been carried out by community members, including myself, with the support of the City Council, Environment Canterbury and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for these gullies, but it has not been finalised. The gully by the school is also unsuitable for housing, and should be protected. These covenants must be completed. Furthermore, it is my view that these areas should have reserve status before any sale is considered. This would protect the replanting and ensure continued community usage.
  2. The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, at the top end of Ngatea Road there is current usage and access by residents on Marine Drive.
  3. Walking tracks have been built within the proposed covenant areas. Access to these tracks must be protected. The main school access walking track from Waipapa Avenue does not have an easement and needs to be provided for.
  4. Residents must be consulted with regards to road access to the land. For example, Ngatea Road is narrow with a sharp bend. There is also limited visibility of oncoming traffic when turning right into Ngatea Road from Marine Drive. There is no way Ngatea Road could safely support even a moderate increase in traffic, let alone construction traffic over an extended period.
  5. Diamond Harbour's wastewater infrastructure is prone to blockage and leakage and has an

ageing pipe system. Who will pay to upgrade the system to cope with the large number of houses that can be built on the land?

6. The road in and out of Diamond Harbour can be dangerous at the best of times. A significant increase in traffic during peak hours would make the situation worse.

7. Should all the land be sold at once? Would a staged housing development be better for the community? Should some parts of the land be released for residential development and other parts held for other uses, e.g. a new Fire Station?

I sincerely hope the Council will take into account all of the above mentioned points and remove these areas from the list of Council owned properties that could potentially be disposed of in the Long-term Plan.

### Feedback

1.1 Have we got the game plan right?

1.3 Proposed changes to existing rates, and new targeted rates

Kia ora,

Thank you for the opportunity to make a submission on the 2021-31 Long Term Plan. I am submitting on behalf of the St Martins Valley Tennis Club regarding tying rates remission to balances less than 50 times the total assessed Council rates.

Our Club has benefited the surrounding community for the previous 99 years of its operation. Aside from our regular members, we host many other community groups at our courts including children from St Martins School, juniors from Opawa and Redcliffs tennis clubs, and two other groups of seniors. We fill a valid niche for community members who cannot afford the significantly higher yearly fees of nearby larger clubs, as well as providing a more social, community-orientated level of tennis than those affiliated with Tennis Canterbury.

After the earthquakes, the club received an insurance pay-out that unfortunately was substantially short of what was required to remediate the land damage under the courts. Instead, this money was banked and has provided funds that continue to allow repairs to the court surfaces on an ongoing basis. We received no grants for court or pavilion upgrades such as other clubs were able to procure.

Given the above characteristics and circumstances, our not-for-profit club will be unable to sustain the increased cost of full Council rates if the proposed Plan change of limiting cash and investments to 50x assessed rates is implemented. Our membership is steady, with between twenty and thirty active members who cannot afford the significantly increased yearly subscription fee that would be required to ensure the club remains solvent. To go ahead with this specific plan change will inevitably result in the eventual closure of a beneficial community resource that is currently in it's 100<sup>th</sup> year of operation.

Kind regards,

Warrick Mason

Treasurer

St Martins Valley Tennis Club

Christchurch

### Feedback

1.1 Have we got the game plan right?

I'd encourage a heavier focus on public transport (light rail) over road improvements. We are too heavily dependent on individual vehicles as it stands. Further driving this strategy is looking backwards, not forwards.

1.2 Rates

Rates increases should track the increase in median household income, as to not out-price average New Zealand households, making home ownership ever less affordable

1.6 Rubbish, recycling and organics

This seems like an issue that needs to be addressed on a national level, with restrictions placed on good manufacturers and packaging. The issue lies in the industrial production of excess rubbish, not its disposal. We need to encourage industry to find new ways to package their products.

### Feedback

1.1 Have we got the game plan right?

To keeo the mobile library bus.

1.2 Rates

This is too high, especially for people on a fixed income.

1.3 Proposed changes to existing rates, and new targeted rates

This is not acceptable. We have plenty of water for local residents. It should not be bottled and sold overseas.

1.5 Investing in our transport infrastructure

Instead of offering a free bus service you should put a toll charge on the busiest roads at peak times. This would bring in revenue and encourage people to use the buses. What a huge waste of money repainting the buses in an insipid colour that the elderly have trouble seeing. As the Red Bus company lost the tender for certain routes there are the small Mercedes buses sitting idle at the depot. Why can't they be used for the mobile library service?

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties  
Sell them and reduce the rates.

1.12 Any other comments:

Please remember that people are not numbers. Those who rely on the mobile bus service enjoy browsing, chatting, feeling part of the community and need this to continue. Electronic books or relatives choosing on your behalf is not a reasonable alternative.

### Feedback

1.7 Our facilities

Mobile library.

The Council's long term plan to cease the mobile library service is of great concern. The residents of our retirement village greatly rely on the mobile library, look forward to its visits and choosing books for themselves. Some residents cannot easily (if at all) make the trip to the library to borrow books, therefore the mobile library is so valuable, not to mention the fact of the benefits we all gain from reading.

The service is so popular amongst retirement villages, to book a time slot for the library to visit is very difficult, if anything, the service needs to be increased rather than ceased.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

As a resident and member of New Brighton Residents Assn, my submission reflects mainly the feedback of many sea-side locals we have been engaged with.

There is barely a murmur against the draft plan as it relates to New Brighton, particularly the bridge, the opens spaces and the roads.

This is tempered with a significant amount of scepticism around the City Council's past history of delivery to New Brighton apart from the recent \$24 million on the legacy projects and foreshore.

The New Brighton Mall continues to be an eyesore and there is a belief CHCHCC dropped the ball with the appointment of DCL to follow through with these special projects. This external quasi organisation ate a few million dollars and delivered little in respect to housing and retail regeneration.

The rebuilt of New Brighton planning goes all the way back to 2012 and became official in 2015 and in 2021 there is little to show apart from the foreshore redevelopment.

NBRA recommends the draft LTP be adopted with these provisions:

The Public Spaces project be brought forward along with the Oram Av extension, to immediate start.

Added to the build of the new Pages Rd bridge, should be the repair and remediation of New Brighton Rd,

returned to two way and avoiding the current roundabout by feeding directly into Hawke St. It is hoped the new bridge will also be linked to directly into Hawke St.

Also money be put into the revival of the CAG or Community Advisory Group made up of vested interest stakeholders to monitor progress and facilitate an ease of passage for the LTP projects by liaising between Council and locals. The CAG were prominent in contributing to the 2015 New Brighton Masterplan.

The most important though remains the regeneration of the commercial hub, and the Public Spaces \$14 million dollar plan to upgrade roads and facilities in and around the Mall with beautification and pedestrian friendly areas.

New Brighton residents will be expecting delivery this time round and sooner the better.

1.2 Rates  
Support this increase

1.3 Proposed changes to existing rates, and new targeted rates  
Could not get a consensus on this

1.4 Investing in upgrading and protecting our city's water networks  
Absolutely right behind this proposal

1.5 Investing in our transport infrastructure  
More bike lanes in and around New Brighton, there is a big black hole in this regard. New Brighton's ecology lends itself to cycle tourism cyclists in general. Recharging pods for electric bikes needed on foreshore or within Mall space.

1.6 Rubbish, recycling and organics  
Support more encouragement of re-cycling.

1.7 Our facilities  
Generally supporting this draft proposal.

1.8 Our heritage, foreshore and parks  
There was a big thumbs up for foreshore and park improvement, less so for heritage buildings. People want more houses to live in.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

### Feedback

#### 1.7 Our facilities

I do not think the Riccarton Bus Lounges should be closed. Now, I'm obviously biased because my part time work over the weekend is at stake ( [REDACTED] ). But also, I feel I can represent and pass on what I've been told by a large number of people.

First, the toilet facilities are hugely important for everyone that needs them and everyone does at some point in the day. Without them, I cannot imagine how hectic it would be around riccarton rd.

Next, I have had near a dozen elderly people since the news about a potential closure broke coming up to me and saying "I'm so glad that a place like this (Riccarton Bus Lounge) is here", not only does it keep them safe during their wait, but they also have a comfortable place to sit and rest.

Adding to this, albeit somewhat of a 'necessary evil', is that kids from all over seem to flock to riccarton mall, a lot by bus from all over the city. Now if the riccarton bus lounges were to close, it wouldn't stop the kids from flocking, but I can bet my bottom dollar that those kids that gather in the mall and the bus lounges are now out on the street.

Personally, I cannot imagine how hectic riccarton rd would be without the bus lounges. Kids running amuck, the elderly standing for long periods of time, no facilities other than the mall and other businesses (neither of which would particularly welcome that sole activity). It would be a bad time all around.

Regards,

Otis.

### Feedback

1.1 Have we got the game plan right?

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer. We suffered all the inconvenience of the months of roadworks only to find out fibre would not be supplied to us!

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

Thank you.

**First name:** Colin **Last name:** Roxburgh

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

i think given previous underfunding in essential services, more needs to be done to catch up

#### 1.3 Proposed changes to existing rates, and new targeted rates

i support the targeted rate for water consumption

#### 1.4 Investing in upgrading and protecting our city's water networks

this investment is clearly important, hard to tell if balance is right on information available

#### 1.5 Investing in our transport infrastructure

the amount is ok, but only if it genuinely will achieve desired and meaningful outcomes with respect to carbon emissions, it is not clear that this is truly the main focus

#### 1.7 Our facilities

services at the Art Gallery should not be reduced, these are really great family events that have been really well attended in my experience.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I believe it is important to be more transparent by using targeted rates for special projects and I commend the council for using this option for support of the Arts Centre. As a Walk Christchurch guide the joy I used to receive from clients when they entered under the clocktower and proceeded to view the individual courtyards and marvel that this large number of heritage 1 buildings could have potentially been lost on several occasions is hard to explain. We lost a number of early Christchurch buildings following the February 2011 earthquake and it would be travesty not to continue with the repair work and bring the Arts Centre back to where it can be self supporting and frankly become the centre of Christchurch's redevelopment.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

it is vital that the Council support the Arts Centre through this \$5.5 million funding proposal. I see this as penance for the appalling decision made by ChristchurchNZ to mothball I site. Originally a supporter of I Site though Walk Christchurch, we have found the support of the Arts Centre in allowing us to continue by using their booking system has been most beneficial and will enable us to offer walks when our Australian cousins arrive. Personally I am very willing to allow my rates to increase by 0.04.

1.11 Potential disposal of surplus Council-owned properties

I find it strange that you should have to ask about this as any council that showed a modicum of efficiency would automatically dispose of surplus properties.

1.8 Our heritage, foreshore and parks

I'm in favour for Community to be able to access Steadfast and for a track to connect from Cass Bay to the upper summit rd area. The Cass Bay community has been asking for 15 years. The Port Hills is known for it's activities for all the family and having a connection to the Port hills from Cass Bay just makes sense.

### Feedback

#### 1.7 Our facilities

The proposed changes to the Christchurch Art Gallery Te Puna o Waiwhetū's services should be revisited. While reducing the weekly late night is understandable if this time slot is undersubscribed, a 25% reduction of programmes offered to the public, and especially to school groups, seems ill advised in a time when arts and cultural education is already underrepresented in the curriculum. 25% is a very significant cut for the gallery to face, and may result in job losses. The gallery is there to serve its public, including the next generation, and this cut will severely affect its capacity to actively do so, as well as the ability to initiate and host the collaborations with other community organisations that a public institution of this scale is positioned to. We feel this proposal should not be undertaken, and that there be further discussion with the gallery about any further proposed changes.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

We support this funding, and the Council creating a special heritage rate in order to fund the grant.

At The Physics Room, a not-for-profit contemporary art space, we are very aware of the access to facilities and resources that the Arts Centre Te Matatiki Toi Ora affords to a wide range of community members, including our own diverse arts community. This community includes not only local practitioners and supporters of the arts, but national and international visitors with a keen interest in many of the activities supported and enabled by the Arts Centre. As tenants of the Arts Centre, we acknowledge that a reasonable rent rate allows us to occupy our excellent site in the central city, with proximity to core audiences. The Arts Centre is also home to a community of other tenants with whom we share audiences, resources, strong relationships and a neighbourhood. The architectural history represented by the Arts Centre is unique, and while we occupy a newer building, the site as a whole is in need of the care that this funding will allow. Further, this funding seems well placed to contribute to the CCC priorities of the celebration of our identity through arts, culture and heritage, and valuing the voices of all cultures and ages. Without it, the closure of the Arts Centre would be a very significant loss, likely affecting The Physics Room's capacity to stay our current site, as well as what we are able to offer to the communities we represent.

1.12 Any other comments:

We are strongly aware of the CCC's Strengthening Communities fund as a vital source of funding enabling the wellbeing and meaningful operation of many small local organisations including our own. We are grateful for what this has enabled for us, recognise the need for targeted funding like this in realising the CCC's priority of enabling active and connected communities to own their future. This starts with small scale community organisations being supported to make decisions with agency and adequate resources. We advocate for an increase of this fund, in acknowledgement of its very meaningful impacts on community wellbeing.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.5 Investing in our transport infrastructure

I support the investment in cycleways. However, I think more money should be invested into public transport facilities and would like to see a greater focus of work being done in this area. I believe the only way to significantly reduce car use in a private transport dominated city, is through having a public transport option (busses/MRT) that is much more appealing to use than a car.

It would be good to see more incentivisation of using public transport. This could be through cheaper bus fares (or a tap on/off system, where passengers only pay for the distance they're travelling), more bus only lanes/right of way (so they always run to schedule and are faster than driving in a car), and reducing the 'stigma' around taking buses.

#### 1.7 Our facilities

I think Tūranga's opening hours should remain the same. It's a facility which helps attract people into the central city for reasons other than eating and drinking. As Christchurch's main library, it offers a free, cultural space where people can develop their knowledge and feel part of the community. Having later opening hours allows for more people to benefit from this.

I support the proposal for it to be open on some public holidays.

#### 1.8 Our heritage, foreshore and parks

It would be good to see some of the budget allocated to enhancing the lighting over the footpaths in Hagley Park, particularly around the edges and through Little Hagley. Using the paths when it's dark feels unsafe because the lighting is so dim, and the street lights (particularly along Harper Ave) barely light the path.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.12 Any other comments:  
It's really good to see that the Council is prioritising climate change across this LTP

### Feedback

1.1 Have we got the game plan right?

This sounds reasonable but I am not so sure that this should be done at expense of the less tangible /visible responsibilities of council funding. I am especially concerned at how it easy it is the pick on reducing financial support to the Art Gallery which in a very modest way provides so much to the wider community.

1.2 Rates

I definitely do not agree to any rates increase AS WELL AS a removal of any financial support to community assets that provide well being to our community.

1.3 Proposed changes to existing rates, and new targeted rates

I do not have enough information to comment on these. I certainly think the arts Centre needs some support but unsure what options have been explored. However the council does have a responsibility to contribute to this. It is a major part of our history and a focal pint for visitors. I would support some targets support here. I

I would refuse water rates unless the Canterbury farming sector was brought into line at using such incredible volumes of out old artesian supplies, which would have kept the population of Christchurch going forever.

#### 1.4 Investing in upgrading and protecting our city's water networks

That does sound reasonable. I am unable to comment on the percentage cost

#### 1.5 Investing in our transport infrastructure

I agree we need to spend now of transport infrastructure - but what does this include? If it is better pedestrian and cycle access around the city and electrification of public transport I agree. But can't once again these changes take a bit longer if needed to meet the budget rather than take off existing services and penalising rate payers even more?

#### 1.6 Rubbish, recycling and organics

agree this is a good spend. Can it be reduced by more public education that could achieve a lot of this. Yes organics processing is good to spend but try a big public education first. People want to move this way and do the right thing themselves too.

#### 1.7 Our facilities

Firstly, since the establishment of Turanga I have heard of a lot more usage of this wonderful facility, and enormous acclaim. Encourage more usage. Why keep taking money away from Library and Art Gallery when so much has been spent making these great places. The Art Gallery's education programme is quietly and modestly doing an amazing job in bringing art to many children who would not go to the public gallery if it wasn't for these. 2 years is a lot in a child's life. Similarly the public talks and extended hours on Wednesday night brings the opportunity to interact with Art to a wider audience. If it isn't 'open for business' those who can only get there after working hours won't have the opportunity. Surely it is better to spread the infrastructure spend over a few more years? Similarly programmes such as Artzheimers. My husband has Dementia and his once a month (! not much ) visit is a highlight. However why does this has to depend on the volunteers? The staff have great expertise and a progressive society cannot keep depending on volunteers. Show leadership and be forward-thinking to expand not contract these services.

#### 1.8 Our heritage, foreshore and parks

Yes - 11% at least. Good value I'd say!

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

Definitely an excellent suggestion

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

##### Comments

Not a high priority but not a big percentage either?

#### 1.11 Potential disposal of surplus Council-owned properties

what are they ? isn't that the point?

### Feedback

1.1 Have we got the game plan right?

no I do not think you have the correct focus, so much has already been spent on redoing areas multiple times and not one thing has ever been finished fully before it gets worked on

The council is not listening to the people who have their say, they ask for votes on proposals and then when the vote is against what is proposed they still go ahead with it.

No one seems in touch with the day to day people who are paying their wages through their rates and asking what is important to be done or what will work better for the city. Never in the 5 years I have owned my house has there been an actual survey of what really needs to be changed or worked on in Christchurch.

1.2 Rates

for the rates increase I think it is quite unreasonable. We already have higher rates than Auckland and have less roadways than then. You say that there has been savings planned but where.

People can only afford so much and at the moment the rates are so expensive for the size of the city. To say they will be increased by nearly 50% in 10 years can not be justified.

Christchurch council is unique in that it runs a lot of its own business's but doesn't utilise the services or run them efficiently. Most businesses need to make a profit to run and do not rely on the public for a funding boost.

People do not have endless pockets better budgeting needs to be made instead of thinking of increasing the rates. What needs to be done to keep the rates low and maintainable so the person who owns their house can actually pay them.

### 1.3 Proposed changes to existing rates, and new targeted rates

it seems like there just want other ways to put more things in the rates.

Fix the water leaks in the streets first and charge business for bottling our water before charging us for water.

There is so much wasted water I see by the council that this needs to be addressed first before the tax payer pays for it.

There needs to be a lot more done before raising the rates by that much and also removing a lot of the extra sundry items from the rates. Why are we paying for uniforms when it should be part of the business and we were told cycleways were paid for why is there a charge for them as a separate item.

Remove the cathedral cost as the rate payers votes against having to pay it yet it was put on.

### 1.4 Investing in upgrading and protecting our city's water networks

what has already been spent.

seems like it wasnt focused correctly in the first place.

Make sure the plans are correct before spending money that wont do the job.

### 1.5 Investing in our transport infrastructure

no as already too much has been spent on cycle ways that dont work and are not correct for the city.

ecan is suppose to do the support for public transport so why is the council putting money in as well

do not think this is well thought out but just a number given for a budget. Does it take into account the governments contributions or is on top of it.

### 1.6 Rubbish, recycling and organics

if it works will be money well spent.

need to have a better recycling facility here and utilise it more. The way it is going there is more waste going to landfill than recycling now

### 1.7 Our facilities

yes it wise to invest in local communities.

but dont agree with closing Wharenui community centre - the pool is one of the better run ones and has a better reputation.

the other council pools do not offer the community feel or variety that can be done there

|                                                                                                                                                                                                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.8 Our heritage, foreshore and parks                                                                                                                                                                                                                                                     |
| think it is too much % needs to be only 7% but a lot if the work that needs to be done is clean up for previously council decisions to not do anything and let it go wild/natural which did not work and caused more pest problems                                                        |
| 1.9 Funding for the Arts Centre Te Matatiki Toi Ora                                                                                                                                                                                                                                       |

### Feedback

1.11 Potential disposal of surplus Council-owned properties

With regard to the proposed disposal of vacant land adjacent to Diamond Harbour school on Hunters Road. I am strongly against this idea and feel that it would alter the sense of village community that we have enjoyed for many years now in a negative way. Another point of concern should the land be sold and developed would be any future expansion of our growing school and preschool. The community is upset with council handling of the Godley site. The proposed sale and development of this land will be upsetting to many more i feel. There is a reason people move to Diamond Harbour.

Thanks for your consideration, Simon Richardson.

Additional requirements for hearing:

### Feedback

1.1 Have we got the game plan right?

To whom it may concern,

While I commend the priorities of this long term plan, I believe that it does not go far enough in addressing the council's financial needs, nor in addressing the environmental concerns that the council faces.

Therefore I would ask the council to consider the following:

- Doubling of the proposed water consumption rates to \$2.70 per 1000 litres. This will provide minimal additional revenue but will serve as a greater disincentive to excessive water use. This could potentially be phased in over the next few years and provide up to \$2 million in additional revenue per annum.

- Introduction of a 2% petrol/diesel tax. This would cost consumer an additional 2-4c per litre (\$13.94 per year on average) while providing approximately \$5.3 million per annum in revenue to the council (partially offset by the cost of council vehicles). Not only would this provide revenue to accelerate environmental projects, the effect on consumption would encourage the use of electric vehicles and cycling, improve air quality and reduce traffic congestion.

- Introduction of a progressive rates system on residential properties. Increasing rates on high-value residential properties would provide additional revenue while ensuring an equitable tax burden. Thus we propose a targeted rate increase of 2% per annum, in addition to that proposed in the LTP, on the 10% highest valued residential properties. Assuming a cutoff of >\$1 million, this would be an average increase of at least \$108 per annum on 15,650 households. Over the course of the LTP this would raise an least \$76 million, while avoiding putting the tax burden on renters.

Over the course of the LTP, these measures would potentially raise \$145 million in revenue for the council, while

also improving the health and welfare of the city (these calculations are crude estimates from the available public data, but they are conservative). Given the historic low interest rates, servicing debt would not be the best use of this funding.

It would however be sufficient to halve bus fares throughout the city, or provide targeted free transport (e.g. to community service card holders, under 21's, etc.). This would provide a massive incentive to increase public transport usage, reduce congestion, reduce greenhouse emissions and reduce the council's future transport expenses.

Thank you for your time and your consideration of these proposals.

Nga mihi,  
  
Kelly Whyte

### Feedback

#### 1.1 Have we got the game plan right?

The high-level strategic priorities are sound, and I believe the Council has identified a suitable balance of broad themes.

However, I'd encourage the Council to go further on forward-looking investment for the social and physical infrastructure of a growing city. While we are recovering from a series of acute crises in the earthquakes, terror attack and pandemic, we also face the underlying chronic challenges of climate change, poverty and prejudice. Left unchecked, these problems will only grow more expensive, so early investment will pay off better than short-term austerity thinking.

#### 1.2 Rates

The proposed rate increase is manageable and conservative.

I would also support loosening the constraints on borrowing if the resulting funds can be directed towards well-considered and future-focused projects.

#### 1.3 Proposed changes to existing rates, and new targeted rates

I support the rates changes, and in particular the commitment to sharing costs more fairly across ratepayers in each of the proposed areas.

I support the excess water charge as a measure to curtail unnecessary water use.

I'd like to see a targeted rate for vacant sites, provided that the overall goal of the vacant sites programme is to incentivise development that addresses the need for affordable inner-city housing, office and retail spaces with cheaper rents to support a greater diversity of smaller businesses. We're over-supplied with car parks and with residential and commercial developments that are too expensive for the community they need to serve.

#### 1.4 Investing in upgrading and protecting our city's water networks

Upgrading the city's water networks is important and necessary, and will benefit the city for many decades to come.

#### 1.5 Investing in our transport infrastructure

Transport spending across New Zealand has too often been directed to poorly-conceived roading projects that fail to address changing patterns of transport use. It is pleasing to see indications in the draft plan that the Council is making efforts to counterbalance this with more thoughtful and multi-modal transport development. The direction is promising, but I would like to see the Council go much further.

We should move rapidly to expand and join up the cycleway network, replacing sharrows with safer fully separated cycleways.

We also need to get serious about commuter rail to satellite towns that are currently poorly served by public transport. Many plans have been made over decades, and I would like to see the Council push harder to make this a reality.

#### 1.6 Rubbish, recycling and organics

I support these investments.

#### 1.7 Our facilities

There's an urgent need for more community housing, and I would like to see the Council doing more over the next ten years than "maintaining and improving the quality of our existing stock". An adequate supply of healthy, publicly-owned community housing could meet the immediate needs of many citizens, but also provide downward pressure on private rents and increase population density around retail centres and public transport.

I would like to see opening hours for libraries increased rather than decreased, both in the evenings and at weekends. The success of Tūranga has demonstrated the central role of libraries as multipurpose community facilities. These are vital public spaces, promoting community involvement and solidarity, and providing destinations for families and community groups that can revitalise surrounding retail areas.

#### 1.8 Our heritage, foreshore and parks

Earthquake recovery forced a necessary focus on repairing and restoring colonial buildings, but as this work is completed I would like the Council to adopt a broader focus on other aspects of heritage: both the centuries of Māori settlement and the natural heritage of the area. The Christchurch 360 Trail provides a great example of a facility that engages with this deeper understanding of heritage. The regeneration of the Residential Red Zone provides another enormous opportunity. I would like to see expenditure rebalanced over the period of this plan to place greater emphasis on Māori heritage and natural heritage.

I'm pleased to see the strategic land purchase with the Rod Donald trust.

## Feedback

### 1.2 Rates

These rate increases are well in excess of inflation and very difficult for people in fixed incomes. Rate increases should be considered in line with inflation.

### 1.3 Proposed changes to existing rates, and new targeted rates

- **Excess water charges:** The council is proposing to introduce excess water charges without first trying a communications approach. Currently households don't even know their water usage because they have not been told. Ideally this information should be provided to ratepayers quarterly, with data that compares each property's usage to similar sized properties in the area (perhaps on a litres/square metre basis, for more easy comparison). Try this communications approach for 1-2 years and measure the outcome. If there is no change in usage, then move to the next step of considering charging. Also, the council notes that it wants to charge the "small proportion of very high users". If water charging was to come in, I believe the minimum should be set at a higher rate - 900 or 1,000 litres - not 700 litres, which is only 160 litres above the average. I fully agree that "very high users" should be charged but I don't think the council has got the proposed numbers right.

### 1.5 Investing in our transport infrastructure

- **Roading:** The council is allocating \$47m to road smoothing (asphalt surface) and \$136.2m to chip seal. Chip seal is terrible to drive on: it's much, much noisier than asphalt (both inside the car and external noise) and adds more wear and tear on bicycles and vehicles. The council should allocate more money to asphalt and ensure roads are not a few hundred metres asphalt then a few hundred metres chip seal then back to asphalt etc - make them all asphalt for a smoother, safer and quieter journey for road users.
- **Roading costs from other councils:** 40 percent of residents from Selwyn and Waimakariri travel into Christchurch for work. Their local councils should help Christchurch to pay for its roading given the high use by residents in these districts.
- **Bridges:** The Bealey Ave/Harper Ave (Carlton Mill) bridge needs to be made safer for pedestrians and cyclists. It is one of the busiest bridges in Christchurch but has been allowed to stay in a state of disrepair for over a decade. Shared cycle/pedestrian "clip ons" need to be added either side of the bridge urgently.
- **Better planning:** All residents are well aware of roads that laid only to be dug up shortly after. The council must prioritise its roading planning to ensure this does not occur except in emergencies: it's a waste of money and resources.
- **Median strip maintenance:** More should be done to keep median strips in good order. They are often covered in moss and dirt and never cleaned or looked after: many of the median strips in our city are an eye-sore.

### 1.6 Rubbish, recycling and organics

- **Green bins:** The council should offer larger green bins (at no cost) to residents who want them. This will help reduce landfill and reduce traffic to the refuse stations to drop off green waste.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

I don't support targeted rates for small projects like this: the council should be able to manage its budget to support this from normal revenue.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

### Feedback

1.7 Our facilities

I am very disappointed you are planning to close libraries at 6pm. I believe this will impact may in our community. Libraries are a very important part of our community and closing at 6pm will exclude so many workers, students and community groups.

Our group has been meeting at the Riccarton library for some time now, initially for free for non-profit groups, then you decided to charge us. We continued because we believe our meetings were for fellowship as well as learning. Now you want to take that away.

We understand the central library may remain open, it's not possible for many to travel into town in the evening.

Please reconsider your proposal and let us continue using these wonderful facilities staffed by amazing people.

### Feedback

#### 1.2 Rates

I support the increases as there are many parts of the LTP that are necessary to implement as soon as possible to enable ongoing earthquake repairs of important historic buildings e.g. the Arts Centre and Robert McDougal gallery. Also money is needed to ensure the infrastructure is fit for purpose.

#### 1.3 Proposed changes to existing rates, and new targeted rates

Yes I think the changes are generally ok. However I think that there should be a very significant rate penalty for owners of derelict inner city sites. These owners are delaying the revitalisation of the city and taking no responsibility for the effects of their negligence. I know that in other countries councils have the power of compulsory acquisition in similar situations. As this is probably not a financial possibility for our council, a severe rates penalty is a viable alternative.

#### 1.4 Investing in upgrading and protecting our city's water networks

Yes this is necessary.

#### 1.5 Investing in our transport infrastructure

The present focus on cycleways seems to be ignoring the importance of bus and shuttle bus options for the elderly, less able and for inclement weather. ECAN advised me recently it would be "impossible" to provide a more extensive bus or shuttle bus network in the inner city because cycleways meant there was no room for bus stops! I was astonished by this response. With the focus on inner city revitalization, surely shuttle buses would be an integral part of the plan.

#### 1.6 Rubbish, recycling and organics

yes

#### 1.7 Our facilities

The mobile bus service should be retained. It is the council's responsibility to provide such facilities for residents of all age groups and abilities. With huge amounts being spent on sports facilities and public buildings many residents will never use, the comparatively small amount on the mobile bus service is a necessary investment in the wellbeing of people such as rest home residents and people with limited access to transport.

If libraries are not being patronized at particular times, it does make sense not to keep them open, and to channel the savings into other areas.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments

The Arts Centre is a vital part of our cultural heritage as well as an important tourist attraction. It needs ongoing council funding so it can be fully repaired and utilised. A comprehensive funding model is needed so the Arts Centre will be a vibrant creative and arts hub in the centre of the city in tandem with the performing arts precinct.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

This significant building was gifted to the city and should be used as a gallery, not a storage facility as at present. It would be short-sighted not to so the work so it can be used by future generations. The heart of a city is its culture. The beauty and practicality of the interior of the gallery needs to be preserved for the benefit of the community.

1.11 Potential disposal of surplus Council-owned properties  
The 2 heritage buildings should be retained, but other properties divested. We must hold onto what few heritage buildings remain in Christchurch.

### Feedback

#### 1.2 Rates

#### 1.7 Our facilities

I do not agree with the decommissioning of Wharenui Pool as outlined in Christchurch City Councils' Long Term Plan and would like to see the pool stay for the use of the local community and Wharenui Swimming Club. Closing Wharenui will leave a big gap in the community. It takes decades to create the sense of community that has been created at the Wharenui Swimming pool. The value of that sense of community goes way beyond the financial. In addition, for many people such as myself, swimming is the only exercise that helps to relieve pain. I have used this pool frequently over the years. As the Council closes pools, the lanes in the existing pools become more crowded and it becomes harder to swim without bumping into others.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 17/04/2021

**First name:** Nicole **Last name:** Reddington

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.1 Have we got the game plan right?

My understanding, while rudimentary, sees this as being reasonably on track. I know as an organisation you are trying to please many ppl which is essentially impossible all the time. I would like to see as many ppl as possible having a positive experience with all elements of the council. I would also like to see the question of council wages looked at. I have no idea what ppl in council earn and I also know everyone needs, at the least, a living wage. My understanding of research about wages says that the closer ppl are in a wage band, the better the economy is. I would like to know that this has been looked at and that we aren't plagued by massive wages at the top with a steep drop to most wages being at the bottom, that we are reasonably fair and equitable.

#### 1.2 Rates

It's tough and I think many will struggle. There is a bigger picture which as councillors you probably don't really have any control over, eg house price rises and wage stagnation, so while I understand that the money needs to come from somewhere I wonder if there are other options other than a blanket one. Are there targeted options you can look at as an alternative?

#### 1.3 Proposed changes to existing rates, and new targeted rates I support these.

#### 1.4 Investing in upgrading and protecting our city's water networks

My issue with the water quality is that we are paying for 2 things. One is earthquake damage which I am happy to support with my rates. It's no one's fault these things happen and they simply need fixed.

The thing I am not happy with paying for is our water quality. Before Ecan was undemocratically disestablished and restructured to promote intense dairying, it was predicted that Chch residents would suffer a significant drop in their water quality. There were many people who benefitted from this move. Chch ratepayers were not, so I believe the finding for this part should not have to be paid for by us.

I believe this is called something along the lines of privatisation of profit, and collectivisation or publicisation (totally incorrect grammar!) of cost. This is, to me, corrupt and wrong.

1.5 Investing in our transport infrastructure

I LOVE the bike lanes. Most things seem to be on track. Obviously I would like to see a few more roads out east, where I live, made smoother. Love the highways heading north and south!

1.6 Rubbish, recycling and organics

Really loved the bin good booklet. I don't know how good we are overall at recycling. I would hope that those who don't care are being addressed in some way or other. I would also really like to see numbers beyond 1, 2 and 5 being addressed. Perhaps some entrepreneur can come up with some kind of business model for us to help keep the place clean. Perhaps businesses could be encouraged to be more responsible for their packaging costs and waste.

1.7 Our facilities

I think these are mostly right. I would like to see Turanga opened late tho and possibly the odd night at some community libraries

1.8 Our heritage, foreshore and parks

I'm glad to see these are being considered. I would love to see Marine Parade made great.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

Want to say thanks for supporting the arts centre to help it stay open. I realise it is an expensive operation but as a long term Chch resident, I see this collection of buildings as a community hub of sorts and it is from here, many individuals have had their creativity nurtured and many others have had so many recreational needs met.

The arts centre mainstay for Chch culture for decades and it is one really positive vestige of the past we have an opportunity to hold on to do thanks for being aware of this. It would be very fortunate if we could go back to seeing the arts centre as being once again, a place for the ppl to celebrate and enjoy and be involved in creative activities there.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments  
Would like to quantify this with a question. Are other options for funding this being considered? It's a beautiful building but very expensive to fix. Can it wait? Do we have philanthropy grants etc?

1.11 Potential disposal of surplus Council-owned properties

Whatever you do, get the maximum use out of them. Either top dollar if they are disposed of or repurposed for the good of all

1.12 Any other comments:

Thanks for asking. Best of luck going forward and I do hope you consider all of us in our unique variety when you are making your decisions

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 17/04/2021

**First name:** Derry **Last name:** Gordon

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

I support the principle of increasing rates at a reasonable percentage per annum. Costs are rising and will almost certainly continue to do so.

#### 1.3 Proposed changes to existing rates, and new targeted rates

HOWEVER, I urge the Council to change the land rating to be based on unimproved value. This is especially important in the CBD, to encourage landowners to develop the unacceptably high number of unimproved sites. Unimproved rating would also be preferable for the inner suburbs, to encourage denser development in these areas.

#### 1.5 Investing in our transport infrastructure

I encourage the increased provision of cycling and walking facilities.

I also ask for the establishment of a flexible parking charge regime for the CBD, the inner suburbs, and major activity centres such as the University and the large malls. This would discourage day-long parking in favour of short term parking, and encourage workers to use public transport and/or cycling for journeys to work. To be truly flexible and with wide coverage of parking sites this would require the development of a cellphone 'app' that could have regular and short term changes to parking charges.

#### 1.6 Rubbish, recycling and organics

Please fix or move the composting in Bexley. SOON!

I encourage the recycling programme of CCC. Please put greater emphasis on making clear to the public what can and cannot be recycled.

1.8 Our heritage, foreshore and parks

I urge extreme caution in spending on foreshore protection, the long term prognosis is that protection here is most often illusionary. Far better to plan for an orderly withdrawal.

I support spending on heritage and parks.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

To pay for continually improving services for our city we need to pay rates - it's part of the process. However, I encourage Council to continue looking at ways to make the rates rebates process as easy as possible for low-income earners, particularly those who are disadvantaged by the digital divide, and to widely encourage the use of this scheme.

#### 1.3 Proposed changes to existing rates, and new targeted rates

I think it's reasonable to have a targeted rate for heritage and arts buildings if we also have targeted rates for sports and recreation facilities and stadiums - some degree of reducing the gap between the two should be considered.

Targeted rates drive accountability from our Council. If we know we're paying a certain amount for a service, Council has a responsibility to use that rate effectively and make the service appealing to rate payers. Rate payers have no ability to opt out of paying a targeted rate, so the Council must find ways to make the service relevant for all.

The onus then sits with Council to *actively* provide and improve a service that residents will use, not passively sit back and point to residents not using services as being their issue.

#### 1.7 Our facilities

I have serious concerns about the reduction in programming services at Christchurch Art Gallery (CAG).

Art galleries are at times at risk of being impenetrable and inaccessible for some who aren't familiar with galleries and arts institutions. Some people feel like they are not places for them, and that they are unwelcome. Some people don't realise that they are free to be enjoyed.

Public and education programmes play a key role in bringing people into public places and activating them. Some children may never be taken to an art gallery by their parents, so going with school is the only time they have that experience. As you reduce the programming that is activating the gallery you will see an overall reduction in use and engagement, which gives Council misconstrued data because that result is of their own making. If that data were then used in the future to further reduce the funding of CAG because of a lack of use it would be a pathetic erosion of the value of the arts to our community, lead by the Council itself.

Ultimately, I think reducing the programming services at CAG is a mistake, and if anything, that area should be strengthened and grown. The focus should be on making CAG an accessible and relevant destination for all, and that starts with programming that is low cost, high quality, and convenient for our communities to attend, with the overall goal to contextualise and share that great community taonga.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties

Fine to sell.

1.12 Any other comments:

Broadly I feel that the Council needs to continue supporting the arts, culture, and heritage sector. Council needs to at least maintain, or even extend funding available to arts organisations and communities, as well not reduce Christchurch Art Gallery programme funding.

### Feedback

#### 1.1 Have we got the game plan right?

I totally support the primacy given to Action on Climate Change and support the measures outlined in the consultation document on pp.14-15. It is extremely important the Council continue to have a 'climate change lens' over all its activities. The Council has rightly declared a climate emergency. Daily we hear news of new statistics which underline how serious the emergency is. We face a frightening future. Now is the time for us to take the emergency seriously and act with urgency.

The targets should be stronger however: why has methane been excluded from the net zero target and why is the target year of 2045, so far in the future?

Similarly the aim to halve emissions by 2030 from 2016-17 levels should be stronger. It should at least match the aspirations of the UK to cut emissions to 59% below their 2010 level by 2030.

#### 1.2 Rates

In the climate change emergency we need to take unprecedented action. I support the rates rise.

#### 1.3 Proposed changes to existing rates, and new targeted rates

I note that the Council has made the proposed water rate equitable in that each household is entitled to the same amount per day. But it is still inequitable in that the soils in Christchurch differ greatly and where houses have been built on poor soil, generally in the lower income areas, households will need more water if they are to have productive home fruit and vegetable gardens.

I urge the Council as a top priority to put aside the proposed water rate and instead put resources into fixing all the leaks in the system. A shocking amount of water is lost each day by these leaks and when walking in my own suburb I notice leaks that remain unattended for months, sometimes even years.

Another approach that could be taken is education. If households knew how much water they are currently using many households would respond to suggestions about how they could reduce their water usage. An incentive could be introduced for those who reduce their water use, rather than penalising those who genuinely need a significant amount of water for their household's food production.

#### 1.4 Investing in upgrading and protecting our city's water networks

The city's water networks need to be of a high standard for the future health and sustainability of the city. A significant investment is needed and I agree that this is a priority.

#### 1.5 Investing in our transport infrastructure

All money spent on public transport, and improved safety for pedestrians and cyclists is money well spent. This is definitely high priority. Travel by private car does not need 'better options': Too much money has been invested in facilities for cars in the past, and the more that is invested in parking buildings etc, the more cars will be used. This is not the way of the future.

The city's current and proposed cycle track network is brilliant and the more that are built, the more they will be used not just by cyclists but also by people on electric bikes, tricycles, wheelchairs, scooters and pedestrians.

To back up the cycle tracks the city transport system needs to be upgraded so that individuals have a real choice between travelling around the city under their own steam or using a cheap, efficient integrated bus and suburban rail system, using existing railway lines.

#### 1.6 Rubbish, recycling and organics

An upgrade to the organics processing plant is clearly needed, given the offensive smell in eastern suburbs. Recycling infrastructure is clearly needed too, especially the sorting machinery which is presently preventing us from putting many recyclable items into the recycling bin.

#### 1.7 Our facilities

I am opposed to the closing of the Mobile Library service. Please reconsider this decision.

#### 1.8 Our heritage, foreshore and parks

All of this work is important and must be well resourced. Our public parks need to be resilient to the greatly reduced rainfall which we are already experiencing.

Restoring heritage buildings is important and high priority should be given to restoring the Provincial Council buildings.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

#### 1.11 Potential disposal of surplus Council-owned properties

The former Rolleston House building has gained enormous significance since the earthquakes because so many buildings of similar age and size have been lost. A type of building which used to be common is now rare. It is really important that it be conserved and I urge the Council to find a way to use it for their own activities, especially given its proximity to the Council offices.

1.8 Our heritage, foreshore and parks

BELFAST NETBALL COURTS.

I wish to support the call for upgraded netball courts in Belfast. I am aware that they are in bad condition and am shocked that the plan does not currently include renewal for 10 years. This is plainly ridiculous when it has such heavy use.

I am also keenly aware of the frustrations being felt by club executives who are fighting to have this community facility operating at it's highest and safest level.

My submission to council is to have this rectified and included in the current plan

### Feedback

1.1 Have we got the game plan right?

No,

Stop spending ridiculous amounts of money on bike lanes. I am a cyclist but don't use these as they are dangerous and slow.

Cant you see a future where personalized transport is by very small electric vehicles that need parking and charging. Have a look at the heavily populated cities in France. Untra small electric personal transport vehicles are the future. i love my bike but I am now 65 years old and am sick of the cold and the rain and being knocked off my bike. Bike lanes are slow and dangerous with many obstructions. I dont want to see any more of them. I feel safer on the roads where I can bike at speed and can be seen.

1.2 Rates

Having worked for as a contractor to the council i see waste everywhere. The council should always be working to a cap of inflation and should be under pressure to reduce costs and improve productivity year after year. some of the council salaries are just way out of kilter with the private sector. get back to basics and stop wasting my money,.

1.3 Proposed changes to existing rates, and new targeted rates

I would like to see rates reduce and the council cut its cloth nd stop giving money to pet and ideologically driven causes.

1.4 Investing in upgrading and protecting our city's water networks

This is fundamental and should never have been left to get into this state.

You have no right to even think about water charges until you stop the infrastructure leaking like a sieve.

We dont need clorination or florination we just need to get the water we have secured.

1.5 Investing in our transport infrastructure

If your talking about fixing the roads then yes. If your talking about more cycle lanes and ruining the parking and free flowing traffic like you have on Linwood ave Ferry Road and many other minor arterials then no.

#### 1.6 Rubbish, recycling and organics

Take the money your proposing on spending on cycle ways and spend it on building proper Plastic Recycling facilities that will handle all plastics. set up a tyre reprocessing plant so that we can take all of the tyres from all of NZ and recycle them into the valuable steel and materials that can be used in roading and other building applications.

There should be at least two days per year when residents can put out anything for disposal. Asking people to rent a car with a tow ball and a trailer and then pay to dispose of a mattress or other no longer required items in archaic. This is the 21st century. People no longer have trailers in their back yards and cars with tow bars. Many of the inner city dwellings dont even have car parks but they still have household items that have to be dumped. It is no wonder that we see rubbish dumped on the side of the road. you give people no option.

#### 1.7 Our facilities

I think that the CCC should either work out how to run these facilities efficiently of get out of the business. The new Library is mostly an empty building as are most of them. Have you not heard of the internet? A library should no longer be a place where books are sorted and stored. You cant get to the library anyway. There is no parking and no place to stop and get dropped off. As the population ages these places become inaccessible.

I used to belong to the CCC gyms but fees just kept on rising while the services dropped. I now belong to private pool and gym facilities and it costs me half as much with much better equipment and service. All of these commercial ventures run by the council are run inefficiently and run at a loss when the competing private facilities offer better value for money better service and run at a profit. Tme for the CCC to recognize this and get out of these business and stop using rates to subsidize facilities that compete poorly with private service providers.

#### 1.8 Our heritage, foreshore and parks

Ye parks and foreshore are important.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

##### Comments

No I don't this should be a user pays facility. I will never use the library, the arts center the conference center or the metro sports center or the new stadium or many of the other poorly provided Council white elephants. Please get back to basics and let the market provide the facilities that are needed.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

##### Comments

I like the Robert Mc Dougall but we should only have one Arts Centre. If it is the RMCD then yes fix it and make this the one CCC funded facility. But of the city center Arts Centre is the main venue then the RMCD arts center should be let go. Sorry but pick one.

1.11 Potential disposal of surplus Council-owned properties  
Yes dispose of under utilized assets please.

1.12 Any other comments:

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

### Feedback

1.1 Have we got the game plan right?

I was shocked to just discover that we are not on the historical list. My husband (now deceased) and I have owned this land since 1988. It would appear that boundary changes we made some years ago have impacted and I will be devastated if I am charged more rates. It is difficult enough now to cope with rates etc on a pension. We get nothing for our rates, no lawn mowing, no footpath, no gutters, not kerbside rubbish collection and stormwater discharge has always been our own responsibility. I will be extremely upset if I am charged more when our neighbours in Onawe Flat road are not, it is EXTREMELY unfair. I would like to see your map changed to reflect a property that has been rated historically since Duvauchelle was first surveyed. I actually have the original map if you wish to see it.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

We need a stronger, more active response to climate change. It's all too easy for CCC to respond to 'what ratepayers want', but the larger, long-term responsibility to make changes that will reduce our carbon emissions significantly and contribute to a sustainable, more liveable and better connected city won't go away just because some people say they want to keep driving their cars everywhere! We need to reduce choices to those that allow us a future on this planet, not pretend that all choices remain on the table. We need bold action, not fussing with minor details. When it comes to climate change mitigation, and especially transport policy, please take responsibility for more connected up thinking and long-term planning towards a carbon zero future.

### 1.2 Rates

Overall this is probably about right.

### 1.3 Proposed changes to existing rates, and new targeted rates

Rates are increasingly difficult for our household to cover, but as long as we see the council using its funds well that's okay. The targeted water rate is good, but I'd like to see it reviewed after one year. We also need to have more transparency about commercial users of water, and CCC / ECan might do more to limit / review these if they are excessive. The Arts Centre targeted rate is good - we should get this repaired.

### 1.4 Investing in upgrading and protecting our city's water networks

Old pipes with lead connectors must go. Replace these urgently to get lead out of our water supply.

### 1.5 Investing in our transport infrastructure

Transport is one of the most important aspects of the plan. However, transformational or long-term change is sidelined, resulting in a very conservative and ineffective looking plan for our transport in future. The consultation document refers to the Greater Christchurch Public Transport Futures business case, and there is a report available online with the recommendations being made. But the Draft LTP is largely silent about what the council's plans are. What is the CCC position or proposal based on that business case? Why have some proposals not been outlined to the public based on this work as part of the Draft LTP? Surely it makes sense to align these plans, even if that means delaying to allow for it. Given transport is so crucial to reduction in carbon emissions, efficient land use, economic development, environment and health, why is the really effective stuff sidelined? The LTP in its current form appears toothless in its approach to transport. The evident concern of the council is to deflect negative responses from the community, thus the LTP is at pains to convey that '[council] is focusing on what you're telling us is important' (mainly re-surfacing roads) and giving people 'choice'.

This is the wrong approach. We need a council that will take stronger leadership to provide low-carbon transport networks. The current work on the major cycleways (supported by central government) is brilliant, and I applaud the efforts to complete this work. We need the same long-term thinking set out for the PT Futures business case, and a commitment to its three stages of future planning. The LTP makes the argument that Christchurch's road quality is below the national average. However, the PT Futures business case points out that Christchurch's investment in public transport is significantly below that of Auckland and Wellington. Why is CCC not arguing to bring our public transport up to standard more assertively, instead of justifying its spend on roads? You also aim to revitalise the central city and complete major public facilities in central Christchurch. These aims are not complete without a more effective long-term transport plan that takes us towards mass rapid transit. It doesn't make sense to offer aqua-jogging at the new Metro Sports centre if those taking part all hop in their cars and drive to get there. Such facilities need to be much better connected with public transport and walking - if not now, then at least in our medium to long-term future. The cycleways are a good model, showing slow but steady increase in use and providing a network that can be expanded / improved as needed in future.

The model of splitting transport responsibilities between CCC and ECan might need to be reviewed. I don't know enough about this, but have heard from others that it is a problem. As a rate payer I'd like to know that the model we have works well and is capable of the long-term thinking needed for effective transport planning.

1.6 Rubbish, recycling and organics  
Yes, these are good initiatives.

#### 1.7 Our facilities

Libraries need to have some late-night hours to enable working people to get to them out of work hours. I have a young family, and find that after work we have dinner and bedtime to complete before going to the library would be an option. However, by 7pm our local library (South) is closed. It would be wonderful to have one late-night per week even till 8pm so that I could go to the library. 8.30 or 9pm would be even better. The weekend is a possibility, but for parents of young children the library often means supervising kids, reading to them and helping them choose books, rather than being able to look for books yourself. So a late-night at most suburban libraries would be greatly appreciated. Our community pools / gym / sport facilities are open much longer hours than our libraries, eg I could go swimming or do a fitness class at QEII until 9.30pm every weekday evening. Why is reading not afforded the same opportunity? Also, as a community meeting space the library is an important alternative to cafes/bars. CCC could balance these opening hours better.

1.8 Our heritage, foreshore and parks  
Yes, this seems good.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments  
Yes.

#### 1.11 Potential disposal of surplus Council-owned properties

In general a lot of these seem like reasonable disposals. Coronation Hall at 71 Domain Terrace is the venue of the Christchurch Folk Music club. This is a wonderful club with a really important community presence. It would be a tragedy if sale of this venue disrupted the wonderful music nights they regularly hold. I oppose sale of this hall unless there is clear the Folk Music club would benefit or at least not be disadvantaged by it.

1.12 Any other comments:  
Thanks for supporting cycleways!

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 17/04/2021

**First name:** Daniel **Last name:** Bristow

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I am writing to request that the land as described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) be removed from the LTP and fast track disposal. The normal process for disposal of land that would require Community Board and public consultation, should be used instead. The community has spent many hours planting Sam and Morgan's gullies in native vegetation and these gullies have not been protected yet. Please allow normal community consultation in this process.

1.8 Our heritage, foreshore and parks

regional parks require more investment with increased focus on pest plant control.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.3 Proposed changes to existing rates, and new targeted rates

Who will pay for the water metering and upkeep for every household?

1.6 Rubbish, recycling and organics

I propose that the Council investigates the incineration technologies used in European countries and reports to the community the alternatives available to landfill waste disposal. The technology has advanced considerably and coupled with efficient targeted recycling incineration provides a means to cleanly turn waste into energy and reduce the lifecycle costs from home collection to landfill. Provide clear information to all rate payers about what happens to each individual type of waste, particularly those we purportedly recycle. Could Christchurch become the lead region in regard to development of recycling facilities, given the wide array of technology solutions available and the reducing scale / cost effectiveness of such facilities that aligns with our waste volumes and profile.

1.7 Our facilities

I recommend that you support the return of the Godley House site to the rightful commercial designation, and support funding and community ownership/management of that land for the benefit of the community now and in future. That a new commercial building and social space be created that meets the needs of our community, providing amenity and connection to the surrounding reserve land and the harbour. This should incorporate the library and Council functions for our growing community. The potential to create a distinct destination for the large number of passenger ship visitors should not be ignored, and the value they and local / national tourists could bring to such a development would ensure long term commercial viability.

1.8 Our heritage, foreshore and parks

Please fund and complete the Lyttelton Harbour Head-to- Head walkway, and utilise local communities and the capacity they offer help to build and maintain this.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

## 1.11 Potential disposal of surplus Council-owned properties

**My submission is to** request that the land as described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) be removed from the LTP and fast track disposal. The normal process for disposal of land that would require Community Board and public consultation, should be used instead. In making this request I provide the following supporting information:

1. The two pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan. Instead I wish to see meaningful consultation with our Diamond Harbour and Southern Bays communities.
2. The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation).
3. Thorough community consultation should be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.
4. Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not just be made by Council staff.
5. The following matters should be considered if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process.
  - a. Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to conflicts with community usage and aspirations.
  - b. The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles and do not follow the fence-lines. This means that extensive areas of native planting are not in the draft covenants.
  - c. Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for. The Mt Herbert Walkway also has no easement at present (as it is on Council land).
  - d. If there are houses built, the school roll may increase, and the school may wish to expand on to the land considered for disposal. There is an easement to the western side of the school but no designation for further expansion in the district plan.
  - e. If road access to the site is developed through Ngatea Road, or Whero Avenue, more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner.
  - f. The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?
  - g. Should all the land be sold (privatised) at one time? Would a staged housing development be better for the community?
  - h. Different use options for the land need to be considered not just a sale to a housing developer. Should some parts of the land be released for residential development and other parts held for other uses? Should the Council consider the needs of the community for special types of housing e.g. catering for older or younger people looking for smaller units?
  - i. The land could be used as a test site for a futuristic style community development comprising all facets of modern sustainable design, as outlined here for example: <https://medium.com/hackernoon/natures-whole-system-optimization-informs-community-design-546d484050bd>

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

After reading through the proposal to extend the land drainage targeted rates in the Christchurch region, I agree that we all benefit indirectly from a well working system, however not all of us would benefit directly by making rates the same across the board. In fact this could have quite a considerable impact on those who have chosen to live outside the main city center for affordability's sake in terms of rates. In areas such as Birdlings Flat, you have a complete community who has had to provide and pay for their own waste waster and land drainage systems, and due to the nature of the land, will not require flood protection or other major developments related to this proposal. It is properties such as this which should not be expected to have their rates increased to match areas who rely on this infrastructure. I believe that Cristchurch City Council should adopt Alternative option 1: Set the land drainage rate on properties receiving a land drainage service.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

The overall rates increase over the next ten years is too high.

#### 1.3 Proposed changes to existing rates, and new targeted rates

I agree with the excess targeted water rate coming in, but I'm not interested in funding heritage projects with rates.

#### 1.4 Investing in upgrading and protecting our city's water networks

I would like to see safe water in line with the government recommendations, namely multi barrier protection: not just bringing the well heads above ground, but also protozoal protection (UV or cartridge filtration) and bacterial protection that will last to the tap (chlorination).

#### 1.5 Investing in our transport infrastructure

I think bikes are still in a vulnerable position around much of the city, and it would be great to remedy that.

#### 1.6 Rubbish, recycling and organics

Sounds excellent.

#### 1.8 Our heritage, foreshore and parks

Heritage: couldn't care less, how about spending \$57 million on the woefully underresourced mental health services instead?

Foreshore and parks: great for the health and enjoyment of the community.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

1.11 Potential disposal of surplus Council-owned properties  
Unless they're needed for a new purpose, they should be sold.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

The Christchurch Heritage Trust believes a targeted rate for heritage protection and restoration is appropriate.

The Christchurch Heritage Trust also requests the Councillors restore the Heritage Incentive Fund grants funding to its previous level of \$700,000 when the funds of the disbanded Landmark Grants have been exhausted.(Likely to be 2023-24.)

Christchurch was well known for its eclectic array of heritage buildings pre-earthquake, but now the few remaining ones, when restored and strengthened are important in providing a tangible reminder of our past.

It has been proven that through incentive funding of heritage building restoration the Council has saved significant heritage which would otherwise have been lost. Grants are for the buildings NOT the owners. With the condition of a heritage covenant to accompany grant funding, it means the building is there for future generations to enjoy. Heritage buildings add to the interest and history of our city.

The last year of the Landmark Grants was disbanded and the remaining \$1.5 million carried over to the Heritage Incentive Grant Fund. Under the Draft LTP this is expected to last 10 years.

Already HIG grants have been made and if the upcoming planned draw down is approved, it will leave roughly \$800,00 for the next year (year 2021-22).

At this rate it is likely there will be no funds available after 2023-24.

The next LTP review will be 2024.

In past the CCC has put aside roughly \$700,000 annually for the HIG.

The CCC has widened the HIG criteria to include non-scheduled items of heritage value including buildings, movable heritage and grave monuments.

Supported Arguments:

CCC Heritage Strategy: The Community was consulted and strongly communicated the importance of Heritage and the CCC responded by adopting the Heritage Strategy. Withdrawing funding is contrary to the Strategy and the wishes of the Community. The Strategy refers to partnership and the CCC is effectively withdrawing from its role as partner with the community.

There has not been in the past or an expectation of the future, that there will be a reduction in

requests for HIG grants.

The CCC is planning to add more buildings onto the District Plan.

HIG is the "carrot" to entice owners to list their buildings.

The HIG has been used for very successful restorations of commercial Heritage buildings especially in the CBD and surrounding areas.

The best green building is the one still standing and a Heritage Building meets this criteria easily.

A commercial heritage building's restoration is the catalyst for local economic rejuvenation.

Tourist branding. Major cities are known by their heritage buildings.

Heritage buildings physically tell us our stories of where we came from. Knowing these stories gives us the confidence and the credibility to project our individual and Christchurch identities.

How will ChristchurchNZ compose a credible narrative to market the City if it is not informed by living images of our built history?

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

The Christchurch Heritage Trust strongly supports funding for the Arts Centre.

A \$5.6 million contribution to assist with the restoration for the buildings is considered appropriate. page 38 Draft LTP.

The Arts Centre has restored 2/3 of the site in what is a \$255 million project. It is an iconic branded site that welcomes a large number of visitors and makes a significant economic contribution to the CBD.

"A fixed rate was considered but not preferred because a targeted rate based on house value was considered more equitable."page 3 LTP.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

The Christchurch Heritage Trust strongly supports funding for base isolation of the Robert McDougall Art Gallery.

The Canterbury Museum considers the base isolation of the Robert McDougall Art Gallery to be a key part of the Museum’s redevelopment. page 61 LTP.

The Robert McDougall Art Gallery was a gift to the city. Keeping it closed since 2003 is not honouring the spirit of this gift.

### Feedback

1.12 Any other comments:

I would ask for funding to be released to deliver the Sumner Village Green at the same time as the Bays Area Skate Park in 2022. To me this would make more sense - from both minimising the disruption to the surrounding area during construction, as well as actually saving money, by developing both at the same time, it would minimise some construction costs. The areas have been designed to complement each other, and delaying construction of the green by many years will have significant impact on the community.

### Feedback

1.1 Have we got the game plan right?

The focus for the next ten years should be on infrastructure that; transitions to zero emissions and protects sustainable water supply and use.

Decisions on the LTP infrastructure investment needs to be in accordance with the draft Otautahi Christchurch Climate Change strategy.

1.2 Rates

Focusing on being affordable as possible is key.

1.3 Proposed changes to existing rates, and new targeted rates

I agree with the principle of user pays and charging for excess water use.

However, I am unclear why Council would charge for land drainage to remote rural properties on the Banks Peninsula where no infrastructure exists.

1.4 Investing in upgrading and protecting our city's water networks

Changes need to be made to the Akaroa wastewater system projects ID 62349 and 596 . The balance is not right. These projects need to be reviewed in accordance with the draft Otautahi Christchurch Climate Change Strategy 2021.

The Council together with the community has a responsibility to apply a holistic approach to Akaroa's sustainable water use by upgrading the wastewater network to be both more efficient and more resilient, while at the same time maximising reuse of the precious taonga that is water. Refer to the supporting document attached.

1.6 Rubbish, recycling and organics

A stronger focus on influencing product packaging is required to reduce unnecessary plastics.

### Attached Documents

File

Submission to Christchurch City Council draft Long Term Plan 2021

## **Submission to Christchurch City Council draft Long Term Plan 2021-2031 and Otautahi Christchurch Climate Change Strategy 2021**

From: Simon Trotter

Date: April 18, 2021

**The Akaroa wastewater system LTP projects ID 62349 and 596 in the consultation as part of Draft Long Term Plan the Council and Otautahi Christchurch Climate Change Strategy 2021.** Review these two projects in accordance to the draft Climate Change Strategy.

The Council together with the community has a responsibility to apply a holistic approach to Akaroa's sustainable water use by upgrading the wastewater network to be both more efficient and more resilient, while at the same time maximising reuse of the precious taonga that is water.

The Akaroa water supply already fails to meet demand every summer. Management of the infrastructure is poor, including a lack of a safe secure system to avoid the water supply being contaminated by animals. The Akaroa wastewater network is ageing badly, with stormwater leaking in and, potentially, raw sewage leaking out and polluting the harbour. The public has become aware over the past year that 60% of the total wastewater volume is in fact storm and ground water infiltrating into the network. The Akaroa wastewater system is being renewed through LTP projects ID 62349 and 596.

- **Climate Change Goal 2. Understand and are preparing for ongoing impacts of climate change**
- Identify the infrastructure that is most vulnerable to sea level rise and other climate change impacts, including water supply on Banks Peninsula, to inform community discussions and infrastructure planning.
- Work with communities on Banks Peninsula to develop responses to localised climate issues such as threats to water supply, increased wildfire risk, and erosion.
- **Climate Change Goal 4. We are guardians of our natural environment and taonga**  
Work with the community to encourage and enable sustainable water use as part of a response to reduced surface water supply.

### **Changes requested for draft LTP projects ID 62349 and 596**

#### **The Akaroa Inflow and Infiltration (I&I) Renewals - Project ID 62349,**

Reallocate funds from the 596 project to 62349 project. Request to increase the budget for I&I renewals to ensure the repairs to the broken wastewater pipe network can be fully completed – in line with recent Council resolution recommending that an 80% reduction in I&I be achieved. The current budget does not reflect this decision, with the money budgeted to achieve a 20% reduction now being expected to cover an 80% reduction. With over 60% of the wastewater quantity in an average year currently due to I&I (and more in wet years), a full repair of the broken pipe network will enable a much smaller scheme to be designed, resulting in less overall expense and therefore a more cost-effective overall project.

The reduced wastewater quantity will allow for a more efficient performance from the current wastewater treatment plant, which is not due to be closed for many years under the proposed scheme. This will dramatically reduce the raw sewage overflows into the Akaroa harbour that currently occur when the system is inundated during storm events. Failing to fix the sewer pipe network leaves it highly vulnerable to raw sewage overflows under the more intense storms predicted due to climate change. Further, it may reduce or eliminate the excessive levels of coliforms that are routinely observed in the harbour near Akaroa, by preventing raw sewage

leaking out of the wastewater network and infiltrating the stormwater system, for both the current and new wastewater treatment plants. This must surely be the top priority for maximising the health and mauri of Akaroa Harbour.

#### **Akaroa Reclaimed Water Treatment and Reuse Scheme – Project 596**

Request that the Christchurch City Council defer further funding on Project 596 until the inflow and infiltration pipework repairs in Akaroa are fully completed. Only then will accurate figures on the quantity of wastewater in the system be known enabling the new system to be designed to the correct size. The more I&I is reduced, the more money the Council will save on Project 596 by knowing this crucial factor before it does the detailed design on the new system.

#### **In summary**

By amending the LTP and reprioritising spending on I&I reduction, water reuse and other improvements to the water supply, the same budgeted expenditure could address these issues and achieve a far more sustainable, long-serving and ultimately less expensive outcome.

The consequence for not making changes to the draft LTP are: Akaroa be left with a leaking pipe network that pollutes the harbour and is highly vulnerable to storm events, a potable water supply that is overstretched and in danger of being even more inadequate in future, a treatment plant processing much more water than it needs to, and an expensive and unnecessary infrastructure of pipes, pumps, wastewater ponds and irrigation fields to operate and maintain.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

I'm submitting on the draft Long Term Plan to ask the Council to prioritise the immediate renewal of the Belfast netball courts at Sheldon Park and the repair of the toilet block.

The courts are in terrible state and in dire need of renewal. The netball courts are a health and safety concern because:

- they flood when it rains
- they are slippery with ice on frosty mornings
- when most teams train in the evenings they are slippery and damp from night-time dew
- part of one court is permanently wet and covered in a slick film because it never dries out
- they have extensive cracking filled with vegetation
- they have holes for tennis net poles that are no longer used

The toilet block was damaged in the earthquakes and is frankly, in a disgusting state.

The junior teams at the Belfast Netball Club, Belfast School, Belfast Kids First Kindergarten and other community and sporting groups use the courts. The senior teams (under 17 and up) no longer use the courts due to the high risk of injury. Instead the Club pays each year to hire courts for senior teams to train on. This is a large burden.

Belfast Netball Club is a large community based club, run by a small, dedicated committee. It has approximately 250 registered players this year. New subdivisions and the proposed addition of a second school in the area means this number will grow.

However, for the Club to be able to support growth it requires adequate facilities, now, not in 2027.

Safe courts are essential for the Club's future. Please Christchurch City Council, prioritise the immediate renewal of Belfast Netball Courts and the immediate repair of the toilet block! Bring forward the Community Parks Planned Hard Surfaces Sheldon Park projects works and include the repair of the toilets with it.

### Feedback

#### 1.7 Our facilities

We strongly oppose the proposal in the Draft Long Term Plan 2021-31 to decommission Wharenui Swimming Pool. Our members regularly use the pool to practice whitewater paddling skills including learning to roll a kayak and introducing new members to the rapidly growing sport. **\*This is the only pool in Christchurch which has been able to accommodate the needs of our club and of the whitewater community\*.** We do not believe the new Metro Sports Facility will meet these needs.

Without this facility, our members will lose the ability to learn and practice basic skills in a safe environment. These skills are fundamental to our sport and essential to river safety. Losing this facility will prevent new members from getting into the rapidly growing sports of whitewater kayaking, canoeing and packrafting, and compromise the ability of kayakers, canoeists and packrafters to paddle rivers safely.

Wharenui is part of the fabric of a local community and has forged invaluable social connections and opportunities. Decommissioning it would be a huge loss to the community as a whole, as well as whitewater clubs and other community groups that use the facility.

We note that, by the Christchurch City Council's own admission, it has massively overestimated the costs of running Wharenui Swimming Pool. This surely requires a complete re-evaluation of the basis for the proposal to decommission it.

We urge the Christchurch City Council to immediately drop the proposal to decommission Wharenui Swimming Pool.

#### 1.12 Any other comments:

About us:

The Canterbury Whitewater Club is a non-profit, recreational whitewater club. Our members paddle on whitewater rivers in a variety of watercraft, including kayaks, canoes, rafts, packrafts, stand-up paddle boards and more. The club was formed around 1977 and was previously known as the Whitewater Canoe Club until July 2020 when our name was changed to Canterbury White Water Club. We are one of the biggest whitewater clubs in New Zealand, with a membership of approximately 200.

The club is a member of Whitewater NZ, the national organisation representing recreational whitewater canoeing and kayaking in New Zealand.

The club organizes trips on New Zealand's whitewater rivers, ranging from Class II to Class IV whitewater and runs beginner kayaking courses. The club participates in river and water management and conservation issues that affect our enjoyment of the rivers we paddle.

The club is managed by a Committee, which is elected annually by the club membership. We have been a registered Incorporated Society since 1983 and have a constitution that governs what we do, what members can expect, and what is expected of them.

#### 1.7 Our facilities

I have lived in the Halswell area since 1995. When my daughters - now 27 and 23 - were young, we used (and loved) the Halswell library, at the corner of Halswell and Sparks Roads, extensively - especially on Saturday mornings.

I was delighted when Te Hapua was built - it is a fantastic facility - and have used it extensively, most notably between 6 and 7 pm on weekdays and on Saturdays and Sundays, usually between 1 and 3 pm. To be able to use Te Hapua at these times - especially late on a weekday, after a busy day, with all of its hustle and bustle, has been absolutely wonderful. The opportunity to wind down and reflect, using the library's extensive facilities, has been a very positive feature of my life in recent years. I would be very, very sad to see the closing time at Te Hapua reduced from 7 pm to 6 pm on weekdays. This would certainly affect my usage and enjoyment of the library negatively. The same can be said of reducing the weekend hours.

If this is a resourcing issue for the CCC, perhaps a compromise could be found. For example, leaving the library open until 7 pm on Monday, Wednesday and Friday, and reducing it 6 pm on Tuesday and Thursday. Alternatively, or in addition, Saturday, or Sunday afternoon hours could be reduced from 4 pm to 3 pm. I would be sad to see this happen, but accept that it may be required from a rationalisation of resources point of view.

Although I do not purport to speak for them, I am aware of people who, being fully engaged with work and parental duties and responsibilities during the day, use the library very late - often after 6 pm - for research and study purposes. They are bound to be disadvantaged by earlier library closing hours.

With respect to Turanga, reducing its opening hours from 8 to 7 pm would affect my usage, as I sometimes am there close to closing time. More importantly, though, Turanga has become a hub of activity at all hours - especially for international students - and I strongly believe that reducing its opening hours would be a significant step backwards for a city striving to bring people and energy to the city centre. Early evening in Christchurch would be much poorer with Turanga closed.

In this brief submission, I have tried to explain how important and beneficial to my life the long opening hours of Te Hapua (and, to a lesser extent Turanga) have been. So pleased was I that, soon after its opening, I expressed the strong hope to many of the library staff that Te Hapua's opening hours would remain and not be reduced. I retain this wish and hope for your favourable consideration.

Thank you.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

The Banks Peninsula Community Sports Complex Group believe that Council have \$170,000 in their LTP in the Community Parks Planned Recreation Spaces Renewal Programme Budget (ID 61794). This amount is budgeted in the 2024/25 financial year.

This group strongly supports this budgeted amount and would like to see it retained in the Christchurch City Council Long Term Plan.

It is imperative that the Akaroa Community have their current facilities upgraded and made into a safe and Multipurpose Sporting Complex which would serve the needs of all from the very young to the very old. As Akaroa and the wider Bays are so far from Christchurch facilities, we need to retain and grow the opportunities for sport and recreation here for the local community, other non permanent rate payers and visitors alike.

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

1.12 Any other comments:

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

### Feedback

#### 1.7 Our facilities

I strongly oppose the proposal in the Draft Long Term Plan 2021-31 to decommission Wharenui Swimming Pool. I am a very long term member (35 years) of a kayak club (Canterbury White Water Club), which regularly uses the pool to practice whitewater paddling skills, including learning to roll a kayak and introducing new members to this rapidly growing sport. \*This is the only pool in Christchurch which has been able to accommodate the needs of this club and of the whitewater community\*. I do not believe the new Metro Sports Facility will meet these needs. I am also a former instruction officer of this club, and a former instruction officer of the overarching body representing kayakers in NZ.

Without this facility, the members will lose the ability to learn and practice basic skills in a safe environment. These skills are fundamental to our sport and essential to river safety. Losing this facility will prevent new members from getting into the rapidly growing sports of whitewater kayaking, canoeing and packrafting, and compromise the ability of kayakers, canoeists and packrafters to paddle rivers safely.

I am also a former swimming instructor and note that parents need easy access to pools close to their childrens' schools and homes to enable children to learn to swim. This is a vital skill for all NZ children and facilities that promote swim teaching and enable easy access must continue to be provided. Having many smaller easy to access pools is more desirable, as they are much easier for parents to access, than having fewer, but bigger, bigger pools.

Wharenui Pool exists to promote swimming, water safety and water based activities. Wharenui Pool should continue in the role it fills so well. I note that school pools all around NZ have been closed due to lack of support from the Ministry of Education in providing these facilities. I also note than NZ has a high drowning rate relative to similar countries and this is of major concern to all NZ'ers.

Wharenui Pool is a huge part of the fabric of a local community and has forged invaluable social connections and opportunities. Decommissioning it would be a huge loss to the community as a whole, as well as whitewater clubs and the vast number of other community groups that use the facility.

I note that, by the Christchurch City Council's own admission, it has massively overestimated the costs of running

Wharenui Swimming Pool. This surely requires a complete re-evaluation of the basis for the proposal to decommission it.

I urge the Christchurch City Council to immediately drop the proposal to decommission Wharenui Swimming Pool.

About my Kayak Club:

The Canterbury Whitewater Club is a non-profit, recreational whitewater club. Our members paddle on whitewater rivers in a variety of watercraft, including kayaks, canoes, rafts, packrafts, stand-up paddle boards and more. The club was formed around 1977 and was previously known as the Whitewater Canoe Club until July 2020 when our name was changed to Canterbury White Water Club. We are one of the biggest whitewater clubs in New Zealand, with a membership of approximately 200.

The club is a member of Whitewater NZ, the national organisation representing recreational whitewater canoeing and kayaking in New Zealand.

The club organizes trips on New Zealand's whitewater rivers, ranging from Class II to Class IV whitewater and runs beginner kayaking courses. The club participates in river and water management and conservation issues that affect our enjoyment of the rivers we paddle.

The club is managed by a Committee, which is elected annually by the club membership. We have been a registered Incorporated Society since 1983 and have a constitution that governs what we do, what members can expect, and what is expected of them.

## 1.8 Our heritage, foreshore and parks

Canterbury Museum Development:

The funds will strengthen the Museum's approach to Central Government for funding the redevelopment.

Museum / Robert McDougall will be to host world class exhibitions .

Museum redevelopment has the Robert McDougall as a major part of its development. The Christchurch City Council along with Selwyn and Waimakariri, is obliged by legislation using a population based formula.

It is an iconic branded site that welcomes a large number of visitors and makes a significant economic contribution to the CBD.

The Targeted Rate is to cover borrowed funds. Considering the current very low interest rates this is a prudent measure. "

"A fixed rate was considered but not preferred because a targeted rate based on house value was considered more equitable." (page 38 Draft LTP)

### Heritage Incentive Grant (HIG) Fund: (Covers Built Heritage)

Please **restore the Heritage Incentive Fund grants funding to its previous level of \$700,000 when the funds of the disbanded Landmark Grants have been exhausted.(Likely to be 2023-24.)**

The last year of the Landmark Grants was disbanded and the remaining \$1.5 million carried over to the Heritage Incentive Grant Fund. Under the Draft LPT this is expected to last 10 years.

Already HIG grants have been made and if the upcoming planned draw down is approved, it will leave roughly \$800,00 for the next year (year 2021-22).

At this rate it is likely there will be there will be no funds available after 2023-24.

The next LTP review will be 2024.

In past the CCC has put aside roughly \$700,000 annually for the HIG.  
**The CCC has widened the HIG criteria to include non-scheduled items of heritage value including buildings, movable heritage and grave monuments.**

Supported Arguments:

CCC Heritage Strategy: The Community was consulted and strongly communicated the importance of Heritage and the CCC responded by adopting the Heritage Strategy. Withdrawing funding is contrary to the Strategy and the wishes of the Community.

The Strategy refers to partnership and the CCC is effectively withdrawing from its role as partner with the community. There has not been in the past or an expectation of the future, that there will be a reduction in requests for HIG grants.

The CCC is planning to add more buildings onto the District Plan. HIG is the "carrot" to entice owners to list their buildings. The HIG has been used for very successful restorations of commercial Heritage buildings especially in the CBD and surrounding areas.

The best green building is the one still standing and a Heritage Building meets this criteria easily. A commercial heritage building's restoration is the catalyst for local economic rejuvenation.

Tourist branding. Major cities are known by their heritage buildings.

Heritage buildings physically tell us our stories of where we came from. Knowing these stories gives us the confidence and the credibility to project our individual and Christchurch identities. (How will ChristchurchNZ compose a credible narrative to market the City if it is not informed by living images of our built history?)

**Proposed Intangible Heritage Grant Fund: I request the CCC adopts this.**

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
 Yes  
 Comments

**A Targeted Rate specifically for the Arts Centre Te Matakiki:** Page 39 Draft LTP  
 Please **adopt the proposed Targeted Rate for the Arts Centre as outlined in the Draft LTP.**

\$5.6 million to help with the restoration for the buildings. (page 38 Draft LTP)

The targeted rate will be for 10 years and be phased in over two years. page 61 Draft CCC LTP. The targeted rate will be based on house value.

Supporting Arguments:

The Arts Centre has restored 2/3 of the site in what is a \$255 million project.

It is an iconic branded site that welcomes a large number of visitors and makes a significant economic contribution to the CBD.

"A fixed rate was considered but not preferred because a targeted rate based on house value was considered more equitable."(page 3 LTP)

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
 Yes  
 Comments

Robert McDougall Art Gallery:

"Canterbury Museum considers the base isolation of Robert McDougall Art Gallery to be a key part of the Museum's redevelopment". page 61 LTP

"Base isolation is the recognised industry standard and is the only existing technology that would protect the museum's valuable heritage collections and enable international lenders to exhibit in the building."page 61 LTP

Robert McDougall Art Gallery was a gift to the city. Keeping it closed since 2003 is not honouring the spirit of this gift.

1.11 Potential disposal of surplus Council-owned properties

"Potential disposal of surplus Council-owned properties" (page 64 Draft LTP Consultation)

Please **withdraw this proposal.**

Please **set up a full meaningful community consultation for each property that is outside the Draft LTP Process.**

Adopting this proposal means the CCC will use a commercial tender process which excludes community consultation and participation in deciding an appropriate use for the building's future. This is highly inappropriate for valued heritage and community amenities.

Yaldhurst Memorial Hall: (Potential disposal of surplus Council owned properties pdf)

This is a memorial Hall to the fallen of World War 2 that was fundraised for by the Community. (There was a Government scheme offering a pound for pound subsidy.)  
It is a practical living monument to the fallen, available to serve the community and this makes it different should not be treated as just another building to be sold off.

The CCC has a custodial role and should be respectful of the intention of those who fundraised its construction. This should also apply to the other Memorial Halls the CCC owns.

### Feedback

1.1 Have we got the game plan right?

no i do not think you have the balance right, you are charging rate payers for services you dont supply and services we cant use.

1.2 Rates

Unrealistic , compared to income increases if you are lucky enough to be working. So many of us lost our jobs with covet and struggle to find work. Or are on pensions who cant afford big rate increases.

1.3 Proposed changes to existing rates, and new targeted rates

No you are targeting rural rate payers for curbing,storm water,waste water and sewage which are not accessible to all rural properties .

1.4 Investing in upgrading and protecting our city's water networks

This should not be applicable to rural properties who have to pump and supply there own water, dispose of their own storm water and process their own sewage , maintenance is at the owners expense .

1.5 Investing in our transport infrastructure

There is no public transport to the Yaldhurst rural area , there are no foot paths or cycle ways. inadequate street lighting.

1.7 Our facilities

You have closed our community facilities (Yaldhurst Memorial Hall ) dont agree with closing bus lounges in Riccarton safe place for people to wait for buses.

No

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

1.11 Potential disposal of surplus Council-owned properties

I strongly dont agree with selling off Yaldhurst Memorial Hall which was built for the people of Yaldhurst by the people of Yaldhurst, land donated by people of Yaldhurst. To honour our Brave men who lost there life to give us the freedom we all have today. We would like to see this return to the people of Yaldhurst . Yaldhurst has lost its heart of the community, we have no where in our area

we as a community we can go. The local School children doesn't have a place for their children to have concert dances and anything else which they used to be able to do, the school has to pay for buses and bus them to facilities if they can find places , which i know they are finding it hard to do. we need the heart of the community restored not sold off .

