16.1 Objectives and policies

16.1.1 Objective 1 - Recovery and growth

- a. The recovery and economic growth of the district's industry are supported and strengthened in existing and new greenfield industrial zones.

16.1.1.1 Policy 1 - Sufficient land supply

- a. Maintain a sufficient supply of industrial zoned land to meet future demand up to 2028, having regard to the requirements of different industries, and to avoid the need for industrial activities to locate in non-industrial zones.

16.1.1.2 Policy 2 - Enable the development of industrial areas to support recovery

- a. Encourage the redevelopment of existing industrial zones for industrial activities, particularly in areas that have lost industry and associated employment opportunities due to the earthquakes.

16.1.1.3 Policy 3 - Range of industrial areas

- a. Recognise and provide for industrial zones with different functions that cater for a range of industrial activities depending on their needs and effects as follows:
 - i. Industrial General Zone
 - A Recognise and provide for industrial activities that can operate in close proximity to more sensitive zones due to the nature and limited effects of activities including noise, odour, and traffic.
 - ii. Industrial Heavy Zone
 - A Recognise and provide for industrial activities that generate potentially significant effects, including relatively high levels of noise, odour, heavy traffic movements, and the presence of significant amounts of hazardous substances, necessitating separation from more sensitive land use activities.
 - iii. Industrial Park Zone
 - A Recognise and provide for industrial activities in the high technology sector and other industries in a high amenity environment dominated by open space and landscaping, and that generate higher volumes of traffic than other industries while having negligible effects in terms of noise, odour or the use and storage of hazardous substances.

16.1.1.4 Policy 4 - Activities in the industrial zones

- a. Maintain and support the function of industrial zones while providing for limited non-industrial activities that:
 - i. are ancillary in scale and on the same site as a permitted activity;

- ii. are not appropriate in more sensitive environments due to their potential noise, odour or other environmental effects;
 - iii. comprise yard based or trade suppliers in the Industrial General Zone;
 - iv. provide an emergency service which may generate adverse effects; or
 - v. support the needs of workers and businesses in the zone for food and beverages, commercial services, and the care of children.
- b. Avoid any activity in industrial zones with the potential to hinder the establishment or ongoing operation of industrial activities.
- c. Avoid the use of industrial zones for non-industrial activities that could adversely affect the strategic role of the Central City, District, and Neighbourhood Centres as focal points for commercial, community, residential, and other activities.

16.1.1.5 Policy 5 - Office development

- a. Avoid office development in industrial areas other than where it is:
- i. ancillary to a permitted activity on the same site;
 - ii. located in the Industrial Park zone while supporting the function of the zone for primarily industrial activities seeking a park like environment.

16.1.1.6 Policy 6 - Office parks

- a. Avoid the development of new office parks while recognising and enabling office activities in the existing office park areas in Addington (Hazeldean Business Park and Show Place) and Russley (Airport Business Park and Sir William Pickering Drive) in a manner that does not undermine the role of District and Neighbourhood centres as the focus for offices.

16.1.1.7 Policy 7 - Brownfield redevelopment

- a. To support the redevelopment of brownfield sites for residential or mixed use activities where:
- i. A reduction in industrial land supply will not affect the ability to meet the anticipated needs of industrial activities including those with specific locational requirements.
 - ii. The residential or mixed-use development would not hinder the establishment or ongoing operation of surrounding industrial activities.
 - iii. The anticipated amenity values of the adjoining industrial zone are not compromised.
 - iv. The safety and efficiency of the current and future transport system is not significantly adversely affected.
 - v. A high level of residential amenity can be achieved on the site.
 - vi. There is good walking and cycling access to public transport routes, commercial and community services, and open space.
 - vii. If necessary, contaminated land is remediated in accordance with national and regional standards.

- viii. The redevelopment does not impact on the vitality and strategic role of commercial centres as the focal points for commercial and other activities, and the efficient and effective use of land and/or community and transport infrastructure investment in centres.

