

7.3.21 Formation of unformed legal roads

The following are matters of discretion for Rule [RD3](#), Section [7.2.2.2](#):

1. Whether there is ability to form the unformed legal road in a way that is safe, functional and maintainable at a reasonable cost.
2. Whether the use of the unformed legal road will adversely affect the environment and/or character of the location and surrounding area (including effects from dust, noise and vibration and effects on visual amenity).
3. Whether the use of the unformed legal road will adversely affect safe access for other current and potential users of the unformed legal road, including pedestrians and cyclists.

For vehicle crossings to unformed legal road in the Coastal Environment shown on the Planning maps:

4. The effects of the location, nature, and scale of the formation and use of the road and/or earthworks on the natural character and heritage of the coastal environment.
5. The adequacy of protection, restoration or enhancement of the natural character and historic heritage of the coastal environment.
6. Any effects on public access to and along the coastal marine area.
7. The adequacy of measures to address adverse effects on public access to and along the coastal marine area.
8. The extent to which the nature, scale, intensity and location of the proposal will have effects on the coastal environment taking into account the Coastal Environment objectives and policies [19.1](#).

Appendix 7.12- Road classification system

The purpose of Appendix 7.12 is to outline the Road Classification System, which is used to distinguish roads into categories, as some of the rules in the District Plan only apply to some of the roads in a particular category.

1. Description of the Road Classification System

a. Functional hierarchy (Movement and Place Functions):

Traditionally road classification systems have primarily focused on the movement function of roads (i.e. moving people and goods from 'a' to 'b') and seldom taken account of the communities and environment that surround them. However the Road Classification System in this Plan (which is based on the Road Classification System adopted in the [Christchurch Transport Strategic Plan](#)) presents a more balanced view of the role of roads by applying a 'place' (land use) function for roads, alongside a 'movement' (or link) function.

The Road Classification System in the [Christchurch Transport Strategic Plan](#) has been simplified for use in the District Plan. The traditional four 'movement' function categories remain (Major Arterial, Minor Arterial, Collector and Local) to show the role that the road plays in moving people and goods around the transport network. Some roads have changed their classification from the previous District Plans as changes to the network have occurred over the last few years.

In addition to the four 'movement categories', four 'place categories' now sit within the system to reflect the different 'place' requirements: Rural, Industrial, Residential, and Centres. These additions to the categories take into account the surrounding land use, and show the role the road plays in contributing to the amenity values, identity and public space of the adjoining area.

When the four place types are combined with the four levels of movement function, a two-dimensional array, or 'matrix', with 16 potential cells is created. This gives roads a dual classification, of one 'place' function and one 'movement' function. This ensures, for example, that arterial roads in residential areas are managed differently to reflect their context in a different manner than arterial roads in industrial areas or local roads in residential areas.

b. Use hierarchy (modal networks):

In addition to the functional hierarchy, a road use hierarchy has also been defined within the [Christchurch Transport Strategic Plan](#). These networks highlight that different modes of transport have different priorities within the network. There are five modal networks defined in the [Christchurch Transport Strategic Plan](#):

- i. the cycle network of major, local and recreational cycle routes (including on and off roadcycle ways, and cycle ways within rail corridors);
- ii. the core public transport route network;
- iii. the walking network;
- iv. the freight network (including the rail network); and
- v. the strategic road network.

These networks are not specifically shown in the District Plan, as they will be subject to change over time. However, they are an important part of Christchurch's transport network and will be considered as part of the Integrated Transport Assessment process.

In addition to the classification system the [Christchurch Transport Strategic Plan](#) highlights the need to manage the road network more efficiently. The Christchurch Network Management Plan is being developed to guide how the network will be managed based on user priority and the time of day, to reflect the different demands that occur on the networks and the importance of prioritising users during different times of the day.

- vi. Note that [Appendix 8.6.3 of Chapter 8](#) contains the standards for new roads.