1.12 Any other comments:  
We also dont like how our rural fringe land is being allowed to be turned into a commercial area without consultation with the local community. We all moved to rural setting for peace and quiet for the rural life style , not spend our time fighting court battles to stop quarries and any other commercial operations moving into this area. We have big trucks coming down our small rural roads which arent made for these trucks and they shouldn't be there but there is no one policing this. The council seem to be letting more and more business start up in our rural fringe

## Feedback

1.1 Have we got the game plan right?

As the owner of the historic cottage, the Captain Bruce, in Akaroa, I am concerned about the proposed levy on short term rentals. The cottage has been in the family since 1954 and because of its age, has required considerable time and expenditure since. In the past year, for example, I have spent in excess of \$17,000 on carpentry, replacing boards etc plus painting both the exterior and interior. There is still much to do, with the garage roof next on the list. A positive in all this is that the work has provided employment for local tradespeople.

Last year, I received \$3,700 from Akaroa Holiday Rentals, managed by Tracey. Short term rental fees are merely a contribution towards the ongoing costs and the house is mainly used by family. I suspect many bach owners are like me and are not profiting from letting them at all.

My comments may need to be included in the rates section below but this wasnt clear.

1.7 Our facilities

I would like to see an information service offered to visitors as in the past, preferably in the old post office building in Akaroa. I can appreciate the drop in visitor enquiries because of Covid but believe these will definitely increase henceforth.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Comments

I would like to see the gallery used as was intended, for the exhibition of Canterbury art works.

1.11 Potential disposal of surplus Council-owned properties

I wonder why the Council purchased the property at Green Point which was used as a residence by the town engineer in Akaroa. It is of interest historically but could easily have been bought by private interests. The price paid was substantial and that sum could have been better used.

otherwise I have no problem with the Council selling the two surplus properties.

### Feedback

1.1 Have we got the game plan right?

That an immediate re-evaluation of the Airport Noise Contours be commenced. That all restrictions on development be removed up to an including the 65 dn contour after contour review.

That a process be developed whereby the actual data variable numbers can be transparently and independently arrived at. A process that reflects CIAL business continuity concerns and neighbouring land owners land use rights to and including 65dbn and aspirations on equal footing to others such as CIAL , Clearwater, Canterbury university etc.

Such a process will require independent leadership. That the issue of the applicability of a 60 dBA and 65DBA Ldn air noise contour be raised in a manner that brings it on scope for Environment Court scrutiny.

That the dilemma raised by having an activity avoidance rule set at a 60 dBA Ldn Air noise contour level when the background noise experienced on that land under that contour already exceeds 60 dBA be investigated and resolved. It should be obvious that modern noise mitigation design methods can very easily resolve any alleged adverse noise impacts at 60dBA and at the 65 dBA level and higher. If the assertion is that there needs to be amenity value/risk noise mitigation for outdoor activities on land under the 60 dBA Ldn Air noise contour then could someone articulate what that risk is and how it can be mitigated **when the background noise** already exceeds 60 dBA. Also relate to traffic noise in the city which on arterials, inner city and moderate carriage suburban roads is considerably higher constantly than the land surrounding the airport.

### Feedback

#### 1.7 Our facilities

My main interest in the plan is specific to the opening hours of the art gallery. I have greatly enjoyed the ease and relaxed atmosphere of the Wednesday night open hours and would greatly resent not having this available each week.

The educational contribution to the community given in the 6pm talks and films and any later items offered provides a general education rarely accessible to a general population. It is to the enhancement of us all. No pressure, no booking usually needed, predictably worth the visit, no cost - but welcoming to all, varied in artistic appeal, and enjoyable.

And extra to me as a volunteer guide at the gallery for over 20 years (both RMAG and CAGTPOW) I find the topics covered in the Wednesday evening programmes most helpful.

Please keep the gallery open every Wednesday 😊

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

More money being spent on improving road ways and less money on making cycle ways that a small portion of the road users benefit from

1.2 Rates

Bad. This is going to push up rents making our housing market bad. This is also push myself and many other people out of CHCH

1.3 Proposed changes to existing rates, and new targeted rates

This is a bad idea. Barely any house holds use excessive water. The farmers and people that pay barely anything or in some cases nothing and get to thank thousands of liters of water a day and don't have to pay should be the ones having to pay for water. Not everyday citizens. Water for personal use should be covered in rates. water for commercial should have to be paid for

1.4 Investing in upgrading and protecting our city's water networks

Yes this is a great idea. If the water is only being used for personal use and not for commercial. eg farming and bottling for monetary purposes

1.5 Investing in our transport infrastructure

This sounds good to me once again it needs to be put into the right areas. Not cycle ways but a large improvement in public transport.

1.6 Rubbish, recycling and organics

This is a good idea. More fines need to be put in place for littering and putting rubbish in the recycling bins. Not just warnings

1.7 Our facilities

Riccarton road bus lounges SHOULD NOT BE CLOSED. This is a big mistake. if you want people to get top work and school by bus then a place where they can stay out of the rain and elements is key to making people want to bus instead of drive. DONT CLOSE THE LOUNGES.

1.8 Our heritage, foreshore and parks

This is too high. Money should be spent on things that improve the day to day life of everyday citizens. If heritage stuff is that important then the Government of New Zealand should be doing it not the regional councils/government

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

Rates shouldnt be increased for something that only the council will make money on. If rates were to increase by 0.04 percent for 10 years then decrease by 0.04 percent after ten years then i would happily say yes, however i doubt that they would ever decrease and that they will continue to rise putting more pressure on renters

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

Same as previous answer.

1.11 Potential disposal of surplus Council-owned properties

sell these buildings or make them into something that the public can use

| Rates Remissions Policy Submission - Abridged |

---

Submission by \_St John's Anglican Church and Community Centre Woolston

---

Change to Rates Remission Policy  
18<sup>th</sup> April 2021

### **Rates Remission Policy – Not-for-profit community-based organisations**

\_\_St John's Anglican Church Woolston\_\_\_\_\_ are extremely grateful for the support we receive from the Council and ratepayers in the form of rates remissions.

It has always been a challenge operating a community-based charity, and it is even more so the case in these difficult times. For us the rates remission is critical in helping support the provision of many community initiatives we are involved in, including:

Community Lunch. \_\_\_\_\_

Foodbank/Fruit and Veg Stand \_\_\_\_\_

Eldercare \_\_\_\_\_

Mainly Music \_\_\_\_\_

Community Garden \_\_\_\_\_

Ladies Friendly Hour \_\_\_\_\_

\_\_St John's Anglican Parish\_\_\_\_\_ is concerned that the proposed policy change has not been adequately considered by Council. We do not support the proposed change to the Rates Remission Policy because of our concerns regarding:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

We understand that there are other submitters who have provided Council with information and arguments regarding the above concerns, so given our limited time and resources we haven't expanded on these in our submission.

\_Lorna Harris (Secretary)\_\_\_\_\_ ----/does not wish to speak to Council in support of our submission.

## Feedback

1.1 Have we got the game plan right?

CCC is working on the LTP and the Climate Change Strategy in tandem. It is difficult to know if CCC has the balance of the LTP right, without looking at all of its measures through a climate change lens.

CCC has declared a Climate and Ecological Emergency. I do not think the measures in both the LTP and the Climate Change Strategy are bold enough to meet CCC's target of achieving net greenhouse gas emissions by 2045.

1.2 Rates

I support this increase. However I know of working families struggling to pay rates, and I would like to see the Rates Rebate scheme substantially improved.

1.4 Investing in upgrading and protecting our city's water networks

Excess water use targeted rate for households: I support this initiative.

Suggested changes; I think the Council needs to do more to educate/incentivise households and businesses to reduce water usage. This would include initiatives in gardens as well as in the buildings (eg cheaper/easier access to mulch to reduce summer watering).

- Drinking water: I support the Council's initiatives in upgrading the network. I also strongly support Council's goal to provide safe drinking water, without residual chlorine.
- Suggested changes; protecting our water also means that the Council must do much more. It must strongly support Ecan in its water quality work. It must also influence the members of the Greater Christchurch Partnership to strongly lobby against the degradation of our aquifers. We cannot accept business as usual from the powerful farming lobby.
- Surface water and waterways: I support the Council's proposed infrastructure spending.
- Wastewater: I support the Council's infrastructure initiatives.
- Suggested changes; I understand that in 2041 the Pegasus Bay wastewater outfall is up for review. Alternative reclaimed water options need to be considered /planned for now, perhaps following some of the Akaroa initiatives.
- Suggested changes; I ask that the Council also considers initiatives such as a heat exchange system on the wastewater before it leaves the Lyttelton Harbour (near the Tunnel) to support the heating of Council (or other) buildings in Lyttelton.
- Stormwater: Suggested changes; despite our relatively low rainfall, the Council could do more to promote and incentivise options such as detention and retention systems, soak pits, and pervious paving in Lyttelton and beyond to manage the flow of stormwater.

## 1.5 Investing in our transport infrastructure

- Investing in our transport infrastructure: I generally support these initiatives, particularly the cycleways. However with 36% of greenhouse gas emissions in Christchurch coming from the traffic on our roads, I do not think these initiatives are ambitious enough for the Council to reach its goals of halving emissions by 2030. The LTP initiatives will need to include ensuring that the Christchurch Transport Plan is a game-changer and doesn't just promote incremental change. Together with Ecan, the Council must take a multi-modal approach to public transport to include initiatives such as trackless trams, passenger rail, and passenger ferry/ coastal shipping.

## 1.6 Rubbish, recycling and organics

I support the CCC initiatives.

Suggested changes; I would like to see a resource recovery depot in Lyttelton (and other suburban areas) for those residents who are unable to easily access the CCC Eco Depots. Otherwise perhaps quarterly kerbside pickups of recyclable items.

## 1.7 Our facilities

I strongly disagree with the CCC proposal to stop the CCC service desk at the Lyttelton Library. The Lyttelton Library is the hub of our community. This service is highly valued by the community and cannot be solely measured by task numbers. I ask that the CCC take a truly multi-function approach to this service. In the future it will be more important than ever for CCC to have a close relationship with the community, and in Lyttelton we would like to continue a real partnership with CCC. There is the potential for many more tasks for this service desk to manage - both future CCC initiatives (eg climate change/environmental) where community buy-in to CCC initiatives is essential, and also local (eg Project Lyttelton) initiatives that CCC could better support.

## 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

## 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

## 1.11 Potential disposal of surplus Council-owned properties

I disagree with selling off CCC property.

This short-sighted approach does not recognise the huge role that CCC has to take with initiatives such as Climate Change. Properties such as YHA could be a leader in demonstrating retrofitting buildings to face the future - an inspirational educational space to showcase green initiatives.

Once these buildings/spaces are out of public ownership, they are enormously expensive to buy back.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

OK

1.2 Rates

OK

1.3 Proposed changes to existing rates, and new targeted rates

OK

1.4 Investing in upgrading and protecting our city's water networks

I can see that beautifying the Avon is a nice to do but it is wasted if the Council is not also tidying up the Heathcote River and addressing the pollution. Both rivers discharge into the estuary then into the sea affecting marine and benthic species.

1.5 Investing in our transport infrastructure

Cycleways are all very well but the designers need to check that they are not making the road dangerous by narrowing it for all traffic. Example new cycleway Fernihurst St, two way bend reduced to one way semi-blind bend. No accidents yet but it is only a matter of time as you are committed to entering the bend before you can see the on coming vehicle.

Bus lounges - obvious councillors don't use buses regularly. Riccarton Road is noisy & laden with traffic fumes particularly on the side where the buses go into the CBD. Passengers need that shelter especially in bad weather.

1.6 Rubbish, recycling and organics

Organics plant- good to here of upgrade. How is this affected by Government's plan to standardise recycling and rubbish processing plant across all councils.

1.7 Our facilities

NO. Kept the library hours as they are. ^pm closing is strain for anyone who can only get there after work, especially if they have to contend with 5pm traffic jams.

Keep the mobile library its a vital service.

Opening of libraries on Public Holidays is a double edged sword. Yes some customers will use the libraries but have you factored in the costs of extra expense on heating, lighting, security and financial compensation to staff in the form of overtime payments or days in lieu.

1.8 Our heritage, foreshore and parks  
Heritage definitely needs money to preserve what is left after the previous Government's demolition free for all. Hope tthe old Provincial Chambers is high on the list for saving

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments  
The Arts Centre is a vital part of Christchurch's historic and cultural presence. It has done it's best to survive but has been let down by organisational duck shoving about who should give it grants. The Canterbury Museum has included its well being in its 10 year plan. The Council should do the same. A restored and revitalised Arts Centre together with the Museum will bring more visitors and spending into the CBD.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments  
Base isolation plus an upgrade of the interior so it can be use again for permanent and visiting art exhibitions.

1.11 Potential disposal of surplus Council-owned properties  
Coronation Hall OK as the damage to it from earthquake and arson attempt make it uneconomical to repair.

1.12 Any other comments:  
A big part of the plan seems to be cutting/reducing services for low income people. No mention of trimming bonuses or decreasing the number of 3 figure salaries.

**First name:** Michael **Last name:** Primrose

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.2 Rates

Agreed

1.3 Proposed changes to existing rates, and new targeted rates

In full agreement with the new targeted rates proposed in the Draft Long Term Plan, and would, in fact, support more money being assigned to these projects or a higher excess water charge being considered

1.4 Investing in upgrading and protecting our city's water networks

Yes, agreed

1.5 Investing in our transport infrastructure

Ye, Agreed

1.6 Rubbish, recycling and organics

Yes, Agreed

1.7 Our facilities

Once opening hours are decreased it is unlikely that they will ever be increased even once tourist numbers improve. The libraries, mobile libraries, service and even the Christchurch Art Gallery Te Puna o Waiwhetū are there primarily for the long term benefit of residents, not as an additional lure for tourists to visit Christchurch and Banks Peninsula. Looking at other, cash-strapped cities overseas, it has always seemed to be the easy option to reduce the opening hours and staff numbers of libraries and galleries in order to save money for bigger infrastructure projects. This has led, especially in England, to wide spread closure of the facilities, or them being left to the care of volunteers, to the detriment of the communities that lost these facilities.

One of the delights of living in Christchurch and Banks Peninsula has been the ready accessibility and provision of these services so that we remain a civilised and cultured city. If you want to increase the patronage of these facilities, then advise ratepayers of what is available and the times of opening, to remind people that they are there and to encourage them to use the facilities available. If rate payers are not reminded of what is available then they will not remember to use them.

I do **NOT** agree to the reduction in opening hours or availability of the facilities discussed in this section.

I would agree to the Council providing more timely and better focused information about these facilities to the ratepayers to encourage participation.

#### 1.8 Our heritage, foreshore and parks

Yesm agreed, though I would also agree to increasing this percentage of the overall capital spend on our heritage, foreshore and parks

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

The Arts Centre Te Matatiki Toi Ora site is a vital part of the civic infrastructure of Christchurch and as a city, we are incredibly lucky to have retained this magnificent cultural centre, when so much has been lost to the earthquake and demolition. The Arts Centre needs to become even more the civic heart of the city rather than the old Anglican Cathedral. The Council should be encouraging events to take place at the Arts Centre and to thus build the idea that this is where we Cantabrians could to celebrate civic occasions.

I **AGREE** with the Council funding of \$5.5 million for the Arts Centre, and would **AGREE** that this amount needs to be even larger for such a vital civic component

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

Even though the cost of funding the the base isolation of the Robert McDougall at a cost of \$11.8 million is significant (especially in comparison the funding of the Arts Centre) it does need to be need to be done. If it is not done now, when the strengthening work for the Canterbury Museum is being undertaken, then when will be the right time to undertake this work? If the work is not undertaken at the Gallery, then we will be left with an increasingly decaying, white elephant, until such time as it will be easier to demolish it rather than to attempt to save it.

Christchurch needs to have the Robert McDougall Gallery fixed and back in operation, in order to increase the cultural facilities available to the city. The ability of the Gallery to host smaller, focused exhibitions, such as the Scott and the Antarctic Exhibition between the quakes, is a vital resource for the cultural district of Christchurch and will encourage more residents and tourists into the area.

Therefore, i **AGREE** with the Council funding base isolation of the Robert McDougall at a cost of \$11.8 million

#### 1.11 Potential disposal of surplus Council-owned properties

I **DO NOT AGREE** with disposal of the former YHA hostel at 5 Worcester Street. Given that this building is in the heart of the the Christchurch Cultural Precinct it seems remarkably short sighted to sell such a property for short term gain, when the property could be utilised by one of Christchurch's cultural groups as central base within the city, thus anchoring the cultural precinct even more.

Even though Bruce Rendall is reported as saying, in justification of the sale, that "*The council had contacted organisations with a possible interest in using the building, but those attempts were unsuccessful, he said. The council also reviewed its own potential uses, but no unmet need was identified.*", given that the YHA only expire on November 30 last year, one would suggest that more time could be taken to find suitable occupants for the building, before the Council rushes to sell the building.

Included in the list of properties that the Council is proposing to dispose of there are various community and

memorial halls, as well as land currently utilised for community sporting groups. I would think that far more consultation is required before we dispose of these civic assets for short term gain.

Therefore, I **DO NOT AGREE** with the potential disposal of surplus Council-owned properties until far more consultation is carried out.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

My biggest concerns are for Council action on climate change. Care for our environment should be our highest priority, and I have no objection to paying more in my rates for change in this area.

1.2 Rates

I am happy for my rates to increase, particularly in relation to the following:

- Increased funding for the Arts Centre
- Climate change action
- Clean waterways and drinking water.

1.7 Our facilities

The facilities that I care most about in our city are those that provide entertainment and education for diverse communities, and those that tell stories about our culture and history. Changes to the services that Tūranga, the libraries, and the Christchurch Art Gallery provide are a great concern to me.

The research on the relationship between arts and wellbeing, and the role of arts in rejuvenating cities is clear: <https://www.creativenz.govt.nz/development-and-resources/advocacy-toolkit/the-evidence-for-advocacy> This discrepancy in funding between the arts, and sports and recreation (for example), doesn't make sense given what we know about the benefits of arts to our community.

Particularly, the changes to the education programme make little sense to me. The changes in how the art

gallery operates post-covid are related specifically to the number of tourists through the doors. Why make changes to the education programme, which is targeted to the local community, not tourists? As a primary school teacher who has taken numerous school groups through the CAG programmes, I am dismayed at this proposal. The education programme offered by CAG is excellent. LEOTC are authentic, hands-on, interactive learning experiences that complement and enhance classroom learning. The educators at CAG provide experiences that cannot be offered in the classroom environment, and they knowledge and skills is specialist.

A reduction in programmes that are targeted at visiting audiences makes more sense, not that which is for local audiences. I think that changing the open late Wednesdays is a great idea, with a focus on more irregular, but better promoted, large events where food and alcohol is for sale. Perhaps a change in weekend opening hours, for example 4pm closing on Sunday and Monday?

### Feedback

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

I support the Christchurch City Council creating a Special Heritage rate to assist with running The Arts Centre.

The 2010/2011 earthquakes destroyed a large number of Christchurch's heritage buildings.

The Arts Centre is unique with a concentration of heritage listed buildings on the one site and must be maintained for future generations.

Christchurch has a thriving Arts community. The Arts Centre brings together: performance space; exhibition space; local artisans showcasing their skills; cinema; sculptures; antiquities; education; retail; cafes; restaurants; a market; culture and public spaces – something for everyone.

## Feedback

### 1.2 Rates

People will get up in arms about this, but the impact on their lives and finances is negligible. Particularly considering rates primarily affects homeowners, who already have a level of privilege a large proportion of the population don't have.

Increase rates. Just make sure it is spent well.

### 1.3 Proposed changes to existing rates, and new targeted rates

Targeted rates seem like a cool idea. It means people can directly see the results of their contribution.

If I can see the percentage of rates going towards somewhere like the arts centre, and then go there and witness how that money is spent, that feels more satisfying than adding a road somewhere I'll likely never see.

### 1.5 Investing in our transport infrastructure

As long as this money is spent on providing more car-less options, then I'll be happy.

Christchurch is the perfect cycling city, it's flat and straight, take advantage of that.

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

**Comments**

I genuinely can't imagine this city without it. What will happen if they are run into disrepair? It'll get knocked down?

### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

**Comments**

### 1.12 Any other comments:

There needs to be a more targeted focus on supporting arts institutions. Christchurch has a lot of potential, but is limited by the imagination of a select few, and a general lack of financing.

The council should seek to spread and improve funding to more vibrant arts communities, including communities of colour, and indie arts organisations. THAT'S WHERE THE MAGIC HAPPENS, and without a leg up the old guard will die and there'll be no one left to take their place - leaving the city artless.

No one institution should be the be all and end all of a particular form of art.

### Feedback

1.1 Have we got the game plan right?

I do not believe you the right balance as I believe the plan totally lacks a disabled perspective. I think some, or many, of your projects will impact severely on the wellbeing of disabled and older persons, particularly regarding the proposal to cease the mobile library service. You are taking away the autonomy of disabled and older persons by denying them access to the library because for many, ceasing the mobile library service will mean many disabled and older persons will need to stop using the library as you are proposing denying them access by stopping the mobile library. For many of these people the library is the main or only social and entertainment option in their lives and you removing this from them. I will explain in more detail under the mobile library section of this submission.

1.7 Our facilities

CCC are proposing to no longer provide the mobile library which mainly caters to social housing complexes and retirement complexes. Social housing tenants are people with disabilities, including learning disabilities, psychosocial (mental illness), mobility, sight and hearing disabilities. There are also some older persons in social housing and, they too generally have illness and disability issues. All people in social housing complexes have exceptionally low incomes, a prerequisite for accommodation being provided. Most tenants are under 65 years of age so do not qualify for a gold card. Many find it hard to live on the benefit and have to prioritize bus fares to the supermarket or doctor over luxuries such as catching the bus to the library. As for people in care places, they too have a significant range of disabilities and many are no longer able to drive. Whilst there may be residents who have some independent income, many rely on the government pension to pay for their place and subsequently have only a few dollars (for example, \$20) left over each week from which to buy their toiletries and other basic needs. Subsidized taxi vouchers are available for some but, although this means a half price fare, they need to try and come up with that portion of the fare. This would be difficult if your in pocket amount each week is \$20. Those 65 and over (only some of the mobile library bus clients) can use a gold card for free bus journeys to a library but they must be mobile enough to be able to catch the bus, make any bus changes and walk from the bus to the library. I live in social housing, have several disabilities and cannot walk to the nearest bus stop. I do not have a gold card nor a subsidized taxi so I would not be able to go to the library.

The library has digitized many parts of their service and products for those of us who cannot go to a library, this would hugely impact on what we could read, watch or access. I believe that at least half of the books aren't available online, dvds can't be accessed and nor can many of the specialized services such as access to sheet music or IT assistance. This limits us enormously. However, a more critical problem with digitization is that a lot

of mobile library clients do not use IT or use it minimally. There are cost issues regarding data as well as many struggling with the basic tenets of technology. I assisted two of my neighbours who wanted to keep the mobile library and wanted to make an online submission but I had to do all the technical part of their submission, including using my email address as they don't have email. A number of people with Learning Disabilities (formerly Intellectual Disorder) use the mobile library and stopping the service would shut them out of the library completely which I believe is a human rights issue where our most vulnerable are excluded.

The mobile library is, for many of us, an opportunity to meet and greet, to interact with our local community. Taking away this service just isolates us more. It is, for many, also the only social activity (books, dads and so on) we may have in a week because we are stopped from engaging with other activities due to our disabilities, access or cost. Reading is so important in our lives, and given the limits of activities we are able to undertake, why would you take our one pleasure away and leave us with nothing?

### Feedback

1.1 Have we got the game plan right?

Support the Arts Centre!

Don't cut library and art gallery funding.

Keep developing cycle routes in the city to make Christchurch the best cycling city in New Zealand.

1.2 Rates

It's fine.

1.3 Proposed changes to existing rates, and new targeted rates

Yes I would accept a rates increase.

1.4 Investing in upgrading and protecting our city's water networks

Yes, water is important.

1.5 Investing in our transport infrastructure

Develop cycling and public transport links!

Build transport infrastructure for a future with less cars! Cycling, e-scooters, ride sharing, busses, light rail.

Less cars in the central city! More shared / mixed use walkways like on Oxford Tce ! This is what makes a modern city vibrant.

1.6 Rubbish, recycling and organics

Yes! to more organic / composting options. More composting education and small-scale local efforts to compost/recycle.

EDUCATION

1.7 Our facilities

Christchurch Art Gallery is a massive asset to the city and should be supported as such.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

YES Support the Arts Centre.

New Zealand's largest collection of Category 1 listed heritage buildings! In central Christchurch! Are we just going to let them go bankrupt? No question that we should support the Arts Centre with this funding.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

Yes, but I'd like to see it used for more than the museum! Open it up to community groups and events.

### Feedback

1.1 Have we got the game plan right?

Rate increases should be restricted to the cost of living increases. Your plan at this stage is fine for people working in highly paid jobs, but very hard for those in the lower socio-economic areas. An overall increase of 47.8% over 10 years is likely to force some elderly and other lower income earners out of their homes.

1.2 Rates

Far too costly for the average family/home owner.

1.3 Proposed changes to existing rates, and new targeted rates

As an avid gardener and supporter of our Garden City I feel I will be penalised and disadvantaged by being limited to 700 litres of water per day for my flower and vegetable gardens. More families should be encouraged to have vegetable gardens. How can fair use be assessed between a city apartment with limited garden space and a suburban section? Two entirely different situations.

We are happy with the Heritage and Arts Centre targeted rate proposals.

1.4 Investing in upgrading and protecting our city's water networks

Sadly, due to years of neglect, this will be a necessary investment for the future.

A good start to saving water would be the prompt repair of numerous leaky toby boxes across the city.

1.5 Investing in our transport infrastructure

Motorists are being discouraged from going to the central city due to ever-increasing parking charges. Most of the people we speak to say they will continue to shop at suburban malls. This will do nothing to sustain the life of the central city. Also the large expenditure on cycle lanes could simply be reduced by widening existing footpaths to a shared cycle/pedestrian space without encroaching on existing traffic lanes.

1.6 Rubbish, recycling and organics

We agree with this proposal, but would like to see larger green waste bins as this is The Garden City.

## 1.7 Our facilities

We believe the reduction in library hours in line with attendance is very sensible.

The closing of some council-owned facilities may be detrimental to the elderly - eg, the closure of service desks in Lyttleton and Akaroa.

We object to the proposed closure of Wharenui Pool as this facility helps ensure good water safety for many of our school age children at a price affordable to schools and their families. Parking may be an issue at the new Metro facility.

## 1.8 Our heritage, foreshore and parks

We think this would be a fair proposal.

## 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

## 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

At this stage, this is not an urgent priority spend and any additional charge on rates becomes a burden.

## 1.11 Potential disposal of surplus Council-owned properties

It would be interesting to know which properties you refer to, however, if they are surplus to requirements get rid of them.

## 1.12 Any other comments:

We are pleased to see the Council finally making a start on the removal of the former Sockburn Service Centre.

Also the owner of the site of the old Catholic Monastery on Riccarton Road should be made to demolish and clean up this site.

If more attention was paid to the type of tree planted on suburban berms and these trees were properly maintained, there would be a far lesser need for ongoing footpath repairs.

**First name:** Annabelle **Last name:** Priddy

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I think that the proposal to cut 25% of education and events is going to negatively impact the city. The events that are held are such wonderful pockets of joy for all us local people, especially because of Covid when a lot of other things are no longer running. As a mother and a training primary school teacher, it is so important and beneficial for children to experience programmes and cultural diversity through what the council can provide.

1.2 Rates

I wouldn't mind if there was a rates increase if there wasn't a proposal to make cuts. I am confused as to why there are cuts being made but rates increase.

1.3 Proposed changes to existing rates, and new targeted rates

That sounds reasonable.

1.4 Investing in upgrading and protecting our city's water networks

Clean and pure water for the city is important.

1.5 Investing in our transport infrastructure

That sounds important.

1.6 Rubbish, recycling and organics

Environment is very important.

1.7 Our facilities

I think revising and seeing where council services can be changed because of covid is important, but also shouldn't minimise the services that are provided that the community need and enjoy.

1.8 Our heritage, foreshore and parks

I see how this is important but would a less percentage still allow for work to be done, but money could go back into where expected cuts are planned.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

The arts centre is privately funded and so should cover those costs without council grants being given.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

Is there a way of selling these properties so they can be repurposed? Or at least selling a few to try and maintain heritage buildings

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

YMCA Christchurch will be subject to the rates remission policy as we are a not for profit that receives a remission.

We disagree that rates remissions should be removed simply based on the cash balances of a not for profit, for the following reasons:

First of all, a not for profit that has a high cash balance is presumably planning on investing that profit into their particular cause/objective - so increasing rates for these community groups is essentially 'robbing peter to pay paul'. We suggest that consideration should be put into what the outcomes to the community are, whether or not they have charitable status, what any cash surplus's are tagged for, and, - where these are about community programmes, services or facilities - the rates remission should remain.

Too often charities and not for profits are unfairly judged by their balance sheet or bank balance. It is an oxymoron: on the one hand for a charity to be successful in terms of delivering on charitable objectives, they need income streams which are sustainable and allow for continuous improvement, changes to legislation, changing needs of beneficiaries, growth and assets etc. However the funding streams are often annual and decision makers in relation to philanthropic grants favour charities which have no cash reserves. Conversely, charities which do not have cash reserves are hammered by their auditors around issues of going concern and liquidity. There is not a business person in Christchurch who would advocate it is good business practice to deplete cash reserves in order to benefit from a remission or a philanthropic or local govt grant - however this is the messaging that many receive from funders and council.

This proposed rates remission policy will not impact on the Christchurch YMCA in the near future as we have little to no cash reserves anyway. However, the remission we receive is hugely beneficial to us and we receive very little other council funding in comparison to the huge community service we provide. Strategically, as an organisation, we are focused on improving our long-term sustainability and a key part of this is asset improvement. This means we need to increase our cash reserves over time. Assets are costly and we do not receive any capital funding from local government. However, we consider our assets to be community owned in the sense that they are accessible to all members of the community. In 2019 we estimated over 130,000

Christchurch-ians utilised our programmes and services - this is a significant contribution to the wellbeing of our city and our community.

If we want to achieve our strategic goal this policy acts as a disincentive. It could create unintended consequences for our organisation and therefore the beneficiaries of our organisation. By extension, the rates remission is also an incentive for not for profit enterprises to establish themselves... which makes for a more supported community and therefore a community that enjoys greater wellbeing.

In conclusion we do not support the change to the rates remission policy and ask that if it is to go ahead that it excludes specifically *registered charities that exist to deliver free or subsidised programmes and services to the community.*

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

YMCA Christchurch is strongly in favour of any support the council can give to the Arts Centre. It is a key part of the city's identity, history and spirit and it is also a draw card for tourists and a way to activate the central city. If the Arts Centre attracts visitors so too do the other surrounding amenity (much of it owned by the CCC) such as the museum and the Art Gallery.

The YMCA Christchurch would like to support our neighbour's success and is also keen to work with the Arts Centre in terms of activating community involvement in our neighbourhood.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

YMCA Christchurch supports the redevelopment of the Museum in general. This is a key part of the visitor attraction as well as an important part of the connectivity children and families have to the central city - being a positive and engaging source of 'free' activity for families that also helps families engage with other surrounding amenity such as the botanic gardens, the arts centre, and the gallery.

YMCA Christchurch has limited understanding of the Museums redevelopment plans but in general think the CCC should support the museum to be the best possible asset to the city and the community. YMCA Christchurch does not agree that this should be paid for via rates increase but rather by prioritisation of funds already on hand.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 17/04/2021

**First name:** Lynley **Last name:** Aldridge

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

There is much to do and inevitable pressure on rates but please bear in mind the hardship for our senior citizens on fixed incomes to meet ever rising rate demands. The discount system in place is appreciated and very necessary at times like this when potential income has been completely eroded by extremely low interest on any savings, providing minimal return.

#### 1.4 Investing in upgrading and protecting our city's water networks

This is critical work to deliver, non-chlorinated, fresh water to all communities through upgraded pipes. Areas like Diamond Harbour have a network of very old pipes and any thought of further developing this area is dependent on the infrastructure being vastly improved.

#### 1.5 Investing in our transport infrastructure

The vibrancy and survival of the city centre depends on people being able to access the city quickly by well managed, people safe, direct/express services from Lyttelton, Lincoln, Rolleston, Kaiapoi/Pegasus, and Rangiora from early morning until late evening with a frequently of service that encourages the car to be left at home. This is imperative to make cultural facilities, shops and restaurants thrive.

#### 1.6 Rubbish, recycling and organics

I support spending in these areas and particularly in making it easier to recycle. In recent years, many of the items that had previously been recycled are no longer accepted. This is a huge waste. Canterbury seems to struggle to find viable end uses for many products so while manufacturers should be required to reduce waste in packaging and accept back their products at the end of life, I would also like the Council to be proactive in connecting waste with reuses - i.e. finding and negotiating with businesses to develop their research and development to find viable uses for waste. A good example is plastic made into fence posts or products regenerated as road seal etc.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

The restoration of the Arts Centre has retained a superb asset, enhancing this precinct of the city, and warrants Christchurch City Council support to ensure it remains viable and open for the community to share and enjoy the many businesses / restaurants / galleries / markets / social venues etc. It is thrilling to see these buildings return to public life.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

#### Comments

I think that the Robert McDougall Art Gallery building should be saved and would make an ideal extension to the adjacent Museum for the display of their art collections. Space is a limited commodity for the Museum and it is a shame when so much of the collection has to remain locked away due to lack of display space.

#### 1.11 Potential disposal of surplus Council-owned properties

The proposal to dispose of land in Diamond Harbour listed as 27 Hunters Road (CB 12F/538 - 38.96 ha) and 42 Whero Avenue (CB452/50 - 1.18ha) must be removed from the Long Term Plan and fast track disposal process. To bypass the normal consultation processes with residents and the Community Board would be a disaster for this community. Any discussions on future development must involve public consultation and the development of a future plan for the district.

The area proposed for sale contains land planted out by this community and includes - Morgan's & Sam's Gullies and the "School Track" - all developed by local residents. These are all used by Diamond Harbour families for safe access to school and for recreation. The introduction of native planting in the gullies is absolutely in line with the restoration of natural corridors for birds and wildlife (with pest management) on Banks Peninsula. It is imperative that these areas with access avenues, space to extend, and link to other planting are, at the very least, preserved by covenants before any development is considered.

Any future development of residential properties in Diamond Harbour will put additional pressure on the School and Kindergarten requiring expansion to accommodate students and facilities, e.g. playing fields, larger swimming pool, school hall etc. It is imperative that the Council retain land for this purpose with access to the school track, neighbouring streets and the gully tracks to enable school children and families to safely travel between their homes and school without being exposed to main road traffic.

Any proposal to sell this block for potential residential use would change the face of the community. Diamond Harbour/Church Bay/Charteris Bay and Purau are not satellite towns - they are a collection of villages. The infrastructure on this side of the harbour was never planned, or improved, to incorporate a third more houses. Any new residential development of the area must take into account the need to improve the entire infrastructure which would simply not cope with that much growth.

- The water pipes are very old and all need upgrading to ensure a constant flow of clean, unchlorinated water. Likewise waste water has to be efficiently removed.

- The safety of electricity supply is tenuous with overhead wires. I recently witnessed a sparking pole near my home and it was terrifying that these sparks on a pole within a section could ignite long grass and trees creating a fire that could have easily, and quickly, got beyond control. It is important that all overhead wires are relocated underground to ensure a continuous electricity supply to this area before any more houses are added.

- The roads are not constructed to manage the increased traffic that more housing would bring - they are narrow, uneven camber, no safe side parking and in many areas dangerously close to the footpaths. Purau Avenue is a good example where, on the bend beside the entrance to the bowling club etc, the camber of the road causes the traffic to come up hard against the footpath which itself is compromised by land slips and vegetation making it unsafe and unsuitable for wheelchairs, pushchairs/prams and scarily uncomfortable for people walking. All local footpaths are impossible for seniors to use walking frames due to angles & obstacles. In recent years the number of large trucks travelling these roads (at speed) have greatly increased and the bends in the area are insufficient width for these trucks (frequently towing large trailers) to safely navigate the corners. I have been caught myself by a truck jack-knifing around a corner and coming to rest against my car. If I had been pushed by this vehicle I would have been over the bank. More homes will mean more young people needing to travel to high school by bus adding more larger vehicles to narrow roads.

- More people will require a larger ferry and frequency of crossing and the associated transport links from Lyttelton.

- The community has struggled since the earthquakes cost us all the facilities that Godley House provided. Adding more people without resolving the social aspects of the community is going to cause continued frustration and dissatisfaction.

- More houses will require more telecommunications - phone and internet - and we clearly saw during the Covid lockdown with the community working from home and school students learning online, that the internet infrastructure here is totally inadequate now let alone adding hundreds of new users.

- We need money spent urgently on coastal protection. Rising sea levels will cut off all of these villages if work is not urgently completed at the lowest points at Teddington (planned) and around Charteris Bay/Orton Bradley Park.

I am not against development, with appropriate consultation. It may be that some land can be released for residential uses with larger parcels of land hence reducing the number of properties. Some areas adjacent to houses may offer a natural extension for houses but please do not put the entire area up for sale when it could be purchased by one or more developers looking to build city-style sub-divisions with no care about local services and facilities or the development of walking tracks and open spaces to enhance the unique aspects of this community. One of the delightful aspects of housing on this side of the peninsula is that buildings are unique. The area will not be enhanced by multiple buildings of similar design being plopped down on hill sections.

Please remove this land from fast track sale and consider the community as a whole. With communication and negotiation, development can be managed at a sustainable level.

### Feedback

1.1 Have we got the game plan right?

Repairing and maintaining infrastructure should be the priority.

There's no sense in building shiny new entertainment venues unless the fresh water arrives and grey water departs as and when required.

1.2 Rates

I hold out hope that before anyone in the Council says "Let's form a focus group / print a brochure / commission a new sign" that they visualize the pensioners, on fixed income, who will pay for that Jolly Good Idea.

1.3 Proposed changes to existing rates, and new targeted rates

I think that the Arts Centre should receive the proposed \$5.5 million.

The Arts Centre has a claim to fame with it's connection to Ernest Rutherford.

Rutherford avoided woolly thinking. Wouldn't Christchurch benefit from promoting that image?

The Christchurch City Council could parlay Rutherford's name to offset some of their less rigorous thinking.

Targeted rates for water:

Last Thursday I noticed a person in hi-vis, with swing-tag, outside my property. After ten minutes he spat on the

footpath. My husband went out to see what trouble was afoot and to possibly extract some value out of the hourly rate to which we guessed we were contributing.

The person told my husband that Council had identified us as high water users. He seemed to not know which toby box serviced our property. We have a 404sq metre property, narrow perimeter planting, no lawn (although we do maintain the Council berm). Two people.

High water use? Okay, the pipes must be leaking. Bad news travels fast when you live in the City.

Nobody owns water. You can charge for delivering it but to charge for the water below us is like charging for the air above us.

#### 1.4 Investing in upgrading and protecting our city's water networks

Infrastructure is essential.

It should come before any new above ground building work.

Again, you may charge for the delivery mechanism of water but not for the water itself.

#### 1.5 Investing in our transport infrastructure

Let's remember the tram hopelessly stuck on the Armagh / Park Terrace corner. A monument to tracked transport in an earthquake prone country. Who will put their name to the next marooned transport monument?

Talk of light rail is hopeful, or indeed hopeless, on this earthquake prone island.

Much better to have a bus system. No tracks. (Electric seems to be the future, although this ignores the problem of mining rare earth minerals).

A bus can travel to wherever there is need. If the city falls, burns, floods or shifts focus then the transport system should be able to adapt and do so with minimal expense. That precludes fixed tracks.

If the City is a heart then the roads are it's arteries. Narrow them and expect the obvious.

Christchurch is a market town, fed by the rural community. Travel to the Main South Road and witness the vast rural supply network.

Transport planners who have flown to New Zealand from elsewhere should be taken to see the lay of the land. It's all very well to promote bicycles when you have fetched up at the airport in a fug of avgas.

We cannot expect the wider community to gather supplies every day by bicycle.

I have a mother who, aged six, contracted Polio. Talk of bicycles is moot. An inclusive city needs more talk of accessible car parking, with room to fully open car doors leading to low curb rises, smooth paving etc.

Every time I read of the penalties planned for car use I wonder why the proposer has no plans for ratepayers becoming unwell or growing old, as we will.

If residents can't get out then service vehicles will need to come in. More thought needs to go into not isolating Central City dwellers.

Recently, at 2:30pm on a Friday, I drove into Christchurch from the Northern Motorway. The traffic heading out of town was bumper to bumper, backed up along Cranford street. We two in the front seats were discussing the thoughts of those who were queued to head North when one of the people in our back seats smilingly suggested four words: "Thank you Garry Moore".

#### 1.7 Our facilities

The Christchurch Art Gallery was built on time and on budget.

The Gallery is testament to P. Anthony Preston who achieved that remarkable result against all odds.

Shut it completely..... what would that say about this city?

To shut it slightly would merely be a slight. You could shut it incrementally and survey ratepayers every few years. As you do.

Oh.

#### 1.8 Our heritage, foreshore and parks

"Hagley Park development and renewals (\$8 million)".

"We heard that people want Greater Christchurch to be sustainable, green, safe and affordable - a place where it's easy to get around using public transport, walking or cycling, and where nature is protected and respected."

I live opposite Hagley Park. Twenty years ago the Bellbirds sang here every day. Tourists were enchanted. Me too, that's why I chose to live in the City.

Over the past three years the birds have all but disappeared. When once the bellbirds flitted around this neighbourhood as bold as sparrows. Now their song is a rare and often distant treat.

The native pigeons are also now much more scarce. My neighbours' holly tree is in full berry. There should be two pair of pigeons here gorging themselves. None have come.

The lack of birds can only be put down to the Park being treated as an entertainment venue. The bellbirds don't appreciate amplified music, fireworks and light shows. Especially in nesting season.

Why was there a weekend-long mountain bike event set up in Hagley Park exactly where the Alexander Beetles lived?

What is the Council's strategy on protecting the Ground weta found only in Hagley Park and it's environs?

Electric Avenues business owners advise me to keep my pets inside. How, when my garden hosts the local Ground weta can I comply? I can't bring them inside. I can't issue them knee muffs.

These Hagley Park critters are natives. Worse, they are remnant species. Seriously special. Actual, not-from-

anywhere-else remnant natives.

The Council has a major problem here.

We local residents are trying to keep the City critters alive. The Council seems to be virtue signaling by setting up habitats elsewhere.

It's just bad form to kill off actual native, remnant populations, while trying to be seen to establish wildlife elsewhere.

You indicate \$170 million budgeted for the Residential Red Zone and the Avon River Corridor.

The residential zone has been in intensive cultivation, subject to chemical sprays and housing.

Should the Council not spend money on saving the remnant species in Hagley Park? The park has never suffered intensive residential cultivation.

The habitat is intact, as it has been for over 100 years. The Park was a peaceful green space until the "Entertainment Area" signs went up.

More emphasis should be put on the bugs and the birds that are remnant species. Replacing gravel paths alongside the Avon with tarmac for the comfort of concert goers is interesting. Laying tarmac next to a river is not "green".

Why does the Council's blurb suggest that ratepayers want nature to be "protected and respected" and yet you give it hell all summer?

The up-lights that have recently been made to work are killing thousands of caddisflies and moths by the hundreds. Are the native fish and eels saying "Thank you, Vicky Buck?" Possibly not.

Use some of your \$8 million for a photographic essay of what was here.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

Sure, unsubscribe my money from the Anglicans' Cathedral and put it towards the Arts Centre (with it's history of rigorous thought).

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

##### Comments

The Robert McDougall Art Gallery should be opened.

Talk of base isolation is a red herring. The Gallery's collection is more than enough to fill the gallery. Touring exhibitions are not required. If the "museum's valuable heritage collections" require base isolation, are they being stored under those conditions now?

Meantime, another museum has been built on Rolleston Avenue and Council pledging our funds to it's running costs. Why? I'm yet to hear a plausible answer.

## Feedback

1.7 Our facilities

No you didnt get it right. you shouldnt close the Akaroa centre and it isnt a good fit where it is currently at the library . Below are some of the reasons

Some people (older) do not have the understanding/access to internet. The closure removes their independence and increases reliance on external help. (this may not be the issue in 10 – 15yrs)

<sup>35</sup><sub>17</sub> Local employee has knowledge of the area and concerns of those the CCC serves, certainly a call centre in ChCh or the Halswell service centre does/may not.

<sup>35</sup><sub>17</sub> Due process of community consultation did not occur before removal from P.O ♦ library. Why was this? This move was dishonest. Removal of services by stealth

<sup>35</sup><sub>17</sub> Announcing the “transfer” to the Library just on the Christmas Break was unfair. What capacity, training or knowledge to continue “business as usual” did/do the library staff have?

<sup>35</sup><sub>17</sub> The Akaroa library is both community and school - it is a teaching space for our children, not a place to discuss your CCC concerns, privacy issues, especially in a small community.

<sup>35</sup><sub>17</sub> Currently open 5hrs/day on split shifts, if concentrated into 2 or 3 days there are sure to be a local/s who would consider part time employment.

<sup>35</sup><sub>17</sub> If the Council has a need to rationalize the number of service centres, why close Akaroa? How do we compare with Little River? The Banks Peninsular population east of Hilltop is larger and more dispersed with fewer service options. The population within the Little River Basin is approx 933, and they have closer options in Halswell and elsewhere. The Little River population is also more connected to and closer to Halswell than the Akaroa population is to Little River

## Feedback

1.1 Have we got the game plan right?

in relation to drainage and flood water plan I support option 2 as a rate payer of Robinsons bay ..

1.2 Rates

I think that the ccc should not increase rates as they could sell unnecessary assets and make present services more efficient .

1.3 Proposed changes to existing rates, and new targeted rates

I agree to have rate payers that use more than 700 litres a day should pay extra

i do not agree the increase for the art center

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

1.11 Potential disposal of surplus Council-owned properties

yes the ccc should focus on services not owning unnecessary properties

1.12 Any other comments:

the proposal to dump Akaroa sewerage into Takamatua and Robinsons Bay is not acceptable when there are way more cost effective methods

### Feedback

1.1 Have we got the game plan right?

The Council's failure over many years to implement a Local Alcohol Policy to address alcohol-related harm in the district has been a major failing and neglect of the community, and provision for the development of a Local Alcohol Policy in the Long Term Plan should be a very high priority.

The CAAP is not good enough; it is not a Local Alcohol Policy. The Sale and Supply of Alcohol Act makes provision for territorial authorities to have local alcohol policies developed through consultation, which have a recognized place within the scheme of the Act and which need to be considered by District Licensing Committees in making decisions under the Act.

Attempting to bypass rights of consultation and appeal is undemocratic, not respectful of the rule of law and disingenuous in presenting a mere façade of addressing alcohol-related harm.

Parliament is the lawmaker, and the Council needs to work within the statutory scheme by using the tools available. District Licensing Committees need local alcohol policies to serve their communities; it is grossly unfair on them and the community to only have a plan that cannot legally or fairly have the status of a local alcohol policy.

The community appreciate that District Licensing Committees have a very difficult and technical role, are constrained to work within the confines of the law, and are linked to the Court system, needing to follow judicial processes, though they can be supported by the Council through having a Local Alcohol Policy. The Council should front up to its responsibility in this area, rather than hiding behind the constrained role of the District Licensing Committees, and writing documents that can never fairly have the status of a local alcohol policy. It is entirely unfair and lacking in the courage the Council needs to show to protect its community.

The harms of alcohol are many; the Council has access to the expertise to address these and needs to seriously enter the fray by having the fortitude to follow through on implementing a Local Alcohol Policy.

The most insidious harm of alcohol is its addictive grasp, which is poorly addressed by the absence of a local alcohol policy; the District Licensing Committee are left alone unsupported to consider sensitive sites. It declines an application for a bottle store next to a Salvation Army Family Store and in close proximity to a key alcohol dependency treatment centre, and is subjected to appeal, there being no local alcohol policy in place in support the community and protect the vulnerable. The extent to which alcohol is forced into the faces of the dependent, and normalized to the young, needs to be countered in fairness to give people a chance to seek wellness and grow up healthy.

Alcohol is an addictive substance, which presents an uneven playing field where Parliament gave councils powers to enter the fray to level the playing field by implementing local alcohol policies to counter the unfair grip alcohol and the industry gets over the people. Alcohol dependency infects and erodes all sectors of society; the community needs a defender, and the Council should be answering the call the Parliament put out with the Act for councils to defend their communities from harm.

How many people need to ruin their and their families lives, die in alcohol-fueled incidents outside city bars, develop cancers through regular unhealthy imbibing, and incur all the many other harms of alcohol harm, before the Council will step up and be a good provider for its community.

Alcohol-related harm and dependency erodes our society, and rots out the foundations of all parts of our city from low to high socio-economic areas. People regularly die in alcohol-related incidents orphaning small children, and more regularly children's lives are indirectly undermined and screwed up by the profit-seeking of the alcohol industry. The Council needs to be their champion and defend those children. Those children grow up and become the disturbed and scarred adult children of the victims of

alcohol. The future success of our city depends on growing healthy adults by tackling these matters head on.

The Salvation Army and such NGOs, and the Licensing Inspectors, Police, Medical Officer of Health and District Licensing Committee, have tremendous dedication, evenhandedness and manaakitanga in Christchurch. The agencies here are world-class and amazing; they are our guardians and your warriors, and they need the Council's support through the development of a Local Alcohol Policy, including to keep those in alcohol dependency treatment at a fair distance from the drug to support and nurture them. The Committee has been courageous and kind to protect our community; I only ask you please support our guardians and warriors with the tool of a Local Alcohol Policy they need to best protect our district.

We are all guests your great city. He tangata takahi manuhiri, he marae puehu {a person who mistreats his guest has a dusty Marae}. Ma whero ma pango ka oti ai te mahi {with red and black the work will be complete}, i.e. if everyone does their part, the work will be complete.

Thank you for considering this strong urge to make provision to develop a Local Alcohol Policy.

### Feedback

#### 1.1 Have we got the game plan right?

It is hard to determine whether the balance is right - the LTP document says it is about looking after what we've got but I feel we have so much more now that the 'red zone' is mostly in CCC hands. We have also not made the most of the amazing asset that is the Banks Peninsula since it was incorporated into CCC in 2006.

Given that we are in a climate emergency, and that this next decade is the UN Decade for Ecosystem Restoration, our city needs to be investing more in biodiversity enhancement. It is likely that more money will need to be spent on biodiversity and other climate friendly activities i.e. tree planting and maintenance. This area needs more focus in the LTP - value our park rangers and ensure they can continue to work effectively with community restoration groups. Now is not the time to reduce funding for organizations such as the Banks Peninsula Conservation Trust or Predator Free Banks Peninsula...both of these need more funding not less.

The same goes for community funding. The proposed cut by 5% to the Sustainability and Biodiversity & other similar funds does not bode well for community partnerships. It is vital that CCC supports volunteer groups across the city who run community gardens, park restoration programmes and social enterprises to make most of these huge volunteer hours (and passion for making a difference) rather than cut their funding.

#### 1.2 Rates

I am comfortable with the rates increases particularly if they are used to improve our 3 waters infrastructure alongside improving the ecological health of our urban environment. I would also like to see the completion of our urban cycle network to ensure we're a more connected and climate friendly city by the end of the decade. Spending now to prepare for a low carbon future is vital now to ensure the following generations do not face exponential costs.

#### 1.3 Proposed changes to existing rates, and new targeted rates

I agree with the targeted rates, particularly the excess water usage and heritage targeted rates. I also support a targeted rate that would encourage improvements of vacant land in the central city - either to move the redevelopment of that site or improve its natural amenity value while the owner waits to build on it.

#### 1.4 Investing in upgrading and protecting our city's water networks

I think the balance is pretty much on target. I am keen to see the end of chlorine in our drinking water hence I support the continued improvement of our drinking water infrastructure.

I am also keen to see the city's storm-water infrastructure improved so that our urban rivers are protected from pollutants and heavy rain sewage overflows.

#### 1.5 Investing in our transport infrastructure

Certainly repairing and maintaining roadways around our city is important - potholed streets and broken footpaths do little to advance a feeling of pride in an area. Priority needs to be given to areas that were most badly affected by the earthquakes and, in areas where there has been a significant increase in residential population and therefore traffic movement, there is need for footpath extension to ensure the safety of pedestrians.

As a cyclist, I would like to see the MCRs currently budgeted for completed during the long term plan period. These cycleways improve cycle safety with the proposed associated local cycleway connections providing an improved network across the MCRs. One area I would like see completed sooner rather than later is the City to Sea cycleways out to Brighton as 'the east' tends to miss out on quality cycling infrastructure. As someone who has cycle toured extensively elsewhere in the world, I would like to see improve 'wayfinding' signage to make the use of these networks easier and more attractive.

I am comfortable with the proposed increase to on and off street parking charges in CBD. I support improvements in Public Transport infrastructure such as bus lane priority, intersection improvements, and upgrades to bus stops. I would like to see the return of the free shuttle bus service in the centre city as this would enable ease of movement for shoppers round our central city. I am keen to see actions that make the use of PT easier, more comfortable and safer for all hence I am not supportive of the closure of the Riccarton Rd bus lounges.

I am not supportive of the extension to the tram lines at this stage - it really is a tourist attraction rather than a transport service for the general public.

#### 1.6 Rubbish, recycling and organics

Yes, I think the balance is about right.

The proposed improvements alongside what the government has proposed should see a reduction in compostable materials going to landfill. As one who smells the putrid wafts from the organics processing facility in Bromley the proposed improvements are well overdue and much needed.

Further education about what can and can't be recycled would be useful in the hope of reducing contamination. Currently the messages are confusing particularly as there seems to be no consistency across NZ's TLAs as to what is acceptable & what is not.

#### 1.7 Our facilities

We have wonderful public amenities in Christchurch and I am keen to see levels of service generally maintained. I think the city council needs to focus on improving amenity and livability of low socio economic areas of the city such as Linwood, Philipstown, Waltham, Aranui, Northcote, Shirley & Hornby.

Libraries are essential services for communities - they are places of information, for education and enhancement as well as providing spaces in which to gather. and to share. Librarians have diverse skills that serve the public well. We are lucky that our libraries have not suffered similar austerity cuts as seen in the UK & elsewhere. Library closing hours should not be based in size but on need so in this respect I support the downgrading

of Sumner Library hours but not those in suburbs like Aranui and Linwood. I also value the Mobile library service and would like it maintained past 2022; I'd like to understand what the alternatives could be that would provide the same level of service as currently.

I can appreciate the closing of service desks where little use is made of them so agree with the closure of Akaroa & Lyttelton serve desks. The reduction in Wednesday evening Art Gallery events seems sensible, too during this Covid impacted period.

I question the closure of the Riccarton Rd Bus lounges - they seem well used whenever I have cycled past them and actually often wondered why people awaiting buses in Linwood we're not similarly catered for in terms of comfort and warmth.

I am looking forward to the opening of Te Pou Toetoe in Linwood as we have been under-served for such facilities in our area for some years. I also support the provision of improved services in Hornby and Halswell area where there has been a noticeable population growth post quake. I remain opposed to funding of the multi-use arena as I believe the \$253 budgeted for it would be better allocated elsewhere - the stadium will be a mill-stone round our city's neck for decades much as the Forsyth Barr stadium has been to Dunedin. A country the size of NZ does not need, and really can't afford, 4 mega stadiums. I would also delay the investment in a new arts precinct at \$34.8M - The Court Theatre's current site accommodates them well - I would rather see that money invested in completing the Arts Centre refurbishment.

#### 1.8 Our heritage, foreshore and parks

Yes, I think the balance is about right. It would be wonderful to see the heritage buildings currently damaged & derelict (eyesores) in the centre of our city restored to their former glory and become assets. I like the arrangement with Box 112 for 'Our City' building.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

It would be wonderful to see the Arts Centre completed and activated. It is a significant set of heritage buildings that are known beyond Christchurch. My preference is spend money here rather than on building a \$34.8M new arts precinct.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

##### Comments

In this current climate, this redevelopment can be put on hold.

#### 1.11 Potential disposal of surplus Council-owned properties

Yes, go ahead - it will be interesting to see whether either draws any interest from entrepreneurs or developers.

#### 1.12 Any other comments:

Very supportive of the ongoing dialogue between the Mayors and councils within the Greater Christchurch area. The Greater Chch Partnership 2050 programme is vital if the assets Chch City is building and investing in are to be well used by people beyond our urban boundary. What type of cost sharing or restitution could be negotiated? How do we connect and move across urban boundaries in ways that are efficient, safe and climate friendly?

Keeping the relationships warm between the partners within the Greater Chch Partnership is vital for our urban region's future.

### Feedback

#### 1.7 Our facilities

Cutting the services offered by the Christchurch Art Gallery Te Puna o Waiwhetu to the public and school groups by 25% is a massive reduction that will have a negative impact on the precise community this facility is meant to serve. Public programmes and education offerings are generally designed for and attended by locals, not overseas visitors. Decreased visitation is not a good enough reason to make any such cuts, especially when parents may be finding it harder than usual to offer their children extracurricular activities, due to the impact of COVID on their personal finances. The Gallery's programmes, both public and educational, are either free or \$2 per student for a lesson, and may be the only chance a Christchurch child has to experience art outside the classroom. It would be such an incredible shame to lose any public programmes or education offerings, so please reconsider this proposal.

### Feedback

#### 1.1 Have we got the game plan right?

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

#### 1.2 Rates

I question whether this is affordable in the long term. As we approach retirement and a fixed/reduced income it is highly possible that after working and saving for our retirement we will be unable to stay in our current property due to the cost of rates.

### Feedback

1.2 Rates

4 percent should be the maximum and it should trend down to 2%

1.5 Investing in our transport infrastructure

The Council staff seems to have a dislike for cars. Cars are an important part of our transport system and council policies should not be unfriendly to car users.

1.8 Our heritage, foreshore and parks

I would like to see adequate funds allocated to relocate the cricket wicket blocks and relevel the outfielders at Elmwood Park. This is necessary to realign the playing areas to reduce overlaps between fields to make it safer for the cricket teams that play there, and to better align with the location of the new pavilion that is to be built there soon, as approved by the CCC Community Board in 2019.

Little money has been spent by the CCC on the park since before the earthquakes, and so it is now time to allocate sufficient funds in 2021-2022 to enable this work to be done.

I support the allocation of funds for the renovation and capital development of sports fields in Christchurch, and note the vital role that sport plays for community connectedness, health and wellbeing.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

### Feedback

#### 1.1 Have we got the game plan right?

Not entirely. You have to keep strictly to your fundamental core roles at minimum cost to rate payers. People only have limited finances especially in these Covid times. A lot of business and ordinary people are struggling already with our rates increases on top. Rate increases should not be above the level of inflation.

#### 1.3 Proposed changes to existing rates, and new targeted rates

As a rural land owner on Banks Peninsula I oppose a change to the land drainage targeted rate. The C.C.C do not supply anything towards the drainage on our property. We have to do it ourselves, just like we supply our own water supply, our own sewage septic tank system and we have no rubbish collection. We already pay a considerable amount of rates to ECAN to deal with rivers and environmental issues involving water. Why should we pay rates to two different organisations to deal with the same issues. C.C.C and ECAN have to realise the public can not afford to keep on paying more and more rates every year to cover the costs of running large bureaucratic organisations especially rural land owners who receive very little services from them. To try and justify it by saying we get the benefit from it by not having to drive through flooded water when we go to the city does not stack up. One of the main reasons there is flooding in Christchurch is that parts of the city are in low lying areas that should never have been built on in the first place. It is poor planning to allow developers to turn this sort of land into residential or business areas so people can make money out of it and then someone else has to pay to fix the problems.

#### 1.6 Rubbish, recycling and organics

One way to cut down on rubbish would be to charge manufacturers the cost of disposing of their products and packaging. You just have to look at how many inferior made products that don't last long and are wrapped up in lots of plastic advertising packaging that end up filling our landfills not long after entering the country. The reality is there is a steady train of trucks heading to the landfill at Kate Valley after Xmas full of inferior products that have just come from places like China. Encourage people to buy local well made products that last a lot longer and our rubbish dumps would not fill up anywhere near as quick. It is a bit ironic that some of the waste management companies in NZ have ties to China.

#### 1.8 Our heritage, foreshore and parks

##### Our heritage

It is good to save our heritage but in some cases there needs to be open discussion and public notification of intended purchases so the public can have a say in how their money is being spent and whether other organisations who are going to benefit from these acquisitions are intending to contribute as well.

##### Parks and Foreshore

Investment in council owned heritage and paksareas CHCh and B.P

That rural land owner in the C.C.C region retain the right to farm their land in partnership with the environment and not have large areas of rural land set aside as a playground. Their is already DOC land and reseves available for this purpose.

1.11 Potential disposal of surplus Council-owned properties  
If the council is going to dispose of surplus properties to save money should they not be very prudent when purchasing properties as well to save money.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I object to the proposed change to the land drainage targeted rate that will increase our property's rates.

I do not think that we should pay for a service that we do not receive. Also you mention in your letter that charging this way is a fairer and more consistent way of recognising that land drainage and flood mitigation etc are services to the whole district. This is definitely one example that our property would not benefit from as Coutts Island is the designated ponding area of the flood mitigation plan for Christchurch, and if there is a flood parts of our property will be severely damaged, so in a way we would be paying for our property to be damaged if there is a flood which does not seem right.

Also as a rural resident we already have additional costs for services that would normally be covered by the Council for urban areas eg the six monthly monitoring and servicing of our waste water system.

We are a retired couple who have lived here all our lives and like living in the country but additional costs such as a rates increases put extra strain on our finances.

### Feedback

#### 1.3 Proposed changes to existing rates, and new targeted rates

With regard to your proposal for land drainage rates to rural properties we do not see this as a '*fairer and more consistent way of recognising..... are services to the whole district.*' First, it appears that the proposal indicates *higher rateable properties*. would pay more than lower rateable properties. Secondly, home/land owners in this area have paid for their own water access via wells paid for at significant cost, pumps to access the underground water, and holding tanks, their own sewerage, and water is drained through the land, not through any other process. We have several soakpits around the property, also paid for by ourselves. At no stage have we ever received services from the city council for any of these, therefore how can the city council deem it is appropriate to charge rural land owners for services they supply themselves. Where residential dwellers have these services provided, we do not. We already pay rates to Christchurch City Council, which we believe are going to rise for all and sundry regardless. We also pay rates for the water race in front of our property to Selwyn District Council.

The first bullet pointed section under " The Problem". *the extension of the land drainage.....* makes little sense in terms of how we benefit from land drainage activities, as water drains into the land naturally.

You talk about drainage of the CBD, and the fact that maintaining it *accrues to a wide cross section of Christchurch residents who work in, or use the CBD*. We live well outside the CBD, we also work outside the CBD, and would rarely have the time, or take the time to utilise this area. We do not benefit from any services available to this area, or indeed residential suburbs. It is not *difficult*, to ascertain who has serviced facilities, and who does not, and we see nothing *fair and accurate*, in a proposal to charge land drainage rates to properties which do not have these. Let alone the fact that water on our property and others in the area are self draining. There are no *drainage assets* provided by the city council. Apparently your *counter argument* is that we *benefit from other land throughout the city being drained so that mobility and accessibility can be maintained*. For who? For those living and using those areas, yes, if the infrastructure in terms of water is maintained to the required standard.

Your proposal in the Long Term Plan 2021-31 sounds like it will go ahead regardless, and delivering this to us, would suggest a tick box activity where we have been notified, given a right to submit, but it will happen no matter what the submissions might be. We would question where the 'fairness' is in this respect.

1.4 Investing in upgrading and protecting our city’s water networks

Whether your proposal and financial planning are in line with what does, or does not need to be done in terms of water infrastructure, this again does not affect people like us on the rural fringes of Christchurch. Certainly this infrastructure is crucial in providing services to those within residential and CBD areas

1.5 Investing in our transport infrastructure

It would seem that CCC are already investing heavily in cycle lanes. Have you looked at the percentage of those who actually use these, and is the cost of upgrading and/or developing more in line with demand and usage? We don't know. Have ACC claims with accidents caused on electric scooters, or by electric scooters not risen substantially since their introduction in 2018. Despite potential carbon reduction through their use the cost of injuries to the tax payer would quite possibly negate viability of this carbon reduced option. We don't use public transport, however there are many we are sure who do use this daily, and yes, there may be a need to look at improvements as long as they are in line with public safety, economical viability for users, and where possible more environmentally friendly. This, is only our opinion.

1.6 Rubbish, recycling and organics

Investing in public awareness and educating around as to what is recyclable or not, and the how to we think would be worthwhile. We know this is already in place to a degree, unfortunately there will always be those who really don't put much thought into the environment.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 17/04/2021

**First name:** Nicole **Last name:** Hanning

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

1.11 Potential disposal of surplus Council-owned properties

I ask that proper community consultation should be undertaken for this selling of the surplus land holdings in Diamond Harbour, I would like the fast track disposal be rejected. With Community consultation, the following can then be considered; gully protection, boundaries, road access, school development, walking tracks, infrastructure and other local interests. Community input is needed, especially in such a small community where this would have large effects. Please stop disposal of diamond harbour land until proper process can be followed.

1.12 Any other comments:

Please stop disposal of diamond harbour land until proper process can be followed. Thank you for reviewing my thoughts.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

I dont feel we need rates increase, the disposal of land in areas of Diamond Harbour etc would cover the need to do this and also less massive sized cycle lanes that 2 cars from driving down a road, example Domaon terrace in Sydenham

#### 1.11 Potential disposal of surplus Council-owned properties

Very happy for the disposal of the land in Diamond Harbour. Hunters Road, Waipapa etc

Will be great to see our community grow and flourish

#### 1.12 Any other comments:

Diamond Harbour School really needs better signage on Marine Drive especially with the new development going in

Thank you :)

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.2 Rates

spend less, cut costs elsewhere, less rates increase. No rates rise for 2021/22 to allow people to recover from 2020

1.3 Proposed changes to existing rates, and new targeted rates

targeted rates sounds like more of a user pay scheme rather than everyone pays extra for the benefit of a few

1.5 Investing in our transport infrastructure

Improve roading round Halswell school. Pedestrian safety should be paramount. Bus service from furthest end of Halswell straight to CBD would be good too

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

not at this stage. Let the people recover financially

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

i like the idea but not yet

1.11 Potential disposal of surplus Council-owned properties

good plan

## Feedback

### 1.1 Have we got the game plan right?

It is good to see recognition being given to the overarching importance of climate change. The next ten years are absolutely critical for avoiding rapidly increasing disastrous consequences from local to global scales. Pages 14-15 of the consultation document use appropriate language to stress the importance of a strong response in all aspects of our lives. It would have been good to have read similarly strong statements from the council's leaders. The Mayor (p4-5) makes two brief mentions, and the Chief Executive (p6-7) makes one brief mention. These brief comments do not suggest the need for urgency to confront a crisis. It is well and good inviting comments from people in general but strong statements from those in leadership positions greatly help in setting the agenda and driving change.

On page 15 it is heartening to read that this is the first LTP "to include a climate change lens over everything" - and not before time. However, this is not reflected in the outline of the "Strategic Framework" on p18 where five "strategic priorities" all appear to have equal status. In order to stress the criticality of our response to climate change the diagram should place "Meeting the challenge of climate change..." as an umbrella priority above the other four strategic priorities. Making signals of this sort is important in stimulating the necessary response from society as a whole.

### 1.2 Rates

The planned increases seem reasonable so long as they are supported by clearly understandable, on-going evidence that they are resulting in adequate responses to climate change. I want to see my rates help in making the necessary "fundamental societal and systems transitions and transformations that help limit global warming to 1.5°C" (IPCC 2018 SR1.5) in an equitable way and I need to see evidence that this is happening. There should be a requirement for Council to report every two years with data on progress in this regard both for its own activities and also for the city as a whole.

Population growth should not be used as a means to supposedly keep rates increases lower for individual ratepayers. This seems to be the argument presented on page 33. "More developments" and growth in "the number of rateable properties" is presented as a sensible direction. This acceptance of population growth is also apparent on p20. The statements there seem to applaud that we have had population growth of 15% since 2006, that there is an expectation of about 150,000 more people by 2048 and that we are the second biggest urban centre in NZ. This growth increases the environmental impact of the city and makes it more difficult for us to respond to the climate crisis. We need to become truly environmentally sustainable, which would mean greatly reducing our environmental impact, without fooling ourselves that this is achievable whilst these forms of so-called growth continue. I neither accept that "we have space to grow" nor that we need growth to "maintain the lifestyle many of us love". The only "growth" that is acceptable is that which decreases the city's environmental impact and especially that which decreases our greenhouse gas emissions.

### 1.3 Proposed changes to existing rates, and new targeted rates

I support targeted rates based on house value for heritage projects and for the Arts Centre.

I am disappointed that you will be "talking more about" a targeted rate for vacant central city land "in the coming months" (that seems somewhat open-ended!) rather than proposing to apply it now. Vacant land should be used to its full for the benefit of the city and should not persist solely for the financial benefit of the owner due to land value increases. The Council should use whatever means it has to drive the best use of this land for the city as a whole.

Proposed rate for excess water use. I agree that our domestic water should be regarded as a precious resource and should not be wasted. I am not convinced that a rate for water use is the best way to improve behaviour in this regard. I would not like to see large families with low income subjected to a charge. Your example on p46 (a household using 1200 litres per day) could, at an average per capita use of about 250 litres per day, be a 5 person household. The annual cost to them would be \$243- per year. This would be a burden for a low income household.

An education campaign of similar intensity as that applied to rubbish sorting should be applied, e.g. when and how to water gardens, potential use of grey water to water gardens, encouragement of capture and use of roof run-off, of use of drought-resistant plants in gardens, mulching of soils, use of a brush to sweep drives rather than a high pressure hose, use of appropriate shower heads, etc. etc.!!

People would be more likely to consider their own water use if it was known that Council was rapidly moving towards improving water supply infrastructure and especially reducing losses through leaks. If my "back of an envelope" calculation is correct then the volume of water lost in leaks each year (about 11,700 ML) is about 8 times the volume that would be charged as "excess use" in your example on p45 (\$2 M annual income from charges of \$1.35 per 1,000 L for a total "excess" of about 1,480 ML per year). It seems the major problem by far lies in the leaks. (I'm assuming the volume of an "Olympic-size swimming pool" (p44) is 2.5 ML! Please use actual data in your documents rather than these supposedly easy to envisage substitutes for real numbers.)

#### 1.4 Investing in upgrading and protecting our city's water networks

This looks reasonable to me. I'm particularly pleased that Lyttelton Harbour will no longer receive treated wastewater and that Akaroa wastewater treatment is to be modernised and used to irrigate new areas of native trees. In Akaroa, the plan to use some of the reclaimed water for irrigating parks and flushing public toilets is good as is the possible extension of this to its use on private properties. Could this be used as a trial for expanding a similar scheme to the wider Christchurch area?

#### 1.5 Investing in our transport infrastructure

An effective response to climate change has to make deep reductions of at least 50% in transport emissions over the next ten years. That is about a 7% cut each year on the previous year's total. It is good to see the explicit recognition of road traffic's contribution to emissions (p50) but the language could be a lot stronger in order to emphasise how essential it is to achieve these cuts.

Of greatest need is the transformation of the city into one where travel needs are minimised by making employment, shops and entertainment locally available within walking distance of home. In other words, the city should be divided into self-sufficient suburbs so far as possible. In the shorter term, modes of transport other than the private car will have to be made attractive enough to become the travel mode of choice. The future does not lie in every fossil-fueled vehicle being replaced by an electric vehicle. Already we hear of concerns about the loading on the power supply network if that happened.

I fully support the cycleways programme. My experience of those on Sparks Rd and Strickland Street has confirmed to me that safety of cyclists is greatly improved as is speed of travel and convenience. The sooner an extensive network of well-connected cycleways is completed the better. I would support bringing forward the completion of all cycleways.

The central city should increasingly be made car-free with electric buses, trams, bikes, electric bikes, electric scooters and walking used to move people around those areas. Each year an additional street or two could be made car-free. Improved public transport would bring people from outlying areas to the edge of the car-free central city.

The emissions of people travelling into the city from outlying towns must be horrendous. The daily evidence for me is the traffic coming off the southern motorway onto the traffic-clogged Brougham St. There is no mention of light rail as an alternative to this.

The plan contains nothing that is transformational in removing the perceived need for private vehicle use. We need such a transformation if the "growth" that is predicted (p50) and accepted as unavoidable (p53) does not just dig a deeper hole for ourselves by increasing emissions. What is meant by "corridor improvements" (p53)? If it is more and wider roads for private vehicles then we are going backwards. If these "improvements" are for improving ease of travel by public transport then I would support them.

## 1.6 Rubbish, recycling and organics

I support an emphasis on waste minimisation. Of course, the only real solution is a radical change in our consumerist, use-once-and-chuck-away culture. I support the focus on reduction of greenhouse gas emissions from waste processing and collection activities.

## 1.7 Our facilities

I support the improvements to be made in the quality of community housing. These improvements should be expedited. 10 years would be too long to wait for a warmer, drier house. The provision of more community housing should be more than a "hope" (p56).

I do not support spending on the "Multi-Use-Arena". This structure and associated activities will only increase our greenhouse gas emissions. At a time of climate crisis this is the last thing we need. However, as this will almost certainly go ahead, I do wonder whether its construction could be designed to reduce the embodied carbon emissions in the materials used, e.g. the use of wood rather than steel, and minimisation of concrete use. I continue to be horrified by the amount of structural steel being used in the construction of the Metro Sports Facility. Surely this could have been better designed to minimise the embodied carbon emissions.

Without seeing the numbers on usage at different times, it is difficult to comment on the proposed reduction in library hours. I believe libraries are vital hubs of community activity and would be cautious of any reduction in their availability. I know little about the Mobile Library except for what I have read in a recent newspaper article. It seems to cater well for people who would otherwise have difficulties in accessing a library. I am surprised that the "consultation" and exploration of "alternative services options" (p58) could not have already been made before proposing the cut in service. Only with knowledge of what those options would be, could a more rational opinion be expressed on whether the cuts are damaging or not. Present people with the arguments before suggesting removal of the service.

I have read (Akaroa Mail) that the Akaroa service desk has an average of around 7 - 9 transactions per day. Rather than cutting the service completely, it could be reduced to say a single day during which there could be up to about 45 transactions. This would reduce costs but still cater for people who prefer to deal face-to-face with service providers.

## 1.8 Our heritage, foreshore and parks

I support the funding proposals and the targeted rates based on capital value.

It would have been useful to have read which of the parks and foreshore expenditures would contribute to carbon sequestration in native forest. I would favour maximising expenditure in such schemes at the expense of others that may be of more cosmetic value. For instance, is the "Rod Donald Trust strategic land purchase (\$3 million)" for native forest regeneration, likewise the "Strategic land purchase (\$4.5 million)"? If so, then the spending on those seems low compared with that in other areas, e.g. "Naval Point redevelopment".

## 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

## 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

It would be good to see this building in use again.

## 1.12 Any other comments:

I am very concerned about the Airport Company's purchase of land in Tarras for construction of an international airport. This must not be allowed to

happen. It would make a complete mockery of the Council's stated desire to reduce greenhouse gas emissions. Likewise, we need to recognise that Christchurch cannot continue to depend on the income derived from international visitors flying into Christchurch airport. International flights will increasingly become a focus for cutting emissions. This will have to be part of the "fundamental societal and systems transitions and transformations that help limit global warming to 1.5°C".

### Feedback

1.1 Have we got the game plan right?

My priorities for the city:

development of undeveloped sites in the city;

Better infrastructure to limit carbon emissions from vehicles - access and availability of public transport, better cycleways and pedestrian safety/priority within the 4 avenues

1.2 Rates

I am happy with the rates increases proposed

1.3 Proposed changes to existing rates, and new targeted rates

I think targeted rates is a good idea

1.4 Investing in upgrading and protecting our city's water networks

this must be a priority in light of what is happening in other regions around NZ

1.5 Investing in our transport infrastructure

the balance is right

1.6 Rubbish, recycling and organics

the balance is right

1.8 Our heritage, foreshore and parks

the balance is right

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 17/04/2021

**First name:** Angela **Last name:** Nicol

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I am concerned that there is a lot of focus on new projects, while the economy is heavily impacted by Covid, and current services become sacrificed.

1.2 Rates

How are those on a permanent wage with either none/very little wage inflation supposed to keep their houses in 10 years time? For example those who are forced to work part time due to health conditions, those on sickness benefits, or those who are retired?

It has become hard enough on a low wage to manage to eat healthy, cope with bill increases, let alone trying to maintain their houses.

Its continually disheartening to see that part of our rate increase might be used in areas and resources the majority may not use.

1.3 Proposed changes to existing rates, and new targeted rates

In terms of water use is there any way to monitor and prevent industries using their sprinklers daily during the rain?

1.4 Investing in upgrading and protecting our city's water networks

Water is extremely important and I would like to see Christchurch water become clean and pure in time.

The risk of high level nitrates, and the increasing time we've had chlorine is disappointing.

1.7 Our facilities

In terms of losing services, the libraries are not just a foundation of knowledge, but warmth, and for some cases social needs – the majority of this user base arrive in the library in the evenings. There are also community groups who book side rooms in the evenings.

Losing the mobile library would have a huge impact on those who cannot make it to libraries.

As you can see from the feedback of this facebook post, many disagree with the plan of decreasing hours: <https://www.facebook.com/lynchinnz/posts/271620590993154>

**1.12 Any other comments:**

I realize the Council is caught between a rock and a hard place.

However it is well known that New Zealands employment wages can't keep up with living costs, now we have a housing crisis, and now the threat of a huge rates increase in time.

I hope the Council is really looking through Citizens eyes, and are understanding the effect they will have on taking away services, and the impact such huge rate increases will have.

The Village Presbyterian Church

**Your role in the organisation:** Treasurer

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.3 Proposed changes to existing rates, and new targeted rates

This submission relates to the Rates Remission Policy and is made on behalf of a local Presbyterian Church. The property is owned by Presbyterian Church Property Trustees but is vested in the local church for their own use. The church is a not-for-profit community organisation which at present receives an annual remission of Christchurch City Council rates. The Village Presbyterian Church operates from two sites in Bryndwr and Papanui. It operates for the benefit of the community by providing spaces for a number of not-for-profit activities, both for outside organisations and our own activities and initiatives. By doing this we are able to contribute towards the wellbeing of the wider Christchurch community. This is our contribution towards building a community which encourages resilience and supports strong mental and physical health outcomes.

An increase in rates would put constraints around our ability to support community activities. We note that the proposed plan changes indicate that there is to be a form of means testing to assess eligibility for the remission of rates. The proposed calculation is a disincentive for our Church to maintain good stewardship of our financial resources. It encourages a culture of inward looking to protect our own resources rather than engaging with our wider community.

We submit that the eligibility for remission should continue at the present rate on the basis that our activities provide significant public good.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 17/04/2021

**First name:** Nigel **Last name:** Larsen

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

I think the balance is about right. Water infrastructure is in desperate need of the highest proportion of spending.

In terms of transportation and CCC's climate change targets, roading, unless it is in support of better cycling or public transport, should be a lesser proportion of spending. We cannot encourage more use of roads by cars. The proposed increase in road resurfacing could be better spent in conjunction with Ecan to provide more extensive public transport networks and facilities around the city.

1.2 Rates

Probably a struggle for a huge number of families and tenants of rented accommodation as the latter will bear the brunt of landlords passing on the costs.

1.3 Proposed changes to existing rates, and new targeted rates

I agree with the proposed targeted rates, especially for excess water use.

1.4 Investing in upgrading and protecting our city's water networks

Yes, good use of the capital spend.

However, council should make changes to handling water runoff in that there'd be a lot less need for garden watering if builders and developers etc had to use porous surfaces so that rain falling on properties soaks into the ground and doesn't run off into already strained CCC drainage systems. Also, as part of the requirements for new builds, rain water harvesting and storage should be made compulsory.