16.1.2 Objective 2 - Amenity in industrial zones and the effects of industrial activities

- a. Adverse effects of industrial activities and development on the environment are avoided, remedied or mitigated and the level of amenity anticipated in the adjoining zone is not adversely affected by industry.
- b. Industrial sites visible from the road have a higher level of visual amenity, particularly the Industrial General Zone (North Belfast) and Industrial Heavy Zone (South West Hornby) that are in highly prominent locations and act as gateways to the City.
- c. The cultural values of Ngāi Tahu/ manawhenua are recognised, protected and enhanced through the use of indigenous species in landscaping and tree planting, a multi-value approach to stormwater management in greenfield areas, and the protection and enhancement of waahi tapu and waahi taonga including waipuna.

16.1.2.1 Policy 8 - Improve visual amenity

- a. Development shall enhance the visual amenity of industrial sites along street frontages through landscaping and tree planting, and the location of the office component of the industrial activity on the street frontage, while providing for passive surveillance of public space.
- b. To encourage the use of indigenous species, appropriate to the local environment, in landscaping and tree planting to recognise the cultural values of Ngāi Tahu/ manawhenua.
- c. Enhance the visual amenity at gateways to the city through setbacks and landscaping in the Industrial Heavy Zone (South West Hornby) and also well designed buildings in the Industrial General Zone (North Belfast).

16.1.2.2 Policy 9 - Development in greenfield areas

- a. To achieve environments in greenfield priority areas with larger setbacks and landscaping , reflecting their location at the interface with adjoining rural zones and in prominent locations, some of which act as gateways to the city.
- b. Manage the development of greenfield areas in a manner aligned with the delivery of infrastructure, including upgrades to networks, to avoid adverse effects on networks serving these areas.

16.1.2.3 Policy 10 - Managing effects on the environment

- a. The effects of development and activities in industrial zones, including visual, noise, glare and other effects, are avoided, remedied or mitigated through the location of uses, landscaping, acoustic treatment, and screening

- b. The scale and form of buildings reflects the surrounding built form of industrial areas while minimising visual effects on more sensitive zones.
- c. The use and storage of hazardous substances and quantity of wastewater discharged in areas over unconfined or semi-confined aquifers is restricted to minimise any risk of contamination.
- d. The cultural values of Ngāi Tahu/manawhenua are recognised through the protection of waahi tapu and waahi taonga, including waipuna, from the adverse effects of development.
- e. Development is designed and laid out to promote a safe environment and reflects principles of Crime Prevention through Environmental Design (CPTED).

16.1.2.4 Policy 11 - Managing stormwater

- a. Ensure that stormwater is managed in a way that:
 - i. supports a multi-value approach, using swales, wetlands, infiltration and retention basins having regard to the location and environmental constraints;
 - ii. is integrated within a wider network, reflecting a catchment based approach;
 - iii. limits the stormwater discharge to waterways through the use of retention facilities, storage tanks and/or rainwater harvesting, to reduce the risk of flooding;
 - iv. improves water quality;
 - v. reduces the potential for birdstrike risk to aircraft
 - vi. utilises native species within swales, basins and wetlands, where appropriate, recognising their ability to absorb water and filter waste.

16.7 Appendices

Appendix 16.7.1 - Rules and guidance for landscaping and tree planting

The provisions in Part B of this Appendix are for information and guidance only and are not statutory rules. They have been incorporated to assist in the choice of species suitable for planting in particular site conditions, and to help ensure the Council's requirements are successfully achieved.

Part A: Tree requirements - statutory requirements

1. Tree Size

- a. Any tree required under Landscaped Area rules shall be:
 - i. not less than two metres high at the time of planting; and
 - ii. a species capable of reaching a minimum height at maturity of eight metres.

Note: trees listed in Part B of this appendix would meet this clause.

2. Tree protection

- a. Any trees required under Landscaped Area rules shall be located within a landscaping strip, or within a planting protection area, with a minimum dimension or diameter of 1.5 metres.
- b. No more than 10% of any landscaping strip required under Landscaped Area rules, or any planting protection area, shall be covered with any impervious surfaces.
- c. Landscaping strips or planting protection areas adjacent to a road boundary, or adjacent to or within a carparking area, shall be provided with wheel stop barriers to prevent damage from vehicles. Such wheel stop barriers shall be located at least one metre from any tree.