The Proposed Christchurch Replacement District Plan

2. Summary of the Road Classification categories

- a. Each road will have a dual classification both a 'movement' and 'place' classification (see Figures 7.17(a-f) for maps of the road classification). The 'movement' and 'place' function categories are described in Table 7.17.

Table 7.17 Explanation of movement and place categories

	Movement function category	Explanation
i.	Major arterial roads	State Highways and key roads in Christchurch District that cater especially for longer trips. Major Arterial Roads are the dominant elements of the roading network which connect the major localities of the region, both within and beyond the main urban area, and link to the most important external localities. Some major arterials, particularly some state highways, serve an important by-pass function within Christchurch District, directing traffic through it to areas beyond. They are managed to minimise adverse effects from access on network efficiency. All motorways within Christchurch District are classified as major arterial roads.
ii.	Minor arterial roads	Roads that provide connections between major arterial roads and the major rural, suburban and industrial areas and commercial centres. Generally, these roads cater for trips of intermediate length. They will generally connect to other minor and major arterial roads and to collector roads. Arterial roads provide the most important movement function and as such require the highest degree of movement function protection. They may also define the boundaries of neighbourhood areas.
iii.	Collector roads	Roads that distribute and collect local traffic between neighbourhood areas and the Arterial road network. These are of little or no regional significance, except for the loads they place on the Arterial road network. They link to the Arterial road network and act as local spine roads, and often as bus routes within neighbourhoods, but generally do not contain traffic signals. Their traffic movement function must be balanced against the significant property access function which they provide. Collector roads within the central city are known as distributor roads. These roads have a similar 'movement' function to the distributor streets in the Central City, which are shown in the Christchurch Central Recovery Plan.
iv.	Local roads	All other roads in Christchurch District. These roads function almost entirely for access purposes and are not intended to act as through routes for motor vehicles
	Place function category	
v.	Urban (Centres)	Any road that is adjacent to a Commercial Zone. These are the areas which are shown as the Urban (Centres) Place Type on the Road Classification Maps (Figures 7.17(a-f)).
vi.	Urban (Industrial)	Any road that is adjacent to an Industrial Zone. These are the areas which are shown as the Urban (Industrial) Place Type on the Road Classification Maps (Figures 7.17(a-f)) ¹ .

The Proposed Christchurch Replacement District Plan

	Movement function category	Explanation
vii.	Urban (Residential)	All other roads within the existing urban area as defined by Map A of Chapter 6 of the Canterbury Regional Policy Statement, as well as roads that are adjacent to any other Residential Zone in Christchurch District. These are the areas which are shown as the Urban (Residential) Place Type on the Road Classification Maps (Figures 7.17(a-f)).
viii.	Rural	All roads outside the existing urban area as defined by Map A of Chapter 6 of the Canterbury Regional Policy Statement, except for roads adjoining to any Residential, Industrial, and/or Commercial Zone in Christchurch District. Rural roads are generally the roads classified as rural or semi-rural in the road classification system in the Christchurch Transport Strategic Plan.

Note:

The exact area of all the place types is based on zoning and may be modified through the second phase of the District Plan Review (especially the rural place type). Thus the second phase review area is shown on the Road Classification maps and the rural place type is not shown.

¹ If a road is adjacent to a Commercial Zone on one side of the road and adjacent to an Industrial Zone on the other side of the road, then the place function is Urban (centres).

Note: The Stage 1 and Stage 2 version of Figure 7.17a and 7.17e showed the Central City area, as being 'covered by the Christchurch Central Recovery Plan'. A consequential change, as part of the introduction of the Central City Transport provisions in Stage 3, is that Central City Road Classification in Appendix 13.9.11 Figure 13.9.10 will be included in these maps. The road classification outside the Central City is not open for Submissions as it was consulted on in Stage 1.

¹ Marshs Road (Shands Road to Main South Road) is a Minor Arterial. However a new road between Main South Road and Shands Road (north of Marshs Road) is proposed to link with the Pound Road/ Barters Road re-alignment (see the Road Classification maps). It is intended that in future this new road will be a Minor Arterial instead of Marshs Road between Main South Road and Shands Road.