1.5 Investing in our transport infrastructure

As long as alternatives to car transportation are given the highest priority and proportion of the transport infrastructure budget.

Two things to consider:

1)Investigate making the trams a lot cheaper to use for residents to get around the inner city. Or failing this;

2)Provide free or 50 cent (ie, low cost) CBD shuttles (electric) to make it easier for people, especially older people, to get around between Hagley Park and Madras St, and bounded by St Asaph and Salisbury Sts.

#### 1.6 Rubbish, recycling and organics

Expanding the options for recycling to include hot composting of polylactic acid based packaging would be good, as these materials are more and more prevalent.

#### 1.7 Our facilities

Reduction of library and service desk hours is good if warranted by low use. However, closing them is a different matter. There are some people for whom such facilities are essential and the last thing council should be doing is forcing them to make long trips in vehicles to access them. If a library isn't in a neighbourhood, is it possible to use Post Shops model where service desks are embedded in local businesses for example?

#### 1.8 Our heritage, foreshore and parks

Our proud history of heritage took a bit of a battering when Brownlee was in charge of earthquake recovery, but kudos to CCC for keeping the Town Hall when it was proposed to be demolished.

Perhaps we have too many parks or some of them could be downsized? Council seems to struggle to keep the gardens in them in a good state - e.g Abberley Park where the rose garden is looked after, but the rest of the park needs attention to weed and pest control (rats). Either that or staff need training in what a weed looks like.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

We are so lucky to have the Arts Centre. However, I'd like the CCC to ensure, as a requirement of its deal with the Arts Center Trust, that the Trust has adequate insurance cover each year.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

##### Comments

This is essential.

#### 1.11 Potential disposal of surplus Council-owned properties

At fair market rates, I am OK with this. However, what I wouldn't be happy with is sales and deals at mates-rates to developers etc who might not respect the heritage values or CCCs intended use for such sites.

#### 1.12 Any other comments:

None

#### Attached Documents

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 17/04/2021

**First name:** Paul **Last name:** May

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

No council need to stop spending on social services which are the role of the government. Its double taxing for the same service. To be clear, Cathedral, heritage, social housing, and of social services must not be funded by ratepayers when local government cry they have 80% of infrastructure but only 15% of tax revenue. This seems to overlook Waka Kotahi funding of all road projects done by local councils. Council needs to lead a efficiency charge to cut unnecessary spending on items like the 6 m touch screen in the library.

### 1.2 Rates

Outrages. Salaries and wages (excute for minimum wage) have not increase a total of 5% over 5 years. How do you expect people to afford \$6000-\$8000 a year in rates? Too much social spending and other non core activities like heritage, arts and gold plated projects like the metro sports center and the worlds most expensive tier 2 stadium which wont attract big All Black matches yearly because its too small. We now fight with Otago, Hamilton and New Plymouth for tier 2 tests and yet we are the second biggest city in New Zealand. We need an efficient and lean council that spends rates on core services not election vote buying and social engineering.

### 1.3 Proposed changes to existing rates, and new targeted rates

No no no to rates for art centre its not a priority. The proposed water charge is grossly unfair. Why is it the same for each house when not everyone pays the same rates and big larger houses pay more rates. So how is it fair for a one bedroom flat gets the same as a five bedroom house? Plus many of us have responded to the climate change emergency by investing in home gardens to grow our own fruit and veg which saves transport and cool-storage of fruit and veg grown around NZ or overseas. The water allocation for each property should be based on the size of the property and encourage sustainable measures like growing your own fruit and veg.

### 1.4 Investing in upgrading and protecting our city's water networks

this is what councils are here for. Final core infrastructure gets a fairer share of the funding. However, more funding is achievable without rates increases by stop funding government areas of responsibility (social housing and services). Heritage building should be paid for by private funding raising not rates.

### 1.5 Investing in our transport infrastructure

No, cycling is not the fix for reducing traffic. The priority on spending must be bus lanes and public transport. Cycle advocates think we should all be forced on cycles or buses. Thats wrong they are workable for many situations but commutes to work is perfect for buses but the frequency needs to increase (by regional council) and council needs to build bus lanes to make trips more reliable during peak traffic. Cars will have electric motors (either battery or hydrogen powered) and will still be a key mode of travel for certain trips. I'd like to see funding for controls on cyclists speeds on SUPs. Its seems every has a problem with cyclist. Cyclist used speed differential to push for reduce speed limits but then go faster than cars on SUPs and put pedestrians at risk from serious injury.

### 1.6 Rubbish, recycling and organics

Dont punish the community, you should be lobbying the goverment to put controls on packaging etc. Also the publics job should be to put all recyclable items into the yellow bin. Its the governments ands councils job to identify ways to reuse/recycle the materials. If something is recyclable but the sorting equipment cant handle it, then upgrade the process. Its a terrible outcome that items that can be rectcd are not because they are small and/or cant be sorred or NZ has no one that can recycle it.

#### 1.7 Our facilities

No stop funding a dinosour like a library. One central library is enough and more to online books. Hard abd soft covered physical books are unsustainable use of recycles and not wise use of limited funds.

#### 1.8 Our heritage, foreshore and parks

Heritage is way over played in Christchurch. The city is coming alive due to new modern fit for purpose buildings. Heritage is not corr infrastructure or service and the council must stop funding these activies then demand more rates to pay for core infrastructure and services.

5% rates increase in one year wiles out 5 years of next to no pay imceases for workers. Its outragous and unsustainable.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

##### Comments

This is money thr council cant afford or otherwise it would come from current rate funding.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

##### Comments

Arts is no a core service or core infrastructure. For decades this council has prioritised everything bit threewaters and transport. It has to stop. Rate payers cannot afford 4/5% increases which is more than wages and salaries are increasing.

#### 1.11 Potential disposal of surplus Council-owned properties

sell them and all social housing to fund the gaps in your budget and invest in threewaters and transport and improve parks and reserves that have more weeds than grass if there is any grass. Halswell parks and reserves are terrible.

#### 1.12 Any other comments:

Its time the mayor and councilors got in touch with rate payers rather than pandering to residents that want everything but dont pay for them. People do t get to go to their employer and tell them our spending is increases so we need an extra 4/5% per year for ten years. I know the council can absolutely live within there means and become more efficent in doing the same work with less workers and cost by focusing on the must haves which is core infrastructure and services which dont include social housing and services, arts and other nice to haves.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.11 Potential disposal of surplus Council-owned properties

I ask that proper community consultation should be undertaken for this selling of the surplus land holdings in Diamond Harbour, I would like the fast track disposal be rejected. With Community consultation, the following can then be considered; gully protection, boundaries, road access, school development, walking tracks, infrastructure and other local interests. Community input is needed, especially in such a small community where this would have large effects. Please stop disposal of diamond harbour land until proper process can be followed.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

1.2 Rates

As someone who does not yet own my own home, but will be looking to in the future, the ever rising cost of housing is worrying enough without the rates increasing at such a large degree over the next decade.

1.7 Our facilities

I think it is a mistake to change the opening hours of the libraries, as there are many in the community that use these in the evenings, and many who would be unable to use them during the day due to other commitments. It seems wrong to be increasing the rates, while taking away access to services such as libraries.

1.12 Any other comments:

I support establishing a regional incentive for the film industry, along with further funding for Screen CanterburyNZ to help grow the film/TV sector, that is often overlooked in our region.

### Feedback

1.1 Have we got the game plan right?

Rates increase seems reasonable, but keen on long term investments to strategically target climate friendly initiatives.

1.2 Rates

I am very happy with rates increases, IF they address the needs to meet our climate change goals.

1.3 Proposed changes to existing rates, and new targeted rates

Yes to excess water targeted rate! I think water is a precious asset that we should all conserve and appreciate so we should all pay for all the water we use, but this is a great start.

Yes targeted rates for heritage to help preserve our beautiful history as an important part of our collective history and identity.

1.4 Investing in upgrading and protecting our city's water networks

Yes to investment in water infrastructure...but keen for new systems / investments to be sustainable options that meet the challenges of climate change and preserve this precious taonga of ours for generations to come.

1.5 Investing in our transport infrastructure

Yes to investing in transport, but active forms!

This wording implies there will be a focus on providing options for people to get around, but there is still a much bigger budget allocated to roading than cycling & public transport.

With over 40% of our emissions coming from transport, we need to make bold investments in cycling & active transport to significantly reduce our emissions & meet the challenges of climate change.

And the great thing about this is you end up with much more liveable and communities which provide tangible health, environmental & social benefits for all.

I live in Spreydon with my young family, and it is a joy to be able to ride everywhere we need to go with our six year old on his own bike. We can get to Addington School, to work, all around the city (esp. Margaret Mahy playground), and even to our grandparents in Merivale on almost entirely cycleways. The cycleways created so far are fantastic, so keep going! Especially for the east of the city! They are really missing out on what we have in Addington & the central city.

Cycling is one of the simple solutions needed to solve our worlds complex problems. So please continue to build excellent infrastructure and increase your support for community initiatives that enable cycling to thrive!

#### 1.6 Rubbish, recycling and organics

I love and am so proud that CHCH recycles organic waste. Can't believe other cities dont.

Yes to more investment in organics recycling.

Would love all of our central city to have green bins too! Seems crazy not to include them when so much food is consumed there. So either more support for Council to collect organics in cbd, or massive support / funding to enable the current community groups already attempting to do this work to do significantly more.

Also, recycling for glass and tyres. Covid has shown we cannot rely on shipping our waste to offshore processing plants, nor should we. We need to solve these issues to be self sufficient in our waste management and find innovative, environmental solutions for these problems.

#### 1.7 Our facilities

I love our libraries and believe they are crucial as truly public space, open to all. But I have looked at the proposed changes to open hours and think they are reasonable and would not effect how much my family uses these facilities.

I also think closing the Riccarton bus lounge is reasonable. As mentioned, no other suburbs have this and survive, but I don't use the bus, so wouldn't know.

#### 1.8 Our heritage, foreshore and parks

I support spending money on heritage, it is an important part of our cities urban fabric and collective identity. With so much lost in the recent earthquakes, we need to preserve what we have left. I also think it's fantastic for the Council to collaborate with or fund community groups that are already successfully working in the space to increase their impacts.

Chch is well known for its parks, so these are important to maintain

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Yes! Love the Arts Centre. A total treasure and unique part of our city. I think the Council should do everything they can to support the people who are restoring and preserving this special place for generations to come.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

##### Comments

Need more information on what's being protected.

#### 1.11 Potential disposal of surplus Council-owned properties

Happy to trust Council's judgement on this.

#### 1.12 Any other comments:

Please continue your amazing support for community groups, enabling them to provide services to the people of our city.

There are so many passionate people running grass roots initiatives whose capacities are only limited by the funds they are able to generate / receive.

So many answers to our climate change challenges already exist within our communities, whether that be community gardens & composting systems for food security or recycling bikes for waste minimisation & active transport. Many groups have the expertise & abilities to help the Council meet their climate change goals. Council collaborations with successful community groups is a strategic investment in building our community capacity. Empower the people to empower eachother.

### Feedback

#### 1.7 Our facilities

i disagree with the proposal to cease the mobile library service. I think supporting isolated, vulnerable and elderly rate payers is as important as supporting wealthy, mobile young rate payers who can get to one of the large libraries. I believe as a community, you are only as strong as your weakest members, and where we can, we need to raise people up. With the mobile library, we have a resource and opportunity. To end the service is a huge waste of that opportunity and would be doing a disservice to a group of people who rely on the mobile for more than just books.

A falling footcount can be explained by the fact the mobile library has been marketed almost entirely by word of mouth since its last vehicle replacement other than some mention on the website when its replaced a closed library.

On that note. This vehicle has been invaluable when other libraries have had to close. are we expecting there to be no events or instances where it might be useful to have a response vehicle available?

Keep the mobile. Raise its profile. Expand its service. Reach people.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 17/04/2021

**First name:** Anthony **Last name:** Ussher

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

CCC is working on the LTP and the Climate Change Strategy concurrently. Without looking at the LTP's measures from a climate change perspective, it is difficult to know whether the LTP balance is right. Despite declaring a Climate and Ecological Emergency, it is hard to determine whether the measures in the LTP will be able to achieve CCC's target of net greenhouse emissions by 2045.

1.2 Rates

I support the increase levels. However, some families will struggle and the Rates Rebate Scheme should be improved to assist these families.

1.3 Proposed changes to existing rates, and new targeted rates

I support this proposal but would prefer a rate targeted for Christchurch's highly significant heritage buildings generally, and not just the Arts Centre. The Canterbury Provincial Council Buildings are amongst the most significant and important heritage buildings in New Zealand and deserve the same consideration, if not more, than the Arts Centre. Likewise the Peterborough Centre.

Water use in Christchurch is taken for granted by many. I would only support an excess water use rate if it were used in conjunction with education about it being a finite resource not to be taken for granted, rather than setting a punitive rate.

1.4 Investing in upgrading and protecting our city's water networks

- Drinking water: I support the Council's initiatives in upgrading the network. I also strongly support Council's goal to provide safe drinking water, without residual chlorine.
- Suggested changes; protecting our water also means that the Council must do much more. It must strongly support Ecan in its water quality work. It must also influence the members of the Greater Christchurch Partnership to strongly lobby against the degradation of our aquifers. We cannot accept business as usual from the powerful farming lobby.
- Surface water and waterways: I support the Council's proposed infrastructure spending.
- Wastewater: I support the Council's infrastructure initiatives.
- Suggested changes; I understand that in 2041 the Pegasus Bay wastewater outfall is up for review. Alternative reclaimed water options need to be considered /planned for now, perhaps following some of the Akaroa initiatives.
- Suggested changes; I ask that the Council also considers initiatives such as a heat exchange system on the wastewater before it leaves the Lyttelton Harbour (near the Tunnel) to support the heating of Council (or other) buildings in Lyttelton.
- Stormwater: Suggested changes; despite our relatively low rainfall, the Council could do more to promote and incentivise options such as detention and retention systems, soak pits, and pervious paving in Lyttelton and beyond to manage the flow

of stormwater.

1.5 Investing in our transport infrastructure

Investing in our transport infrastructure: I generally support these initiatives, particularly the cycleways. However with 36% of greenhouse gas emissions in Christchurch coming from the traffic on our roads, I do not think these initiatives are ambitious enough for the Council to reach its goals of halving emissions by 2030. The LTP initiatives will need to include ensuring that the Christchurch Transport Plan is a game-changer and doesn't just promote incremental change. Together with Ecan, the Council must take a multi-modal approach to public transport to include initiatives such as trackless trams, passenger rail, and passenger ferry/ coastal shipping.

1.6 Rubbish, recycling and organics

I support the CCC initiatives.  
Suggested changes; I would like to see a resource recovery depot in suburban areas for those residents who are unable to easily access the CCC Eco Depots. Otherwise perhaps quarterly kerbside pickups of recyclable items.

1.7 Our facilities

I strongly disagree with the CCC proposal to stop the CCC service desk at the Lyttelton Library. The Lyttelton Library is the hub of our community. This service is highly valued by the community and cannot be solely measured by task numbers. I ask that the CCC take a truly multi-function approach to this service. In the future it will be more important than ever for CCC to have a close relationship with the community, and in Lyttelton we would like to continue a real partnership with CCC. There is the potential for many more tasks for this service desk to manage - both future CCC initiatives (eg climate change/environmental) where community buy-in to CCC initiatives is essential, and also local (eg Project Lyttelton) initiatives that CCC could better support.

1.8 Our heritage, foreshore and parks

I support this initiative. However, I would like to see funding committed to our most significant building, the Canterbury Provincial Council Buildings.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties

I do not support this proposal. There is insufficient information to be able support this proposal or not. What are the buildings? What is their social, cultural and architectural significance to the city or their communities? Buildings aren't just a physical and economic resources, but have intangible values that are equally important.

### Feedback

1.7 Our facilities

I have concerns regarding the proposed cuts to the education programme at Canterbury Art Gallery. During these somewhat bleak and trying times it seems counterintuitive to cut programming that contributes to positive mental health outcomes.

I also believe having children experience the gallery while they are young means they are more likely to return as adults - even bringing their own children. This ensures the gallery remains a space for all - not just for those who are tertiary educated.

Lastly, I'm wondering who exactly the gallery is staying open for? With tourism largely at a halt who exactly is frequenting the space? It seems short-sighted to cut the Education Programme when it can bring in approx. 60 children a day + teachers and parent helpers.

Thank-you for considering my thoughts,

Nadine Luscombe

### Feedback

1.1 Have we got the game plan right?

Sorry, I'm not informed on this particular issue

1.2 Rates

Sorry, I'm not informed enough about why the city needs more tax dollars to operate to comment on this one

1.3 Proposed changes to existing rates, and new targeted rates

I do support an excess water rate for high using households. It seems fair that those who use more, pay more.

1.4 Investing in upgrading and protecting our city's water networks

I can't access whether that's a reasonable number or not, but I do think the water infrastructure is unquestionably worth maintaining and modernizing.

1.5 Investing in our transport infrastructure

I can't access whether that's a reasonable number or not, but I do think making the city transport infrastructure greener is worth investment.

1.6 Rubbish, recycling and organics

I do support these taxes. It's about time we made recycling work better.

1.7 Our facilities

Sorry, I'm not well informed on the proposed changes to service levels overall. I would like to see wharenui pool kept open. I use it for kayak rolling practice.

1.8 Our heritage, foreshore and parks

yes

1.11 Potential disposal of surplus Council-owned properties

If the council isn't using them, I support getting rid of them so they can be used by someone else.

### Feedback

#### 1.11 Potential disposal of surplus Council-owned properties

My submission concerns the land described as 42 Whero Avenue and 27 Hunters Road. I believe that this land should be removed from the disposal of surplus Council-owned properties plan to allow more consultation with the community. I walk regularly on the tracks through Morgan's and Sam's gullies and several additional tracks connecting to Waipapa Ave, Marine Drive, Ngatai Road and Bayview Road. I note the significant work done by volunteers to plan and nurture native trees and plants. I'm delighted with the increasing bird life that has occurred over the previous two years and the number of families who enjoy walking through the various different tracks and I strongly support these areas being classified as native reserves and being protected by covenants. If the land is sold to a developer without any covenants, there is a risk that these beautiful reserves will be closed in with subdivisions and roads. The community values these spaces and in many residents have moved to Diamond Harbour because they value a quiet and peaceful lifestyle. I would not have considered purchasing my property at the end of Whero Avenue if I had known that there could be potential for a large subdivision at the end of the road and a new through road built. Whero Avenue is already too narrow when there is parking on either side and there is no foot path. I strongly recommend that the council delay a decision about the disposal of this land until such time as there can be full community consultation and Community Board input.

#### 1.12 Any other comments:

I don't believe that genuine community consultation can be achieved effectively through this submission process. As I work full time, I don't always have time to read all the local news and I only heard about this proposed disposal through a conversation with a neighbour. Other neighbours close by were also not aware of this process. Residents in Diamond Harbour are committed to ensuring that their environment is sustainable and they are prepared to volunteer their time to the recovery of native vegetation. I am confident they would engage with a public consultation process.

### Feedback

#### 1.7 Our facilities

I would like to comment on the proposed reduction in the education programme at Christchurch Art Gallery Te Puna o Waiwhetū.

I find it inconceivable that a saving in this area is thought to be appropriate in the plan. In my experience of my childrens' education, especially through their primary education here in Ōtautahi Christchurch, I have been disappointed with the Art content in the curriculum. Art in the curriculum is much more than the sum of it's parts: it is not just about a child making an idea visual, it is providing a learning environment which is far removed from the normal classroom environment. With wellbeing being the hot topic in education and the workplace, giving space for Art to feature strongly is essential for exploring alternative ways of learning. The opportunity which is currently offered to schools when they visit the Art Gallery offers a short tour of selected art works - an experience where they learn how to behave around important taonga and to be respectful to it - and then giving them the opportunity to produce an art work in an immersive, nurturing environment, with the help of an educator and a volunteer guide, is valuable beyond words. Kids who have this opportunity remember this experience for years, and they return to the Gallery with their whanau in tow, feeling a sense of ownership of the city's taonga.

To reduce the availability of this opportunity for schools is incredibly shortsighted. Art in education sows the seed from which a new generation of creatives rise. Schools struggle to maintain a balance in the curriculum for the Arts: the Art Gallery provides this and should not have it's budget reduced.

## Feedback

### 1.2 Rates

I think the Council should work harder at becoming leaner. There are still too many managers and back office people. A much greater attempt should be made to out source work to local communities.

Our Council should not be like a business. I'm tired of seeing over inflated salaries that rate payers subsidise. I'd like to see more people paid a decent wage and less on over \$100,000.

### 1.3 Proposed changes to existing rates, and new targeted rates

I don't think a new Land Drainage Rate on rural properties is fair. They already pay land drainage rates with ECAN.

Happy to pay a targeted Heritage Rate.

I don't want to pay for the Arts Centre. This project has been privatised so why should the rate payers pay for it.

I think excess water should be charged to make people think twice before they waste water.

### 1.4 Investing in upgrading and protecting our city's water networks

I agree with this.

### 1.5 Investing in our transport infrastructure

Bikes need to be able to get to Christchurch from Lyttelton. A tunnel option is needed.

Light rail introduced on the heavy rail lines.

No more freeway projects.

1.6 Rubbish, recycling and organics  
Happy to see as much as possible spent on waste reduction efforts.

1.7 Our facilities  
Happy with the opening hours of libraries but I think you should retain the 24/7 Finger Library.  
The Akaroa Service Centre should not close.  
Educational programmes at the Art Gallery should not be reduced.  
Any new buildings should not be "gold plated". A more modest standard is acceptable.  
More facilities should be under local community control.

1.8 Our heritage, foreshore and parks  
Happy for this expenditure but would like to see more accountability for the work performed.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates  
Happy with targeted rates.

1.4 Investing in upgrading and protecting our city's water networks  
While it's a considerable proportion of the capital spend water infrastructure is a priority.

1.5 Investing in our transport infrastructure  
I agree with the spend on transport infrastructure, and especially cycleways. As a cyclist I prefer cycleways that are not over-engineered and am usually happy with on-road cycleways.

1.6 Rubbish, recycling and organics  
I support the investment in organics infrastructure - Christchurch is fortunate to have organics weekly collection when many other New Zealanders don't have this service.

1.7 Our facilities

Christchurch has excellent library services, I support investment in these. The longer opening hours, e.g. until 8pm on weekdays at Fendalton library, are great but I would understand if they need to be reduced due to demand at these times.

I would like to see the mobile library service retained as it meets a community need.

1.12 Any other comments:

As part of the Canterbury Museum redevelopment I would like to see the Blue Whale skeleton on display. For many children growing up in Christchurch in the 1980s, including my husband and I, it was the highlight of every visit to the museum. My own children are growing up in Christchurch without this opportunity.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.2 Rates

In general i support the rates rises and capital programme.

### 1.3 Proposed changes to existing rates, and new targeted rates

i support the water rates as a means to give water resources greater value and prevent wastage.

### 1.4 Investing in upgrading and protecting our city's water networks

I support spending on water infrastructure generally and an approach to supporting our local enviroment.

This includes improved management of waste water, ideally reducing through local managemt systems (raingardens and permeable surfaces) and more efficeint appliances and plumbing.

### 1.5 Investing in our transport infrastructure

I support the development of cycling infrastructure. The recent improvements to the cycle path network have made significant change to my family and it would be great to see that continue.

The success of the cycling infrastructure is related to creating a culture around cycling, which should also continue to be promoted/supported by the CCC.

### 1.6 Rubbish, recycling and organics

Reducing waste, including recycling, seems like a key part of effective and sustainable waste management. Beyond sone promotion im not sure what can be done at a local level, but stronger support for organic or biodegradable waste streams would help.

## Feedback

1.11 Potential disposal of surplus Council-owned properties

(1) Request the land described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) be removed from the LTP and its disposal therein.

**Reason:** resolving questions concerning this land being surplus to requirements, and preferences for its future use, should be the domain of the Banks Peninsula Community Board (as decision-maker) and by way of public consultation which satisfies the 'Principles of consultation' as described in Section 82 of the Local Government Act 2002. The current LTP process is unlikely to satisfy the said Section 82 requirements.

(2) If disposal of this land was to proceed then it is asked that the three gullies which dissect it are conservation covenant protected from development, and are eventually gazetted as reserves.

**Reason:** land in the gullies is unsuitable for housing development; and, through the Reserves Management Committee much work by the Diamond Harbour community has been undertaken to restore gullies with Banks Peninsula endemic native flora (planting and water irrigation systems) and to provide walking track access including the School Track which traverses from Waipapa Avenue across the said land to the Diamond Harbour School on Hunters Road.

(3) Limit development and protect this land for its food producing value.

**Reason:** It is ironic that we persist to favour economic growth without limits, when world-wide we must know our numbers and associated activities are imposing massive pressures on space, resources, and other life. To such a degree that we are experiencing symptoms of ourselves as the cause of climate warming, the very high rate of extinction of other species, damages to our waterways, oceans, our current pandemic, etc.

If you have lived here in Diamond Harbour even for a short while, myself for 17.5 years, you would have a strong sense of how it has changed, and most notably since the 2010/11 etc earthquakes, when we came to recognise the consequent (and now Nationally) the need for more housing. And presently we who live in Diamond Harbour are soon to have our own supermarket, and which will require motor car parking space, and thence we will see more motor cars on our roads, and thence the need for wider and better roading within Diamond Harbour and connecting to Christchurch. All these changes in the name of economic progress will make Diamond Harbour, as anywhere, more attractive to people to want to live here. More pressures, and more problems due to growth without limits. So, who seriously does consider our ecological foot-print limits (protecting the life-supporting capacity of air-water-soils-ecosystems), transitioning to some form of steady state economy (versus the current no limits progressive economy), and becoming more nature-centred versus only nature-friendly.

To take this opportunity to state a perception. While we Homo sapiens urgently need to address this pandemic in the immediate short-term, and climate warming in the near-short term, and other survival concerns, we more seriously, in the short to longer term, need to address the ultimate cause of these symptoms - ourselves). I feel strongly and can present the argument that we urgently need to change how we sense our world and live in it, if we are to survive 'with our humanity goodness intact'. Professor Murray Cox (School of Fundamental Sciences, Massey University) recently said on Radio NZ that in the last 50,000 to 100,000 years (known as the Cognitive Revolution) Homo sapiens has experienced little genetic change.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

The rate increase is about right. However, in respect to other charges, development contributions need to be more adjusted to the degree they affect climate protection and other environmental goals. Developments that are likely to encourage public transport use, have mixed use for employment and living and have environmentally beneficial building and land use features should pay less than projects that encourage urban sprawl, long commutes and inefficient housing.

#### 1.3 Proposed changes to existing rates, and new targeted rates

I support the excess water targeted rate with the necessary safeguards in place (no full charge if leak was not known etc).

I oppose the suggested cancellation of rates remission for not-for-profit community-based organisations that hold large cash balances. Some of them have trust funds that only generate a small income for the many outgoings of such community organisations. This is particularly the case for community organisations that have heritage buildings. These are costly to maintain. A considerable rate increase on top of that would then impact the actual community services such an organisation could carry out. Several organisations also hold investments in trust that can only be used for very specific purposes, so that in fact they cannot be accessed. Even though the policy is supposed to catch "rich" organisations, it could also affect struggling community organisations that have some trust funds. This could also affect the viability of organisations looking after heritage buildings.

#### 1.4 Investing in upgrading and protecting our city's water networks

Water infrastructure is important. This needs to happen alongside water efficiency measures.

#### 1.5 Investing in our transport infrastructure

While the building of cycle-ways is laudable, greater effort has to be made to make active and public transport preferable over individual motorized transport. That means making car travel less convenient in many cases. In particular, more money has to be invested in low-traffic neighbourhoods with local streets closed to through-traffic and people encouraged to walk and cycle in the local area. In road renewals, on-street parking should be reduced further.

Less money needs to be spent on chip-seal re-surfacing of streets. While some re-surfacing may be required in

some instances, overall the money should be invested in more productive activities. It is more important to invest in mode shift, rather than continuing to pour money and carbon-emitting petroleum products into road upgrades. Road renewals can be increased, once more sustainable transport patterns have been established.

Priority for public transport needs to be addressed. This should not only be seen from a road corridor perspective, rather from a bus route perspective. For example, the Orbiter bus is one of the most successful routes in Christchurch. Nevertheless, it has to contend with road and intersections that are not designed for this bus route. There are no special turning lanes to allow the bus to enter streets; the traffic light phasing does not take the bus into account; there are no priority lanes; road priority is set to maximize the level-of-service for private motor vehicles, rather than this bus route. By considering each bus route, public transport can be sped up. Buses are often considered a preferable form of public transport, because they have flexible routes, but that also makes them less attractive, because the overall performance of a bus route is not considered. In this case, route flexibility is a disadvantage. Therefore, buses have to be treated a little bit more like fixed routes to give them reasonable travel times. Such a programme of considering each route and the improvements that can be made needs to be implemented as part of the LTP.

In general, Christchurch should implement traffic light priority for buses with intelligent traffic lights that adjust phasing, when a bus is approaching. Traffic lights need to be designed for moving buses before general traffic.

1.8 Our heritage, foreshore and parks

Owners of heritage buildings need to be supported through relevant grants. The current level of grants is low compared to other categories. A re-balancing of the grants towards greater heritage protection needs to be considered.

I support the grant towards the Cathedral project.

## Feedback

1.1 Have we got the game plan right?  
I do not agree with the proposed decommissioning of Wharenui Pool. It is a great asset to the community, and well used by school groups, swim squads, and individuals. I've been swimming there for 10 years because it's the best place for lunchtime lane swimming in the area. We are very lucky to have such a great facility with its wonderful staff.

## Feedback

1.1 Have we got the game plan right?

no you have not. CCC members are still grossly overpaid, and you ignore public feedback on proposals.

1.2 Rates

instead of rates increases, how about a freeze on council payraises until key infrastructure like water and roading are done, properly.

And not make rate payers fork out to fix issues that should have been done right the first time, like redesigning the ridiculous 20 traffic light intersection in town.

1.3 Proposed changes to existing rates, and new targeted rates

i strongly oppose water rates.

1.4 Investing in upgrading and protecting our city's water networks

you have had many many years to address water infrastructure, and have yet to make a noticeable impact, chlorine levels are way too high, and pressure at peak is atrocious.

1.5 Investing in our transport infrastructure

no more bike lanes.

1.11 Potential disposal of surplus Council-owned properties

agree

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

Kia ora! Thanks for the opportunity to submit on the Long Term plan. I know you all have a million submissions to read, so I'll try to keep this really straightforward:

#### Things I fully support:

- Investment in cycleways, Coastal Pathway, and local cycle infrastructure
- The investment proposed in drinking water, stormwater infrastructure, surface water and waterways quality
- Targeted rate for Arts Centre
- Heritage targeted rate
- All the ecological and environmental investment, tree planting programmes etc.
- Excess water targeted rates (including supporting the exemptions available). Unfortunately the fact is that many people need a financial incentive to not waste water.
- Future rate for vacant sites in the CBD - please please nudge these reticent land owners along! As an example, I've watched several small hospitality operators start up, and then fall over in The Yard development between Tuam and St Asaph St. If they had had an office or residential development next door, rather than a cheap all-day-commuter-parking gravel pit, they would have had a much better chance of success for their business.

#### Things where I would like to see change:

- Please bring the local connections' cycle infrastructure forward. This is really minor spend, proportionally, but will make a huge difference to many neighbourhoods in helping us access the major cycleways network, address dangerous trouble spots, and add value to the investment already made into the major cycleways.
- Please bring the Otakaro cycleway out to the East forward - 2025 or later is just too far away, those folks have been waiting long enough for this! It's all I ever see on Facebook and hear from friends in New Brighton, and their needs for a safe cycleway needs to be prioritised by bringing that project forward.
- Please keep the mobile library. Frankly, \$90,000 a year is chump change, and this is a really important service for those who have limited mobility, adding significant connection and quality of life to those who rely on this service.
- Please retain the Riccarton bus lounges. As you've stated, transport is the city's biggest source of climate emissions and closing the bus lounges is a totally retrograde step. People, especially women and other people more at risk of harassment need a safe, well-lit space to wait for their bus.
- I would like to see more investment in safe walking infrastructure, including far more safe crossing points.

- I would prefer wealthy households like mine to pay more rates to fund services for the cultural, economic, social and environmental wellbeing of our city and us as residents. I don't support any uniform charges as these weigh more heavily on lower income households which is manifestly unfair. Please get rid of the uniform charges and make all rates progressive.

Frankly, those of us in expensive properties like mine won't even notice the difference. We can afford it.

Other comments and supporting info:

- Council has committed to halve our city's emissions by 2030 from 2016–17 levels. This is a crucial but challenging target, and we have no time to lose. Recent research found that cycling is 10 time more important for reaching net-zero cities than EVs (see <https://www.nzherald.co.nz/lifestyle/the-conversation-cycling-10-times-more-important-than-electric-cars-for-reaching-net-zero-cities/XYRGT7SIOBQKJBMJYLNZOZVHPQ/>)  
We must make cycling, walking and busing safe, pleasant, convenient and affordable. Myself and my family and friends are so incredibly grateful for the Council's commitment and investment in cycleways so far. 30% of vehicle trips in Chch are under 2km. An additional 30% of vehicle trips are under 5km. Please let's do everything we can to make active and public transport the most convenient option for most of these short trips, both via 'carrots' by providing more excellent infrastructure to all corners of the city, and 'sticks' by internalising the costs of driving, like charging for parking at its true cost. Parking is expensive to provide, and takes up huge amounts of prime land in the city. I do not want as a ratepayer to subsidise free or under-charged parking (except for people with mobility impairments who have no choice but to drive). We must stop subsidising the most polluting transport mode available. Driving is the worst mode for air pollution, water pollution, population health in terms of sedentary lifestyles, respiratory illness, mental health, killing people in crashes etc, and should be a completely user-pays activity (and for the record, I'm a driver too).

Thanks for your time. Please do what's right for us all in the long term, particularly in regards to all programmes that will reduce our climate emissions. We've wasted 30 years. We have no more time to waste.

Nga mihi,

Anne

Additional requirements for hearing:

### Feedback

#### 1.2 Rates

chrstchurch already asking all the residents who own a house higher rate than any other city. And they already rasied the rate last year and now 5 percent and gradually more and more next 10 years without any particular reason-

CCC needs to ask every year this same same question and request the agreement of raising the rate - asking for consent / now CCC is trying to be a sneaky by saying it as 10 years plan and it will raise the rate every year which is unfair. 5percent is huge increase - it is sudden, huge and already CHCH is charging so much more to each resident. This is not fair and 5% is way too much.

#### 1.3 Proposed changes to existing rates, and new targeted rates

I understand it was way too much money spending for covid 19, CCC lost heaps of money. But so did all the residents. Heaps of people lost a job and had a financial impact.

I agree 'increasing ratenis necessary but not 5%, less than 5%.

I would agree with 1-2%

#### 1.4 Investing in upgrading and protecting our city's water networks

well, clearly CCC needs to think smart on money spending not money collecting.

running too many swimming pool, and usinf unnecessary budget on unnecessary stuff would be reduced first . Building 3 more pools are unnecessary but it is happening- where on earth getting money from ? And keep asking rate payers so much moneh for these water infrastructure- which is unfair, was CCC being a budget smart? I don't think so .

#### 1.5 Investing in our transport infrastructure

Well, more bikes less car would be great but I live in addington , and NZTA is planning to make 6 lanes on brougham street near my kids primary school which is addington primary, this means less lanes for pedestrians and bikers and way more dangerous.

how on earth this is encouraging people to use more bikes less car?

sure that street is always blocked up in the morning - so increasing lanes from 4 to 6?

Needs rates to be increased for making better CHCH , then walk the talk please

#### 1.6 Rubbish, recycling and organics

rather than changing the system, need a proper education to people- still so many people use yellow bin as red bin - CCC tried to stop that by not collecting the yellow bin if resident didnt recycle properly but not enough education on that , and they stop doing it.

need to keep not collecting the bin if it didn't recycle properly and constantly educate people rather than keep changing infrastructure and spending money. CCC - you need to budget smart, use the source you already got not creating more place to spend money on.

#### 1.7 Our facilities

well, making things better is great but when all the residents and people faced financial hardship - do we need a new TV, New reception desk ? No

i understand art gallery needs some financial help but not upgrading hardware.

#### 1.8 Our heritage, foreshore and parks

I dont have a problem from this area with spending budget .

### Feedback

1.1 Have we got the game plan right?

See submission under 'Proposed changes to existing rates, and new targeted rates'

1.2 Rates

See submission under 'Proposed changes to existing rates, and new targeted rates'

1.3 Proposed changes to existing rates, and new targeted rates

### THE PROPOSAL

I most strongly oppose the adoption of the proposal to extend the Land Drainage Targeted Rate (LDTR)

There are currently 15 'Targeted' rate charges, in addition to the General rates showing on my rates statement which collectively now account for over 20% of the total charge. Christchurch City Council have now decided to create another new one.

The repeated justification for this new charge uses 'fairness' as its main and only argument to defend the proposal, stating that 'the proposed change is a fairer approach that recognises all properties benefit from land drainage and flood protection and control works by improving the accessibility of the whole district, and especially places such as the central business district...'. Given this new basis for charging out costs to its residents, perhaps CCC can now reconsider its decision to selectively charge residents of Banks Peninsula the costs associated with the building of the Akaroa Health Centre since the service this provides is evidently available to all properties in Christchurch if those residents chose to visit Akaroa and find themselves in need of medical attention?

Surely Mr Moher and those other Council members proposing this new charge can appreciate the inequity of their proposal?

'Fairness' cannot be the justification for this proposal as it is very evident that this is a false assumption - the vast majority of affected rural properties receiving no benefit, being independent and incurring no additional cost for the Council. Therefore, unless a more meaningful justification can be provided, the proposal must be withdrawn.

## THE ALTERNATIVE OPTIONS

Unfortunately, it is only too evident from how each of the three alternative options has been dismissed that CCC have already decided to proceed with their proposal, despite asking for feedback.

However, the Council may wish to consider its own 'fairness' argument and how much more relevant this is to Option One – which must be the preferred choice. The counter argument to this option that states that 'those properties benefit from other land throughout the city being drained ....' is self-evidently wrong and inaccurate and to suggest that the 'rules' necessary to determine which properties receive a land drainage service would be 'complex' is simply an excuse and admission that the Council would be highly likely to ensure that the 'rules' they created would be designed to cover as close to 100% of properties as possible.

## THE COSTS

Apart from stating that costs of \$43.6m are to be recovered in 2021/22 nowhere in the extensive narrative is there any mention of the Value Factor that would be applied to the affected properties in each year as the proposal is phased in. It is stated, however, in the dismissing argument in Option Three that to fund the LDTR through the General Rates would result in those properties not currently paying LDTR suffering a 'significant rates increase'.

This infers that if, as proposed, the LDTR is phased in over three years, by the end of this period the same properties would be experiencing a significantly increased rates charge.

How can CCC put forward a proposal for public consultation without providing details of the financial implications for the affected residents? The review deadline should be extended, and more pertinent information provided to enable residents to make informed choices.

## CONCLUSION

**I strongly oppose the proposal put forward by CCC but do support alternative Option One.**

### Feedback

1.4 Investing in upgrading and protecting our city's water networks

I have been monitoring my water usage for the last eight weeks keeping it to a minimum. We use the dishwasher washing machine every 2-3 days. we have low pressure on both hot and cold water for our shower (household of three) and have an automatic sprinkler for our vegetable garden, with mist spray jets; for only 8 minutes daily. We are struggling to keep our water usage to 1000 litres per day at this time of year. In mid summer period that figure would increase. The idea of limiting individual residences to 700 litres is far too low and should be adjusted depending on the section size. This limit may be appropriate for a townhouse with virtually no garden but not for the majority of households in Christchurch. We have an abundance of water despite the bottling plants who only pay a relatively small annual fee. The cost of administration of this proposal to charge for water over a certain limit will negate much of the revenue collected. Is the councils long term plan to spend all the rate payers money to bring our supply infrastructure up to standard and sell it off to some foreign corporation as is happening in Australia, America and the United Kingdom?

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.7 Our facilities

I believe the proposed reduction to The FingerTip Library service from a 7 day service to Monday-Friday will create an inconsistency of service levels to all customers who currently enjoy a high level of remote service 7 days a week.

These proposed changes will create an inequity of service to diverse customer groups including our most vulnerable citizens.

If this proposed service reduction goes ahead customers who phone, email, visit LiveOnline, or connect via the Christchurch City Libraries' social media channels on the weekend will receive no service or at best a reduced level of service. Even though all libraries are open Saturdays and 10 libraries are open Sundays.

The Draft LTP 2021-2031 states:

“Ōtautahi - Christchurch is an inclusive multicultural and multilingual city that honours Te Tiriti o Waitangi – a city where all people belong”.

“We value diversity and treat all groups and culture with respect”

“communities have equitable access to Council services and resources, and their voices are heard and valued” (pp.8-9)

CCC also acknowledges the risk of “Financial/physical/access and other barriers to participation for diverse/vulnerable community members” and suggests the following as a mitigation to this risk: “Ensure equitable access and inclusion in quality opportunities by managing affordability, locality and accessibility”. (Activities and Services Statement of Service Provision, p.20)

The proposal to close FingerTip at the weekend goes against this kaupapa.

For a considerable number of customers FingerTip are a key channel to help them overcome barriers to equity. In particular the FingerTip Library Team are uniquely placed to assist people who may be grappling with:

- The Digital Divide. FingerTip can perform most circulation activities and research for people who do not have access to the library eResources or the internet or who are unable to use them because of their lack of digital skills.
- The Financial Divide. Customers do not need to pay transport/parking/etc to get information or assistance.

- The Accessibility Divide. Customers can contact FingerTip from the warmth and safety of their homes, or from elsewhere in New Zealand and overseas. People with disabilities can get assistance without needing to rely on others for support. Deaf people can use LiveOnline to contact us without having to talk on the phone or in person. Similarly people for whom English is an additional language can get support in writing, which they might find easier than having to deal with New Zealand accents and idioms. And of course, housebound customers are exclusively reliant on FingerTip's service.

FingerTip is the only library that provides service to people who cannot visit the library.

Removing FTL's services at the weekend would exacerbate inequalities rather than working towards our goal of promoting equity. Customers who are able to visit a physical library have access to the full range of services FingerTip currently provide 7 days a week. Those who are not able to visit a physical library are restricted to a weekday service which may or may not be convenient to them.

Given our population is becoming increasingly older and diverse, it appears not only inequitable but also shortsighted to limit access to FingerTip services to weekdays only.

It is also important to understand that The FingerTip Library is a specialised and dedicated team who have skills and knowledge to assist customers and resolve often complex information remotely and at the first point of contact.

FingerTip Library is the first point of contact for the entire Christchurch City Libraries network, but they also a specialised team who are the Libraries' HelpDesk.

They are highly skilled in the use of technology, and have the unique skill of assisting customers in a remote environment. While they answer simple questions ("When is the JP at the library") they are also critical to helping customers access the Libraries' eResources, website, collections and equipment and facilities.

Libraries have moved towards self-service and online accounts and are growing their digital collections. FTL is able to support this by assisting customers to become independent and use the online library from home by guiding them through the steps on their own pcs or devices in their own homes.

By reducing the Libraries Digital Support HelpDesk service to weekdays, customers can't get help on the weekends unless they visit a library. Surely the weekend is when customers have time to explore the incredible digital resources Christchurch City Libraries have invested in. And surely it makes sense to offer telephone/LiveOnline support for these online services.

Please consider keeping The FingerTip Library a 7 day service so they can continue to support customers with a consistent level of service, so customers have a 'HelpDesk' to support our Digital library resources and online options, and to honour an aim of the Draft LTP 2021-31 to "Ensure equitable access and inclusion in quality opportunities" so all Christchurch citizens can enjoy our library services.

Ngā mihi nui

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Jeremy **Last name:** Lynn

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

Im sick of us investing in roads, its carbon intensive and weve been doing it intensively for the last 10 years as a result of the earthquakes. The benefits are short lived (in perception), its heavily targeted to only people who drive on the road on a day to day basis and spending seems to be targetted in more affluent suburbs (i.e. its easy spending to abuse/ lobby for). So no, i did not appreciate seeing a focus on roads in the proposal. Id much rather see public transport reform and cycle lanes higher on the list. More streets that are wider than they currently need to be could be reviewed for their suitability for a dedicated cycle lane.

### 1.2 Rates

Im fine with the rates increase if it means increased infrastucture for the city. However, I think there needs to be an independent review of council spending which includes wages and performance.

### 1.3 Proposed changes to existing rates, and new targeted rates

Im fine with the proposed rate changes. In terms of household water, i think its worth implementing bylaws for new builds that would require the installement of rainwater tanks for garden purposes. Developers wont install them unless its a requirement as they are trying to save money and it goes a long way in reducing the 'surges' in the storm drain system as well as reducing water usage in peak for things like watering the garden. Fitting at teh time of build is much easier than retrofitting.

### 1.4 Investing in upgrading and protecting our city's water networks

Im fine with the proposed plan. Im a little confused as I thought the central government was taking of over teh 3 waters but understand this is potentially just a plan at this stage. IF that were the case, id like to see the rates related to water removed.

### 1.5 Investing in our transport infrastructure

This should be much higher on the list. I doubt this is enough financially and would suggest money be taken out of road upgrades and put in to this as I believe it gets a much better reward (both financially and fo the environment). THE city should be encouraging alternatives to cars more often (more and free motorcycle and scooter parking within the city).

### 1.6 Rubbish, recycling and organics

This seems about right. Would like to see soft plastic recylcing or collection taken back over by the council and advertised

### 1.7 Our facilities

I beleive this is a right balance. I do wonder if we need to review the number of libraries we have. Everyday I see the central library full of people which is great and even South Riccarton and new Brighton library have people in it right up until closing but I wonder if all community libraries are as well utilized.

### 1.8 Our heritage, foreshore and parks

The balance is right. Id like to see these maintained in a more sustainable way. Mono cultural and the 'central park'esque parks are not easy to maintain.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

Disposal of vacant land is fine. Id prefer these are developed by the council in to medium density council flats (As realistically this is whats going to happen when they are sold anyway) but understand not all properties are appropriate for this. ID like to see the community halls held by the council and used for birthdays, council events. Reduce restrictions and their use and allow the community to use them.

PLease do not dispose of any of the carparks within the city without also evaluating the monopoly on car parking that Wilsons have and reducing their share of the car parks as well.

1.12 Any other comments:

Stop lobbying against housing density regulations by the central government. Support more high density housing within the city. Urban sprawl is making infrastructure development a lot harder and needs to be tackled. With the changes to business that COVID has brought it also means that there will be less demand for business propoerty. PLease allow for more properties to be dual use or conversion of business properties to residential properties.

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Vicki **Last name:** Veitch

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

No - I do not believe you have the balance right. The roads are ridiculous and this never seems to change no matter how much money you take from the rate payers - its all words words and no action.

1.2 Rates

I am not liking any increase when Council could effectively bring their own spending into line to reach more efficiencies.

1.3 Proposed changes to existing rates, and new targeted rates

I wish to object to the Long Term Plan proposal to charge ratepayers at Birdlings Flat a land drainage rate.

There is no stormwater infrastructure at Birdlings Flat and owners have to provide and maintain their own infrastructure for stormwater dispersal. Since the bulk of the land drainage expenditure is on stormwater infrastructure and maintenance rather than land drainage, we do not think it fair that Birdlings Flat residents should pay this additional rate for a service they do not receive. We consider Option 1 to be fairer and request that the Christchurch City Council adopt Option 1.

1.4 Investing in upgrading and protecting our city's water networks

The council already ruined our first water source in birdlings flat and had to spend trucking water in for the mistake.

What if this happens again? Is our drinking water now even tested - we are not told.

At Birdlings we live on live pit run and therefore no drainage is required and we have all spent alot of money putting in clearwater systems and tanking our rainwater for use on our gardens.

1.5 Investing in our transport infrastructure

No - I do not agree with what the council has done so far. You have disrupted our once free flowing roads for

cycle ways. Day after Day I see very few cyclists on the sparks road cycle way or any others.

Whilst residents have no parking and cars are now in traffic jams.

#### 1.6 Rubbish, recycling and organics

I would like to see the council collect rubbish instead of putting stars on bins.

Give people better sized red bins so that the waste does not end up in parks and in the streets. You cannot change some people and the majority may be really good at recycling - but the few will always create mess in our world.

We do not have roadside collection - we do have a dump to take our rubbish and recycling too and this is fine for us fitter residents but what about the elderly? Well just like all the other things we as a community also take our elderly's rubbish to the dump.

#### 1.7 Our facilities

I am thankful for our community hall in birdlings flat. This is a delight. 19% is ok.

#### 1.8 Our heritage, foreshore and parks

Yes

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

No this really should be privately funded - we have enough philanthropists in New Zealand to have this done and they can all have their lovely names on it and we can appreciate them for giving back.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

No not necessary at all.

Feed and house our poor. Look at the mental health of our young people. Clamp down on all dairies selling cigarettes and the other banned substances from under their counter. BAN all dairies within a 5km radius of schools from selling cigarettes and canabanoids. This is killing our young and will ruin our future. And actually actively search these places.

#### 1.11 Potential disposal of surplus Council-owned properties

Sell them and use the money for above projects without raising our rates.

#### 1.12 Any other comments:

Actually do something NEW New Zealand - look after our youth, house our people, feed our people.

Get rid of illegal drugs and canabanoids - look after our roads and think less about cyclists - they are still getting killed even with your silly cycle ways - Educate the riders - they take undue risks often. They ride 2-3 abreast on the Akaroa road and this is dangerous when cars need 2 lanes - 1 for each way.

Stop giving yourself pay rises every year - I have not had an increase in 2 years yet I have worked harder than I ever had with more stress.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Judith **Last name:** Roper-Lindsay

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I support the proposal to have a targeted heritage rate so that collection of rates and spending on heritage buildings and activities is clear. The Council's "Our Heritage, Our Taonga" Strategy starts the process of strengthening heritage protection and a specific rating item would build on this.

1.8 Our heritage, foreshore and parks

I would like to see heritage, foreshore, and parks dealt with in separate chapters - they are extremely different topics! Grouping these together for funding discussions belittles the importance of each.

The City's heritage structures were dramatically affected by the earthquakes and by the demolition/rebuild policy/plan that followed. It is important that there is sufficient funding in the next ten years to prevent further loss and decline. I own a Heritage building in the city and have welcomed the support of staff advice on its very costly restoration. The presence of a potentially substantial fund helped enormously. I request that the Heritage Incentive Grant is reinstated to a high level to ensure that protection by the City for the City can continue. This would be in line with Goal 4, Action 4 of the Strategy. I also request that operational funding to the Heritage section be increased in line with others, so that quality staff can be retained and recognised.

1.11 Potential disposal of surplus Council-owned properties

Given the loss of heritage structures over the last 12 years, I think that the City must take a lead in protecting those remaining. This can best be done through retaining ownership of properties and seeking innovative and appropriate funding for their upkeep and use. Engineers and architects have learned much over these 12 years about retaining heritage features while adapting to the 21st century life. I request CCC to retain ownership of Rolleston House and Yaldhurst Hall to ensure ongoing protection.

### Feedback

1.1 Have we got the game plan right?

Our club would oppose such rates to be applied to the land we currently lease for the following key reasons;

1. We are a small incorporated society made up of an older/retired demographic of members. Such a proposed rates demand will ultimately bring increase in annual subscription fees introducing possible hardship to the simple pleasures the members enjoy at their Club.
2. The club grounds do not enjoy, nor require, land drainage in this Christchurch zone. The grounds are subject to extremely dry conditions by nature of its river base and the only risk is the same as that which affects the whole of Christchurch from the Waimakariri River that has flood mitigation controls.
3. The large shingle mining companies who neighbour our property serve by their nature to be that of a swale in such rare conditions known to the Lessor and the Lessee of these properties and is approved with the resource consent, mitigating impact in this zone.
4. The large forest area immediately surrounding our club grounds consumes large volumes of water from the resource.

Thank you for allowing us the opportunity to respond to this proposal.

### Feedback

#### 1.11 Potential disposal of surplus Council-owned properties

This submission is in regard to the proposed selling of land in Diamond Harbour. I hold deep concerns re this being included in the LTP as there would be no possibility for community consultation. This is a large tract of land which if sold to a developer with a high probability of it being carved up into sections, would have a huge impact on this community. There is not the infrastructure in place to cope with potentially 200-300 more homes. There is also the question of protecting Morgan's and Sam's Gullies which many volunteers have spent much time in protecting and enhancing. This land also holds a safe walking track for the school children. What would become of that? Considering the huge impact this would have on this community, it would only be right and just for the community to be consulted and have a say in its future.

### Feedback

1.11 Potential disposal of surplus Council-owned properties

Re: 27 Hunters Rd, Vacant Land, Pt Lot 1 DP14050++, 12F/538, 390,222 sq metres)

There are many environmental issues that should be discussed with the Council, Community Board, and the local community before this land is sold for residential development: the uses of the land, the gullies, public access and reserves (the gullies have not yet been protected by covenants and should become reserves as much work has been done by the community in restoring them- which in turn assists the management of storm water run off, protects our natural environment, provides natural habitat for our native wildlife + creates much needed green corridors for wildlife movement, etc).

There is no requirement on the Council to consult about subdivision of this land but its development will greatly affect our community, the environment, wildlife, and have negative ramifications for climate change unless the community is engaged + consulted, and the climate change strategy is reflected in the development of this area.

I request that the land as described as (27 Hunters Rd, Vacant Land, Pt Lot 1 DP14050++, 12F/538, 390,222 sq metres), be removed from the LTP and it's fast track disposal. Instead I demand that the normal process for disposal of land which would require Community Board and public consultation, should be used + the Climate Change Strategy (although still in it's draft form) is stringently applied throughout this process (please refer to <https://ccc.govt.nz/assets/Documents/Consultation/2021/03-March/STR3951-Draft-Otautahi-Christchurch-Climate-Change-Strategy-WEB.pdf>).

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Robyn **Last name:** Thomson

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

I wish to preface my submission by saying that I had spent considerable time and written more in my first draft but it disappeared.

This subsequent version is therefore brief. It would help enormously if there was an ability to save the work in progress.

I do appreciate the opportunity to give some feedback re proposed Council spending:-

A long term approach is obviously necessary and commendable but cutting current valuable services eg library, art gallery is short sighted. The spend on huge projects such as Red Zone should not come at the expense of these services.

1.4 Investing in upgrading and protecting our city's water networks

I cant comment on the spend amount but it's right to prioritise this essential service.

I look forward to the fluoridation of our drinking water and regard it as long overdue for the dental health of the community.

1.7 Our facilities

I do not support the changes to libraries and Art Gallery levels of service.

Our local library is only open on Saturdays from 10am to 4pm and closed Sundays. Not everyone is can attend during weekday hours. Evening hours at libraries allow those who work and those who wish to visit at a quiet time to access the facility.

Similarly the Art Gallery evening hours on Wednesday and the education classes run for children provide valuable community service.

Keep our libraries and Art Gallery services unchanged. They are truly valued and essential for the education,

health and wellbeing of the community.

If the Riccarton bus lounges were researched and found feasible,what has changed? Ditching them would seem to indicate poor planning and desperation to save money. It's hard to believe the case for them has disappeared in such a short time.

1.8 Our heritage, foreshore and parks

Save Hagley Park from any further predation by the likes of sports clubs. This encroachment by a cricket club has not only poached land from our park but contributed to traffic problems and curtailed access to the hospital.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments  
This is a worthwhile project and community asset that is well underway and needs to be completed.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments  
Not at this stage. There is insufficient information.  
  
Look to what happened with the Christchurch Cathedral and the Town Hall. The only ones who failed to anticipate the enormous budget blowouts on those restoration projects were the vociferous heritage lobby and their gulled supporters. And this after "due diligence" that the budget was achievable and realistic.

1.11 Potential disposal of surplus Council-owned properties

Seems reasonable

1.12 Any other comments:

I feel that there needs to be some way of tempering the balance of feedback.  
  
You will inevitably receive a greater amount of comment from enthusiasts and lobby groups eg heritage, cycling, business who have their own barrows to push and are organised and vociferous. There remain a lot of quieter but no less firmly held opinions that risk being overlooked in the clamour.  
  
How do you ensure that appropriate weight is given to all submissions?

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**First name:** Vicky **Last name:** Pollard

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.11 Potential disposal of surplus Council-owned properties

I am a resident of Diamond Harbour and am making this submission requesting that the land as described as 27 Hunters Rd (Record of Title CB12F/538, 38.96ha) and 42 Whero Avenue (Record of Title CB452/50, 1.18ha) please be removed from the LTP and fast track disposal of Council Land.

It is vital to have community input into how we see Diamond Harbour growing, and how we see the land being both protected and utilised in a way that is sensitive to the community and surroundings.

Main Points to support my submission include:

1. The fact that the current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation).

2. Thorough community consultation is vitally important and needs to be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.

3. Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not be made by Council staff alone.

4. The following matters cannot be adequately considered through the current LTP submission process and should proceed through normal disposal processes involving Community Board and community input.

- Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. The gully by the school that is also unsuitable for housing should also be protected. Covenants for these areas should be completed,

and a timeline developed for these areas to become reserves established.

- The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'.
- Our children have and still do use the tracks daily which have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for. This is a safe way for children to avoid the roads in order to get to school safely.
- If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.
- If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner and is too narrow for increased traffic.
- The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?
- There needs to be different options for the land use, and not to be just sold to a housing developer.

Thank you for your time and consideration, please support our community!

Vicky Pollard

### Feedback

1.1 Have we got the game plan right?

Your priority should be to maintain current services and improve on them. You need to budget for maintenance of current services and their expansion rather than trying to save money by cutting services.

Only once you have maintained what we have should you think about spending on new projects.

1.2 Rates

I am happy to pay my share of rates as long as you spend wisely and don't blow the budget on mega projects such as the stadium, red zone remediation and pointless exercises such as painting all the buses a new colour, before maintaining what we have at present.

1.3 Proposed changes to existing rates, and new targeted rates

Residents don't have enough information to be able to comment usefully.

1.4 Investing in upgrading and protecting our city's water networks

Seems reasonable , but get on with the fluoridation of the drinking water supply. This will improve the dental health of babies and children and save money in the long run in medical / dental costs.

1.5 Investing in our transport infrastructure

Bus lounges.

You have just built the bus lounges, now you want to shut them. Did you not have any evidence for their need when they were built. There are barely any facilities to make bus travel user friendly with most bus stops are exposed to the weather .

This raises the whole question around the quality of council planning, who does it , what evidence is used, and once a decision is made do you commit to maintaining the outcome, with appropriate ongoing funding.

You need to build infrastructure to support bus travel otherwise you will never make any progress in getting us to change from cars.

You state that a reason for closing the bus lounges is that you have not planned for such facilities in any other parts of Christchurch in the future, this is a very lame excuse and could be used to never do anything anywhere. Maybe you should plan for more lounges or more comfortable bus shelters, bus use is not exactly booming at present. If you improved the services, of which a bus lounge is one, you might find patronage improves. You need to work on the user experience.

Please look at how you spend our money, you appear happy to change the colour of all the buses on a whim that adds nothing to the service and then you want to cut services that are actually used and of benefit.

You have budgeted eye watering amounts to be spent on the red zone, perhaps you should consider a reduction in expenditure there and put it towards improving bus and library services. The bulk of Christchurch residents don't go anywhere near the red zone and possibly won't despite your expenditure.

A cynic might say- If closing bus lounges is good for the system, close the central bus exchange and revert to open air roadside stops. That would save even more money and make it worth your while.

---

#### 1.6 Rubbish, recycling and organics

Sounds promising but can we trust your costings? You don't say exactly what you are planning so is very hard to comment.

---

#### 1.7 Our facilities

Re Library Hours changes.

I do not agree with you reducing the hours of opening to 6pm.

Many of us work during the day and only get an opportunity to visit the library in the evening. Closing at 8pm allows for these users.

Many of us avoid busy times if possible and choose to go when the library is quieter, hence the need for extended hours of opening so that it is not busy all the time.

A library is a community resource that is not used by us all, all of the time, but at least if it is open we can use it.

For those in the community with reduced personal resources the library is a lifeline. The use of the internet etc at the library allows those without computers to access the increasingly required online access only for many things- WINZ, City council information, ACC etc.

You are proposing to cut service desks because people are using online access. Some of these people use the library internet access and their access will be reduced if you close libraries in the evening.

The mobile library is another community asset that should be maintained, for goodness sake fix the bus and keep it going. The more you cut things the less they will be available. The people that use the mobile library do so because they physically can't get to a main library building.

Christchurch Art gallery.

It is not for overseas visitors primarily. It is a Christchurch asset for Christchurch residents. Rather than reducing the wednesday night openings why not try advertising and encouraging locals to visit in the evenings, perhaps several evenings each week. Wednesday only may not suit a lot of people. Perhaps show films / documentaries / movies / something in the large theatre every evening and thereby encourage locals to visit. Reducing the programmes for the public and school groups is the ideal way to completely lose the interest of locals. If you don't promote the Art gallery to children and schools who do you think will be interested in

patronising the gallery and art in the future.

You have spent the money to build it , it is a waste of it is closed.

1.8 Our heritage, foreshore and parks

Otakaro Avon River Corridor.

Maintain services and improve services to Residents before you commit to spending such large amounts of money on the red zone area. Once everything else is running properly then budget for the red zone rehabilitation.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments

The repair of the Arts Centre is nearly done, get it finished and usable

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No  
Comments

Only do this when the funds are available and you don't have to cut existing services to raise the money. I understand the building is not damaged and probably useable now. Why not use it until you have the funding

1.11 Potential disposal of surplus Council-owned properties

If you don't need them by all means sell them to someone who can use them eg the Sockburn service centre building is now a eyesore.

Surely you need to get on and sell it and then you may have funds to maintain libraries and existing swimming pools etc without cutting services.

1.12 Any other comments:

CAPITAL SPENDING

Again eye watering amounts to be spent.  
Reconsider the amounts budgeted and reduce a little all round so that you can maintain existing services such as Library hours, Art gallery hours and programmes before building new mega projects.  
Maintain the Wharenui Swimming pool and don't close it on the basis that you are opening a huge new multiuser area in the centre of town. Maintaining smaller community facilities maintains communities and their groups and clubs and activities which will be destroyed if they are forced close or to try and migrate to a more expensive distant site.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

I'd like to switch the targeted cathedral rates to the arts centre - the arts centre is a much more inclusive community space for a wide range of people than an Anglican cathedral.

1.5 Investing in our transport infrastructure

Yes more cycleways, footpaths and shared areas please - cars are last century and the balance needs to shift away from cars being prioritised in every part of our city and our lives. Cycling and walking has the benefit of addressing traffic congestion as the city grows, climate change, and building social connections.

### Feedback

#### 1.11 Potential disposal of surplus Council-owned properties

Diamond Harbour is a small, lovely, connected community with a strong interest in native planting and regeneration. This is evidenced by decades of planting in gullies to eliminate gorse and renew natives.

There is a proposal numbered 1.11 Potential disposal of surplus Council-owned properties 27 Hunters Road and 42 Whero Avenue. This seeks to fast track the sale of this land without adequate community consultation. I am requesting that the Council follow good process and engage in full community consultation on the future of this land. There is a Community Board who should also be engaged in a proper consultative process.

The roads leading to Diamond Harbour are in a terrible state. They have been inadequately repaired following the earthquakes and continue to be potholed and unpleasant to drive on. The sale of two large blocks of land for residential housing will add strain to the already compromised roads, potentially damaging them further.

Ngatea Road is a small, narrow road which is essentially one laned due to its size. Increased traffic would be dangerous and unsafe for children who walk this road as part of the Diamond Harbour school track. This track extends to Whero Ave and ends at Hunters Road. I would like to ensure that the track is protected, as are the children walking it.

Diamond Harbour School and Early Learning Centre are on Hunters Road. A full and proper consultative process will ensure that the safety and needs of the school and its community are met (or at least considered) when disposing of this land.

The Council land includes planted gullies, a school walking track and various other walking tracks. These have been looked after by a community of dedicated volunteers over decades and their protection must be ensured.

### Feedback

1.1 Have we got the game plan right?

27 Hunter and 42 Whero are worthy of community consultation.

The fast-track disposal here should be rejected for local input on what community wants to see.

reconsider boundaries, school development, walking tracks, infrastructure and other local interests - space for play and reflection of stunning 3 dimensional landscape

Very little open space on less-steep land exists in the community. This disposal proposal would starve diamond harbour of opportunity to have such open shared space free of traffic concerns and confinement of tall surrounding trees.

1.4 Investing in upgrading and protecting our city's water networks  
I want the chlorine removed. Move on with that please

1.5 Investing in our transport infrastructure  
more walking extensions around the head to head trail. how will this actually connect given current property ownership? tops travel around the harbour is not a public facility. People ought to have an easement along significant peninsular ridgelines including public access to Adderly head.

1.7 Our facilities  
standing computers at libraries ought to be standard. replace sitting with standing thanks

1.8 Our heritage, foreshore and parks  
I would like to see more evidence of uniquely canterbury heritage art and activity being supported/facilitated

1.11 Potential disposal of surplus Council-owned properties  
I'm ok with retiring disused buildings where no interest is there to support future use.

### Feedback

#### 1.1 Have we got the game plan right?

No the balance is not right. While focusing “on roads and transport infrastructure and in protecting and upgrading our water networks” is important the underlying issues or concurrent issues are not being addressed. Roothing and transport in the Inner Harbour area from Christchurch City need urgent attention. With an increasing full time population to in the Greater Diamond Harbour area (Teddington, Charteris Bay, Church Bay, Diamond Harbour Village area, and Purau) the current road conditions are appalling with the potential of causing major accidents or death. Recent remediation work on the road is of poor quality and in the short time since being completed has already deteriorated to a condition similar to or worse than to prior the work being done. In addition, there appears to be little in the plan around mitigation of climate change effects on the road especially around the areas of Charteris Bay Road at the Teddington Flats and around Charteris Bay area on Marine Drive from the area where Orton Bradley Park is situated through to the boat ramp at Charteris Bay itself.

Further to this public transport links need to be substantially improved. The timetable to the Diamond Harbour Ferry needs to be improved to allow more locals to use it for work or other day to day activities. To ensure that any improvements in the Ferry timetable are effective bus links need to be also improved to allow better linkages of the services. In addition to this parking for private cars at both ends of the Diamond Ferry route need major improvement and investment especially for the disabled, elderly and young families. While the Christchurch City Council has committed to improvements to the current wharf structure for these to be used to their potential maximum more needs to be done about the above highlighted problems.

#### 1.5 Investing in our transport infrastructure

The transport infrastructure in the Lyttelton Harbour Basin is poor and needs major upgrades. Roothing is at suboptimal state with many of the roads being constantly repaired or in such a state that they over time damage individual ratepayers vehicles reducing their efficiency though for example; tyre alignment being constantly out resulting in increase fuel usage. Without major investment into the roading itself and underlying concurrent issues of potential road damage from sea level changes/storm damage in low lying areas private cars and other transport usage will continue to contribute to Christchurch City carbon being a major carbon contributor.

In addition, with a fast-growing population in the Greater Diamond Harbour area, Council needs to make major investment in public transport for the area. Diamond Harbour Ferry timetable needs to be improved with more frequent services provided with infrastructure improvements to the parking at both ends of the route. Further to this, connections to public transport at the Lyttelton Harbour end of the Ferry route needs major improvements. To help reduce private vehicle use and reduce carbon emissions in the Greater Diamond Harbour area, a shuttle or similar service to the ferry allowing local residents to leave their car at home would be advantageous.

#### 1.6 Rubbish, recycling and organics

No the Christchurch City Council is missing out on huge resource to increase your organic recycling. Most residents of the Greater Diamond Harbour area have a small green bin for organic waste. If large green bins where and option without increase in charge local residents would be able to put more green waste out – currently any extra is either stockpiled or sent to the Transfer station often mixed with non-organic matter that needs to be dumped.

In addition, due to the distance from Diamond Harbour to the closets Transfer Station when local residents do take unwanted goods/waste to a Transfer Station it is a mix of organic, recyclable and 'rubbish'. Due to the mixture of rubbish this often gets put into the area for landfill rather than separated into organic and recyclable products. If there was a closer transfer station even with reduced hours, it would increase the opportunities for locals to optimise their waste management without having to travel long distances to achieve this.

#### 1.11 Potential disposal of surplus Council-owned properties

For the Greater Diamond Harbour Area the potential disposal of surplus Council-owned properties encompasses LOT 9 DP 304811 – a small commercial property at 2H Waipapa Avenue in the centre of Diamond Harbour Village and LOT 1 DP 9607++ a large area of land that is currently used for grazing buried in the complexity of the 10 year plan is not acceptable.

The area is bordered by Hunters Road, Bay View Road, across the top end of Whero Ave and bordering on the back of residential property on Te Papau Crescent (approximately). It would boarder or include local gullies (e.g., Sam's Gully) that local residences have been working on to restore native plantings. Any development of the Hunters Road site into residential housing has a high potential to adversely impact these areas with run off silt and water from developments. In addition, with a large development of residential properties the already strained local infrastructure would be put under even more burden. For example, the transport and roading system which are already adversely effected would not cope with further large increase in population. Further to this the drainage and water system would also be impacted by the population increase.

Recreational resources would also be impacted adversely such as access to local walking tracks and impact on the local foreshore which currently has limited public access/infrastructure. Further to this the development of this area would be reduced/limited development of the local educational infrastructure.

If this land is to be sold a full consultation process with the community is an imperative rather than the land sale being incorporated in the 10-year Christchurch City Council plan.

### Feedback

1.1 Have we got the game plan right?

Ngā mihi nui. Thank you all for your work. I have been caring for a family member and have been unable to attend meetings. Due to this I will make brief comments.

Protection of nature is the most important thing we can do. Transitioning may be messy. This means things may not look as beautiful as we let go of "an English town in Aotearoa" to a low carbon city preparing for drought, heat waves, new kinds of housing, 15 minute communities.

I totally agree with Ngai Tahu and Papatipu Rūnanga being consulted.

Moving a broken city forward was always going to be hard but I do feel these are extraordinary times. Kia kaha

While we transition as a city please look at trialing different ways of making change - costs do seem to blow out and concrete is bad for emissions.

I would love to see progress on the residential red zone. Especially extensive planting.

Low carbon and degrowth need to be values for now into the future. So I do like the idea of a water park - surely kids can have fun. International tourist attractions this should not be a priority. If in 60 years from now we discover climate has stabilized and we have zero carbon air or sea travel then that may be the time to consider international tourists.

Education around our climate crisis is important. I have attended a coastal meeting and acknowledge Council is working hard. Libraries are amazing.

The mainstream media mentions climate but there do seem to many people who become defensive and I worry this will only become worse if we don't focus to meet the needs of everyone. I think libraries could/should be our community hubs. If residents meetings, walking groups, craft groups, could meet in libraries it would be good. Parent and baby groups are excellent. The more schools can use libraries the better. Keeping people connected and engaged is the key to communication/ ownership/harmony in my mind.

Transport - walk, cycle and scooter. We are heading towards the baby boomer bubble. Rail and buses that can accommodate mobility scooters, people with walking aids, a family with shopping or boggie boards. If we are not

going by car we need a variety of choices.

1.4 Investing in upgrading and protecting our city’s water networks

water = life.

all aspects of our water cycle must be protected.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Comments  
unsure about this. seems less important than water and food security to me

1.11 Potential disposal of surplus Council-owned properties

if we sell these we could buy other property that is useful for today and future. having had property has served CCC well in the past  
- yes?

### Feedback

1.1 Have we got the game plan right?

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

## Feedback

1.1 Have we got the game plan right?

Generally yes. However I would like to see an increase in the budget for community groups.

1.2 Rates

Yes, this acceptable given the challenges with regards failing infrastructure and climate change.

1.3 Proposed changes to existing rates, and new targeted rates

I don't have a comment on most of these but I do agree we need an excess water targeting rate for households who use over 700 litres/day. Perhaps you could make the transition easier by providing large water butts/containers and instructions how people can save the water from their roofs for use in watering their gardens.

1.4 Investing in upgrading and protecting our city's water networks

Yes, this the budget is fine. Please prioritise the reuse of stormwater, into water gardens, off roofs etc.

1.5 Investing in our transport infrastructure

Yes, the budget is fine. Please prioritise low carbon infrastructures options, i.e. everything but private use fossil fuel cars.

1.6 Rubbish, recycling and organics

Yes, the budget is fine. Please prioritise the phasing out of single use plastic and landfill waste items.

1.7 Our facilities

Please increase this percentage, and invest in more community facilities, perhaps funded by an extra percentage rate increase.

1.8 Our heritage, foreshore and parks

Yes, the budget is fine.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

## Feedback

1.1 Have we got the game plan right?

We need more of a focus on The Arts and dedication to delivering the Toi Ōtautahi plan. For this to happen, it requires funding and attention.

One of the wellbeing goals of the CCC is to have active citizens and connected communities; this is what the Arts create and encourage. The Arts play a central role in creating vibrant cities and with the proposed money saving efforts, you're pulling the rug out from under them.

1.2 Rates

I support the rising of rates.

1.3 Proposed changes to existing rates, and new targeted rates

I propose charging absent landlords with long standing vacant buildings and empty sites higher rates to encourage use of their land by communities. Sydenham is an example of absent landlords and viable spaces going to waste, it is too easy for them to do nothing and leave them as a depressing eyesore. It seems that many vacant buildings (new builds as well as established) are being held empty because landlords cannot get tenants who can afford the set rent; an encouragement to fill the spaces is key.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

We have a huge lack of affordable artist studio spaces in Chch, instead of getting rid of the YHA building, I strongly suggest converting it into a building for studio spaces for contemporary artists.

Currently the only spaces in the CBD for rent are huge commercial spaces, which stay empty because no one can afford them. We need smaller, more affordable spaces to bring back individuals, small businesses and artists. The YHA could become a space where we have artist residencies, exhibitions, workshops, talks and more.

One of the 5 focus areas for the CCC is building up momentum for a vibrant CBD. Having affordable studios for artists will bring them into the CBD and contribute greatly to the vibrancy of the city.

1.12 Any other comments:

- The proposal to reduce the strengthening communities fund is a terrible idea. In recognition of the value of community, the fund should be RAISED, not diminished. If you want active citizens and connected communities as stated in your city strategy, you need to invest in them, not cut funding to them.

- I strongly disagree with the proposals to reduce services at Chch Art Gallery, specifically in the education area. In order to bring more people into the gallery, you need to educate and inspire youth, cutting funding to this area is hobbling the development of future audiences.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

While I understand that investment in roads and transport is important, there needs to be a culture shift in the city towards using public transport, cycling and low carbon emission options. It's great to see you investing in our waterways! So critical. Thank you.

As I am passionate about the arts, the main things that concern me in the LTP are arts related:

- I would like to see the investment in the Arts Centre go ahead. This will provide a hub and a heart for the city. It's already going well, and to see this complete would be a real asset for the whole city.

- I am disappointed that the education programmes at the Christchurch City Art Gallery are proposed to be downscaled. There is already a tiny education team who do an amazing job reaching out to children, and this is one of the most important aspects of the gallery that has long term impacts.

1.2 Rates

This seems realistic and fair.

1.3 Proposed changes to existing rates, and new targeted rates

Fine, this will encourage people to think about their water usage. I'm not sure that letting everyone decide about heritage, when a lot of people don't know that they care about it?!, is a good idea. We have already lost so much, let's look after what's left.

1.4 Investing in upgrading and protecting our city's water networks

Seeing what's happening in Wellington, let's invest and do it right.

1.5 Investing in our transport infrastructure

People need to be encouraged to get out of their cars. I don't want to see new roads built, but other transport options to be given priority. I cycle to work everyday and it's great.

1.6 Rubbish, recycling and organics

I love that the council has an effective recycling and organics programme, so glad you are expanding and improving this.

1.7 Our facilities

Some cost cutting is obviously necessary, but let these organisations choose where to cut their levels of service.

For the Art Gallery, there are lower visitor numbers due to less tourists, so cutting the public programmes and education doesn't make sense since they need to be focussed more on encouraging locals to visit and giving back to the community. Children in particular need the opportunity to learn and be creative in these uncertain times, and the gallery does an amazing job of this. Public programmes provide a chance for all people of Christchurch to come and access the collection and other exhibitions.

Changes to the opening hours of the gallery to have one late night a month is fine, but this should be controlled by the gallery who know best what can boost numbers and accessibility.

1.8 Our heritage, foreshore and parks  
Sounds good.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora  
Yes  
Comments  
This is a small investment for such a great asset for the city.

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes  
Comments

1.11 Potential disposal of surplus Council-owned properties  
It's fine to sell surplus properties... so long as they go to a good new owner if they are heritage buildings.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

We are very much opposed to the proposed changes of the land drainage targeted rate. We support Option 1: Set the land drainage rate on properties receiving the land drainage service. The majority of rural properties are already spending a substantial amount of money and time on drainage (and in some cases flood prevention) on their property and it would be unfair to charge these properties for services they don't receive.

## Feedback

1.1 Have we got the game plan right?

increase investment in support for community organisations through the Strengthening Communities fund over time rather than decrease. In this way supporting community initiatives and activity in the arts, culture, heritage and recreation.

1.2 Rates

just fine.

1.3 Proposed changes to existing rates, and new targeted rates

Absolutely support a targeted rate for the Arts Centre.

1.4 Investing in upgrading and protecting our city's water networks

Necessary investment.

1.5 Investing in our transport infrastructure

Support cycleways, enhanced electric car and bike charging network.

1.6 Rubbish, recycling and organics

Great-Bromley community will no doubt enjoy this.

1.7 Our facilities

Would hate to see the Art Gallery suffer unduly. Reconsideration of where investment and services are delivered for sure-but I would hate to see a redirection that couldn't be reversed once borders reopen. I would also like to ensure our city becomes more arts and cultural literate.

1.8 Our heritage, foreshore and parks

Great-important assets for our community. Ensure wahitapu included in this-not just european tangible heritage.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

## Comments

Ensure the gallery is used according to the original plans.

## 1.11 Potential disposal of surplus Council-owned properties

The YHA should become a focus for the arts-artists studios etc. Retain young people in the city and create a real vibrancy at this end of the city. Council should support (fund) this-it could underpin your/our investment in the creative sector which in turn supports innovative and dynamic growth of the city.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Dave **Last name:** Bastin

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

This submission relates to the Requirement to re-evaluate the Air Noise Contours surrounding Christchurch International Airport (CIA) every ten years.

It was required to have been completed by 2017. This has not been done.

#### Remedies Sought

That an immediate re-evaluation of the Airport Noise Contours be commenced. That all restrictions on development be removed up to an including the 55 dn contour after contour review.

That a process be developed whereby the actual data variable numbers can be transparently and independently arrived at. A process that reflects CIAL business continuity concerns and neighbouring land owners land use rights to and including 55dbn and aspirations on equal footing to others such as CIAL , Clearwater, Canterbury university etc.

Such a process will require independent leadership. That the issue of the applicability of a 50 dBA and 55DBA Ldn air noise contour be raised in a manner that brings it on scope for Environment Court scrutiny.