3. Maintenance of trees and landscaping

- a. Any landscaping or trees required under Landscaped Area rules shall be maintained, and if dead, diseased, or damaged, shall be replaced.

Part B: Tree species- information and guidance only, non-statutory requirements

- 1. The lists of trees and shrubs contained in Sections 1 to 3 of this Part are considered suitable for Christchurch conditions.
 - a. Section 2 of this Part specifies the suitability of the trees that meet the requirements in Part A for particular conditions, these being:
 - i. trees suitable for moist/wet soil conditions;
 - ii. trees suitable for dry soil conditions;
 - iii. frost tender trees;
 - iv. trees suitable for coastal areas;

- v. trees suitable for car parking/ paved areas etc;
 - vi. trees susceptible to wind damage/ breakages;
 - vii. trees with aggressive root system (relevant to driveways and underground services);
 - viii. trees prone to common diseases.
- b. More detailed descriptions and requirements for each tree can be obtained from various plant manuals or by seeking advice from the Christchurch City Council City Arborist or Nursery Supervisor. It should be noted that the tree size ranges are estimates for trees that are planted in highly modified environments, e.g. streets, car parks, pedestrian malls, storm water swales. Trees planted in parks or large gardens are expected to grow larger.
- c. The shrubs listed in Section 3 are considered suitable for planting between trees in landscaped strips.

Generic detail for trees in car park / paved situations

2.6 Trees particularly susceptible to wind damage/branch breakage

Common name	Botanical name
Mayten	Tendency to split in narrow branch forks
Wattle	Weak branch unions
Acer negundo (box elder)	Brittle branches, weak branch unions
Agonis (myrtle)	Weak branch unions
Banksia integrifolia	Weak branch unions
Eucalyptus	Heavy end weighted branches can cause branch breakage, summer branch drop

Poplar	Weak branch unions
Liquidambar	Heavy weak branch forks and brittle timber prone to wind damage when in full leaf
Claret ash (and other ash species excepting common and manna ash)	Weak forks, brittle timber

Common name	Botanical name
Mayten	Tendency to split in narrow branch forks
Wattle Willow (all species)	Weak branch unions Brittle timber, heavy foliage, summer branch drop
Pinus radiata	Wind and snow damage
Cupressus macrocarpa	Wind and snow damage
Cedar (all species)	May suffer loss of large branches in winds and snow when mature

The above trees should not be precluded from plantings entirely but thought should be given to siting them in more sheltered positions away from buildings and public thoroughfares.

2.7 Trees with particularly aggressive root systems

- a. The roots of all trees have the potential to cause damage to structures, underground services and sealed/paved surfaces if planted too close to them. For example, most trees have a tendency to develop roots under shallow sealed surfaces often causing cracking or lifting.
- b. Properly constructed planting pits that allow for adequate root growth along with the use of a combination of structural soils (or root cells) and permeable asphalt surrounding the planting pit will alleviate this problem. Please contact the Christchurch City Council City Arborist for more information.
- c. The roots of all trees will follow moisture trails from leaking drainage systems (usually old earthenware pipes) and enter them. However, most modern drainage pipes made of synthetic materials with greatly improved joint sealing should be able to withstand all but the direct expansion pressure of trees growing right next to them. In addition tree roots will not extend in to heavily compacted soils. Soils around underground services need to be heavily compacted so that roots will not enter them. To be on the safe side, medium to large sized trees should be situated at least 3.0 metres from all drainage pipes except that if a tree root barrier is used then trees can be planted up to 1.5 metres from drainage pipes. A modern reinforced concrete slab building foundation constructed to withstand earthquake forces should not be affected by tree roots, except possibly where a larger tree is growing right against it. The older type of foundation, which ran around the perimeter of the building only, is much more at risk and even smaller growing trees should not be planted too close.
- d. Commonly planted tree species more frequently associated with damage to the above structures are as follows:
 - i. Willows
 - ii. Poplars
 - iii. Eucalyptus
 - iv. Pinus radiata
 - v. Cupressus macrocarpa

- vi. Horsechesnut
- vii. Maples and sycamore
- viii. Ash.