That the dilemma raised by having an activity avoidance rule set at a 50 dBA Ldn Air noise contour level when the background noise experienced on that land under that contour already exceeds 50 dBA be investigated and resolved. It should be obvious that modern noise mitigation design methods can very easily resolve any alleged adverse noise impacts at 50dBA and at the 55 dBA level and higher. If the assertion is that there needs to be amenity value/risk noise mitigation for outdoor activities on land under the 50 dBA Ldn Air noise contour then could someone articulate what that risk is and how it can be mitigated **when the background noise** already exceeds 50 dBA. Also relate to traffic noise in the city which on arterials, inner city and moderate carriage suburban roads is considerably higher constantly than the land surrounding the airport. It seems we are over regulated with stupidity.

It may be a great starting point to realize that Marshall Day (CIAL) and (CCC's) then preferred acoustical expert when outline consent processes were approved for the new Hotel at the airport indicated that 50 dBA was an acceptable noise level for the noise inside the bedrooms of that facility. Yes. Inside the bedrooms. Where is the fairness and consistency?

The only risk is in the minds of CIAL executives terrified of a **curfew on their 24 hour unimpeded airside operations**. CCC, the statutory body charged with noise pollution enforcement has stood by for decades enabling the loudest and most sustained noise pollution at night **by a tenant being another large corporation (Air NZ)** and in the early hours of many mornings through aircraft on wing engine testing is really giving the **one finger salute** to the backbone of the city, the rate payers. No profit driven organization has the right to dictate to restrict the rights of others. Some landowners have been in the area for decades and slowly had their rights eroded by CCC and CIAL who have the financial clout to swamp the small man. Unfortunately CIAL would be insolvent if not for the property holdings many developed ignoring their own special zoning. More income has been lost (by rates) with the CCC restricting west land development than would ever be recovered from CIAL.

#### LYTTELTON NAVAL POINT REDEVELOPMENT.

I agree with the plan put forward for the NAVAL POINT redevelopment but due the council owned Christchurch NZ agreeing to

Sail GP the development should be fast tracked to allow the sail GP to be successful and ultimately allow it to be part of the Sail GP 10 year cycle allowing numerous types of these events at Lyttelton in the future.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

We are very much opposed to the proposed changes of the land drainage targeted rate. We support Option 1: Set the land drainage rate on properties receiving a land drainage service. The majority of rural properties are already spending a substantial amount of money and time on drainage (and in some cases flood protection) on their properties and it would be unfair that they would also be charged for services they won't receive.

## Feedback

1.1 Have we got the game plan right?

make investments that support opportunities for young people-across all ages and abilities. Make our city more interesting. Support the arts, parks, sports fields etc.

1.3 Proposed changes to existing rates, and new targeted rates

okay that we support development of facilities which are for all of us like the Arts Centre.

1.4 Investing in upgrading and protecting our city's water networks

Good.

1.5 Investing in our transport infrastructure

Think long term.

1.7 Our facilities

Don't reduce services in a way that might undermine future planning and which make our city less interesting.

1.8 Our heritage, foreshore and parks

Great.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

Make the YHA a hub of young arts and cultural activities. Spaces like this might have kept my sister here rather than leaving to Wellington (which has Toi Poneke).

What about a Maori cultural centre? Can any of these spaces be kept for that? Great for young Maori in the city.

### Feedback

1.1 Have we got the game plan right?

In reference to Infrastructure spending in Diamond Harbour and the potential land dispersal of land between Hunters Road and Whero Avenue.

There is not clarity in the existing consultation what the impacts (both positive and negative) will be on community and the environment. There is not enough information in the current proposal to be able to make an informed submission.

The proposal doesn't provide any clarity in regard to the following questions.

1.) How does the sale of this land and associated potential damage to existing planted areas and the immediate local environment fit with the Whaka Ora Healthy Harbour Plan and how are Ngāti Wheke, as key partners in the Whaka Ora plan being engaged on this decision? The CCC is a partner in the Whaka Ora Healthy Harbour plan and should be making decisions which will work towards the key outcomes of this plan.

2.) How well is the cost of the new infrastructure required due to a new subdivision understood? How large or small would the subdivision need to be in order to be feasible from an economic and environmental perspective?

3.) Is there more information residents can be informed on to help in their understanding of the implications of a new subdivision and an increase in the resident population , 100, 200 houses??

- how would the 3 waters be improved in Diamond Harbour so that existing issues are resolved and there is future proofing for an increasing population?

- what impact will a new subdivision have on the money allocated in the long term plan for roading and traffic safety between Governors Bay and Diamond Harbour? Will this be enough? What is being factored in to account for population growth in Diamond Harbour.

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Yes, it seems fair that the council is funding basic infrastructure but I would also like to see a high emphasis on community and arts funding. I am also keen to see a commitment to carbon neutral transit.

1.2 Rates

Rates should increase if necessary.

1.3 Proposed changes to existing rates, and new targeted rates

Targeted rates are good so long as they are fair.

1.4 Investing in upgrading and protecting our city's water networks

This work is essential and needs to be done.

1.5 Investing in our transport infrastructure

I'd like to see more emphasis on carbon neutral options and public transport, ideally public transport should also have disability access in mind when designed.

1.6 Rubbish, recycling and organics

Love the green bins!

1.7 Our facilities

Disappointed to see that the Art Gallery will have less funding to support public programmes and education. I believe youth access to the arts is incredibly important for well being and contributes to making our community a better place to live. The proposed changes would not make significant savings, especially with regards to the already efficient education offering.

It seems short-sighted to be making changes to the LTP when the long term COVID impacts on visitor numbers are not fully known, and the borders will reopen soon.

1.8 Our heritage, foreshore and parks

All good.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

Depends on what they are - fine as long as there is proper consultation.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.2 Rates

Given the proposed breakdown of rates spending and increase, I am supportive of the increase.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

I am strongly in favour of this: the Arts Centre site represents 36% of the remaining built heritage fabric of our city and is integral to see grow and thrive. Significant, intensive and enduring work has been completed by the Trust itself, in order to get to the stage that it is in today (in regards to the restoration), however, Council support in the proposed form will be of huge benefit in completing the restoration of the site.

By supporting the Arts Centre with this grant, the wider city of Ōtautahi has a chance to tangibly support an iconic heritage site in the post-quake environment.

As a ratepayer, business owner and mother, I want to see this unique collection of buildings not only restored, but also set up to embody the creative hub of the city that we know that it can be. The Arts Centre Trust has made significant inroads in this regard, and I am strong supportive of the capital grant proposed, in order to aid in these efforts.

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

## Feedback

### 1.1 Have we got the game plan right?

I think a budget that places such a heavy emphasis up front on traditional infrastructure areas is very limited, particularly when we consider the approach that has been taken at a national level of looking to produce that are increasingly focused on social and cultural wellbeing. Essentially a more holistic budget in terms of income and expenditure would provide a greater sense of what the city really wants to achieve for its community and I believe would get greater buy-in from its ratepayers.

### 1.2 Rates

To be honest I think that greater transparency around the rates increases would be setting the 2021/22 cycle at 5% and carrying this rate forward for at the least next 5 years. What councils have tended to do across NZ for a number of years is promise low increases until a crunch point and then ratepayers then are hit by significant rates hikes - I would suggest trying to be more open about what is on the cards now and in the coming few years would at least make ratepayers believe in this process more now (also money is relatively cheap at the moment, so increasing spending and borrowing now makes economic sense).

### 1.3 Proposed changes to existing rates, and new targeted rates

I accept that there should be targeted rates across the board, but I think there needs to be transparency in how this is administered and shows on the accounts in the medium the long term.

### 1.4 Investing in upgrading and protecting our city's water networks

I think so, but I have not looked at the data sufficiently.

### 1.5 Investing in our transport infrastructure

I think beyond this the council should be investigating further how its own fleet across the spectrum of light, medium and heavy vehicles are contributing to the long-term footprint of the city needs further investigation.

### 1.6 Rubbish, recycling and organics

Yes, if not more investment could be required.

### 1.7 Our facilities

Having looked at this in more detail, I would suggest that the cutting back of services particularly in the educational component of the Christchurch Art Gallery will have a significant impact on this community and I am not supportive of the reduction of this service. As someone who sees a range of benefits from this particular service as a parent of two children, I am deeply concerned about what this will do not only in terms of my children's education, but also what it means in terms of attracting other professionals to this city over the coming years. Also, as an arts leader in this city, who sees/recognizes the long term benefits in terms of the wellbeing of the citizens and elevating a broad of people across this community I see this as an investment that will generate massive returns in the future. This is a service that gives a lot for little input and when it is gone or cut back will show up in what we are doing the future - so for very little we put in the removal of these kind of services will do damage to this next generation.

1.8 Our heritage, foreshore and parks

We have lost a lot in a relatively short term period, so what we put in now will provide significant returns and mark us out as a city to visit and live in the future.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes  
Comments  
I support this investment only if it is about putting money into the arts in direct and meaningful ways to events, artists and creative endeavors rather than finishing off buildings or simply supporting the infrastructure of this organization. I was disappointed to hear that an investment now would keep the doors open for the next 3 to 5 years in the coming years, which seemed short sighted and lacking vision.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes  
Comments  
I am supportive of this only if the Museum seeks to work on projects directly with people operating in the visual arts community on significant projects in the coming years - recognizing in principle the original deed of the RMAG.

1.11 Potential disposal of surplus Council-owned properties

As long as this transparent and is not simply to property developers, but recognizes the potential of these assets more than just the bottom line of the proposals in what they will give back to this community.

# Museums and happiness:

The value of participating  
in museums and the arts

Daniel Fujiwara

April 2013

# The Author

**Daniel Fujiwara** is an economist at the London School of Economics and Political Science. His research focuses on policy evaluation methods and techniques for valuing non-market goods. He has recently published guidelines on valuation for the UK Government, including an update to the HM Treasury Green Book manual. Daniel has researched and estimated the value of a wide range of non-market goods and services, including employment, health, volunteering and reduction in crime.

Daniel was previously head of the cost–benefit analysis division at the Department for Work and Pensions and senior economist at the Cabinet Office. He is currently scientific advisor to the SROI Network and works with a number of OECD governments on policy evaluation methodology.

## Acknowledgements

This analysis was conducted using Taking Part data collected by BMRB Social Research and supplied under licence by the Economic and Social Data Service (ESDS). Responsibility for the analysis and interpretation of these data is solely that of the author.

I am grateful to Mandy Barnett, Tony Butler and participants at the Happy Museum Symposium (February 2013) for their input and useful comments on the research.

Any opinions, statements or claims made in this paper are the author's own.

## Foreword

Measuring what matters is one of the six Principles of the Happy Museum Project. We suggest that counting visitor numbers tells us nothing about the quality of their experience or our contribution to their wellbeing.

Museums are adept at storytelling, evaluation reports which speak of transformational experiences for individuals as a result of museum activity are legion. Qualitative research has been used by museums as effective advocacy, often influencing the hearts and minds of decision makers at local level. However, we think that quantitative evidence that robustly uncovers cause and effect is more likely to influence policy makers.

So with funding support from Arts Council England we asked Daniel Fujiwara from the London School of Economics to measure and value people's happiness as a result of visiting or participating in museum activity. This paper is one of a handful of studies that have applied robust quantitative methods on large national datasets to give us a better understanding of the impact of culture on people's lives.

By finding that the individual wellbeing value of museums is over £3,000 a year, the report makes a strong case for investing in museums. It also identifies what makes people more likely to visit museums, giving some direction into where that investment might be best placed. It sits alongside our qualitative research which digs into *how* museums make a difference.

We hope these striking results will encourage museums to think more about their impact on wellbeing just as they try to do for the local economy. The aim is to arm museums with compelling statistics to show how a healthy culture must be at the heart of a healthy society.

A handwritten signature in black ink, appearing to read 'Tony Butler', with a long horizontal flourish extending to the right.

**Tony Butler, Director Happy Museum Project and Director Museum of East Anglian Life**

# 1. Introduction

This paper looks at the relationships between museums, the arts and wellbeing using data from the *Taking Part* survey. We also look at self-reported health as this is likely to be a mechanism through which museums and the arts impact on happiness, and, since it includes mental health, is in itself an important outcome that fits closely with the Happy Museum Project's focus on resilience. We look at the impact on wellbeing and health of participating in and being audience to the arts and of being involved with museums and compare these impacts to other activities such as participation in sport. We attach monetary values to these impacts using standard methods set out in welfare economics and these results can be used in Cost-Benefit Analysis (CBA) or Social Return on Investment (SROI). Finally, the research also looks at the main determinants of involvement with museums in order to derive a better understanding of the barriers to participation.

There is a growing literature in economics on the value of the arts or being audience to the arts. These studies often use contingent valuation surveys, whereby people are asked their willingness to pay for a good or service in a hypothetical setting. In relation to the arts and museums this may be framed as, say, the willingness to pay to attend an exhibition or to participate in a cultural event at a museum. Contingent valuation and other stated or revealed preference techniques (where people are asked, or behaviour infers a value) require that people have good information and a set of underlying well-defined preferences for these types of activities and that they can report their values accurately. However much research in the psychological sciences has demonstrated that people's preferences are often not well-defined a-priori, that people may lack enough information to state a valid willingness to pay amount and that contingent valuation studies are susceptible to a large number of survey biases (for a detailed discussion see Fujiwara & Campbell, 2011). The upshot is that preferences and willingness to pay figures may not provide a fully accurate picture of how much people really value museums and the arts.

This paper takes a different approach, whereby rather than asking for or observing people's preferences we look at the impacts of the arts on people's subjective wellbeing and health and attach values to these impacts. This is the Wellbeing Valuation approach, which has been recently developed and which now features as part of HM Treasury Green Book guidance (Fujiwara and Campbell, 2011) and is hence prominent in government policy making (Dolan and Fujiwara, 2012). The Wellbeing Valuation approach estimates monetary values by looking at how a good or service impacts on a person's wellbeing and finding the monetary equivalent of this impact. In the present context, we would look at the impact of, say, going to a museum on wellbeing. The Wellbeing Valuation method derives robust value estimates in that they are in line with the welfare economic theory on valuation that underlies CBA and SROI (see Fujiwara and Campbell (2011) for details). The advantage is that the Wellbeing Valuation approach can be undertaken using any dataset that includes measures of wellbeing (as long as

there is data on the goods and things we are trying to value and other determinants of wellbeing, including income) and we do not need to ask people to consult their preferences and state a value themselves for a good/service like attending a museum. The central element of deriving values for museums and the arts in the Wellbeing Valuation approach will be to assess their impacts on wellbeing and we will look at how a number of different variables (factors) related to the arts and museums and then derive values for them for use in CBA, SROI and policy-making more generally.

### **Key findings**

We find that visiting museums has a positive impact on happiness and self-reported health after controlling for a large range of other determinants that may confound the relationship. We also find that participation in the arts and being audience to the arts have positive effects on happiness. The effect of participation in the arts is of the same magnitude as the effect of participation in sports if we control for health. Our valuation headline figures are as follows:

- ✓ **People value visiting museums at about £3,200 per year.**
- ✓ **The value of participating in the arts is about £1,500 per year per person.**
- ✓ **The value of being audience to the arts is about £2,000 per year per person.**
- ✓ **The value of participating in sports is about £1,500 per year per person.**

We must apply some caution to these results though. As involvement in the arts and sport was not randomised across our sample, we are reliant on the data we observe and statistical methods for controlling for as many of the differences between people that are involved and those who are not involved in order to make inferences about causality. But there are always likely to be some important factors that we cannot observe and control for and hence these factors may be driving any observed relationships between the arts, happiness and health. For example, extraverted people may be more likely to participate in the arts and also are more likely to report higher happiness and wellbeing, which means that any observed relationship between the arts and happiness may in part be driven by this personality trait rather than the act of participation itself. Further, there may be the problem of reverse causality (wellbeing prompting attendance, rather than attendance creating wellbeing). However, we have taken steps to employ the most robust statistical methods possible given the data and this level of statistical rigour passes thresholds used by many OECD governments in impact assessments.

## 2. Literature Review: Museums, the Arts and Wellbeing

We used a range of academic journal search engines and found that there is not a lot of literature on museums, arts and wellbeing using national datasets and self-reported measures of wellbeing. Most studies seem to use qualitative survey approaches with small focus groups to assess the links between museums, arts and wellbeing. For example, Packer (2008) uses a qualitative approach to survey people about their experiences and perceptions regarding museums and finds that museums are important because of the experiences they create and because they provide a restorative environment for people where they can relax and unwind. Similarly, Binnie (2010) uses a qualitative approach and finds that people report reduced levels of anxiety and increased wellbeing after viewing art in museums.

However, we have to apply caution to qualitative approaches since there is no way to ensure causality – as the behavioural sciences literature shows, asking people about a perceived impact is problematic for a number of reasons, such as (i) people may give socially desirable answers to please the survey enumerator; (ii) it is very difficult for people to conceptualise and forecast what the counterfactual would have been (ie, what would have happened anyway) and people probably just compare outcomes pre and post the activity or programme intervention, which has been shown to be a highly biased estimation method; (iii) these types of studies tend to use very small sample sizes such that results are not generalizable and we cannot test statistical significance; and (iv) due to cognitive dissonance people will likely say that an experience was positive or beneficial for them purely because they had decided to do it as they would not want to seem inconsistent in themselves. For a full review of these issues see Dolan, Fujiwara and Metcalfe (2012). Qualitative survey techniques can be useful for understanding the different aspects of a positive (or negative) experience and they can guide us in showing some of the outcomes that may be of import, but their use in understanding and attributing causality are severely limited. The approach taken in this paper, therefore, is to use statistical analyses with a large national dataset so that causality in the links between museums, the arts and wellbeing can be better attributed.

The closest study to ours is Marsh et al. (Matrix) (2010). They use the British Household Panel Survey (BHPS) to look at impacts on wellbeing of participation in the arts and sport. They also value this impact using the Wellbeing Valuation approach that will be employed here. The BHPS is very restrictive when it comes to the arts and culture in that there are only a handful of relevant variables. Indeed Marsh et al were only able to assess the impacts and values of doing sport, going to the cinema and going to concerts. They found that all three activities impact on life satisfaction positively and that doing sport at least once per week is valued at about £11,000 p.a., and that going to the

cinema at least once per week and going to concerts at least once per week are both valued at about £9,000 p.a.

There are, however, a number of important differences between this paper and Marsh et al. (2010). First, we use the *Taking Part* survey rather than the BHPS in order to increase the number of variables related to museums, arts and culture in the analysis. We look at a much wider range of variables than the three used in Marsh et al., including participation in and visiting museums which was excluded from Marsh et al.

Second, Marsh et al. use overall life satisfaction as the wellbeing variable, which is the most commonly used variable in the Wellbeing Valuation literature. We have data on happiness in *Taking Part* and hence use this as the wellbeing measure for valuation (the question is described in more detail below). As described below, happiness and life satisfaction are different measures of a person's wellbeing and will tap in to distinct aspects of how a person's life is going. Happiness fits more closely with the concept of wellbeing and resilience set out in the Happy Museum Project.

We note that the results reported in this paper are not comparable to those presented in Marsh et al.

Third, we also look at the impacts on self-reported general health.

There is reason to believe that we will find some positive impacts on wellbeing from activities related to museums. Viewing art has been found to impact on physical sensations (Berleant, 1990), such as decreasing perceived intensity of pain (De Tommaso, Sardaro & Livrea, 2008). And hospital patients report higher life satisfaction scores and health status after participating in handling sessions with museum objects (Chatterjee, Vreeland & Noble, 2009) (see Binnie (2010) for these references).

### 3. Methodology

There are four aspects of the analysis. First, we look at whether involvement in museums impacts on wellbeing and self-reported health. Here, we look at four variables related to museums: (i) whether people go to museums in their free time, (ii) whether people volunteer at museums, (iii) the frequency of visiting museums, and (iv) the amount of time people spend visiting museums. Second, we look at the differential impacts associated with participation in and being audience to the arts (regardless of whether this is specific to museums). Third, we use results from these analyses to derive monetary values associated with museums and the arts. Finally, we assess the main barriers to involvement with museums so that we can better understand how to encourage more participation.

As discussed above, the preferred methodology here is to use quantitative methods to assess the impact of museums and the arts on wellbeing and health. The fundamental statistical approach will be to estimate the following types of regression models, where involvement in the arts and museums are determinants of happiness and self-reported health and along with other factors:

$$SWB_i = f(y_i, x_i, arts_i) \quad (1)^1$$

$$Health_i = g(z_i, arts_i) \quad (2)^2$$

where  $SWB_i$  is the level of subjective wellbeing (SWB) for individual  $i$ ,  $arts_i$  is a vector that includes any variable related to the arts and museums,  $y_i$  is income and  $x_i$  and  $z_i$  are respectively other determinants of SWB and health. Income ( $y_i$ ) is explicitly shown in equation (1) since we will use the derivative  $f_y$  to derive values for the variables in  $arts_i$ .

The models set out in equations (1) and (2) are described schematically in Figure 1 below.

---

<sup>1</sup> This model simply states that wellbeing is determined by income, participation/involvement in the arts and museums and a range of other factors, such as education, region of residence, employment status and health status.

<sup>2</sup> This model states that health is determined by participation/involvement in the arts and museums and a range of other factors, such as education, region of residence and employment status.

### 3.1. Data

The data come from the *Taking Part* survey commissioned annually by the Department for Culture Media and Sport (DCMS). *Taking Part* surveys around 14,000 adult individuals per year (as of 2011) from 2005 as a repeated cross-section survey and asks a wide range of questions on involvement and attitudes concerning arts, culture and sport. More specifically, it provides a good source of UK evidence on:

- participation in culture and sport
- satisfaction with and enjoyment of culture and sport
- social capital
- volunteering
- barriers to participation

*Taking Part* is a representative sample of the population in England. In this paper we use data from 2005 – 2011, which results in about 100,000 observations or individuals for the statistical analysis. It should be noted that the latest wave of the *Understanding Society* dataset also includes a range of variables on involvement in the arts and museums, but *Taking Part* was preferred for this study for three reasons: (i) It has a large sample size than the single wave of *Understanding Society*; (ii) it includes a wider range of questions related to museums and the arts; and (iii) to our knowledge it has been under-used in academic research, especially on the links between museums, the arts, health and wellbeing (it has also not been used for the purposes of valuation before).

One thing to note about the data is that there is only one question related to SWB – this is a question on happiness, which asks respondents to answer the following question, "*Taking all things together how happy would you say you are?*", where responses are on a scale of 1 - 10 (10 = '*extremely happy*' and 1 = '*extremely unhappy*'). Happiness taps in to people's emotions, technically their affective state, and hence tries to gauge people's moods at that moment. This differs to wellbeing questions that contain an evaluative judgment such as life satisfaction or eudemonic wellbeing. Life satisfaction is held to contain a response about one's current emotions together with an evaluation of their life overall (how it measures up to their goals for instance) and eudemonic wellbeing questions tap in to people's perceptions of whether they are living a meaningful life. Since, these different measures of wellbeing all reflect different aspects of a person's life we can expect them to produce different results when looking at the impacts of museums and the arts; some things that are important for happiness may not be important for life satisfaction and vice-versa. For example, income does not show up very strongly in happiness reports, but does in life satisfaction. Museums and the arts

are likely to be important aspects of a person's evaluative and eudemonic wellbeing, but happiness (affective wellbeing) is also important. Affective wellbeing picks up our positive emotions related to museums and the arts and it is core to the Happy Museum Manifesto<sup>3</sup>.

We also look at self-reported health as health and wellbeing are highly correlated. Although our focus in this paper is on happiness, questions on general health will cover mental health and so we may be able to pick up some aspects of wellbeing or happiness that are not captured in the stand-alone happiness question. Also, the analysis of the health impacts can shed light on the mechanisms through which a factor impacts on wellbeing (ie, we can see whether, say, participation in the arts impacts on SWB (to some extent) through health. This is important because health is such a big determinant of SWB measures like happiness. Furthermore, as shown in the literature review health is an outcome that has been the focus of previous research on the arts. The health question in *Taking Part* asks respondents to answer the following question, "*How is your health in general? Would you say it is?*", where respondents answer on a scale of 1 - 5 (1 = 'very good' and 5 = 'very bad'). We flip this scale for convenience such that a higher score equates to better health.

Equations (1) and (2) are estimated using ordinary least squares and hence we are assuming that  $SWB_i$  and  $Health_i$  are cardinal measures of wellbeing and health. This is a standard assumption made in much of the wellbeing literature (Fujiwara & Campbell, 2011) and Ferrer-i-Carbonell and Frijters (2004) show that it ultimately makes little difference for the results whether ordinality or cardinality is assumed. There is a wide range of variables related to the arts and museums in the *Taking Part* survey. However, many of them could not be used because either response rates to the question were too low or because there was minimal variance in the variable and so a statistically significant relationship could not be traced. Table 1 describes the arts and museums related variables that are used in the analysis.

---

<sup>3</sup> As set out in 'What we know now' – an interim commentary by Tony Butler, Happy Museums Symposium, February 2013.

**Table 1. Arts and museums variables**

| Variable                     | Description                                                                                                      |
|------------------------------|------------------------------------------------------------------------------------------------------------------|
| Log (income)                 | Log of personal earnings (in £5,000 bands)                                                                       |
| married                      | 1 = married; 0 = not married                                                                                     |
| religious                    | 1 = reports religion; 0 = no religion                                                                            |
| high education               | 1 = Qualification of GCSEs and above; 0 = Less than GCSE qualifications                                          |
| health                       | Self-reported health on a scale of 1-5 (5 = 'very good'; 1 = 'very bad')                                         |
| male                         | 1 = male; 0 = female                                                                                             |
| employed                     | 1 = employed; 0 = not working                                                                                    |
| Frequency of meeting friends | 1 = if meets friends at least once or twice per month; 0 = if meets friends less than once per month             |
| London                       | 1 = lives in London; 0 = otherwise                                                                               |
| children                     | Number of children                                                                                               |
| satisfied with local area    | 1 = if 'satisfied' or 'very satisfied' with local area as place to live; 0 = if otherwise                        |
| drinking                     | How often drinks alcohol on scale of 1-5 (1 = 'never'; 5 = 'everyday')                                           |
| smoker                       | 1 = smokes; 0 = does not smoke                                                                                   |
| non-white                    | 1 = non-white ethnic group; 0 = white                                                                            |
| volunteer                    | 1 = if volunteers; 0 = otherwise                                                                                 |
| visit museums                | 1 = visit museums in free time; 0 = does not visit museums in free time                                          |
| volunteer museums            | 1 = volunteers in museums; 0 = otherwise                                                                         |
| time spent in museums        | Number of hours spent in museums per year                                                                        |
| didn't go to museums         | 1 = if parents did not take individual to museums as a child; 0 = otherwise                                      |
| no. of museum visits         | museum visits per year                                                                                           |
| participated sport           | 1 = done sport of physical activity in the last 4 weeks; 0 = otherwise                                           |
| participated arts            | 1 = if participated in (ballet/dance/singing/playing music/painting & drawing/photography/crafts); 0 = otherwise |
| audience arts                | 1 = if audience to (exhibitions/opera/concerts & live music/ballet/dance); 0 = otherwise                         |

### 3.2. Valuation

The results from equation (1) can be used to derive values for the arts. Here we estimate the compensating surplus (CS) of different elements of the arts and museums. CS is the amount of money, paid or received, that will leave the individual in his initial welfare position following a change in the (level of a) good/service. CS is the most widely used measure of value in CBA (and SROI since SROI uses valuation methods directly from CBA and welfare economics). This measure here is akin to willingness to pay for different elements of the arts and museums, but the values derived here should not be seen as traditional willingness to pay measures since we have not derived the values from preferences. The values identified in this paper are not what people would actually pay for these things in a market. Instead, they are purely a monetary representation of how large an activity's impact on happiness is – they provide a basis for us to compare the magnitude of different impacts on wellbeing.

We are valuing these outcomes using happiness as the outcome measure. The Wellbeing Valuation approach has predominantly relied on life satisfaction as the measure of wellbeing ( $SWB_i$ ) in equation (1), but we use happiness here. Theoretically this is not problematic - we are simply using a different measure of wellbeing, but there are some technical considerations. As Powdthavee and van den Praag (2010) show using happiness rather than life satisfaction as the outcome measure generally increases value estimates because income has a smaller impact on happiness than on life satisfaction.

In essence, what we are measuring is the effect of arts and museums on happiness and the monetary equivalent of that effect. So for example if, say, that visiting a museum regularly increased happiness by 1 index point per year and that £5,000 of income also increases happiness by 1 index point, then the equivalent value of visiting museums regularly is about £5,000.

An approximation of the CS (ie, value) for the arts can be derived from the partial derivatives with respect to the arts and income in equation (1) as follows:

$$CS = \frac{\frac{\partial SWB}{\partial arts}}{\frac{\partial SWB}{\partial y}} \quad (3)$$

The **Annex** sets out the full derivation of the Wellbeing Valuation approach and equation (3). Figure 1 shows in a graph how equations (1) and (3) are estimated in order to derive valuations for outcomes related to museums and the arts.

The Annex shows that the Wellbeing Valuation approach can derive estimates of value that are fully consistent with the welfare economic theory of valuation. This valuation theory underlies the recommended approach to policy assessment in the UK as set out by HM Treasury Green Book guidance, and the Wellbeing Valuation approach now

features as part of the official Green Book and is growing in prominence in UK public policy. The results derived here are therefore based on a robust methodology.

**Figure 1. Diagram of Wellbeing Valuation approach**

In essence, in equation (1) we are estimating the impact of involvement in museums and the arts on wellbeing (here happiness). This provides an estimate for  $\frac{\partial SWB}{\partial arts}$  in equation (3). In equation (1) we are also estimating the impact of income on wellbeing, which is depicted in the right hand side of Figure 1. This is an estimate of  $\frac{\partial SWB}{\partial y}$  in equation (3). The strength of the impacts (denoted by the arrows in Figure 1) determines how much value people place on different aspects of involvement in museums and the arts. In equation (2) we look at the impacts of involvement in museums and the arts on health, as this might be one important mechanism through which involvement in museums and the arts impacts on happiness. In other words, in the health model in equation (2) we would like to know whether there is an indirect impact of involvement in museums and the arts on happiness through health so here the left hand side of Figure 1 essentially becomes as set out in Figure 2.

**Figure 2. Indirect effect of museums and arts on wellbeing**

### 3.3. Caveats

As with all statistical analyses of observational data, causality can be an issue. Participation/involvement in the arts and museums is not randomly assigned in the *Taking Part* survey and hence we have to rely on selection on observables assumptions in order to infer causality in our modelling. In other words, since people in the survey are not randomly assigned to a treatment group (that gets involved in the arts) or a control group (that isn't allowed to), the only way we can attempt to infer causality is by controlling for as many of the observable differences between those who are involved in museums and the arts and those who are not and we do this through regression analysis. In the wellbeing and health models (1) and (2) we have used as many of the potentially confounding explanatory variables as possible, but we cannot rule out the possibility that some of the results may be susceptible to selection bias and reverse causality: certain types of people who would have higher health and wellbeing anyway may select into involvement in the arts and it could also be that happiness 'causes' people to go to museums and the arts rather than the other way around.

Given the nature of the data, multivariate regression analysis or matching techniques are arguably the best methods that can be used (there were no suitable instrumental variables<sup>4</sup> or cases where natural experiments could be exploited in the data). This level of rigour (multivariate analysis) is anyway normally acceptable in public policy-making and policy evaluation in OECD governments and hence we believe that it can be informative here, with the caveat that we are unable to be fully confident of attributing causality.

---

<sup>4</sup> For example, parent encouragement in arts participation when the individual was young was one possible instrumental variable but it was weak and there were issues regarding the exclusion restriction in the first stage which lead to biased results.

## 4. Results

### 4.1. Museums, wellbeing and health

First we estimate equation (1):

$$SWB_i = f(y_i, x_i, arts_i) \quad (1)$$

using ordinary least squares (OLS) for a number of arts and museums related variables. Table 2 shows the impact of a number of museum related variables. In line with previous studies we find that the standard explanatory variables included in wellbeing regressions explain about 10% to 15% of the variation in wellbeing<sup>5</sup>. The museum-related variables are included piece-wise (one by one) since they may be correlated if included all together, which would make it difficult to decipher the marginal impacts. In other words we run four separate models – one for each museum-related variable. But in Table 2 we present all results in the same column for simplicity. Coefficient sizes on the other explanatory variables were similar across all four models and so we only report the results on the other variables from the first model. We find that there is a positive effect on happiness for people who visit museums in their free time. The number of museum visits people make, the length of time spent visiting museums and volunteering in a museum all have positive effects, but they are not statistically significant. For some of these variables (eg, volunteering in a museum), this is likely to be because there are so few respondents in the survey who respond affirmatively to these questions (hence very little variation in the variable of interest). These results therefore are probably more a problem of the data (and non-response in the survey) rather than there being no statistical effect. It could also be that our measure of SWB (happiness) would not pick these micro-level activities up unless respondents had recently been to a museum.

Going to museums in one's spare time leads to an increase in happiness of about 0.1 index points on a scale of 1 – 10. This seems small but as we shall see when we value this impact it is a significantly important impact.

---

<sup>5</sup> The negative finding for employment is contrary to the wellbeing literature although it is only significant at the 10% level.

**Table 2. Museums and happiness**

| Explanatory variable         | Coefficient (Standard error) | Explanatory variable      | Coefficient (Standard error) |
|------------------------------|------------------------------|---------------------------|------------------------------|
| Log (income)                 | 0.055***<br>(0.018)          | satisfied with local area | 0.568***<br>(0.034)          |
| Married                      | 0.453***<br>(0.024)          | drinking                  | -0.005<br>(0.010)            |
| religious                    | 0.212***<br>(0.025)          | smoker                    | -0.245***<br>(0.027)         |
| high education               | -0.080***<br>(0.024)         | non-white                 | 0.230***<br>(0.038)          |
| health                       | 0.529***<br>(0.013)          | visit museums             | 0.088***<br>(0.025)          |
| male                         | 0.011<br>(0.023)             | volunteer at museums      | 0.426<br>(0.419)             |
| employed                     | -0.048*<br>(0.027)           | no. of museum visits      | 0.014<br>(0.050)             |
| frequency of meeting friends | 0.204***<br>(0.025)          | time spent in museums     | 0.014<br>(0.012)             |
| London                       | -0.114***<br>(0.034)         | constant                  | 4.518***<br>(0.077)          |
| children                     | -0.042***<br>(0.012)         | N                         | 21369                        |
|                              |                              | R-sq                      | 0.13                         |

Notes: Significance: \*\*\* = 0.01; \*\* = 0.05; \* = 0.10.

In Table 3 we show the results from the health model using OLS:

$$Health_i = g(z_i, arts_i) \quad (2)$$

**Table 3. Museums and health**

| Explanatory variable | Coefficient (Standard error) | Explanatory variable  | Coefficient (Standard error) |
|----------------------|------------------------------|-----------------------|------------------------------|
| Log (income)         | 0.051***<br>(0.007)          | non-white             | -0.041***<br>(0.014)         |
| high education       | 0.095***<br>(0.009)          | visit museums         | 0.040***<br>(0.009)          |
| male                 | -0.083***<br>(0.009)         | volunteer museums     | -0.286**<br>(0.130)          |
| employed             | 0.416***<br>(0.010)          | no. of museum visits  | 0.029<br>(0.019)             |
| children             | 0.063***<br>(0.004)          | time spent in museums | -0.004<br>(0.006)            |
| drinking             | 0.075***<br>(0.004)          | Constant              | 3.489***<br>(0.018)          |
| smoker               | -0.236***<br>(0.010)         | N                     | 36748                        |
|                      |                              | non-white             | -0.041***                    |

Notes: Significance: \*\*\* = 0.01; \*\* = 0.05; \* = 0.10.

Again, as in Table 2 the different museum-related variables were entered separately but we show the results in the same column (coefficients for the other explanatory variables come from the first model with the visit museums variable). Again, there is a positive significant coefficient on visiting museums, which shows a positive relationship between

this variable and self-reported health. Number of museum visits and time spent in museums do not have an impact. Interestingly we find that volunteering in a museum is negatively associated with self-reported health: people who volunteer at museums report significantly lower health than those who don't. This seems to be an anomaly for two reasons. First, there is a lot of evidence that volunteering impacts positively on wellbeing (see Meier & Stutzer, 2004) and so it is hard to see why it should have a detrimental effect on health, which is closely related to wellbeing. Second, given the types of programmes run at museums, this finding of a negative association is likely to be due to reverse causality – in other words, it is people in poorer health to begin with (including elderly people) who are encouraged or are more likely to volunteer at museums, rather than volunteering in museums having a negative impact on health. We should therefore see this result as an anomaly, probably being caused by the fact that less healthy people select into volunteering in museums.

In sum, visiting museums impact positively on health and since health in turn impacts positively on people's happiness, we can deduce that one important mechanism through which visiting museums impacts on happiness is through health.

#### **4.2. Arts audience, arts participation, wellbeing and health**

In Table 4 we present the results for participation and audience in the arts. We also include participation in sports. We find that participation and audience in the arts and participation in sports all have significant positive effects on happiness at the 10% level. As stated above, since the arts audience and participation variables are constructed to encompass the same activities, they are directly comparable. There are two important findings from the analysis. First, we find that being audience to a variety of artistic and cultural events and activities has the biggest impact on happiness out of these three activities. And second, we also find that participation in sport has about the same impact on happiness as participating in arts and culture.

**Table 4. Arts audience, arts participation and happiness**

| Explanatory variable      | Coefficient (Standard error) | Explanatory variable      | Coefficient (Standard error) |
|---------------------------|------------------------------|---------------------------|------------------------------|
| Log (income)              | 0.062***<br>(0.017)          | satisfied with local area | 0.592***<br>(0.031)          |
| married                   | 0.474***<br>(0.022)          | drinking                  | -0.004<br>(0.009)            |
| religious                 | 0.191***<br>(0.023)          | smoker                    | -0.241***<br>(0.025)         |
| high education            | -0.085***<br>(0.022)         | non-white                 | 0.232***<br>(0.035)          |
| health                    | 0.525***<br>(0.013)          | participated in sport     | 0.040*<br>(0.022)            |
| male                      | 0.011<br>(0.022)             | participated in arts      | 0.039*<br>(0.022)            |
| employed                  | -0.068***<br>(0.025)         | audience to arts          | 0.054**<br>(0.022)           |
| frequency of meet friends | 0.190***<br>(0.024)          | constant                  | 4.458***<br>(0.071)          |
| London                    | -0.098***<br>(0.031)         | N                         | 25069                        |
| children                  | -0.044***<br>(0.011)         | R-sq                      | 0.13                         |

Notes: Significance: \*\*\* = 0.01; \*\* = 0.05; \* = 0.10.

It should be noted that this difference with sport is understated in the analysis in Table 4 because as we show in Table 5, participation in sport has a much bigger impact on self-reported health than being audience to and participating in arts and culture events and since health is held constant in Table 2, this will apply downward pressure on the coefficient on participation in sports. In fact, in analysis we do not show here, dropping the health variable in Table 2 leads to a vast increase in the size of the sport coefficient (and not much in the arts related coefficients). This analysis is not presented here because clearly dropping health from the SWB function can lead to omitted variable bias, but the outcomes we get if we do drop health are as we would expect.

Table 5 shows that participation in the arts has a positive effect on health, but that it is statistically insignificant. Being audience to arts has a positive impact on health. As we would intuit, participation in sport has a large positive effect on health (four times larger than the effect of being audience to arts).

We can conclude that being audience to the arts and participation in sport will have indirect effects on happiness through health - the former, probably through mental health and the latter, most likely through physical health.

**Table 5. Arts audience, arts participation and health**

| Explanatory variable | Coefficient (Standard error) | Explanatory variable  | Coefficient (Standard error) |
|----------------------|------------------------------|-----------------------|------------------------------|
| Log (income)         | 0.047***<br>(0.006)          | non-white             | -0.058***<br>(0.012)         |
| high education       | 0.074***<br>(0.008)          | participated in sport | 0.230***<br>(0.008)          |
| male                 | -0.099***<br>(0.008)         | participated in arts  | 0.004<br>(0.008)             |
| employed             | 0.373***<br>(0.009)          | audience to arts      | 0.066***<br>(0.008)          |

| smoker               | -0.227***<br>(0.009)         | adj. R-sq             | 0.119                        |

Notes: Significance: \*\*\* = 0.01; \*\* = 0.05; \* = 0.10.

We ran a number of models with interactive effects for different demographic groups, for example to see if the impact of participation in the arts is larger for men or women or for more educated groups, but in general sample sizes were too small to derive statistically significant results, possibly due to low variance in the variables of interest.

### 4.3. Valuation

The results in Tables 2 and 4 are now used to derive monetary values for activities related to museums and the arts more generally using the wellbeing valuation approach in equation (3) and the methodology set out in the Annex. We have discussed the issue

of bias that can arise when using this kind of survey data. It has been frequently found that the income coefficient is understated in OLS wellbeing models compared to two-stage least squares with an instrumental variable for income. On average the size of the income coefficient is about two to ten times larger when using an instrument for income to solve for endogeneity in life satisfaction models<sup>6</sup> (Pischke, 2010; Fujiwara, forthcoming; N. Powdthavee, 2009)<sup>7</sup>. In work using the BHPS that is not presented here (since the happiness variable is different in the BHPS) we find that when using lottery wins as an instrument for income, (lottery wins are exogenous for lottery players and hence make a suitable natural experimental setting so that we can get a good estimate of the causal effect of income) the size of the impact of income on happiness increases more than ten-fold. This is part of the reason why Wellbeing Valuation studies that do not instrument for income derive implausible large value estimates for non-market goods. Since there is no suitable instrument for income in the *Taking Part* data we also estimate values using an income coefficient that has been multiplied by 8 (which is in the scale between 2 to 10, which is the level of bias found in the studies above, but weighted more towards 10 since the analysis of happiness data using the BHPS suggests that the true impact of income on happiness may be more than ten times larger than the OLS coefficient). From Tables 2 and 4 the coefficient on log of income is about 0.06. We derive values using this estimate and an income coefficient value of 0.5 (about  $0.06 \times 8$ ) to try and account for the endogeneity issue (by multiplying the original coefficient by 8). Using the larger coefficient will produce lower estimates of value for non-market goods and the values derived using the 0.5 coefficient should be seen as the core results here. This is because we know from many previous studies that OLS estimates of the impact of income are under-biased and because this also provides conservative estimates of value since they will always be lower when using a larger income coefficient.

Table 8 presents estimates of the compensating surplus associated with museums and the arts. We look at the values associated with any participation/attendance variable that is statistically significant from Tables 2 and 4. These are:

- Visiting museums in one's free time.
- Participation in the arts.
- Audience to the arts.
- Participation in sports.

---

<sup>6</sup> Note these studies focus on life satisfaction but the findings are likely to be relevant for happiness models.

<sup>7</sup> Fujiwara (forthcoming) originally presented at the Government Economic Service *Conference on Wellbeing in Policy*, May 2012.

The 'core' results are values estimated using a coefficient of 0.36 for income. The values in the final column are estimated from the original income coefficient value of 0.06 and are presented just for information purposes here. It should be noted that some variables (eg, audience to art and participation in sport) had impacts on health (see Tables 3 and 5) and that health is controlled for in the happiness regression. This means that the values presented in Table 6 are values that do not include any indirect effect through health. This will somewhat understate the values associated with audience to arts and participation in sports (especially the latter), but there may be other indirect effects at work too (eg, some of the activities may also impact on happiness indirectly through better social relationships, which is held constant in the wellbeing regression). We show the wellbeing valuation results as they are normally presented in the literature (which is *net* of any indirect effects).

**Table 6. Values associated with museums, arts and sports**

| Activity                      | Impact size (coefficients) | Value (Core estimate) | Value   |
|-------------------------------|----------------------------|-----------------------|---------|
| Visiting museums in free time | 0.088                      | £3,228                | £15,400 |
| Participation in the arts     | 0.039                      | £1,500                | £9,600  |
| Audience to the arts          | 0.054                      | £2,047                | £11,868 |
| Participation in sports       | 0.04                       | £1,538                | £9,731  |

Note: Values represent per year estimates. They are estimates of compensating surplus for these goods. Values are calculated from the sample average level of income. The income variable is banded in *Taking Part* – so we estimate how many income bands people would have to move to derive the same impact on wellbeing and convert this into a monetary scale using the rate 1 Band = £5,000.

These values represent the compensating surplus for these activities. In other words, it is the amount of money people would in theory give up in order to undertake the activity and is related to the concept of willingness to pay. We find that:

- ✓ People value visiting museums at about £3,200 per year.
- ✓ The value of participating in the arts is about £1,500 per year per person.
- ✓ The value of being audience to the arts is about £2,000 per year per person.
- ✓ The value of participating in sports is about £1,500 per year per person.

Being audience to the arts and participating in sports and the arts all have about the same value. In fact, if we look at Table 4 we see that the 95% confidence intervals for

the three variables overlap and so there is no real distinction in the size of the impacts in a statistical sense. The values derived in Table 6 are based on point estimates of the impacts from Table 4, but there is some uncertainty involved in any regression analysis outputs due to sampling error and so it could be argued that we can treat the impacts and values of (i) being audience to the arts, (ii) participating in sports and (iii) participating in the arts as pretty much the same (around £1,500 - £2,000 per year), but we should caveat (as discussed above) that the indirect effect through sport is not included in these figures.

Visiting museums has the largest value. People who visit museums in their spare time value this at about £3,200 per annum. This is quite large even for people who visit regularly. We can speculate that this figure may include a value that people place on the existence of museums as well as any value they derive from physically visiting museums (what economists call '*existence value*'). This could be one reason for its comparatively higher value than the other arts related activities. Another reason for the relatively high value of visiting museums is the other activities related the arts that are valued in Table 6 are to some extent a subset of visiting museums. The variables on participation and audience to arts includes drawing, photography and exhibitions, all of which may have taken place in museums and survey respondents probably include these activities when they say they visit museums. To some extent then it is likely that the value of visiting museums encompasses some of the value of participating in and being audience to the arts.

It is interesting to note that the value derived here for museum visits far exceeds the value derived from a stated preference (contingent valuation) study by Bolton Metropolitan Borough Council (2005)<sup>8</sup>, which found that when asked people were willing to pay a maximum of £33 annually to visit museums in Bolton. As explained, values between preference and wellbeing valuation methods can differ for a number of reasons. One issue that is relevant here is that there is no opportunity to bias the values in any way in Wellbeing Valuation, but when asked in contingent valuation it is unlikely that people will state a high value for a currently publicly available service in case they may get asked to pay for it in the future (strategic bias). Also, this figure of £33 is unlikely to include an existence value for museums. Furthermore, two very distinct measures of wellbeing are being used across these studies - we use happiness here and preference satisfaction is being used in the Bolton study and there is no philosophical or theoretical reason why values from these methods should converge in anyway. We should note that the wellbeing values derived in Table 6 do not need to reflect, in any way, people's

---

<sup>8</sup>[http://webarchive.nationalarchives.gov.uk/20120215211001/http://research.mla.gov.uk/evidence/documents/bolton\\_main.pdf](http://webarchive.nationalarchives.gov.uk/20120215211001/http://research.mla.gov.uk/evidence/documents/bolton_main.pdf)

income constraints as we are simply looking at the impact of museums and arts on people's happiness and attaching an equivalent monetary value to this. The size of an activity's impact on happiness should have nothing to do with the level of someone's initial income – for example, clearly people don't care about or appreciate their health any less just because they are or become poorer. As we explain in section 3.2 these are not necessarily amounts of money that people would actually pay.

The values derived here using Wellbeing Valuation seem like reasonably sized values, but how do these values compare to other activities that have been valued using the Wellbeing Valuation approach? For example, we can compare these values to the values associated with adult learning. Dolan and Fujiwara (2012) used a similar methodology to that employed here (but using life satisfaction instead of happiness) and find that people who participate in adult learning classes (on average about 2 courses per year) value this at about £1,600 per year. Fujiwara (2013) finds that the value of living in a house which does not suffer from neighbour noise is about £1,100 per year and that the value of socialising with friends regularly is about £3,000 per year. All in all although these studies use life satisfaction, which will usually lead to lower values than when using happiness, it seems that museums, arts (and sports) have a relatively large impact on wellbeing.

#### **4.4. Determinants of visiting museums**

Given the important role that museums seem to play as determinants of people's happiness, it is crucial to assess how we might reduce barriers to participation and we can do this in the *Taking Part* data. We first look at self-reported reasons regarding involvement in museums. Respondents are asked what factors would encourage them to go to museums more often (for those that say they would like to go more often) and about the factors that prevent them from going to museums (for those that say they don't go to museums). Table 7 shows the top three reported reasons in each category.

**Table 7. Self-reported reasons regarding encouragement and barriers to museum visits**

| Ranking | Encouraging factors                                                          | Barriers                          |
|---------|------------------------------------------------------------------------------|-----------------------------------|
| 1       | 'If I had more time'                                                         | 'Not really interested'           |
| 2       | 'Exhibition or display of a subject I am interested in'                      | 'It's difficult to find the time' |
| 3       | 'More information about events and exhibitions' / 'Cheaper admission prices' | 'Health isn't good enough'        |

Next we look at the determinants of people visiting museums as revealed through their behaviour. Table 8 shows that people with low incomes, low levels of education and smokers are less likely to visit museums and that volunteers, married people, women, and people who live in London are more likely to visit museums controlling for a number of other potential explanatory variables. Interestingly, there seems to be an inter-generational effect in that people who were never taken to museums by their parents in their childhood are far less likely to visit museums as adults. In fact, we find that this is the largest determinant of the likelihood of adults visiting museums. People who were not taken to museums in their childhood by their parents are 17% less likely to visit museums now. As a comparison this is about three times the magnitude of the impact of being in low income groups (income under the UK average); low income groups are about 6% less likely to visit museums. As other examples, people with higher levels of education (5 GCSEs or more up to degree level) are 16% more likely to visit museums, married people are 3% more likely and those living in London are 8% more likely<sup>9</sup>.

---

<sup>9</sup> Marginal probabilities are estimated from odds-ratios using the sample average levels for each of the other explanatory variables.

**Table 8. Determinants of visiting museums**

| Explanatory variable | Coefficient (Standard error) | Explanatory variable | Coefficient (Standard error) |
|----------------------|------------------------------|----------------------|------------------------------|
| low income           | -0.236***<br>(0.041)         | drinking             | 0.095***<br>(0.016)          |
| didn't go to museums | -0.672***<br>(0.038)         | smoker               | -0.257***<br>(0.045)         |
| male                 | -0.151***<br>(0.039)         | non-white            | 0.448***<br>(0.063)          |
| married              | 0.118***<br>(0.039)          | volunteer            | 0.539***<br>(0.042)          |
| high education       | 0.649***<br>(0.039)          | children             | -0.025<br>(0.020)            |
| employed             | -0.036<br>(0.041)            | constant             | -1.186***<br>(0.125)         |
| health               | 0.092***<br>(0.023)          | N                    | 13311                        |
| London               | 0.333***<br>(0.057)          |                      |                              |

Notes: Significance: \*\*\* = 0.01; \*\* = 0.05; \* = 0.10. Logit model with dependent variable = whether people visit museums.

Taken together the results in Tables 7 and 8 provide some interesting implications. As we probably would have guessed, lack of time, lack of museums or good quality museums (people living in London are more likely to go to museums), steep admissions prices and lack of interesting exhibition content all seem to act as barriers to visiting museums. In addition an important less obvious finding is that probably one of the biggest barriers to visiting museums is not having been taken to museums as a child by

your parents, which is assumed here to work through the mechanism of creating a preference and affiliation for museums that continues in to adult life. This is probably not salient to people (at least when they are asked about it) but is clearly important from the analysis here.

The data and results suggest that in order to increase participation and visits to museums, which is good for people's wellbeing and health, we need make museums accessible, affordable and interesting and we need to get parents involved with their children from a young age in order to have a growing sustainable impact.

## 5. Caveats

As discussed, as with all statistical analyses of observational data, causality can be an issue and these results may be biased somewhat from self-selection and reverse causality. However we have applied a level of rigour in the statistical analysis (ie, multivariate analysis) that would be acceptable in many public policy-making and policy evaluation decisions in OECD governments, and hence we believe that the results can be informative here. We have noted, especially, that the income coefficient is problematic in wellbeing models and we have taken a corrective approach by multiplying the size of the income coefficient. This was the best approach given the data, but a more robust method would of course be to use instrumental variables for income in the actual data if they were available.

The wellbeing valuation techniques used here are in line with welfare economic theory on valuation (which underlies all cost-benefit analysis and SROI techniques), but we should note that these values should not be seen as amounts that people would *actually* be willing to pay per year for these activities. This would only be the case if people satisfy their preferences solely on the basis of what makes them happy, but other factors may impact on people's preferences and market decisions. These values should be seen as the equivalent amount of money required to create the same impact on people's happiness and they are useful as they show us the magnitude of importance of museums and the arts to people.

Furthermore, these are average values. They are average values for the sample. No doubt different groups will value these activities in different ways but we were unable to pursue this analysis by different demographic groups due to sample size restrictions.

It is clear overall that more data and some use of experimental methods, where treatment or involvement in the activity of interest is randomised, are essential next steps in the future to develop on the analysis undertaken here.

## 6. Conclusion and discussion

This study looks at the impact of involvement in museums and the arts on health and wellbeing. We also looked at the determinants of why people visit museums and the impacts of participation in sports as a benchmark comparison. After noting issues around causality, we find that (some of the main findings):

- (i) Visiting museums has a positive impact on happiness and self-reported health after controlling for a large range of other determinants;
- (ii) Participation in the arts and being audience to the arts also have positive effects on happiness, and being audience to the arts has a bigger impact on happiness.
- (iii) The wellbeing impact of participation in the arts is of the same magnitude as the effect of participation in sports (after controlling for health);
- (iv) Lack of time is the main self-reported barrier to visiting museums more frequently;
- (v) Not being taken to museums by parents as a child is the biggest barrier for people going to museums when we look at people's behaviour (rather than self-reports).

In terms of valuation these results imply that:

- ✓ People value visiting museums at about £3,200 per year.
- ✓ The value of participating in the arts is about £1,500 per year per person.
- ✓ The value of being audience to the arts is about £2,000 per year per person.
- ✓ The value of participating in sports is about £1,500 per year per person.

These are important findings with lots of implications for policy and future research. It creates a strong positive foundation and argument for the role of museums and the arts in society. As new waves of *Taking Part* will include time-series elements for some of the survey respondents we will be able to use panel data methods to better understand causality, but clearly we need some robust experimental methods where treatment or involvement in the arts and museums is randomly assigned across different groups so that we can infer causality with confidence - to verify our findings here and to re-assess some of the anomalous findings. It need not always be the case that we randomise the actual intervention, activity or programme (if this is difficult), and instead it is possible to work with data where *encouragement* to participate in museums and the arts has been randomised. In other words, we need not try to put people in to intervention and non-intervention groups but simply randomise encouragement to go to museums through say

information campaigns. With careful planning it would be possible to derive more robust estimates of the impacts of museums and the arts on wellbeing and health using this technique. The UK Government is one of the leading governments in the world in terms of running randomised trials within policy interventions (Haynes, Service, Goldacre, & Torgerson, 2012) and hence experimental methods are becoming increasingly common and popular in public policy and wellbeing valuation can be carried out with data from randomised trials too.

# Annex

## The Wellbeing Valuation approach

A central assumption of the wellbeing valuation approach is that measures of wellbeing (here happiness) are good proxies of an individual's underlying utility. In this sense, the utility function and its level sets (the indifference curves) can be directly observed and it is possible to estimate the marginal rates of substitution (MRS) between income and the non-market good to provide an estimate of value. For example, if a 20% reduction in local crime rates increases happiness of an individual by 1 index point and an increase in household income of £2,000 p.a. also increases their happiness by 1 index point, then we would conclude that the value of the 20% reduction in crime to them is £2,000 per year.

Formally, compensating surplus (CS) is estimated as follows in the wellbeing valuation approach:

$$v(p^0, Q^0, M^0) = v(p^1, Q^1, M^1 - CS) \quad (\text{A.1})$$

where  $v(\cdot)$  is the indirect utility function;  $M$  = income;  $Q$  = the good being valued;  $p$  = prices. The *0 superscript* signifies the state before  $Q$  is consumed (or without the good) and the *1 superscript* signifies the state after consumption (or with the good). For our analysis in this paper  $Q$  refers to the activities related to the arts and museums.

In practice in wellbeing valuation we work with an 'observable' measure of welfare (ie, self-reported wellbeing rather than preferences) and it is possible to estimate the MRS between  $M$  and  $Q$  to measure CS using the *direct utility function*  $u(\cdot)$ :

$$u(Q, M, X) \quad (\text{A.2})$$

where  $X$  is a vector of other determinants of welfare ( $u$ ). Empirically what we measure is:

$$SWB(Q, M, X) \quad (\text{A.3})$$

where  $SWB$  = happiness. Equation (A.3) is usually estimated by applying regression analysis to panel or cross-sectional survey data. Using the cross-sectional data from *Taking Part* the following happiness function is estimated:

$$Happiness_i = \alpha + \beta_1 M_i + \beta_2 Q_i + \beta_3 X_i + \varepsilon_i \quad (A.4)$$

Now we can substitute (A.4) into (A.1):

$$SWB_i(\alpha + \beta_1 M_i^0 + \beta_2 Q_i^0 + \beta_3 X_i^0 + \varepsilon_i) = SWB_i(\alpha + \beta_1(M_i^1 - CS) + \beta_2 Q_i^1 + \beta_3 X_i^1 + \varepsilon_i) \quad (A.5)$$

And solve for compensating surplus (CS):

$$CS = M^0 - e^{\left[\ln(M^0) - \frac{\beta_2}{\beta_1}\right]} \quad (A.6)$$

(A.6) derives estimates of welfare change that are consistent with welfare economic theory. (A.6) is equivalent to equation (3) in the paper. We use average sample income for  $M^0$  and the coefficients  $\beta_1$  and  $\beta_2$  from (A.4) to populate equation (A.6). The term  $e^{[\cdot]}$  accounts for the logarithmic format of the income variable. Since income is measured in income bands (in intervals of £5,000) we estimate CS as changes in bands of income and multiply by £5,000 to derive the estimates in Table 6.

# Glossary

Here we include a brief description of some of the technical terms in the report. The order is set so that some of the terms can follow off descriptions of the previous ones.

**Affective state** - people's emotions and moods. It picks how people feel emotionally at the time when asked.

**Life satisfaction** – a broader measure of wellbeing that picks up current mood and as well as an overall assessment of one's life is going in comparison to one's goals and objectives and in comparison to other people.

**Eudemonic wellbeing** – an assessment of the extent to which people think the things they do in their lives are worthwhile and valuable.

**Control for...** - controlling for a variable simply means taking out its effect through statistical methods. So if we are looking at the impact of X on Z and control for Y we can find the effect of X on Z after any impact of Y on Z has been taken out of the relationship. This gives us a better understanding of the role of X on its own.

As an example, say Z = wage income, X = years of education and Y = innate ability. In this simple example, just looking at relationship between wages and education would be a misleading estimate of whether years of education impacts on wage income in later life because ability will play a role in determining wage income and level of education (people with higher innate ability are more likely to stay in education for longer). Here, we would at least want to control for the effect of ability before looking at the relationship between wage and education. We say 'at least' because there may also be other variables that we want to control for too. Here ability is known as a **confounding variable** because it is associated with both Z and X. Once we have estimated this relationship in regression analysis the size of the impacts of Y and X on Z are shown as **coefficients**, which show the magnitude of impact on Z.

**Endogeneity** – if we cannot control for all confounding factors a variable will be endogenous, which in the simplest sense means that we cannot properly estimate the true effect it has on the outcome variable because other factors that we cannot control for will influence the relationship.

**Explanatory variables** – in the example above we often use the terminology explanatory variables to indicate the Y (ability) and X (education) variables. This is because here ability and education 'explain' wages.

**Ordinary least squares** – this is a common statistical technique that allows us to run models where a large number of explanatory variables can be controlled for at the same time. It generates coefficients for each explanatory variable included in the model.

**Instrumental variables** - these variables allow us to get better understanding of cause and effect in the relationship we are modeling. In our wage income example an instrumental variable for education would allow us to make stronger claims about the causal effect of education on income than in a model where other factors are controlled for. Randomised trials are seen as the '*gold standard*' approach to causal inference and instrumental variable techniques can be robust enough to allow us to get close to a randomized trial setting without actually having to randomize the intervention. The methodology is involved and hence is not described in full here.

**Statistically significant** - statistical significance is a test of whether the impact we estimate for a variable (as shown in the coefficient) is not just simply due to random chance. A statistically significant effect or impact is one that the evidence suggests is important because it is unlikely to be just due to chance.

**Cardinality and Ordinality** – a cardinal variable is one for which the scale is the same grade throughout. So a variable measured say on a scale of 1-100 is cardinal if a jump from 2 to 3 is the same magnitude as the jump from 90 to 91. People's height is an example of a variable with a cardinal scale. An ordinal scale is one that does not have this equal interval scale. This is a technical issue, which matters mainly for the type of statistical analysis we can use. With cardinal data we can use ordinary least squares, but for ordinal data we need to use other methods.

**Partial derivatives** - in the simplest form another term for coefficient.

**Randomly assigned** – when an intervention or programme is assigned to people through randomization. Doing so means that we can properly account for the causal effect of the programme as through virtue of randomization the only difference between the two groups is that one group did receive the programme and the other did not. Any difference in outcomes that we observe between the two groups can then solely be attributed to the effect of the programme.

**Selection on observables** – this simply states that all of the explanatory variables in a model are observable and can be measured by the statistician.

**Compensating surplus** – a standard measure of value used in welfare economics. CS is the amount of money, paid or received, that will leave the individual in his initial welfare position following a change in the (level of a) good/service. So if an individual consumes a service which increases his welfare the CS is the amount of money one would have to take away from him to return him back to his original level of welfare or wellbeing. It is synonymous with the term willingness to pay.

**Reverse causality** – in our example above this is when Z impacts on X rather than the other way around.

# The Next Level

Boost your bottom line with wellbeing and technology

**Nearly half of all small business owners work six or seven days to keep their business running. What's more, 88% of them miss out on family time because they're distracted by the business.**

**But it doesn't have to be this way.**

The New Zealand Institute of Economic Research (NZIER) shows investing in staff wellbeing initiatives can have up to a **12:1 return on investment**. And using technology to run your business is key to increasing efficiency and profitability.

**Improve productivity and get back control over your time.  
Find out how to take your business to the next level.**

## How staff wellbeing can improve your bottom line

If you're ignoring wellbeing, you're missing out on money.

New figures from the NZIER have found for every single dollar you spend on staff wellbeing, you will earn an average of \$5 back on your investment within a year – money that is otherwise lost to poor productivity.

**In fact, this return on investment can go as high as 12:1 – or \$12 back for every dollar spent on wellbeing.**

Creating a wellbeing culture that supports the physical and mental health of your team goes a long way to reducing the costs and impacts of getting help for staff who need it.

It's expensive to have unhappy, distracted employees.

According to the NZIER, poor wellbeing negatively affects a person's decision-making and productivity for an average of 13 weeks a year.

That's three months!

Happier, healthier employees are more productive and profitable than their burned out, unhappy teammates. And this flows on to your business – healthy people, healthy bottom line.

Improved focus and better decision-making leads to higher productivity during the workday. Feeling happy and like you belong can be a driver for upskilling and remaining part of the team.

Here are some easy, practical ways you can make a real difference to your work culture and start to see the financial benefits of creating a wellbeing-focused workplace.

# The Next Level

## Here's what to do in 2021

### The Check In

The Check In has five steps to create a wellbeing-focused workplace with an estimated average return of 8.5:1 – or \$8.50 for every dollar invested.

From encouraging open conversations within your team, to making it part of the culture to ask for help, it's time to normalise not being okay.

Simple things like getting together as a team to celebrate success or having one-on-one conversations with employees about their lives help shift the culture towards being more open and inclusive.

### Business.govt.nz

The Ministry of Business, Innovation and Employment have a wealth of resources available online to help small business owners succeed. [Managing mental health in the workplace](#) is one such resource.

### XAP

All Xero NZ customers on a Starter, Standard or Premium plan have access to the [Xero Assistance Programme](#). This provides free, confidential counselling, support and resources to employers, employees and their families. You don't have to have all the answers. There are professionals who can help.

## Unlocking productivity through cloud technology

Before COVID-19, NZIER found a 20% uptake in cloud technology would add up to \$6.2 billion in GDP for New Zealand's economy.

Let that sink in. An additional \$6.2 billion circulating around our economy, simply from embracing new technology. And this is an achievable goal for most small businesses.

Lockdown proved Kiwis are able to rapidly change how they operate and many were successful at embracing new technology. Now, it's about applying cloud tools to other parts of your business.

### How technology can earn you more money

Streamlining operations can strip out time wasted on admin-heavy tasks, making sure all your time at work is being put towards something profitable. Remember, time is money.

Think of the difference between a local retailer using an e-commerce platform like Shopify to diversify their sales, compared to one only selling in a physical store. Or contractors who can quote and invoice on a job from their phones versus those who need to create, print and deliver invoices physically.

There's a wealth of cloud services out there that can help all sorts of businesses become more profitable.

## Here's what to do in 2021

### Find useful apps

Rather than spending hours managing inventory, rosters and supply chains, technology can take the hassle – and the human error – out of these processes. [Check out some top apps for different industries.](#)

### Find someone to help you get set up

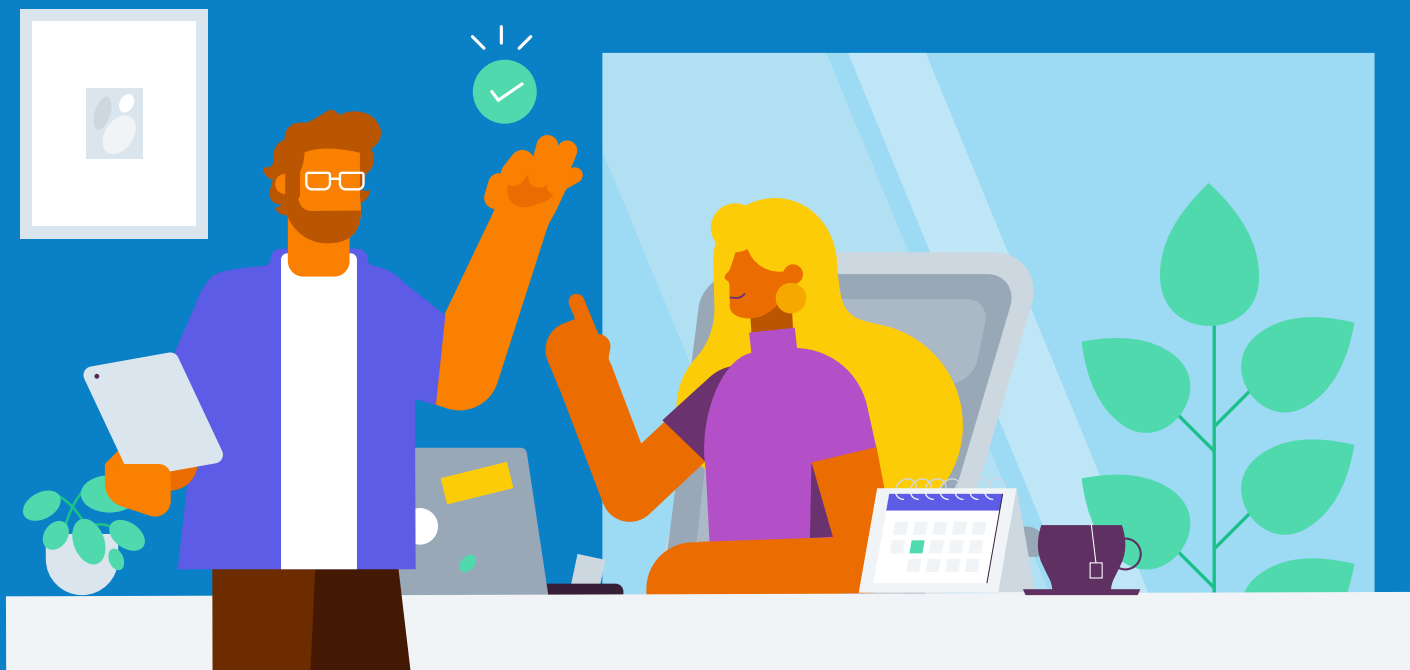

Setting up new tools for your business can be daunting. [App integrators](#) are experts in recommending and setting up the right software and apps for businesses based on their individual needs. No business is too small to engage with these consultants and it's a worthwhile investment that will save you time and money in the long run.

### Talk to your accountant

Work with your accountant to take stock of the year that was and create a plan for the next 12 months. They can help set goals and implement changes, and guide you on new developments in accounting tech like e-invoicing and open banking. [Find an advisor.](#)

# The Next Level

## Sector Starters

Here are some great tools you can use to take your business to the next level in 2021.

### Go-to for all small businesses

#### Stripe

A complete payments platform that makes it easy to accept debit and credit card payments for online invoices sent from Xero.

#### GoCardless

Automatically collect pre-authorised payments straight from your customer's bank account whenever an invoice is due. Made for recurring payments, it puts you in control of your cash flow.

#### Hubdoc

Hubdoc reduces data entry by accurately capturing information from bills and receipts and publishing it to Xero; making it easy to match transactions to the Xero bank feed.

#### HubSpot

A simple CRM that makes it easy to track every detail of your business relationships and manage your entire sales pipeline.

### Retail apps

#### Dear Inventory

Enables you and your team to manage all products, customers, suppliers, contacts, purchases and sales in one easy-to-use system.

#### CIN7

All-in-one cloud-based supply chain management, combining real-time inventory with automated procurement, production, ordering and fulfillment processes.

#### Vend

Grow in-store and online sales, increase profits and reclaim precious time with Vend's multi-outlet point-of-sale and inventory platform.

#### Airsquare

Everything you need to set up an online store, manage stock, accept payments and process your orders.

## Sector Starters

### Agriculture

#### Figured

Cloud-based farm financial management system, providing farmers and their advisors with real-time production tracking, budgeting and reporting information.

#### PaySauce

Payroll for farming. Automate payroll compliance, satisfy HR and regulatory requirements, and cut down admin with minimum wage top-ups.

#### Vinsight

Takes care of regulatory compliance like traceability, food safety, excise duties and taxes while also providing sales, inventory, production and costing tools.

#### Asset.Guru

Fixed asset management for organisations of any size, that empowers agribusinesses to leverage what they own, where it is and what it's worth.

### Trade and Construction apps

#### Tradify

The complete job management solution for tradies and contractors. Easy to learn, simple to use, handles quoting, invoicing, job scheduling and tracking, timesheets and more.

#### Fergus

Job management software for growing trades businesses. Manage job scheduling, quoting and invoicing, timesheets and financial reporting in one system.

#### Corecon

A construction software suite for estimating, project management, cost control, scheduling and collaboration. Corecon is accessible via browser or mobile apps, allowing immediate access to critical project information.

#### SimPRO

End-to-end business management system for trade service, maintenance and project contractors. With features for office and field, simPRO gives you everything you need to manage operations.

## Sector Starters

### Professional services

#### Timely

Appointment booking software that's designed to help you deliver exceptional client experiences. Easily manage your calendar, clients, staff, stock, reporting and more.

#### Gluh

A sales, quoting, automated procurement platform for IT Service Providers.

#### JobAdder

An easy-to-use, comprehensive recruitment platform for in-house recruiters and recruitment agencies. Match an applicant with the right role, track employee progress and record their performance.

### Tourism

#### Preno

An intuitive hotel management system for busy accommodation providers. It saves time on admin and simplifies bookings and billing.

#### Intellibook

A simple but powerful tour and event booking solution. Add efficiency to your operations through online registration, payments and inventory management.

### Hospitality

#### Tanda

Automates the admin side of managing rostering, timesheets and payroll, and helps you pay staff correctly for their hours.

#### Lightspeed

An all-in-one solution that helps restaurateurs and retailers sell across channels, manage operations, engage with consumers, accept payments, and grow your business.

#### Bartab

A point-of-sale solution designed for pubs and bars. Add orders to tabs or tables, split bills and take payments through the iPad app.

#### QuickB2B Order Management System

Phone app ordering and order management system designed specifically for food service wholesalers. Includes inventory management.

## How thriving small businesses are using technology

### Building a wellbeing-focused workplace from the top down

Miranda Hitchings and Jacinta Gulasekharam are behind [Dignity NZ](#), a company dedicated to promoting free sustainable period products for all people without access to these products in Aotearoa.

Dignity NZ uses a 'Buy One, Give One' initiative so that businesses can provide period products not only to their staff, but also to those who are lacking access to pads and tampons, causing them to miss out on education, work and other aspects of life.

Anika Speedy, General Manager at Dignity NZ, says that her key takeout from COVID-19 was to ensure that her team were still regularly meeting virtually, even if there was nothing that needed to be addressed, just to maintain contact and check in on each other.

This communication is at the forefront of the team culture at Dignity NZ, where a large emphasis is placed on genuine and authentic connections and check-ins.

Anika says being in contact regularly was crucial for the team, with a focus on supporting each other and being flexible enough to roll with whatever is happening in their lives.

While there is no formal wellbeing structure at Dignity NZ, Anika believes business culture operates from the top down and that business owners have a huge influence on the energy of a business – with empathy, kindness and natural awareness fostering an environment where everyone feels cared for.

Looking forward, the Dignity NZ team are looking to formalise their wellbeing programme and are looking to [The Check In](#) as a basis to kickstart this process and add to their culture of support.

## How thriving small businesses are using technology

### Driving productivity through positive culture and digital tools

Intuto is an online learning platform for creating and delivering training courses. Designed for small and medium businesses, Intuto can help you produce and deliver courses, and create learning and development strategies.

Intuto has built their business on a tailored app stack of cloud-based tools including Xero, Slack, Jira, Hubspot, Trello, Chargify, and Stripe.

Richard Warren, CEO at Intuto, says the most important factors when selecting cloud tools are usability, affordability, and making sure they integrate with other technology already in the business.

For example, Richard says having Hubspot, Chargify and Stripe seamlessly integrate with Xero is a huge help as it provides one source of truth for accounting. And in terms of their own business, it's clear that there is a growing realisation that using a platform such as Intuto for staff training is driving increasing benefits for business.

Not only does Intuto use cloud tools to drive productivity gains, but they also foster a culture of positive wellbeing. During the first COVID-19 lockdown, the Intuto team started virtual check-ins at the start and end of each day. They've kept these going since being back together in the office, and find it's a great way to connect and learn what's going on with each team member.

Since they're a small team of 11, most of the time everyone enjoys being in the office, but employees are offered the flexibility of working from home when they need to.

It's important to Richard that the team has a chance to hang out socially.

At Intuto, there's an outdoor area that's used for team barbecues and Friday drinks, which gives everyone the chance to wind down and share stories from the week.

In lockdown, they make sure the same thing happens over Zoom.

## How thriving small businesses are using technology

### Improving worksite efficiency with cloud-based tools

ASR Group provides a range of comprehensive drainage services in Auckland, and they pride themselves on responsiveness, reliability and professionalism, using technology to deliver an outstanding service.

ASR Group uses Xero, simPRO and Zoho, as well as other apps, to run and manage the business. Kevin Browne, General Manager at ASR Group, says simPRO is an extensive solution that allows them to manage nearly all parts of the business. Everything from job scheduling, quoting and invoicing, HR, assets and vehicles is managed through simPRO and seamlessly integrates with Xero.

The ASR team who are out in the field use the simPRO mobile app to clock in and out of jobs, take photos and add work notes to a job. The office staff process all the quotes and daily invoices in real time, using the information entered in simPRO by the team.

Building a strong culture is important to Kevin, and he believes that is the backbone of long-term business success. Kevin is in the process of implementing a 'check-in' with his team, taking inspiration from Xero's wellbeing guide, [The Check In](#).

Coming from a corporate background, Kevin took the old-school concept of a performance review and turned it into a less formal check-in that considers everything impacting a team member and the way they do their job, including their wellbeing.

**The Next Level is not only good for your people, it's good for your business.**

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 17/04/2021

**First name:** Keren **Last name:** Oertly Ryan

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

- ☐ Yes
- ☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.1 Have we got the game plan right?

I believe that further adjustments are needed to Council's draft long term plan to manage future risks and generate the conditions for community well-being to flourish across the next decade. My submission will be focussed on the need to invest further resources in:

- \* the prevention of environmental degradation by collecting data for scientific modelling, developing disaster-prevention strategy, and fixing or moving vulnerable landfills in Waitaha Canterbury
- \* the growth of the cultural sector, with particular reference to galleries, museums and libraries, by resourcing these institutions to deliver community-facing public programmes, classes and events that prioritise social impact through engagement and education.

#### 1.2 Rates

Our home in Bryndwr sits with the median price range for Ōtautahi properties. In the last 5 years, our rates have increased from \$2,436.73 (2014/15) to \$3,265.78 (2020/21), an increase of 74.78%. With the additional 4% rates increase proposed for the rating year 2021/22, we will be paying \$3,396.10, an average quarterly bill of \$849.02 inc GST. Our quarterly rates bill is a major expense in our carefully balanced household budget and this is only going to make the pinch tighter in the years ahead. There is a real economic impact to the local economy as a result: we rarely eat out any more, we attend few high-price (\$100+) ticketed events, and our household spend on food, utilities and clothing is much reduced. We spend more time in the outdoors, in spaces that have a low/koha/no entry fee, and we attend more events that are free or which involve local organisation by people we know.

We understand that with the ongoing challenges of the earthquakes and 2019 terror attack, loss of dividends due to Covid-19, pricing increases by Council suppliers (likely at CPI rates - 1.4% at the 4th quarter of 2020, a rate significantly lower than proposed rates increases), and the growing pressure of existing resources/facilities will necessarily require investment by Council and contributions by citizens. However, if we are to pay for this through our rates over the next 10 years of our working lives, I would like to advocate for an increase in investment in the areas of value to us in the present (environment/arts) and an increase in planning and preparation for an increasingly uncertain and precarious future.

#### 1.3 Proposed changes to existing rates, and new targeted rates

As above. Rates should not exceed \$1,000 inc GST per quarter for a property within the median price bracket for Ōtautahi within the next decade. Rates projections must be capped to ensure this, if Council wants to see recovery in the lives of local communities and the growth of the local economy.

#### 1.6 Rubbish, recycling and organics

A recent article in Stuff (Nikki Macdonald, "More than 300 old dumps at risk of coastal erosion and flooding", Mar 29 2021), outlines how local landfills around Aotearoa "risk blowout from angry seas or river flooding." The National Climate Change Risk Assessment (NCCRA) warns the dearth of information around this issue is a "substantial risk", and that increasingly extreme weather events and sea-level rises pose a "major" community threat. Changing environmental conditions are set to release heavy metals, glass, plastics and asbestos into our local environments, which may lead to "potentially cascading consequences for public health, ecosystems and the economy".

The article indicates that Council has identified 112 former or current town dumps within 100m of the coast or rivers in Ōtautahi, which could be vulnerable to sea-level rise or river flooding. However, the dumps have not yet been checked for actual risk.

I would like to advocate for a 33% year on year investment of the recycling infrastructure budget in the following areas:

- \* immediate and rigorous differentiation between types of waste at municipal landfills
- \* higher charges for disposal of medical waste, asbestos, hazardous chemicals from industrial processes
- \* greater investment in ECan's computer modelling project, prioritising at-risk dumps in Canterbury, and increase personnel resources to enable in-person visits to all landfills to "ground-truth" the data
- \* risky landfills should be dug out and relocated to better protected, in-land sites

The article advises that the Environment Ministry is considering a funding framework to protect vulnerable dumps, so additional revenue from central government might facilitate this work, beyond reliance on rates increases.

## 1.7 Our facilities

Based on Council's proposed spend on galleries, museums and libraries in the Draft LTP, the total expenditure on the arts will be \$801 million. Relative to the total Draft LTP budget of \$13.1 billion, that is a total investment of 6.11% in the arts locally. This suggests that the arts is a low priority for Council, which is surprising given the market (employment, tourism and economic stimulus to ancillary suppliers and services) and non-market (volunteering, creative development, health & wellbeing) benefits that these institutions generate. From the aftermath of earthquakes to terror attacks to the Covid-19 pandemic, I have been fortunate to work in Ōtautahi for various arts institutions or businesses and witness their substantial contributions to the life of the city, providing supported spaces for engagement and connection, opportunities for learning, development and employment, and resources for creative projects and programmes through which individuals and communities express their ideas, stories, experiences and concerns, and materialise their hopes for the future. If the proposed \$801 million investment in galleries, museums and libraries is divided by the populations of Christchurch and Banks Peninsula as at the 2018 census (370,788 - Christchurch 369,006, Banks Peninsula South 1,167, Eastern Bays 615), the average arts investment per person over 10 years is only \$2,160.26.

The Labour government's 2020 Budget has prioritised health and social services, and they have committed to going beyond Gross Domestic Product (GDP) in measuring well-being and social progress. The tireless work of arts institutions in Ōtautahi and around the country demonstrably contributes to these measures, and the current Draft LTP is an excellent opportunity to align Council's plans in practical terms to benefit everyone. The low priority of investment may be due to difficulties in quantifying the value of the arts relative to other industries and services. However, there have been important developments in quantifying well-being that advocate for increased investment in arts organisations.

Newly released figures from the New Zealand Institute of Economic Research (NZIER) found that for every single dollar spent on well-being, an entity will achieve an average of \$5-12 return on investment within the year, because improvements in happiness, well-being, and satisfaction correlate with engagement, productivity, stability and higher consumer expenditure. This bears out in research from the UK's Happy Museum Project (HMP), launched in 2015 and funded by Arts Council England. HMP looked at the impact of museums and the arts on health and well-being and quantified the value of participating in the arts at GBP1,500/NZD2,828 per person per year and being audience to the arts at GBP2,000/NZD3,771 per person per year. (By way of reference, the value of participating in sports is identified at GBP1,500/NZD2,828 per person per year; equivalent to participation in the arts.)

However, these monetary considerations are only part of the picture. A 2016 report by the American Alliance of Museums (Elizabeth Merritt, "Happiness: because you get what you measure", 2016 AAM Trendswatch Report) indicates there is growing evidence of the efficacy of investment and integration of the arts into the health & wellbeing sector. For example, Chelsea & Westminster Hospital in the UK integrated art into its wards in 2009, and found that all surveyed patients experienced a psychological lift, and 27% "very much so." Likewise, Al Maktoum Hospital in Dubai used a social media campaign #wordsthatheal, and found that creating and sharing this archive of words had "a powerful and remedial effect on those suffering."

The 2016 AAM Trendswatch Report also indicates that it is more important than ever to "embrace non-financial measures of whether a person is a valued and valuable member of society", if we are to face a future of radically lower unemployment and increasing inequity of wealth. AAM notes in particular that Millennials face higher rates of unemployment, lower prospects of advancement, and greater vulnerability to market forces than their peers of an equivalent education. Conversely, Millennials are shown to prefer spending money on experiences rather than things, a strategy shown to be more likely to produce lasting happiness. As Gen X and Millennials carry increased debt burdens over the next decade, it is critical that the Draft LTP includes a greater provision for their care and well-being, learning and development, work and life goals, aligned with their ideas, aims, experiences and priorities for the future.

On the basis of the accumulated benefits of both financial and non-financial measures outlined here, I advocate for an increase of average arts investment into galleries, museums, and libraries in Ōtautahi based on HMP's lower rate of \$2,828 per person over a 10 year period. This would comprise an investment total of \$1,048,588,464, with a return on investment at NZIER's lower 5:1 ratio, returning a value to the city of \$5,242,942,320 within the same period, with non-financial well-being measures increasing proportionally. If proved to be successful in achieving stated goals, this investment should increase in subsequent LTP's.

## 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

## Comments

I support this, but only if investment in Ōtautahi museums, galleries and libraries is also increased, to the levels outlined above.

## 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

## Comments

I support this, but only if investment in Ōtautahi museums, galleries and libraries is also increased, to the levels outlined above.

## 1.12 Any other comments:

## Council Submission

The following pieces of land should be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan:

- 27 Hunters Road, Diamond Harbour (Title Ref: CB12F/538)
- 42 Whero Avenue, Diamond Harbour (Title Ref: CB452/50)

Reasons why:

1. The current process does not adequately meet the requirements of Section 82 of the Local Government Act 2002 (Principles of consultation). Local residents must be properly consulted given the massive impact this sale could have on them.
2. A thorough community consultation must be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.
3. The following matters should be considered if disposal is to proceed through a normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process:
  1. Gully protection. Extensive replanting has been undertaken in Morgan's and Sam's Gully This work has been done by community members, including myself, with the support of the City Council, Environment Canterbury and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for these gullies, but it has not been finalised. The gully by the school is also unsuitable for housing, and should be protected. These covenants must be completed. Furthermore, it is my view that these areas should have reserve status before any sale is considered. This would protect the replanting and ensure continued community usage.
  2. The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, at the top end of Ngatea Road there is current usage and access by local residents on Marine Drive.
  3. Walking tracks have been built within the proposed covenant areas. Access to these tracks must be protected. The main school access walking track from Waipapa Avenue does not have an easement and needs to be provided for.
  4. Residents must be consulted with regards to road access to the site. For example, Ngatea Road is narrow with a sharp bend. There is no way it could safely support even a moderate increase in traffic, let alone construction traffic over an extended period.
  5. Diamond Harbour's wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay to upgrade the system to cope with the large number of houses that can be built on the land?
  6. The road in and out of Diamond Harbour can be dangerous at the best of times. A significant increase in traffic during peak hours would make the situation worse.
  7. Should all the land be sold at once? Would a staged housing development be better for the community? Should some parts of the land be released for residential development and other parts held for other uses, e.g. a new Fire Station?

I sincerely hope the Council will take into account all of the above mentioned points and remove these areas from the list of Council owned properties that could potentially be disposed of in the Long-term Plan.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.12 Any other comments:

My submission relates to the proposed disposal of

27 Hunters Road, Diamond Harbour (Title Ref: CB12F/538) and

42 Whero Avenue, Diamond Harbour (Title Ref: CB452/50)

without adequate community consultation by fast-tracking it through the LTP.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Kay **Last name:** Robertson

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.1 Have we got the game plan right?

I find this all rather overwhelming. There's a lot to consider here and I can see that the CCC has tried to do it's best to balance all the various considerations.

I really, really wish we weren't spending so much on the Key Government's "nice to haves" that came out of the 100 day plan that was forced onto all of us (and agreed to by a past Council). I oppose the \$1/2 billion stadium, another \$1/2 billion for the ridiculous convention centre and the completely over the top sports centre - but I guess we're locked into those excessive capital (and I suspect ongoing large operational) expenses. These are a big part of the rates increases we now face. The ongoing expenses will carry on in perpetuity I fear.

I care about climate change, biodiversity, and fostering a cohesive society. I think the CCC is trying to increase support for these areas, but I would prefer more.

I understand that Community funding will be cut by 5% across the board, including the Sustainability and Biodiversity funds. I want to see funding fully reinstated. Community programs are incredibly valuable and contribute to so much to our community. They support volunteer efforts and community engagement. I don't want to see this reduced one bit.

I would like to improve the amenities and beauty of the lower socioeconomic parts of the city: Linwood, Philipstown, Waltham, Aranui, etc. It seems the leafy suburbs (such as where I live) get plenty of attention when other parts of the city miss out.fundin

#### 1.2 Rates

I think we must do this.

As mentioned above, much of this is the legacy of the quakes and the 100 day plan coupled with infrastructure reaching its 'use-by' date. The whole country faces the latter problem and it will be expensive. Delay will just compound the problem.

I would really, really like to see us defer (or eliminate) the stadium. What a colossal expense for something that will be used about 1% of the time. This next generation can't afford a house; do you think they'll buy expensive

rugby tickets?

Re the debt ceiling - I support this. Interest rates are at record lows and it's smart to take advantage of that.

### 1.3 Proposed changes to existing rates, and new targeted rates

I support the removal of uniform charges as they increase the burden on the poor.

I support shifting to targeted rates for the CCBA - Central City Business Association. I feel much of the CBD rebuild has been designed at the behest of the hospo/travel/retail sectors, not so much the people who live in the greater Chch area. I know many people who say "I never go downtown, why would I?" They drive around it. The CCBA presumably got the CBD they wanted; the rest of us get to vote with our feet. Mind you, I don't blame the Council. The Council and the peasants of this fair city had little say in the rebuild.

### 1.4 Investing in upgrading and protecting our city's water networks

Quite simply, we need to do this. We have damaged and aging infrastructure and we must take responsibility and fix it instead of passing this costs to future generations.

We should be encouraging (mandating?) roof water capture on all new builds.

Stormwater: I would like to see more done in this area as it will improve our urban waterways. They are quite degraded and need help. This affects biodiversity. We need to do better here.

#### Excess water-use charge

I am opposed to this.

-What is the cost of meter readers that will be required to implement this idea?

-I've heard that 20% of the water loss is due to broken CCC pipes and such, which you are moving to fix, so good on ya. That should help a lot.

-What about people who are watering a veggie garden? Or their property is over the shingle soil of Halswell or the sandy soil of New Brighton?

I would prefer that excess water users are visited by a council staff who can assess why they are using so much water and give advice on how to reduce their usage. If they are growing food on higher draining soils, there may not be much they can do. The alternative is buying their food and they may be poor and need a home veggie garden.

We also need to consider that valuable greenery may die if it doesn't get watered in the summer. We are losing our shade trees and evaporative cooling just at a time when we need to be increasing this to help reduce summer heating.

In general, there needs to be more education and information about watering our gardens, including xerascaping, before we start charging. We need to understand why these 20% are watering so much and give practical advice on how to reduce water use.

#### Akaroa

I'm please to see you are going to use treated wastewater from Akaroa to irrigate new areas of native trees at Robinson Bay, Takamātua and Hammond Point. I suspect there is some concern in those communities about smell and lower property values, but I don't think that will happened and instead we'll create more native habitat like Hinewai. Really good idea and important to have a model so we can replicate this elsewhere.

## 1.5 Investing in our transport infrastructure

For 30 years now, my main mode of transport has been a pushbike. Every year the cycleways get better and better and I really appreciate that. It makes cycling safer and encourages more people to switch from 4 wheels to 2. I'd like to see the remaining cycleways completed sooner and then figure out what else we can do to make cycling an even better option.

I do have a car, but I would get rid of it if we had a viable EV carshare program. If I could walk, say within 100 metres, and get a car I'd earlier booked via an app - that's really all I need. I hope that we will move toward developing such a system. It would save our society so much resources that are currently tied up in redundant vehicles that sit idle most of the time (like the stadium will). A huge waste.

I support free buses. It would be a big up front expense, but there would be enormous benefits too. We heavily subsidise individual transport (and all the roading costs that requires) and heavy truck use (which is what causes most of the potholes and road repair issues). Yet we are reticent to heavily subsidise buses which would greatly improve the efficiency of both public and private transport systems. Seems strange to me. Let's fund a great, free public transport system. Also, please bring back the free electric bus that used to circle the CBD. It was so stupid to sell that. There are few bus stops in the CBD (who designed this system?) and it can be a long walk from the Bus Exchange or the few bus stops to other parts of the CBD. It's hardly an 'accessible city' for someone who can't walk several blocks.

Basically, we should aim for the '15-minute City' concept.

Regarding safety, I would really suggest you contact Scottsdale, Arizona. They have the best intersection design I've ever seen. Much safer and more efficient. For example, they use motion-detection cameras that can tell that a driver will run a red light, so the system keeps all 4 directions on red and snaps a picture of the offender so they can be ticketed. The system quickly pays for itself. They also put the right turn arrow (obviously in the US it's a left-turn arrow) at the end of the cycle instead of at the start. This clears the intersection more efficiently. The system also seems to see how many cars are waiting in the turn lanes and adjusts the time so the turn arrow stays on longer to clear the turn lanes or turns off sooner if fewer cars are in the turn lane. Much more efficient and much less frustrating.

### However, transport must be integrated with good urban design

I think we should consider making an exclusive light rail corridor from Church Corner, down Riccarton Rd, intersecting the heavy rail line to the north, through Hagley Park, past the hospital, the bus exchange, the ridiculous stadium, and through to Philipstown. Then we should have a master planned urban development from Riccarton to Philipstown. I would strongly suggest getting advice from Susan Krumdieck. See her classic: From the Ground Up: <https://www.youtube.com/watch?v=fTrj2f9t3So>

I also think we should restore the rail network to Rangiora and Rolleston to develop viable public transport now that the greater Chch has sprawled into these areas (thank you Key Gov't again for development straight out of the 70's). Then plan for intensive development along those new transport corridors (again ask Ms. Krumdieck) instead of greater use of the motorways.

The area around the Avon Otara River Corridor would also be prime for well planned redevelopment.

### CBD Residential Development

I cannot understand why we are allowing private developers to build low-rise apartments in the CBD. It must

maximise their profits, but is a wholly inadequate use of central city urban space. What other city is building stair-accessible apartments in the downtown? Not just a few; that's the bulk of what is being built. The lack of accessibility is one major issue, but it is just a waste of prime real estate. It seems that developers' short-term profits are driving our CBD residential build and we're either getting multi-million dollar apartments with a lift or banal little boxes with stairs. The boxes aren't communities. They are for property investors to rent to tenants and AirBnB. We are not getting quality affordable options. There is no cohesive plan to build something that will create a vibrant downtown. Commercial imperatives seem to be the only consideration.

The sale of the Viva/Breath/Madras Sq. land by the Ardern Gov't was absolutely appalling. I am interested in living in the CBD, but only for something like this project. This was an opportunity to showcase good urban housing that is better than what the private sector is willing to provide. The CCC did support this project and I am grateful for that. This seems another example that the "well-being" budgets is just empty words - co-benefits are hard to quantify and therefore are left off the balance sheet entirely. The bean-counters in treasury (national and Council) still don't know how to value things properly.

Here's a great article by Brendon Harre:

<https://brendon-harre.medium.com/reinventing-public-works-to-rebuild-new-zealand-1985512c754c>

Brendon references: "Professor Alan Evans in his book Economics and Land Use Planning, (2004, P.176–180). He describes two types of plans for the built environment:

- Positive planning where the government buys the land (outright or in partnership with the landowners) and builds what it understands should be there, benefiting from the capital value uplift the developed properties creates, to fund, in part or in whole, the infrastructure provided (note local or central government may also gain rising tax revenue as a result of the economic activity induced by the public works that could also fund the infrastructure provided).
- Negative planning is the use of district plans and planning rules to prescribe or proscribe what types of land-use development can occur in an area. Yet how much and what type of built environment that is actually constructed is determined by the private sector, as long as they act within the boundaries of the planning rules."

We have been doing the latter; we should be doing the former. We need coordinated effort by the Gov't and Council to plan an entire urban redevelopment and use the Public Works Act to acquire the land that will benefit from the new transport.

Under the current Anglo/American model, the Gov't builds and retains the bit that loses money, the bit that needs to be subsidised, whilst privatising the capital value uplift and then the Gov't tries to recover a bit of that through taxes. Instead we should masterplan urban redevelopment with public ownership retaining a significant portion of the commercial area, using that income to subsidise the public transport. We could consider public/private partnerships, but the public needs to keep a substantial part of the betterment. We need to socialise the benefits as well as the costs and we need much better urban development than the present ad hoc private developer model is delivering.

#### Existing housing and neighbourhoods

I'm inspired by this program in Berkeley that looks at things on a neighbourhood perspective, not individual houses:

<https://ecoblock.berkeley.edu/>

"EcoBlock is a radical retrofit of existing residential homes, creating a block that is more resilient to power

outages, has improved indoor air quality, and allows residents to co-own the main means of their energy production. The Oakland EcoBlock project is creating a technical, legal, financial, and social roadmap to decarbonize cities through block-by-block urban retrofits that reduce energy and water consumption and reduce tailpipe emissions from gasoline powered cars through support of electric mobility and carshare.”

This project improves each home’s efficiency and sustainability, but also creates neighbourhood, solar power generation to buffer individual home’s power needs and charge EVs. Doing this on a block-by-block basis creates opportunities and efficiencies where separate home systems create unnecessary redundancy. Brilliant!

### Finally

Aotearoa spends about \$8 billion on transport fuel imports every year. Our trade deficit began in the 70s; that’s no coincidence. It’s when OPEC organised and quadrupled the price of oil. This year we will likely have a small surplus - because we aren’t burning so much transport fuels. Every year, our current account deficit increases and we become more indebted to the rest of the world - to pay for transport fuel. Plus, our economy is vulnerable to shocks when the oil price goes up or our currency moves lower on international markets. Imagine if we could end this addiction! This is the promise of converting to electric, active and public transport coupled with better urban design.

We have the opportunity to redevelop several major parts of our city to create 21st century, sustainable, well-designed urban spaces where most activities are within a 15-minute walk, cycle or bus ride.

### 1.6 Rubbish, recycling and organics

Sounds good.

We need the Gov’t to hurry up with packaging deposit schemes (not just bottles), taxing or banning non-biodegradable packaging (styrofoam!), establishing labeling standards (no more greenwash claims about being compostable when it’s only in a commercial composting facility). Whatever else we need to get on top of these problems. So I hope the CCC will be pushing the Gov’t here.

Unfortunately a portion of waste ends up in storm water drains, so more education is needed about littering and keeping gutters clean is needed. Enviro schools is a key part of this).

### 1.7 Our facilities

There is an ever increasing need for social housing - particularly given the RBNZ’s blowing up an asset bubble via QE and then saying it’s not their problem. The property market has gone mad and people are suffering. We need to build more to help reduce this problem.

The reduced hours and services at the various facilities seem reasonable - we have to pay for that ridiculous stadium after all.

### 1.8 Our heritage, foreshore and parks

#### Heritage

I agree with a targeted rate based on property value for Heritage. Less burdensome on the poor.

After Brownlee's bulldozing, there isn't much heritage left to protect. I support the proposed projects, through I fear these buildings will end up looking like out of place relics of the past - rather like what you see in modern Germany after the mass bombings of WW2. Such a pity. It makes me so sad to go downtown.

-

#### Parks

I'm so glad we're not doing that ridiculous rowing facility that Brownlee wanted.

Park maintenance and improvements are good investments. The Avon Otakaro River Corridor is a massive investment, but also a great opportunity to create amenities for people and restore lost native habitat for thriving biodiversity.

However we must provide for pest control - weeds and mammals. Wellington has shown the way, but they have also shown that volunteers can only take things so far. We need to employ more rangers/coordinators. There are many people who want to trap, but there simply aren't enough coordinators and volunteers are overwhelmed and get burnt out - I know from experience. If we're going to do all this planting, we need a well-funded coordinated plan for trapping as well, to really bring back the birds to Christchurch.

I'm very pleased to see the funding for the Rod Donald Trust strategic purchases. This is a great opportunity to expand this important conservation area. However, I have heard that CCC proposed to reduce the funding for the Banks Peninsula Conservation Trust (down to \$190,000) and completely cut funding for Predator Free Banks Peninsula. What? Both these projects need more funding, not less. Both of these projects are part of a regional plan to restore biodiversity from the Peninsula, over the Harbour, and ultimately through the great urban area of Christchurch. This is a coordinated effort that needs to be fully funded. We need more funding for pest control, native planting and more rangers.

I hope there's a plan to create a habitat for the endangered black-bill gulls. Perhaps we need to build a fenced, derelict foundation wetland option as they seem to prefer that. (sarc)

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

#### 1.11 Potential disposal of surplus Council-owned properties

I'm generally not in favour of asset sales, especially strategic assets like Redbus, but that's now water under the bridge.

If these properties are truly surplus and we don't anticipate any future need by those local communities, then ok.

However, I prefer to preserve the ownership of public assets for future generations if it is reasonably foreseeable they can be of future use.

## 1.12 Any other comments:

As you can tell, I'm not happy about many of the things that have happened to our city post quake, but those are largely due to the Key Government and the Christchurch Earthquake Recovery Authority and the Minister who was in charge of it all. Share an Idea was largely binned and we've been saddled with a lot of expensive boondoggles instead. (Boondoggle: a project that is considered a waste of both time and money, yet is often continued due to extraneous policy or political motivations.)

However, we must crack on and make the best of the situation. We cannot change what's done, but we can learn and do better in the future. There is much opportunity to make improvements all over the city, to re-imagine and redevelop and I hope we will do that. I am heartened to see that many other people seem to want these things as well. We will need to support of central government - they have the funding and the power to make these changes possible.

Here's another idea that would need central government support, but I want to put it on the table. A few years back, Michael Parker wrote a book called *The Pine Tree Paradox; why creating the New Zealand we all dream of requires a great university*. He describes how NYU was transformed from an average university to one of the top ranked in the world (currently ranked 35 - U Auckland is 81, Otago is ranked 184, U Canterbury is 270, AUT is 437: <https://www.topuniversities.com/qs-world-university-rankings>.) Mr. Parker suggest building a new university on the waterfront (where another stupid stadium is mooted). However, arguably it would make more sense to build this in Christchurch, not Auckland. It would bring many benefits to the city and local economy.

The other suggestion - a truly world class cancer facility. NZ needs one of these; so many people are calling for one. Let's put it here. Perhaps we could retrofit the enormous carbuncle on Cathedral Square AKA Te Pae The Christchurch Convention Centre.

**SUBMISSION TO CHRISTCHURCH CITY COUNCIL 2021-31 LONG-TERM PLAN CONSULTATION****18 April 2021****From:****Dr David Miller and Carole Francis-Miller**

This is our submission on Christchurch City Council's Long Term Plan consultation.

We have farmed 2000 stock units of sheep and beef at Decanter Bay since 2001.

Currently we pay \$7541.93 per annum in rates to Christchurch City Council and Environment Canterbury Regional Council.

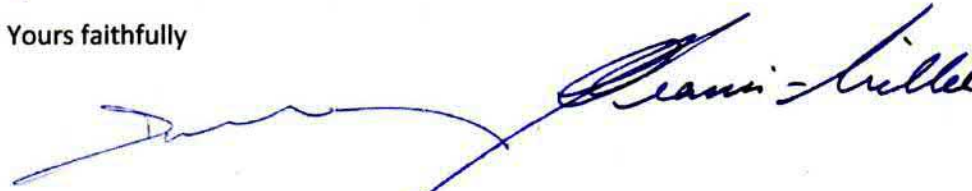

Our submission concerns the proposed extension of the land drainage targeted rate to all properties, including those that are historically unserved by the Council's land drainage infrastructure.

We are appalled at this proposal which has come out of the blue with no prior consultation or engagement, and with last minute notice through a letter dated 30 March 2021 but delivered to our address on 15 April 2021. We calculate that we will pay **\$325.04** on this targeted rate in 2021/22 and this will increase to **\$975.12** in 2023/24. How anyone could describe this as a 'fairer' approach is beyond our comprehension.

**This proposed rate is for a service we do not receive or benefit from.** That in itself makes it inequitable. The cost is oppressive for our farm and fails to recognise the work that we do as landowners on our property to manage excess water. The water from our farm drains into our catchment stream, and thence to the sea rather than to any council land drainage infrastructure. We are responsible for managing our waterways, drains, and wetlands to standards set out by rules for freshwater management and future rules on indigenous biodiversity. This includes considerable spending on fencing, riparian planting, sediment management, etc., all of which we are expected to meet at our own cost.

This proposal should not proceed. It is ill-considered, has had zero consultation with those directly affected and is simply unfair. Please think again for the sake of the rural community.

Yours faithfully

A handwritten signature in blue ink, appearing to read 'David Miller', is written over a horizontal line. The signature is stylized and cursive.**Dr David Miller and Carole Francis-Miller**

# Parish of Opawa-St Martins

Christchurch City Council  
Submission by the Anglican Parish of Opawa St Martins  
Change to Rates Remission Policy  
17<sup>th</sup> April 2021

## **Rates Remission Policy – Not-for-profit community-based organisations**

As Wardens of St Mark's Church and the Anglican Parish of Opawa St Martins we are extremely grateful for the support we receive from the Council and ratepayers in the form of rates remissions. It has always been a challenge operating a community-based charity, and it is even more so the case in these difficult times. At present, after 10 years, our church plant is currently inaccessible as it undergoing post-earthquake repairs and for us the rates remission is critical in helping sustaining our ability to support the many community initiatives we are involved in including:

- Eldercare
- Brownies
- Community Choir
- Preschool Playgroup
- Hobbies groups –gardening, model building and cactus enthusiasts.

Our Parish are concerned that the proposed policy change has not been adequately considered by Council. We do not support the proposed change to the Rates Remission Policy because of our concerns regarding:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

We understand that there are other submitters who have provided Council with information and arguments regarding the above concerns, so given our limited time and resources we haven't expanded on these in our submission.

Thank you for considering our concerns.

Barbara Robertshawe  
Vicar's Warden

Anna Wilson  
People's Warden

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Yes, more or less.

1.2 Rates

5 per cent for 2021/22 seems reasonable, given what is needed for

- day to day activities
- to catch up with deferred ageing infrastructure maintenance and renewal
- to prepare for the effects of climate change and to reduce our contribution to it
- to be ready to embrace technological change and opportunities
- to be ready for challenges and shocks that may come our way.

The cumulative effect of an average 4 percent increase over 10 years to an increase of 47.8 per cent is sobering, but I think we need to be as bold as we can be, and **definitely not take an austerity approach.**

So many of the proposed activities and services in this budget are for relatively small amounts - compared to the big infrastructure spending. It may be tempting to take an axe to some of them, but these small "soft" projects and services have a huge effect on life in Christchurch and the wellbeing of its people and diverse communities.

1.3 Proposed changes to existing rates, and new targeted rates

## New targeted rates

### Excess water targeted rate

I agree with this proposal which seems to be targeted well above average rate of water consumption - as long as the proposed exemptions are included - for unexpected high use due to a leak, and for personal circumstances such as medical conditions or very large families requiring more than average water use.

It should encourage more conservative water use habits without being unduly punitive or disruptive to people's lifestyles. Water is often wasted, eg hosing down driveways, watering street verges, sprinklers on small lawns or garden strips with overflow on to paved surfaces. The Council already publicises advice and tips on how to save water, but if this rate is adopted and there is plenty of publicity across many platforms, hopefully more households will adopt the advice as part of their normal patterns of water use.

### Heritage targeted rate

I support a separate targeted rate for heritage. It should provide transparency and a guaranteed but not unlimited pool of funding for heritage projects and acquisition - rather than the current situation where difficult decisions have to be made about heritage spending against many other important and competing interests funded by the general rate.

I also agree that a rate based on house value rather than a fixed sum is more equitable and affordable for those on limited incomes.

### Arts Centre Te Matatiki Toi Ora

I support the targeted rate to provide the Arts Centre Te Matatiki Toi Ora with a capital grant to finish the remaining strengthening and restoration work. So much has already been completed that it makes no sense not to finish the job in spite of Covid 19 making inroads into their finances.

## 1.4 Investing in upgrading and protecting our city's water networks

Very important that we systematically renew our aging water infrastructure. Being mostly out of sight it has been easy to take it for granted and ignore its importance in favour of more visible or glamorous projects.

This infrastructure is enormously expensive to maintain, renew and extend but it is something we must do. Leaking and defective pipes are not only environmental and health hazards, wasteful of resources and a cause of inconvenience to affected households and communities, but they are an ongoing financial drain. The budgeted amount in this plan, with more catchup work projected over 30 years, is a good start.

**Drinking water** - I used to be strongly in favour of **chlorine free drinking water**, but after experiencing the recent addition of chlorine to our water, I no longer hold this view, as I have found its addition unnoticeable, and would be happy to continue with chlorine added if it helps provide the safest water for us to drink or is mandated by central government, or both.

**Wastewater** - I support the replacement of ageing pipes, the work to protect harbours from treated wastewater discharge, improvements in treatment plants, and innovative methods being considered, with input from mana whenua and local community, to use reclaimed water on selected land projects

**Surface water** - I have been pleased to see the recent increase in use of innovative ways to improve stormwater runoff from roads, eg swales, rain gardens, plantings. Also a huge increase in river and streamside plantings with ecological, aesthetic and water quality benefits. Excellent use of rates money!

- *I would like to see more **education and publicity** (perhaps in partnership with Lincoln University's Waterways Centre for Freshwater Management) on the link between the often contaminated stormwater leaving our homes and the health of waterways, eg copper traces from spoutings, downpipes or roofs ending up in rivers, zinc from roofing, contaminants and detergents from cars washed and hosed on driveways or side of road.*

## 1.5 Investing in our transport infrastructure

Totally support an emphasis on making it easier to travel by public transport, bike, scooter or foot in order to

reduce both the high carbon emissions from road traffic and road congestion. Reducing road congestion in itself should produce improvements in safety both for drivers and for users of alternative transport options.

Also very much support the 23 per cent of capital expenditure for environmental improvements and 12 percent for safety improvements and renewals. And on taking advantage of "shovel ready" funding to accelerate the Major Cycle Routes programme, and Waka Kotahi's 51 to 75.5 per cent funding contribution to safety improvements.

- *City design and planning goes hand in hand with transport infrastructure as a means of reducing our carbon emissions and making transport options safer, more pleasant, relaxing, efficient, less time wasting. A more compact city with well designed cycleways (underway!), convenient, affordable public transport and an end to or big reduction in ever increasing urban encroachment on farmland and new strung out developments are all important parts of the picture and complement efforts to improve the transport network and reduce long daily commutes in private vehicles.*

## 1.6 Rubbish, recycling and organics

I support the Council's focus on changing our "throw-away" culture and the proposed spending on infrastructure upgrades of the facilities that handle rubbish, organics and recycling - to make them better able to reduce the amount of waste that goes to landfill and contribute to a circular economy.

I note that of the \$18.4 million to be spent on recycling infrastructure over the next 10 years, \$16.8 million will be funded by Government.

I support the proposed inclusion of education programmes to help divert more waste from landfill and an exploration of ways to reduce greenhouse gas emissions from the Council's own waste processing activities, kerbside collection vehicles, and waste transportation - as a way of contributing to the Council's zero emissions target.

## 1.7 Our facilities

### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

**The Arts Centre** is one of our most beautiful, accessible and well loved heritage venues. Its precinct provides public outdoor areas and other public amenities and economic opportunities for a diverse range of businesses and organisations: cultural, educational, the arts, hospitality, consumer goods, reuse of materials, and more. It is a place that supports our 21st century lifestyle and has been strongly embraced by the people of Christchurch and its visitors, but its atmosphere resonates with stories, people and reminders of the past.

I support the targeted rate to provide the Centre with a capital grant to finish the remaining strengthening and restoration

work. So much has already been completed that it would makes no sense not to finish the job.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

Base isolation for the Robert McDougall Art Gallery

I support the proposed funding for this as part of Canterbury Museum's redevelopment, with base isolation across all buildings. The Museum's development has been on hold for so long - it now seems within reach at last, and base isolation of the Robert McDougall Art Gallery as well as the rest of the Museum complex would be a prudent safeguard against future earthquakes.

| Rates Remissions Policy Submission |

Christchurch City Council

---

Submission by Anglican Diocese of Christchurch –  
Parish of Linwood-Aranui  
 Change to Rates Remission Policy  
 18<sup>th</sup> April 2021

### **Rates Remission Policy – Not-for-profit community-based organisations**

The Parish of Linwood-Aranui is extremely grateful for the support we receive from the Council and ratepayers in the form of rates remissions.

It has always been a challenge operating a community-based charity, and it is even more so the case in these difficult times. For us, the rates remission is critical in helping support the provision of many community initiatives we are involved in, including:

- operating a foodbank, op shop for low cost clothes, drop in café, community lunch, and various other activities to assist and cater for those in need in our parish boundary;
- the provision of religious services for those wanting to avail themselves of such services.

All these services and activities need buildings from which to perform those services and activities. The Parish very seldom runs a surplus of income over expenses for the year, normally making a loss. Without being able to build up our investments over time we would not be able to maintain our buildings to a proper standard and then would almost certainly have to close down due to most charitable funders not funding building repairs. This would disadvantage those in the community needing our services and activities. For example, this year our Parish is having its earthquake repairs done and taking the opportunity to catch up on deferred maintenance, which is so far costing us some \$137k and counting. Without our investments we would not be able to have such work carried out.

The Parish is concerned that the proposed policy change has not been adequately considered by Council. We do not support the proposed change to the Rates Remission Policy because of our concerns regarding:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

We understand that there are other submitters who have provided Council with information and arguments regarding the above concerns, so given our limited time and resources we have not expanded on these in our submission.

The Parish does/does not wish to speak to Council in support of our submission.

## Feedback

1.1 Have we got the game plan right?

I did one submission but when I attached a file, the submission disappeared, so I am repeating it.

Emphasis needs to be on climate change. We are having an emergency so every decision made needs to have green houses gases taken into consideration. They need to be zero.

People's well being needs to be a priority. In Christchurch, people are suffering from the earthquakes and the loss of income from them, the massacre, Covid and now climate change. Everyone needs to be looked after so that we can raise healthy families that thrive rather than have people turn to drugs and other unsocial behaviours.

1.2 Rates

This is too high. It should be at a level of inflation. There are too many people affected by high rents and job losses from Covid.

1.3 Proposed changes to existing rates, and new targeted rates

I agree with the excess charge for high water use.

Kapiti council. They saved electricity from water pumping when meters were installed. <https://www.kapiticoast.govt.nz/whats-on/news/supporting-news-items/our-emissions-reduction-journey/>

**Installation of water meters:** Household and business water meters were installed throughout the district in 2013/14 as part of a move to improve water conservation, identify leaks and enhance the sustainability of our existing water supply. The resultant reduction in demand for water had the additional benefit of significantly reducing electricity use through our water distribution network. In 2014/15, an estimated \$88,000 of energy costs for water, and 159 tonnes of CO<sub>2</sub>e emissions, were avoided.

We also have to look after the water level of the aquifers so our descendants do not run short of water.

---

#### 1.4 Investing in upgrading and protecting our city's water networks

We do need to spend on water. Upgrading so the pipes don't leak.

Stormwater flooding causes a problem.

I would like to see permeable paving : See attached file on permeable paving in the Gold Coast.

Reduction of stormwater drainage in sandy and stony areas. In Marblehead, Mass., USA, the rain water from the roofs drain into the soil. There is no drainage on the streets. This saves pollution entering the stormwater.

Support people financially who put in rainwater tanks as they don't use the stormwater system or piped water.

Lesser support could be for people who put in tanks who use fresh water but not the stormwater.

---

#### 1.5 Investing in our transport infrastructure

We have excellent roads compared to other countries including wealthy areas in Mass., USA. The people in east Christchurch who still have earthquake damaged roads still need them fixed. The spending improving the roads around St Albans has been excessive.

Leave spending at 2%. Spend the allocated money on bus lanes, better cycle lanes and road use for scooters and other transport.

Have free buses on Saturdays and Sundays to encourage families to learn how to use buses.

Buses need to have a Next Stop sign inside of them to make travel easier.

Free buses or tram use in the inner city. The East End has only one bus route though it. It's a long walk from the bus station to the Gardens, Art Gallery and museum. The electric buses were great. They need to travel down Hereford Street and Armagh Street. The tram would work well as one stop is near the bus station.

---

#### 1.6 Rubbish, recycling and organics

This infrastructure is necessary.

I would like to see easier ways of getting repairs done. There seems to be only one place in Christchurch that does repairs for microwaves with a charge for looking at the item. The council needs to have repairing shops.

The attitude is that it is cheaper to get a replacement rather than repair. There needs to be a disposal charge when you buy an item so it is more expensive to replace.

Information on recycling: The people at the council only give general help but when we went to the recycling centre I was able to ask about much more specific information. E.g. Can you recycle envelopes with windows? There are also some compostable products that can be composted. It would be great to find out what these are easily.

Green waste: Information at the drop off places is detailed and not on the website. It was frustrating, after checking the website, to end up taking stuff home after hiring a trailer because it could not be accepted.

#### 1.7 Our facilities

Community housing is great. I think there needs to be more of it.

Wharenui pool needs to remain. It is essential for our children's well being that they have this activity available for them. They can go to a local pool and have fun. They also learn water skills and how to mix with other pool users.

If the people who use the service desks need them, then they should remain. Adults on benefits and some on super cannot afford wifi to pay bills and cheques are disappearing. The vulnerable need to be looked after.

#### 1.8 Our heritage, foreshore and parks

Spend the renewing funding only. We need to save money and not spend on non essential services.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

I know the museum needs an upgrade, but we can manage as it is for now. Other things are a priority and the council provides a lot of activities. We are so much better off than most other cities in NZ and overseas.

#### 1.11 Potential disposal of surplus Council-owned properties

Agree. And meanwhile, are they well insured?

#### 1.12 Any other comments:

City planning. Subdivisions in the country where transport to and from Christchurch needs to be stopped.

Subdivisions on land that is good for agriculture and horticulture needs to be stopped.

Planning needs to include shopping areas and services and preferably jobs within walking distances. St Albans is a good example. There are great shops and services at Edgware and nearby Merivale. Things missing include a market, hardware shop, gym.

Susan Kumdieck: Grenoble is a city a bit smaller than Christchurch. They are using innovative ways to get people out of cars. <https://www.youtube.com/watch?v=4mzRbEJfjPA> 19:00 to 27:04

Marketing: Needs to be modernised so that bus travel is perceived to be fun, enables connection, a bargain, relaxing. They manage to sell Coca Cola and Toyota trucks using these values and needs.

### 13.11.1 Introduction

Porous pavement is a load bearing pavement structure that is permeable to water. There is a wide variety of porous pavement types, each with advantages and disadvantages for various applications. The common features of porous pavements include a permeable surface layer overlying an aggregate storage layer. The surface layer of porous pavement may be either monolithic (such as porous asphalt or porous concrete) or modular (clay or concrete blocks). The reservoir storage layer consists of crushed stone or gravel which is used to store water before it is infiltrated to the underlying soil or discharged towards a piped drainage system.

Porous paving can be used as an alternative to conventional paving and hardstand surfaces within urban developments to reduce stormwater runoff velocity and volume by:

- limiting the amount of impervious surface area on a site;
- encouraging infiltration of surface runoff;
- detaining and slowly releasing water from a site.

Water quality improvement is achieved through:

- filtering through the pavement media and underlying material;
- potential biological activity within the base and sub-media;
- reduction of pollutants through reduced runoff volumes.

A number of porous paving types are available including:

|                                                    |                                                                                                                                                                                      |
|----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Porous Asphalt or Concrete (Monolithic Structures) | Open graded asphalt or concrete with reduced or no fines and a special binder that allows water to pass through the pavement by flowing through voids between the aggregate.         |
| Modular Pavers                                     | Pavers may be made of porous material or where pavers themselves are not permeable, are installed with gaps between the pavers to allow stormwater to penetrate into the subsurface. |
| Grid or Lattice Systems                            | These are made of concrete or plastic grids filled with soil or aggregate that water can percolate through. These systems may also be vegetated (usually with grass).                |

Porous pavers make up the surface of the porous paving system, however there are a number of layers to the overall system (refer to **Figure 13.11-A**). Pavers are generally laid on a bedding layer of coarse sand. Beneath the porous pavement surface and bedding layer is an aggregate storage or reservoir layer (the detention volume) underlain with geotextile fabric. The aggregate also serves as the road or parking area's support base and must be sufficiently thick to support traffic loads. A final filter layer is provided at the base of the paving system below the aggregate layer. This is usually fine sand (or finer material), that contains the underdrainage system of is the final layer prior to infiltration to surrounding soils or discharge to a piped drainage system. Geotextile fabric is used to provide separation between the bedding layer, the aggregate layer and the filter layer beneath. Stormwater runoff from the paved surface and adjacent impervious areas passes through the porous pavement to the aggregate reservoir where it is filtered and stored.

**Figure 13.11-A: Typical Porous Paving Section**

Permeable pavement systems can function in two ways:

- as an infiltration system, holding water to allow percolation in underlying soils;
- as a detention system, holding surface water temporarily to reduce peak flows by later release of stormwater to the drainage system.

Infiltration porous paving systems are not encouraged for use in Gold Coast City, particularly where they are located adjacent to conventionally paved/ concreted areas such as roads. Water infiltration adjacent to road pavements can cause damage such as asphalt stripping and loss of strength in sub-grades. Porous paving should not be included in treatment trains where they would become Council owned or maintained assets. Porous paving systems in Gold Coast City should be privately owned and maintained.

For infiltration porous paving systems, direction should be taken from **Section 13.8 – Infiltration Measures**, taking into consideration the design guidance provided regarding site soil conditions, setback distances, etc. and the design procedure in that section.

## 13.11.2 Design Considerations

### 13.11.2.1 Design Objectives

Porous paving systems can be designed to achieve a range of objectives including:

1. Minimising the volume of stormwater runoff from a development.
2. Preserving predevelopment hydrology.
3. Capturing and detaining or infiltrating flows up to a particular design flow.
4. Enhancing groundwater recharge or preserving predevelopment groundwater recharge.
5. Removing some sediments and attached pollutants by passing runoff through an underlying media layer.

The design objective will vary from one location to another and will depend on site characteristics, development form and the requirements of the receiving ecosystems. It is essential that these objectives are established as part of the conceptual design process and approved by GCCC prior to commencing the engineering design.

This procedure should be used when porous paving is to provide flow attenuation and water quality treatment. Porous paving may also be used as a general measure to reduce the impervious fraction of a site where it is not considered itself as a treatment measure. This procedure should not be used in these cases.

### 13.11.2.2 Selecting the Type of Porous Paving

Selection of the type of paving for a particular application must occur as part of the conceptual design process (ie. Site Based Stormwater Management Plan) by assessing the site conditions and desired amenity or built environment/ local character requirements against the functional types of paving systems. **Table 13.11-A** shows a range of suitable applications for different porous paving types in Gold Coast City.

**Table 13.11-A: Potential Applications of Porous Paving in Gold Coast City**

| Condition/ Use                          | Porous Asphalt/ Concrete | Porous Pavers/ Grid Systems | Interlocking Concrete Paving Systems |
|-----------------------------------------|--------------------------|-----------------------------|--------------------------------------|
| Commercial parking lots                 | ✓                        | ✓                           | ✓                                    |
| Perimeter/ overflow parking             | ✓                        | ✓                           | ✓                                    |
| Residential/ light commercial driveways | ✓                        | ✓                           |                                      |
| Patios other paved areas                | ✓                        | ✓                           |                                      |
| Sporting courts                         | ✓                        |                             |                                      |
| Industrial storage yards/ loading zones | ✓                        | ✓                           |                                      |
| Parking pads (eg. caravan parks)        |                          | ✓                           | ✓                                    |

Porous paving is not recommended for the following applications in Gold Coast particularly where the asset is to be handed over to Council, nor should porous paving be located immediately adjacent to the following areas:

- road pavement;
- on-street parking;
- road shoulders;
- median strips;
- footpaths and bikeways;
- other uses in parkland, civic spaces or municipal areas to be maintained by GCCC.

### 13.11.2.3 Sizing

The size of a porous paving system requires consideration of the volume and frequency of runoff discharged to the paved area, the available 'detention volume' and the infiltration rate (product of 'infiltration area' and hydraulic conductivity of the paving system).

The required 'detention volume' is defined by relating the volume of inflow and outflow for a particular design storm, and then deriving the 'infiltration area' to ensure the system empties prior to the commencement of the next storm event.

### 13.11.2.4 Siting

Permeable paving systems should be located in areas to avoid:

- high water tables;
- saline soils;
- acid sulphate soils;
- wind blown areas;
- runoff from areas expected to have a high sediment load;
- high traffic volumes.

The design should demonstrate avoidance of these areas.

### 13.11.2.5 Pretreatment of Stormwater

Pretreatment of stormwater entering a porous paving system is primarily required to minimise the potential for clogging of the paving media and to protect groundwater quality where infiltration is proposed. Stormwater should be treated to remove coarse and medium sized sediments and litter to prevent blockage of the porous paving system. Suitable pretreatment to porous paving systems includes vegetated buffers, swales, or a small sediment forebay depending on the nature of runoff to the paving system.

### 13.11.2.6 Vegetated Systems

In modular or grid paving systems, grass may be grown in the voids however the following factors will result in this being unsuccessful due to:

- lack of sufficient soil depth and nutrients for grass to grow;
- heat retained in the pavers;
- wear from vehicle movement.

Grass should only be considered where these factors will not affect plant growth. The design should demonstrate mitigation of these factors if vegetated systems are proposed.

### 13.11.2.7 Site Terrain

The surface of the 'porous paving area' must be flat or as close to this as possible to ensure uniform distribution of flow and to prevent hydraulic overloading on a small portion of the surface. Generally porous paving systems should be on a slope of less than 3% and should not be considered for slopes >5%.

### 13.11.2.8 Flow Management

Where possible, 'above design' flows will bypass the porous paving systems. This can be achieved in a number of ways. An overflow pipe or pit, which is connected to the downstream drainage system, can be used.

'Above design' flows or overflows from the porous paving must be diverted towards the stormwater system and design of overflows should demonstrate that overflow will not be directed towards or cause damage to buildings, structures and services.

**13.11.2.9 Structural Integrity**

A proposed design will have to consider the likely damage to the pavement by the expected vehicle load and demonstrate structural integrity of the pavement to a standard at least similar to the requirements of the following guidelines:

- **Austroads;**
- **Main Roads Queensland;**
- **Section 3.3 of the Land Development Guidelines.**

**13.11.2.10 Safety**

Designers must also consider the likelihood of pedestrian traffic across the pavement surface and ensure the porous paving does not create a public safety risk. Key considerations in the design of porous paving systems in pedestrian traffic areas will include minimising trip hazards and minimising slips and falls associated with a slippery pavement surface.

**13.11.3 Design Process**

The following sections detail the design steps required for porous paving. Key design steps are:

### 13.11.3.1 Step 1: Confirm Concept Design and Treatment Performance

This step involves confirming the design objectives, defined as part of the conceptual design, to ensure the correct porous paving system design method is selected. The treatment performance of the system should be confirmed (including revisiting and checking of any modelling used to assess treatment performance). The type of porous paving system will be selected by assessing the site conditions against the relative merits of the different porous paving types, and in consideration of integration with the built environment and amenity.

#### a) Check Service Locations

As part of the confirmation of objectives and review of the conceptual design, the designer must check that there are no existing or proposed services in the proposed site for the porous paving.

The designer should liaise with civil designers and GCCC officers to ensure:

- porous paving will not result in water damage to existing services or structures;
- access for maintenance to existing services is maintained;
- no conflicts arise between the location of services and WSUD devices.

### 13.11.3.2 Step 2: Pretreatment Design

As outlined in **Section 13.11.2.5**, both Level 1 Pretreatment (minimising risk of clogging) and Level 2 Pretreatment (groundwater protection) may be required for porous paving systems. To determine Level 2 requirements, an assessment of the groundwater must be undertaken to define existing water quality, potential uses (current and future) and suitability for recharge.

Pretreatment measures include the provision of leaf and roof litter guards along the roof gutter, vegetated swales, sediment forebays or buffer strips.

### 13.11.3.3 Step 3: Determine Design Flows

The hydraulic design for porous paving should be based on the following design flows:

- minor Storm Event for sizing the surface area, detention volume and overflow pit of the paving system;
- major Storm Event for overflow or bypass of the system. These flows will flow over or bypass the system and enter the stormwater drainage system (either piped system or overland flow) for the relevant design event.

A range of hydrologic methods can be applied to estimate design flows. If typical catchment areas are relatively small, the Rational Method design procedure is considered suitable.

### 13.11.3.4 Step 4: Size Porous Paving System

Where the design objective for a particular porous paving system is peak discharge attenuation or the capture and infiltration of a particular design storm event, then the design storm approach may be adopted for sizing the porous paving system.

#### a) Design Storm Selection ( $Q_{des}$ )

The first step is to select the design storm to capture for detention or infiltration. This must occur in consultation with GCCC and will generally relate to 3 month ARI and 1 year ARI design storms.

#### b) Detention Volume

The required 'detention volume' of a porous paving system is defined by the difference in inflow and outflow volumes for the duration of a storm.

The inflow volume ( $V_i$ ) will depend on the source runoff being routed through the porous paving system. Inflow may include:

- rainfall onto the porous paving system only;
- a combination of rainfall onto the porous paving system and runoff from other impervious areas.

# Our Living City

The inflow volume for the design storm on the porous paving system (treatment surface) only is (**Argue 2007**):

$$V_i = \frac{A_s \cdot i}{10^3 \times 360} \cdot D$$

Where:

|       |   |                                                       |
|-------|---|-------------------------------------------------------|
| $V_i$ | = | inflow volume                                         |
| $A_s$ | = | estimate surface area of the paving (m <sup>2</sup> ) |
| $i$   | = | average rainfall intensity for design storm (mm/hr)   |
| $D$   | = | duration of storm (hr)                                |

## Equation 13.11.1

The inflow for a combination of rainfall onto the porous paving system and runoff from other impervious areas is determined, as the product of the design storm flow and the storm duration.

$$V_i = Q_{des} \cdot D$$

Where:

|           |   |                                                                                        |
|-----------|---|----------------------------------------------------------------------------------------|
| $V_i$     | = | inflow volume (for storm duration D) (m <sup>3</sup> )                                 |
| $Q_{des}$ | = | design storm flow for sizing<br>(Rational Method, $Q = CIA / 360$ (m <sup>3</sup> /s)) |
| $D$       | = | storm duration (hrs x 3600 s/hr)                                                       |

## Equation 13.11.2

Outflow from the porous paving system is via the base (and on some cases the sides) of the infiltration media and is dependent on the area and depth of the structure. It is calculated using the filtration rate through the filter layer media and the storm duration.

The maximum filtration rate represents the maximum rate of flow through the paving system and is calculated by applying Darcy's equation as follows:

$$Q_{max} = K_{sat} \cdot A \cdot \frac{h_{max} + d}{d}$$

Where:

|           |   |                                                     |
|-----------|---|-----------------------------------------------------|
| $Q_{max}$ | = | maximum filtration rate (m <sup>3</sup> /s)         |
| $K_{sat}$ | = | filter layer saturated hydraulic conductivity (m/s) |
| $A$       | = | area of the porous paving (m <sup>2</sup> )         |
| $h_{max}$ | = | depth of pondage above the soil filter (m)          |
| $d$       | = | depth of filter media (m)                           |

## Equation 13.11.3

Given there is no detention depth or pondage above surface of the porous paving, and conditions are likely to be fully drained, then:

$$\frac{h_{max} + d}{d} = 1$$

Outflow volume is calculated as:

$$V_o = Q_{max} \cdot D$$

Where:

|           |   |                                             |
|-----------|---|---------------------------------------------|
| $V_o$     | = | outflow volume (m <sup>3</sup> )            |
| $Q_{max}$ | = | maximum filtration rate (m <sup>3</sup> /s) |
| $D$       | = | duration of storm event                     |

## Equation 13.11.4

Thus, the required detention volume ( $V_d$ ) of an porous paving system can be computed as follows:

$$V_d = \frac{V_i - V_o}{p}$$

Where:

|       |   |                                                  |
|-------|---|--------------------------------------------------|
| $V_d$ | = | required detention volume (m <sup>3</sup> )      |
| $V_i$ | = | inflow volume (m <sup>3</sup> )                  |
| $V_o$ | = | outflow volume (m <sup>3</sup> )                 |
| $p$   | = | porosity of the retention trench (gravel = 0.35) |

**Equation 13.11.5**

**Note:** *Volume calculations may need to be revised if further steps in the design process result in changes to the expected surface area of the porous paving system.*

#### c) Depth

The depth of the porous paving system will be determined from site constraints and the structural requirements of the paving system (refer **Section 13.11.2.9**).

#### d) Surface Area Check

To this point in the design process an assumed surface area may have been used. A check and final surface area of the porous paving should be determined using two steps:

- calculate surface area based on the volume and required depth;
- check surface area has capacity to infiltrate peak flows for design storm.

The surface area of the porous paving system should be checked using the following equation from **Argue (2007)**:

$$A_s = \frac{Q_{peak}}{(1 - B) \cdot K_{sat}}$$

Where:

|            |   |                                                                                                                 |
|------------|---|-----------------------------------------------------------------------------------------------------------------|
| $Q_{peak}$ | = | Peak inflow to porous paving surface (m <sup>3</sup> /s)                                                        |
| $B$        | = | Blockage Factor (this should be estimated based on non-porous structural elements (eg. plastic/ concrete grids) |
| $K_{sat}$  | = | saturated hydraulic conductivity of paving surface (eg. concrete/ asphalt)/ or porous material between pavers.  |

**Equation 13.11.6**

#### 13.11.3.5 Step 5: Underdrainage Design and Check

To ensure slotted pipes are of adequate size, several checks are required to ensure:

- the perforations are adequate to pass the maximum filtration rate;
- the pipe itself has sufficient capacity;
- that the material in the filter layer will not be washed into the perforated pipes (consider a transition layer).

The capacity of the perforated under-drains need to be greater than the maximum filtration rate to ensure the filter media drains freely and does not become the hydraulic 'control' in the porous paving system (ie. to ensure the filter layer sets the travel time for flows from the aggregate layer rather than the perforated under-drainage system).

To ensure the perforated under-drainage system has sufficient capacity to collect and convey the maximum filtration rate, it is necessary to determine the capacity for flows to enter the under-drainage system via the perforations in the pipes. To do this, orifice flow can be assumed and the sharp edged orifice equation used. Firstly, the number and size of perforations needs to be determined (typically from manufacturer's specifications) and used to estimate the flow rate into the pipes, with the maximum driving head being the depth of the porous paving system. It is conservative, but reasonable to use a blockage factor to account for partial blockage of the perforations by the drainage layer media. A 50 % blockage of the perforations should be used.

The flow capacity of the perforations is thus:

$$Q_{\text{perf}} = B \cdot C_d \cdot A \sqrt{2 \cdot g \cdot h}$$

Where:

|                   |   |                                               |
|-------------------|---|-----------------------------------------------|
| $Q_{\text{perf}}$ | = | flow through perforations (m <sup>3</sup> /s) |
| $C_d$             | = | orifice discharge coefficient (0.6)           |
| $A$               | = | total area of the orifice (m <sup>2</sup> )   |
| $g$               | = | gravity (9.81 m/s <sup>2</sup> )              |
| $h$               | = | maximum depth of water above the pipe (m)     |
| $B$               | = | blockage factor (0.5)                         |

#### Equation 13.11.7

If the capacity of the drainage system is unable to collect the maximum filtration rate additional under-drains will be required.

After confirming the capacity of the under-drainage system to collect the maximum filtration rate, it is necessary to confirm the conveyance capacity of the underdrainage system is sufficient to convey the collected runoff. To do this, Manning's equation can be used (which assumes pipe full flow but not under pressure). The Manning's roughness used will be dependant on the type of pipe used (refer to **QUDM Table 5.21.3 (DPI, IMEA & BCC 1992)**).

Under-drains should be extended vertically to the surface of the porous paving system to allow inspection and maintenance when required. The vertical section of the under-drain should be unperforated and capped to avoid short-circuiting of flows directly to the drain.

#### 13.11.3.6 Step 6: Check Emptying Time

Emptying time is defined as the time taken to fully empty a detention volume following the cessation of rainfall. This is an important design consideration as the computation procedure associated with **Equation 13.11.4** assumes that the storage is empty prior to the commencement of the design storm event. **Australian Runoff Quality (Engineers Australia 2006)** suggests an emptying time of the detention storage of porous paving systems to vary from 12 hours to 84 hours. Designers should aim to have a drainage time of 24 to 48 hours.

Emptying time is computed simply as the ratio of the volume of water in temporary storage (dimension of storage x porosity) to the filtration rate through the filter layer (hydraulic conductivity x infiltration area):

$$t_e = \frac{1000 \cdot V_d \cdot P}{A_{\text{inf}} \cdot K_{\text{sat}}}$$

Where:

|                  |   |                                                       |
|------------------|---|-------------------------------------------------------|
| $t_e$            | = | emptying time (hours)                                 |
| $V_d$            | = | detention volume (m <sup>3</sup> )                    |
| $P$              | = | perimeter length of the infiltration area (m)         |
| $A_{\text{inf}}$ | = | infiltration area (m <sup>2</sup> )                   |
| $K_{\text{sat}}$ | = | filter layer saturated hydraulic conductivity (mm/hr) |

#### Equation 13.11.8

#### 13.11.3.7 Step 7: Check Requirement for Impermeable Lining

The saturated hydraulic conductivity of the natural soil profile surrounding the paving system should be tested together with depth to groundwater, chemical composition and proximity to structures and other infrastructure. This is to establish if an impermeable liner is required at the base (only for systems designed to preclude ex-filtration to *in-situ* soils) and/or sides of the pavement sub-layers. If the saturated hydraulic conductivity of the paving system is more than one order of magnitude (10 times) greater than that of the surrounding *in-situ* soil profile, no impermeable lining is required.

**13.11.3.8 Step 8: Specify Porous Paving Layers Elements**

The following design and specification requirements must be documented as part of the design process for porous pavement systems.

**a) Porous Paving Surface**

The porous paving layer will depend on the type of paving decided on through the design process. The porous paving surface type must be specified along with any proprietary requirements and specifications. The pavers are set on a coarse sand or fine gravel bedding layer. The purpose of this layer is to provide a smooth, flat surface on which to lay the porous paving.

**b) Retention/ Aggregate Layer**

Where the 'detention volume' is created through the use of a gravel-filled trench then the gravel must be clean (free of fines) stone/ gravel with a uniform size of between 25 - 100 mm diameter.

**c) Geofabric**

Geofabric must be installed along the side walls and through the base of the detention volume to prevent the migration of *in-situ* soils, and material from the bedding and filter layers into the system. Geofabric with a minimum perforation or mesh of 0.25 mm should be used.

**13.11.3.9 Step 9: Size Overflow Pit/ Pipe**

Overflow from a porous paving system can be via overflow pipes located just underneath the sand bedding layer, in the top of the detention/ aggregate layer or can be via an overflow pit or similar structure.

**a) Overflow Pipes**

Pipe flows are to be calculated in accordance with **Section 3.5** and **QUDM (DPI, IMEA & BCC 1992)** which use standard pipe equations that account for energy losses associated with inlet and outlet conditions and friction losses within the pipe. For most applications, the pipe or culvert will operate under outlet control with the inlet and outlet of the pipe/ culvert being fully submerged. With relatively short pipe connections, friction losses are typically small and can be computed using Manning's equation. The total energy (head) loss ( $\Delta H$ ) of the connection is largely determined by the inlet and outlet conditions and the total losses can be computed using the expression as provided in **QUDM (DPI, IMEA & BCC 1992)**:

$$\Delta H = h_f + h_s$$

Where:

|                    |   |                                                                                                                                         |
|--------------------|---|-----------------------------------------------------------------------------------------------------------------------------------------|
| $h_f$              | = | $S_f \cdot L$ = head loss in pipe due to friction (m)                                                                                   |
| $h_s$              | = | $(K_{in} + K_{out}) \cdot V^2 / 2g$ = head loss at entry and exit (m)                                                                   |
| $S_f$              | = | friction slope which is computed from Manning's Equation (m/ m)                                                                         |
| $L$                | = | is the length pipe (m)                                                                                                                  |
| $K_{in} + K_{out}$ | = | the head loss coefficients for the inlet and outlet conditions (typically, and conservatively, assumed to be 0.5 and 1.0, respectively) |
| $V$                | = | velocity on flow in pipe (m/s)                                                                                                          |
| $g$                | = | gravity (9.79 m/s <sup>2</sup> )                                                                                                        |

**Equation 13.11.9**

**b) Overflow Pit**

In porous paving systems, the overflow pit is designed so that the pit crest is at the level of the pavement surface. It may be raised slightly above the surface of the paving to ensure flows do not divert to the overflow pit before infiltrating the pavement surface.

To size an overflow pit, two checks should be made to test for either drowned or free flowing conditions. A broad crested weir equation can be used to determine the length of weir required (assuming free flowing conditions) and an orifice equation used to estimate the area between openings required in the grate cover (assuming drowned outlet conditions). The larger of the two pit configurations should be adopted (as per **Section 5.10 QUDM (DPI, IMEA & BCC 1992)**). In addition, a blockage factor is to be used that assumes the grate is 50 % blocked.

For free overfall conditions (weir equation):

$$Q_{\text{weir}} = B \cdot C_w \cdot L \cdot h^{3/2}$$

Where:

- $Q_{\text{weir}}$  = flow into pit (weir) under free overfall conditions (m<sup>3</sup>/s)  
 $B$  = blockage factor (0.5)  
 $C_w$  = weir coefficient (1.66)  
 $L$  = length of weir (perimeter of pit) (m)  
 $h$  = flow depth above the weir (pit) (m)

#### Equation 13.11.10

Once the length of weir is calculated, a standard sized pit can be selected with a perimeter at least the same length of the required weir length.

For drowned outlet conditions (orifice equation):

$$Q_{\text{orifice}} = B \cdot C_d \cdot A \sqrt{2 \cdot g \cdot h}$$

Where:

- $Q_{\text{orifice}}$  = flow rate into pit under drowned conditions (m<sup>3</sup>/s)  
 $C_d$  = discharge coefficient (drowned conditions = 0.6)  
 $A$  = area of orifice (perforations in inlet grate) (m<sup>2</sup>)  
 $B$  = blockage factor (0.5)  
 $g$  = gravity (9.81 m/s<sup>2</sup>)  
 $h$  = maximum depth of water above the pipe (m)

#### Equation 13.11.11

When designing grated field inlet pits, reference is to be made to the procedure described in **QUDM Section 5.10.4 (DPI, IMEA & BCC 1992)** and **Section 3.5**.

#### 13.11.3.10 Design Calculation Summary

Following is a design calculation summary sheet for the key design elements of a porous paving system to aid the design process.

| Porous Paving Systems                                         |  | Calculation Summary     |                      |
|---------------------------------------------------------------|--|-------------------------|----------------------|
| Calculation Task                                              |  | Outcome                 | Check                |
| <b>Catchment Characteristics</b>                              |  |                         |                      |
| Catchment Area Contributing to Paving System                  |  | Ha (or m <sup>2</sup> ) | <input type="text"/> |
| Catchment Land Use (ie. Residential, Commercial, etc)         |  |                         |                      |
| Storm Event Entering Porous Paving System<br>(Minor or Major) |  | year ARI                |                      |
| Estimated Surface Area of Paving System                       |  | m <sup>2</sup>          |                      |
| <b>1 Confirm Design Objectives and Pavement Type</b>          |  |                         |                      |
| Confirm Design Objective as Defined by Conceptual Design      |  |                         | <input type="text"/> |
| Confirm Treatment Performance                                 |  |                         |                      |
| Confirm Paving Type                                           |  |                         |                      |
| Detention System Only?                                        |  |                         |                      |
| <b>2 Pretreatment design</b>                                  |  |                         |                      |
| Appropriate Treatment Provided to Avoid Clogging?             |  |                         | <input type="text"/> |

### 13.11.4 Construction and Establishment

It is important to note in the context of a development site and associated construction/ building works, delivering porous paving can be a challenging task. A careful construction and establishment approach to ensure the system is delivered in accordance with its design intent. The following sections outline a recommended staged construction and establishment methodology for porous paving.

#### 13.11.4.1 Construction and Establishment Challenges

There exist a number of challenges that must be appropriately considered to ensure successful construction and establishment of porous paving including:

- sediment loads during construction phase which can clog paving surface;
- construction traffic and other works which can damage paving surface and layers.

#### 13.11.4.2 Staged Construction and Establishment Method

To overcome the challenges associated within delivering porous paving a Staged Construction and Establishment Method should be adopted:

|                                     |                                                                                                                                                                                                                                                                  |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Stage 1:</b>                     | Construction of the functional elements of the porous paving and the installation of temporary protective measures (ie. stormwater bypass system and suitable erosion and sediment control measures). This should be done towards completion of the development. |
| <b>Functional Installation</b>      |                                                                                                                                                                                                                                                                  |
| <b>Stage 2:</b>                     | While other final elements of the development are completed the temporary protective measures preserve the functional infrastructure of the porous paving against damage.                                                                                        |
| <b>Sediment and Erosion Control</b> |                                                                                                                                                                                                                                                                  |
| <b>Stage 3:</b>                     | At the completion of the Building Phase, the temporary measures protecting the functional elements of the porous paving can be removed and the system allowed to operation in accordance with the design intent.                                                 |
| <b>Operational Establishment</b>    |                                                                                                                                                                                                                                                                  |

Where large scale porous paving systems are proposed, a detailed construction and establishment plan, including temporary protective measures, should be prepared.

#### a) Functional Installation

Porous paving should not be laid until all catchment surface areas have been stabilised to prevent sedimentation and early clogging of the system. Installation would generally involve:

- bulking out and trimming;
- installation of the overflow structures;
- placement of non-woven geofabric to sides and base;
- placement of gravel;
- flow to be diverted around porous paving to ensure sediment laden stormwater flows 'bypass' the system;
- place silt fences around the boundary of the porous paving to exclude silt;
- place highly visible physical barriers to restrict access.

#### b) Sediment and Erosion Control

The temporary protective measures are left in place through the remainder of the building phase to ensure sediment laden waters do not enter and clog the porous paving surface.

#### c) Operational Establishment

At the completion of the Building Phase the temporary measures (ie. stormwater bypass) can be removed and the porous paving allowed to operate. It is critical to ensure that the pretreatment system for a porous paving is fully operational before flows are introduced. If at the commencement of operations there is some clogging of the pavement surface, then the surface should be tilled, vacuum swept or high-pressure-hosed to clean or unblock the surface.

### 13.11.5 Maintenance Requirements

Maintenance for porous paving aims at ensuring the system does not clog with sediments and that an appropriate infiltration rate is maintained.

Key elements of porous paving maintenance are to ensure:

- protection from pulse sediment loads particularly during and immediately after subdivision and house construction to prevent clogging;
- inspection for cracks and holes and replacement as necessary;
- they are cleaned of debris and surface sediment;
- weeded or mowed where appropriate.

The most important consideration during maintenance is to ensure the surface of the porous paving systems are operating as designed to avoid blockage.

To ensure the system is operating as designed, the infiltration zone should be inspected every 1 – 6 months (or after each major rainfall event) depending on the size and complexity of the system. Typical maintenance of porous paving systems will involve:

- routine inspection to identify any surface clogging/ blockage of the underlying aggregate or filter layers;
- routine inspection of inlet points to identify any areas of scour, litter build up, sediment accumulation or blockages;
- routine inspection of pavement for holes and cracks;
- routine inspection to ensure contributing catchment area is stabilised and not a significant source of sediment;
- routine inspection of pretreatment to ensure it is working effectively;
- periodic inspection to ensure system dewaterers following storm events;
- removal of accumulated sediment and clearing of blockages to inlets;
- regular vacuum sweeping and/or high pressure hosing to free pores in the top layer from clogging;
- periodic replacement of aggregate layer (about every 20 years) and replacement of geotextile fabric;
- maintaining the surface vegetation (if present).

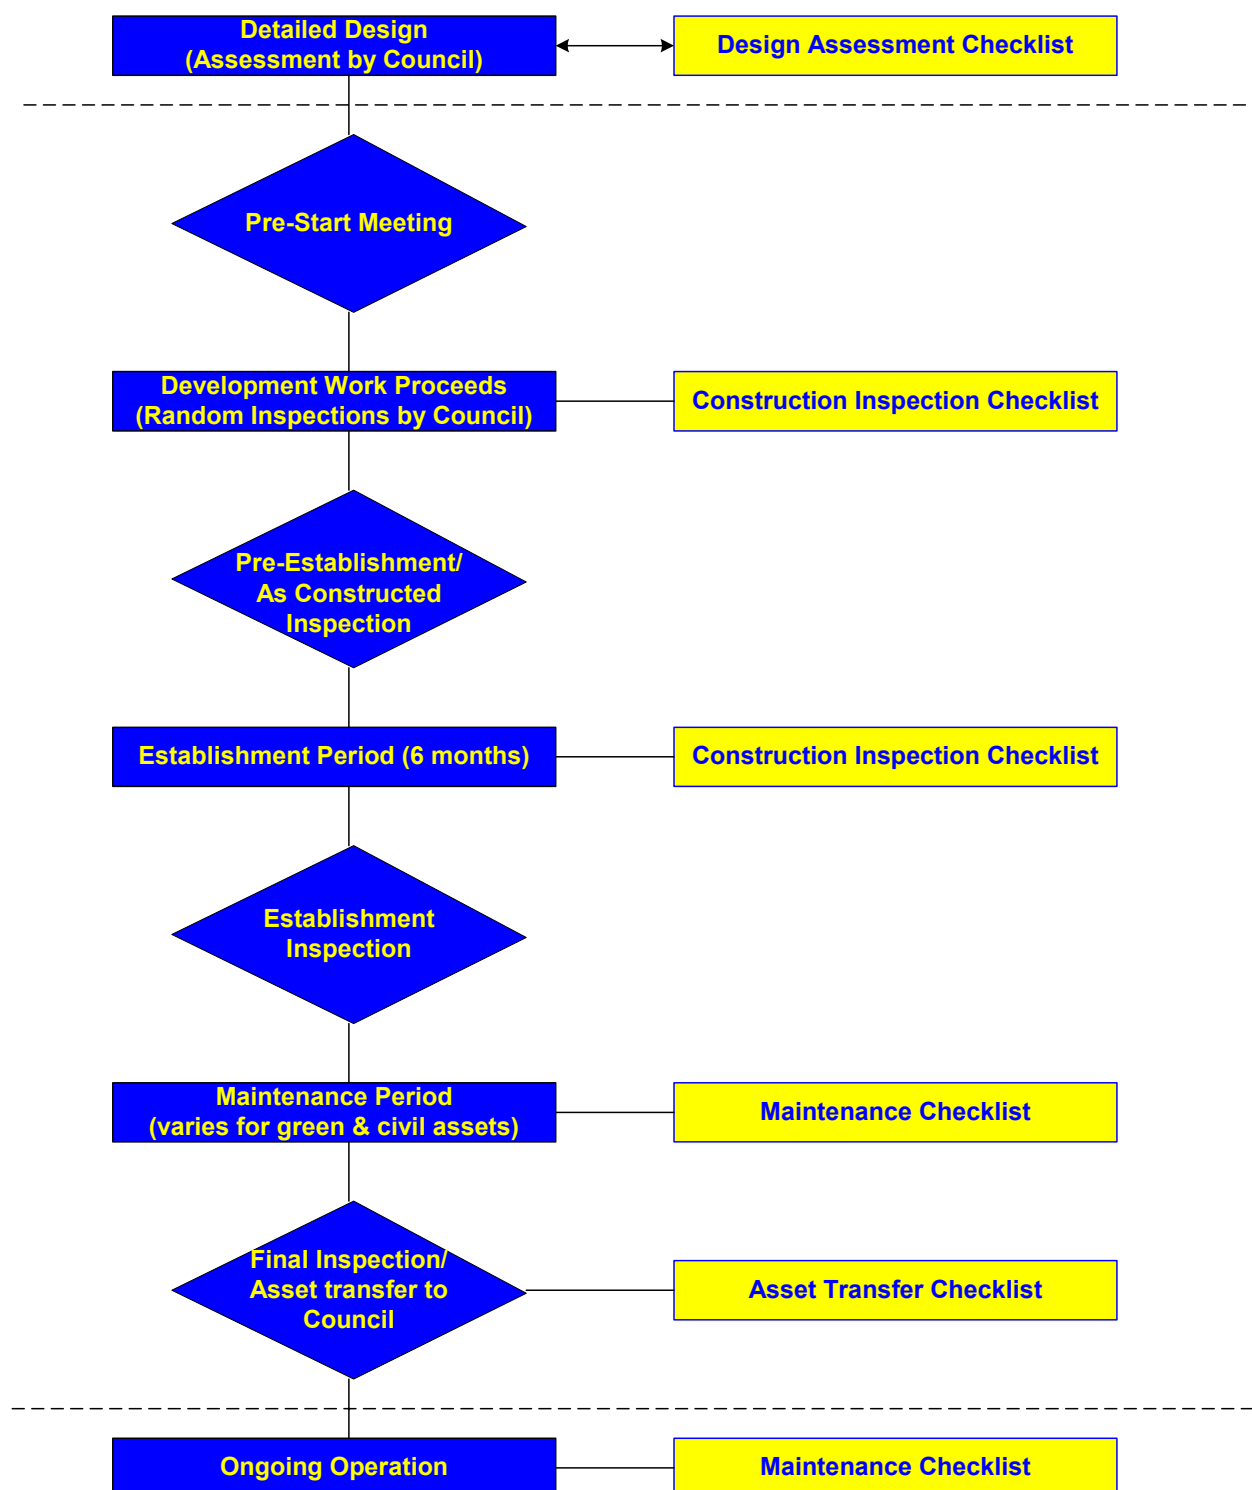

All maintenance activities must be specified in an approved Maintenance Plan (and associated maintenance inspection forms) to be documented and submitted to Council as part of the Development Approval process. Maintenance personnel and asset managers will use this Plan to ensure the porous paving continues to function as designed. An example operation and maintenance inspection form is included in the checking tools provided in **Section 13.11.7**. These forms must be developed on a site-specific basis as the nature and configuration of porous paving varies significantly.

### 13.11.6 Checking Tools

This section provides a number of checking aids for designers and Council development assessment officers. **Section 13.11.4** provides general advice on the construction and establishment of porous paving and key issues to be considered to ensure their successful establishment and operation. The following checking tools are provided:

- Design Assessment Checklist;
- Construction Inspection Checklist (during and post);
- Operation and Maintenance Inspection Form;
- Asset Transfer Checklist (following 'on-maintenance' period).

**Figure 13.11-B** below shows the stages of the development approval, construction and establishment and asset transfer process and which checklists should be used at each stage.

**Figure 13.11-B:** Development Approval and Handover Stages – Appropriate Checklists

**13.11.6.1 Design Assessment Checklist**

The design assessment checklist presents the key design features that are to be reviewed when assessing the design of a porous paving system. These considerations include configuration, safety, maintenance and operational issues that need to be addressed during the design phase. If an item receives an 'N' when reviewing the design, referral is to be made back to the design procedure to determine the impact of the omission or error.

In addition to the checklist, a proposed design should have all necessary permits for its installation. Council development assessment officers will require that all relevant permits are in place prior to accepting a design.

**13.11.6.2 Construction Inspection Checklist**

This checklist presents the key items to be reviewed when inspecting the porous paving during and at the completion of construction. The checklist is to be used by Construction Site Supervisors and GCCC Compliance Inspectors to ensure all the elements of the porous paving have been constructed in accordance with the design. If an item receives an 'N' in Satisfactory criteria then appropriate actions must be specified and delivered to rectify the construction issue before final inspection sign-off is given.

**13.11.6.3 Maintenance Checklist**

In addition to checking and maintaining the function of pretreatment elements, the maintenance checklist can be used during routine maintenance inspections of the porous paving and kept as a record on the asset condition. Inspections should occur every 1 - 3 months. More detailed site specific maintenance schedules should be developed for major porous paving systems and include a brief overview of the operation of the system and key aspects to be checked during each inspection.

**13.11.6.4 Asset Transfer Checklist**

Land ownership and asset ownership are key considerations prior to construction of a stormwater treatment device. At the present point in time, Council will not accept porous paving systems, however this may be determined on a case-by-case basis. A proposed design should clearly identify the asset owner and who is responsible for its maintenance. The proposed owner should be responsible for performing the asset transfer checklist.

| Porous Paving Design Assessment Checklist (Detention Systems Only)                                                                                      |                                  |                                      |                                     |          |

## Feedback

1.3 Proposed changes to existing rates, and new targeted rates

Fully support the proposed \$5.5M for the Arts Centre.

Will strongly oppose an excess water charge for households. The Garden City concept is too valuable to be abandoned but that is what would happen if people are unable to water our gardens. In our home we have about 20 roses and many shrubs. They would all suffer. We also water azaleas that are planted on Council owned berm. They would be the first to die. If gardens dry off and die, so the bird life will disappear and every suburb will become bland and desolate.

1.5 Investing in our transport infrastructure

Upgrading of bus services might be a good idea, if the routes were more convenient. We live on Murray Aynsley Hill and the nearest bus stop is about 18 minutes away by foot. It used to be a lot closer when the buses traversed the full length of Centaurus Road

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

Absolutely

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

1.11 Potential disposal of surplus Council-owned properties

Get quit of them

### Feedback

#### 1.4 Investing in upgrading and protecting our city's water networks

The drinking water in Christchurch does not need to be chlorinated. The bores used to supply the city are sufficiently deep that E Coli cannot survive the migration from surface to well water- and there has never been a case of E Coli contamination in CHCH. The council needs to push back against the Governments water proposals. The South Island water supply based on aquifer water is much more secure and robust than that based on shallow surface flow on from largely mudstone soils in the North Island.

The pipes that carry the water within the city have positive pressure so the physical possibility of water contamination from delivery around the network is also negligible. The CCC should engage engineers and scientists to rebut the Governments water policy and save money on this investment. The Government has interpreted the precautionary principle of science - proceed with caution and mitigate the risk - as proceed only if there is no risk. This is costing the council ratepayers and New Zealand tax payers hugely and needlessly. The council needs to stop responding to pressure groups and use an evidence base to assess proposals. At the moment our drinking water is contaminated by chlorine - needlessly. There is no evidence that it can be contaminated either at source or in delivery - this is a huge spend for political reasons based on no science. The Waimakariri river provides a solid buffer between the Christchurch water supply and North Canterbury - the geology of the Plains is such that contamination is highly unlikely from any source. There is also no evidence that the infrastructure could result in contamination - the well heads were needlessly upgraded because of the over cautious policy. Council needs to readjust its policy making to an evidence base - not an emotional one - and encourage Central Govt. to do likewise on this and other issues.

#### 1.5 Investing in our transport infrastructure

The city has become a nightmare for cycles and cars. As a frequent cyclist into the city I am astounded at the lack of continuity of cycle ways- many that just end at an intersection or flow onto foot paths with little signage to know that is the requirement. As a car user the 30 km limit has been trialed for several years now - the council needs to collect and publish evidence that this has had the positive outcomes it was implemented for.

#### 1.6 Rubbish, recycling and organics

The organic plant - or composting plant produces a large amount of carbon rich plant material. This has little economic value because it stops nitrogen cycling when incorporated into soil. The Council should seek opportunities to incorporate the compost product into gravel areas in the greater Canterbury region. Upgrading the plant at Bromley should be a priority to reduce the smell - paid for by the council and the contractor operating it.

### 1.7 Our facilities

The council should not be forcing the closure of Wharenui Pool. It is difficult to find pool space in Christchurch at all times- but especially once the outdoor pools close. The new pool is located in an area with limited parking, difficult to get and in a highly congested area. Councils lose money on pools - but they also lose money on parks art galleries and libraries. There should be more suburban pools created - such as Pioneer. We needed one competition pool to replace QEII but we do not need to centralize all swimming to that facility. The council should be looking to expand the local pool network and investigate partnering with high schools and other community groups to provide more pool space for our children. As the population ages - more pool space is also required to keep elderly people active in low impact activity. Pools space needs to be increased not decreased.

### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

### 1.12 Any other comments:

Council is increasing costs of doing business by pandering to the loudest voices in our community. The council needs to engage greater use of science and engineering in decision making. For example the banning of glyphosate is costing rates payers money needlessly. (See attached report by Martin Kuntz December 2020 to see the corruption of this issues - and lack of scientific evidence). The council needs greater advice from experts in the field - and then lead the public debate. Too often council is spending money on political issues with no evidence base.

There are many ore examples where the precautionary principle is misinterpreted by council as a need to remove all risk - this is now starting to occur in climate mitigation policy and is being used as a justification for adaptation. The IPCC reports present worse case scenarios - the council does not need to take those scenarios and implement policy to reduce all risk associated with them. The rate payers simply can't afford it now or in the future. Council needs to assist in the education of the public that there is risk in everything we do - mitigating risk where it is real and avoidable is laudable. Eliminating risk impossible - council seems to focus on the latter and thus needlessly spends money beyond what is appropriate. There needs to be a change in thinking around the council table and within the organisation to reset the drivers of policy to evidence not social media.

Finally the council long term plan needs to address how the council intends to cull the exploding population of Canadian geese - one way would be to consider farming the red zone with cattle - to stop the need for mowing and reduce their feed supply - while providing some ability for cost recovery.

# GLYPHOSATE, SEPARATING "THE WHEAT FROM THE TARES"

Marcel KUNTZ

The Fondation pour l'innovation politique  
is a French think tank for European integration and free economy.

Chair: Nicolas Bazire

Vice-chair: Grégoire Chertok

Executive Director: Dominique Reynié

Chair of Scientific and Evaluation Board: Christophe de Voogd

## FONDATION POUR L'INNOVATION POLITIQUE

*A French think tank for European integration and free economy*

The Fondation pour l'innovation politique provides an **independent forum for expertise, opinion and exchange** aimed at producing and disseminating ideas and proposals. It contributes to **pluralism of thought** and the renewal of **public discussion** from a **free market, forward-thinking and European perspective**. Four main priorities guide the Foundation's work: **economic growth, the environment, values and digital technology**.

The website [fondapol.org](http://fondapol.org) provides public access to all the Foundation's work. Anyone can access and use all the data gathered for the various surveys via the platform "**Data.fondapol**" and the data relating to international surveys is available in several languages.

In addition, our blog "**Trop Libre**" (Too Free) casts a critical eye over the news and the world of ideas. "**Trop Libre**" also provides extensive monitoring of the effects of the digital revolution on political, economic and social practices in its "**Renaissance numérique**" (Digital Renaissance) section.

Additionally, reflecting the Foundation's editorial policy, our blog "**Anthropotechnie**" aims to explore new avenues prompted by human enhancement, reproductive cloning, human/machine hybridization, genetic engineering and germline manipulation. It contributes to thinking and debate on transhumanism. "**Anthropotechnie**" offers articles tackling ethical, philosophical and political issues associated with the expansion of technological innovations in the fields of enhancement of human bodies and abilities.

The Fondation pour l'innovation politique is a state-recognized organization. It is independent and receives no financial support from any political party. Its funding comes from both public and private sources. Backing from business and individuals is essential for it to develop its work.

## SUMMARY

Glyphosate has long been considered as an herbicide\* with no unacceptable health risk. In 2015, its classification as "probably carcinogenic" by the International Agency for Research on Cancer (IARC) changed the situation, and in 2017 the European Union renewed its authorisation for only five years with France even wanting to "get out of glyphosate" in three years time. However, other official risk assessment agencies have contradicted the IARC's opinion and, as our study attempts to show, this discrepancy is not scientifically explainable. On the other hand, the IARC has a clear lack of ideological neutrality and some IARC experts have financial ties with lawyers exploiting the tort law in the United States based on the IARC's opinion on glyphosate. In Europe, claims of a universal contamination of the population by this herbicide was propagated following urine analyses of volunteers. However, the unreliability of the tests used in these activist campaigns has been established. The glyphosate case confirms the necessity of trustworthy scientific authorities to separate "the wheat from the tares". In addition, the influence of activist structures having a pretence to science and the questioning of official risk assessment agencies present a problem in terms of risk management by the political authorities and public perception. All the more so when journalists entered the debate, some involved in interpreting scientific evidence whilst others drew attention to the supposed influence of Monsanto on researchers or on scientific risk experts.

\* Words or expressions followed by an asterisk are explained in the glossary at the beginning of this study.

## GLOSSARY

**Weeds.** Plants that grow on cropland independently of any human seeding. They are commonly referred to as "noxious plants" or "weeds". Among the most harmful for the cultivation of certain cereals is poppy which can also be a reservoir of viruses, datura (nightshade family) and ragweed, a highly allergenic plant. These weeds are difficult to eliminate without herbicide\*. There are also parasitic plants such as broomrape.

**Conservation agriculture.** It is defined by the Food and Agriculture Organization (FAO) as an agriculture based on a continuous minimum mechanical soil disturbance, or even the elimination of plowing, permanent organic soil cover and diversified crop species grown in sequences or associations. Its cultivation systems are diverse: simplified cultivation techniques, no-till, direct sowing under plant cover, etc. Conservation agriculture aims to maintain and improve the agronomic potential of soils while maintaining regular and efficient production.

**LC/ MS-MS analysis.** Liquid Chromatography (LC) with Tandem Mass Spectrometry (MS-MS) is an analytical technique that combines the power of compound separation of chromatography with the ability to analyse (ionised derivatives) the separated compounds. The mass spectrometer has an ionisation source in which the effluent from the LC column is transformed into charged particles. This allows compounds to be identified and possibly quantified with a high degree of sensitivity and selectivity.

**Acute reference dose.** For any chemical substance to which a subject may be exposed, there are two thresholds of health risk. The acute reference dose (ARfD) defines the maximum amount of a substance that can be ingested by an individual over a short period without risk of harmful health effects. It is calculated from a 'no observable effect level' (NOEL\*). The maximum residue limit (MRL) defines the maximum acceptable concentration without risk to health, even if this exposure is repeated every day throughout the life of the person.

**Epidemiological studies.** There are two main types of such studies: experimental ones where the researcher intervenes by choosing the subjects and on the exposure of subjects *via* the factors and times of exposure, and observational studies where the researcher does not intervene on the exposure conditions of the subjects. Among the latter are incidence studies, where observations take place over time (longitudinal studies) on a group or groups of subjects to measure changes in their health status. In this category, cohort studies involve two groups: subjects exposed to the studied risk factor and subjects

not exposed to this risk factor (control group). The two groups are followed (prospective cohort) then compared with each other as to their state of health. These are expensive studies. Case-control studies compare subjects with a condition/disease ("cases") to subjects without ("controls") at a given time or retrospectively. The two groups should ideally be as similar as possible, the only difference being signs of the disease. The goal is to identify the origin of the disease and to define its causes (professional activity, diet, exposure to a chemical substance, etc.).

**Exposure** (acute, sub-chronic or chronic). Acute exposure is a single contact of less than 24 hours. Sub-acute or sub-chronic exposures consist of repeated contact for 1 to 3 months. Chronic exposure is a repeated exposure lasting more than 3 months. Modes of exposure may be oral, inhalation, dermal or through the placenta.

**Genotoxicity/ Mutagenicity.** A substance (synthetic or natural) or a radiation is said to be genotoxic when it is capable of compromising the physical or functional integrity of the genome (DNA). Mutagenicity is a special case of genotoxicity: an agent is said to be mutagenic if it changes the genome of an organism so that the number of genetic mutations is higher than that occurring naturally. Genotoxicity is an indication of the carcinogenic potential of an agent, but is neither necessary (there are non-genotoxic carcinogens) nor sufficient (intervention of multiple factors). The study of genotoxic and/ or mutagenic effects is conducted on bacteria and mammalian cells or human lymphocytes.

**Herbicide.** Crops can face competition from weeds\* which limit their potential. There are selective herbicides that can be used on cereals, corn, beets, etc. Less numerous authorised, non-selective, also called total herbicides, such as glyphosate, are effective on all weeds as well as on cultivated species. Notable are contact herbicides, which act at the point where they come into contact with the plant, and systemic herbicides, which migrate through the plant, to the roots for example, which is the case for glyphosate.

**Mutagenicity.** See Genotoxicity/Mutagenicity\*.

**NOAEL (no observed adverse effect level)/ NOEL (no observed effect level).** NOAEL refers to the highest dose of a substance for which no toxic effect was observed in exposed animals compared to a group of control animals. NOEL is the highest dose or exposure level of a substance that produces no noticeable (observable) effect on tested animals.

**Endocrine disruptors.** There are many definitions of endocrine disruptors. According to the World Health Organization (WHO) an endocrine disruptor is "an exogenous substance or mixture that alters function(s) of the endocrine system and consequently causes adverse health effects in an intact organism, or its progeny, or (sub)populations"<sup>1</sup>. The endocrine system includes all organs that secrete hormones. Endocrine disruptors, therefore, potentially affect various body functions (metabolism, reproductive functions, the nervous system, etc.). Today, scientifically, but also under pressure from activists, the definition of endocrine disruptors tends to broaden. However, most substances labelled as endocrine disruptors are most often only suspected of having this type of activity. To date, there are in fact very few proven endocrine disruptors<sup>2</sup>.

**Pesticides.** The word comes from the Latin *cida* ("to kill") and *pestis* ("contagious disease"). They are therefore substances used to fight against organisms harmful to crops such as pests, pathogens or weeds\* (in this case the term plant protection products is used), to protect the environment and fight diseases and vectors of diseases (biocidal products) or for veterinary purposes (treatment of animals). One distinguishes between herbicides, insecticides, fungicides (against microscopic fungi), rodenticides (against rodents), parasiticides (against parasites), nematicides (against roundworms), bactericides or even virucides. The marketed products (specialties) may contain one or more active ingredient and formulation products which improve the physical properties of the active principle (solubility, stability, power of penetration, etc.). Glyphosate is the active ingredient in various formulations, including various types of Roundup, which is a trademark.

**Teratogenic.** The term refers to a substance or process that causes foetal malformations after exposure of the mother. These substances can be diverse (drugs, alcohol, tobacco, etc.). Some viruses can also be teratogenic.

**Toxicology.** A scientific discipline whose vocation was, at its origin, to study poisons, but today is more generally interested in all products likely to have effects on an organism (the toxicity of products, including natural ones), in exposure to these products, in the means of detecting them and in therapeutic methods to combat them, as well as in the establishment of preventive measures.

# GLYPHOSATE, SEPARATING "THE WHEAT FROM THE TARES"

Marcel KUNTZ\*

Research Director at the French National Centre for Scientific Research (CNRS), Invited lecturer at Grenoble-Alpes University, 2017 gold medal recipient from the French Academy of Agriculture.

## INTRODUCTION

From Antiquity, texts have emphasised the problem posed by weeds\*. At the Neronian time, Columella wrote in his *De Re Rustica*: "But to me it seems the mark of a very poor farmer to allow grass to grow among his crops, for it detracts greatly from the yield if weeding is neglected"<sup>1</sup>. In modern times, weed control remains essential since contamination can reduce the value of a crop either by competing with cultivated plants or by affecting its quality. Weeds can also increase the cost and farmer's worktime<sup>2</sup>. A variety of agricultural weed control methods exist<sup>3</sup>. Although perceived negatively by public opinion, herbicides\*, also known as weedkillers, remain the most effective. They have been used to destroy weeds since the end of the 19<sup>th</sup> century, notably by the use of diluted sulphuric acid, which is corrosive and not effective on all weeds. The first herbicides derived from organic chemistry appeared shortly before World War II. It was discovered that synthetic analogues of natural plant growth regulators (phytohormones), such as 2,4-D, marketed from 1946, could be used as a selective herbicide, acting specifically on dicotyledonous plants while not affecting grasses.

However, weeds can sometimes be beneficial and herbicides can help weeds to become useful, such as in the context of conservation agriculture\* (where the ground is permanently covered with vegetation and is no longer tilled,

3. Encyclopaedia Britannica [[www.britannica.com/plant/weed](http://www.britannica.com/plant/weed)].

\* The author does not express the official position of his employer in this study. He has received no income related to the marketing of agricultural, biotechnological or agrochemical products.

apart from the sowing line when seeds are sown). A long-term experiment by the National Institute for Agronomic Research (INRA) has confirmed that the manner by which the soil is tilled, or not, is the most determining factor for soil biodiversity. According to this criterion, conservation agriculture is more efficient than conventional and even organic agriculture<sup>4</sup>. Herbicides participate in conservation agriculture where the ground cover by plants between two successive crops is destroyed by a weedkiller, thus allowing for reseeded.

However, the drawbacks of herbicides include a possible loss of biodiversity in or around the field, possible contamination of runoff and groundwater<sup>5</sup>, as well as health risks for users if insufficiently protected.

For all these reasons, herbicides, like other pesticides\*, are subject to scientific risk assessments<sup>6</sup>, which has led to many of them being banned. Stringent requirements make it difficult nowadays to introduce new herbicides onto the market<sup>7</sup>. Marketing authorisation also has to be reassessed periodically, and it is in this context that glyphosate hit the headlines.

## I. GLYPHOSATE, FROM ADMIRATION TO DISGRACE

N-(phosphonomethyl) glycine, more commonly known as glyphosate, an analogue of the natural amino acid glycine, was first synthesised in the 1950s by the Swiss chemist Henri Martin, employed by Cilag. With no identified use, the molecule was sold to other companies. It was first employed for its chelating properties<sup>8</sup>, in this case of metals, and was, therefore, used to clean boilers and pipes as of 1964. John Franz, a Monsanto chemist working in the company's agricultural division in 1967, synthesised various molecules of the phosphonic acid family, including glyphosate, which he identified as an herbicide in 1970<sup>9</sup>.

4. Ludovic Henneron *et al.*, "Fourteen years of evidence for positive effects of conservation agriculture and organic farming on soil life", *Agronomy for Sustainable Development*, vol. 35, n° 1, January 2015, p. 169-181.

5. Atrazine was not reauthorised in the European Union in 2003 because of its above-limit concentrations in groundwater, but remains authorised in the United States, for example.

6. European Food Safety Authority (EFSA), ([www.efsa.europa.eu/en/applications/pesticides](http://www.efsa.europa.eu/en/applications/pesticides)).

7. See "Regulation (EC) No 1107/2009 of the European Parliament and of the Council of 21 October 2009 concerning the placing of plant protection products on the market and repealing Council Directives 79/117/EEC and 91/414/EEC" (<https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32009R1107&from=EN>).

8. The Editors of Encyclopaedia Britannica, "Chelate", *Encyclopædia Britannica*, access date: 21 December 2020 ([www.britannica.com/science/chelate](http://www.britannica.com/science/chelate)).

9. Various molecules of this family had been tested at the company but did not show herbicidal activity. At first, Franz thought that this type of molecules was converted by plants into beneficial derivatives for them. See "John Franz", [web.mit.edu](http://web.mit.edu), September 2007 <https://web.archive.org/web/20071208092208/http://web.mit.edu/invent/iow/franz.html>.

Monsanto patented the invention and marketed it from 1974 under the Roundup brand name. The product was first appreciated by farmers to control hard-to-eliminate perennials. It then, in various formulations, became the most widely used weedkiller in the world. Its success in agriculture, urban, industrial and garden sectors was due to various factors: its low cost and high efficiency, both against monocots and dicots<sup>10</sup> (i.e. a "total herbicide"), and especially its short persistence allowing rapid reseeding after use<sup>11</sup>. Glyphosate has also become an important element in conservation agriculture; to weed without having to till the soil.

John Franz received many awards and Roundup was named one of the "Top Ten Products that Changed the Face of Agriculture" by Farm Chemicals magazine in 1994. The patent came into the public domain in 2000 and the molecule is now synthesised by many companies, especially Chinese ones. How has glyphosate gone from the status of an almost miraculous product to that of French and European disgrace in such a short time<sup>12</sup>?

## II. A REASSURING SCIENTIFIC RISK ASSESSMENT

Glyphosate has been studied extensively, itself or as a formulation, as have its adjuvants - including tallow amines, also known as polyoxyethylene amines (POEA) - and its main metabolic derivative produced in plants, aminomethylphosphonic acid (AMPA). In order to understand what follows, it is necessary to first explain some general principles of health risk assessment. First, according to Paracelsus' principle, "the dose makes the poison"<sup>13</sup>. In addition, the distinction between risk and hazard is essential: risk is the "probability that a person will suffer harm or a harmful effect to their health when exposed to a hazard". This takes into account the hazard ("any potential source of damage, harm or harmful effect to something or a person") and exposure to the hazard (i.e. the dose)<sup>14</sup>. To summarise: risk = hazard x exposure to hazard.

10. Glyphosate diffuses throughout the plant and prevents the synthesis of certain amino acids that make up proteins. The plant continues to grow, until it is fatally deficient in protein.

11. Glyphosate is biodegradable in the scientific sense of the term, but not in the regulatory sense because its disappearance is not fast enough under all conditions to meet the standards in the matter. <https://forestinfo.ca/faqs/how-long-does-glyphosate-remain-in-the-soil-water-plants-and-sediments-after-treatment/>; this has forced Monsanto to alter its advertising of Roundup as biodegradable: <https://apnews.com/article/d196b9a5bb54637a7b281760b0f7a966>.

12. "The Stop glyphosate initiative", *European Citizens' Initiative Forum – Success Story*, April 2018 ([https://europa.eu/citizens-initiative-forum/sites/default/files/2020-01/SEC-17-001\\_success\\_story\\_stop\\_glyphosate\\_EN.pdf](https://europa.eu/citizens-initiative-forum/sites/default/files/2020-01/SEC-17-001_success_story_stop_glyphosate_EN.pdf)).

13. On this principle and exceptions, see: [www.chemicalsafetyfacts.org/dose-makes-poison-gallery/](http://www.chemicalsafetyfacts.org/dose-makes-poison-gallery/), <https://endocrinesciencematters.org/non-monotonic-dose-responses-2/non-monotonic-dose-responses-technical-overview/>.

14. Canadian Centre for Occupational Health and Safety, Hazard and Risk ([www.ccohs.ca/oshanswers/hsprograms/hazard\\_risk.html](http://www.ccohs.ca/oshanswers/hsprograms/hazard_risk.html)).

As a result, those in favour of banning a product have an interest in ignoring Paracelsus' principle. Without this principle, the mere fact of detecting a product, even at an extremely low dose and even when a risk has not been proven, becomes publicly unacceptable. Even more so if it is a source of publicised concern that opposition organisations, which are now extremely well-organised, know too well how to trigger.

There are several types of toxicology\* studies<sup>15</sup>, including in vitro or animal (in vivo) experiments, where the dose and exposure time may vary (acute, sub-chronic or chronic exposures\*) or epidemiological\* studies (experimental or observational) which focus on the incidence of disease and their cause in a human population<sup>16</sup>.

The following lines and paragraphs summarise a review article published in 2000<sup>17</sup>. Oral absorption of glyphosate and AMPA is low, and studies of Roundup formulations have demonstrated low skin penetration. When present in an organism, both molecules are excreted in urine, in a largely unmetabolised form, and do not bioaccumulate in animal tissues. No significant toxicity was detected in toxicology studies with acute, sub-chronic or chronic exposure. However, irritation is a well-known symptom in the event of direct eye contact with a Roundup formulation.

Data on genotoxicity\* - the ability to cause damage to genetic material - has not provided any convincing evidence of direct DNA damage in vitro or in vivo. Roundup and its components do not appear to present a risk of inducing mutation in humans. In animals, lifetime feeding studies have not demonstrated any tumourigenic potential for glyphosate. As a result, it was concluded that glyphosate is non-carcinogenic.

Glyphosate, AMPA and POEA are not considered as teratogens\* (i.e. do not cause foetal malformation) or to be toxic for human development. Two multi-generational animal studies did not reveal any effect of glyphosate on fertility or on reproductive parameters. Likewise, there was no effect on reproductive tissues of animals treated with glyphosate, AMPA or POEA in chronic and / or sub-chronic studies. Nor did standard endocrine disruption\* studies demonstrate any effect. Therefore, it was concluded that the use of Roundup does not cause adverse effects on development, reproduction or endocrine systems in humans and other mammals under normal use.

15. Introduction to toxicology ([https://ec.europa.eu/health/ph\\_projects/2003/action3/docs/2003\\_3\\_09\\_a21\\_en.pdf](https://ec.europa.eu/health/ph_projects/2003/action3/docs/2003_3_09_a21_en.pdf)).

16. Epidemiology: Types of Epidemiological Studies ([www.ihatepsm.com/blog/epidemiology-types-epidemiological-studies](http://www.ihatepsm.com/blog/epidemiology-types-epidemiological-studies)).

17. Gary M. Williams, Robert Kroes and Ian C. Munro, "Safety Evaluation and Risk Assessment of the Herbicide Roundup and Its Active Ingredient, Glyphosate, for Humans", *Regulatory Toxicology and Pharmacology*, vol. 31, n° 2, April 2000, p. 117-165.

"No Observable Adverse Effect Doses" (NOAEL\*) have been identified in all sub-chronic, chronic, developmental and reproduction studies for glyphosate, AMPA and POEA. By comparing these NOAELs to the highest exposure estimates, it was concluded that, under actual and expected conditions of use, Roundup herbicide does not present any risk to human health. However, in 2015, the evaluation by the International Agency for Research on Cancer (IARC) was to change everything.

III. THE IARC CLASSIFICATION: GLYPHOSATE CONSIDERED AS "PROBABLY CARCINOGENIC TO HUMANS"

On 20 March 2015, the IARC published its evaluation of five organophosphate pesticides: four insecticides and one herbicide, glyphosate<sup>18</sup>. IARC evaluations are performed by a panel of experts and result in a "Monograph" which includes a classification of the level of carcinogenicity of the product concerned, in this case, glyphosate, in group 2A ("agent probably carcinogenic to humans") (see table below).

Agents classified by IARC Monographs, Vol. 1-128

|          |                                                             |            |
|----------|-------------------------------------------------------------|------------|
| Group 1  | <i>Carcinogenic to humans</i>                               | 121 agents |
| Group 2A | <i>Probably carcinogenic to humans</i>                      | 89 agents  |
| Group 2B | <i>Possibly carcinogenic to humans</i>                      | 315 agents |
| Group 3  | <i>Not classifiable as to its carcinogenicity to humans</i> | 497 agents |

Source: International Agency for Research on Cancer, IARC (<https://monographs.iarc.fr/agents-classified-by-the-iarc/>)

In this group, glyphosate joins certain other chemicals; synthetic or which can form spontaneously (e.g. during cooking, such as acrylamide), in consumption habits (red meat, drinks hotter than 65°C) and professional<sup>19</sup> or domestic<sup>20</sup> activities. It should be noted that the agent "carcinogenic to humans" category includes the consumption of alcoholic beverages, processed meat or even indoor emissions from domestic combustion of coal.

18. See International Agency for Research on Cancer (IARC), "IARC Monographs Volume 112: evaluation of five organophosphate insecticides and herbicides", iarc.fr, 20 March 2015 ([www.iarc.fr/wp-content/uploads/2018/07/MonographVolume112.pdf](http://www.iarc.fr/wp-content/uploads/2018/07/MonographVolume112.pdf)).

19. Such as the manufacture of art glass, glass containers and pressed ware, occupational exposure as a hairdresser or barber, or night shift work.

20. Such as indoor emissions from household combustion of biomass fuel (primarily wood).

Glyphosate, separating "the wheat from the tares"

These examples illustrate the rigid nature of these classifications. It is evidently the excessive consumption of meat (the famous toxicologists' "dose") that is causing the problem, rather than a moderate consumption. The informative value of this type of classification for the public authorities is also questionable, especially in relation to the multiple official risk assessment agencies recently created<sup>21</sup>. It is precisely via these agencies that the glyphosate file reemerged.

#### IV. ISOLATED, THE IARC VIOLENTLY FIGHTS BACK

At the authorities' request, various official risk assessment agencies reexamined the glyphosate case and all contradict the IARC's conclusion. In Germany, on 31 August 2015 the Bundesinstitut für Risikobewertung (BfR), the German Federal Institute for Risk Assessment, drew up a document for the European Food Safety Authority (EFSA)<sup>22</sup>. On 12 November 2015, the latter then stated that "glyphosate is unlikely to pose a carcinogenic hazard to humans"<sup>23</sup>. In the world, a dozen other agencies concluded similarly<sup>24</sup>. The World Health Organization (WHO), the governing body of the IARC, distanced itself, especially in the context of a meeting with the Food and Agriculture Organization (FAO) dedicated to pesticide residues<sup>25</sup>. It is, therefore, incorrect to assert, as has been claimed, that the "World Health Organisation (WHO) has said that glyphosate can "probably" cause cancer"<sup>26</sup>. Various individuals have tried to understand, on a scientific basis, the difference between the IARC evaluation and that of the other agencies<sup>27</sup>. Perhaps this

21. On this subject, in Europe, it is ECHA and not the IARC which officially "gives an opinion on the proposed harmonised classification of substances as carcinogenic"; <https://echa.europa.eu/fr/about-us/who-we-are/committee-for-risk-assessment>.

22. This document leaked and was made public by activists. See "Renewal Assessment Report. Glyphosate Addendum 1 to RAR. Assessment of IARC Monographs Volume 112 [2015]: Glyphosate", [gmwatch.org](http://gmwatch.org), 31 August 2015 ([https://gmwatch.org/files/Renewal Assessment Report Glyphosate Addendum1 RAR.pdf](https://gmwatch.org/files/Renewal%20Assessment%20Report%20Glyphosate%20Addendum%201%20RAR.pdf)).

26. Reuters, "W.H.O. Report Links Ingredient in Roundup to Cancer", *The New York Times*, 20 March 2015 [[www.nytimes.com/2015/03/21/business/who-report-links-ingredient-in-roundup-to-cancer.html](http://www.nytimes.com/2015/03/21/business/who-report-links-ingredient-in-roundup-to-cancer.html)]; "Roundup weedkiller 'probably' causes cancer, says WHO study", *The Guardian*, 21 March 2015 [[www.theguardian.com/environment/2015/mar/21/roundup-cancer-who-glyphosate](http://www.theguardian.com/environment/2015/mar/21/roundup-cancer-who-glyphosate)].

27. See Francisco J.R. Paumgartten, *To be or not to be a carcinogen; delving into the glyphosate classification controversy*, Braz. J. Pharm. Sci. vol. 55 São Paulo 2019 ([www.scielo.br/scielo.php?script=sci\\_arttext&pid=S1984-82502019000100510](http://www.scielo.br/scielo.php?script=sci_arttext&pid=S1984-82502019000100510)); in French: Hervé Le Bars, "Le glyphosate est-il cancérigène ?", *Science & Pseudo-Sciences*, n° 323, January-March 2018, p. 63-75 ([www.pseudo-sciences.org/Le-glyphosate-est-il-cancerogene](http://www.pseudo-sciences.org/Le-glyphosate-est-il-cancerogene)).

could be explained by the different objectives of these agencies: the IARC evaluates hazards (i.e. the effect a substance may have), whereas the other agencies evaluate risk (i.e. the effect the substance actually has)? However, this explanation does not appear credible on reading the IARC's "preamble" to its classifications: "Although the Monographs programme has focused on hazard identification, some epidemiological studies used to identify a cancer hazard are also used to estimate an exposure–response relationship within the range of the available data"<sup>28</sup>.

In addition, European regulations also imposed a hazard assessment by the European Chemicals Agency (ECHA), and this agency additionally contradicted the IARC on glyphosate<sup>29</sup>.

In fact, the data reviewed by the IARC and the other agencies do in fact converge, but with differences, as detailed below. Divergences are rather evident in the interpretation of the data<sup>30</sup>. It would not be unusual for the IARC to give different weighting to certain data and then the controversy could have simply been ended by providing such an explanation. However, this was never the position of the IARC, which, on the contrary, attacked the other agencies head-on, in particular the EFSA. Kathryn Guyton, an IARC official and responsible officer for "Monographs", denigrated the work of the European agencies: "In my understanding, the evaluation of the European health authorities was entirely written by the manufacturers of glyphosate"<sup>31</sup>. Christopher Portier, a scientific expert in the IARC glyphosate working group, also overstepped the scientific framework by being extremely hostile with regard to the EFSA evaluation<sup>32</sup>. Portier even appeared to be entrusted with a mission of lobbying politicians who he met in various European countries. For example, in 2015 he sent a letter to the European Commissioner for Health and Food Safety, Vytenis Andriukaitis, in which he attacked the EFSA<sup>33</sup>.

33. Letter of Christopher Portier to Vytenis Andriukaitis, [www.efsa.europa.eu](http://www.efsa.europa.eu), 27 November 2015 ([www.efsa.europa.eu/sites/default/files/Prof\\_Portier\\_letter.pdf](http://www.efsa.europa.eu/sites/default/files/Prof_Portier_letter.pdf)).

## V. CONFLICTS OF INTEREST AND LACK OF NEUTRALITY AT THE IARC

Christopher Portier's aggressive conduct did not fail to draw attention. It subsequently became common knowledge that he was paid by the Environmental Defense Fund (EDF)<sup>34</sup>, an American anti-pesticide organisation, which, in itself, is not reprehensible, but there should have been more transparency. For example, his letter to the European Commissioner, Vytenis Andriukaitis, makes no mention of this link. Portier's relationship with anti-pesticide organisations is also highlighted in a talk he gave on behalf of the Health and Environmental Alliance (HEAL) as part of an ECHA consultancy in 2016<sup>35</sup>. In addition, in January 2016, three other members of the IARC glyphosate working group assisted Portier in a private meeting with Vytenis Andriukaitis, where the EFSA attacks were reiterated<sup>36</sup>, suggesting widespread collusion within the working group rather than just the people mentioned above.

David Zaruk (under the alias "The Risk-Monger") provided more shattering evidence<sup>37</sup> based on a testimony made by Portier under oath in a United States court<sup>38</sup>: in the week following the publication of the IARC's glyphosate evaluation, Portier signed a contract with two law firms that were preparing to sue Monsanto on behalf of victims of cancer "caused" by glyphosate. Portier's fee as a litigation consultant was more than \$160,000 (until June 2017), plus travel expenses, for his work in providing his analyses of glyphosate for one law firm, and more than \$144,000 for his work at another lawfirm. A confidentiality clause stipulated that Portier was to refrain from disclosing this employment to a third party. Emails provided during the hearing also reveal the key role that he attributed himself after the IARC evaluation. In an email addressed to this body, Portier pledged to protect the reputation of the IARC and its Monograph on glyphosate, and not to let the opinions of the BfR and the EFSA weaken the strength of the IARC Monograph"<sup>39</sup>.

34. See Kate Kelland, "Is your weed killer carcinogenic?", reuters.com, 18 April 2016 (<https://fr.reuters.com/article/us-health-who-glyphosate/is-your-weed-killer-carcinogenic-idUSKCN0XF0RL>).

35. Christopher Portier, "Carcinogenicity of Glyphosate. A Systematic Review of the Available Evidence", 21 November 2016 ([https://echa.europa.eu/documents/10162/22863068/glyphosate\\_ngo\\_heal\\_en.pdf/b743ed14-d27d-b17f-7fec-dcb2866f8fe3](https://echa.europa.eu/documents/10162/22863068/glyphosate_ngo_heal_en.pdf/b743ed14-d27d-b17f-7fec-dcb2866f8fe3)).

36. See email from 22 January 2016 exchanged for the preparation of this meeting ([https://corporateeurope.org/sites/default/files/attachments/27\\_bto\\_meeting\\_redacted.pdf](https://corporateeurope.org/sites/default/files/attachments/27_bto_meeting_redacted.pdf)). The names deleted in this document are those of Francesco Forastiere, Ivan I. Rusyn and Hans Kromhou.

37. The Risk-Monger, "The Portier Papers", 13 October 2017 (<https://risk-monger.com/2017/10/13/greed-lies-and-glyphosate-the-portier-papers/>).

38. United States District Court, Northern District of California, "Roundup Products Liability Litigation. Deposition of Christopher Jude Portier, Ph.D.", New York, 5 September 2017 (<https://usrtk.org/wp-content/uploads/2017/10/Deposition-of-CHRISTOPHER-JUDE.pdf>).

39. Email by Christopher Portier, 9 November 2015 (<https://g8fip1kplyr33r3krz5b97d1-wpengine.netdna-ssl.com/wp-content/uploads/2018/07/SPOLITIC020-18070214030.pdf>).

The phrase "*I do not intend to let this happen*" written in this email, as well as his lobbyist activities mentioned above, is especially evocative when his ties with lawyers exploiting the IARC classification are taken into account. Portier admitted during his hearing that he had actually worked for the law firm Lundy Lundy Soileau & South for two months prior to March 2015, i.e before the date of his involvement in the IARC glyphosate working group.

The Corporate Europe Observatory (CEO), "a campaign group working to expose and challenge the privileged access and influence enjoyed by corporations and their lobby groups in EU policy making"<sup>40</sup> which participates in various political ecology campaigns (against biotechnologies, pesticides, and nuclear energy, for example) stepped in to defend Portier, explaining that "one reason we are writing this factsheet to defend Dr. Portier is because he helped us a lot in our work"<sup>41</sup>.

The hearing in the U.S. revealed an additional conflict of interest for Charles William Jameson, another member of the IARC glyphosate working group, who was also paid to write an expert report to support complaints based on the classification of glyphosate by this working group, at an hourly rate of \$400<sup>42</sup>.

Numerous documents reveal other conflicts of interest, as well as an obvious lack of neutrality on behalf of several members of the IARC working group and exposing its questionable working methods<sup>43</sup>. Equally disturbing are the conflicts of interest for experts involved in previous IARC work and their ties to law firms, as seemed to be the case for the benzene working group in 2009<sup>44</sup>.

The lack of transparency of the IARC regarding its opinion on glyphosate raises questions. The journalist Kate Kelland highlighted the IARC's refusal to release the working group documents that led to the classification of glyphosate<sup>45</sup>. Former IARC Director, Christopher Wild, also refused to attend the United States House of Representatives Science Committee hearing on the IARC's

40. CEO introduction page [<https://corporateeurope.org/en/who-we-are>].

Jameson, Ph.D., in Support of General Causation on Behalf of Plaintiffs", 12 May 2017 [<https://usrtk.org/wp-content/uploads/2017/10/Charles-Jameson-expert-report.pdf>].

43. Complete file on this case compiled by Marcel Kuntz, "Glyphosate: Why did IARC produce such a questionable classification?" [[www.marcel-kuntz-ogm.fr/2019/04/glyphosate-why-did-iarc-produce-such-a-questionable-classification.html](http://www.marcel-kuntz-ogm.fr/2019/04/glyphosate-why-did-iarc-produce-such-a-questionable-classification.html)].

44. The investigation was led by David Zaruk and made public in a series of articles. The names of Bernard Goldstein, Peter Infante and Martyn T. Smith are cited as litigation consultants in the context of benzene lawsuits and members of the IARC Benzene Working Group (see The Risk-Monger, "The Corruption of IARC 1/4: IARC Monographs Produced for US Tort Law Firms", risk-monger.com, 24 August 2019, <https://risk-monger.com/2019/08/24/1-4-iarc-monographs-produced-for-us-tort-law-firms/>).

45. An email written by Kathryn Guyton, IARC Scientist and Acting Head of the IARC Monographs Group, stated the IARC "does not encourage participants to retain working drafts or documents after the monograph has been published". See Kate Kelland, "Exclusive: WHO cancer agency asked experts to withhold weedkiller documents", reuters.com, 25 October 2016 [[www.reuters.com/article/us-health-cancer-iarc-exclusive-idUSKCN12P2FW](http://www.reuters.com/article/us-health-cancer-iarc-exclusive-idUSKCN12P2FW)].

functioning (see below) and wrote a letter to this committee in which he stated the "IARC would be grateful if the House Science Committee would take all necessary measures to ensure that the immunity of the Organization, its officials and experts, as well as the inviolability of its archives and documents, are fully respected"<sup>46</sup>. Kate Kelland also published an investigation showing that between the *draft* version and the *published* report of the IARC glyphosate Monograph, several passages were changed. This in itself is not unusual, but what is unusual is that all the changes converge, in order to strengthen the conclusion of the carcinogenic classification of this herbicide<sup>47</sup>. Even if the IARC replied<sup>48</sup>, the verification of its explanations is always confronted by the lack of transparency of its work.

Finally, it should be mentioned that Kathryn Guyton, an IARC official who had agreed to testify in 2016 before the travesty of justice called "*The International Monsanto Tribunal*" but did not receive WHO autorisation to appear, suggested the organiser, Marie-Monique Robin, notoriously anti-Monsanto, invite Aaron Blair (chairman of the glyphosate working group) instead, not bound by the duty of reserve<sup>49</sup>.

## VI. A KEY POINT IN THE IARC'S EVALUATION: NON-HODGKIN'S LYMPHOMA

Observational epidemiological studies have investigated the possible links between glyphosate and an increased risk of cancer in its users. It is well known that these types of studies may be prone to bias and error, in particular because of the so-called confounding factors<sup>50</sup>. It is therefore not surprising to obtain contradictory results, with some studies finding a link between glyphosate and cancer whilst others conclude a lower incidence of cancer in the users of this herbicide.

46. Letter by Christopher Wild to the Committee on Science, Space, and Technology from the U.S. House of Representatives, 11 January 2018 (<https://usrtk.org/wp-content/uploads/2018/01/IARC-letter-back-to-Lamar-Smith.pdf>).

47. Kate Kelland, "In glyphosate review, WHO cancer agency edited out 'non-carcinogenic' findings", *reuters.com*, 19 October 2017 ([www.reuters.com/investigates/special-report/who-iarc-glyphosate/](http://www.reuters.com/investigates/special-report/who-iarc-glyphosate/)).

48. International Agency for Research on Cancer (IARC), "IARC rejects false claims in Reuters article ['In glyphosate review, WHO cancer agency edited out 'non-carcinogenic' findings']", 24 October 2017 ([www.iarc.fr/wp-content/uploads/2018/07/IARC\\_Response\\_Reuters\\_October2017.pdf](http://www.iarc.fr/wp-content/uploads/2018/07/IARC_Response_Reuters_October2017.pdf)).

49. See Marie-Monique Robin's invitation email to Aaron Blair, 18 August 2016 (<https://usrtk.org/wp-content/uploads/2017/06/Blair-25.pdf>).

50. A variable [e.g. another substance] is a confounding factor if it is related to the exposure studied (here glyphosate) and if it is associated with the disease in unexposed subjects.

Examples of epidemiological studies linking the occurrence of various types of cancer and exposure to glyphosate

Source: Andrew Kniss, "Glyphosate and cancer – revisited", 11 August 2018 (<https://plantoutofplace.com/2018/08/glyphosate-and-cancer-revisited/>).

Explanation: Each point represents a study that assessed the relative risk of developing cancer between individuals exposed to glyphosate compared to those who were not. The dots on the left side of the blue line [values <1] mean that, on average, individuals exposed to glyphosate were less likely to get this type of cancer. Dots to the right of the blue line [values >1] mean that individuals exposed to glyphosate were more likely to get this type of cancer. Confidence intervals (the uncertainty associated with the risk estimate) are not shown in this graph.

Whilst it seems unlikely that these studies reflect the reality, it confirms the necessity for a critical analysis of all published data to identify possible biases and limitations, which is, therefore, a matter for specialists.

A number of studies (see graph above) seem to indicate (overall, but with the above-mentioned reservations) a link between glyphosate and non-Hodgkin's lymphoma (NHL), which are cancers of the immune system, more precisely the lymphatic system. It is this indication that the IARC working group selected, speaking of "limited evidence of carcinogenicity in humans for non-Hodgkin's lymphoma" which, nevertheless, had a non-negligible weighting in its classification decision.

Glyphosate, separating "the wheat from the tares"

Looking in detail, it appears that this "limited evidence" comes from four case-controlled, retrospective epidemiological studies. This type of research is known to be subject to bias<sup>51</sup> and the level of proof of these four studies was very low<sup>52</sup>. In addition, 17 other studies indicated the absence of a carcinogenic risk for humans<sup>53</sup>. "Cohort" studies (i.e. the follow-up of subjects over time, termed longitudinal, prospective statistical studies), considered as less biased<sup>54</sup>, did not indicate a link between glyphosate and cancer. Researchers considered the prospective Agricultural Health Study (AHS) published in 2005 to be the only reliable assessment of the risk of NHL for users of glyphosate<sup>55</sup>. This independent, publicly-funded study included more than 50,000 farmers and did not identify any increased risk of cancer in glyphosate users. However, two limitations should be noted – the relatively low number of cases and a follow-up period of less than 10 years – but which do not preclude solid statistical power. The IARC thus based their evaluation on the most reliable results (the AHS study published in 2005) but also on the results of less reliable studies. The AHS later lifted the limits mentioned above and confirmed the absence of a link between glyphosate and NHL<sup>56</sup>. The IARC explained that they had not taken into account these latest results since they had not been published in a scientific journal at the time of their discussions on glyphosate.

However, this rule was not always respected by the IARC concerning unpublished data<sup>57</sup> and they were in fact aware of this unpublished AHS data at the time. In fact, Aaron Blair, retired from the National Cancer Institute in the United States and "Overall Chair" of the IARC glyphosate working group, had participated in at least the first phase of this AHS study. Court documents cited above revealed that Blair knew that new AHS data had demonstrated no link between increased risk of cancer and exposure to glyphosate. In his testimony under oath, he also stated that this ignored data would have altered the IARC analysis, i.e. that it would have made it less likely that glyphosate would meet the criteria to be classified as "probably carcinogenic"<sup>58</sup>.

51. For example, memorisation bias: a subject with a pathology ["case"] can remember more from past exposures than a subject not affected by the pathology ["control"].

Stoop, "Pesticides and cancer among farmers: the rush towards irrefutability", *europeanscientist.com*, 12 September 2018 ([www.europeanscientist.com/en/features/pesticides-and-cancer-among-farmers-the-rush-towards-irrefutability/](http://www.europeanscientist.com/en/features/pesticides-and-cancer-among-farmers-the-rush-towards-irrefutability/)).

55. John Acquavella, David Garabrant, Gary Marsh, Tom Sorahan and Douglas L. Weed, "Glyphosate epidemiology expert panel review: a weight of evidence systematic review of the relationship between glyphosate exposure and non-Hodgkin's lymphoma or multiple myeloma", *Critical Reviews in Toxicology*, vol. 46, suppl. 1, September 2016, p. 28-43 ([www.tandfonline.com/doi/full/10.1080/10408444.2016.1214681](http://www.tandfonline.com/doi/full/10.1080/10408444.2016.1214681)).

56. Gabriella Andreotti et al., "Glyphosate Use and Cancer Incidence in the Agricultural Health Study", *Journal of the National Cancer Institute*, vol. 110, n°5, May 2018, p. 509-516 ([www.ncbi.nlm.nih.gov/pmc/articles/PMC6279255/](http://www.ncbi.nlm.nih.gov/pmc/articles/PMC6279255/)).

57. See The Risk-Monger, "Glyphosate: How to fix IARC", 27 September 2017 (<https://risk-monger.com/2016/09/27/glyphosate-how-to-fix-iarc/>). This article shows that, at least in the case of Monograph 118 on welding fumes, the IARC took into account unpublished data. A document reports a confidentiality commitment to allow the consultation of this data.

58. See Kate Kelland, "Cancer agency left in the dark over glyphosate evidence", *reuters.com*, 14 June 2017 ([www.reuters.com/investigates/special-report/glyphosate-cancer-data/](http://www.reuters.com/investigates/special-report/glyphosate-cancer-data/)).

In addition, Aaron Blair was also involved in another unpublished study, the North American Pooled Project<sup>59</sup>, which came to the same conclusions as the AHS one did. Blair did not inform the IARC glyphosate working group of this study and let them vote, including himself, in favour of a link between glyphosate exposure and cancer, knowing it was wrong.

## VII. OTHER SCIENTIFIC ALLEGATIONS CONCERNING GLYPHOSATE

Pesticides, in general, and glyphosate in particular, have extensively motivated scientific studies. Publications reporting harmful effects vary in quality: certain are credible, while others are limited in scope, not to mention certain outlandish demonstrations. Hence, the importance of the work of official agencies and their neutrality, in order to separate the "wheat from the tares".

The outlandish demonstrations category includes the series of publications "Pathways to Modern Diseases" by Anthony Samsel and Stephanie Seneff which suggest a link between exposure to glyphosate and intestinal disorders, obesity, diabetes, cardiac disease, depression, autism, infertility, cancers and Alzheimer's disease, etc.

Stephanie Seneff's affiliation with the Massachusetts Institute of Technology (MIT) has given her some credibility in the press, but she has no actual experience in this field. These two authors did not conduct any study, satisfying themselves with speculative correlations, without evidence<sup>60</sup>.

The work of the German veterinary Monika Krüger, a specialist in microbiology and infectious diseases in animals should also be mentioned. Krüger believes that glyphosate is responsible for harm in farm animals<sup>61</sup>. She demonstrated an effect of glyphosate on potential pathogens and beneficial bacteria on the intestinal flora of chickens. This herbicide can, in fact, potentially affect the metabolism of certain bacteria, a subject of risk assessment. However, Krüger's study was only performed in vitro. It should be mentioned that such an effect was not found in the intestinal bacteria of rats exposed to high doses of glyphosate<sup>62</sup>. This question, therefore, remains open.

59. See Occupational Cancer Research Center, "North American Pooled Project: pesticides, agricultural exposures, and cancer", 2013 ([www.occupationalcancer.ca/2013/north-american-pooled-project/](http://www.occupationalcancer.ca/2013/north-american-pooled-project/)).

60. For critical views on publications by Anthony Samsel and Stephanie Seneff, see Keith Kloor ([www.discovermagazine.com/environment/when-media-uncritically-cover-pseudoscience](http://www.discovermagazine.com/environment/when-media-uncritically-cover-pseudoscience)), Pacific Standard Staff (<https://psmag.com/social-justice/research-gone-wild-the-future-of-autism>), and Hank Campbell ([www.acsh.org/news/2017/11/09/not-even-wrong-seneff-and-samsel-debunked-seralini-crew-12126](http://www.acsh.org/news/2017/11/09/not-even-wrong-seneff-and-samsel-debunked-seralini-crew-12126)).

61. For a summary of Krüger's claims, see her presentation as a "witness" at the mock justice of the "Monsanto International Tribunal" (<https://en.monsantotribunal.org/upload/asset/cache/1007664447.pdf>).

62. Lene Nørby Nielsen et al., "Glyphosate has limited short-term effects on commensal bacterial community composition in the gut environment due to sufficient aromatic amino acid levels", *Environmental Pollution*, vol. 233, February 2018, p. 364-376 ([www.sciencedirect.com/science/article/pii/S0269749117328099](http://www.sciencedirect.com/science/article/pii/S0269749117328099)).

Krüger then published a study that investigated the presence of glyphosate in new-born piglets with malformations on a Danish farm. The weakness of this work lies in the lack of proof of cause and effect. The EFSA notes that "malformations in newborn piglets on a Danish farm have been attributed to glyphosate simply because residues of this active substance were found at extremely variable concentrations in different organs and tissues of these animals. In the absence of any control group and taking into account the rather low dietary exposure of the sows and the results of a multitude of developmental studies, this assumption is not sufficiently substantiated to be relied upon"<sup>63</sup>. The question is, why has such an effect not been observed elsewhere, such as in the United States, for example?

Krüger also detected glyphosate in dairy cows in Denmark, at levels she claimed to be correlated with biochemical changes in these animals' blood, which the researcher attributes to the chelating effect of glyphosate. The EFSA reports that

"During the current assessment, it was concluded that the small amount of ingested glyphosate is not expected to bind trace elements to such an extent that clinical signs might occur. Furthermore, this study presented major methodological deficiencies (e.g. the absence of a control group), severely affecting its reliability"<sup>64</sup>.

All this did not prevent Krüger from gaining notoriety among anti-GMO and anti-glyphosate activists. She is herself considered an activist opposed to this product, based on her studies which have, however, been refuted, reminiscent of the Séralini phenomenon in France<sup>65</sup>. Krüger's influence surged following one of her publications claiming to validate an ELISA test (enzyme-linked immunosorbent assay)<sup>66</sup> manufactured by Abraxis (USA) for the detection of glyphosate in urine. This publication claims to find more glyphosate in the urine of individuals consuming conventionally farmed products than in those consuming organic products, and similarly in chronically ill persons compared to healthy ones<sup>67</sup>. Following this publication, Krüger cofounded a laboratory for the detection of glyphosate in urine.

63. EFSA, "Evaluation of the impact of glyphosate and its residues in feed on animal health", *European Food Safety Authority Journal*, vol. 16, n° 5, May 2018, (<https://efsa.onlinelibrary.wiley.com/doi/10.2903/j.efsa.2018.5283>).

64. EFSA (*ibid.*).

65. See M. Kuntz, *The Séralini affair-The dead-end of an activist science*, Fondation pour l'innovation politique, 26 September 2019 ([www.fondapol.org/en/etudes-en/the-seralini-affair-the-dead-end-of-an-activist-science/](http://www.fondapol.org/en/etudes-en/the-seralini-affair-the-dead-end-of-an-activist-science/)).

66. Biochemical ELISA tests are based on the binding of an antibody to the target that it is capable of recognising. This binding then gives rise to a signal that is visualised.

67. Examination of the figures in the publication casts doubt on the validity of this claim. See Monika Krüger et al., "Detection of Glyphosate Residues in Animals and Humans", *Journal of Environmental & Analytical Toxicology*, vol. 4, n° 2, 2014 ([www.researchgate.net/publication/261250327\\_Detection\\_of\\_glyphosate\\_residues\\_in\\_animals\\_and\\_humans](http://www.researchgate.net/publication/261250327_Detection_of_glyphosate_residues_in_animals_and_humans)).

## VIII. THE CASE OF GLYPHOSATE IN URINE

A campaign launched in Germany in 2016 by the Heinrich-Böll Foundation (allied with the German Green Party) claimed that an "overwhelming majority of Germans were contaminated by glyphosate"<sup>68</sup>. The French press reported on this "Public mobilisation"<sup>69</sup>. MEPs themselves participated in the experiment, providing credibility to the idea of a universal contamination of the population by this herbicide. Even more disturbing: breast milk was also contaminated<sup>70</sup>.

In France, a similar campaign, named "Volunteer Pissers", in analogy to the "Volunteer Reapers" who destroy GMOs, was launched in April 2017<sup>71</sup>. Thousands of volunteers participated, including celebrities. The analyses were performed by Krüger's company and all results were positive. The authorities were demanded to ban all pesticides\* (synthetic only, since pesticides used in organic farming are never targeted by "anti-pesticide" campaigns) and complaints were filed.

However, the fact that these tests gave 100% positive results contradicts other scientific studies<sup>72</sup>. In addition, it is well known to specialists that an antibody can also bind to other molecules, especially if they are abundant, leading to false positives in routine ELISA tests. Such tests have been validated for detection in a simple medium such as water, e.g. before capture, but not for a more complex medium such as urine (except by Monika Krüger). Detection based on chromatographic separation, associated with mass spectrometry, known as LC/MS-MS\*, is considered as the most reliable.

The unreliability of the tests used in this activist campaign was established when farmers themselves took the initiative to be tested by both methods in parallel. The results of the LC/MS-MS analyses contradicted those of the ELISA tests<sup>73</sup>. Nevertheless, the campaign had paid off. Thus, a document destined for agricultural education and available via the official organisation

73. For a comparison of data from both techniques, see [www.agriculture-environnement.fr/2019/02/21/biocheck-un-laboratoire-aux-curieuses-analyses](http://www.agriculture-environnement.fr/2019/02/21/biocheck-un-laboratoire-aux-curieuses-analyses).

Educagri affirms that "the surveys in France resulted in 100% presence in urine"<sup>74</sup> and relates other misinformation, e.g. the citation on several occasions the works of Seralini or even Samsel and Seneff<sup>75</sup>.

## IX. REFLECTIONS ON PARALLEL "SCIENCE"

The concept of parallel "science" arose as a result of activist anti-GMO initiatives<sup>76</sup>, having pretence to science but which are truly at the planned service of a political project aiming to replace scientists by mediated "experts", sympathisers of the political project at hand, in particular for risk assessment<sup>77</sup>. These experts can be self-proclaimed or, on the other hand, even recognised scientists. In the latter case, the concept joins that of "alterscience", developed by Alexandre Moatti where people trained in science mobilise their knowledge in favour of alternative theories or the reconstruction of disciplines for ideological or personal gains<sup>78</sup>. This "alterscience" concept involves those who, alone against the entire scientific community, claim to be right. Today, however, this notion of the lone researcher is outdated since many activist organisations claiming scientific notoriety exist, such as the Committee for Independent Research and Information on Genetic Engineering (Criigen<sup>79</sup>) in France and its equivalents in other countries. The Collegium Ramazzini is such an organisation, described as "an independent, international academy founded in 1982 by Irving J. Selikoff, Cesare Maltoni and other eminent scientists. It is comprised of 180 internationally renowned experts in the fields of occupational and environmental health. The mission of the Collegium Ramazzini is to advance the study of occupational and environmental health issues"<sup>80</sup>.

74. See Collectif Résolution, "Controverses autour du glyphosate et de ses impacts", May 2019, p. 9 [[https://srfdpdl.educagri.fr/pluginfile.php/418/mod\\_folder/content/0/Kit%201%20Guide%20complet%20glyphosate%20PhC%20V10.pdf?forcedownload=1](https://srfdpdl.educagri.fr/pluginfile.php/418/mod_folder/content/0/Kit%201%20Guide%20complet%20glyphosate%20PhC%20V10.pdf?forcedownload=1)].

75. *Ibid.*, p. 6-7 and 10-11.

76. N.B. The purpose of the author of this study is not to condemn activism in itself, which may be esteemed, but to analyse new approaches in the history of science.

77. See Marcel Kuntz, "Science and false sciences et fausses sciences", marcel-kuntz-ogm.fr, 9 January 2011 [[www.marcel-kuntz-ogm.fr/article-false-science-64605349.html](http://www.marcel-kuntz-ogm.fr/article-false-science-64605349.html)].

78. Alexandre Moatti, *Alterscience. Postures, dogmes, idéologies*, Odile Jacob, 2013.

79. For details on Criigen (in French), see [ecolopedia.fr](http://ecolopedia.fr), 5 March 2019 [[www.ecolopedia.fr/?p=410](http://www.ecolopedia.fr/?p=410)].

80. "About Mission", [[www.collegiumramazzini.org/about/mission](http://www.collegiumramazzini.org/about/mission)]. The purpose here is not to denigrate all the work carried out by the Collegium Ramazzini, in particular after its creation in 1982, but to illustrate an increasingly frequent tendency of disseminating systematically alarmist messages in the media and to entice, by a group effect, other scientists in this worldview.

Its list of members includes Aaron Blair and Christopher Portier, as well as three experts in the previously cited IARC benzene evaluation. In the Ramazzini conglomerate, we also find the Istituto Ramazzini which has a research laboratory in Italy and does not hesitate to affix its logo next to those of associations from the world of political ecology<sup>81</sup>. In addition, some of its work has been refuted<sup>82</sup>.

When their theories are contradicted by official risk assessment agencies, the "anti-" organisations readily appropriate the results of such scientific-pretending activist structures. Considering the importance that alarmist theories on health and the environment have acquired in society, it is not surprising that scientists also adhere to such a vision of the world and that some provide their support for certain approaches that do not have respect for the facts as a priority. In such a context, it is conceivable that these scientists could find themselves numerous in the IARC working groups.

The proliferation of false allegations clearly presents a problem for the authorities in terms of risk management and public perception. In addition, the mediatisation of organisations of parallel "science" is often associated with campaigns aimed at discrediting official agencies.

## X. ACCUSATIONS AGAINST A GERMAN SCIENTIFIC AGENCY ON GLYPHOSATE

The BfR is the responsible agency on behalf of the reporting member state (RMS) for glyphosate, in this case in Germany. A first campaign to discredit the agency claimed that it had only taken into account documents provided by manufacturers grouped together as the Glyphosate Task Force (GTF). This campaign was accompanied by the announcement of the filing of complaints by six anti-pesticide organisations and was taken up by the media<sup>83</sup>. These allegations are based on an interpretation of a document

81. See <https://citizens4pesticidereform.eu/> (note the plethora of associations) and <https://risk-monger.com/2018/11/04/why-the-activist-manifesto-is-manifestly-wrong/>.

82. For the refutation of a study on aspartame, see EFSA Panel on Food Additives and Nutrient Sources added to Food [ANS], "Statement on two reports published after the closing date of the public consultation of the draft Scientific Opinion on the re-evaluation of aspartame [E 951] as a food additive", European Food Safety Authority Journal, online journal, vol. 11, No. 12, December 2013 (<https://efsa.onlinelibrary.wiley.com/doi/10.2903/j.efsa.2013.3504>). For the rebuttal of another study on another sweetener, see Nicolas Guggenbühl, "Carcinogenic, sucralose? No, reaffirms EFSA", foodinaction.com, N.D. ([www.foodinaction.com/cancerigene-sucralose-non-reaffirme-efsa/](http://www.foodinaction.com/cancerigene-sucralose-non-reaffirme-efsa/)), and of a study on radiofrequencies, see International Commission on Non-Ionizing Radiation [ICNIRP] "ICNIRP note on recent animal carcinogenesis studies", icnirp.org, 4 September 2018 ([www.icnirp.org/cms/upload/publications/ICNIRPnote2018.pdf](http://www.icnirp.org/cms/upload/publications/ICNIRPnote2018.pdf)).

83. Pesticide Action Network, Press release, 2 March 2016 ([www.pan-germany.org/download/presse/Press\\_release\\_PAN\\_Europe\\_020315.pdf](http://www.pan-germany.org/download/presse/Press_release_PAN_Europe_020315.pdf)); "Glyphosate: Environmental organisations press charges against Monsanto, BfR and EFSA for assessment of glyphosate", eureporter.co ([www.eureporter.co/world/2016/03/02/glyphosate-environmental-organisations-press-charges-against-monsanto-bfr-and-efsa-for-assessment-of-glyphosate/](http://www.eureporter.co/world/2016/03/02/glyphosate-environmental-organisations-press-charges-against-monsanto-bfr-and-efsa-for-assessment-of-glyphosate/)).

from December 2013<sup>84</sup> reporting on the BfR's evaluation, part of which is presented in the French TV documentary entitled "Pesticides: la malediction du soja" [Pesticides: the curse of soya] broadcast in the France 2 investigational programme, *Envoyé Spécial*<sup>85</sup>. Page 1 is shown on the screen with one of its sentences magnified and presented as proof of the exclusive use of data from the GTF<sup>86</sup>. On the other hand, other sentences on the same page explaining that the BfR also carried out an independent analysis from the scientific literature<sup>87</sup> and examined the publications cited in a document published by an organisation close to political ecology<sup>88</sup> are not magnified and are thus illegible on the screen. Its methodology was explained by the BfR in a press release from November 2015<sup>89</sup>, which did not deter France 2 from broadcasting its documentary in February 2016, also containing other inaccuracies, including the repetition without criticism of Krüger's mentioned previously theories.

A variation on this theme was launched at the end of 2017 in a report commissioned by Helmut Burtscher-Schaden, member of the Austrian ecology organisation, Global 2000, which accuses the BfR of having plagiarised, i.e. having simply copied and pasted GTF manuscripts for its report. At first glance, these accusations may seem credible since they involve a certain Dr. Stefan Weber, an expert on plagiarism<sup>90</sup>. Again, this campaign was accompanied by the announcement of the filing of a criminal complaint<sup>91</sup> and the allegations of plagiarism were widely relayed by the international press. In France, the newspaper *Le Monde* even dedicated no less than six articles to the

84. "Renewal Assessment Report. Glyphosate. Volume 3. Annex B.6.1. Toxicology and metabolism" ([https://corporateeurope.org/sites/default/files/attachments/glyphosate\\_rar\\_08\\_volume\\_3ca-cp-b-6-2013-12-18\\_san.pdf](https://corporateeurope.org/sites/default/files/attachments/glyphosate_rar_08_volume_3ca-cp-b-6-2013-12-18_san.pdf)).

85. Pierre Morel, Mauricio Rabuffetti..., *op. cit.*

86. *Ibid.*, 27'39" to 28'00". Poorly written by the BfR, this sentence is almost incomprehensible: "Due to the large number of submitted toxicological studies, the RMS was not able to report the original studies in detail and an alternative approach was taken instead. The study descriptions and assessments as provided by GTF were amended by the deletion of redundant section [such as the so-called 'executive summaries'] and new enumeration of tables" ("Renewal Assessment Report. Glyphosate", art. Cit., P. 1).

87. "The technical databases that have been used for the literature search include..." ("Renewal Assessment Report. Glyphosate...", art. cit., p. 1).

88. "Additional publications cited in a recent document prepared by the NGO 'Earth Open Source'...", *ibid.*

90. See Claire Robinson, "Glyphosate: Expert finds BfR guilty of plagiarism from Monsanto", [gmwatch.org](http://gmwatch.org), 11 October 2017 ([www.gmwatch.org/en/news/latest-news/17898-glyphosate-expert-finds-bfr-guilty-of-plagiarism-from-monsanto-demolishes-excuses](http://www.gmwatch.org/en/news/latest-news/17898-glyphosate-expert-finds-bfr-guilty-of-plagiarism-from-monsanto-demolishes-excuses)), and Dr. Stefan Weber, "Expert opinion on adherence to the rules of good scientific practice in the subsections, B.6.4.8 Published data [released since 2000]", 30 September 2017 ([www.global2000.at/sites/global/files/Expert%20Opinion%20Glyphosat%20Plagiarism%20English.pdf](http://www.global2000.at/sites/global/files/Expert%20Opinion%20Glyphosat%20Plagiarism%20English.pdf)).

91. See "Criminal complaint filed against EU authorities after glyphosate approval", [gmwatch.org](http://gmwatch.org), 5 December 2017 ([www.gmwatch.org/en/news/latest-news/18015-criminal-complaint-failed-against-eu-authorities-after-glyphosate-approval](http://www.gmwatch.org/en/news/latest-news/18015-criminal-complaint-failed-against-eu-authorities-after-glyphosate-approval)).

topic between 2017 and 2019<sup>92</sup>. *The Guardian* devoted an article to this in 2017 and again in 2019<sup>93</sup>. However, the BfR explained its methodology on 15 September 2017<sup>94</sup> and refuted the accusations of plagiarism on 20 September 2017<sup>95</sup>. For transparency reasons, the BfR disclosed the detailed descriptions of the studies of the applicants for marketing authorisation. The law obliges these studies to be conducted and the BfR had the task of evaluating them. Therefore, the BfR communicated its own comments relating to the studies, italicised in its report, just below the manufacturers' details. The BfR's methodology, admittedly clumsy in its presentation but which is standard for evaluation procedures, can, in no way, be considered as connivance in relation to the GTF studies.

## XI. THE EUROPEAN SCIENTIFIC OPINION ON GLYPHOSATE

The main difference between the 2015 EFSA report and previous evaluations is a new "safety measure": the introduction of a standard of "acute reference dose\*" to be used to revise the maximum residue levels for glyphosate. It appears that the EFSA, by revising the acceptable level of user exposure and daily intake for consumers, had revised the toxicity of this herbicide somewhat upwards<sup>96</sup>.

92. See Stéphane Foucart "Glyphosate : l'expertise européenne truffée de copiés-collés de documents de Monsanto", lemonde.fr, 16 September 2017 [[www.lemonde.fr/planete/article/2017/09/16/glyphosate-l-expertise-europeenne-truffee-de-copies-collés-de-documents-de-monsanto\\_5186522\\_3244.html](http://www.lemonde.fr/planete/article/2017/09/16/glyphosate-l-expertise-europeenne-truffee-de-copies-collés-de-documents-de-monsanto_5186522_3244.html), limited access]; Id., "Environnement : Les industriels auraient intérêt à avoir face à eux un contre-pouvoir scientifique plus fort", lemonde.fr, 30 September 2017 [[www.lemonde.fr/idees/article/2017/09/30/les-industriels-auraient-interet-a-avoir-face-a-eux-un-contre-pouvoir-scientifique-plus-fort\\_5193986\\_3232.html](http://www.lemonde.fr/idees/article/2017/09/30/les-industriels-auraient-interet-a-avoir-face-a-eux-un-contre-pouvoir-scientifique-plus-fort_5193986_3232.html), limited access]; Stéphane Foucart and Stéphane Horel, "Glyphosate : révélations sur les failles de l'expertise européenne", lemonde.fr, 26 November 2017 [[www.lemonde.fr/planete/article/2017/11/26/glyphosate-revelations-sur-les-faillles-de-l-expertise-europeenne\\_5220696\\_3244.html](http://www.lemonde.fr/planete/article/2017/11/26/glyphosate-revelations-sur-les-faillles-de-l-expertise-europeenne_5220696_3244.html), limited access]; Stéphane Horel, "Glyphosate : les ONG portent plainte contre les agences d'expertise européennes", lemonde.fr, 4 December 2017 [[www.lemonde.fr/planete/article/2017/12/04/glyphosate-les-ong-portent-plainte-contre-les-agences-d-expertise-europeennes\\_5224475\\_3244.html](http://www.lemonde.fr/planete/article/2017/12/04/glyphosate-les-ong-portent-plainte-contre-les-agences-d-expertise-europeennes_5224475_3244.html)]; Id., "Au Parlement européen, les impasses de la commission pesticides", lemonde.fr, 16 May 2018 [[www.lemonde.fr/planete/article/2018/05/16/au-parlement-europeen-les-impasses-de-la-commission-pesticides\\_5299688\\_3244.html](http://www.lemonde.fr/planete/article/2018/05/16/au-parlement-europeen-les-impasses-de-la-commission-pesticides_5299688_3244.html), limited access]; Stéphane Foucart, "Glyphosate : les autorités sanitaires ont plagié Monsanto", lemonde.fr, 15 January 2019 [[www.lemonde.fr/planete/article/2019/01/15/glyphosate-l-expertise-de-l-ue-minee-par-le-plagiat\\_5409233\\_3244.html](http://www.lemonde.fr/planete/article/2019/01/15/glyphosate-l-expertise-de-l-ue-minee-par-le-plagiat_5409233_3244.html), limited access].

95. BfR, "Glyphosate assessment: BfR rejects plagiarism accusations", bfr.bund.de, 20 September 2017 [[www.bfr.bund.de/en/press\\_information/2017/34/glyphosate\\_assessment\\_bfr\\_rejects\\_plagiarism\\_accusations-201890.html](http://www.bfr.bund.de/en/press_information/2017/34/glyphosate_assessment_bfr_rejects_plagiarism_accusations-201890.html)].

96. See EFSA, "EFSA explains risk assessment. Glyphosate" [[www.efsa.europa.eu/sites/default/files/corporate\\_publications/files/efsaexplainsglyphosate151112en.pdf](http://www.efsa.europa.eu/sites/default/files/corporate_publications/files/efsaexplainsglyphosate151112en.pdf)].

On the other hand, the EFSA upholds that "the weight of evidence indicates that glyphosate does not have endocrine disrupting properties"<sup>97</sup>. The agency also concludes that "glyphosate is unlikely to be genotoxic (i.e. damages DNA) or to present a carcinogenic threat to humans" and that "neither the epidemiological data (i.e. on humans) nor the evidence from animal studies have demonstrated causality between exposure to glyphosate and the development of cancer in humans"<sup>98</sup>.

In the above-mentioned document, the EFSA suggests that the "this distinction between active substance and pesticide formulation mainly explains the differences in how EFSA and IARC weighed the available data."<sup>99</sup>. It should be reminded here that the IARC has never put forward any such explanation, which is actually contradicted by the fact that both agencies considered both studies taking into account commercial formulations (including epidemiological studies) and studies using the substances alone. Therefore, this "diplomatic" explanation from the EFSA (which did not prevent this agency from being attacked by members of the IARC working group, as mentioned above) does not hold, especially since a more scientific document from the agency identifies differences in the interpretation of data<sup>100</sup>.

It is true that, unlike the IARC, the EFSA also took into account studies conducted by manufacturers (according to regulations)<sup>101</sup>. This point clearly incites suspicion. However, it should be pointed out that these regulatory studies are typically conducted by specialised service providers following current recommendations and are consequently of good technical quality (when this is not the case, they are rejected by the EFSA). In addition, it should be reminded that, in the Séralini case, the repetition of experiments by independent laboratories confirmed those of manufacturers and not those of activists<sup>102</sup>.

97. EFSA, "Peer review of the pesticide risk assessment of the potential endocrine disrupting properties of glyphosate", European Food Safety Authority Journal, vol. 15, n° 9, September 2017, abstract, (<https://efsa.onlinelibrary.wiley.com/doi/epdf/10.2903/j.efsa.2017.4979>).

98. EFSA, "Glyphosate: EFSA updates toxicological profile" ([www.efsa.europa.eu/en/press/news/151112](http://www.efsa.europa.eu/en/press/news/151112)).

99. See EFSA, "EFSA explains risk assessment. Glyphosate" ([www.efsa.europa.eu/sites/default/files/corporate\\_publications/files/efsaexplainsglyphosate151112en.pdf](http://www.efsa.europa.eu/sites/default/files/corporate_publications/files/efsaexplainsglyphosate151112en.pdf)).

100. EFSA, "EFSA explains the carcinogenicity assessment of glyphosate", 12 November 2015 ([www.efsa.europa.eu/sites/default/files/4302\\_glyphosate\\_complementary.pdf](http://www.efsa.europa.eu/sites/default/files/4302_glyphosate_complementary.pdf)).

101. The above shows that this difference does not explain the opinion of the IARC, which also diverges on the interpretation of the studies reviewed by all.

102. See M. Kuntz, *The Séralini affair-The dead-end of an activist science*, Fondation pour l'innovation politique, 26 September 2019 ([www.fondapol.org/en/etudes-en/the-seralini-affair-the-dead-end-of-an-activist-science/](http://www.fondapol.org/en/etudes-en/the-seralini-affair-the-dead-end-of-an-activist-science/)).

## XII. JOURNALISTS AS PROTAGONISTS IN THE CONTROVERSY

It is also intriguing to notice similarities between the glyphosate case and the Séralini case. First, some constrained doubts were also expressed by the scientific press after the publication of the IARC's opinion<sup>103</sup>. Second, whereas the divergence between the IARC and other agencies is often mentioned by the mainstream media<sup>104</sup>, many of whom are puzzled<sup>105</sup> or take at face value that the divergence can be explained by the "diplomatic" reason given by the EFSA (i.e. as mentioned above: the EFSA had considered only glyphosate, whereas the IARC had also assessed formulations)<sup>106</sup> or even defend the IARC<sup>107</sup>. The press, as a whole, remained very quiet about Christopher Portier's ties with litigation lawyers, a notable exception being *La France Agricole*<sup>108</sup>. Similarly, the fact that two lawyers received prison terms for a \$200M Roundup extortion scheme received little media coverage<sup>109</sup>.

Another similarity with the Séralini case: announcements by anti-pesticide organisations were, in both cases, widely reported on by the press. The media coverage of traces of glyphosate in everyday consumer products and of the famous detection of glyphosate in urine are examples<sup>110</sup> confirming that our mentality has not integrated the fact that simple detection is not synonymous with a health problem.

103. See for example, Daniel Cressey, "Widely used herbicide linked to cancer", nature.com, 24 March 2015 ([www.nature.com/news/widely-used-herbicide-linked-to-cancer-1.17181](http://www.nature.com/news/widely-used-herbicide-linked-to-cancer-1.17181)).

104. However, in the U.S., the media generally did not follow up on the many agencies that contradicted the IARC, whose opinion is still largely presented as the "definitive" analysis.

105. See Jennifer Martin, Cutting Through the Clutter on Glyphosate, *Food Inside*, 14 January 2016 (<https://foodinsight.org/cutting-through-the-clutter-on-glyphosate/>).

106. See Barbara Lewis, "European scientists say weedkiller glyphosate unlikely to cause cancer", Reuters, 12 November 2015 (<https://news.yahoo.com/european-scientific-advisers-glyphosate-unlikely-cause-cancer-111029054-finance.html>); Niamh Michail, "Glyphosate is unlikely to cause cancer, says EFSA", 13 November 2015 ([www.foodnavigator.com/Article/2015/11/13/Glyphosate-is-unlikely-to-cause-cancer-says-EFSA](http://www.foodnavigator.com/Article/2015/11/13/Glyphosate-is-unlikely-to-cause-cancer-says-EFSA)).

107. See Sarantis Michalopoulos, "WHO agency isolated in glyphosate fight", euractiv.com, 20 November 2017 ([www.euractiv.com/section/agriculture-food/news/iarc-alone-against-glyphosate-despite-new-evidence/](http://www.euractiv.com/section/agriculture-food/news/iarc-alone-against-glyphosate-despite-new-evidence/)); Justin Worland, "European Safety Group Recommends Pesticide Glyphosate Despite Cancer Concerns", *Time*, 12 November 2015 (<https://time.com/4109153/glyphosate-pesticide-cancer/>).

108. See "Nouvelles accusations sur les résultats du Circ", *lafranceagricole.fr*, 24 October 2017 ([www.lafranceagricole.fr/actualites/glyphosate-nouvelles-accusations-sur-les-resultats-du-circ-1,2,629563539.html](http://www.lafranceagricole.fr/actualites/glyphosate-nouvelles-accusations-sur-les-resultats-du-circ-1,2,629563539.html)).

109. See Reuters, "Virginia lawyers get prison terms for \$200M Roundup extortion scheme", 18 September 2020 (<https://today.westlaw.com/Document/ISOa628d0f9f211eaadd8fa89d4036ae0/View/FullText.html>); In France the leftist newspaper Libération mentioned it after being questioned by readers: Cyrine Ben Romdhane, "Procès Monsanto : pourquoi deux avocats des parties civiles ont-ils été condamnés ?" *Libération*, 28 September 2020 ([www.liberation.fr/checknews/2020/09/28/proces-monsanto-pourquoi-deux-avocats-des-parties-civiles-ont-ils-ete-condamnes-1800565](http://www.liberation.fr/checknews/2020/09/28/proces-monsanto-pourquoi-deux-avocats-des-parties-civiles-ont-ils-ete-condamnes-1800565)); *Le Monde* published a factual article: Arnaud Leparmentier, "Un des avocats anti-Monsanto condamné à deux ans de prison", *Le Monde*, 24 September 2020 ([www.lemonde.fr/planete/article/2020/09/24/un-des-avocats-anti-monsanto-condamne-a-deux-ans-de-prison\\_6053448\\_3244.html](http://www.lemonde.fr/planete/article/2020/09/24/un-des-avocats-anti-monsanto-condamne-a-deux-ans-de-prison_6053448_3244.html)).

110. See, for example, Arman Azad, "Dozens more breakfast foods test positive for trace amounts of weed killer, report says", *CNN*, 24 October 2018 (<https://edition.cnn.com/2018/10/24/health/breakfast-cereal-food-weed-killer-roundup/index.html>); Oliver Milman, "Weedkiller found in wide range of breakfast foods aimed at children", *The Guardian*, 7 August 2018 ([www.theguardian.com/environment/2018/aug/16/weedkiller-cereal-monsanto-roundup-childrens-food](http://www.theguardian.com/environment/2018/aug/16/weedkiller-cereal-monsanto-roundup-childrens-food)). For a critical view, see: Michael Fumento, "Ignore the Ominous Headlines About Glyphosate In Food", *realclearmarkets.com*, 12 March 2019 ([www.realclearmarkets.com/articles/2019/03/12/ignore\\_the\\_ominous\\_headlines\\_about\\_glyphosate\\_in\\_food\\_103659.html](http://www.realclearmarkets.com/articles/2019/03/12/ignore_the_ominous_headlines_about_glyphosate_in_food_103659.html)).

The *Envoyé Spécial* French TV programme in 2016 devoted entirely to glyphosate also deserves mention. After starting with a balanced coverage of a glyphosate supporter and opponent, the programme then became one-sided with a long interview with Séralini, a report on malformed animals in Denmark and the campaign to detect glyphosate in urine. The programme was criticised on social media and by certain journalists<sup>111</sup>. The latter, notably Emmanuelle Ducros and Geraldine Woessner, were in turn attacked by other media<sup>112</sup>.

Other programmes, also hosted by the journalist Élise Lucet, in particular that of 2 February 2016, which had completely misinterpreted the EFSA's figures concerning the presence of pesticides in food<sup>113</sup>, had already attracted numerous criticisms<sup>114</sup>. To conclude in relation to the information provided by public service broadcasting, it should be noted that when the glyphosate AHS study was published, a journalist explained quite justly that "to date, there is no solid evidence allowing to affirm that glyphosate is carcinogenic", however, showed his bias by regretting that "the best arguments to fight this herbicide" had not been used<sup>115</sup>. Therefore, the incomprehension of the agricultural world in the face of what it considers a never-ending critique<sup>116</sup> from France Television is not surprising.

In the case of glyphosate, a major event occurred in March 2017 concerning the Monsanto company. The newspaper *Le Monde* announced that "American justice has declassified the company's internal correspondence. As early as 1999, the company worried about the mutagenic\* potential of glyphosate"<sup>117</sup>.

These documents became known as "The Monsanto Papers". Throughout 2017, these internal documents, made public as part of a collective action brought before a federal court in California resulted in a veritable journalistic carpet bombing, with no less than six articles in *Le Monde*, plus an online chat and two editorials. The message is always the same: Monsanto manipulates

111. See Gil Rivière-Wekstein, "Envoyé spécial : Élise Lucet face à une avalanche de critiques", agriculture-environnement.fr, 29 January 2019 [[www.agriculture-environnement.fr/2019/01/29/envoye-special-glyphosate-elise-lucet-face-a-une-avalanche-de-critiques](http://www.agriculture-environnement.fr/2019/01/29/envoye-special-glyphosate-elise-lucet-face-a-une-avalanche-de-critiques)].

112. The reader will be able to get an idea of the brutality of this clash between journalists by typing (in French) "attaques contre Ducros et Woessner" on a search provider.

113. For recent figures, see EFSA, "Pesticide residues in food: track trends with our browsable charts", 2 April 2020 [[www.efsa.europa.eu/en/news/pesticide-residues-food-track-trends-our-browsable-charts](http://www.efsa.europa.eu/en/news/pesticide-residues-food-track-trends-our-browsable-charts)].

114. See Marcel Kuntz, "Crash de Cache Investigation", marcel-kuntz-ogm.fr, 18 February 2016 [[www.marcel-kuntz-ogm.fr/2016/02/crash-de-cache-investigation.html](http://www.marcel-kuntz-ogm.fr/2016/02/crash-de-cache-investigation.html)].

115. Dominique Dupagne, "Le glyphosate, les écologistes et la science", franceinter.fr, 30 November 2017 [[www.franceinter.fr/emissions/sante-polemique/sante-polemique-30-novembre-2017](http://www.franceinter.fr/emissions/sante-polemique/sante-polemique-30-novembre-2017)].

116. The term "agribashing" is used by French farmers.

117. Stéphane Foucart, "Ce que les "Monsanto Papers" révèlent du Roundup", lemonde.fr, 18 March 2017 [[www.lemonde.fr/planete/article/2017/03/18/ce-que-les-monsanto-papers-revelent-du-roundup\\_5096602\\_3244.html](http://www.lemonde.fr/planete/article/2017/03/18/ce-que-les-monsanto-papers-revelent-du-roundup_5096602_3244.html), limited access]. Another interpretation has been proposed: Monsanto considered glyphosate to be safe, but anticipated that its safety would be questioned (see "Le thriller Glyphosate pour les nuls", forumphyto.fr, 6 November 2017, [www.forumphyto.fr/2017/11/06/le-thriller-glyphosate-pour-les-nuls/](http://www.forumphyto.fr/2017/11/06/le-thriller-glyphosate-pour-les-nuls/)).

information to the detriment of public health (Volkswagen is also condemned in one of the editorials<sup>118</sup>).

The IARC is presented as the "United Nations agency against cancer", undoubtedly to enhance its status, and as a "model for an in-depth overhaul of European expertise"<sup>119</sup>: "how can this spectacular divergence (between the IARC and other agencies) be explained? Most observers cite a major reason: to make their conclusions, the other agencies relied heavily on confidential data provided by ... Monsanto, whereas the IARC did not have access to this data"<sup>120</sup>. In addition, "to save glyphosate, the company undertook by all means to prejudice the 'United Nations Cancer Agency'". However "a renowned toxicologist will soon expose the matter: Christopher Portier"<sup>121</sup>. In the end, the Varenne Award and the 2018 Investigative Reporting Award of the European Press were awarded to two journalists from *Le Monde*, Stéphane Foucart and Stéphane Horel for their investigations into these Monsanto Papers<sup>122</sup>.

The clear-cut positioning of the two journalists from *Le Monde* in favour of the IARC became clear after the publication of the classification of glyphosate as a probable carcinogen in March 2015: "the IARC evaluations have the highest level of recognition in the scientific community, but are often attacked by displeased industrialists"<sup>123</sup>, such as those prejudicial to the BfR - "a third of the committee members are directly employed... by agrochemical or biotechnology giants!"<sup>124</sup> (in fact, three out of twelve members and involving companies not selling glyphosate at the time<sup>125</sup>, otherwise they would not have been able to participate in delivering BfR's evaluation).

Yet the drama does not end there. Closer examination of declassified documents in the U.S., including those obtained under the Freedom of Information Act, revealed that the name of the journalist who was at the origin of the Monsanto Papers campaign also appears in these documents, since it is read that Kathryn

118. "Monsanto Papers : des dérives inadmissibles", lemonde.fr, 5 October 2017 ([www.lemonde.fr/idees/article/2017/10/05/monsanto-papers-des-derives-inadmissibles\\_5196563\\_3232.html](http://www.lemonde.fr/idees/article/2017/10/05/monsanto-papers-des-derives-inadmissibles_5196563_3232.html)).

119. "Monsanto Papers : les leçons d'une enquête", lemonde.fr, 3 June 2017 ([www.lemonde.fr/idees/article/2017/06/03/monsanto-papers-les-lecons-d-une-enquete\\_5138336\\_3232.html](http://www.lemonde.fr/idees/article/2017/06/03/monsanto-papers-les-lecons-d-une-enquete_5138336_3232.html)).

120. Stéphane Foucart and Stéphane Horel, "Monsanto papers, les agences sous l'influence de la firme", lemonde.fr, 5 October 2017 ([www.lemonde.fr/planete/article/2017/10/05/monsanto-papers-les-agences-sous-l-influence-de-la-firme\\_5196332\\_3244.html](http://www.lemonde.fr/planete/article/2017/10/05/monsanto-papers-les-agences-sous-l-influence-de-la-firme_5196332_3244.html), limited access).

121. Note that Portier is not a toxicologist, but a statistician.

122. For some critical thought: "Stéphane Foucart et Stéphane Horel récompensés par le Prix européen du journalisme d'enquête...vraiment ?", seppi.over-blog.com, 16 March 2018 (<http://seppi.over-blog.com/2018/03/stephane-foucart-et-stephane-horel-recompenses-par-leprix-europeen-du-journalisme-d-enquete.vraiment.html>).

123. Stéphane Foucart, "Le désherbant Roundup classé cancérigène", lemonde.fr, 25 March 2015 ([www.lemonde.fr/planete/article/2015/03/25/le-desherbant-roundup-classe-cancerogene\\_4600906\\_3244.html](http://www.lemonde.fr/planete/article/2015/03/25/le-desherbant-roundup-classe-cancerogene_4600906_3244.html)).

124. *Ibid*.

125. See Gil Rivière-Wekstein, "Nouvelle étape dans la guerre contre le glyphosate", *agriculture-environnement.fr*, 4 May 2015 ([www.agriculture-environnement.fr/2015/05/04/nouvelle-etape-dans-la-guerre-contre-le-glyphosate](http://www.agriculture-environnement.fr/2015/05/04/nouvelle-etape-dans-la-guerre-contre-le-glyphosate)).

Guyton, the IARC official who piloted the classification of glyphosate as a "probable carcinogen", recommended Christopher Portier to contact Stéphane Foucart, and the latter thanked him for his help afterwards<sup>126</sup>. There is nothing wrong with this in itself, but these emails, part of a clearly longer series which are not available, suggest that this journalism owes much to the contribution of Christopher Portier, who himself is evidently not neutral in the matter.

It is therefore legitimate to take an interest in the history of these famous Monsanto Papers and to reexamine their interpretation. It was actually the organisation US Right to Know (USRTK<sup>127</sup>) which made the documents resulting from the legal procedure public, in collaboration with a lawyer of one of the law firms involved in the class action against Monsanto<sup>128</sup>. It is difficult to come to a clear conclusion on the basis of only the released documents. However, there is certainly an anti-glyphosate triad between lawyers specialised in litigation against corporates, professional activists and some members of the IARC working group<sup>129</sup>, which merits a credible journalistic investigation.

Concerning Monsanto's influence on scientific information, two aspects need to be distinguished: on one hand, the regulatory studies provided to the agencies, and there is no evidence in these documents as to a desire to falsify these studies. On the other hand, publications in scientific journals or in blogs gave rise to wide media coverage condemning the ghostwriting practiced by Monsanto, notably concerning articles by the American biologist Henry Miller, published in a blog on the site of the economic magazine Forbes<sup>130</sup> but which will not be developed here since blog articles are unlikely to have influenced the assessment agencies. Another accusation concerns "five articles in several scientific fields (toxicology, epidemiology, animal studies, etc.) [published] in September 2016 in the journal *Critical Reviews in Toxicology*"<sup>131</sup>. These articles were commissioned and funded by Monsanto, via a consultancy firm, which is clearly mentioned in the articles, but the authors' declarations of interest were not complete.

126. See the available emails: "Les 'Portier-papers', Stéphane Foucart et le CIRC", seppi.over-blog.com, 2 November 2017 (<http://seppi.over-blog.com/2017/11/les-portier-papers-stephane-foucart-et-le-circ.html>).

127. USRTK is an American anti-GMO association created to force product labelling for foods containing GMOs. USRTK then engaged in the fight against glyphosate (often associated in the United States with GMO crops). For an investigation on USRTK, see "Les eaux troubles des Monsanto Papers", agriculture-environnement.fr, 13 May 2019 ([www.agriculture-environnement.fr/2019/05/13/les-eaux-troubles-des-monsanto-papers/](http://www.agriculture-environnement.fr/2019/05/13/les-eaux-troubles-des-monsanto-papers/)).

128. See "Celles qui ont révélé les 'Monsanto papers' racontent comment Monsanto triche", interview with Carey Gillam and Kathryn Forgie, reporterre.net, 24 October 2017 (<https://reporterre.net/Celles-qui-ont-revele-les-monsanto-papers-racontent-comment-monsanto-triche>). This site, ideologically close to political ecology, explains that Carey Gillam and Kathryn Forgie are at the origin of the Monsanto papers: "Carey Gillam started as a journalist, having worked for Reuters for more than 20 years. She has worked for two years for USRTK, particularly on the Monsanto case. Kathryn Forgie is a lawyer at Andrus Wastaff attorney firm and represents the class action of some of the plaintiffs against Monsanto".

129. For example, the above-mentioned Blair's court hearing revealed his and Portier's interactions with USRTK lobbyist Carey Gillam: *The Risk-Monger*, "Carey Gillam: A Rachel Carson for our Time?", 10 October 2017 (<https://risk-monger.com/2017/10/10/carey-gillam-a-rachel-carson-for-our-time/>).

130. The reader can find the details on this Internet campaign by searching for "Henry Miller + Forbes + Monsanto" and can get an idea of the author's other writings here ([www.henrymillermd.org/articles/](http://www.henrymillermd.org/articles/)).

131. Find these articles here: [www.tandfonline.com/toc/itxc20/46/sup1?nav=tocList](http://www.tandfonline.com/toc/itxc20/46/sup1?nav=tocList).

The question rightfully asked by the European Commission to the EFSA is whether the articles mentioned in the Monsanto Papers could have unduly influenced the agency's evaluation. It should be reminded that the EFSA evaluation dates from 2015 and that the five articles mentioned above were published at a later date, and, therefore, could not have influenced it. The EFSA provided a very detailed response, including two other scientific reviews which had been published earlier (in 2000 and 2013):

"Following this investigation, EFSA can confirm that even if the allegations regarding ghostwriting proved to be true, there would be no impact on the overall assessment as presented in the EFSA conclusion on glyphosate"<sup>132</sup>. The reasons given in this answer are as follows: "the two review articles in question are an analysis of regulatory guide line studies already included in the applicant's dossier" and "their provenance was evident from the Declarations of Interest and Acknowledgements in the articles themselves". According to the EFSA, "the review articles simply served to summarise or substantiate the industry position on glyphosate that had been presented, as required by the regulatory framework in the applicant's dossier".

An analysis on how Monsanto's image gradually deteriorated is not the purpose of this study. Nevertheless, these facts explain the easy acceptance of a "good versus evil" narrative, that this company is a major influencer and whose products are by definition toxic. Whether in the media or on social media, the first concern is not usually the distinction between true and false. However, the ties between a reference scientific organisation and a private company is clearly considered as discrediting giving rise to unreserved moral judgment. This suspicion is likewise maintained towards other official risk assessment agencies. For enlightened choices, individual or collective, these agencies do not deserve to be discredited or instrumentalised by political authorities themselves.

### XIII. POLITICAL ACTIONS

Following the IARC classification and in the context of the failure of a governmental plan to reduce pesticide usage (called "Écophyto"), Ségolène Royal, then Minister of the Environment, repeatedly spoke out against Roundup. On 16 June 2015, whilst shopping in a garden centre, in front of cameras, the Minister withdrew the product from the shelves. She announced a ban on all over-the-counter pesticides, which was already planned for 2018. Ségolène Royal had also referred to the French Agency for Food,

132. EFSA, "EFSA Statement regarding the EU assessment of glyphosate and the so-called Monsanto papers", 29 May 2017, p. 5 [[www.efsa.europa.eu/sites/default/files/topic/20170608\\_glyphosate\\_statement.pdf](http://www.efsa.europa.eu/sites/default/files/topic/20170608_glyphosate_statement.pdf)].

Environmental and Occupational Health & Safety (ANSES) following the IARC classification. Following the EFSA evaluation<sup>133</sup>, "ANSES indicates that the information available on the risks of glyphosate alone does not justify, at this stage, the probably carcinogenic classification, however, the mixture of glyphosate with certain coformulations, especially of the tallow amine family, may present particular risks for users in the general public or the agricultural world"<sup>134</sup>. On 12 February 2016, the Minister asked the ANSES to withdraw the marketing authorisations for glyphosate formulations containing these adjuvants.

In Europe, the authorisation of glyphosate was coming to an end. On 30 June 2016, in the absence of an agreement with Member States, the European Commission decided to extend authorisation for eighteen months<sup>135</sup>. France and Malta voted against and seven countries, including Germany, abstained. Taking into account the EFSA's favourable evaluation, whilst seeking a political compromise, the European Commission decided, on 16 May 2017, to revive the procedure for a ten-year instead of a fifteen-year renewal.

The outcome of such a vote was uncertain and the reactions were rather negative at the time in the European Parliament. For Harald Ebner, MEP from the Greens, "a new authorisation for 10 years without restrictions would show little respect for the citizens' initiative" against glyphosate<sup>136</sup>, whilst Éric Andrieu and Marc Tarabella (Socialist Party) speaking "in the name of the precautionary principle" and referring to the Monsanto Papers, believed that "the Commission is basically wiping its feet on the health of 500 million Europeans"<sup>137</sup>. As for Angélique Delahaye (European People's Party), she regretted the lack of consideration of the European Parliament, which in April voted on a proposition to limit the authorisation of glyphosate to seven years<sup>138</sup>.

As the vote of Member States loomed (planned in October 2017), Nicolas Hulot, the new Minister of the Environment, announced on 29 August 2017 that France would vote against due to "uncertainties" relating to the hazardousness of the molecule. The Minister declared: "against glyphosate and its role as an endocrine disruptor, and maybe as a powerful antibiotic, the fact that many assumptions remain justifies the application of the precautionary principle"<sup>139</sup>.

133. The EFSA opinion seems to point to gaps in the evaluation of the product rather than to make a definitive conclusion [see EFSA, "Request for the evaluation of the toxicological assessment of the co-formulant POE-tallowamine", *European Food Safety Authority Journal*, vol. 13, n° 11, November 2015, <https://efsa.onlinelibrary.wiley.com/doi/pdf/10.2903/j.efsa.2015.4303>].

134. Translated from a declaration by the Minister to the French press.

137. Translated from a quote in "La Commission proposera une ré-homologation pour 10 ans", *lafranceagricole.fr*, 17 May 2017 [[www.lafranceagricole.fr/actualites/cultures/glyphosate-la-commission-proposera-une-re-homologationpour-10-ans-1,1,2733957307.html](http://www.lafranceagricole.fr/actualites/cultures/glyphosate-la-commission-proposera-une-re-homologationpour-10-ans-1,1,2733957307.html)].

138. *Ibid.*

139. Translated from a quote in "Glyphosate : Hulot pour une agriculture intensive en emploi plutôt qu'en engrais", *ouest-france.fr*, 22 September 2017 [[www.ouest-france.fr/economie/glyphosate-hulot-pour-une-agriculture-intensive-en-emploi-plutot-qu-en-engrais-5264800](http://www.ouest-france.fr/economie/glyphosate-hulot-pour-une-agriculture-intensive-en-emploi-plutot-qu-en-engrais-5264800)].

The antibiotic argument is taken from activist literature<sup>140</sup>. That glyphosate is an endocrine disruptor is contradicted by the EFSA (see above). However, despite the protests from agricultural organisations, on 5 September 2017 the Prime Minister, Édouard Philippe, confirmed the government's choice.

The European Union finally voted the five-year authorisation by a narrow majority, notably thanks to Germany and its agricultural minister who voted in favour, whereas its environment minister wanted to abstain. In the wake, the French President, Emmanuel Macron, asked "the government to take all necessary measures to ban the use of glyphosate in France as soon as alternatives have been found or, at the latest, in three years' time"<sup>141</sup>. This announcement contrasts with Emmanuel Macron's electoral promise to no longer "overtranspose European regulations" (as previous French governments did) and this was criticised by agricultural organisations that had opposed such over-transpositions for many years.

Faced with what may be interpreted as "a slap in the face" for European scientific agencies which is likely to contribute to the undermining of the public's confidence in these institutions, no scientific body truly protested. In this context, the National Research Institute for Agriculture, Food and the Environment (INRAE) submitted its report on the "usage of glyphosate and its alternatives" following the request by several ministers. In addition, in July 2019, December 2019 and June 2020, evaluations conducted by experts at the request of the Prime Minister and the Ministers of Agriculture and of Environment, were aimed at providing the ANSES with information relating to the economic impact of the withdrawal from glyphosate.

It is notable, however, on 10 October 2017, the publication of an article under the auspice of the French Academy of Agriculture on "the services provided by glyphosate in agriculture", which states that "the fate of glyphosate must be based on scientific knowledge and [that] decisions should be prevented from being guided by dogmatic approaches which could generate real difficulties for some, without any benefit for others".

The MPs Jean-Luc Fugit and Jean-Baptiste Moreau published an interesting report on 12 November 2019 on "the monitoring of the glyphosate exit strategy". They present an overview of the uses of this herbicide in France and states: "unresolved agronomic stalemates", in particular a conservation

140. This allegation comes from a publication by an activist scientist claiming that exposure to glyphosate or another herbicide cause changes in the antibiotic susceptibility of two bacteria, which has attracted media attention, but has not been confirmed and even contradicted using the same bacteria by J. Pöppe et al. "Selection for Resistance to a Glyphosate-Containing Herbicide in *Salmonella enterica* Does Not Result in a Sustained Activation of the Tolerance Response or Increased Cross-Tolerance and Cross-Resistance to Clinically Important Antibiotics". *Applied and Environmental Microbiology* Nov 2020, 86 [24] e01204-20 [<https://aem.asm.org/content/86/24/e01204-20>].

141. See Reuters, "Macron says glyphosate to be banned in France within three years", 27 November 2017 [<https://fr.reuters.com/article/us-eu-health-glyphosate-macron-idUKKBN1DR259>].

agriculture that could be called into question, crops with major technical constraints, the treatment of toxic or allergenic plants and the difficulty of controlling invasive perennials. The alternatives are judged to be "technical responses that are still flawed or undeveloped in several cases".

The report recommends "overseeing that the ban on glyphosate does not result in an increase in the overall consumption of herbicides, especially the most problematic substances" and states that "the transition will have a substantial cost" and that "the economic balance of farms will be difficult to maintain without financial support".

Reality caught up with the government: in January 2019 President Macron backed down on his decision to fully ban glyphosate in France in 2021<sup>142</sup>. However, restrictions on its use in farming were later announced<sup>143</sup> and the French government now wants to put the subject back on the table at the European level<sup>144</sup>.

France may get some support in Europe. In July 2019, the Austrian parliament voted a law for a total glyphosate ban, which was due to come into effect on 1<sup>st</sup> January 2020. However, the Austrian government did not send the necessary notification to the European Commission. The notification was sent to the Commission in May 2020 by the Head of Parliament, but in August 2020, the planned ban was suspended by the Commission. The political attempts to ban glyphosate nevertheless continue. In January 2020, Luxembourg announced that it had revoked authorisation for plant products containing glyphosate to become effective on 31 December 2020<sup>145</sup>. There has been no objection by the European Commission to date. In September 2019, as part of a larger action plan for the protection of insects, Germany also embarked on a phased ban of glyphosate, aiming to stop use in 2023<sup>146</sup>. At least five other European Union Member States have also imposed restrictions on glyphosate use<sup>147</sup>.

On 10 April 2019, Vietnam decided to remove glyphosate from its List of Permissible Plant Protection Products, which took effect on 10 June 2019, prohibiting production and importation, though the product can be sold and used until 30 June 2021.

Malawi suspended import permits and the use of glyphosate in April 2019, before rescinding the decision. Togo also stopped the import and use of glyphosate in December 2019, with a delay of 12 months for the use of products introduced before this date.

Six Middle Eastern countries, Saudi Arabia, Kuwait, the United Arab Emirates, Qatar, Oman and Bahrain, have banned glyphosate since 2016, after the IARC's classification.

Sri Lanka banned glyphosate in 2015 following an erroneous report linking the herbicide to a kidney disease epidemic in the country, but cancelled the ban in 2018. In October 2019, Thailand announced its intention to ban glyphosate, but on November 2019 it reversed the decision, allowing its use to continue within maximum residue limits.

Other countries have declared their intent to gradually phase out glyphosate use, such as Mexico where the issue is subject to intense political arguments. Restriction or bans by local political authorities are also widespread.

## CONCLUSION

In France, the ban on glyphosate is added to the long list of industrial, technological and infrastructural issues sacrificed for electoral reasons over the past forty years, including the ban of GMO cultivation in 2008<sup>148</sup>.

Concerning agricultural issues, farmers obviously do not have control over their image in the public debate. The same may be said for the official risk assessment agencies, regularly taken to task by those campaigning against the products they evaluate.

The lawsuits against Bayer in the United States confirm the perversity of a system where profiteers of tortious liability in common law instigate lawsuits by recruiting patients by advertising, taking 30 to 40% of the indemnities allocated by justice. A \$11 billion deal was offered to end the glyphosate litigation<sup>149</sup>. The multiplication of procedures typically results in the targeted

148. See M. Kuntz [2014] The GMO case in France: politics, lawlessness and postmodernism. *GM Crops Food*. 2014;5[3]:163-169. ([www.ncbi.nlm.nih.gov/pmc/articles/PMC5033180/](http://www.ncbi.nlm.nih.gov/pmc/articles/PMC5033180/)).

149. Tom Hals, "Bayer resolves more Roundup cases, judge keeps pause on litigation", *reuters.com*, 24 September 2020 (<https://fr.reuters.com/article/uk-bayer-glyphosate-litigation-idUKKCN26F3E2>).

company finally seeking an arrangement in order to close the procedures to avoid much higher costs if all cases (125,000 in the case of glyphosate) were going to trial. Glyphosate appears to be a profitable line, especially due to the scientific debate in relation to non-Hodgkin's lymphomas. In addition, these lymphomas are relatively frequent (more than 77,000 cases are expected in the United States in 2020), therefore the recruitment of many patients is not expected to be a problem. There are around 80 different types of NHL, clearly presaging complicated technical debates in the courts, with the risk of emotional arguments taking the upper hand. This is all the more true given that Bayer (even if just the acquirer of Monsanto) will probably have great difficulty in winning a lawsuit and in the media tribunal due to Monsanto's greatly deteriorated image. Obtaining a dependent scientific opinion was the final requirement to trigger legal proceedings.

The IARC's opinion played a large role in triggering legal procedures, despite the fact that it was contradicted by the other agencies both from the point of view of a "hazard" (see the ECHA's opinion above) and that of a "risk" (see epidemiological studies). However, as shown by the bans and restrictions on the use of glyphosate around the world, it is as if a single alarmist opinion prevails mediatically, politically and judicially over a series of reassuring opinions. The conditions under which the IARC establishes its classification and chooses its experts, their possible financial or ideological interest<sup>150</sup> would warrant a thorough public inquiry.

The IARC was investigated in 2017 by the United States House of Representatives Committee on Science, Space, and Technology. On 1<sup>st</sup> November 2017, a letter was sent to the IARC director Chris Wild by the Republican chairmen of this House Committee on Science, Lamar Smith, and the Subcommittee on Environment, Andy Biggs, stating that they are "concerned about the scientific integrity" of the IARC's "Monograph", mentioning Portier's apparent conflicts of interest<sup>151</sup>.

In a second letter, on 8 December 2017, these Congressmen expressed further concern that the IARC's evaluation meetings, deliberations and drafts have not made public<sup>152</sup>.

151. See: [https://governance.iarc.fr/ENG/Docs/CLSBiggs-IARC\\_01112017.pdf](https://governance.iarc.fr/ENG/Docs/CLSBiggs-IARC_01112017.pdf).

152. See: [https://governance.iarc.fr/ENG/Docs/SST\\_IARC12082017.pdf](https://governance.iarc.fr/ENG/Docs/SST_IARC12082017.pdf); <https://fr.reuters.com/article/idUSKBN1D15TU>.

A hearing entitled "In Defense of Scientific Integrity: Examining the IARC Monograph Programme and Glyphosate Review" took place on 6 February 2018<sup>153</sup>.

When asked to provide a witness for this hearing, the IARC Director Wild refused to attend: "although IARC is not in a position to provide witnesses for any potential hearing, I welcome this opportunity to respond to your various points and in so doing to correct repeated misrepresentations of the Monographs promoted by some sections of the media over an extended period of time". Cynically, he added: "you would also both be welcome to visit the Agency [in Lyon, France] and to pose your questions directly to me and my staff"<sup>154</sup>.

Although it was a thorough hearing, in the context of U.S. politics it was viewed as partisan and no conclusion was published. Furthermore, Republicans became the minority party in the House after the 2018 election and the inquiry did not resume.

In France, the Parliamentary Office for the Evaluation of Scientific and Technological Choices (OPECST), a joint structure to the National Assembly and the Senate, can be credited for addressing the case of glyphosate in one of its reports and for mentioning the criticisms concerning the IARC. However, the OPECST contented itself with just citing the latter's responses, without seeking to check their validity. Since the IARC is based in France, it is regrettable that a real investigation was not conducted there.

## THE FONDATION POUR L'INNOVATION POLITIQUE NEEDS YOUR SUPPORT

To reinforce its independence and carry out its mission, the Fondation pour l'innovation politique, an independent organization, needs the support of private companies and individuals. Donors are invited to attend the annual general meeting that defines the Fondation orientations. The Fondation also invites them regularly to meet its staff and advisors, to talk about its publication before they are released, and to attend events it organizes.

As a government-approved organization, in accordance with the decree published on 14<sup>th</sup> April 2004, the Fondation pour l'innovation politique can accept donations and legacies from individuals and private companies.

Thank you for fostering critical analysis on the direction taken by France and helping us defend European integration and free economy.

# GLYPHOSATE, SEPARATING “THE WHEAT FROM THE TARES”

*By Marcel KUNTZ*

Glyphosate has long been considered as an herbicide with no unacceptable health risk. In 2015, its classification as “probably carcinogenic” by the International Agency for Research on Cancer (IARC) changed the situation, and in 2017 the European Union renewed its authorisation for only five years with France even wanting to “get out of glyphosate” in three years time. However, other official risk assessment agencies have contradicted the IARC’s opinion and, as our study attempts to show, this discrepancy is not scientifically explainable. On the other hand, the IARC has a clear lack of ideological neutrality and some IARC experts have financial ties with lawyers exploiting the tort law in the United States based on the IARC’s opinion on glyphosate. In Europe, claims of a universal contamination of the population by this herbicide was propagated following urine analyses of volunteers. However, the unreliability of the tests used in these activist campaigns has been established. The glyphosate case confirms the necessity of trustworthy scientific authorities to separate “the wheat from the tares”. In addition, the influence of activist structures having a pretence to science and the questioning of official risk assessment agencies present a problem in terms of risk management by the political authorities and public perception. All the more so when journalists entered the debate, some involved in interpreting scientific evidence whilst others drew attention to the supposed influence of Monsanto on researchers or on scientific risk experts.

Subject: Land Drainage Targeted Rate'

Importance: High  
  
Follow Up Flag: Follow up  
Flag Status: Flagged

Dear Sir/Madam,

It was with some surprise that when returning from a trip away I found a letter from you the council regarding a new rate that you want to impose upon ratepayers like ourselves that do not and will never have any benefit from the rate, namely 'Land Drainage Targeted Rate'.

You may well argue that this rate is for the benefit of all council ratepayers but arguments you have shown in the three 'Options' do not indicate/show or reasonably suggest that this new rate impost is of any benefit to any other than those that have a need for drainage. If the land warrants drainage then surely it is the responsibility of the owner. With the owner being the council then yes the drainage rate should be borne by ratepayers who are effected. But if the land to be drained is not council owed then surely it is the responsibility of the owner.

Christchurch is and still is being built on a swamp of which the council seems fit to realise land which is totally unfit for development, particularly with the eternal threat of earthquakes. Even if the council does not realise land themselves they are allowing private property developers to develop land that is totally unsuitable for development, expressly for close housing sites.

As Christchurch has develop it covers more ground that becomes impenetrable to water along with more houses and industry, the use of water increases by having to bring water into the city and taking it out as waste water from house, industry and natural water. The ultimate responsibility under the current democracy that we live in is that the council for any particular area is the responsible party for the issue and deposing of water, thus drainage. I and many others live not in a city but in the country where the council does very limited drainage work if any apart from the maintenance of road drainage. To the best of my knowledge the council does not in any way help or advise me with drainage that I have to carry out on a regular basis on my property. It appears by the very limited information in your letter and website that the new rate is for city drainage and that the money that you intend to raise from all ratepayers is purely for the benefit of those that work, live and play in the city.

You may suggest that as I am a ratepayer of Christchurch that I will benefit from the drainage that is carried out within the city. Yes that could be said but as I and many others do not regularly go to Christchurch but usually only on a needs only basis. For some it is over 100kms away and expensive to travel these distances, yet we are ratepayers. I would suggest that more people come into Christchurch from outside the rated area who work within the city, yet you would not charge them for drainage even though it may be to their advantage.

This proposal should not proceed in any way or means as it is totally unfair to those outside the city. Being a percentage rate on current council rates it becomes totally excessive to the farming community and people who live outside the city.

C M Stewart-Robinson

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Not in my opinion i what you are proposing. Targeted rates should remain.

1.2 Rates

No not acceptable as rates are outstripping inflation and wages. I would not expect many to get a 5 percent increase in income then 4% compounding year on year for the next decade. You are talking around a 50% raise in rates over the next decade on top of approx 40% raise the last.

1.3 Proposed changes to existing rates, and new targeted rates

Target those that use the service or will benefit from it. Broad brush to all rate payers would be unfair. In my case i have no sewer, storm water system, rubbish collection, footpaths and only poor quality roading. Which is ok, i based my decision to live here on very few services and my rates need to be reflective of this. Dont mind paying for parks, libraries, art gallery as a community asset.

1.4 Investing in upgrading and protecting our city's water networks

Water to township fine,. The rest not applicable

1.5 Investing in our transport infrastructure

Not applicable where i live and think spending too much on minority with out thinking of the needs of the many as Christchurch has a very large footprint. Reintroducing trains from the Waimakariri and from Rolleston area would be something to consider.

1.6 Rubbish, recycling and organics

Not applicable as service provided in Birdlings Flat will not change and doesnt require change. As for the larger population education is the key. Experience out here shows if you make dump fees too high then people will dump road side and then rate payer foots the bill anyway for clean up.

1.7 Our facilities

Not required as current amount surfices for population if anything kerb spending.

1.8 Our heritage, foreshore and parks

Kerb spending as not vital in this economic climate.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

Less funding and charge a small admission for those who wish to go there.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

Need to amalgamate, reduce cost by staffing one site and all the savings that go with running one site.

1.11 Potential disposal of surplus Council-owned properties

Sell off and put into restoring viable sites

1.12 Any other comments:

User pays. Target rates to user and keep spending down to inflation. Rates are running above inflation and the proposal is for more of the same? Concentrate on what is vital to the populations well being, essentials first, nice to haves later.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.2 Rates

Rates increases should be kept to the rate of inflation.

### 1.3 Proposed changes to existing rates, and new targeted rates

The proposed land drainage targeted rate should be put on hold until affected property owners are advised as to how much the proposed change will increase in rates by. How can people make balanced decisions when they don't have the necessary information.

### 1.4 Investing in upgrading and protecting our city's water networks

Urgent work needs to be undertaken for Akaroa. The Council's performance over the last 15 plus years in providing Akaroa with drinking water has been shameful. Council does not appear to have a short term nor long term plan to rectify supply issues.

See submission attached.

With regards to Wastewater, see submission attached.

### 1.7 Our facilities

See submission attached.

| CCC Long Term Plan 2021-2031 |

## Submission to Christchurch City Council Long Term Plan 2021 – 2031

From: Chris & Annette Moore

Date: 14 April 2021

### **1. Akaroa Wastewater**

- Recently, the Council approved the Akaroa Wastewater Project and in that approval, it resolved that an 80% reduction in I&I be achieved. The current budget does not reflect that decision. The money previously budgeted for a 20% reduction is now being expected to produce an 80% reduction.....IMPOSSIBLE.
- As Council well knows, 60% of Akaroa's wastewater comes from I&I. A full repair of the broken pipe network will achieve the 80% reduction required and will therefore enable a much smaller scheme to be designed **resulting in substantial savings and a more cost effective project.**
- By fixing the pipes, the reduced wastewater quantity will result in a substantially improved performance from the existing wastewater plant which is not due to be closed until 2028 thereby resulting in a dramatic reduction of raw sewerage overflows into the Akaroa Harbour, something local Iwi and residents will be very happy about.
- **Therefore, increase the budget to the appropriate level to allow the pipe network to be repaired so that the Council's expectations on the 80% reduction in I&I can be achieved which will then result in a lower Capital Cost for the overall project and will also quickly improve the health of the Akaroa Harbour.**

### **2. Akaroa Drinking Water**

- Akaroa has been short of drinking water for many years, particularly in summer. Quite frankly, it's a disgrace. We are not a third world country but Akaroa is being treated like one. Constant shortages and no plan to fix the short term and long term supply problems. It's just not good enough.
- This year in particular, Akaroa residents have been suffering and have not been able to lead normal lives due to level 4 water restrictions. Council should be ashamed that it has treated its residents so poorly.

- **Council should immediately put in place a plan for groundwater exploration and drilling for wells around the inner harbour. This must be a HIGH Priority and the necessary funding should be allocated immediately.**
- Council should also augment drinking water supply by turning Akaroa wastewater into potable water and then distributing this to the land above the current catchment area. There is nothing new about this process with many countries around the world ( including the UK, Australia and Europe) producing potable water from treated wastewater.
- Community consultation has shown overwhelming support for the reuse of wastewater to augment Akaroa's water supply. With the Water Services Bill currently in the Select Committee stage in Parliament and water supply an increasing issue for Council's around New Zealand, the need for a legal framework to facilitate the re-use of treated wastewater is being recognised at a national level. **We would urge Council to relook at the Akaroa Wastewater Project and include the necessary equipment to produce potable water.**

### **3. Akaroa Service Centre**

- **We are against the proposed closure of the Akaroa Service Centre.** This provides an important service to the Akaroa Community and makes no sense at all to close it

### **4. Land Drainage Targeted Rate**

- We are against the proposal to rate all rateable properties in the district for land drainage because no information was given as to the impact on our current rates. Until we know what the financial impact will be on our current rates, we are not in a position to say one way or the other.
- If Council go ahead with this proposal, then it should be introduced over a 5 year transition period.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** charlot **Last name:** Hudson

**Organisation name, if you are submitting on behalf of the organisation:**

Sumner Community Residents' Association

**Your role in the organisation:** Coordinator

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

#### 1.3 Proposed changes to existing rates, and new targeted rates

We would like to see information provided to households regarding their individual use over the summer months before any charges are brought in. It is hard for the community to evaluate what behaviour can result in excess charges. We are a dry and sandy suburb and watering of gardens (which is encouraged by Fire and Emergency outside of water ban periods) is encouraged to avoid conditions that encourage wild fire. If individuals are educated as to their water use before charges are imposed it can give them the chance to adapt their behaviour. Perhaps a grace period can be given and exemptions on a case by case basis.

#### 1.5 Investing in our transport infrastructure

We would like to ask the funds allocated for the Sumner Masterplan not be delayed until 2030/31. We hope to be able to deliver the Sumner Village Green to support the Bays Area Skate Park. This project would need funds from the Masterplan to be able to be delivered at the same time as the Skate park. The creation of a place for the community to gather would encourage walking, biking, scooting and skating to enjoy recreation and lessen the reliance on motor vehicles to access places of communal gathering and recreation.

#### 1.7 Our facilities

We would like to see any changes to the library opening hours at Matakū Takotako be communicated to the community and the reasons for the changes highlighted. We would also like to raise the issue that reduction in library opening hours also reduces the access to the public toilets and ask that access to the building not be affected by the library being closed.

#### 1.12 Any other comments:

We would like to see the potential reduction in funding of community groups to not become part of the long term plan. Community groups such as Sumner Community Residents' Association has a large portfolio of community work which is expanding each year. Groups such as ourselves are worthy of ongoing support and potential increase in financial support.

We would like to ask the funds allocated for the Sumner Masterplan not be delayed until 2030/31. We hope to be able to deliver the Sumner Village Green to support the Bays Area Skate Park. This project would need funds from the Masterplan to be able to be delivered at the same time as the Skate park. The creation of a place for the community to gather would encourage walking, biking, scooting and skating to enjoy recreation and lessen the reliance on motor vehicles to access places of communal gathering and recreation.

**First name:** Kim **Last name:** Macintosh

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Mostly right. However, I have serious concerns as to the impact of the proposed cuts for art gallery and library and the long term affect on residents and tourism. The balance of spend between infrastructure and community facilities is out of whack.

1.2 Rates

Yes,

1.3 Proposed changes to existing rates, and new targeted rates

Agree with this approach.

1.4 Investing in upgrading and protecting our city's water networks

Important yes, but important also to understand that people don't visit or live in a city because of its infrastructure, we choose to live in a city or visit a city because of its uniqueness, vibrancy, life style, entertainment, food scene and it's arts and culture,etc. It's important to support what makes a city great not just it's drains.

1.5 Investing in our transport infrastructure

As above, transport infrastructure is important, particularly good public transport, but important also to understand that people don't visit or live in a city because of its infrastructure, we choose to live in a city or visit a city because of its uniqueness, vibrancy, life style, entertainment, food scene and it's arts and culture etc. It's important to support what makes a city great not just it's numerous traffic lights.

What I'd like to see in this area, is a commitment to designing roads and infrastructure right the first time, no rethinking and redesigning a couple of years later (e.g. High Street lights), do it once and do it right. St Asaph Street is a classic example of poor design, with 'safety' improvements and the addition of a cycle way making its completely unsafe. Cycleways are important and I do support them but let's consider good design and safety also.

1.6 Rubbish, recycling and organics

Support

1.7 Our facilities

Very happy with a commitment to spending on community facilities. However, the proposed spend is significantly low compared to infrastructure. Again, why do people choose to live or visit a city? it's for it's culture. I'm disappointed that library hours are proposed to be reduced, and I certainly support the retention of the mobile library service. However, this city has multiple libraries for users. But this city has only one public Art Gallery, To consider reducing hours of opening and levels of access for education and programmes just doesn't make any sense at all.

I can not support the proposal to reduce opening hours and Levels of Service for education and public programmes at the Art Gallery. This seems such a retrograde step! Access to art, education and culture is a fundamental part of education and what makes a city great! Children learn so many skills through visiting art galleries and making art, skills such as creative thinking and problem solving (skills that help make them good adults!). One of the things we've learn in the last ten years in this city is the important role art played in the recovery and wellbeing of this city. The Gallery's programme following the earthquakes, alongside Gap Filler and other programmes put this city on the map and provided us and our children purpose, relief and hope. One of the main focus points of the post quake programmes of the Gallery was children and education, if just seems crazy to reduce a service so well respected and successful and which provides such an important component of a child's wellbeing. The Gallery continues to provide a safe and welcoming space for all during the current global crisis. The mental health and wellbeing impacts of COVID-19 will be long and impactful, particularly in our younger folk. So to reduce something like access to art and hands-on making activities seems totally insane! The rational that the cuts are being made due to COVID-19 reducing the number of tourist, seems a totally invalid reason for reducing school services which are fundamentally designed for local residences!

Programmes at the Gallery are well attended and hugely positive for all. Christchurch Art Gallery is one of the most respected galleries in New Zealand, it attracts out of town and international visitors generating tourist dollars and bed stays. Reducing opening hours will potentially have negative flow-on affects for the inner city neighbourhood restaurants, cafes and bars.

I can't support the proposed changes for the Gallery, in fact I'm perplexed that its even an option, I can't imagine it even saves a great deal of money as compared to the enormous dollar figures proposed for infrastructure.

#### 1.8 Our heritage, foreshore and parks

I support investment in heritage, foreshore and parks.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

#### 1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

#### 1.11 Potential disposal of surplus Council-owned properties

Yes, if they are surplus then yes move them on!

#### Attached Documents

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

Halswell is rapidly growing and we need to see more more allocated towards infrastructure. Libraries should be supported fully with more links with the local community groups.

1.3 Proposed changes to existing rates, and new targeted rates

Cut the budget for the Arts centre and put it towards local community groups.

1.5 Investing in our transport infrastructure

Continue providing cycle tracks and increase tram routes. Provide subsidies for local residents to purchase tram tickets.

1.6 Rubbish, recycling and organics

Each household should have the option of having a large organics bin, free of charge. The recycling service should include more options to recycle larger plastic containers.

1.8 Our heritage, foreshore and parks

Use the money to maintain the parks and less on heritage buildings.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.11 Potential disposal of surplus Council-owned properties

Sell the buildings.

To whom it may concern.

I am emailing as a 5th Generation New Zealander living, and farming, in England and as a member of the Deans family - and my family gave Deans Bush at Riccarton House to the nation.

I am writing to strongly support “Greening the Red Zone” and their proposals, which are outlined below. I would love the red zone to be a place where future generations can remember and learn, where New Zealand's iconic native birds can breed - what a wonderful opportunity to become a world leader showing what can be done. The knock on or spread of wildlife outside the Red Zone would be tremendous together with the associated health benefits for Christchurch residents. Just think what has been achieved at Travis Wetland already.

Christchurch and Canterbury are very special to me, I was born here and farmed at Hororata in the early 80's. It is my spiritual home - please take note of Greening the Red Zone's submission and don't let this amazing opportunity be missed.

Hamish Monro

CCC LONG  
TERM PLAN - GTRZ SUBMISSION

Introduction

Thank you to the Christchurch City Council for enabling the community to submit on the Council's long-term plan. Our vision is for the Ōtākaro-Avon River Corridor (OARC) to be largely returned to native bush and wetland. We believe an urban forest and wetland park can support most of the objectives in the Long Term Plan.

We have reviewed the long-term proposal and of particular note to us is the lack of funding for the OARC in the first three years. We would like it noted that we ask Council to bring that funding forward to begin in 2022-2023, to show commitment to the area.

Please find a list of bullet points outlining our comments on the Long Term Plan proposal:

Most important to us is the thoughtful implementation of the Regeneration Plan's vision under a robust, co-governance model that puts the health of the awa and the ecology first and foremost.

We need greater transparency re the realistic formation of a co-governance body, given that mana whenua have yet to come to the table in a meaningful way. We may be looking at 18 months to 2 years before that happens - a process that needs to be done right and cannot be rushed. People need to know this. In the interim, larger projects (Eden for example), need some certainty if they are to keep investors on the hook for that long. Smaller projects need to know so they can pace themselves and not burn out volunteers/facilitators who are trying to maintain energy levels. Some kind of governance structure is required.

We note Council is making essentially no financial commitment until year 2024/25 Current spending is government quake recovery money (e.g. CRAF). There are just two mentions of the OARC on lines 119 and 120 of the LTP Distribution By Wards doc. This means another election/LTP cycle before any Council money is spent in the corridor. We strongly suggest these items be brought forward to the 2022/23 spend to make it definite.

Community-led restoration with Council support is preferred over a top-down blitz approach because it's cheaper, it gives the community buy-in/'ownership', and also saves money with reduced

The flood remediation  
is a form

of restoration too, as they are essentially wetlands, but obviously they are technical and will be done by Council. Until we decide on planting plans etc, we won't know how much that's going to cost

It's difficult to know  
if the corridor

budget is sufficient, because the breakdowns aren't clear. There is \$7.7 million for pathways and connections, but does this include lighting? There is \$25.7 million for eco-restoration in the Green Spine, but is this largely the stormwater remediation works?

Will it also support community planting projects? Is there anything for planting outside the Green Spine? An alternate breakdown says there is \$86 million to go on land drainage throughout the corridor, presumably including the estuary work? The numbers are

big, but probably not big enough - we must spend that money wisely to get the most bang for our buck.

The focus of spending  
for ecological

regeneration appears to be focused on the Green spine. We urge the council to widen the terminology to include the entire OARC.

How much stopbanking  
is in the

budget and to what level is unclear. There

is a potential danger of wanting to do the easy (cheap) stuff first, leaning into a piecemeal roll-out of stop-banking etc in the places where it is potentially the least needed. Or worse, has unintended consequences on critical projects, partly due to lack

of transparency and consultancy until decisions have been made. There needs to be a collaborative and co-designing process for these infrastructural components.

Monies for  
biodiversity and planting

along the Ōtākaro

Avon River Corridor should be budgeted for separately but that isn't clear.

Stop-banking and  
eco-restoration

overlap in the Green Spine - doing it right will take a lot more investment than we are seeing here.

The monies earmarked  
for the Red

Zone must include provision for establishing projects like the Waitākiri Eco-sanctuary and Eden. Once these boundaries are established the CCC can be relieved of its role (and cost) of maintaining those sections of the Red Zone.

The Regeneration Plan  
must be kept

as per the end-result of years of consultation, work and expense. It is vital that no inappropriate encroachment be made into the Green Spine or critical areas of the wider red zone.

The pedestrian/cycle  
path is very

positive and will help invigorate other parts of the Red Zone.

Lighting should be a  
primary consideration

and co-designed with experts and advocates, along with the foundation infrastructure such as stopbanks and pathways. Fit-for-purpose, nature-friendly LEDs should be amber-coloured, fully shielded and run on motion sensors. Throughout NZ areas of ecological importance are installing these best-practice lights. There are also creative options such as luminescent materials which can double as art.

Bexley Wetland  
development is a  
great outcome we fully support.

We support the  
targeted excess  
water rate (for those who use over 700 litres/day), so long as it does not disproportionately affect large, low-income families.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 17/04/2021

**First name:** glenn **Last name:** boyle

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

See attached submission.

1.5 Investing in our transport infrastructure

## Submission on CCC Draft Long Term Plan 2021-2031

I wish to comment on two matters.

### 1. Proposed excess water use targeted rate for households

As an economist, I strongly support the principle of charging for water. A well-designed scheme forces households to confront the true cost of their water usage and discourages wasteful consumption. Unfortunately, the proposed scheme seems unlikely to achieve either of these objectives.

Setting a single water use threshold (700 litres per day) for all households creates two big problems. First, households with more people living in them have greater water needs. Under the current proposal, singles or couples living in \$1 million-plus apartments in the CBD will be able to continue with daily 20-minute showers while families of 5 or more living in the suburbs will be forced into bathing every second or third day. The only recognition of this point is the vague statement that an exemption of some kind may apply to “a very large family requiring additional water use”. Yet the council’s own figures (p45 LT Plan) show that even an average family of four would need to reduce its current water usage by 30% to not exceed the threshold.

Second, and probably more importantly, bigger properties typically have gardens and gardens require additional water. Again, residents of \$1 million-plus CBD apartments will be unaffected, but suburban households who grow their own fruit and vegetables and keep Christchurch beautiful will be hammered. Do councillors really want ratepayers to start ripping out their trees, plants and flowers? I assume not, but this will be one consequence of the proposed scheme.

Anybody who’s tempted to claim that the proposed water charge is fairly minor and so won’t induce drastic behavioural changes should think again. Rate payers are not stupid — they know that such charges inevitably rise sharply once introduced and that \$60 per quarter today can easily become \$600 per quarter in a few years. In anticipation of this, they will act today.

Bottom line: the proposed scheme will allow many wealthy households to avoid cutting even the fat from their current water consumption while forcing other, including many that are less well off, households to carve into flesh and bone. This is obviously both inefficient and inequitable.

If the council is determined to press ahead with water charging (which I support), it should either (i) apply a lower per litre charge rate to *all* usage or (ii) set higher thresholds for bigger properties. Either would still contain anomalies, but these would be minor compared to the mess inherent in the current proposal.

Finally, I am suspicious about some of the information provided on the proposed scheme. For example, the claim that only 20-30 thousand properties (15-20% of Christchurch households) exceed the 700 litre threshold seems inconsistent with an average daily usage of 540 litres unless the standard deviation is implausibly small. Also, if the annual average is 540 litres, the summer average seems certain to be well above 700 litres, i.e., the majority of households will be caught by this rate, contrary to what is claimed in the Draft Plan. To try and shed some light on these matters, I emailed a series of questions to the CCC on 25 March. After a reminder, I eventually received an answer to one question (unrelated to the above issues) on 9 April, together with an assurance that “the water team are working” on the others. Yet here we are, at the end of the submission period, with nothing more having been received. There are just two possibilities for this. One is that CCC staff do not in fact have the information, which begs the question of where the figures quoted in the Draft Plan come from. The other is that they do have the information, but do not wish me to see it. Either way, councillors should view the provided information with considerable scepticism.

## 2. Cycleways

It's almost six years since James Hill and I provided council with our review of the Christchurch cycleway business case.<sup>1</sup> After correcting some of the more egregious errors in that case, we found that the cycleway network had an economically dubious benefit-cost ratio in the 0.7-1.6 range (at best). However, council ignored our analysis and has continued to pour large dollops of ratepayer and taxpayer money into further development of the cycleway network.

Unfortunately, all our pessimistic predictions have come true, e.g., traffic congestion has got worse, not better, as a result of the cycleways; there has been no observed improvement in public health; and there have been at least two cyclist deaths consistent with a Peltzman Effect attributable to cycleways.<sup>2</sup> Most glaring of all though, our prediction that the network cost would continue to rise inexorably has become painfully obvious. Even without any further adjustment to the claimed benefits, the latest cost estimate means the benefit-cost ratio now lies somewhere between 0.35 and 0.8, i.e., for every dollar spent on it, the expected return is, at most, somewhere between 35 and 80 cents. The repeated upward revisions of the network cost is, in percentage terms, an error comparable in size to the recent Wharenui Pool fiasco, but involving far, far greater amounts of ratepayer money.

Faced with these facts, some councillors resort to some rather strange justifications for continuing to spend ratepayer money on the cycleway network. One is that cycling has improved their own personal health and well-being, but this mixes up private and public benefits, confuses anecdote with evidence, and overlooks the fact that cycling does not require cycleways. Another is that more cycling will assist in combating climate change, but even the council business case did not claim this — the research literature is adamant that any conceivable uptake in cycling is just too small to have any effect on carbon emissions.

It is surely time for councillors to swallow their pride and halt this folly. Treat the already-developed cycleways as a sunk cost (with perhaps some modification of the worst examples, such as St Asaph St), but stop pouring ratepayer and taxpayer money into a financial black hole.

Holding the vision of Te Aho Tū Roa and EnviroSchools

## Submission: Christchurch City Council Long Term Plan 2021-2031

**Name:** Toimata Foundation **Contact person:** Kristen Price, General Manager

We **DO NOT** wish to speak to this submission

Enviroschools is a holistic framework that supports the development of resilient, connected and sustainable communities. It operates nationwide through a cross-sector approach involving Local Government, Central Government and Community. Toimata Foundation (a charitable trust) is the national support organisation for Enviroschools and Te Aho Tū Roa. [www.toimata.org.nz](http://www.toimata.org.nz)

There are 28 Enviroschools in Ōtautahi/ Christchurch, part of a network of 100 across Waitaha/ Canterbury and over 1,300 nationwide. Each Enviroschool is supported by an Enviroschools Community Facilitator, roles supported directly by our Local Government partners.

This submission:

1. Thanks CCC for its role in founding the Enviroschools Canterbury network back in 2003.
2. Acknowledges the investment from CCC in the facilitation of your local Enviroschools during the 2018-2021 LTP period. This was \$50,000 per annum funded through the Capital Endowment Fund and provided a period of stability after an extended period of variable and annual funding.
3. Requests that CCC works with Environment Canterbury (ECAN) to find a shared solution to providing support for your existing 28 Enviroschools and to addressing the high level of community demand for participation in this proven approach to community sustainability.
4. Requests that council note the two scenarios proposed below.
5. Requests that council note Enviroschools is specifically designed to meet multiple council outcomes through authentic relationships with the community and contributes to all Community Outcomes for Ōtautahi/ Christchurch. See pages 4 and 5.

### **Scenarios for Enviroschools in Ōtautahi/ Christchurch 2021-2025**

Work undertaken in 2019/2020 by staff from CCC, ECAN and Toimata Foundation came up with the following two scenarios for the next 3 years from 2021-2024.

#### **1. Grow and develop the Enviroschools network in Ōtautahi Christchurch**

Increase capacity and strategic connection by creating “in-house” Enviroschools Community Facilitators at CCC. The facilitation capacity proposed is 1.0-2.0 FTE. This is a move beyond the previous model of CCC contributing financially to the team of Enviroschools Community Facilitators managed by ECAN. Key outcomes of this scenario:

- Increased synergies with the work of the CCC Learning Through Action team and other community work undertaken by CCC. Enviroschools complements and adds value to these work areas.
- Growth in the number of Enviroschools to widen the reach into communities across Ōtautahi. There is high level of community demand for Enviroschools with a third of schools in Christchurch City expressing interest in Enviroschools.
- Stronger alignment and visibility of the contribution of the city’s Enviroschools network to the Community Outcomes for Ōtautahi.
- Increased involvement of the Enviroschools network in collaborations and community projects (given more capacity of the Facilitator to support these opportunities).
- Quality support provided to all Enviroschools in Ōtautahi. (as per scenario 2)

Note, some of these outcomes could also be achieved by CCC contributing a larger amount to the team of Enviroschools Community Facilitators managed by ECAN. We would propose \$100,000 - \$200,000.

## 2. Maintain quality support for existing Enviroschools without growth

This “fallback” scenario was developed mid-2020 due to the financial impact of COVID-19 on CCC. It is based on CCC continuing to invest in the team of Enviroschools Community Facilitators managed by ECAN at the 2018-21 funding level with CPI adjustments. Key outcomes of this scenario:

- Enviroschools Community Facilitators provide bespoke support to each of the 28 Enviroschools
- Empower, upskill and connect teachers in Enviroschools through cluster meetings and workshops
- Enable student enviro leaders to network and celebrate their progress in a nature-based event
- Conduct a survey of all 28 Enviroschools in 2021 and again in 2023

Based on our understanding that CCC has not allocated any funding for Enviroschools facilitation in the Long Term Plan, Toimata has recently made a 3-year application to the Strengthening Communities Fund. Please note that Toimata does not usually get involved in regional funding in this way. In most cases the over 60 councils we partner with work directly with each other to support their local Enviroschools.

Our role as Toimata is the national hub for the collaborative approach that underpins Enviroschools. We are fully funded for this role by Central Government and do not seek any Local Government funding for this. Rather, we provide a range of wrap around support to our Local Government partners. We: set a strategic direction responsive to all participants; provide training, mentoring and educational resources; support innovation and project opportunities; invest in research, evaluation and programme development; and support cross-sector partnerships between a large number of organisations.

### **Enviroschools Waitaha/ Canterbury - current situation**

Enviroschools operates as a multi-agency collaboration in Waitaha. The current shape is:

|                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Participants:</i>                           | 100 Enviroschools – 70 schools (25% of total sector) and 30 early learning centres (7% of total sector)                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <i>Regional Leadership &amp; Coordination:</i> | 0.8 FTE position – employee of Environment Canterbury (ECAN). Including this position and other support, ECAN contributes goods and services to the value of \$213k per annum (2019/20 figures)                                                                                                                                                                                                                                                                                                                                            |
| <i>Community Facilitation:</i>                 | <ul style="list-style-type: none"> <li>• 2.1 FTE (3 people). In-kind support from ECAN and direct \$ investment from Territorial Authorities (TA) totalling \$123k (2019/20 figures). TA partners are CCC and the Selwyn, Waimakariri, Mackenzie, Waimate and Timaru District Councils. Funding is in proportion to the size of the programme in each area.</li> <li>• 0.2 FTE (3 people). In kind support from South Canterbury Kindergartens and Waimate Kindergarten Association who have their own ‘in-house’ facilitators.</li> </ul> |
| <i>Regional events:</i>                        | Funding from ECAN, Toimata Foundation and DOC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <i>Collaborations:</i>                         | Working Waters Trust, Te Ara Kakariki - these are ongoing collaborations                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## **Enviroschools nationally - overview**

### ***Enviroschools is a nationwide movement for positive change***

Enviroschools is a holistic approach to the development of resilient and sustainable communities. The complex environmental, social, cultural and economic challenges facing us today call for a collaborative response. Toimata Foundation creates a hub for a cross-sector approach bringing together around 100 organisations from Local Government, Central Government and Community.

Enviroschools now has significant reach across our country. Nationally over 1,370 early childhood education (ECE) centres and schools are part of the Enviroschools network. This is 12% of all ECE, 42% of all primary and 32% of all secondary.

Enviroschools is inspiring and empowering people of all ages through connection, creativity and action so they are actively engaged in creating a sustainable future. Through Enviroschools tens of thousands of innovative projects and lifestyle changes are happening in schools/centres, households, neighbourhoods, on farms, in local businesses and in all types of ecosystems. Some projects are small-scale and others involve hundreds of people working across a whole catchment or community.

### ***Enviroschools is designed to meet Local Government Outcomes***

Over 80% of all councils are Enviroschools partners. Enviroschools is specifically designed to meet multiple council outcomes through authentic relationships with the community. It is a proven approach, with a 20-year track record and backed by a 5-year research and evaluation programme.

The long-term holistic approach of Enviroschools creates a wide range of outcomes across all the Four Well-beings. This graphic (below), from the most recent Enviroschools National Census, shows the percentage of participants taking action across environmental, cultural, social, and economic aspects.

Councils also benefit from the co-investment model of Enviroschools. Councils contribute 20-25% of the total annual investment in Enviroschools, with the balance funded by Central Government and Community.

#### **Environmental sustainability actions:**

#### **Cultural, Social and Economic sustainability actions:**

*\* Percentages are the total % of participants who are taking one or more actions in the area*

## **Contribution of Christchurch's Enviroschools network to the proposed Community Outcomes for Ōtautahi Christchurch**

Enviroschools is specifically designed to meet multiple council outcomes through authentic relationships with the community.

| Community Outcomes                                                                                                                                                                                                                                                                                                                                                           | Contribution of the Enviroschools network includes:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Evidence from National Enviroschools Census *                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

St Ninian's  
5 Puriri St, Riccarton,  
Christchurch***

Property Reference: 73089126

Saturday, 17<sup>th</sup> April 2021

**Rates Remission Policy Review.**

St Ninians Presbyterian Church, situated at 5 Puriri St Riccarton, is a Parish of the Presbyterian Church of Aotearoa, New Zealand, (PCANZ).

In terms of the regulations of PCANZ the property title(s) for any properties held by a parish are held by the Church Property Trustees (CPT) of PCANZ. However the costs of operating and maintaining the property (including rates) are the responsibility of the local Parish.

Funds received from any sale of property are held by PCANZ in the name of the parish but can only be released for a project that has been approved by CPT. These funds are not available to meet operating expenses such as rates, although the interest received on such funds can be used for operating expenses.

PCANZ requires all of its Parishes to upgrade all properties to be upgraded to a minimum of 67% NBS seismic rating although no timetable has been set. This challenge, particularly where it is logical to include the seismic upgrading as part of earthquake repairs, poses a significant financial hurdle for many churches in the Christchurch area.

It is therefore submitted that should the proposed criteria to qualify for rates remission be adopted by CCC the definition of the funds to be included in the calculation of the eligibility for the remission of rates should be modified to include only those funds that are available to the Parish for general use. At least in the case of PCANZ properties this distinction is clearly established.

To remove the rates remission currently applying will reduce the ability for the churches to meet the community needs in their area.

Pamela McKeachie  
Parish Clerk

| CCC Draft Long Term Plan 2021 HTT submission |

# ***The Heritage Tramways Trust***

---

## **Submission of the HTT (Heritage Tramways Trust) to the Christchurch City Council Draft 2021 Long Term Plan April 2021**

**In support of Christchurch Tramways Limited.**

**In support of Tramway Historical Society.**

### **Introduction**

The Heritage Tramways Trust (HTT) is an arm of the Tramway Historical Society (THS) based at Ferrymead Heritage Park Christchurch.

Some thirty years ago, the Christchurch City Council and the THS met to discuss the possibility of opening a Heritage Tramway in our city. The outcome of that and several meetings since is a very successful / history which has created one of the most recognized images of our city both nationally and internationally.

At that time THS was focusing on restoration and refurbishment of trams fit for this purpose so formed the HTT to basically “take care of business” and let the society continue restoration work and maintenance of the Ferrymead Tramway.

HTT is a registered non-profit organisation which now employs five staff, four very skilled trades people and a contracted part time workshop manager who works weekly alongside Christchurch Tramways Limited (CTL) scheduling maintenance and highly specialised repairs of all trams on the city network. Five of the seven trams belong to THS but we also complete highly specialised work on the other two trams when required. The restaurant tram had major work completed by us last year.

HTT worked with CCC to draw up the original contract and lease agreement which enabled the CCC to sublease trams to the foundation tramway company. We have since renewed an agreement directly with CTL giving it 30 years of tram lease certainty in line with CCC agreement for track and overhead.

CTL and HTT have been working together to ensure we both survive the present devastating loss in income as a result of Covid-19 boarder closures.

HTT and THS have been working hard to complete restoration of Christchurch Hills Car No24 to its original 1920's configuration which is ideal as a summer tram for CTL. We also have an agreement with the Dunedin City Council to acquire Takapuna No66 the only restorable Takapuna tram in New Zealand. They are also prepared to let us have a Sydney Bogey which will enable THS/HTT to restore the only one of two in existence. We also have plans to restore two YANK trams one for CTL and one for Ferrymead Heritage Park in the long term. HTT has recently employed a full time engineer to ramp up these restorations and build the trucks, and other highly specialised engineering components required for these tram restorations over the next decade.

## **Our submission**

- 1 It had not been our intention to make a submission to this Draft Long Term Plan, as the unforeseen closure of our boarders and Level 4 shut down HTT is again in a period of fighting for its survival. We indicated to CTL that we will not invoice tram rental over the lockdown period to help them get through. We are also only charging CTL rental on three of the five trams over the downturn period. This places us in serious financial situation. We are delighted that CCC has announced that the proposal to extend the inner-city network as planned in October this year and CTL can complete the full circuit of the inner city when international return to our City.
- 2 The impact of COVID-19 on our businesses has, like many others, has been devastating, with tourism in particular very badly affected. THS/HTT are committed to the restoration of New Zealand's tram history and The City Network allows huge numbers of the public to enjoy that heritage. Should HTT fail THS will be unable to meet any future needs in Christchurch by any operator of the city network. It is vital for all that CTL and HTT are still around and fully operational at the end of this setback as one relies on the other.
- 3 It is important the CCC continue with track extensions creating the city loop that will link many existing and new attractions. We must all prepare for the return to a vibrant and exciting inner city for visitors to Christchurch with CTL and HTT/THS forging ahead with their ideas and plans for expansion as Christchurch recovers from another major setback.
- 4 HTT fully supports submissions from CTL and THS. We also strongly support the Christchurch City Council's decision to complete the High Street, Tuam Street and Poplar Street loop in October 2021.

# Gracefield Avenue Street Renewal Project

Christchurch  
City Council

The Christchurch City Council is proposing to renew the kerb and channel in Gracefield Avenue in the 2011-12 financial year.

Consideration of community input and Council objectives has resulted in the preparation of the enclosed concept plan for further comment.

The project is within SAM (Special Amenity Area) 25.

## Project Objectives:

### The key objectives for this project are:

- Replace kerb and channel and additional assets, meeting current standards and new street layout
- Maintain or improve safety for all road users
- Ensure adequate drainage
- Provide landscaping and trees to meet Council Community Outcomes
- Complete project in budget, cost effectively

## have your say

[www.ccc.govt.nz/haveyoursay](http://www.ccc.govt.nz/haveyoursay)

A project information session will be held on **Thursday 27 May** at the **Canterbury Bowling Club** (corner of Gracefield Avenue and Salisbury Streets) **from 4.30 pm to 6pm.**

You are most welcome to call in during this time to discuss the project. The concept plan will be on display, and staff available to assist.

*Responses need to be received with Philinna Upton.*

Original Plan Size: A3

ISSUE 1 27/04/10

## Key features of the proposed plan

- Replace kerb and channel, footpath and grass berms
- Provide roadway widths of 9 m in the northern section and 7.5 m in southern section
- Remove all existing crab apple trees and one manna ash tree, all assessed in poor to fair condition
- Retain two existing ash trees in good condition, outside number 50
- Field maples will be used for replanting the remainder of the street
- Replacing and upgrading intersection treatments to improve safety for pedestrians, cyclists and vehicles
- Provision of nine spaces of P120 grouped in three sections, to provide relief for residents from the effects of commuter parking
- Approximately 11 parking spaces removed to improve safety and visibility
- Drainage and lighting upgrades

## Features of Proposed Tree (Field Maple)

- Provides a canopy effect as per the features of the SAM
- Has strong yellow autumn colour
- Has a dense round shape
- Is generally a good smaller tree growing 8-10m in height
- Is a good performer, low maintenance and easily grown

## The Consultation Process

The Council is interested in receiving your comments on the enclosed concept plan for the renewal of Gracefield Avenue. The street renewal plan is not finalised and we will consider feedback that could be used to improve or amend the plan.

Once all feedback has been received and considered the concept plan will be finalised. A report detailing the proposal and the outcome of community consultation will be presented to the Hagley/Ferrymead Community Board for consideration and approval. It is anticipated this will happen by September 2010.

## Have Your Say

Please complete the attached  
form and return it by **5.00 pm**  
**Friday 4 June 2010**

30 July 2010

Bob & Margie Manthei

*Emailed 1/8/10 re replacing  
our ash trees w/ the new  
Japanese Snowbell selection*

Dear Bob & Margie,

**GRACEFIELD AVENUE PROPOSED STREET RENEWAL**

Thank you very much for taking the time to respond to the concept plan for the proposed Gracefield Avenue Street Renewal project. The project team has considered all feedback, and the amended plan to be presented for Community Board approval on 18 August is enclosed, along with community feedback and project team responses.

Approximately 50 households in Gracefield Avenue and surrounds, and approximately 200 other interested parties including absentee landowners, were consulted, of which 17 responded. Five respondents were in full support of the proposal, ten expressed mixed views with suggestion or comment, and two did not specify.

Community feedback and questions on the concept plan focused mainly on the proposed replacement trees, and parking restrictions. Requests for under-grounding of overhead wires cannot be granted as there is no funding available in the 2019-2019 Long Term Council Community Plan for under-grounding of local streets.

As a result of consultation feedback, the following changes have been made to the proposed plan (see enclosed, Plan for Board Approval):

- The P120 parking previously outside number 22 has been relocated to the south outside number 16 Gracefield Avenue and number 855 Colombo Street (also on Gracefield Avenue), just north of where the new Salvation Army site is proposed.

Please note that the P120 parking restrictions are limited to Monday to Friday, 8am to 6pm.

- The species of tree proposed has been reviewed and *Styrax japonicus* (Japanese Snowbell) is now proposed instead of the originally proposed *Acer campestre*, (Field maple) as residents requested a species that has flowers as well as autumn colour.

This tree is one of those approved under the Central City Garden and Master Plan. Trees chosen as part of the plan were selected under a range of criteria, including suitability for growing in a street with overhead wiring.

The photos below show the tree in different stages, and in flower:

Juvenile specimen

Mature specimen

Japanese snowbell in flower

The amended plan and report will be presented to the Hagley/Ferrymead Community Board for approval at their 3.00 pm meeting on August 18 2010, at Linwood Service Centre, Smiths Street Linwood.

Please contact me in the first instance if you have any questions or concerns.

However this is a public meeting and those wishing to address the board may request speaking rights from the board adviser,

- 3 -

Subject to Community Board approval, construction of the Gracefield Avenue street renewal project is expected to be completed by mid 2012. You will be sent a letter advising the outcome of the Board's decision.

Thanks again for your interest and input to this project.

Yours faithfully

Project Team Responses to Submissions

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 17/04/2021

**First name:** Marjorie **Last name:** Manthei

**Organisation name, if you are submitting on behalf of the organisation:**

Victoria Neighbourhood Association

**Your role in the organisation:** Membership &

Consultation Coordinator

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☒ Yes

☐ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

Additional requirements for hearing:

### Feedback

1.1 Have we got the game plan right?

This submission is made on behalf of the Victoria Neighbourhood Association Committee and residents of Gracefield Avenue. The VNA is one of seven residents' groups in the central city, and Gracefield Avenue is one of the streets within our boundaries (Salisbury St - Victoria St - Bealey Ave - Colombo St).

The number of important submission dates all coming at once made it impossible for us to consult with our wider membership on the full Long Term Plan (we are consulting and/or have made submissions on the Draft Parking Policy, Plan Change 4, E-Can's Long Term Plan and the Representation Review, as well as being involved in a hearing and appeal against a large non-residential development in our neighbourhood).

Our submission, therefore, includes only **two** submission points: (1) reinstatement of the Gracefield Avenue upgrade, initially scheduled for 2010 and (2) CCC support for the reinstatement of the central city Shuttle or its equivalent.

**Note 1:** The VNA was represented at the 11 April 2021 meeting organised by the Greater Hornby Residents Association for all residents' groups to consider the Long Term Plan. The VNA therefore supports the combined submission arising from that meeting.

**Note 2:** Additional material covering our submission points is attached.

1.5 Investing in our transport infrastructure

In all consultations carried out by the Victoria Neighbourhood Association, reinstatement of the Shuttle or its equivalent is one of the top priorities. We realise that E-Can has overall responsibility for this aspect of transport, but we also know that the CCC could initiate its replacement, in the same way it was responsible for introducing the original Shuttle.

Given the planned growth of the central city population---and the increased density that already has occurred--an effective, easy way of moving residents around the central city is just as important as getting people into & out of the city. The Shuttle was a popular way for visitors and residents to use the CBD for entertainment, shopping and other errands without having to use a car.

1.7 Our facilities

Although we did not carry out formal consultation with our current 175 financial members, informal discussions among some members indicated that there is little, if any, support for disestablishing the mobile library. This was a strong sentiment, even though it does not affect our members on a personal level.

1.12 Any other comments:

| Gracefield Upgrade 2010-outcome          |
| Gracefield Upgrade 2010-Deferral Ltr     |

## **Background to Victoria Neighbourhood Association's request that the Gracefield Avenue upgrade be rescheduled now.**

---

**Note that the upgrade (including replacement of all trees, upgrading the deep channels and minor changes to on-street parking) was initially scheduled for 2010 – 2011.**

- (1) In 2009, the City Council consulted with residents re a project to *'replace kerbs and channels to meet current standards....and provide landscaping and trees to meet Council Community Outcomes'* (May 2010 document, attached). The original plan also included putting the power poles underground, as one done on the neighbouring streets (Conference, Beveridge and Peacock) a few years before.
- (2) The plan was approved by the Hagley Ferrymead Board in August 2010 (letter dated 30 July 2010, attached). **All trees were to be removed and replaced with *Styrax japonicus* (Japanese snowbell), along with the other improvements listed above.**
- (3) On 3/11/10, Council deferred many projects because of the earthquakes. According to the letter received (also attached), the deferral was for nine months.
- (4) Residents accepted the delay, even when it became much longer than the expected nine months. We did not request reinstatement of the project until 2018 (as part of that Long Term Plan).
- (5) There was no response, so in May 2019, residents contacted arborist Tony Armstrong, as well as making a presentation to the Linwood-Central-Heathcote Community Board. We also had an independent assessment of the trees carried out for us. The conclusion was that none of the trees are 'fit for purpose', with the majority in poor condition, including rotten material, sludge and split branches.
- (6) Mr Armstrong agreed that five trees were 'very poor' and another seven 'poor'. All 'very poor' trees have been removed. There was to be a reassessment of other trees in 2020 and the removed trees replaced. That has not been done.
- (7) Since then, another tree (not even classified as 'poor') split down the middle during a storm and was subsequently removed as well. Two other trees fell during a storm several years ago, taking power lines with them. None have been replaced.

### **Summary:**

- (i) It has been over 10 years since the Gracefield Avenue upgrade was scheduled. The trees were considered beyond their use-by date then, so further delays have just made matters worse.
- (ii) In the last three years, many new dwellings have been built, with much higher density than pre-earthquake days. There is now more traffic and more pressure on parking (especially since some new dwellings have no off-street parking at all).
- (iii) We understand it is still City Council policy to replace deep channels such as the ones on Gracefield Avenue because of the additional maintenance they require.

### **Proposal re tree replacement:**

- (i) that the upgrade of Gracefield Ave trees be included in this Long Term Plan;
- (ii) that replacement of the trees that have been removed be done within the first year; and
- (iii) removal and replacement of all other trees be carried out in stages (if it cannot be done all at once), with the trees in the most serious condition and those affecting redevelopment done first. Some residents indicated they might be prepared to pay for a replacement tree in front of their property, if the CCC takes care of removal.

Attachments: May 2010 consultation document, 30 July 2010 outcome, 3 November 2010 deferral

**CAPITAL PROGRAMME GROUP**

Robert James Manthai

3 November 2010

Dear Resident

The earthquake on 4 September caused considerable damage to property and infrastructure across the city and the surrounding areas. As a result, Council now needs to focus on restoration and remediation of these so the city can be returned to a fully functioning state.

The Council realised this will involve prioritising some of its capital programme work, so at its meeting on 30 September, the Council decided to defer 416 projects in its 2010/11 capital assets renewals programme for nine months. This will allow for \$56 million to be reallocated for earthquake recovery work.

The projects that have been identified for deferral in the Hagley/Ferrymead Ward are as follows:

Transport Projects (in the inner city)

Latimer Square West Street Renewal

Barbadoes Street Renewal (Kilmore St – Lichfield St)

Madras Street Renewal (Moorehouse Ave – Latimer Square and Kilmore St to Salisbury St)

Cambridge Terrace Renewal (Peterborough St – Madras St)

Barbadoes Street water main renewal (Gloucester St – Lichfield St)

Transport Projects

Clive Street Renewal

Havelock Street Renewal

Marlborough Street Renewal

Gracefield Avenue Renewal

Greenspace Projects

Brownlee Reserve Landscape Development

Although you may previously have been consulted or informed about these projects, this letter is to let you know the work has been deferred and will not be starting on the original proposed date.

All projects will be re-assessed in the future and you will be informed at a later date about the status of the project affecting you.

Yours sincerely

 General Manager, Capital Programme  
 Capital Programme Group, Christchurch City Council

## Feedback

### 1.2 Rates

I support the rates increase as it seems manageable and it offers some long-term certainty, but would be extremely disappointed if this is then increased beyond this.

### 1.3 Proposed changes to existing rates, and new targeted rates

I strongly support the targeted rate for the Arts Centre.

I support the introduction of the excess water rate although would like clarity about subsidies for those with low incomes and / or large (often multi-generational) families. There is a big difference between an older couple of empty nesters overwatering a large green property and a family of 10 - 12 making do. Given current water demands, and the certainty of ongoing climate shifts, I would also like to see campaigns aimed at helping people plant more appropriately for changing conditions - e.g. less thirsty and more hardy plants, with greater affinity for our local ecosystems (in line with the excellent resources already available on your website), to break the mindset of Chch as a particularly English or European style garden city. I would also support installation of single meters. I am on a cross lease property with a neighbour with extensive plantings who insists that she can and will water as much as she likes, even during periods of restrictions, and I would not want to be punished because of this. It would also help to have greater clarity about commercial and other usage - e.g. the extent to which residents' use compares to the use of businesses, and the impact of resources consents allowing water bottling, which feels a bit galling when you're being asked to not have baths.

### 1.5 Investing in our transport infrastructure

Please prioritise the east, not noisy suburbs with more assertive or aggressive community groups. 10+ years on from the earthquakes and it's still an embarrassment.

### 1.7 Our facilities

I do not support the reduction of schools programmes at the Art Gallery at all. I can understand the interest in cutting the night hours, but the gallery does not seem to make as good a use of these hours as, say, public programmes at City Gallery in Wellington, which are very good at enticing people in. I would also want to see these night hours reinstated when tourist numbers return.

### 1.8 Our heritage, foreshore and parks

I strongly support the Greening the East proposal from the Waikura / Linwood - Central - Heathcote community board. Environmental and ecological issues aside, the pride in space is markedly different between leafy streets such as Armagh St and bleak, concreted spaces like Cashel St, where I live. I work in Ilam and am forever saddened by the lack of landscaping and planting in Eastern areas. It just feels like we are forever forgotten.

I support the base-stabilisation for the Robert MacDougall and funding for the Canterbury Museum, which is in desperate need of an upgrade and appropriate support.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

That said, \$5.5 million seems like a paltry sum for a contribution to the development / protection / sustainability of this chronically under-funded cultural taonga, which is of such significance to the community, city and country, especially when compared to comparable expenditure elsewhere (e.g. \$3.9 million for the KartSport track, 11.8million for base isolation in the R McD). This reflects broader patterns in the underfunding in the arts and I would happily see this increase considerably, not just because of its cultural significance, but because of the measurable and significant impact that this site (and its use) will have when fully re-developed. It would also help break the contradiction at the heart of the site's use, which pits its intention as, broadly, a space that supports and serves the community with its need to generate revenue from commercial tenants, which are increasingly upmarket. I would particularly support funds towards the old Dux de Lux building, which was key in bringing and keeping people on site throughout the week. The space feels ghostly at the moment.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

1.12 Any other comments:

I would like to see more allocated to the performing arts precinct, which is allotted, essentially, chump change when you consider the significant financial and cultural impact of the arts, and the fact that this amount is eclipsed by long-term overspending on other areas.

I would also like to see something brave done about New Brighton. The pools are really lovely but the retail area is like something out of a post-apocalyptic film.

I would like more attention paid to the Linwood village and areas like it - that is, an increased expenditure on social services. People first. Community groups are working hard here, but it's largely derelict, lots of boarded up windows, and significant social issues, e.g. with substance abuse, homelessness, high social needs, which could in part be improved through better social housing. The number of people asking for money is growing, and not just people sitting on the street outside shops. I now have people rapping on the windows of my car when I pull out to go work in the morning, and some people are asking for money from people who have stopped at intersections, or are coming up to knock on doors at houses. People regularly deal drugs in the park areas and the car parks of industrial sites, like those on Essex St. It's not safe at night. We are not collectively caring enough for people, and I would rather see this significant symptom of social pain and need to addressed before attending to trees in the 'leafy suburbs'.

We do not wish to be heard in support of this submission.

Tena koutou

**RE: RATES FOR CENTRAL CITY WASTE COLLECTION**

We support the submission the Atlas Quarter Body Corporate in relation to rates for the collection of solid waste.

We support the Council's strategic goal of reducing solid waste but object to have to pay \$300-\$400 per year in rates for the collection of the red, green and yellow bins when the Council does not provide this service to us. In the absence of Council providing this service, we pay privately through our Body Corp Levy for waste collection by EnviroWaste.

We support waste minimisation and have all the same waste streams (green, yellow and red) as the Council provides.

**We ask that the Council either:**

- 1) reduce the general rate and waste minimisation levy for developments such as ours to reflect that no waste collection is provided, or;**
- 2) amend your service contracts to provide the waste collection service.**

**Nga mihi**

Comments

1.11 Potential disposal of surplus Council-owned properties

To whom it may concern,

This submission to the draft Long Term Plan concerns the proposed fast track disposal of two parcels of land:

- 27 Hunters Rd (Record of Title CB12F/538, 38.96ha), and
- 42 Whero Avenue (Record of Title CB452/50, 1.18ha)

The Council has notified in its draft Long-term Plan (LTP) that it intends to dispose of the land between the current Diamond Harbour housing and Bay View Road, without further consultation (other than LTP submissions). Many residents live adjacent to the land or use the land. As well as the current sheep grazing, it contains Morgan and Sams gullies where many locals have spent time restoring the vegetation. The gullies have not yet been protected by covenants (long-term they should become reserves).

Requested changes to the draft Long-term Plan:

1. That the two pieces of land be withdrawn from the 'Potential disposal of Council Land' in the Long-term Plan.
2. Thorough community consultation must be undertaken to determine the future of the land. This would include Council proposals as to how it should be utilised, public meetings and a submission process.
3. Decisions on whether to proceed with the sale of the land should be made by the Council on the recommendation of the Community Board. Decisions on the sale should not just be made by Council staff.
4. The following matters should be considered, as a minimum, if disposal is to proceed through normal disposal processes involving Community Board and community input. These cannot be adequately considered through the current LTP submission process:
  - a. *Gully protection. Morgans and Sams Gully have had extensive replanting undertaken in them by community members with the support of both the City Council, Environment Canterbury, and Whakaraupō Healthy Harbour. A draft conservation covenant has been prepared for them but not finalised. The gully by the school that is also unsuitable for housing should also be protected. The covenants should be completed, and a timeline developed for these areas to become reserves established. Long-term ownership by a land developer while covenanted is likely to lead to lead to*

conflicts with community usage and aspirations.

- b. *The boundaries of the land to be sold should be determined prior to disposal rather than disposing of all land 'as is where is'. For example, the 42 Whero Avenue block contains three sections that have been included in a private garden. Kura Lane has a mixture of roading and gardens on it. At the top end of Ngatea Road, there is current usage and access by residents on Marine Drive. The proposed covenant boundaries intersect in a complex manner with the land titles.*
- c. *Tracks have been built within the proposed covenant areas, but in addition the main school walking access track from Waipapa Avenue to the school does not have an easement and needs to be provided for.*
- d. *If there are houses built, the school roll may increase, and the school grounds may need to expand on to the land considered for disposal. There is no designation for further expansion in the district plan.*
- e. *If road access to the site is developed through Ngatea Road, or Whero Avenue more vehicles will use those streets. Ngatea is narrow and has a sharp bend on it. Whero Avenue has a dangerous low visibility corner.*
- f. *The Diamond Harbour wastewater infrastructure is prone to blockage and leakage and has an ageing pipe system. Who will pay for the costs to upgrade the system to cope with the many houses that can be placed on the land?*
- g. *The subdivisions will add further pressure on road infrastructure and public transport requirements. What are the plans to align capital plans and public transport expansion with the expected increase in population. The roads are in bad repair and dangerous, who will pay for the required improvements and capacity upgrades?*
- h. *Should all the land be sold (privatised) at one time? Would a staged housing development be better for the community?*
- i. *Different use options for the land need to be considered not just a sale to a housing developer. Should some parts of the land be released for residential development and other parts held for other uses? Should the Council consider the needs of the community for special types of housing e.g. catering for older or younger people looking for smaller units?*

Regards,  
Arno Andres.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

*I agree we should invest in roads and transport infrastructure because the longer you put it off the more money it will cost. Also keep upgrading our water networks because some of our pipes are in poor condition.*

1.2 Rates

We need to keep a reasonable rates increase every year in order to do the work we need to do. Leaving it means we will have a higher cost and a bigger rates increase.

1.3 Proposed changes to existing rates, and new targeted rates

Heritage targeted rates makes it easier you no the money is there. Target rates for the Arts centre good again because older building and need a lot of money put into it.

1.4 Investing in upgrading and protecting our city's water networks  
Yes you have the balance right.

1.5 Investing in our transport infrastructure

This is needed.The population is increasing more people in city we need good ways to get around.The roads should be kept up to a good city standard . There is a difficult with seeing on the signage on the front of the buses at a distanct the newer bus have it brighter could all the bus be the same.

If the Riccarton bus lounges is going to close could there be a shelter and some where to sit while you are waiting for a bus.

1.6 Rubbish, recycling and organics  
We need to spend more on organics infrastructure and upgrade the plant.as the population increases.

1.8 Our heritage, foreshore and parks

You need to keep putting money into parks-Residental Red Zone and get it finished.Give that a priority to these project,

Botanical Gardens Master Plan,

Naval Point redevelopment,

Akaroa Wharf,

Lancaster Park redeveloping,

### Feedback

#### 1.2 Rates

Rural properties who do not receive any land drainage services should not have an increase in rates. We already gave huge increased costs due to be rural such as soak pits, septic tanks and providing water for fire fighting if it is not already available in area.

We are currently building in Okains bay and these costs have added at least \$40000 to our build.

### Feedback

1.1 Have we got the game plan right?

Our submission is related to our concern that it is proposed that the mobile library service will be stopped. We have not looked at the broader plan in great detail.

1.7 Our facilities

In our country libraries have always been considered an essential community service. The mobile library service is an important part of this for people, mostly the elderly, who are no longer able to visit fixed library sites.

Reduction in usage has been cited as a reason to cut the service but this has to be considered alongside the huge value that the mobile library users receive from the service.

Alternatives that have been suggested are unlikely to support the needs of the mobile library customers - the idea that 'finding relatives to collect books on behalf' might be a replacement for the service is ridiculous. The current service allows mostly older residents of the city to maintain their independence and to make choices for themselves of the material that they borrow.

I acknowledge that there is a cost for this service and note that the current bus was donated. Perhaps council could consider seeking corporate sponsorship (perhaps from some of the large rest/retirement home companies whose residents are big users of the mobile library) to assist to continue to provide this service.

Subject: Long Term Rates Submisison

1681

SUBMISSION TO CHRISTCHURCH CITY COUNCIL  
2021-31 LONG-TERM PLAN CONSULTATION  
18 April 2021

Sam & Charlotte Manson

This is my submission on Christchurch City Council's Long Term Plan consultation.

I farm at Rocky Peak Farm, Little River and our family have farmed here since 1981. I farm 2600 stock units of sheep and beef.

Currently I pay \$7,822.96 to Christchurch City Council as well as \$2,413.20 to Environment Canterbury.

My submission will focus on the proposed extension of the land drainage targeted rate to all properties, including those that are historically unserved by the Council's land drainage infrastructure.

I am shocked at this proposal which has come out of the blue with no prior consultation or engagement and only belated notice through a letter of 30 March 2021. I have worked out that I will pay \$4,464.20 in 2021/22 and this will increase to \$13,392.60 in 2023/24. How anyone could describe this as a 'fairer' approach is beyond my comprehension.

This rate is for a service I do not receive or benefit from. The cost is oppressive for my farm and fails to recognise the work that I do as a landowner on my property to manage excess water. Mostly water from farms drains into wetlands, streams, rivers, and the sea rather than to any council land drainage infrastructure. I am responsible for managing my waterways, drains, and wetlands to standards set out by rules for freshwater management and rules that will be coming on indigenous biodiversity. This includes considerable spending on fencing, riparian planting, sediment management, etc., all of which I am expected to meet at my own cost.

This proposal should not proceed. Please think again for the sake of the rural community.

Yours sincerely,

Sam and Charlotte Manson

### Feedback

#### 1.7 Our facilities

I disagree with your proposal to decommission Wharenui Pool. Keeping Wharenui Pool open should be a priority. Recently Stuff listed groups which use Wharenui Pool regularly; there was an impressive number of them, and many will not be willing or able to use the Metro Sports Facility.

Wharenui Pool is able to close completely for certain groups to have exclusive use, and in many cases this is the only possible or best scenario; for example Muslim women and children, an integral part of the Riccarton/Wharenui community, who would not be comfortable in a more public place, and school groups. School children are easier to control and safer in a private facility. I was fully able to appreciate how much better this was for everybody concerned with my own son; safer for the children, less stressful for teachers and instructors, better time management, and, having been at QEII during a school group session, much more desirable for the general public. If pools such as Wharenui are decommissioned, those that remain can only become more crowded with special interest groups, which will not sit well with other users.

The Council lists a number of desirable community outcomes on its website (<https://ccc.govt.nz/the-council/how-the-council-works/2018-2028-vision/community-outcomes/>), and many of these support the continuation of Wharenui Pool. For example: a strong sense of community; making sure appropriate services are available within local communities and that our general sense of well-being and quality of life often depends on having caring and supportive networks. Recently a friend, a Wharenui Pool regular, became ill, and the support she and her family received from the Wharenui Pool community was outstanding. This friend has spoken many times of friendships forged and interesting people met in her daily sessions at the pool, which demonstrated very clearly to me how important the Pool and the community are to everybody.

The Council also recognises that safe and healthy communities feature people who have active and healthy lifestyles. Already in Christchurch there are an alarming number of people who cannot swim, and in a city by the sea with many lakes and rivers in close proximity, this is dangerous. Swimming itself is a healthy and comparatively low-cost activity; therefore as much effort as possible must be made to encourage people to go to swimming pools, for recreation, learning to swim or daily exercise, especially in the winter when outdoor options are not available. Many groups who use the Wharenui Pool service either cannot or will not go to other, larger, busier or remoter swimming locations such as the Metro Sports Facility.

The Council also seeks to ensure that community facilities are safe, healthy, and welcoming. These features are already established at Wharenui and should not be destroyed. If Wharenui Pool is decommissioned, people will lose touch with the community, become more isolated and in many cases become less and less active and healthy as they cease to swim altogether; in direct contradiction to the Council's aims. Wharenui Pool has been shown to be less expensive to maintain than previously thought.

#### 1.12 Any other comments:

Ōtautahi-Christchurch needs resilient, inclusive communities and a facility like Wharenui Pool is one.

The Christchurch City Council vision states that all communities should have equitable access to Council services and resources, which will not be the case if Wharenui Pool is decommissioned, as many families do not have the ability to travel further afield, to either the new Metro Centre, Jelly Park Pool or other places.

Please do not decommission Wharenui Pool. It is far from being just an "aquatic function" as the draft long-term plan calls it. It is a community resource and a community in itself. People make lifelong friendships there and look forward to their visits. At the very least the council could pass the pool on to the community to run. The Metro "aquatic function" cannot replace the deep-rooted

Wharenui community that would be torn apart if the pool was decommissioned.

**First name:** Joanne **Last name:** Rolley

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.3 Proposed changes to existing rates, and new targeted rates

land drainage should be a user pays charge.

It is a spurious argument that the CBD land drainage is of direct benefit to rural ratepayers. You might as well claim rural people should pay for sewerage disposal in the city as when they visit the city they are not offended by offensive odours. The Act requires that where the chief beneficiaries of the service can be identified, they should be charged. The proposal may be a simpler approach, but is clearly not fair. If the faulty logic used in this proposal is upheld, there would not be one urban service, that could not be justified as a rural cost. The limited level of financial information given to the ratepayer in this land drainage targeted rate consultation document, would not meet Justice Goddard's findings on meaningful consultation. Each ratepayer should have been provided with a dollar costing for their property,

whilst roadside drainage is beneficial for all road users, it frequently causes problems for the landowner.

## Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

### Submitter Details

**Submission Date:** 18/04/2021

**First name:** Sheryl **Last name:** Croft

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.1 Have we got the game plan right?

NO WAY. Get back to your core responsibilities.

**STOP** loaning money

**STOP** spending so much money on bike lanes

**STOP** acting like no one else matters but cyclists - Leanne Dalzell, I rode my bike a LOT when I was younger too but that was a different time - you can't fix stupid and shouldn't try...

**STOP** giving money to the Cathedral - GIVE PEOPLE THE OPTION TO OPT OUT!!!

**DO NOT LOAN, GIFT, GRANT (or anything else) MONEY TO THE ART CENTRE..** I OBJECT TO BEING FORCED TO PAY FOR SOMETHING THAT WAS OBVIOUSLY UNDER INSURED... DOES THAT MEAN THE COUNCIL WILL HELP EVERYONE ELSE OUT TOO? HERITAGE OR NOT IT SHOULD NOT BE PROPPED UP BY THE RATEPAYERS!!!!

**Just because the mayor "wants" it does NOT mean it should happen.**

**STOP** so called "investing" money in white elephant projects... the city can't afford it and CCC needs to tighten it's belt.

When any work is done (road, etc) it should be QA'd - checked to make sure it's compliant and if not, then the contractors should wear the cost to fix it - RIGHT FIRST TIME. DO IT ONCE AND DO IT RIGHT - **there is a LOT of sloppy work going on** and has been for years and they get away with it - no accountability from and within the council. Contractors are getting away with sub standard work..

If you are going to do surveys, make sure they have straight forward questions and answers. DO NOT put 2 answers as an option - they should be separated out.

e.g. don't use the gym/did before feb 2020... separate it out to: don't use the gym and did before feb 2020. Only then will you get the CORRECT AND HONEST response.

**For gods sake - get rid of the chlorine already!!!!!!**

**MOST OF ALL LISTEN TO THE PEOPLE!!!! WE ARE NOT HAPPY WITH CCC AND IT'S SPENDTHRIFT WAYS... AND COMPLETE LACK OF COMMON SENSE. Look at the mess called Manchester St and what you want to do to Harewood Rd. Good God!!!**

**REMOVE** the statue from the Avon (why is it in there anyway?????) anyone with a brain (not CCC that's for sure) would realise that it was a stupid idea and with the ongoing maintenance on it (removing the weeds, etc) is a money pit.

**Please have the English names first on everything - new builds, existing names, etc.**

**CCC has become extremely OTT with naming everything with a maori name... like it or not, english is the common language of NZ and it should be recognised as such.**

**English name first then the maori and then we'd know what the words meant... but ALL street signs should be in English only. Putting maori names at everything because (why? I have no idea and the ccc doesn't seem too either...) is way OTT and smacks of reverse racism at it's best...**

**There are many different races in NZ, BUT WE ARE ALL NEW ZEALANDERS and should be recognised as such.**

## 1.2 Rates

NOT happy - the council can and should do much better! The so called "restructure" of the top tier was a joke! The rates increase is **still too high** and you need to remove **ALL** of the feel good things (**incl anything the mayor wants**) and not give money to anyone at all.

**CCC are in deep financial trouble and wants to make the ratepayers suffer for their incompetence.. enough is enough!**

**It's way past time to cull EVERYTHING that is not core a responsibility**, (white elephants: adventure park, art centre, giving money to the cricket people, Cathedral, the entertainment centre, etc, etc) changing road layouts because they worked better before the changes.....

## 1.3 Proposed changes to existing rates, and new targeted rates

**NO TO THE ARTS CENTRE - NO NO NO. I WANT AN OPT OUT OPTION.. THIS IS NOT ACCEPTABLE**

**NO TO THE CATHEDRAL**

**Not particularly impressed with even more tax on water when it's being taken from us by the water company.** Regardless of where/how they are getting it they are taking our water and getting a massive profit from it and what do we get? nothing!

#### 1.4 Investing in upgrading and protecting our city's water networks

Huh! And what about getting rid of the Chlorine? Chlorine is STILL being added! Why? The "issue" should have been sorted years ago - it just seems to go on and on and on..... and costs us rate payers more and more

**When will ALL of the chlorine be removed from the water???? Why hasn't it all gone by now?**

It seems to me that it takes WAY TOO LONG to get anything done which then results in putting up the rates because CCC can't keep to a budget. Pull in your spending!

**Fixing the roads and infrastructure should have been a priority after the earthquakes, NOT redesigning the city streets, and definitely not spending money on "nice to have" projects. If it doesn't need fixing then leave it alone!**

#### 1.5 Investing in our transport infrastructure

Transport? You mean bike lanes don't you?

**Bike Lanes can and should be integrated on the footpath NOT removing lanes and parking from roads - CCC doesn't look at the bigger picture - there are a LOT of people who cannot use a bike..... where on earth is the common sense?**

Buses are useless, they don't go where you need to, take way too long and having nearly been run off the road in my car (and my son on his bike) they are atrocious. If I want to go to city centre (and I really don't what a mess it is! CCC strikes again) then I want to go directly there I DO NOT want to go to a bus exch and have to change - lets all go backwards first before going forwards....

#### 1.6 Rubbish, recycling and organics

Right, I'd like to see the rubbish picked up when it should be. First we had the red bin not get emptied up, then it was the green bin. This was within the same month....

Yes, break downs happen but really? Are the contractors getting penalised for not emptying the bins when they should? If not then why not?

**I really, really want a bigger green bin, BUT, I refuse to pay an additional yearly amount for it! On top of what I pay already?? What a rip off!!!! (I just don't have the money...)**

Bit of a cheek expecting people to pay twice for a service that already happens.

**I also think that every 6 months council should have a collection of anything that doesn't fit in a bin.**

**You need to realise that tip fees are REALLY expensive, and a LOT of people DO NOT HAVE access to a car or trailer, and don't know anyone who can take it away, and quite simply cannot afford to pay for someone to do it for them! That would cut down on illegal dumping.....**

**Do a 6 month free upgrade thing where people can get a bigger green bin at NO EXTRA COST TO THEM - EVER!!!!**

## 1.7 Our facilities

Leave Wharenui pool alone. Believe it or not not everyone will go to the new sports place.

**After hearing about the rather large public mistake the council made in the LTP, re this pool, it really, really makes me wonder what else CCC has stuffed up on the plan? (including going OTT on bike lanes, and hiding things from people) I'm pretty sure it won't be the only one and it took someone (several someone's actually) to highlight that to the council.... shows how bad CCC is at checking things... this is unacceptable.**

I don't like the city library, it's OTT and seems to be a testament to someone's vanity. Spending all that money on the tv and after perusing the books, I found the local libraries much better - yet another white elephant and money pit!

I use our local library all the time (as do a lot of people) I don't believe cutting the hours is in the public's best interest. For a lot of people that is the only interaction they will have with another person, get to read the paper, and generally be warm..... Remember the rate payers..... we have to stick to a budget, unlike the council!

## 1.8 Our heritage, foreshore and parks

Heritage? If that means giving money to the Arts centre then no, I do not agree. It's a bit late to start bleating on about it there were a lot of buildings that were demolished after the quakes - some should have gone but some shouldn't have. I strenuously object to giving money to businessss (anyone) because they were under insured...

I haven't heard anything about fund raising from the Arts centre - why haven't they done that? Open days, guided tours, there are all kinds of things they should be doing and not expecting a hand out.

**WHY DO THEY ALWAYS EXPECT THE RATE PAYERS TO BAIL THEM OUT? THE ADVENTURE PARK is one, and the list goes on..... what happened to people/businesses getting themselves out of trouble?**

**Since when did it become ok for Joe and Jill public to have to foot the bill because of their incompetency?**

**I seriously think the council needs to re-think this entire giving money, spending money, (for no reason) and loaning money mentality - get back to your core responsibilities - you are not a bank - stop acting like one!**

## 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

**NO NO NO NO NO NO NO**

**I DO NOT SUPPORT FORKING OUT FOR THE ARTS CENTRE - IT IS THEIR RESPOSIBILITY AND THEIRS ALONE...**

**Council doesn't give money to me or any other public person who desperately needs help what's the difference? (and the heritage excuse is a joke...)**

## 1.10 Funding for base isolation of the Robert McDougall Art Gallery

No

Comments

Nope. In all my years in this city never been in there - Don't agree with it at all. Is this a core responsibility? No.....

#### 1.11 Potential disposal of surplus Council-owned properties

Get rid of them - and get some money coming in instead of going out. Money pit. Is this a core responsibility?

Interestingly you don't state what they are....

#### 1.12 Any other comments:

##### **GET BACK TO YOUR CORE RESPONSIBILITIES!!**

Just because Lianne Dalzell thinks it should happen is not a good reason.

The planners who did the Harewood Rd "proposal" need to get some common sense and I suspect they did Manchester St and what a very expensive mess that is. It just proves that CCC really DOESN'T know what it's doing

You've gone OTT with bike lanes, stuffing up the roads, bus lanes (huh), reducing speeds for no logical reason, pretty much to the detriment of other people in the city. We will always need roads and with what you propose for Harewood Rd is not forward thinking it is very much backward, insular, thinking. Remember also, that if council staff don't obey the road rules (and speeds) then why should we?

**CCC NEEDS TO GET TO IT'S CORE RESPONSIBILITIES AND THAT'S IT. YOU ARE NOT A BANK AND SHOULD NOT BE ACTING LIKE ONE!**

RATEPAYERS ARE STRUGGLING (and have been for some time) CCC NEEDS TO BE A LOT MORE FISCAL!!!

# Te Mahere Rautaki Kaurera - Our Draft Long Term Plan 2021-31

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Mark **Last name:** Aitchison

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

### 1.1 Have we got the game plan right?

No; in general: basics such as libraries and pure tap water and safe, smooth roads lag too far behind grandiose, very expensive projects and artworks that bring more controversy than value to ratepayers. Specifically: the mobile library (that costs very little) should not be at risk of being cut, but seen as tier one spending and good efforts should be always made to see how that service could be expanded and enhanced (perhaps in conjunction with other organisations) to provide essential facilities to those with poor access and perhaps feeling left out and unimportant when they see how many hundreds of millions of dollars can be found for projects may become tomorrow's white elephants.

### 1.2 Rates

While I appreciate that many of the services provided by the CCC are labour-intensive and could increase at a faster rate than the general inflation rate, and that there is a still "catch up" expenditure to due to neglected waterworks maintenance and the need for capital works after the earthquakes, and so **could be** willing to pay more in the short term to secure good results, I think I am not alone in thinking:

The rise in rates compared with median income is too much, especially given the signals that good basic services will be cut, our traditionally-good pure water will not be restored in my lifetime, and that so much money will go into projects I neither want nor expect will pay for themselves, I very much do not like the increase, but would be able to stand something more like 2%.

### 1.4 Investing in upgrading and protecting our city's water networks

I agree with the need to ensure this part of council operations works well, so am happy with its prioritisation. I am not so happy that it has got to such a bad state that so much has to be spent (and still we have unpleasant chlorination, despite claims it was temporary).

As this is such a huge amount I would like to see a report into how this situation has arisen, and also (since this

is such an expensive effort and we are an earthquake-prone region) I would like to see the CCC interact with the public and experts to explore ways where a small percentage in expenditure might result in a better system, especially with respect to resilience in the event of another natural disaster such as earthquakes. When I worked in the Waimairi Waterworks department there was a tap at main pumping stations so people could at least go and fill containers with water if the pipes were damaged. There was also a store of extra pipes especially to make quick repairs should an earthquake occur! But I suspect that, with what we know now, we could make an even better system based on experience, specifically:

1. Within the upgrade plan consider the ability to isolate some parts of the water supply system, in case some parts of the city have a more damaged pipework than others;
2. Provide (and publicise) locations of water supplies that can be used for drinking water in an emergency (we had many private bores available within communities, but being able to get water from CCC pumping stations, where the water would still be regularly checked for impurities, would be better).
3. The processing of sewerage after an earthquake was a problem - a possible improvement would be "mini pre-treatment" stations spread throughout the city that can store filter effluent, producing a product that could be valuable to farmers plus an output to existing pipes heading to the main treatment station that is somewhat less of a problem should an earthquake break the pipes. Under normal conditions the high-nutrient component could be regularly trucked away and sold in a self-funding way, but if a severe earthquake occurs a local tank could fill up instead of sending output to broken pipes. In the past earthquakes, tankers would pop up in neighbourhood streets at night, draining the drains, but with a lot of noise, disruption and smell. Better to have fewer places where that has to happen and have some financial gain for doing so during normal non-earthquake times!

#### 1.5 Investing in our transport infrastructure

I do not see good returns from the transport infrastructure in recent times; transport is important, yes. Cycleways are important, many of the aims presented by the CCC are important, yet I do not believe there has been good value for money. As with water infrastructure, I agree with the priority in general, but not the way that priority has been turned into results. Specifically:

1. Proposed cycleways should begin with a cheap experiment, making space available in an inexpensive way, and then see how popular the route is. There have been some incredibly expensive cycleways that suddenly end and become dangerous, so why would anyone want to take that route if you are still risking your life between parked cars and big trucks in a narrow space. So: try it out first, get feedback, do statistics, then spend the rest of the money making it more permanent. A useful analogy was a university I heard of, that didn't lay down paths straight away after their building work, but waited to see where the main tracks in the grass were made by people walking between buildings, and only then decided where to put the paths!
2. Sometimes cars go very, very slowly on an expensive motorway; the reason is usually congestion near one end of the motorway... more money and care should be put into dealing with heavy traffic in a two-block region from an exit; otherwise the big spend on motorway building becomes merely an exercise in forcing vehicles into the worst bottlenecks and so traffic piles up in the motorway. A prime example is Brougham Street, near Colombo, mainly due to slow traffic near Milton street. In such situations it would help to better synchronise lights, and provide green right-turn arrows, and even better: encourage businesses to stagger the times at which they close in the evenings!
3. There have been changes in the type of transport in recent times, including e-scooters; there are bound to be more. The impression given by plans so far, and much public reaction, is that current thinking goes to there being just TWO types of transport: motorists and "everything else", and that supporting "everything else" is

unwanted charity on the part of taxpayers whereas very expensive motor construction is the essential solution to traffic congestion problems we used to think, even a decade or two ago, were only ever "Auckland problems". One problem is a growing tendency to run red lights, possibly in frustration, but it is very, very dangerous to people waling or on cycles, scooters, mobility devices, etc. One partial solution that the Council seems to resist taking is having so many red-light cameras that drivers learn to resist the urge to go through red lights (although it is made complicated when there are painted marking that allow motorists enter the intersection if waiting to turn right, but a good camera system should avoid penalising those doing what they are allowed/expected to do).

4. I would very much like to see a pilot scheme for "non-motorist" overpasses (or possibly underpasses) that allow people to continue their journey without risk and without having to wait for lights. such overpasses (really bridges with a gentle slope and enclosed in perspex or netting, with no risk of falling, and safe in an earthquake) would be cheaper to construct than normal overpasses and motorists stuck at lights could gain a greater admiration for the option of buying a bike or hiring an e-scooter!

5. Another way to reduce transport infrastructure costs my lateral thinking could be having times when certain lanes, especially lanes sometimes used for bus lanes, and some free parking in the city, could be available to particulr groups, such as "gold card holders" or parents/caregivers with pre-schoolers, or people taking elderly/disables/etc shopping. This would do two things: it would make it less stressful for various vulnerable groups, and it would make it more likely these groups (who, likely, could do their journeys at a wider range of times than those travelling to/from/for work) will choose to use the raods at these times and be much less likely to add to teh congestion at times of peak demand.

---

## 1.6 Rubbish, recycling and organics

The changes I would like to see are:

1. more understandable "yellow bin" recycling (probably means: allow more things to go in that bin, and not everyone knows that some things you might think should be recyclable should not currently be in there!).
2. Some initiatives to process some recyclable materials locally (there are stories of recyclable material being dumped too often, besides, we should get some benefit from the recycling, and we don't want to pollute the environment by transporting it too far!)
3. A better approach to avoiding some devices having to go into either bin! Slightly old computers can be turned into diskless Linux workstations or could become part of a scheme where senior citizens and charities, etc get refurbished equipment with free Linux, email and OpenOffice, along with a free "service contract" where faulty equipment is quickly swapped out for "new" second-hand equipment with files being moved across for them, simply because all the old devices are set up to be very similar to each other, with little effort required on the part of the technician that delivers the replacement. Too many good not-for-profit organisations, and senior citizens, don't have the expertise to cope with equipment failures, but a scheme of cleaning and refurbishing even ten-year-old computers to all work in a very standard way to do teh basic tasks makes supporting them (by quick swap-overs) very economical. At it could make our city the best in its use and support of modern technology - all be redefining "modern" to be, well, maybe ten years old!

---

## 1.7 Our facilities

I am unhappy with the balance between big, expensive community facilities and economical-but-useful facilities such as libraries and library staff! Mobile libraries especially. For the sake of community spirit, as well as for the benefit of the less mobile, and for a reduction in road congestion, I would wish the CCC adopts a sensible Code of Practice" as far as the provision of certain facilities in each suburb, including library, service centre, provision for other organisations (such as C.A.B, Postal services and Kiwibank, community police presence, JP), along with good parking, good cycle stands, and supported by good bus routes.

Until the "tier one" needed facilities are provided properly, I would prefer the Council not commission expensive artworks but "leave a space for one", or encourage private benefactors to pay for them.

#### 1.8 Our heritage, foreshore and parks

As far as heritage is concerned, the earthquakes have been forcing people out of communities they may have lived for many decades; it would be good to have a project where people are interviewed who still remember neighbourhoods they way they were long ago, perhaps have stories about why a street or whatever got its name, and so on. That could involve encouraging informal meetings in church halls, or school children being resourced to invite and interview people, or professional historians are archivists collating material that may become a book or a web page. It would encourage community spirit, and preserve information about many aspects of our history that would otherwise be lost.

#### 1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

##### Comments

I would like funding options to such places to be set out with better information, such as its relative value in historic terms, and in tourism terms. Possibly it deserves more than \$5.5m, or possibly some other part of our heritage deserves more? It is too hard to tell.

#### 1.12 Any other comments:

We have had three surprises - the earthquakes, the mosque shootings and Covid; it is likely our city and region will keep getting challenged in ways it is almost impossible to predict (or, if we suspect it is **possible** we might still know **how** it will play out and what we need to adapt in our response). Such challenges require more than the CCC's response... we have seen that various organisations (including, but not limited to, local and central government) must work well together. I am sure the earthquakes showed flaws in the way central government worked with the CCC, and plenty of people have stories of how both central and local government were not as good as a few local people who went around door-knocking or set up a service of some sort for locals all the time the official information was saying to turn up to a particular school to get fresh water yet not realising that school was dangerous and entry to the ground prohibited.

Working together is important, and you cannot leave practising how to do that until the last moment. So I urge the CCC contact, and work with, and especially organise a monthly public meeting (which could use zoom, but preferably have some physical presence option) where the CCC and neighbouring councils, regional council, local MPs plus some organisations that vary from month to month (but always including: St John Ambulance, Salvation Army, someone who can talk about - if not represent - shops, and the young, and the old) and, having already been primed by emails saying what problems are facing them or what hopes that have to significant developments, talk and listen to each other, with some possibility for public questions.

Preparing for the future by knowing, and publically demonstrating, an ability to listen and cooperate, is worth more than much long term planning that cannot foresee so many possible ways those plans could get bent out of shape, as they have been in the past.

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

No. No rates hike. Cyclists to pay for their cycleways thru registration. Consult the public and plan with their help. Do not reduce speed limits.

1.2 Rates

Do not increase rates.

1.3 Proposed changes to existing rates, and new targeted rates

Do not do water rates as this will penalise lots of people.

1.4 Investing in upgrading and protecting our city's water networks

Do it within budget and no rates increase.

1.5 Investing in our transport infrastructure

All vehicles should be able to visit the city. Free buses.

1.6 Rubbish, recycling and organics

Keep as is.

1.7 Our facilities

Keep all libraries.

1.8 Our heritage, foreshore and parks

No rates increase for this

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

No

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

### Feedback

1.12 Any other comments:

I would like to make a submission regarding the Council's plan to dispose of the land between the current Diamond Harbour housing and Bay View Road.

This plan should follow normal land disposal processes, i.e. full community consultation and input of the Community Board must be included to determine the future use of this land. The two pieces of land should be withdrawn from the "Potential Disposal of Council Land" in the Long-term Plan.

As nearby residents my wife and I value the natural beauty of the adjacent land, I'm also part of the group of volunteers who are involved in the re-planting project of Morgan/Sam's gullies. The walking tracks created in these gullies have become very popular and are widely used by locals, visitors and school students.

Issues like gully protection, road access, wastewater infrastructure of Diamond Harbour, to only name a few, need to be discussed during a thorough community consultation process.

Steffen Klink

**SUBMISSION TO CHRISTCHURCH CITY COUNCIL  
2021-31 LONG-TERM PLAN CONSULTATION  
18 April 2021**

Name: Michael Williams  
[REDACTED]  
[REDACTED]  
[REDACTED]

Introduction

This is my submission on Christchurch City Council's Long Term Plan consultation.

I farm 1200Ha on Banks Peninsula with my wife and son and I have farmed here since 1983. I farm 9000stock units of sheep and beef cattle.

Currently I pay a total of \$21,596 to Christchurch City Council as well as to Environment Canterbury in annual rates.

My submission will focus on the proposed extension of the land drainage targeted rate to all properties, including those that are historically unserved by the Council's land drainage infrastructure.

I am shocked at this proposal which has come out of the blue with no prior consultation or engagement and only belated notice through a letter of 30 March 2021. I have been advised that this will increase our rates by \$1135/yr in 2021/22 and this will increase to an additional \$3400/yr in 2023/24. How anyone could describe this as a 'fairer' approach is beyond my comprehension. It certainly does not fit a user pays criteria.

This rate is for a service I do not receive or benefit from. The cost is oppressive for my farm and fails to recognise the work that I do as a landowner on my property to manage excess water. Mostly water from farms drains into wetlands, streams, rivers, and the sea rather than to any council land drainage infrastructure. I am responsible for managing my waterways, drains, and wetlands to standards set out by rules for freshwater management and rules that will be coming on indigenous biodiversity. This includes considerable spending on fencing, riparian planting, sediment management, etc., all of which I am expected to meet at my own cost.

I would also like to question the timing of this proposal and for you to consider the stress and extra mental trauma you are inflicting on the rural community. Banks Peninsula is currently in the worst drought I have experienced in my nearly 40 years of farming here. This is creating a huge amount of mental stress to most landowners running livestock as well as a significant financial cost. I urge you to consider possible consequences for placing more financial pressure on individuals, especially for a service we don't receive.

This proposal should not proceed. Please think again for the sake of the rural community.

Yours sincerely

**Michael Williams**

### Feedback

1.8 Our heritage, foreshore and parks

I support extra funding for heritage, and I support funding for the Canterbury Museum to undertake its redevelopment.

However I am strongly opposed to the sale of all parcels of freehold land in Diamond Harbour without CCC first surveying out the gullies and other areas which have been planted and restored by the local community over many years.

There is a strong rhythm of gullies alternating with broad ridges at the toe of the Mt Herbert Ramp landform where Diamond Harbour is located. It is important that the gullies remain as reserve to protect water quality, reduce sediment, provide off-road walking and cycling access to the foreshore and links to other reserves. There is a logical point where the gentle slope of ridgetop changes to steeper slope into gully where natural boundary between residential land and reserve land should be located.

CCC should carry out a landscape assessment to identify the areas on the ridges which are suitable for housing. Only the parts suitable for housing should be sold for residential development. Developers working with the district plan cannot be relied upon to include all the land which should be reserved. Community input is needed, a consultation process.

1.10 Funding for base isolation of the Robert McDougall Art Gallery

Yes

Comments

Totally support this and its future use to display art from the Canterbury Museum collection

1.11 Potential disposal of surplus Council-owned properties

SUBMISSION TO CCC LONG TERM PLAN

Good morning,

RE: RATES FOR CENTRAL CITY WASTE COLLECTION

We support the submission from the Atlas Quarter Body Corporate in relation to rates for the collection of solid waste.

We support the Council's strategic goal of reducing solid waste but object to having pay \$300-\$400 per year in rates for the collection of the red, green and yellow bins when the Council does not provide this service to us. In the absence of Council providing this service, we pay privately through our Body Corp Levy for waste collection by EnviroWaste. We support waste minimisation and have all the same waste streams (green, yellow and red) as the Council provides.

**We ask that the Council either:**

1. **reduce the general rate and waste minimisation levy for developments such as ours to reflect that no waste collection is provided, or;**
2. **amend your service contracts to provide the waste collection service.**

Thank you. Rod Corbin & Janice Wickes

**Subject:** Fibre for our neighbourhood - submission to CCC Long term plan

I live in a neighbourhood of 36 households that were left out of the Government and Christchurch City Council funded roll out for fibre.

We are located at the top of Huntsbury Ave above Kenmure Drive and include properties on Huntsbury Ave, Westview Place and Tiroroa Lane. We are not a new development, with houses being built up here since the early 1990s, and we are within the Christchurch City Hills Living Zone.

At the time of the fibre roll out when it was being laid up Huntsbury various members of our neighbourhood approached the Christchurch City Council and Enable to find out why we were not being included. Nobody could provide an answer.

We collectively approached Enable in November 2019 to ask them to lay fibre in our neighbourhood. Enable developed a network plan (August 2020) that would lay fibre to most of our properties (but not all, excluding the top properties on Huntsbury Ave). Enable are prepared to fund most of this but require our neighbourhood to fund a shortfall of \$36,000+ GST.

Enable have stated we were excluded due to a 350m gap between the edge of their network and the first property on Westview Place. Over time, this gap in the properties will be developed, and since approaching Enable, 3 new houses have been developed. Our neighbourhood is zoned for residential activities, so it should be provided with the same level of service as other areas in the city zoned for residential. It is not our fault that the landholders in this gap have not yet completed development, and the status of this private landholding should not impact on the services that a ratepayer funded CCO is providing within a zone.

A key focus of Council strategy should be to provide an equitable level of service across the city. It is unfair that we are being required to pay for fibre to our streets while the rest of Christchurch had it provided for free, paid for by our rates and taxes – we are effectively being asked to pay twice.

Fibre is going to be provided to small, isolated country towns such as Lake Brunner and Haast, while we have not been given access to it within 7km of the CBD of the South Island's largest city. It is very discouraging to see extensive Enable advertising in the newspaper and on billboards for fibre take up, while there is apparently no funding to complete the rollout.

Please support us in finding the funding for this shortfall to get fibre laid to our streets OR by convincing Enable that they can cover the full cost of the fibre layout by using their discretionary spending.

### Feedback

1.1 Have we got the game plan right?

I believe that the Wharenuui Pool should be retained.

This is because it is an important community asset that has been at the heart of Riccarton's recreational life for decades. Many Riccarton residents see it as essential to their community. Closing it would reduce the value to Chch of the new Metro Centre (and also to Jellie Park) by causing congestion.

As a daily user of Jellie Park's pools, I would not like to see them getr more crowded than they are at present.

## Feedback

1.1 Have we got the game plan right?

I think the overall game plan is well considered and focusses on the appropriate things.

1.2 Rates

It is critical to have the level of income to fund the overall game plan while being affordable and these increases strike that balance.

1.3 Proposed changes to existing rates, and new targeted rates

Agree.

1.4 Investing in upgrading and protecting our city's water networks

Agree

1.5 Investing in our transport infrastructure

Agree

1.6 Rubbish, recycling and organics

Closer monitoring of the emissions from Living Earth (in conjunction with Ecan) would be welcomes.

1.7 Our facilities

I don't agree with the proposal to close the service desks in Akaroa and Lyttelton. We have learnt a lot over the Covid-19 response time and one of the most important is the value of community connection. These desks provide that connection for both locals and visitors (both Lyttelton and Akaroa have a large number of visitors). This is a financially very small saving and will come at a very significant social cost. The value of services cannot be measured by financial transactions alone. SailGP will put even greater pressure on the need for local services.

1.8 Our heritage, foreshore and parks

I would like to see a strong commitment to pest eradication, natural ecosystems restoration and support of indigenous biodiversity.

1.9 Funding for the Arts Centre Te Matatiki Toi Ora

Yes

Comments

1.10 Funding for base isolation of the Robert McDougall Art Gallery  
Yes

Comments  
The Canterbury Museum and Robert McDougall Art Gallery are key visitor attractions and need to be brought up to an appropriate standard.

1.11 Potential disposal of surplus Council-owned properties  
I would hope that consideration for alternative income generation from these properties, including leasing, are considered rather than just sale. Sale is one off whereas other uses could generate more income longer term.

1.12 Any other comments:

Reinstate strenthening communities funding (the only avenue for many vital local organisations for funding).

Committment to improving the quality of our social housing.

Funding for the Sumner Village Green so that it can be progressed at the same time as the skate park, reducing local disruption.

Support the upgrade work at Naval Point.

Instigate work within Enable Services Ltd to deliver UFBB to all Christchurch residential properties.

Instigate community engagement (particularly within Lyttelton and Akaroa) about any future regulation in regard to number, size and frequency of cruise ship visits.

OTAHUTAHU - CHRISTCHURCH

Christchurch City Council

Submission  
Change to Rates Remission Policy  
18<sup>th</sup> April 2021

## **Rates Remission Policy – Not-for-profit community-based organisations**

Fr Simon Eccleton, Wayne McTague, Bernard Toner and Kirsten Tester, on behalf of The Catholic Parish of Christchurch Cathedral Trust, makes this submission to Christchurch City Council on the proposed change to the Rates Remission Policy.

It is important to firstly state that the many charities which benefit from rates remissions provided by the Council (and effectively the ratepayers), are extremely grateful for this support. For charities the rates remission helps support the provision of critical social activities to communities, and in many cases is an important contributor to their financial sustainability. This support for not-for-profits and the recognition of the good they do in the community is appropriate.

### **Executive Summary:**

While the below information is applicable for not-for-profits in general, at Cathedral Parish our specific circumstances have us appearing to be ‘cash-rich’ as a result of the amalgamation of parishes in July 2020.

The funds we hold currently would have us breach the CCC threshold however all our funds are currently tagged for the future rebuild of the Catholic Cathedral (Cnr Armagh/Colombo) which forms part our parish. Within the next twelve months our cash in hand will significantly reduce as work is carried out on demolitions and subdivision of property held, to raise funds for the rebuild project.

The proposed change to the Rates Remission Policy is not supported due to (i) Insufficient Notice, (ii) Lack of Pre-Engagement, (iii) Lack of Information, (iv) Flawed Remission Assessment Criteria, (v) No Cost/Benefit Analysis, and (vi) the Existing Policy is Adequate. This submission provides supporting arguments and information for each of these concerns. Any of these concerns on their own provide justification for the withdrawal or, at the very least, reconsideration in the future in a more robust and fair manner. Collectively, they provide a compelling argument for Council to withdraw the proposal.

### **Discussion:**

This submission prefers to use the less corporate term of ‘charities’ as opposed to “not-for-profit community-based organisations”.

Clear and supporting information is provided below, under clear headings, in support of the position taken in this submission:

1. Insufficient Notice
2. Lack of Pre-Engagement
3. Lack of Information
4. Flawed Remission Assessment Criteria
5. No Cost/Benefit Analysis
6. Existing Policy is Adequate

### *1. Insufficient Notice*

Given the very large number of charities that this proposal would affect (including those that must file and disclose additional financial information to continue receiving a remission) and that reality that most charities struggle with lack of resources (people and funds), it is considered that insufficient notice has been provided to ensure that charities could appropriately engage in the submission process. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### *2. Lack of Pre-Engagement*

It is reasonable to expect that any proposal by Council to change the important policies affecting ratepayers and the community would be well researched and that a level of pre-engagement with representatives of those affected had taken place to help inform and validate the proposed change. The paper “Background Material on Proposed Changes to Rates for 2021/22” does not provide confirmation that either has taken place and is reflected in serious shortcomings of the proposed change that are discussed later in this submission. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### *3. Lack of Information*

The “Background Material on Proposed Changes to Rates for 2021/22” is a very brief document and thin on any objective information. It is inadequate for any meaningful consultation.

No substantive and objective information has been provided by Council of the supposed issue and how it could be best addressed. For example:

- What are the total remissions each year to charities?
- How many charities does Council consider are ‘wealthy’ and it views as not needing rates remission?
- What is the estimate of \$300k reduction in annual rates remissions based on?
- What would be the cost of implementing the proposal on an annual basis?
- What would the magnitude of loss of rates remission be for affected charities?
- What analysis was undertaken to support cash and investments at 50 times the base services rates for which a remission could be received as being the factor applied for cut-off of eligibility?
- Could some affected charities be forced to reduce the level of their charitable activities due to the loss of the rates remission?
- How many charities would be unfairly burdened by the additional filing requirements to Council to maintain their rates remissions, in order for Council to cease remissions to (a likely) very few charities?

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

### *4. Flawed Remission Assessment Criteria*

The proposed change to the rates remission eligibility assessment is blunt. Most particularly, inadequate consideration has been given to the use and definition of cash and investments as a proxy for determining whether a charity is ‘wealthy’. The current proposal is too much of a blunt instrument and will cause more harm than intended if not ‘nuanced’. Example of unintended consequences of the proposed policy change are provided below:

#### *Charity A*

This charity provides critical social services to vulnerable members of the community. It employs social workers, a manager, and is supported by many volunteers. It is recognised by the Council and government as providing vital social services. Its budget is extremely tight and all the staff are aware

that they have limited job security due to the challenges of maintaining adequate levels of funding. At the end of the financial year the charity made a financial loss. It had eight months liquidity at year end – however almost all of this was grants in advance and recorded as liabilities in the financial statements. This pushed the charity over the 50X rates remission eligibility and it now faces having to reduce its services to offset this cost increase.

#### *Charity B*

This charity provides broad and valuable services to the community. It has just a few staff and many volunteers. It too is recognised by the Council and government as providing vital social services. It too has an extremely tight budget and consistently runs at breakeven or a loss. The charity relies significantly on bequests and endowments to fund its operations. Most of these bequests and endowments are held legally in trust and are restricted as to what they can be spent on, with the two largest endowments specifying that the funds capital must be maintained and only the income is available for specific activities. Despite having inadequate ‘free cash’ to fund its charitable activities, the value of the capital protected endowments pushes it over the 50X rates remission eligibility and it must now reduce its services to offset this cost increase.

#### *Charity C and Charity D*

There are two very similar charities - C and D. Both provide similar social services but in different locations. They operate on a breakeven basis, supported by grants, donations and income from modest (and separate) commercial premises they own. Charity C is forced to sell its commercial property under compulsory acquisition by the Crown. The income it receives from investing the sale proceeds is the same as the net return it received when it owned the property. The sale pushes Charity C over the 50X rates remission eligibility (it does not have a specific capital project to which it will put the sale proceeds) and it must now reduce its services to offset this cost increase, while Charity D which has the same level of assets continues to receive a remission.

The above examples show that crudely applying cash and investments as a proxy for whether a charity is wealthy and not deserving/requiring the support of a rates remission is flawed. Further, the proposed eligibility criteria will have significantly detrimental consequences for some charities. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

#### *5. No Cost/Benefit Analysis*

The background material does not provide any analysis of the costs of implementation of the changes to this policy. It would be reasonable to expect the appointment of suitably qualified chartered accountants to be able to read and interpret the financial statements being submitted and have sufficient knowledge to make informed decisions about what cash and investments should or should not be included in any calculation.

It is also reasonable to expect that there will be increased engagement with charities, on an ongoing basis, over the filing of returns (financial statements) to Council and application of the rates remission eligibility criteria. There will also be additional ancillary costs and associated overheads for this and the financial statement review activity.

There is also the collective burden across all charities receiving rates remissions of filing information, including their financial statements, to Council. The time and cost of this to charities has not been considered in the proposal.

It is fair to reach the conclusion that the cost to Council and affected charities of this policy change would outweigh the estimated (but unsupported) benefit of \$300k plus GST in rates remissions per annum. For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

*6. Existing Policy is Adequate*

There is no discussion in the proposal as to whether the existing Rates Remission Policy is adequate and does not require change to enable Council to reduce or cease rates remissions to charities it reasonably concludes to be wealthy and not requiring such support. Further, the Council paper acknowledges that not making the change will “make it easier for some not-for-profit based organisations to provide more public benefits from their activities”. Any change that will make it harder for not-for-profits to provide public benefits is counter to the principle of the remission.

The current policy provides for “Up to 50% remission (of the rates that would be payable if they were fully rateable) on targeted rates for standard water supply, sewerage, and land drainage” (emphasis added) and that the “extent of remission [if any] shall be determined at the absolute discretion of the Council” (emphasis added). The current Council policy already provides sufficient discretion to decline rates remissions to any charity where it deems that support is not warranted.

For this reason alone it is requested that the proposed change to the Rates Remission Policy is withdrawn or, at the very least, reconsidered in the future in a more robust and fair manner.

Catholic Cathedral Parish

SUBMISSION ON CHRISTCHURCH CITY COUNCIL DRAFT LONG TERM PLAN 2021–31Full name Aotearoa Water Action IncorporatedSubmitted by Mike Currie, Co-Convenor/SecretaryPostal address, postcodeEmail address

Aotearoa Water Action declares in its Charter that “Healthy freshwater, in all its forms, being critical to ecosystem functionality and wellbeing, must likewise be actively protected, restored and maintained, as a priority. This includes protection of water quality (e.g. from sewerage, Industrial waste, toxins and other contaminants) and quantity (in terms of the volume of water or rate of flow in our aquifers, lakes, rivers and wetlands)”

This being the case we will restrict our feedback on the Draft Long Term Plan to the water supply infrastructure and charges.

Excess Water Use Targeted Rate for Households

Aotearoa Water Action supports the proposed charge for excess water use. We support this because we see the charge as not being for water but for the infrastructure needed to provide the water. The volume of water used is simply a measure of the use of that infrastructure, provided that money is used for the water infrastructure and not as a fundraiser to be siphoned off to other infrastructure or other areas of expenditure. It's important to understand that water infrastructure is expensive and the more water we use the more likely it is we will need larger pipes to carry the water, additional water reservoirs, additional water pump station upgrades, additional land to dispose wastewater to and so on.

A charge for water use above 700l/day/household incentivises people to reduce water use (or put in alternative systems for irrigation), reducing the overall cost to the ratepayers. From our point of view, it's fair in that those who drive the need for additional infrastructure pay a greater contribution to the cost of that infrastructure.

However, alongside the excess water charge Council should be educating around the importance of conserving water, and best use in terms of rainwater/greywater collection.

With respect to rain water tanks, all new housing should require the inclusion of rain water tanks and subsidies made available for existing housing to incorporate rain water tanks. Refer to supporting document "Regulating for supplementary water supply (rainwater tanks)" produced by the Canterbury Sustainable Homes Working Party. This will reduce the load on the Christchurch City drinking water supply and infrastructure.

Council has already approved in principle applying for a Water Conservation Order to the NZ Government to protect Christchurch's deep aquifers from exploitation by water bottling companies, intensive farming/horticulture, etc. This will enable more control of the load on the Christchurch City Council drinking water aquifers. The Long-Term Plan must allocate funding to allow the application process to proceed.

### Drinking Water Supply Upgrade

Aotearoa Water Action supports Council "investing in upgrading the city's drinking water supply network, including upgrading well heads, drilling new and deeper wells, upgrading reservoirs, replacing older pipes, and installing new 'smart' monitoring systems and flow meters. The work we're doing is best practice and will future-proof the network for many years to come.

Safe drinking water, without residual chlorine, is a major priority for the Council, and for the people of Christchurch. We've resolved that, long term, we want to retain the city's untreated water supply system and will seek an exemption from the Government proposal in the Water Services Bill to require residual chlorine treatment."

The 'smart' monitoring systems should be installed not just for flow quantity but also for core water quality, meaning protection from and prompt detection and remediation of toxic substances such as E-Coli, nitrates, etc.

The Water Services Bill is about to go through its second reading. Between this Bill and the formation of Taumata Arawai (the enforcement agency) we are going to see the costs of Three Waters provision increase. In addition to that we have the Government proposing the creation of regional entities that will take over the management of Three Waters infrastructure unless councils decide to 'opt out'.

With the cost of running these systems set to increase but councils' debt limits remaining where they are, local councils are facing a dilemma. Unless they can find a way to fund the ongoing provision of Three Waters infrastructure to a standard that meets the requirements of the proposed Water Services Bill (and any additional requirements of Taumata Arawai), they will be unable to 'opt out' of the entity model.

Aotearoa Water Action supports Council opting out. This is because we believe that water services will be less expensive for users if they remain with Council. We also believe there's a reduced risk of privatisation if they remain with Council.

So, given all of the context above, Aotearoa Water Action's position is to support the charge for excess water because We believe it's the fairest way to fund infrastructure and the best way to ensure our Councillors can retain control over our Three Waters networks. Maintaining democratic governance of these networks at a local level means we'll all still get a say in chlorination and fluoridation of supplies, the cost of supplies and the way they are funded etc.

## Canterbury Sustainable Homes Working Party – Regulation

### Regulating for supplementary water supply (rainwater tanks) in new and rebuilt homes in greater Christchurch

#### Goal

The goal is to have greater resilience, reduced water demand in summer and mitigation of storm water runoff during rain events through the installation of rainwater tanks in all new homes and rebuilds following the earthquakes in greater Christchurch.

#### Method

The preferred method is through using s27<sup>1</sup> of the CER Act 2011 to instigate Plan Changes in the CCC, SDC and WDC District Plans.

Plan change 75 for the Kapiti Coast District Plan provides guidance for this process.<sup>2</sup>

#### Rationale

The Canterbury earthquakes disrupted the reticulated supply of water through damage to reservoirs, pumping stations and pipes. Some residents were without water for many weeks, and were reliant on bottled water, tanker supplies or neighbour's private wells

While more than eighty percent of the Christchurch water supply was restored within two weeks of the February earthquake, boil-water notices remained in place citywide until April 2011, due to the risk of cross-contamination from broken pipe works. Shortly after the 22 February earthquake, chlorine was introduced to the water supply to address potential contamination issues, and remained until December 2011.

Experience in Christchurch suggests that current UN-based recommendations of 3 litres of water per person per day, to meet water needs in a disaster situation, may fall well below the actual needs of an urban population. The CDEM Wellington Emergency Preparedness guide (December 2010) suggests 3 litres per person to meet daily drinking needs, and more for cooking, hygiene and pet care<sup>3</sup>.

In Christchurch City in summer 2011/12 level 3 restrictions were imposed because of the reduced storage in the water supply system.

If more homes had rainwater tanks they would have had access to an emergency supply, particularly for non-potable purposes such as clothes washing or garden watering, and there would have been reduced demand on the Councils' supplies.

Significant construction cost savings (up to 50%) can be realised by installing the rainwater tank and dual plumbing systems in new 'greenfield' developments (and new homes) compared to retrofitting existing 'brownfield' areas<sup>4</sup> (or retrofitting in existing homes).

Ministry of Health guidelines indicate that only about five litres per person per day (l/p/d) needs to be biologically and chemically safe. Average domestic water use is about 300-350 l/p/d – all of which is currently cleaned to a potable standard. Clothes and cars are washed, toilets flushed and gardens watered with high quality drinking water. Using rainwater for some of these activities would reduce the demand on potable water.

<sup>1</sup> S27 (1) The Minister may, by public notice, suspend, amend, or revoke the whole or any part of the following, so far as they relate to any area within greater Christchurch: (a) an RMA document

<sup>2</sup> <http://www.kapiticoast.govt.nz/Documents/Downloads/District%20Plan%20Changes/Plan-change-75-Commissioners-Report.pdf>

<sup>3</sup> Moore, R.M. and Abbott, S 2011. *Benefits of Rainwater Tanks in the Event of Damage to Centralised Water Supplies in the Wellington Region*. Report to the Institute of Geological & Nuclear Sciences Ltd. (Contract No: C05X0907)

<sup>4</sup> Kettle, D. March 2010. Barriers to Water Demand Management: health, infrastructure and maintenance. Report WA7060/6 for Beacon Pathway Limited.

Putting in place legislation requiring rainwater tanks homes being built or rebuilt will incorporate resilience for the future.

- This is already signalled in the Christchurch City Council's Water Supply Strategy as Action 12, scheduled for 2014/15<sup>5</sup>.
- In the Waimakariri District Council Water Conservation Strategy<sup>6</sup> rainwater collection and reuse is recognised as a way to reduce peak water demand, but regulatory measures will be reviewed in the 2013 review of the strategy.
- Selwyn District Council has no specific reference to domestic rainwater collection in their five-water strategy.

### Definition

Rainwater harvesting involves the collection, storage and distribution of rainwater from the roof, for use inside and outside the home. Rainwater collected from the roof via gutters and pipes flows through screening devices to remove dirt and debris, and is then stored in tanks outside the house for use in the garden, toilet and laundry. The reticulated supply would still be used for drinking, cooking and other potable purposes.

Each rain tank can save a home about 50% in terms of their water usage when rainwater is re-used for the laundry use and toilet.<sup>7</sup>

### Benefits

- An invaluable alternative water supply when a disaster damages the reticulated system
- Reduces the demand for water from the main water supply
  - Reduces the extraction from groundwater
  - Reduces householders dependence on mains water
  - Offers more resilience when water restrictions are in place
- Reduces costs in the delivery of reticulated water supply, e.g. pipe size, reservoirs, energy costs
  - Avoids oversizing of water supply network and associated costs inefficiencies
  - Can delay capital works
  - Reduced energy costs in embodied energy of infrastructure, operational costs of treatment and pumping,
  - Lower householders water bills (if water is charged for by volume)
- Reduced storm water runoff
  - Prevents the impact of storm water run-off on the local environment
  - Reduces peak flow in storm water system
- Education and awareness
  - On site systems give timely feedback to the householder on water consumption increasing awareness about the limits of water availability and cost of infrastructure/maintenance<sup>8</sup>
  - Householders have increased control over their water source
  - Rain tanks are part of a broader societal shift towards more eco-friendly behaviour and tanks facilitate a transition to more sustainable values and behaviours.

<sup>6</sup> [http://www.waimakariri.govt.nz/Libraries/Public\\_Documents/Water\\_Conervation\\_Strategy\\_-\\_June\\_2010\\_-\\_Final.sflb.ashx](http://www.waimakariri.govt.nz/Libraries/Public_Documents/Water_Conervation_Strategy_-_June_2010_-_Final.sflb.ashx)

<sup>7</sup> <http://www.waitakere.govt.nz/AbtCnl/to/pdf/brochure-rainwatertanksintheurbanarea.pdf>

<sup>8</sup> Presentation - Sustainable water supply for Auckland – Craig Brown Consulting – 5 February 2010  
[www.thesustainabilitysociety.org.nz/docs/Forum-20-Brown.ppt](http://www.thesustainabilitysociety.org.nz/docs/Forum-20-Brown.ppt)

If the councils introduced a volumetric charge on domestic water supply the financial benefits would be higher.

### Costs

- Costs vary with the amount of rainwater to be stored and its intended uses.
- Tank prices plus the cost of installation and additional fittings

Rainwater tanks as a water efficiency mechanism are frequently cited as being high cost for the benefits compared with other technology – these calculations need to be checked that operational costs and life cycle benefits are included; benefits to storm water/wastewater systems are accounted for; and assumptions on treatment standards/equipment are realistic and practical.

### Barriers

Some health regulators believe that health risks are manageable for rainwater use as a non-potable water use. In New Zealand, at present, some health authorities believe that if water tanks are properly installed, labelled and maintained, they are safe to use for non-potable use - flushing toilets, laundry and garden use<sup>9</sup>.

### Regulatory Mechanisms

- The Resource Management Act 1991 (RMA)
  - Regional Policy Statement (RPS) - identify that District Plans of Territorial Authorities should make provision for the mandatory inclusion of rain tanks as a 'rule'. A Section 32 cost benefit analysis and public notification would be required with a public consultation process under the RMA.
  - Regional Plans – the Canterbury Land and Water Plan (replacing the NRRP)
  - District Plan - Plan Change to include policies and a rule around the requirement for rainwater tanks. This process would require a Section 32 cost-benefit analysis to be undertaken.
- The Local Government Act 2002
  - A territorial authority must, from time to time, assess the provision within its district of water services and other sanitary services. An assessment may be included in the territorial authority's long-term plan, but, if it is not, the territorial authority must adopt the assessment using the special consultative procedure
  - If this assessment signals the need for water conservation to avoid or push out further infrastructure development then such measures can be considered under the Long Term Plan (LTP) and considerably shorten the public consultation process required for inclusion in the District Plan.
  - A council can pass a bylaw requiring a supplementary water supply for new houses

The preferred method is through using s27<sup>10</sup> of the CER Act 2011 to instigate Plan Changes in the CCC, SDC and WDC District Plans.

<sup>9</sup> Kettle, D. March 2010. Barriers to Water Demand Management: health, infrastructure and maintenance. Report WA7060/6 for Beacon Pathway Limited.

<sup>10</sup> S27 (1) The Minister may, by public notice, suspend, amend, or revoke the whole or any part of the following, so far as they relate to any area within greater Christchurch: (a) an RMA document

## Appendix 1: Key regulatory processes to influence uptake of rain tanks<sup>11</sup>

| Process                                                       | Scale of Influence | Likely Timeline                                                                     | Priority | Likelihood of success                                                                         |
|---------------------------------------------------------------|--------------------|-------------------------------------------------------------------------------------|----------|-----------------------------------------------------------------------------------------------|
| <b>District Plan Changes</b>                                  | Local              | 2-3 years but would benefit from RPS or other policy work to set the scene          | High     | Success would require education and good consultation                                         |
| <b>Regional Policy Statement</b>                              | Canterbury Region  | Would take several years to be given effect to and filter through to implementation | Medium   | Medium to high, needs good collaboration with ECan                                            |
| <b>Regional Plans – NRRP and Land and Water Regional Plan</b> | Canterbury Region  | Planning process just beginning                                                     | Low      | Medium to high, needs good collaboration with ECan                                            |
| <b>Building Code</b>                                          | National           | 12+ months                                                                          | Low      | High but entirely dependent on involvement in code review and degree of interaction with DBH. |
| <b>Bylaw</b>                                                  | Local              | 6 month process                                                                     | Medium   | Medium – needs support from council to recognise a problem and begin bylaw-making process.    |

## Appendix 2: Rainwater tanks as part of integrated water management

The increasing cost and decreasing availability of water supply will require a more efficient and conservation-oriented supply and management approach if New Zealand is to achieve widespread household sustainability. Rainwater tanks need to be considered as part of a larger water management system:

- **Reduce** water use: demand management
  - Cheapest, but not sufficient in context of increasing population
  - Cost savings (energy and infrastructure)
  - Delays upgrading and renewing water supply and wastewater collection/treatment infrastructure
- **Reuse** water with minimal treatment, locally
  - Greywater recycling
    - Reduces base wastewater flow
    - Wastewater concentration increases
  - On-site wastewater irrigation
- **Rainwater:** a new source without knock-on infrastructure upgrades
  - Integrated Urban Water Management
- **Recycle:** collect and highly process water before using it again
  - Effectively it is another product

The benefits of an integrated water management system are:

- savings in operational (including electricity) and capital costs required for water supply and wastewater treatment
- increased awareness for consumers of water consumption
- increased provision of indirect use values through the reduction of water taken from ecosystems

<sup>11</sup> Adapted from Lawton M., Birchfield D. and Kettle, D. (2007) - Making policy and regulation rain tanks friendly. Report PR 205 for Beacon Pathway Limited.  
[http://www.beaconpathway.co.nz/images/uploads/Final\\_Report\\_PR205\\_Making\\_PolicyRegulations\\_Raintank\\_Friendly.pdf](http://www.beaconpathway.co.nz/images/uploads/Final_Report_PR205_Making_PolicyRegulations_Raintank_Friendly.pdf)

- reduced emissions of greenhouse gases.

### Appendix 3: Example - Kapiti Coast District Council

Kapiti Coast District Council (KCDC) has introduced the mandatory requirement for rain tanks for water conservation as a rule in their District Plan. They did this through their Long Term Council Community Plan (LTCCP), a Section 32 analysis, and a Plan Change notification and consultation process. The rule is triggered when there is an application for land use change or sub-division. In making their case for a plan change the council primarily considered resiliency of their system, especially in the light of climate shocks and water use efficiency, using non-potable water where appropriate. Current water supply can meet potable and hygiene requirements but cannot always supply outdoor needs.

### Appendix 4 : Rainfall and tank sizing

Figure 1: Christchurch Rainfall

Total rainfall per year (average) = 637mm

Rainfall varies across the city – wetter in the west, dryer in the east.

Volume available from a 200m<sup>2</sup> roof

$$= 200 \text{ m}^2 \times 0.637 \text{ m}$$

$$= 127.4 \text{ m}^3$$

$$= 127,400 \text{ litres}$$

$$\text{Less } 20\% \approx 100,000 \text{ litres}$$

In Christchurch the water abstraction rate for public supply averages between 430 and 450 l/p/d, with a median of 435 l/p/d. The daily peak in winter is mid-morning, whereas in summer it is in the evening because of garden watering.

Table 2: Tank sizing

|                                                                                                                                          |      |        |
|------------------------------------------------------------------------------------------------------------------------------------------|------|--------|
| <b>1 Main Building area</b>                                                                                                              |      |        |
| Building width (metres)                                                                                                                  | 10   |        |
| Building depth (metres)                                                                                                                  | 8    |        |
| Rain Collection Area 1 (square metres)                                                                                                   |      | 80     |
| <b>2 Extension/conservatory/porch/garage/shed etc</b>                                                                                    |      |        |
| width (metres)                                                                                                                           |      |        |
| Depth (metres)                                                                                                                           |      |        |
| Rain Collection Area 2 (square metres)                                                                                                   |      | 0      |
| <b>3 Calculate the area of any remaining useful roofs as a figure in square metres and enter directly in the yellow box to the right</b> |      |        |
| <b>4 TOTAL of collectable roof areas (square metres)</b>                                                                                 |      | 80     |
| <b>5 Rainfall per year in your area (mm)</b>                                                                                             |      | 1251   |
| <b>6 Collectable rainwater per annum (in litres - discounted by 20% to account for water loss) (YIELD)</b>                               |      | 80,064 |
| <b>7 Use of water in the building</b>                                                                                                    |      |        |
| <i>Washing machine and toilet flushing are the main usage for rain water in domestic systems. Add an allowance for daily garden use</i>  |      |        |
| Number of people in the house                                                                                                            | 5    | people |
| Number of clothes washing cycles per day (50 litres each)                                                                                | 1.25 | 63     |
| Number of toilet flushes per day (4.42 flushes per person, average 3 litres each)                                                        | 22   | 66     |
| Outdoor use per day (min 5 litres per person per day) or adjust till F39 = F29 more or less                                              |      | 35     |
| <b>8 Amount of water you require every day</b>                                                                                           |      | 164    |
| <b>Amount of water you require every year (DEMAND)</b>                                                                                   |      | 59,787 |
| <b>9 How many days drought protection do you need? Enter a number in the box to the right, typically 28</b>                              |      | 28     |
| <b>10 Capacity of water storage in litres required for drought protection</b>                                                            |      | 4,586  |
| The lesser of YIELD (6) or DEMAND (8) per annum                                                                                          |      | 59,787 |
| Therefore, volume of rainwater storage required (litres)                                                                                 |      | 4,586  |

# Long Term Plan submission

April 2021

## About Sport New Zealand

Sport New Zealand (Sport NZ) is the crown agency responsible for contributing to the wellbeing of everybody in Aotearoa New Zealand by leading an enriching and inspiring play, active recreation and sport system. Sport NZ's vision is simple - to get **Every Body Active in Aotearoa New Zealand**.

Our role as kaitiaki of the system focusses on lifting the physical activity levels of all those living within Aotearoa and having the greatest possible impact on wellbeing. We achieve our outcomes by aligning our investment through partnerships, funds and programmes to our strategic priorities set out in our four-year strategic plan.

Christchurch City Council is critical to the work of Sport NZ in the Canterbury region.

## The importance of Council

Christchurch City Council is the major provider of sport and recreation facilities in Canterbury. We greatly appreciate this support and investment - without it much of what happens in our sector would not be possible. Council investment has provided positive outcomes for a wide range of sports codes, demographics, cultures, ages and abilities. We also acknowledge the commitment of council staff in supporting the sector.

Council is also an important partner for Sport Canterbury, who Sport NZ invests in significantly and are the regional champions of our strategic vision. Sport Canterbury continues to provide strategic leadership across the Canterbury/West Coast play, active recreation and sport sectors. They approach all aspects of their work with an innovative, evidence based and participant focused philosophy. As a result, they consistently set the benchmark for impact and performance for other RSTs throughout the country.

During the challenges thrown at the country during COVID-19 Sport Canterbury have once again demonstrated their essential leadership and support role within their community. They quickly mobilised, as they did previously with the earthquakes and the March Terror attacks, to provide immediate relief for their community. As the implications of the pandemic grew they have been at the forefront of a push for the play, active recreation and sport sector to change and adapt so that they better serve the needs of a rapidly changing world and, as a result, the needs of their current and future participants.

Play, active recreation and sport make an enormous contribution to the health and wellbeing of all Cantabrians. Physical activity, its wide-ranging benefits and its importance to our communities are fundamental to meeting our shared goal of healthy, happy and well connected communities.

We also acknowledge the challenges Council faces with balancing the various competing demands such as growth, transport, climate change and water quality within a context of falling revenue. The impact of Covid-19 will be with us for some time to come, so too the decisions made in this 10-year Budget.

## The impact of COVID-19 on the play, active recreation and sport sector

COVID-19 has placed significant pressure on Aotearoa New Zealand's play, active recreation and sport system.

- Through our insights, we know the COVID-19 lockdowns has exacerbated inequalities, putting some population groups at even more risk regarding their physical and mental wellbeing.
- Analysis of media commentary also identified concerns about returning to previous activities in shared public spaces due to safety.
- Sector organisations which play a key role in allowing New Zealanders to be active were also impacted by COVID-19. These impacts include lost revenue, cash flow difficulties, reduced capacity and change of membership.

All these things have hit the sector hard and Sport NZ is working with regional sports trusts, councils, and other local stakeholders to find solutions to help address these.

### **Target audiences and activity areas**

Sport NZ remains committed to making progress towards our primary goal of ensuring more tamariki and rangatahi (aged 5 – 18) have access to quality physical activity options. We aspire to reduce the drop off in activity levels of rangatahi from ages 12 to 18 and increase the levels of activity for those tamariki and rangatahi who are less active.

Canterbury has communities we know are most at risk of missing out, including:

- Maori and pacific communities
- Low income communities where participation is declining
- Growth of new ethnic communities where physical activity preferences differ

### **Christchurch City Council investment in sport and active recreation**

Sport NZ acknowledges the challenges faced by Council in providing community services through its sport and recreation assets and that Christchurch has a large and growing network of facilities, some of which are ageing and require significant renewal investment, others that are in development and need further investment or support to ensure their ongoing viability and activation.

Sport NZ, Sport Canterbury and the Councils of Canterbury have been working with the sports sector to develop a co-ordinated and collaborative approach for future sport and recreation facility provision that provides Councils with a high-level strategic view of sports infrastructure needs for the region and the evaluation criteria to prioritise investment and ultimately make better decisions.

### **Christchurch City Council investment in Play**

Play is self-directed activity which a young person freely chooses, usually for its own sake. Play is not just about the provision of fixed assets in the form of playgrounds. Commitment to playful communities requires consideration of all the decisions and factors made by Council and its partners that create space, time and permission for our whanau to play.

Research shows that play has many benefits for children, families and the wider community.

- Play contributes the largest number of physically active hours for 5-18 year olds on a weekly basis.
- Play is vitally important for a young person's resilience and wellbeing.
- Playful childhoods lead to healthy, happy, active lives.

It has been taken for granted that play will always be a part of New Zealand childhoods. However, levels of play are in decline due to shifting cultural values, increasingly sedentary behaviours, family circumstances, urbanisation and fears about children's safety.

Christchurch City Council is the city's largest investor and provider of play. Council delivers a wide range of community activation programmes and fixed-play assets. Creating a Play Advocate role would bring leadership and ownership to the play work currently being done by various Council departments. A Play Advocate would ensure there is integrated planning as well as bringing about efficiencies and cost savings to the current approach.

Sport New Zealand, Sport Canterbury and Christchurch City Council share a common interest to ensure the wellbeing of all Cantabrians using physical activity as a core building block. We know if we can raise the physical activity levels of New Zealanders it will lead to better health and social outcomes. Working together towards a collective goal will allow us the greatest possible impact on wellbeing for all New Zealanders.

We urge greater investment in the sport and recreation sector under this Long-term Plan. Without this commitment from Council our current and future community sport and recreation spaces will be compromised. This means our growing, increasingly diverse population will not have access to suitable infrastructure and spaces to participate in physical activity - whether it's playing at a park, an inter-church kilikiti competition or a competitive rugby match

Feedback

1.6 Rubbish, recycling and organics

There also needs to be continued effort to educate the public regarding waste disposal and sorting which heightens awareness and motivates compliance.

1.7 Our facilities

Feel strongly that libraries should be supported, especially those in smaller, rural locations.

1.11 Potential disposal of surplus Council-owned properties

Of particularly concern, regarding the potential disposal of surplus Council-owned properties at 2 locations:

LOT 1 DP 9607++

Whero Ave

PT LOT 1 DP 14050++

Hunters Road

These properties are valuable community resources. There should be careful consideration as to how these properties are utilised, as decisions regarding them will have far reaching impacts on the existing communities. The Church Bay and Diamond Harbour communities need to be fully involved through normal land disposal processes, including comprehensive community consultation as well as input from Community Boards. Otherwise, the potential for high density residential development, which could otherwise result, would significantly impact the local community in a wide range of associated issues. The communities have invested many hours working to regenerate certain sections of these parcels. If allowed to continue, additional Green Space for the community would be gained and native plantings would help to achieve positive impacts for generations to come, as we further our steps to achieve the goals set out by government initiatives for combating climate change.

I request that these two properties be removed from the LTP and put through the public consultation process. Thank you.

Subject: Submission on the Rates Remission proposed policy change

Follow Up Flag: Follow up  
Flag Status: Flagged

Good afternoon,

I am writing in relation to the proposed rates remission policy changes within the Long Term Plan 2021-2031 on behalf of Whānau Āwhina Plunket.

Whānau Āwhina Plunket is a charity and Aotearoa's largest support service for the health and wellbeing of children under five and their whanau. Tamariki and whānau are at the heart of Whānau Āwhina Plunket – everything we do is centred on supporting pēpi to have the best possible start in life. Whānau Āwhina Plunket offers free health and development checks, a 24/7 parenting helpline, and a range of local services doing everything from antenatal classes to injury prevention support.

Our understanding of the proposed change is that *"organisations would only be eligible if their latest financial accounts have a closing balance of cash and investments that's less than 50 times the total assessed Council rates on the properties for which they are seeking a remission"*.

We do not support this proposed change.

As a charitable organisation we do not believe that our cash and investment balances always provide an accurate picture of our current financial circumstances.

As part of our funding model, we apply for grants and also receive income in advance for service delivery contracts in our bank account. This means we receive income, which has been deposited in our bank account, but which relates to a future period. Consequently, our bank balance gets artificially inflated, but we actually have a liability to either spend this money in line with the contract service deliverables / grant conditions, or potentially return the funds. As at 30 June 2020, our income in advance balance was \$10.924m. Depending on when we get paid the income in advance can result in an artificial peak in our cash balance.

It should be noted here that we specifically asked the Ministry of Health to provide us with service delivery contract income in advance due to having ongoing cash flow issues. They have agreed to paying in advance, but this inflates our bank account balance at any point in time, as we have yet to incur the expenses associated with delivery of that contract.

Our balances in our last audited annual report were:

|             |             |
|-------------|-------------|
| Cash        | \$1,979,000 |
| Investments | \$208,000   |
| Total       | \$2,187,000 |

Our current rates GST exclusive paid to Christchurch City Council for our 11 properties totals \$21,661.59 for which we receive remissions totalling \$16,192.45 (GST exclusive). This is a significant amount of money for our not-for-profit organisation, for which we are extremely grateful. 50 times \$16,192 equals \$1,083,080. This would mean that we are no longer eligible for Rates Remissions from Christchurch City Council, based on your proposed policy change.

Our recommendation in relation to this proposal is to instead look at the operating surplus/deficit for the organisation to determine eligibility, rather than cash and investment balances. We believe this would be a more accurate representation of the financial need for a charitable organisation. We have continued to run a deficit since 2017. A high cash balance does not truly reflect the need we have for ongoing support from organisations such as yourself in order to continue meeting the needs of our communities. Our latest operating deficit was \$1.984 million as at 30 June 2020. Therefore, the extra \$16,192 is vital for us to continue operating and providing our services to the tamariki and whanau of New Zealand into the foreseeable future. We request you to please reevaluate the criteria you have chosen for Rates Remissions as this will significantly disadvantage our ability to provide essential services to our community.

Ngā mihi

## Submitter Details

**Submission Date:** 18/04/2021

**First name:** Cameron **Last name:** Bradley

**Your role in the organisation:**

**Would you like to present your submission in person at a hearing? (if yes, you must provide a contact phone number)**

☐ Yes

☒ I do NOT wish to speak in support of my submission and ask that the following submission be fully considered.

## Feedback

1.1 Have we got the game plan right?

No - this plan may keep our public financial debt low but the other costs to future generations will continue to increase exponentially

1.2 Rates

Not enough. Need to spend more now to make up for the bleak outlook future generations currently have

1.3 Proposed changes to existing rates, and new targeted rates

Targeted rates are good. I would like to see us move further towards a land value rate to incentivise higher value developments

1.4 Investing in upgrading and protecting our city's water networks

You need to spend more. Previous councils have already failed miserably by ignoring water infrastructure to the point we are forced to chlorinate it to make it safe. I now face the choice of suffering an allergic reaction or showering and need to buy water.

1.5 Investing in our transport infrastructure

The city has already spent decades forming itself into a car- dominated environment. Good luck changing it with 1.5 billion (probably mostly going to more roads)

1.7 Our facilities

Nice. Cut the level of services to pay for the environmental and social debt that the last few decades have racked up. Very fair.

1.8 Our heritage, foreshore and parks

Why don't kids play outside anymore? Because outside isn't as nice, safe or accessible as it was decades ago.

## Feedback

1.1 Have we got the game plan right?

I would like to see more priority given to road maintenance on Banks Peninsula and a prompt response to damaged infrastructure.

The bridge on the foreshore at Pigeon Bay has been damaged for some months, council's response is that it is not structural damage so not urgent. The kerb is crumbling, the steel supports are exposed, and there is flimsy orange netting covering the hole.

The logging trucks have caused deep pot holes, & cracking road surfaces and damaged road edges making some roads narrower.

1.3 Proposed changes to existing rates, and new targeted rates

Re the land drainage rate, the information letter sent out was very "wordy" & hard to follow. There are no examples of what a land drainage rate will cost, how can we make an informed decision.

I am in favour of the status quo & targeting properties where the services are provided. We have provided our own septic tank, field drains, & swale for storm water, at our property on Banks peninsula. We are already paying an extra targeted rate for the Akaroa hospital, Ecan wants to increase rates by 24 % .

1.11 Potential disposal of surplus Council-owned properties

Submissions in response to the proposed land disposal between Hunters Road and Whero Ave Diamond Harbour. I do not support the disposal of the parcel as proposed. This area has a number of recreation and conservation values, particularly in the gully areas that need to be protected. In addition, consideration needs to be given to the potentially increase adverse effects of land use change on Whakaraupo itself.

The Charteris Bay, Church Bay and Diamond Harbour communities have seen a increase in number of residents in recent years. Very little consideration has been given to further development of recreational amenities in response to this growth. Before any land is disposed of, consideration should also be given to the establishment of facilities as playground, pump track, dog park and skate park.

Current infrastructure appears to be limited in it's ability to manage the current demand and a significant increase in residential areas will add further pressures. In the last few years there have been a numerous failures in the three waters infrastructure which have resulted in raw sewerage entering the harbour, water pipe bursts and significant roading damage. The current infrastructure is unlikely to cope with additional use and land use change.

CYFC submission on CCC LTP Apr 2021

Eve Lafferty and Adam Gard'ner  
Chairs  
Child and Youth Friendly Christchurch

16 April 2021

## Submission to the Christchurch City Council 2021-2031 Long Term Plan

Tēnā koe,

Thank you for the opportunity to provide feedback on the Christchurch City Council 2021-2031 Long Term Plan.

### About the Child and Youth Friendly Christchurch

Child & Youth Friendly Christchurch is a collection of organisations wanting to ensure that Christchurch is a great place for young people to grow up in.

This UNICEF initiative is all about putting the UN Convention of Rights of the Child into practice within our community.

We are working to create a movement to make our city the best place to be a child through tangible actions that improve children's lives.

It's about our community – Government, Iwi, businesses, and communities - setting collective goals towards Christchurch becoming the best city in NZ to grow up in.

### Our submission

#### Library cuts

The LTP proposes reducing the hours of libraries. Libraries are one of the highest rated community assets provided by Christchurch City Council. They are free and offer a range of programmes for parents, children, and young people. Libraries can act as formal or informal gathering spaces and support children and families to be well and well-connected to their communities.

We disagree with the proposed cuts to library hours, especially the proposed cuts to the hours at Aranui Library. While we understand the library may not be busy during the time period of the proposed cuts,

we also note with interest the lack of community activities delivered at the Aranui Library. For example, while some libraries have a range of term break activities, we query the lack of such activities at Aranui Library. We would like further exploration and outreach of how the Council and the local community can together get the most out of this valuable asset.

### **Art Gallery cuts**

The LTP proposes reducing the number of people served by delivery of a 'diverse range of public and school-specific programmes to promote and educate the importance of the visual arts.' Arts and arts access can inspire young people and their families, nurture wellbeing and sense of identity, and outreach programmes can create a more inclusive sense of belonging. For many young people, the gallery's outreach eliminates barriers to accessing an important artistic opportunity.

We disagree with the proposed cuts to the art gallery's outreach programmes with schools. We encourage the Council to consider expanding the current programme rather than cutting it.

### **Community grants funding**

The LTP proposes reducing the existing pool of Strengthening Communities Funding from \$7.65M in 2021/22 to \$7.30M by 2028/29. This funding has been available for a range of community-led projects that achieve valuable outcomes for local children and families. We were delighted to be able to extend the impact of some of our work thanks to a grant from the Strengthening Communities fund.

We disagree with cuts to Strengthening Communities grants. This funding has a strong history of serving the community, and we do not believe there is a case for cutting it. Instead, we support an increase to this pool of money (for example, through inflation-adjusting the fund).

### **Climate harm**
